**Cœlianeurys'ma.** Aneurysm within the abdomen.

**Cœliecta'sia** or **Cœliec'tasis** (*koilia*, abdomen, *ektasis*, dilatation). Abnormal distention of the abdomen.

**Cœliec'tomy** (*koilia*, abdomen, *ektome*, excision). Operation for the removal of an abdominal organ.

**Cœlii'tis.** Abdominal inflammation.

**Cœlio-** (*koilia*, abdomen). In composition, the abdomen.

**Cœ'liocele** (*koilia*, abdomen, *kele*, rupture). See *Hernia*.

**Cœliocystec'tomy, puer'peral** (*koilia*, abdomen, *kystis*, cyst, *ektome*, excision). Excision of an ectopic gestation cyst.

**Cœliocystot'omy, puer'peral** (*koilia*, abdomen, *kystis*, cyst, *tome*, incision). Incision into an ectopic gestation cyst for evacuation of its contents.

**Cœliodyn'ia** (*koilia*, abdomen, *odyne*, pain). Colic.

**Cœlioelytrot'omy** (*koilia*, abdomen, *elytron*, vagina, *tome*, incision). A more correct term for gastroelytrotomy and laparoelytrotomy.

**Cœliohæ'mia.** Cœliæmia.

**Cœliogastrot'omy.** Gastrotomy through an abdominal section.

**Cœliohysterec'tomy** (*koilia*, abdomen, *hystera*, uterus, *ektome*, excision). Excision of the uterus by an incision through the abdomen.

**Cœliohysterot'omy** (*koilia*, abdomen, *hystera*, uterus, *tome*, incision). Cæsarean section.

**Cœliomyal'gia** (*koilia*, abdomen, *mys*, muscle, *algos*, pain). Pain in the muscles of the abdomen.

**Cœliomyi'tis.** Inflammation of the abdominal muscles.

**Cœliomyodyn'ia** (*koilia*, belly, *mys*, muscle, *odyne*, pain). Cœliomyalgia.

**Cœlion'cus** (*koilia*, abdomen, *onkos*, tumor). Tumor of the abdomen.

**Cœlionephrec'tomy** (*koilia*, abdomen, *nephros*, kidney, *ektome*, excision). Operation for excision of the kidney through the abdomen.

**Cœlioparacente'sis** (*koilia*, abdomen, *parakentesis*, tapping). Paracentesis of the abdomen.

**Cœliophy'ma** (*koilia*, abdomen, *phyma*, tumor). Tumor or tubercle of the abdomen.

**Cœliopyo'sis** (*koilia*, abdomen, *pyosis*, suppuration). Suppuration of the abdominal viscera or parietes.

**Cœliopyot'ic.** Relating to or suffering from cœliopyosis.

**Cœliorrheu'ma** (*koilia*, abdomen, *rheuma*, rheumatism). Rheumatism of the muscles of the abdomen.

**Cœliorrhœ'a** (*koilia*, abdomen, *rheo*, to flow). Diarrhœa.

**Cœlios'chisis** (*koilia*, abdomen, *schisis*, a splitting). Abdominal congenital fissure.

**Cœlioschis'tic.** Pertaining to or suffering from cœlioschisis.

**Cœ'lioscope** (*koilia*, abdomen, *skopeo*, to look at). An instrument for examination of the abdominal cavity.

**Cœ'liospasm.** Spasm or cramp of the abdomen.

**Cœliospas'tic.** Pertaining to or suffering from cœliospasmus.

**Cœliosphongio'ma** (*koilia*, abdomen, *sphongos*, sponge). Fungoid tumor of the abdominal cavity.

**Cœliostegno'sis** (*koilia*, abdomen, *stegnosis*, a stopping). Constipation.

**Cœliot'omy** (*koilia*, abdomen, *tome*, incision). Abdominal section or laparotomy.

**Cœli'tis.** Cœliitis.

**Cœlo-** (*koilos*, hollow). In composition, hollow.

**Cœlocli'ne polycar'pa.** Berberin tree, yellow dye tree, tree of Soudan; a small tree growing in Soudan, Sierra Leone, and other parts of Western Africa, the bark of which is employed topically in the treatment of obstinate ulcers, both in powder and decoction.

**Cœ'lodont** (*koilos*, hollow, *odous*, tooth). Having hollow teeth.

**Cœ'lom** or **Cœlo'ma** (*koilos*, hollow). Embryonic body cavity, separated at a later period into the cavities of the peritoneum, pleura, and pericardium.

**Cœlo'ma.** Round ulcer of the cornea, broader and deeper than that described under the name *bothrion*. See also *Cœlom*.

**Cœlophlebi'tis** (*koilos*, hollow, *phleps*, vein). Inflammation of the vena cava.

**Cœlophthal'mic** (*koilos*, hollow, *ophthalmos*, eye). Hollow-eyed.

**Cœlophthal'mus** ((*koilos*, hollow, *ophthalmos*, eye). One who is hollow-eyed.

**Cœlorrhi'zous** (*koilos*, hollow, *rhiza*, root). Hollow-rooted, applied to teeth.

**Cœl'oscope** (*koilos*, hollow, *skopeo*, to view). Instrument for examining one of the cavities of the body by means of electric light.

**Cœlo'sis.** Formation of a cavity. **Endocyt'ic c.,** formation of a cavity within a cell. **Paracyt'ic c.,** formation of a cavity among cells.

**Cœlosto'mia** (*koilos*, hollow, *stoma*, mouth). A defect in speaking, when the voice seems as if it came from a cavern—that is, obscure and as if at a distance.

**Cœ'lum.** Cavity; cœlom.

**Cœn-** or **Cœno-** (*koinos*, common). In composition, common or general.

**Cœnadel'phus** (*koinos*, common, *adelphos*, brother). Double monster, the two portions having, in common, one or more organs indispensable to life.

**Cœnæsthe'sia** or **Cœnæsthe'sis** (*koinos*, common, *aisthesis*, feeling). Common feeling. Some German writers mean by this a sixth sense, the feeling of self-existence or individuality, manifested by the sense of buoyancy or depression which we experience without any known cause—by involuntary shuddering, feeling of chill or glow, etc.

**Cœnæsthet'ic.** Pertaining to cœnæsthesis.

**Cœ'noblast** (*koinos*, common, *blastos*, germ). The primitive germinal layer.

**Cœnot'ic.** Having the same connections; applied to fungi.

**Cœnu'rus** (*koinos*, common, *oura*, tail). An hydatid, which is the larval condition of Tænia cœnurus of the dog, and is the cause of the disease in the sheep called sturdy, staggers, gid, and turnsick.

**Coer′cive force.** The power that prevents a magnet from losing its magnetic action.

**Cof′fea arab′ica.** Plant of the order *Rubiaceæ*, which affords coffee; originally from Yemen. The infusion of coffee is an agreeable and usually wholesome article of diet, when used in moderation, to a certain extent tonic, and employed as such in convalescence from fevers, etc. In cases of poisoning by opium and in old asthmas its use has been extolled. Coffee is a cerebrospinal stimulant, and possesses marked diuretic action. A highly nitrogenized alkaloid was first found in coffee, and called *caffeine*. It was afterward discovered in the leaves of the tea plant, and called *theine*, then in guarana, and called *guaranine*.

**Cof′fee.** See *Coffea arabica*. **Wild c.**, triosteum.

**Coffee-bean tree of Kentuck′y.** Gymnocladus canadensis.

**Cof′fee-ground vom′it.** Vomiting of a dark brown or blackish material, occurring in cases of gastric cancer, yellow fever, and other affections; the matter is blood acted upon by the gastric juice.

**Cof′fee tree.** Coffea arabica. **Califor′nia c. t.**, Rhamnus californica. **Kentuck′y c. t.**, Gymnocladus canadensis.

**Coffe′ic acid.** Caffeic acid

**Coffei′na.** Caffeine.

**Cof′fer dam.** Sheet vulcanite used by the dentist to isolate the teeth from moisture.

**Coffeurin′.** Substance detected in the urine, it is stated, after excessive use of coffee.

**Cof′fin bone.** The os pedis of the horse. **C. joint**, second interphalangeal joint of the horse; the joint within the hoof. **C.-lid crys′tals**, crystals of triple phosphate noticed in the urine.

**Cof′finism.** Treatment of disease advocated by one Dr. Coffin, resembling Thomsonianism in its principles.

**Cognac**, kone-yak′. Brandy made of grapes grown in France.

**Cog′wheel respira′tion.** See *Respiration*.

**Cohabita′tion.** The act of dwelling together with or without marriage. In legal medicine it means the consummation of marriage or copulation.

**Co′hen′s meth′od.** Method of inducing premature labor by injecting water between the walls of the uterus and membranes enveloping the fœtus.

**Cohe′rent.** Holding fast together; logical in construction as representing thought, when the term relates to speech.

**Cohe′sion** (*cohæreo*, to stick together). Force of cohesion; attraction of cohesion or of aggregation; that force in the particles of matter whereby they are connected in such a way as to resist any attempt toward their removal or separation.

**Cohib′iting.** Preventing.

**Cohn′heim′s a′reas.** Polygonal distribution of cross-section of muscular fibre; perhaps showing arrangement of separate fibrillæ into larger prismatic bundles. **C.′s fields**, C.′s areas. **C.′s frog**, frog in which blood in the vessels is substituted by saline solution. **C.′s the′ory**, that faulty development in the embryo is responsible for the subsequent formation and development of all true tumors in after life, these originating from **C.′s tu′mor germs**, small masses of tissue in embryonic life.

**Cohn′ia ro′seopersici′na** (Winter and Kützing). Beggiatoa roseopersicina.

**Cohn′s law.** That each form of bacteria rests upon a definite and unchangeable basis. **C.′s liq′uid**, 1 part of ammonium tartrate, 1 part of yeast ashes in 100 parts of distilled water; used for bacteriological cultures.

**Cohn′stein′s opera′tion.** Cæsarean section in which the incision is made in the posterior wall of the uterus.

**Cohoba′tion** (*cohob*, Paracelsian term for repetition). Distillation of a liquid, already distilled, from the same substances; when this is repeated three or four times it is called *recohobation*. The term is also applied to diseases which recur, although treated properly medicinally.

**Cohol′** (syn. of alcohol). A dry collyrium.

**Cohosh′.** Actæa racemosa, Caulophyllum thalictroides. **Black c.**, Actæa racemosa. **Blue c.**, Caulophyllum thalictroides. **Red c.**, Actæa rubra. **White c.**, Actæa alba.

**Coil.** Anything wound spirally or looped, particularly a wire, as in electricity, or a tube for the condensation of vapor in distillation. **C. glands**, the sudoriparous or sweat glands. **Induc′tion c.**, a double wire coil—one, the *primary*, of coarse wire, the other, the *secondary*, of very fine wire outside the first and insulated from it; an electrical current is induced in the outer coil on the opening or closing of the circuit in the inner or primary coil. **Lei′ter′s c.**, see *Leiter*. **Ruhm′korff c.** induction c.

**Coin-catch′er.** A probang constructed so as to remove a coin lodged in the œsophagus. **C. sound** or **test**, a metallic sound elicited in pneumothorax by listening on the back of the chest while one coin is struck on another anteriorly on the chest.

**Coin′dicant signs** (*indico*, to indicate). Those which furnish the same indications or which confirm the indication afforded by another sign.

**Coindica′tion.** Correspondence of signs with reference to an effect.

**Coir′a.** Catechu.

**Coir′as** (*choiros*, hog). Scrofula.

**Co′ital.** Relating to coitus.

**Coi′tion** (*coeo*, to go together). Coitus, copulation, sexual intercourse; carnal union of the sexes.

**Coitopho′bia** (*coitus* + *phobos*, fear). A dread of sexual intercourse, even when licit.

**Co′itus.** Coition. **C. nervo′rum optico′rum**, chiasm or crossing of the optic nerves.

**Co′ko disease′.** Disease occurring in the Sandwich Islands, and having a resemblance to yaws.

**Colal′gia** (*colon* + *algos*, pain). Pain in the colon.

**Colanin′.** A glucoside in cola

**Co′la-nut.** The seed of Sterculia or Cola acuminata, containing a large proportion of caffeine; a powerful stimulant to the heart and nerves; see *Kola*.

**Cola′tion.** Straining a liquid.

**Colato′rium** Strainer of any kind.

**Co′lature.** A filtered or strained liquid.

**Colaux′e.** Dilated condition of the colon.

**Colchiceï′na** or **Colchiceïne′.** A whitish, crystalline substance made from colchicine; dose, gr. $\frac{1}{64}$–$\frac{1}{32}$ (0.001–0.002).

**Colchici′na** or **Colchicine′.** The active principle of colchicum; a colorless or yellowish, amorphous alkaloid derived from colchicum root; dose, gr. $\frac{1}{120}$–$\frac{1}{60}$ (0.0005–0.001). **C. sal′icylate**, colchisal; a combination of methyl salicylate with chemically pure colchicine; employed in gout and gouty headaches, articular and chronic rheumatism, and rheumatoid affections.

**Col′chicores′in.** Substance of a brown color from Colchicum autumnale.

**Col′chicum** (from Colchis, in Asia, where it is said to have been common). A genus of liliaceous plants. **C. autumna′le**, meadow saffron; the bulb or root or cormus, *Colchici radix* (Ph. U. S.), and the seeds, *Colchici semen* (Ph. U. S.), *C. semina* (Ph. B.), are the parts used in medicine. The taste is acrid, excoriating the mouth, but the acrimony is lost by drying; it is narcotic, diuretic, and cathartic, and has been given in dropsy, gout, and rheumatism; dose, gr. j–vj (0.065–0.4) of the root or seeds. The official (Ph. U. S.) preparations are: *Extractum colchici radicis*, extract of colchicum root; dose, gr. ss–ij (0.032–0.13). *Extractum colchici radicis fluidum*, fluid extract of colchicum root; dose, ♏ij–iv (0.13–0.26). *Vinun colchici radicis*, wine of colchicum root; dose, ♏x–xxx (0.65–2.0). *Extractum colchici seminis fluidum*, fluid extract of colchicum seeds; dose, ♏ij–v (0.13–0.32). *Tinctura colchici seminis*, tincture of colchicum seeds; dose, ʒss–j (2.0–4.0). *Vinum colchici seminis*, wine of colchicum seeds; dose, ♏xv–ʒj (1.0–4.0). The active principle is called *colchicine;* very poisonous; employed in gout and rheumatism hypodermically. *Colchiceine* has also been obtained from it; it is very poisonous, acting on the great nervous centres; used subcutaneously in gout and rheumatism. Colchicum, in an overdose, is an acronarcotic poison. **C. zeylan'icum,** Kæmpferia rotunda.

**Colchisal'.** Colchicine salicylate; used in gout and rheumatism in dose of gr. $\frac{1}{100}$ (0.0006).

**Col'cothar.** Brown-red, ferric oxide; red oxide of iron, obtained by calcining sulphate of iron to redness with or without the contact of air; possesses styptic and tonic properties.

**Cold.** Sensation produced by the abstraction of caloric from the body. See *Heat.* Three degrees of cold are generally distinguished in disease: 1. The simple feeling of cold (*algor*); 2. *Chilliness* (*horror*); 3. *Shivering* (*rigor*). Cold is employed in medicine chiefly as a refrigerant, sedative, and nerve tonic. The word is also vaguely and indefinitely used for a morbid affection supposed to be induced by cold. "To take cold" is to be affected by a disease presumed to be caused by cold. Nosologically, it has no definite meaning. See *Catarrh* and *Coryza.* **C. ab'scess,** see *Abscess.* **C. bath,** see *Bath.* **C.-blood'ed,** a term applied to animals with a body temperature at or but little above that of the surrounding atmosphere. **C. chill,** intermittent fever. **C. cream,** unguentum aquæ rosæ. **C. pack,** the moist packing of hydropathic treatment. **C. plaque,** cerebrospinal meningitis occurring in epidemic form among horses. **Rose c.,** hay fever. **C. sore,** herpes labialis. **C. spots,** localities on the skin where sensation of cold is present.

**Colde'nia procum'bens.** Herb growing in India, where it is employed in powder form to hasten suppuration.

**Colebril'la.** Guinea worm.

**Colec'tomy** (*kolon,* the colon, *ektome,* excision). Excision of a part of the colon.

**Colein'.** See *Chitin.*

**Colei'tis** (*koleos,* vagina or sheath). Inflammation of the vagina.

**Col'eocele** (*koleos,* vagina or sheath, *kele,* rupture). Vaginal hernia.

**Coleop'tosis** (*koleos,* vagina or sheath; *ptosis,* fall). Prolapsus vaginæ.

**Coleorrhex'is** (*koleos,* vagina or sheath, *rhexis,* rupture). Laceration or rupture of the vagina.

**Coleosi'tis.** Leucorrhœa.

**Coleostegno'sis** (*koleos,* vagina or sheath, *stegnosis,* constriction). Narrowness of the vagina, natural or acquired; colpostegnosis.

**Co'leothrix methys'tes.** A microorganism found in spoiled rum, and which causes fermentation.

**Col'eps** or **Colep'ium.** The hollow of the knee; also the colon.

**Cole's pad.** A device employed in treating aneurysm by means of pressure; it consists of a cotton and hair pad connected to a shank with springs.

**Cole'seed.** Rapeseed.

**Co'leus.** Sheath, scrotum, testicle, or vagina. A genus of plants, ord. *Labiatæ.* **C. amboin'icus,** herb growing in Cochin China and the Moluccas; antiasthmatic, antiepileptic, and carminative; leaves are edible. **C. malabar'icus** grows in the East Indies and Indian Archipelago; the root is employed by the natives in dysentery and in ailments of the stomach. **C. scutellarioi'des** has the same properties as Coleus malabaricus.

**Cole'wort.** Brassica oleracea and Brassica napus.

**Co'ley's mix'ture.** A mixture of the toxins of the streptococcus of erysipelas and Bacillus prodigiosus; it is said to be curative in many cases of sarcoma.

**Col'ic** (*kolon,* the colon). Relating to the colon or to colic. In its etymological acceptation colic signifies an affection or pain in the colon, but it is employed in a more extensive signification; it includes every acute pain of the abdomen, aggravated at intervals; the word has often, however, epithets affixed to it which render it more or less precise; see *Colica.* **C. ar'teries** are six in number, three of which, given off by the *superior mesenteric,* are called *colicæ dextræ,* and three, proceeding from the inferior mesenteric, *colicæ sinistræ.* All proceed toward the colon, passing between the two laminæ of the peritoneum, which form the mesocolon, where they ramify and anastomose with each other. The first, *colica dextra,* is called *colica dextra superior;* the second, *colica dextra media, colica media;* and the third, *colica dextra inferior* or *ileocolica.* Of the three *colicæ sinistræ,* the first or *superior* is called, by Chaussier, *colica magna sinistra;* the *second* or *media* is not distinguished from the preceding, as the two often arise from a common trunk; and the third is called *colica parva sinistra.* To these arteries as many *colic veins* correspond, which open into the great and little mesenteric veins. **C. lobe of the liver,** great lobe of that organ. **C. root,** Aletris farinosa, Dioscoreo villosa. **C. veins,** see *Colic arteries.* **C. weed,** Dicentra canadensis.

**Col'ica.** Colic. **C. accidenta'lis,** colica crapulosa. **C. acu'ta,** enteritis. **C. appendicular'is,** the severe pain accompanying appendicitis. **C. arthrit'ica** cœliagra. **C. bilio'sa,** bilious colic, occasioned by an accumulation of bile in the intestines or in its own passages; marked by bilious stools and vomiting; the treatment required is that proper for colica convulsiva. **C. callo'sa,** colic attended with a sense of stricture in some parts of the intestinal canal, often with flatulency and pain; the flatus gradually passing off by the stricture; the bowels tardy, and at length discharging small, liquid stools. **C. convulsi'va,** colic not the symptom of any other affection, characterized by griping pain in the bowels, chiefly about the navel, with vomiting and costiveness, the pain increasing at intervals. The indications are to clear the intestines and allay spasm. Carminatives, calomel and opium, castor oil and opium, emollient and cathartic enemata, with fomentations, wet or dry, to the abdomen, usually succeed. **C. crapulo'sa,** colic arising from eating indigestible aliments or digestible aliments in too great abundance; the remedy is obvious. **C. damnonio'rum** or **damnonien'sis,** c. metallica. **C. febrico'sa,** colica inflammatoria. **C. figulo'rum,** colica metallica. **C. flatulen'ta,** colic arising from an accumulation of gas in the intestines; very common in infants, and may be relieved by aromatics, especially when combined with antacids—for example, oil of aniseed with magnesia. **C. hæmorrhoida'lis,** a kind of colic supposed to precede hemorrhoids or to supervene on their suppression. **C. helluo'num,** colica crapulosa. **C. hepat'ica,** gallstone or hepatic colic; pain in the region of the liver, chiefly about the gall-bladder, occasioned by the passing of a biliary calculus through the cystic and choledoch ducts. **C. idiopath'ica,** colica convulsiva. **C. il'eus,** ileus. **C. inflammato'ria,** enteritis. **C. lappon'ica,** see *Seta equina.* **C. lochia'lis,** diminution or suppression of the lochial discharge. **C. madriden'sis,** Madrid colic; a species of colic, endemic in several provinces of Spain, whose nature is not clear; the symptoms resemble those occasioned by lead; see *Colica metallica.* **C. menstrua'lis,** menstrual colic; colic preceding or accompanying the menstrual evacuation, or which is owing to the suppression of that evacuation. **C. metal'lica,** metallic colic, painters' colic, colic of Poitou, colic of Surinam, Devonshire colic, dry bellyache, dry gripes, saturnine colic, lead colic, plumbers' colic; under this head is generally described the colic produced by lead, as well as the other colics mentioned in the synonymy, and they certainly resemble each other greatly, although some of them are more like bilious colic. There is not much to distinguish this variety of colic from others. The same violent pain about the navel is present, with retraction of the abdomen toward the spine, but it may be distinguished by the presence of palsy. The only difference of treatment is in the necessity for employing more opium along with the purgative. The paralytic sequelæ must be met by change of air, rubbing the spine, exercise, etc. The colics of Madrid, of Poitou, Devonshire, Normandy, etc., have been called *vegetable colic*, because ascribed to the use of new wine or cider, unripe fruit, etc., although really, perhaps, owing to the adulteration of wines and cider by litharge; all the symptoms, indeed, are those of colica metallica. **C. nephrit′ica,** nephritic or renal colic; acute pains accompanying nephritis, and especially calculous nephritis, or the passage of a calculus into the ureter; see *Gravel*. **C. nervo′sa,** colica convulsiva; colica metallica. **C. pas′sio,** colica. **C. phlogis′tica,** colica inflammatoria. **C. pic′tonum,** colic of Poitou, see *Colica metallica*. **C. picto′rum,** painters' colic, c. metallica. **C. pituito′sa,** colica convulsiva. **C. plethor′ica,** colica inflammatoria. **C. plumbario′rum,** colica metallica. **C. pulsa′tilis,** inflammatory c. **C. rachial′gia,** colica metallica. **C. rena′lis,** colica nephritica. **C. rheumat′ica,** a painful affection of the muscular coat of the intestines, occurring after exposure of the skin, especially of the feet and abdomen, to cold. **C. saturni′na,** colica metallica. **C. scorto′rum,** colic of prostitutes; a form of colic observed among that class; uterine colic. **C. sic′ca,** c. metallica. **C. spasmod′ica,** colica convulsiva; ileus. **C. sterco′rea** or **stercora′cea,** a species of colic ascribed to the retention of fecal matters in the intestines; the retention is itself, however, an effect that may be caused in the same manner as the colic pains themselves. **C. stipa′ta,** colica stercorea. **C. uteri′na,** uterine colic; pain seated in the uterus, sometimes called *hysteralgia*. **C. ventric′uli,** cardialgia. **C. vermino′sa,** worm colic; abdominal pain occasioned by the presence of worms in the intestines. **C. zin′ci,** colic due to chronic zinc poisoning; see *Zinci oxidum*.

**Col′icky.** Having a resemblance to the pain of colic.

**Colicodyn′ia** (*odyne*, pain). Colic.

**Colicoliena′lis.** Relating to the colon and spleen.

**Colicople′gia** (*plege*, a stroke). Colica metallica, with paralysis.

**Col′icweed.** Caudates glauca.

**Colicysti′tis.** Inflammation of the bladder, due to the presence of Bacillus coli.

**Colicystopyeli′tis.** Inflammation of the bladder and renal pelvis, due to the presence of Bacillus coli.

**Co′liform.** Resembling a sieve.

**Coli′tis.** Inflammation of the peritoneal or mucous membrane of the colon. The former is termed *serocolitis* and *exocolitis;* the latter, *endocolitis* and *dysentery*. **Follic′ular c.,** see *Follicular colitis*.

**Col′la.** Glue. **C. anima′lis,** animal glue. **C. pis′cium** (fish glue), ichthyocolla.

**Collæ′mia.** The presence of uric acid in colloidal form in the blood.

**Col′lagen** (*kolla*, glue, *gennao*, to produce). A constituent of connective tissue, bone, and cartilage, containing the principle which is developed into glue or gelatin by boiling.

**Collag′enous.** Resembling or yielding gelatin.

**Collapse′.** Complete prostration of strength, either at the commencement or in the progress of a disease. **C. of the lung,** see *Atelectasis*. **Ner′vous c.,** neurasthenia. **Pul′monary c.,** see *Atelectasis*.

**Collapsed′.** In a condition of collapse.

**Col′larbone.** Clavicle.

**Col′lard.** Dracontium fœtidum.

**Collar′gol** or **Collar′golum.** Soluble silver; antiseptic; used in gonorrhœa, gonorrhœal ophthalmia, pyæmia, etc.

**Collasin′** or **Collosin′.** An application for the skin, made of traumaticin and collodion.

**Collat′eral** (*latus*, side). That which accompanies or proceeds by the side of another. One of the delicate branches of an axis cylinder process; paraxon. **C. ar′teries of the arm** are given off by the brachial, and are distinguished into: 1. The *superior* or *external collateral*, which arise from the inner part of the brachial and extend as far as the inferior and external part of the arm. 2. The *inferior* or *internal collateral*, which arise from the brachial, near the elbow-joint, and descend toward the upper part of the forearm. The vessels which pass to the fingers and toes are also called *collateral*. Speaking generally, *collateral branches* are those which follow nearly the same course as the vessel whence they emanate. **C. circula′tion,** circulation which is established through anastomosing vessels (which usually enlarge under the new demands) when the main artery supplying the part has been obliterated by disease or operation. **C. fis′sure,** a cerebral fissure between the subcollateral and hippocampal convolutions.

**Collateral′is.** Ischiocavernosus muscle.

**Collati′tious.** Assisting digestion.

**Collec′ting plate.** Plate in the galvanic cell at which the hydrogen or other decomposition products collect. **C. tu′bule,** the portion of a tubule receiving the uriniferous secretion and discharging into the excretory duct.

**Collec′tion** (*colligo*, to gather). This word is often united to the epithet *purulent, serous*, etc., to express a gathering of pus, serum, etc. **C. lig′ament,** triangular liagment of the abdomen.

**Colle′sis** (*kolla*, glue). Agglutination.

**Col′les's fas′cia.** Inferior perineal fascia. **C.'s frac′ture,** fracture of the lower end of the radius, transverse or oblique, with displacement of the lower fragment backward. **C.'s law,** fact observed by Colles, that mothers, even when not diseased themselves, may nurse their own syphilitic children with immunity, while other women nursing such children frequently contract chancre of the nipple. **C. lig′ament,** ligamentous fibres from Poupart's ligament to the linea alba. **C.'s space,** space beneath the perineal fascia, in which are several important muscles, the bulb of the urethra, vessels, nerves, and areolar tissue.

**Col′les-Baumès** (bo-mase′) **law.** Colles's law.

**Collet′ic.** Agglutinant.

**Colli′ciæ.** Drains to collect and convey away water. **C. puncto′rum lacryma′lium,** union of the ducts passing from the puncta lacrymalia.

**Collic′ular ar′teries.** Arteries entering the corpora quadrigemina from the posterior cerebral arteries.

**Collic′ulus** (dim. of *collis*, hill). A word employed in anatomy to denote a small eminence or tubercle. **C. bul′bi,** a collection of spongy tissue surrounding the urethra at the beginning of the bulbous portion; see *Corpus spongiosum urethræ*. **C. cauda′tus,** nucleus caudatus. **C. ca′veæ posterio′ris ventriculo′rum latera′lium,** hippocampus minor. **C. infe′rior,** one of the posterior quadrigeminal bodies. **C. ner′vi ethmoida′lis,** corpus striatum. **C. ner′vi op′tici,** the papilla of the optic nerve; also the optic thalamus. **C. papilla′ris,** tuberculum papillare of the liver. **C. semina′lis,** caput gallinaginis. **C. subpinea′lis,** small eminence situated near the posterior commissure of the brain. **C. supe′rior,** one of the anterior quadrigeminal bodies. **C. vagi′næ,** nympha.

**Collidine′.** $C_8H_{11}N$. Poisonous alkaloid, derivable from putrid gelatin.

**Col′liers' lung** or **phthi′sis.** The hepatic condition induced in the lungs of coal miners from inhalation of dust; anthracosis pulmonum; pneumonoconiosis.

**Colliga′men** (*colligo*, to bind together). Ligament.

**Colligamen′tum.** Ligament; also liquid in which the primary embryonic rudiments have their origin.

**Colliga′tio.** Binding together by ligaments.

**Collilon′gus.** The longus colli muscle.

**Collin′.** Gelatin in soluble form.

**Collin′ic** (*kolla*, glue). Relating to or obtained from glue.

**Collinso′nia** (after Peter Collinson). Horseweed, horsebalm, richweed, richleaf, healall, stoneroot, knotroot, knootweed, knobweed, ord. *Labiatæ;* indigenous plant possessed of diuretic properties, which seem to reside in a volatile oil; infusion is the best form of administration; leaves in domestic practice are applied to wounds and bruises.

**Col′linson's flow′er.** Collinsonia.

**Colliquamen′tum** (*colliqueo*, to melt). First rudiments of an embryo.

**Colliqua′tion.** Solution, dissolution, act of melting; degeneration accompanied by liquefaction of the tissues.

**Colliq′uative** (*colliqueo*, to melt). Profuse or excessive in flow, noting various discharges which produce rapid exhaustion; hence we say colliquative sweats, colliquative diarrhœa, etc; also applied to any process in which liquefaction of the tissues occurs. **C. fe′ver,** hectic fever. **C. necro′sis,** humid necrosis.

**Collispinal′is.** Spinatus colli muscle.

**Collisplen′ius.** Splenius colli muscle.

**Col′located.** Placed or situated with or immediately adjacent to another part.

**Collo′dion.** Collodium (Ph. U. S. and Br.), liquid cuticle, ethereal solution of guncotton, Maynard's adhesive liquid; solution obtained by dissolving guncotton—pyroxylin—in a mixture of rectified ether and alcohol. Pyroxylin is formed by mixing nitric acid and sulphuric acid gradually and adding cotton (freed from impurities). The U. S. Pharmacopœia contains a formula for the preparation of collodion (pyroxylin, 4; stronger ether, 70; alcohol, 26). When applied to a part the ether evaporates, and the solid, adhesive material is left, which contracts; hence it is used in cases of wounds to keep their edges together. It has been applied as a coating for abrasions and in cases of burns. Various non-official preparations of collodion have been employed, the formulæ for several of which are herewith given (see also *Collodium*): **Abort′ive c.,** consists of hydrargyrum bichloride, 3 parts to 500 parts of collodion; employed for the purpose of aborting smallpox vesicles. **Canthar′idal c.,** *collodium cantharidatum* (Ph. U. S.), *collodium vesicans* (Ph. Br.); the Ph. U. S. contains a formula for its preparation, including as the ingredients cantharides, flexible collodion, and commercial chloroform; in the Ph. Br., pyroxylin and liquor epispasticus; by painting the surface with a little of this solution vesication is produced, as with the plaster of cantharides. **Caus′tic c.,** prepared by dissolving 4 parts of corrosive sublimate in 30 of collodion; has been used for destroying nævi materni. **Elas′tic c.,** flexible c. **Epispas′tic c.,** vesicating c., consisting of a mixture of oil of mustard, glacial acetic acid, and collodion. **Ferru′ginous c.,** mixture of equal parts of collodion and tincture of chloride of iron. **Flex′ible c.,** *collodium flexile* (Ph. U. S.), is a mixture of collodion, Canada turpentine, and castor oil; in the Ph. Br., collodium, Canada balsam, and turpentine; the other ingredients give to the collodion softness and elasticity. **Glyc′erized c.,** mixture of glycerin and collodion, which accommodates itself to the motions of the part and does not crack when applied. **I′odized c.,** mixture of iodine, gr. x–xx, in collodion, ℥j, proposed to obtain rapidly the effects of iodine, especially on tumors. **Io′doform c.,** consists of 1 part of iodoform dissolved in 20 parts of flexible collodion. **Mercu′rial c.,** caustic collodion; prepared by dissolving corrosive sublimate in collodion, in the proportion of 1 part of the former to 6 of the latter; has been used in cases of nævi, and, more diluted, in different cutaneous affections, syphilitic discolorations, for example; also to prevent pitting in smallpox. **Ric′inated c.,** mixture of collodion and castor oil; used for the same purpose as terebinthinated c. **Silk c.,** silk fibre is dissolved in chloride of zinc, and the zinc is then removed. **Styp′tic c.,** *collodium stypticum* (Ph. U. S.); styptic colloid; xylostyptic ether; preparation made of tannic acid, alcohol, stronger ether, and collodion; applied externally to wounded or abraded surfaces; carbolic acid, iodine, morphine, etc., may be added to it. **Terebin′thinated c.,** preparation of collodion and turpentine, used by the Germans and French as a covering in erysipelas, burns, bedsores, and chronic cutaneous diseases. **Ves′icating c.,** epispastic c. **Zinc c.,** prepared by dissolving sulphate of zinc in styptic collodion.

**Collo′dium.** (Ph. U. S. and Br.) Collodion. **C. antisep′ticum,** antiseptic collodion; prepared by saturating linen or silk in a solution of mastic, narcotine in powder form, Peruvian balsam, and chloroform; it is then allowed to dry. **C. canthar-ida′tum,** official (Ph. U. S.) name of cantharidal collodion. **C. carbol′icum,** carbolized collodion; mixture of carbolic acid and collodion, equal parts; employed locally in toothache in the cavity of a tooth. **C. chrysarobina′tum,** chrysarobin collodion; mixture of chrysarobin, 3 parts, in collodion, 20 parts; used locally in the treatment of psoriasis. **C. corrosi′vum,** caustic collodion. **C. creosot′icum,** creosote collodion; preparation made of creosote and collodion; employed in dental caries. **C. crotona′tum,** croton-oil collodion; preparation consisting of croton oil and collodion, equal parts of each. **C. epispas′ticum,** see *Epispastic collodion*. **C. escharot′icum,** caustic collodion. **C. ferra′tum,** preparation made of ferric chloride and collodion in the proportion of 1 to 6; used as a hæmostatic. **C. flex′ile,** official (Ph. U. S. and Br.) name of flexible collodion. **C. glycerina′tum,** glycerized collodion. **C. hæmostat′icum,** styptic collodion. **C. lentes′cens,** glycerized collodion. **C. mercuria′le ioda′tum,** iodized mercurial collodion; a preparation made of mercurial iodide, potassium iodide, alcohol, ether, and soluble guncotton. **C. phenyla′tum,** c. carbolicum. **C. plum′bicum,** lead collodion; consists of lead plaster, alcohol, ether, and collodion; applied to cutaneous irritations and scales. **C. ricina′tum,** terebinthinated collodion. **C. salicyla′tum compos′itum,** compound salicylated collodion, salicylic collodion; preparation made of extract of cannabis indica, alcohol, salicylic acid, and flexible collodion. **C. saturni′num,** c. plumbicum. **C. styp′ticum,** official (Ph. U. S.) name of styptic collodion. **C. tan′nicum,** c. stypticum. **C. terebinthina′tum,** terebinthinated collodion. **C. ves′icans,** official (Ph Br.) name of cantharidal collodion.

**Col′loid** (*kolla*, glue, *eidos*, resemblance). Resembling glue; also any substance, as gum, gelatin, or albumin, which in solution passes with difficulty, or not at all, through minutely porous septa. **An′odyne c.,** amyl colloid. **C. can′cer,** alveolar cancer, gelatinous, areolar, or gum cancer; epithet applied to a product of morbid secretion resembling glue or particles of jelly inlaid in a regular alveolar bed; see *Cancer*. **Carbol′ic c.,** solution of carbolic acid in styptic colloid. **C. cysts,** see *Cysts*. **C. degenera′tion,** colloid softening; metamorphosis consisting of transformation of the tissues into a brownish substance like thin glue or mucilage; its chemical composition is not constant; it occurs in glandular carcinoma and other growths. **C. metamorpho′sis,** c. degeneration. **C. mil′ium,** see *Milium*. **C. solu′tion,** colloidal solution. **Styp′tic c.,** xylostyptic ether; a compound fluid for instant and ready use in the dressing of wounded surfaces, which is at the same time styptic, antiseptic, and a complete means of excluding wounded, abraded, or ulcerated parts from the air. It is made by saturating ether with tannin and guncotton, and may be applied with a brush or mixed with an equal quantity of ether in the form of a spray. It may also be made by adding together collodion, carbolic acid, tannin, and benzoic acid.

**Colloid′al.** Colloid. **C. solu′tion,** a solution in which the particles of the dissolved substance are so large as to impart viscidity to the fluid.

**Colloidin′.** Albuminoid substance found in colloid tumors.

**Collo′ma** (*kolla*, glue). Gelatiniform matter, of common occurrence in cysts; is transparent, amorphous, and devoid of vessels and nerves.

**Collone′ma.** Colloid sarcoma, myxoma; a peculiar gelatinous tumor, consisting of a remarkably soft, gelatiniform tissue, which trembles on being touched.

**Colloph'ora u'tilis** (*kolla*, glue, *phoreo*, to bear). Brazilian lorveria; caoutchouc is obtained from the sap.

**Colloturine'.** Alkaloid obtained from bark of Symplocos racemosa.

**Colloxylin'** (*kolla*, glue, *xylinos*, made of cotton). Pyroxylin.

**Col'lum.** The neck; the part of the body situated between the head and chest; also a part of an organ resembling the neck, as in the following cases: **C. anatom'icum hu'meri**, anatomical neck of the humerus. **C. astrag'ali**, neck of the astragalus; depression separating the anterior extremity of the astragalus from its body. **C. chirur'gicum hu'meri**, surgical neck of the humerus. **C. cos'tæ**, neck of a rib; narrow part of a rib between the head and tubercle. **C. den'tis**, neck of a tooth; part of the tooth between the corona and fang which is embraced by the gum. **C. distor'tum**, wryneck. **C. duc'tus urinif'eri**, neck of uriniferous tubule. **C. fem'oris**, neck of the thighbone; the long, narrow, and oblique portion of the os femoris which separates the head of the two trochanters. **C. fib'ulæ**, neck of the fibula; slight narrowness seated below the head or upper extremity of the fibula. **C. glan'dis**, see *Glans*. **C. hu'meri**, neck of the humerus; circular, depressed portion which separates the head of the os humeri from its two tuberosities; some surgeons place the neck below the tuberosities, no precise line of demarcation indicating its extent. **C. mandib'ulæ** or **maxil'læ inferio'ris**, neck of the lower jaw; depression observable on each side of the lower jaw, immediately below the condyle. **C. obsti'pum**, torticollis. **C. os'sis mag'ni** or **capita'ti**, neck of the os magnum; circular depression beneath the head of this bone of the carpus. **C. pe'dis**, instep. **C. ra'dii**, neck of the radius; narrow portion of the radius which supports the head of the bone. **C. scap'ulæ**, neck of the scapula; narrow portion observable below the glenoid cavity of the scapula, which seems to separate it, as it were, from the rest of the bone. **C. stape'dis**, neck of the stapes. **C. ta'li**, neck of the astragalus. **C. u'teri**, neck of the uterus; narrow, cylindrical, and flattened portion of the uterus, which terminates it inferiorly and opens into the vagina by the os uteri or os tincæ; this neck is perceptible on examination per vaginam until near the end of utero-gestation; as the uterus enlarges, however, it becomes shorter and wider, so that a manifest difference exists between its condition at seven and nine months. **C. vesi'cæ**, neck of the bladder; anterior part of the base of the bladder, which resembles the neck of a bottle and is continuous with the urethra. **C. v. fel'leæ**, neck of the gall-bladder.

**Colluna'rium.** Nasal douche.

**Colluto'rium.** Mouth-wash. **C. adstrin'gens**, mel boracis. **C. o'ris**, mouth-wash.

**Col'lutory.** Mouth-wash.

**Collu'vies.** Filth; excrement; discharge from an old ulcer. **C. gas'trica**, gastric disorder.

**Collyr'ium** (*kollyrion*, eye-salve). Formerly a solid medicine, of long, cylindrical shape, proper to be introduced into the vagina, anus, or nostril; suppository. At the present day collyrium means an eye-lotion. **C. adstrin'gens**, aqua ophthalmica aluminosa. **C. alumino'sum**, aqua ophthalmica aluminosa. **C. ammoniaca'le**, preparation used in France in amaurosis and nervous debility of the eye, consisting of slaked lime, muriate of ammonia, charcoal, cinnamon, cloves, and Armenian bole, moistened, and kept in a well-stopped bottle; the stopper being removed the bottle is moved beneath the affected eye. **C. a'ni**, suppository. **C. antiphlogis'ticum**, liquor plumbi subacetatis dilutus. **Bates's c.**, see *Bates's camphorated lotion*. **C. of the Benedic'tines**, preparation made of extract of soot disolved in vinegar, to which extract of roses is added; a once popular application in scrofulous ophthalmia. **Ferru'ginous c.**, mixture of sulphate of iron and white sugar. **Gim'bernat's c.**, solution of caustic potash in water. **C. opia'tum**, prepared by dissolving extract of opium in rose-water. **C. plumba'tum**, liquor plumbi subacetatis dilutus. **C. sic'cum**, a powder for the local treatment of the conjunctiva. **C. zin'cicum**, unguentum zinci oxidi.

**Colobo'ma** (*koloboma*, anything truncated). Mutilation or defect of any part, especially of the eye. **Bridge c.**, c. iridis crossed by a band of iris tissue. **C. of the cho'roid**, a large defect in the choroid, usually in its lower part; coloboma of the iris and ciliary body generally coexist in this condition. **Fuchs's c.**, see *Fuchs*. **C. i'ridis**, fissure of the iris; congential peculiarity of the iris, consisting of a fissure of its lower portion, and a consequent prolongation of the iris to the margin of the cornea; see *Iridorrhagus*. **C. len'tis**, defect in the crystalline, generally occurring with a similar defect in the iris and choroid, due to a relaxation of the zonule of Zinn. **C. of op'tic-nerve sheath**, congenital rare peculiarity due to imperfect closure of fetal fisures. **C. pal'pebræ**, vertical fissure of the eyelid, passing through it so as to divide it into two flaps, somewhat resembling the two portions of a harelip.

**Colobomat'ic.** Affected with coloboma.

**Colobo'sis.** Mutilation.

**Coloca'sia.** A genus of *Aroideæ*. **C. antiquo'rum**, cultivated in India and Egypt and used for food; juice of the leaves possesses styptic properties. **C. esculen'ta**, variety of Colocasia antiquorum known as laro.

**Colocente'sis** (*colon* + *kenteo*, to pierce). Operation of puncturing the colon, as in case of paralytic distention of that bowel to give exit to gas.

**Colocholo'sis** (*chole*, bile). Bilious dysentery.

**Coloclei'sis** (*kleisis*, occlusion). Occlusion of the colon.

**Coloclys'ter.** A high enema, thrown up into the colon.

**Colocolos'tomy** (*colon* + *colon* + *stoma*, mouth). Operation of forming an artificial communication between two portions of the colon.

**Col'ocynth.** The fruit of Citrullus colocynthis, bitterapple. See *Colocynthis*.

**Colocyntheïn'.** A derivative of colocynthin; purgative.

**Colocynthin'.** A purgative glucoside derived from colocynthis. Dose, gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.013).

**Colocynth'is.** (Ph. U. S.) Colocynth, the fruit of Citrullus (cucumis) colocynthis; the official name in the Ph. Br. is Colocynthidis pulpa. The following are the official preparations: *Extractum colocynthidis* (Ph. U. S.), extract of colocynth; dose, gr ij–v (0.13–0.32). *Extractum colocynthidis compositum* (Ph. U. S. and Br.), compound extract of colocynth; contains colocynth, aloes, scammomy, cardamom, and soap; dose, gr. v–xx (0.32–1.3). *Pilula colocynthidis composita* (Ph. Br.), compound colocynth pill; contains about one-third of its weight of aloes; dose, gr. iv–viij (0.26–0.52).

**Colodac'tylus** (*kolos*, curtailed, *daktylos*, finger). Provided with incomplete fingers or toes.

**Coloenteri'tis.** Colitis with inflammation of the small intestine.

**Cologne' wa'ter.** Spiritus odoratus.

**Colom'ba.** Calumba.

**Colombine', com'mon.** Aquilegia vulgaris.

**Co'lon.** That portion of the large intestine which extends from the cæcum to the rectum. It is usually divided into four portions: 1. The *right lumbar* or *ascending, colon dextrum*, situated in the right lumbar region and commencing at the cæcum. 2. *Transverse colon, colon transversum, transverse arch of the colon*, the portion of the colon which crosses from the right to the left side at the upper part of the abdomen. 3. The *left lumbar* or *descending colon, colon sinistrum*, extending from the left part of the transverse arch, opposite the outer portion of the left kidney, to the corresponding iliac fossa. 4. The *iliac colon* or *sigmoid flexure of the colon*, the portion of the intestine which makes a double curvature in the left iliac fossa and ends in the rectum. The muscular fibres, as in the cæcum, are in three flat stripes. **C. bacil'lus,** B. coli communis **C. b. of Esch'erich,** B. neapolitanus. **Tor'por of the c.,** disease in which the muscular coat of the colon acts with deficient energy, giving occasion to distention of the intestine, which, by pressing upon the other organs, may interfere so much with their functions as to lead to distressing gastric, cardiac, and other disorders.

**Colon'ic.** Pertaining to the colon.

**Coloni'tis.** Colitis; dysentery.

**Coloniza'tion.** Method employed in the treatment of the insane or the epileptic, which consists in keeping them in colonies and in giving them employment and providing for them in families.

**Colonop'yra.** Colopyra.

**Colon'oscope** (*skopeo*, to view). Instrument for examining the upper part of the rectum and colon.

**Col'ony.** A collection of bacteria resulting from the culture of the same in favorable media. **C. treat'ment,** see *Colonization.*

**Colopex'ia** (*pexis*, fixation). Fixation by suture of the colon (the sigmoid flexure usually) to the wall of the abdomen.

**Colopexot'omy.** Fixation of the colon by incision and suture.

**Co'lopexy.** See *Colopexia.*

**Coloph'any.** Colophonia.

**Col'ophene.** Volatile oil from colophony.

**Colophol'ic.** Relating to or obtained from colophony. **C. acid,** acid derived from turpentine; employed in making plasters and soaps.

**Co'lopho'nia** (from Colophon, a city of Ionia). Colophany, colophony, black rosin, pitch, brown rosin; a black resin remaining in the retort after the distillation of common turpentine by means of a strong fire. It is used like the turpentines in general and in some pharmaceutical preparations. **C. mauritia'na,** tree of Mauritius yielding Mauritius elemi.

**Colophon'ic acid.** Colopholic acid.

**Colopho'nium.** Colophony

**Coloph'ony.** Colophonia.

**Coloproc'tia** (*proktos*, anus). Colostomy.

**Colopto'sis** (*ptosis*, falling). Prolapse or falling of the colon. See *Enteroptosis.*

**Colopunc'ture.** Operation of puncturing the colon; colocentesis.

**Colop'yra** (*pyr*, fire). Variety of dysentery accompanied with white discharges.

**Col'or.** The visual perception arising from the reflection of light after it has undergone various changes induced by the diverse refrangibility of its component rays. **Acciden'tal c.,** complementary c. **C.-blind'ness,** inability to distinguish colors accurately, see *Achromatopsia.* **C. cen'tre,** see *Centre.* **Comp'lement'ary c.,** if the eye has been for some time regarding a particular color the retina becomes insensible to this color, and if afterward it is turned to a sheet of white paper the paper will be of the color that arises from the union of all the rays of the solar spectrum except the one to which the retina has become insensible. Thus, if the eye be directed for some time to a *red* wafer, the sheet of paper will seem to be of a *bluish-green* in a circular spot of the same dimensions as the wafer. This bluish-green image is called an *ocular spectrum,* because it is impressed upon the eye and may be retained for a short time; and the color *bluish-green* is said to be the *accidental* or *complementary color* of the *red.* If this experiment be made with wafers of different colors, other accidental colors will be observed, varying from the color of the wafer employed, as in the following table:

| *Color of the wafer.* | *Accidental color, or color of the ocular spectrum.* |
|---|---|
| *Red* | Bluish-green. |
| *Orange* | Blue. |
| *Yellow* | Indigo. |
| *Green* | Violet with a little red. |
| *Blue* | Orange-red. |
| *Indigo* | Orange-yellow. |
| *Violet* | Yellow-green. |
| *Black* | White. |
| *White* | Black. |

If all the colors of the spectrum are ranged in a circle, in the proportions they hold in the spectrum itself, the complementary color of any particular color will be found directly opposite; hence the two colors have been termed *opposite colors.* If the primary color, or that to which the eye has been first directed, be added to the accidental color, the result must be the same impression as that produced by the union of all the rays of the spectrum—*white* light. The accidental color, in other words, is what the primitive color requires to make it white light. The primitive and accidental colors are therefore *complements* of each other, and hence accidental colors have been called *complementary colors.* They have also been termed *harmonic,* because the primitive and its accidental color *harmonize* with each other in painting. **C.-gusta'tion,** a condition in which a certain color calls up a certain subjective sensation of taste, or *vice versa;* pseudogeusæsthesia. **Harmon'ic c.,** complementary c. **C.-hear'ing,** a condition in which the senses of hearing and color are commingled, analagous to c.-gustation; pseudochromæsthesia. **C.-in'dex** see *Blood quotient.* **C. percep'tion,** ability of seeing and distinguishing colors. **C. p., abnor'mal,** color-blindness.

**Colora'tion.** The acquiring of color or any special hue; the effect of staining.

**Colorecti'tis.** Inflammation of the colon and rectum; dysentery.

**Colorectos'tomy** (*colon* + *rectum, stoma,* mouth). Operation for formation of anastomosis between the rectum and colon.

**Colorif'ic.** Producing or giving color.

**Colorim'eter** (*metron*, measure). An instrument with which color intensity in liquids is measured.

**Colos'tomy** (*colon* + *stoma*, mouth). Operation for artificial anus, consisting in making a large, permanent aperture in the colon.

**Colostra'tion.** Disease in newborn children, attributable to the colostrum.

**Colos'tric.** Relating to the colostrum.

**Colostrococ'ca.** Colostrum corpuscles.

**Colos'trous.** Containing colostrum.

**Colos'trum.** Green milk, beastlings, beistings, beestings, biestings, beastings or beest. First milk after accouchement; contains more serum and butter and less casein than common milk, and seems to possess a laxative property, which renders it effective in the expulsion of the meconium. Chemical analysis of the colostrum and the normal milk of woman, according to Simon, gives the following results:

| | *Colostrum.* | *Normal milk.* |
|---|---|---|
| Water | 828 | 887.6 |
| Fat | 50 | 25.3 |
| Casein | 40 | 34.3 |
| Sugar of milk | 70 | 48.2 |
| Ashes | 3 | 2.3 |

Colostrum formerly meant an emulsion prepared of turpentine and yolk of egg. **C. cor'puscles,** granular, round yellow corpuscles, abundant in the colostrum, and disappearing in the course of a week or more.

**Colot'omy** (*colon* + *tome*, incision). Operation of cutting into the colon, as for the formation of an artificial anus. *Callisen's operation* was applied to the descending, that of *Amussat* to the ascending, colon. **In'guinal c.,** Littré's method; the incision is made in the inguinal region. **Lum'bar c.,** Amussat's method; the incision is made in the loin, a spot being selected where the bowel is not covered by peritoneum.

**Coloty'phus.** Typhoid fever accompanied with dysentery.

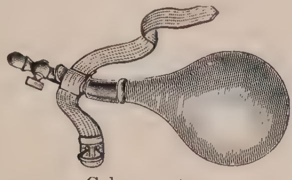
**Colpal′gia** (*kolpos*, vagina, *algos*, pain). Pain in the vagina.

**Colpatre′sia** (*kolpos*, vagina, *atretos*, without opening). Imperforation of the vagina.

**Colpecta′sia** (*kolpos*, vagina, *ektasis*, distention). Condition of the vagina in which marked dilatation exists.

**Colpemphrax′is** (*kolpos*, vagina, *emphraxis*, obstruction). Obstruction of the vagina by foreign bodies.

**Colpeuryn′ter** (*kolpos*, vagina, *euryno*, to dilate). Speculum vaginæ; also a dilatable bag for dilating the os uteri or upper part of the vagina.



Colpeurynter.

**Colpeu′rysis.** Distention of the vagina by means of the colpeurynter.

**Colpi′tis.** Inflammation of the vagina.

**Colpo-** (*kolpos*, vagina). In composition, vagina.

**Colpocace,** kol-pok′a-se (*kolpos*, vagina, *kakos*, evil). Gangrene of the vagina and labia. **C. infanti′lis,** gangrene of the genitals in young girls. **C. puerpera′rum,** sloughing of the vagina and genitals in puerperal women.

**Col′pocele** (*kolpos*, vagina, *kele*, rupture). Vaginal hernia; elytrocele.

**Colpoclei′sis** (*kolpos*, vagina, *kleisis*, closure). Operation for occlusion of the vagina.

**Colpocystarchosyr′inx** (*kolpos*, vagina, *kystis*, bladder, *archos*, rectum, *syrinx*, passage). Fistula between the vagina, bladder, and rectum.

**Colpocys′tic** (*kolpos*, vagina, *kystis*, bladder). Relating to the vagina and bladder.

**Colpocystit′ic.** Relating to or suffering with colpocystitis.

**Colpocysti′tis** (*kolpos*, vagina, *kystis*, bladder). Inflammation of the vagina and bladder.

**Colpocyst′ocele** (*kolpos*, vagina, *kystis*, bladder, *kele*, rupture). Intrusion or prolapse of the bladder into the vagina.

**Colpocystosyr′inx** (*kolpos*, vagina, *kystis*, bladder, *syrinx*, passage). Vesicovaginal fistula, one communicating with the bladder and vagina.

**Colpocystot′omy** (*kolpos*, vagina, *kystis*, bladder, *tome*, incision). Operation for buttonholing the bladder by suturing its mucous membrane to that of the vagina. Lithotomy through the vagina.

**Colpodesmorrhaph′ia** (*kolpos*, vagina, *desmos*, ligament, *rhaphe*, suture). Removal of a part of the mucous membrane of the vagina for the radical cure of prolapse of the vagina and uterus.

**Colpœde′ma** (*kolpos*, vagina, *oidema*, swelling). Œdema of the vagina.

**Colpohyperpla′sia.** Thickening of the vaginal mucous membrane accompanied with increased secretion of mucus. **C. cys′tica,** c. with gaseous blebs formed on the mucous membrane.

**Colpohysterec′tomy** (*kolpos*, vagina, *hystera*, uterus, *ektome*, excision). Excision or ablation of the uterus through the vagina.

**Colpohysterot′omy** (*kolpos*, vagina, *hystera*, uterus, *tome*, incision). Incision of or operation on both the vagina and uterus, or on the uterus through the vagina.

**Colpoklei′sis.** Colpocleisis.

**Colpoleucorrhœ′a** (*kolpos*, vagina, *leukos*, white, *rheo*, to flow). Vaginal leucorrhœa.

**Colpomyomec′tomy** (*kolpos*, vagina, *myoma*, muscular tumor, *ektome*, excision). Removal of a uterine myoma through the vagina.

**Colpomyomot′omy.** Operation upon a uterine myoma through the vagina.

**Colpomyot′omy.** Excision of a uterine myoma through the vagina; colpomyomotomy.

**Colpop′athy** (*kolpos*, vagina, *pathos*, disease). Any disease affecting the vagina.

**Colpoperine′oplasty** (*kolpos*, vagina, *perineum* + *plasso*, to form). Plastic operation for the repair of lesions of the vagina and perineum.

**Colpoperineor′rhaphy** (*rhaphe*, suture). Operation for ruptured perineum by suture to preserve the vaginal mucous membrane as much as possible, and to form a projecting ridge or crest along the middle of the posterior column of the vagina which will act as a column of support and hold up the anterior wall and the bladder.

**Colpophleghymeni′tis** (*phlegma*, mucus, *hymen*, membrane + *itis*). Inflammation of the lining membrane of the vagina.

**Col′poplasty.** Plastic operation on the vagina.

**Colpopol′ypus.** Vaginal polypus.

**Colpopto′sis** (*ptosis*, fall). Prolapsus vaginæ.

**Colporrha′gia** (*rhegnymi*, to break forth). Discharge of blood from the vagina.

**Colpor′rhaphy** (*rhaphe*, suture). Operation of closing the vagina by suture; elytrorrhaphy.

**Colporrhex′is** (*rhexis*, rupture). Rupture of the vagina; discharge of blood from the vagina.

**Colporrhœ′a** (*rheo*, to flow). Leucorrhœa.

**Colpo′sis** (*kolpos*, vagina). Inflammation of the vagina.

**Colpospas′mus** (*kolpos*, vagina, *spasmos*, spasm). Spasm of the vagina.

**Colpospas′tic.** Relating to or affected with colpospasmus

**Colpostegno′sis** (*stegnoo*, to close). Atresia or narrowness or obliteration of the vagina.

**Colpostenocho′ria** (*kolpos*, *stenos*, narrow, *choros*, space). Atresia or narrowness or obliteration of the vagina.

**Colposteno′sis.** Narrowing or constriction of the vagina.

**Colposynize′sis** (*synizesis*, falling together). Atresia or narrowness or obliteration of the vagina.

**Colpot′omy** (*kolpos*, vagina, *tome*, incision). Incision of the vagina in parturition or for stenosis.

**Colpo-ureterocystot′omy.** Incision through the walls of the vagina and bladder to reach the ureters.

**Colpo-ureterot′omy.** Operation upon the ureter through the vagina.

**Colpoxero′sis** (*kolpos*, vagina, *xerosis*, dryness). Abnormal dryness of the vagina.

**Colt's foot.** Asarum canadense; tussilago. **C.'s tail,** Erigeron canadense.

**Col′uber.** A genus of non-venomous snakes.

**Colubri′na.** A term for non-venomous snakes, ord. *Ophidia*. Polygonum bistorta. **C. dracon′tia,** Arum dracunculus. **C. lusitan′ica,** Euphorbia capitata. **C. rectina′ta,** source of mabee-bark; employed in the West Indies in fevers and as a stomachic. **C. virginia′na,** Aristolochia serpentaria.

**Co′lum.** Colon; also a strainer or filter.

**Columba′rium.** A place used for keeping vases in which are contained the ashes of cremated bodies.

**Colum′bian bark.** Carthagena bark.

**Colum′bic acid.** Calumbic acid.

**Columbin′.** Calumbin.

**Col′umbine.** Aquilegia vulgaris. **Wild c.,** Aquilegia canadensis.

**Colum′bium.** Niobium.

**Colum′bo.** Calumba.

**Columel′la** (dim. of columna). Uvula. A bone in the ear of birds corresponding to the stapes in man. **C. coch′leæ,** modiolus. **C. na′si,** cartilaginous septum narium.

**Columel′lar.** Like a pillar. Relating to a columella.

**Col′umn.** In anatomy, a part of greater length than thickness, resembling more or less in general shape a column or pillar. See also *Columna* and *Columnæ*. **Ante′rior c.,** a bundle of white matter in each half of the cord, between the anterior cornu and roots of nerves and the anterior median fissure.

**C. of Ber'tin**, columnæ Bertini. **C. of Bur'dach**, column of Goll. **Car'neous c.**, see *Columæ carneæ.* **C. of Clarke**, a mass of cells restricted to the dorsal region of the spinal cord, lying to the side and a little back of the central canal. **Cu'neiform c.**, c. of Goll. **Direct' cerebel'lar c.**, white matter external to the lateral pyramidal tract. **Dor'sal c.**, posterior c. **Enam'el c.**, one of the hexagonal rods forming the enamel of the teeth. **Fat c.**, see *Fat.* **C. of Goll**, C. of Burdach, cuneiform c.; a bundle of small, wedge-shaped fibres of white substance in the median subdivision of the posterior columns of the spinal cord. **C. of Gow'ers**, see *Gowers.* **Lat'eral c.**, white matter in each half of the cord between the posterior cornu and roots of nerves and the anterior cornu and roots of nerves. **C. of Morgagn'i** or **of the rec'tum**, see *Rectum.* **Mus'cle c.**, muscle prism or rod. **Poste'rior c.**, white matter in the cord between the posterior cornu and roots of nerves and the posterior median fissure. **Poste'rior me'dian c.** (of the medulla oblongata), funiculus gracilis. **Pos'tero-exter'nal c.**, external large division of the posterior column of the spinal cord. **Posterome'dian c.**, central portion of the posterior column of the spinal cord. **Posterovesic'ular c.**, Clarke's column. **Respi'ratory c.**, fibres passing between the internal capsule and lenticular nucleus and adjacent parts. **C. of Rolan'do**, see *Rolando.* **C. of Serto'li**, see *Sertoli.* **Spi'nal c.**, see *Vertebral.* **C. of Spitz'ka-Lis'sauer**, see *Lissauer.* **C. of Türck**, anterolateral column of the spinal cord situated between the anterior median fissure and the nerve roots. **C. of the vagi'na**, see *Vagina.* **Ven'tral c.**, anterior c. **Ver'tebral c.**, see *Vertebral.* **Vesic'ular c.**, a nerve cell in the posterior cornu of the spinal cord.

**Colum'na.** Column. Anatomists use this word for parts resembling a column or pillar. **C. ad'stans inguin'ibus**, penis. **C. dor'si**, vertebral column. **C. foram'inis ova'lis**, see *Ovalis fossa.* **C. for'nicis**, see *Fornix.* **C. me'dia**, see *Thyroid gland.* **C. na'si**, cartilaginous part of septum of the nostrils; see *Nares.* **C. o'ris**, uvula. **C. spina'lis**, vertebral column. **C. val'vulæ Vieussen'ii**, see *Valvula Vieussenii.* **C. vertebra'lis**, vertebral column. **C. virginita'tis**, hymen.

**Colum'næ** (pl. of columna) **adipo'sæ.** See *Fat columns.* **C. Berti'ni**, columns of Bertin, septula renum; processes of the cortical substance of the kidney which extend between the pyramids of Malpighi as far as the hilus. **C. car'neæ** (fleshy columns), small, fleshy columns which project, more or less, into the auricles and ventricles of the heart, whose use appears to be to prevent too great a dilatation of those cavities. A few of these *columnæ* are attached by one extremity to the walls of the heart, and by the other give insertion to the chordæ tendinæ. **C. car'neæ of the rec'tum**, see *Rectum.* **C. car'neopapillo'sæ**, columns of the vagina. **C. cor'dis**, columnæ carneæ. **C. for'nicis**, pillars of the fornix. **C. Morgagn'ii**, see *Rectum.* **C. papilla'res**, see *Columnæ carneæ.* **C. plica'rum**, foliate papillæ of the tongue; columns of the vagina. **C. rec'ti**, columnæ Morgagni. **C. vagina'les**, columns of the vagina.

**Colum'nar.** Resembling a column. **C. epithe'lium**, see *Epithelium.* **C. lay'er of the ret'ina**, the layer of rods and cones.

**Colum'nea longifo'lia.** Bahel.

**Col'umning the vagi'na.** Introduction of tampon or sponges in oiled silk bag into the vagina for the purpose of giving support to the vaginal walls and to elevate the uterus when prolapsed.

**Co'lus Jo'vis** (staff of Jove). Salvia sclarea.

**Colu'tea arbores'cens.** Bladder senna; ord. *Leguminosæ;* leaves are slightly purgative, and are often mixed with those of the Cassia senna. **C. aper'ta**, species having purgative leaves. **C. cruen'ta**, Colutea aperta. **C. hirsu'ta**, Colutea arborescens. **C. orienta'lis**, Colutea aperta. **C. vesica'ria**, Colutea arborescens.

**Colymbif'era mi'nor.** Mentha crispa.

**Colyth'rum.** Esenbeckia febrifuga.

**Colyt'ic** (*kolytikos*, preventive). Inhibitory; obstructive; antiseptic.

**Col'za oil.** Variety of rapeseed oil.

**Co'ma.** A profound, soporous condition from which at times it is extremely difficult to rouse the individual; a symptom occurring in many diseases. Two varieties are distinguished: 1. *Coma vigil, typhomania,* which is accompanied with delirium. The patient has his eyes closed, but opens them when called and closes them again immediately; this state is accompanied with considerable restlessness. 2. *Coma somnolentum* or *comatodes,* in which the patient speaks when roused, but remains silent and immovable in the intervals; coma is a deeper sleep than *sopor,* but less deep than *lethargy* and *carus.* Also formerly hair; capillus (*komeo,* to adorn). **C. agrypno'des**, coma vigil. **Alcohol'ic c.**, coma due to alcoholism. **Apoplec'tic c.**, cerebral apoplexy. **C. cæsa'rea**, plica. **C. comato'des**, see *Coma.* **Diabet'ic c.**, a variety of coma which generally ends fatally, occurring in the latter stage of diabetes mellitus. **C. diacet'icum**, coma due to uræmia. **Epilep'tic c.**, period of unconsciousness occurring after an attack of epilepsy. **Hyster'ical c.**, a form of coma sometimes occurring in hysterical attacks. **Kuss'maul's c.**, see *Kussmaul's symptom.* **C. somnolen'tum**, somnolency, see *Coma.* **Trance c.**, hypnotic lethargy. **Uræm'ic c.**, a form of coma accompanying an uræmic seizure. **C. vig'il**, see *Coma.*

**Coma'con** or **Coma'cum.** Myristica moschata.

**Co'mal** (*kome,* hair). Having resemblance to a hair tuft.

**Coman'dra umbella'ta.** Bastard toadflax; indigenous; has been used in fevers by some Indian tribes.

**Com'arum palus'tre.** Marsh cinquefoil; indigenous plant; is possessed of astringent virtues.

**Com'arus.** Arbutus unedo.

**Co'mata.** Diseases characterized by diminution of the powers of voluntary motion, with sleep or impaired condition of the senses.

**Comato'des.** Comatose.

**Co'matose** or **Co'matous.** Relating to or resembling coma.

**Combi'ning capac'ity.** Quantivalence.

**Combre'tum raimbault'ii.** Plant of Western Africa, called kinkeibah; tonic, diuretic, emetic; used in hæmaturic bilious fever.

**Combus'tion** (*comburo,* to burn). Burning. **Sponta'neous c.**, the alleged rapid destruction of the human body by being reduced to ashes, either spontaneously or on contact with an ignited substance. It is said to have occurred in the obese and the hard drinkers.

**Com'edo** (pl. comedones) or **Com'edon** (*comedo,* to eat up, squander). A minute cylinder of inspissated sebum with a blackened tip, occupying one of the sebaceous follicles of the face; a blackhead.

**Comen'ic acid.** A derivative of meconic acid.

**Côme's arsen'ical pow'der.** See *Powder, arsenical, of Côme.*

**Co'mes** (an associate). A blood-vessel accompanying a nerve. **C. ner'vi ischiad'ici**, branch from the sciatic artery to the great sciatic nerve. **C. n. media'ni**, branch from the anterior interosseous artery to the median nerve. **C. n. phren'ici**, small branch of the internal mammary artery, arising from that vessel where it enters the chest and descending to the diaphragm with the phrenic nerve.

**Comes'tible** (*comedo,* to eat up). Edible; when this word is used substantively it means solid food.

**Cometoc'ora** (*cometes,* comet, *kore,* pupil). Term applied to the different shapes of the pupil in coloboma of the iris.

**Com'frey.** Symphytum. **Spot'ted c.**, pulmonaria. **Wild c.**, Cynoglossum virginicum.

**Com'itant.** Being companion to. **C. heteropho'ria**, c. squint. **C. squint**, conditions in which a wrongly inclined eye moves when the other eye does, so that the deflection is nearly constant.

**Com'ma bacil'lus.** Spirillum choleræ asiaticæ. **C. degenera'tion**, degeneration of the comma tract, as in tabes dorsalis. **C. tract,** tract situated in the middle of the external posterior column of the spinal cord in the cervical and thoracic regions.

**Commanduca′tio** (*commanduco*, to chew up). Mastication.

**Commely′na med′ica.** Aneilema medica; tubers are employed in disorders of the liver and chest.

**Commem′orative** (*commemoro*, to cause to remember). That which recalls, or, rather, which is recalled. **C. signs** are those deduced from circumstances which have gone before; or rather, according to others, those which point out the preceding condition of the patient. They are also called *amamnestic signs*.

**Commen′sal** (*com*, with, *mensa*, table). Term applied to an organism existing within another, but not feeding upon it as a parasite, obtaining its support either from without or from the food-stuff immediately accessible.

**Commen′sum** (*com*, with, *metior*, to measure). Symmetry.

**Com′minuted** (*comminuo*, to break to pieces). Broken into pieces. A comminuted fracture is one in which the bone is broken into a number of pieces.

**Comminu′tion.** Fracture of a bone into a number of pieces.

**Commiph′ora.** Balsamodendron.

**Commissu′ra** (*committo*, to join together). Articulation; commissure. **C. al′ba ante′rior** or **al′ba medul′læ spina′lis,** white commissure of the spinal cord; band of nerve fibres running along the entire length of the spinal cord, situated at the bottom of the anterior median fissure; see *Spinal commissure*. **C. ansa′ta,** fibres extending from the lamina terminalis cinerea over the chiasma opticum to the tuber cinereum. **C. ante′rior accesso′ria,** anterior gray cornu of the spinal cord. **C. ante′rior al′ba,** c. alba anterior. **C. ante′rior cer′ebri,** anterior commissure of the brain. **C. arcua′ta ante′rior,** fibræ arcuatæ orbitales of the optic chiasm. **C. arcua′ta poste′rior,** fibræ arcuatæ cerebrales posteriores of the optic chiasm. **C. basa′lis,** transverse fibres in the tuber cinereum uniting the two hemispheres. **C. ba′seos al′ba,** thin, white lamella connecting the rostrum of the corpus callosum with the lamina cinerea. **C. ba′seos gris′ea,** gray matter forming the floor of the third ventricle. **C. ba′sis sep′ti pellu′cidi,** commissura baseos alba. **C. bre′vis,** a lobule or prominence of the inferior vermiform process of the cerebellum, situated in the incisura posterior, below the horizontal fissure. **C. cerebel′li,** pons Varolii. **C. cerebel′li ad cer′ebrum,** superior peduncles of the cerebellum. **C. cere′bri ante′rior,** anterior commissure of the brain. **C. cer′ebri mag′na** or **max′ima,** corpus callosum. **C. cer′ebri me′dia** or **mol′lis,** middle commissure of the brain. **C. cer′ebri poste′rior,** posterior commissure of the brain. **C. cine′rea,** gray commissure; a band of gray matter situated at the bottom of the posterior median fissure of the spinal cord, connecting the columns of gray matter in the two lateral halves of the cord; see *Spinal commissure*. **C. crucia′ta,** decussating fibres of the optic tract. **C. exter′na,** minor canthus of the eye. **C. for′nicis,** transverse band below the crista fornicis. **C. gris′ea,** gray commissure, see *Spinal commissure*. **C. gris′ea ante′rior,** part of the gray commissure in front of the central canal, see *Spinal commissure*. **C. habena′rum,** transverse fibres connecting the striæ medullares above the ventriculus conarii. **C. hemisphærio′rum,** one of the cerebral commissures. **C. infe′rior,** Gudden's commissure. **C. inter′na,** major canthus of the eye. **C. labio′rum o′ris,** commissure of the lips. **C. labio′rum puden′di,** commisure of the vulva. **C. lemnis′ci,** fibres from the deep layer of the lemniscus, decussating beneath the corpora quadrigemina. **C. mag′na cer′ebri,** corpus callosum. **C. max′ima cer′ebri,** corpus callosum. **C. me′dia,** the middle commissure, see *Cerebral commissures*. **C. medul′læ spina′lis,** spinal commissure. **C. mol′lis,** soft commissure, see *Cerebral commissures*. **C. ner′vea,** syndesmosis. **C. oliva′rum,** arcuate fibres apparently passing from one olivary body to the other. **C. os′sium car′nea,** union of bones by means of muscles. **C. palpebra′rum,** commissure of eyelids. **C. pedunculo′rum cona′rii,** commissura habenarum. **C. pedunculo′rum sep′ti pellu′cidi,** commissura baseos alba. **C. poste′rior cer′ebri,** posterior commissure of the brain. **C. poste′rior cine′rea,** c. cinerea. **C. prosta′tæ poste′rior,** middle lobe of the prostate. **C. puden′di,** commissure of the vulva. **C. sim′plex,** lobule on the upper surface of the vermis of the cerebellum, near the posterior notch. **C. ten′uis,** folium cacuminis. **C. transver′sa sulca′ta,** ala uvulæ. **C. vul′væ,** commissure of the vulva.

**Commissu′ral.** Of or belonging to a commissure.

**Com′missure.** Commissura; a point of union between two parts: thus the commissures of the eyelids, lips, etc., are the angles which they form at the place of union. **Ante′rior c. of the brain,** small, medullary fasciculus, situated transversely at the anterior part of the third ventricle and uniting the two hemispheres. **Ar′cuate c.,** posterior optic commissure. **Ba′sal c.,** c. of Meynert. **C. of the cerebel′lum,** decussation of white fibres occurring above the roof nucleus (**great anterior commissure**) and in the posterior part of the corpus trapezoides (**posterior commissure**). **C. of the eye′lids,** commissura palpebrarum; union of the lids at the outer and inner angles of the eye. **C. of floc′culus,** pedunculus flocculi; unites the flocculus with the posterior medullary velum. **Gray c.,** commissura cinerea. **Great c. of the brain,** unites the two hemispheres for some extent, and is the *corpus callosum*. **C. of Gud′den,** see *Gudden's commissure*. **Intercer′ebral c.,** see *Valvula Vieussenii*. **C. of lips,** place of union of the lips at either angle of the mouth. **C. of Mey′nert,** commissura basalis. **Mid′dle c. of the brain,** layer of gray substance uniting the thalami optici. **Oblique′ c.,** see *Valvula Vieussenii*. **Op′tic c.,** see *Chiasm*. **Poste′rior c. of the brain,** medullary band situated at the posterior part of the third or middle ventricle. **Short c.,** lobule on the inferior surface of the vermis of the cerebellum, in the incisura posterior. **Soft c.,** middle c. of the brain. **C. of the spi′nal cord,** see *Spinal commissure*. **C. of the u′vea,** ciliary ligament. **C. of the vul′va,** place of union of the labia majora, above and below. **C. of Wer′nekinck,** commissura lemnisci. **White c.,** commissura alba.

**Com′mon.** Term applied to structures which form or are formed by two or more structures of similar position or function, as the common bile duct, common carotid artery, etc.

**Commo′tio.** Motion; concussion. **C. cer′ebri,** concussion of the brain. **C. ret′inæ,** œdema of the retina due to traumatism.

**Commo′tion.** Concussion.

**Commu′nicable** (*communico*, to communicate, *habilis*, able). Contagious; infectious.

**Commu′nicans** (*communico*, to communicate). That which communicates or establishes a communication, communicating; as the two *arteriæ communicantes*, within the cranium—the one *anterior*, very short, and extending transversely from one anterior cerebral artery to the other; the other *posterior*, called *communicans Willisii*, passing from the internal carotid to the posterior cerebral artery. It is a branch of the basilary. **C. hypoglos′si,** c. noni. **C. no′ni,** long, slender, nervous branch, formed by filaments from the first, second, and third cervical nerves, descending upon the outer side of the internal jugular vein and forming a loop with the descendens noni over the sheath of the carotids. **C. perone′i,** see *Communicans poplitei*. **C. poplite′i,** large nerve arising from the popliteal, and, at a variable distance below the articulation of the knee, receiving the *communicans peronei* from the peroneal nerve, the two forming the external saphenous nerve. **C. tibia′lis,** communicans poplitei. **C. Willis′ii,** see *Artery* (table) and *Communicans*.

**Commu′nicating.** Establishing communication. See *Communicans*.

**Com′mutator** (*commuto*, to exchange). A device for alternating in direction a galvanic current, with any desired frequency.

**Co′mose.** Profuse in hair; hairy.

**Compact′** (Lat., *compactus*). Solid; close. The term *compact tissue* is given to the hardest and closest parts of bone.

**Compa′ges** (setting together). Articulation; commissure. **C. vertebra′rum,** vertebral column.

**Compar′ative anat′omy.** Comparative study of each organ in different animals or different classes of animals.

**Com′pass plant** (so called from its leaves pointing, quite uniformly, north and south). Silphium laciniatum.

**Compatibil′ity.** Quality of being compatible.

**Compat′ible.** Term applied to a drug which can be prescribed with another without destroying its chemical composition or especially its medicinal activity.

**Com′peba.** Piper cubeba.

**Compelled′ move′ments.** Involuntary movements.

**Com′pensating cur′rent.** Current of electricity which neutralizes the force of a muscle current; the apparatus employed is called a *compensator*. **C. opera′tion,** tenotomy of a healthy eye for paralysis of the other eye.

**Compensa′tion** (*compenso*, to compensate). Counterbalancing of a defect; a term implying especially an increase in size and power of some of the cavities of the heart, so that the arteries receive their full supply of blood in spite of valvular or other obstruction or of regurgitation. **Lost c.,** a condition the reverse of that just described, the heart being unable to supply fully the arteries, and pulmonary and venous congestion resulting.

**Com′pensator.** See *Compensating*.

**Compen′satory.** Acting as a substitute for that which is absent, or counterbalancing a defect. **C. hyper′trophy,** increase in size of some organ or part induced by the extra work necessary to supply a defect in some other organ or part; see *Compensation*.

**Com′peper** or **Com′piper.** Piper cubeba.

**Complaint′.** Disease. **Bow′el c.,** diarrhœa. **Sum′mer c.,** cholera infantum or cholera morbus.

**Complement′.** The active element of hæmolysis in immune serum; it is analogous in its constitution to toxin, being composed of a haptophore group, by means of which the amboceptor anchors it to the erythrocyte, and a toxophore group which effects the destruction of the red cell; the action of this latter group is called zymotoxic.

**Complemen′tal** or **Complemen′tary.** Supplying a lack; completing. **C. air,** see *Respiration*. **C. col′ors,** see *Colors*.

**Complement′ophile** (*phileo*, to love). Term designating the haptaphore group in the intermediary or immune body which combines with the complement.

**Com′plex** (*complecto*, to twist together). Embracing several distinct things; complicated. **C. of symp′toms,** syndrome.

**Complex′io.** Coition; complexion; confusion; temperament.

**Complex′ion.** Often employed to denote the color or the condition of the skin of the face, as "a *good complexion*," "a *sallow complexion*," etc. It formerly had a more extensive signification, denoting the aggregate of physical characters presented by any individual considered with respect to his external arrangement or condition. It meant more than *constitution*, for which it was used synonymously in many cases, and differed from *temperament*, which is less the external condition of the body than the state or disposition of the organs in health.

**Complex′us.** Complex. **C. ma′jor,** c. musculus. **C. mi′nor** arises from the transverse processes of the last four cervical vertebræ, and is inserted into the mastoid process. **C. mus′culus,** muscle situated at the back part of the neck, extending from the interval that separates the two prominent ridges on the posterior surface of the os occipitis to the transverse and articular processes of the six cervical vertebræ, as well as to those of the first five dorsal. It serves to straighten, incline, and turn the head.

**Complica′tion** (*complico*, to fold together). In medicine, the presence of several diseases or of several adventitious circumstances foreign to the primary disease.

**Compo′nent.** Forming a portion of another composite.

**Com′pos** (Lat., having the mastery or control) **men′tis.** Sane; sound in mind.

**Compos′ite.** Made up of several substances. See *Composition*. **C. mar′ginal cells,** see *Crescents of Gianuzzi*. **C. pho′tograph,** a photograph printed from the superimposed negatives of a series of persons or objects of a similar character, such as the heads of many individuals of the same race or class or occupation in life, the object being to obtain a picture of the type.

**Composi′tion** (*compono*, to place together). The act of composing or compounding—of medicines, for example; also the thing compounded; likewise, a combination.

**Compos′itors′ cramp.** An occupation neurosis impairing the finger and arm action of type-setters.

**Compound′.** To mix medicines; to mingle different ingredients into one whole. Used adjectively, *com′pound* signifies the result of the union of several medicinal agents, as a compound medicine, compound cathartic pills, for example. **C. frac′ture,** see *Fracture*.

**Compound′ing.** The pharmaceutical preparation of a prescription.

**Comprehen′sio** or **Compren′sio** (*comprehendo*, to take hold of). Catalepsy.

**Com′press** (*comprimo*, to press together). Folded pieces of lint or rag, so contrived as, by the aid of a bandage, to make due pressure upon any part. According to their shape, direction, and use, compresses have been called long, square, triangular, prismatic, graduated, split, oblique, circular, dividing, uniting, etc. **Crib′riform c.,** a c. with numerous perforations to permit of the escape of secretions from the subjacent parts. **Fenes′trated c.,** one containing an opening for drainage or to permit of inspection of the part beneath. **Grad′uated c.,** one composed of layers of decreasing size, forming a pyramid. **Wet c.,** a cloth, well wetted with cold water, applied to the surface near the supposed seat of disease, securely covered with a dry cloth and changed as often as it becomes dry. It is sometimes covered with a layer of oiled silk, to prevent evaporation.

**Compres′sion.** Pressure; methodical compression is a measure frequently had recourse to in surgery. We compress a limb affected with œdema, varices, hydrops articuli, callous ulcer, etc. The abdomen is compressed after delivery, after paracentesis abdominis, etc. The compression is produced by means of the roller, laced stocking, etc., according to the part and to the particular case. Moderate compression aids the contractility of parts and modifies their nutritive action, so that even large tumors may disappear after it has been used for some time. A greater degree of pressure is apt to impede the circulation. Compression is often used to stop or moderate the flow of blood in cases of aneurysm or wounds of arteries and veins. In such cases the compression may be *immediate* when applied upon the artery itself, or it may be *mediate* when applied through the integuments and soft parts. **C. at′rophy,** wasting of an organ or a part resulting from the pressure of a tumor, an effusion, etc., or from mechanical pressure. **C. of the brain** may arise from coagula of blood, soft tumor, bony excrescence, depressed portion of the skull, or the presence of some foreign body. The effects vary according as the compression takes place suddenly or gradually; when suddenly, the symptoms are of the comatose or apoplectic character; when gradually, mania, convulsions, etc., are more likely to occur. Compression arising from a depressed portion of the skull requires the use of the trephine, but surgical interference is not always practical or judicious. In local suppuration, however, when the matter is collected between the bone and dura mater or in the cavity of the arachnoid, good results may follow from puncturing. Compression may also be caused by sudden hemorrhage in the interior of the brain, as from the lenticulostriate artery, the artery of cerebral hemorrhage of Charcot, or the middle meningeal artery.

The following table gives the differential diagnosis of compression and concussion of the brain (Roberts):

| *Compression.* | *Concussion.* |
|---|---|
| 1. Symptoms may not be immediate after injury. | Symptoms always immediate. |
| 2. Complete unconsciousness and total insensibility to impressions upon the organs of sense. | Partial unconsciousness, and only impaired sensibility to impressions upon the organs of sense. |
| 3. Respiration slow, stertorous, and puffing. | Respiration quiet. |
| 4. Pulse slow and full. | Pulse frequent and feeble. |
| 5. No vomiting. | Sometimes vomiting. |
| 6. Retention of urine, and often of fæces. | Incontinence of urine and fæces. |
| 7. Paralysis, usually hemiplegia, of opposite side. | No paralysis. |
| 8. Pupils insensible to light. | Pupils react somewhat to light. |
| 9. Deglutition impossible. | Deglutition possible. |

**C. of the cord,** a condition produced in a manner similar to that causing compression of the brain. Paralysis (paraplegia usually and loss of power in the rectum and bladder) and disturbances of sensation below the seat of the lesion usually occur. **C. myeli′tis,** myelitis produced by compression, as in Pott's disease.

**Compres′sive.** That which compresses; a *compressive bandage* is one that compresses the parts to which it is applied.

**Compres′sor.** Anything that exerts the force of compression, as a muscle or surgical instrument or an arterial compressor. **C. bul′bi,** accelator urinæ. **C. b. pro′prius,** deep layer of bulbocavernosus, situated directly over the bulb of the urethra. **C. of Deschamps′,** see *Deschamps.* **C. of Dupuytren′,** instrument for compressing the femoral artery. **C. hemisphærio′rum bul′bi,** compressor bulbi proprius. **C. la′bii,** musculus labii proprius; fibres of the orbicularis oris muscle. **C. laryn′gis,** group of muscles, regarded as a whole, situated between the wings of the thyroid cartilage and the cricoid cartilage. **C. len′tis,** see *Ciliary muscle.* **C. na′ris,** muscle situated at the sides of the nose; flat and triangular; arises from the inner part of the fossa canina and passes to the dorsum of the nose, where it is confounded with that of the opposite side. **C. na′si,** compressor naris. **C. of Nuck,** instrument for compressing the urethra to obviate incontinence of urine; it consists of a metal belt to which is fixed a plate that compresses the urethra in the perineum. **C. pros′tatæ,** muscle, admitted by Albinus, which is formed of the anterior fibres of the levator ani, that embrace the prostate; it is the *prostaticus superior* of Winslow. **C. sac′culi laryn′gis,** see *Sacculus laryngis.* **C. tu′bæ Eustach′ii,** levator veli palati. **C. ure′thræ,** muscle consisting of two portions—one of which is *transverse* in its direction, and, in consequence of its having been particularly described by Guthrie, has been called *Guthrie's muscle;* it arises from the ramus of the ischium and passes inward to embrace the membranous urethra. The other portion is *perpendicular,* descending from the pubis and passing down to be inserted into the transverse portion of the muscle—*pubio-urethralis.* This portion has been considered by many to be only the anterior fibres of the levator ani, and, having been described by Wilson, it has been called *Wilson's muscle.* **C. ve′næ dorsa′lis pe′nis,** small muscle distinctly seen in animals, less distinctly in man, which arises from the ramus of the pubis, and, ascending in a direction forward, is inserted above the vena dorsalis, joining with its fellow of the opposite side on the mesial line. Its use is supposed to compress the vein in erection. It is sometimes called the *muscle of Houston,* after Houston, of Dublin. **C. vesic′ulæ et duc′tus semina′lis,** muscular coat surrounding the vesiculæ seminales and vas deferens.

**Compresso′rium.** Compressor.

**Compto′nia asplenifo′lia** (after Compton, bishop of London). Sweet fern, shrubby sweet fern, sweet bush, fern bush, fern gale, spleenwort bush, meadow fern; astringent root; indigenous shrubby plant which grows in sandy or stony woods from New England to Virginia. Possesses tonic and astringent properties, and is used as a domestic remedy in diarrhœa, etc., in the form of decoction.

**Compul′sory move′ments.** Forced movements of coordination, from lesion of the nervous centres; circus movements.

**Con,** as a prefix, like *cum,* with.

**Conæsthe′sis.** See *Cœnesthesis.*

**Conamarin′.** Bitter principle of Conium maculatum.

**Cona′rial.** Relating to the conarium or pineal gland. **C. tube,** hollow stalk of the pineal gland in the early embryo.

**Conariohypophys′eal.** Relating to the pineal gland and pituitary body.

**Cona′rium** (*konos,* cone). Pineal gland.

**Concarna′tio** (*con, caro,* flesh). Union of bones by means of muscles.

**Concassa′tion.** Pharmaceutical process for reducing roots, woods, etc., into small fragments, in order that their active principles may be more readily separated from them.

**Concat′enate** (*con,* with, *cateno,* to link). In a linked condition.

**Conca′to's disease′.** Tuberculosis of different serous membranes, generally followed by tuberculosis of the lungs.

**Concau′sa.** A cause which co-operates with another in the production of disease.

**Concava′tion.** Anterior gibbosity, or projection of the sternum forward.

**Con′cave.** Hollowed and curved, like the wall of a sphere viewed from the centre.

**Concav′itas conchula′ris cer′ebri.** Infundibulum of the brain. **C. u′teri,** cavity of the uterus.

**Concav′ity.** Hollowness.

**Conca′vo-con′cave.** Concave on opposite sides.

**Conca′vo-con′vex.** Concave on one side and convex on the other.

**Conca′vum pe′dis.** Sole of the foot.

**Conceive′.** To become pregnant. To form a mental image.

**Con′centrated.** Term applied to solutions that contain a large proportion of the dissolved ingredients; also to the pulse of arterial tension.

**Concentra′tion.** Evaporation of part of the fluid portion of a mixture, by which the latter gains relative strength.

**Concen′tric.** Peripheries having a common centre; a term sometimes applied to a series of circles so arranged.

**Concen′tric globes.** Epithelial pearls or nests; concentric masses of cells characteristic of epithelioma.

**Con′cept.** A definite form of thought.

**Conceptac′ula** (pl. of conceptaculum) **semina′ria.** Vesiculæ seminariæ or seminales.

**Conceptac′ulum** (receptacle). Uterus; vessel.

**Concep′tio.** Conception. **C. vitio′sa,** extra-uterine pregnancy.

**Concep′tion** (*concipio,* to conceive). Impregnation of the ovum by the positive contact of the male sperm, whence results a new being. The whole subject of conception is most mysterious. It seems to occur as follows: During the sexual union the male sperm passes along the uterus and Fallopian tubes, the fimbriated extremities of the latter seize hold of the ovarium, and the sperm in this manner comes in contact with a matured ovum and impregnates it. The fecundated ovum remains some time in the ovarium, but at length bursts its covering, is held by the fimbriated extremity of the Fallopian tubes, and passes along the tube into the cavity of the uterus, where it remains for the full period of uterogestation. Some are of the opinion that the ovum is not usually impregnated until it has entered the Fallopian tube or uterus. Also the formation of a mental image, or the image formed. **False c.,** a mole. **Imper′ative c.,** mental condition observed to exist among lunatics, in which they entertain the most erratic and false ideas.

**Concep′tus.** First rudiments of the fœtus after conception; also conception. **C. fal′sus,** a mole.

**Concha** (kon′kah) or **Con′chus** (*konche*, concave shell). Anatomists apply this term to several hollowed parts of the body. The concha of the ear is the hollow part of the cartilage of the external ear, with which the external auditory canal commences; the root of the helix divides it into two portions, the upper and smaller of which is the *cymba*. The term has also been applied to the genital organs of the female, the patella, and the middle turbinated bone. **C. au′ris inter′na,** cochlea. **C. cer′ebri,** infundibulum of the brain. **C. ge′nu,** patella. **C. infe′rior,** inferior turbinated bone. **C. labyrin′thi,** cochlea. **C. morgagnia′na,** superior turbinated bone. **C. na′rium supe′rior,** superior turbinated bone. **C. santonia′na** or **Santori′ni,** small bone of the nose occasionally met with, situated above the superior turbinated bone. **C. sphenoida′lis,** sphenoidal turbinated bone. **C. supre′ma,** c. santoniana.

**Con′chæ** (pl. of concha). **C. na′rium,** turbinated bones. **C. prepara′tæ,** burned oyster shells. **C. ven′eris,** turbinated bones.

**Conchairamadine′.** $C_{22}H_{26}N_2O_4 + H_2O$. Alkaloid from cinchona.

**Conchairamine′.** $C_{22}H_{26}N_2O_4 + H_2O + C_2H_6O$. Alkaloid from cinchona bark.

**Conchial** (kon′ki-al). Relating to the concha of the ear.

**Conchinamine′.** Quinidamine.

**Conchinine′.** Quinidine.

**Conchi′tis.** Inflammation of the concha of the ear.

**Conchohe′lix.** Small, fleshy fasciculus attached to the concha of the ear and helix; also called the *small muscle of the helix*.

**Con′choid** or **Conchoid′al.** Shell-like.

**Con′choscope** (*concha*, turbinated body, *skopeo*, to view). Speculum for examining the anterior and middle parts of the nose.

**Con′chotome** (*concha*, turbinated body, *tome*, incision). An instrument for dividing the turbinated bones.

**Con′chus.** Concha; cranium. In the plural it means the orbital cavities. **C. oc′uli,** orbit.

**Conchyl′ia** (*concha*, shell). Turbinated bones.

**Conciden′tia.** Collapse.

**Concoc′ted** (*concoquo*, to boil together). Brought to maturity; ripe; digested.

**Concoc′tio.** Coction; digestion. **C. tar′da,** dyspepsia.

**Concoc′tion.** Coction; the mixing of medicinal substances.

**Concom′itant** (*comito*, to go with). That which accompanies, as a symptom accompanying others.

**Concremen′tum.** Concretion.

**Concres′cence.** Union; growing together of parts normally or previously separate.

**Concres′cible.** Capable of solidifying.

**Concrete′** (*concretus*, compacted). Condensed to solidity.

**Concre′tion** (*concresco*, to grow together). The act of becoming thick or solid; also a mass which has solidified. It was once used synonymously with adhesion or growing together—as *concretion of the toes*. Most commonly it is applied to extraneous and inorganic bodies, of a solid character, met with in different textures after certain chronic inflammations, or which make their appearance in the joints or in the reservoirs for excrementitial fluids. They are calcareous, chalky, fibrinous, etc. Concretion is therefore frequently synonymous with calculus; accidental ossifications or deposits of phosphates of lime—*calcareous concretions*—in certain organs, and especially in the liver and lungs, were formerly called *osseous concretions*. **Al′vine c.,** intestinal c. **Am′yloid c.,** see *Corpora amylacea*. **Calca′reous c.,** see *Concretion*. **Fi′brinous, pol′ypiform, pol′ypous,** or **sanguin′eous c.** of the heart, see *Polypus*. **Intes′tinal c.,** calculus of the stomach or intestines; bezoar. **C. of the ton′sils,** caseous and calcareous concretions in the crypts or follicles of the tonsils.

**Concu′bitus** (*concubo*, to lie with). Coition.

**Concur′sus** (*concurro*, to run, to meet together). The congeries or collection of symptoms which constitute and distinguish a particular disease.

**Concusconine′.** Alkaloid from some of the cinchona barks.

**Concus′sion.** A term employed to denote the agitation often communicated to one organ by a fall upon another, as to the brain from a fall on the breech, etc; a jar or shaking of one of the less solid organs. **C. of the brain** sometimes gives rise to alarming symptoms, even to the abolition of the functions of the brain, yet without any sensible organic disease. Slight concussion of the brain, called stunning, is marked by vertigo, tinnitus aurium, loss of memory, and stupefaction, all these being temporary. When more severe there is instant loss of sensation and volition, with vomiting, the patient being as if in a sound sleep, but there is no stertorous breathing; the pulse is variable, generally more rapid and feeble than in compression; the extremities are cold. (For table of the differential diagnosis of compression and concussion, see *Compression*.) **C. cat′aract,** form of cataract due to traumatism. **C. myeli′tis,** see *Myelitis*. **C. of the lab′yrinth,** condition caused by a blow or an explosion, attended with deafness, vertigo, ringing in the ears, etc. **C. of the ret′ina,** œdema of the retina due to traumatism, with disturbance of vision. **Spi′nal c.** or **C. of the spine,** injury of the spinal cord resulting from a violent shaking or jar, marked by peripheral pains, atrophy, and paresis of the muscles, neurasthenia, etc.; from the fact that this form of injury is often a result of the violent shock of a railway accident, the complex of symptom has been called railway spine.

**Concus′sor.** Apparatus for stimulating muscles in a paralyzed condition.

**Concu′tiens.** Shaking. **C. ca′put,** intertransversalis colli muscles.

**Condamin′ea corymbo′sa.** Tree of Peru; bark is employed as substitute for Peruvian bark. **C. ve′ra,** variety of Cinchona condaminea.

**Condensa′tion.** Increase in density of a fluid or solid, with decrease in size of the latter.

**Conden′ser.** An appliance for reducing gases to the liquid state or liquids to the solid state; see *Alembic*; also an arrangement of lenses for concentrating the rays of light upon the object viewed under the microscope. **Ab′bé c.,** see *Abbé*. **Lieb′ig's c.,** distilling arrangement invented by Liebig, in which the tube conveying the vapor is made to pass through another tube, the calibre of which is such as to leave a space between the two, through which a stream of water may be made to run.

**Conden′sing.** Causing or attended with condensation or solidification, as *condensing osteitis*, an inflammation of bone with induration.

**Con′dom** (from its proposer, Dr. Condom). Armor, French letter, Cytherean shield. The cæcum of a sheep, properly prepared by removal of the mucous coat, which is drawn over the penis prior to coition, to prevent venereal infection and pregnancy, condoms are also made of gold-beater's skin.

**Condril′la** or **Condril′lon.** Gum resin obtained from Atractylis gummifera.

**Conduc′tion.** Term usually applied to the conveyance or transmisson of heat, sound, or electricity. **Aë′rial** or **air c.**, conveyance of sound through the air, the external and internal ear. **C. apha′sia**, amnesic aphasia. **Bone c.**, conveyance of sound to the ear through the bones of the face and head. **Tis′sue c.**, bone c. **Vibra′tions of c.**, see *Sound*.

**Conductiv′ity.** The ability of some media to convey certain forces, such as nervous impulses, heat, sound, and electricity. **Specif′ic c.**, relative ability possessed by some substances for the conveying of certain forces.

**Conduc′tor.** That which conducts. The conductor was an instrument, formerly used in the high operation for stone, for directing the forceps into the bladder. **Pin c.**, instrument for conducting a long pin through tissues. **Sono′rous c.**, name given to nerve fibres in the floor of the fourth ventricle.

**Conduran′go.** Cundurango.

**Con′dylar.** Relating to a condyle.

**Condylarthro′sis** (*kondylos*, condyle, *arthron*, joint). Articulation by condyles; an elongated head or condyle received into an ellipical cavity.

**Con′dyle** (*kondylos*, knuckle). Articular eminence, round in one direction, flat in the other; a kind of process met with more particularly in the ginglymoid joints, such as the condyles of the occipital bone, inferior maxillary bone, etc. Some anatomists have applied the term, however, to eminences that are not articular—as to the lateral tuberosities at the inferior extremity of the os humeri; and even to certain depressions—as to the concave articular surfaces at the upper extremity of the tibia. The transverse root of the zygomatic process has been called *condyle of the temporal bone*. **C. of the fe′mur, of the hu′merus**, etc., see these words.

**Condylec′tomy** (*ektome*, excision). Excision of a condyle.

**Condyl′ion.** Extremity of the inferior maxilla.

**Con′dyloid** (*condylos* + *eidos*, shape). Having the shape of a condyle. **C. articula′tion**, jointing by condyles, an elongated head or condyle being received into an elliptical cavity. **C. foram′ina** are four in number, seated in the occipital bone; two anterior and two posterior to the condyles or condyloid processes of the same bone, and to depressions which are called *fossæ condyloideæ*.

**Condyloid′eocoracoide′us.** Relating to the coracoid process and the head of the scapula.

**Condylo′ma** (Gr., a knob or eminence). Mucous patch or tubercle, moist papule; a soft, fleshy excrescence, of an indolent character, which appears near the orifice of the female genital organs and rectum, occasionally on the fingers and toes, and also in other parts of the body, as the scrotum, penis, mouth, tonsils, etc. The whitish pellicle seen in the mouth especially is called the *opaline patch*. **C. acumina′tum**, cauliflower excrescence. **C. cla′vus**, condylomatous excrescence of the uterus. **C. eleva′tum**, c. acuminatum. **C. endocys′ticum**, molluscum contagiosum. **Flat c.**, c. latum. **C. i′ridis**, iritis gummosa. **C. la′tum**, broad syphilitic eruption on the skin, contagious in character. **C. porcela′neum**, molluscum contagiosum. **C. syphilit′icum**, condyloma latum. **C. ty′lus**, tyloma.

**Condylo′sis.** Condyloma.

**Condylot′omy.** Excision of part of a condyle.

**Con′dylus** (*kondylos*, knuckle). Condyle. **C. exter′nus** or **extenso′rius hu′meri**, external condyle of humerus. **C. flexo′rius** or **inter′nus hu′meri**, internal condyle of humerus. **C. latera′lis fem′oris**, external condyle of femur. **C. l. hu′meri**, external condyle of humerus. **C. media′lis fem′oris**, internal condyle of femur. **C. m. hu′meri**, internal condyle of humerus.

**Con′dy's disinfec′ting li′quid** or **fluid.** A two per cent. solution of potassium permanganate; disinfectant. *Darby's fluid* is a similar preparation.

**Cone.** Triangular area of reflected light-rays visible on the membrana tympani, passing inferiorly and anteriorly from the umbo. **C. fi′bres**, the processes connecting the retinal cones with the outer molecular layer. **C. flow′er**, Rudbeckia laciniata. **Pur′ple c.**, Echinacea purpurea. **C. of the kid′ney**, pyramid of Malpighi. **C. of the ret′ina**, one of the structures intermingled with the rods, in the columnar layer of the retina.

**Cones′si cor′tex.** Nerium antidysentericum.

**Conessine′.** Alkaloid contained in the bark of Nerium antidysentericum, Halarrhena africana, and H. antidysenterica; used in diarrhœa and dysentery.

**Cones′sium.** Wrightia antidysenterica.

**Confec′tio** (*conficio*, to make up). Confection; comfit. In general it means anything made up or preserved with sugar. In the Ph. U. S. and Br. it includes the articles before called electuaries and conserves. **C. alker′mes**, alkermes. **C. amygdala′rum**, almond confection, almond paste (sweet almonds, gum acacia, white sugar); a good mode of keeping almonds in a state fit for making emulsions. In the British Pharmacopœia the ingredients are rubbed to a coarse powder called pulvis amygdalæ compositus, compound powder of almonds. **C. archig′eni** (castor, long pepper, black pepper, storax, galbanum, costus, opium, saffron, syrup of wormwood), a stimulant in nervous affections. **C. aromat′ica**, aromatic confection, Sir Walter Raleigh's cordial (aromatic powder, clarified honey); dose, gr. xx–ʒj (1.3–4.0). Under the name *pulvis cretæ aromaticus*, aromatic powder of chalk, the British Pharmacopœia has a substitute for confectio aromatica, made by mixing prepared chalk, powered cinnamon, nutmeg, saffron, cloves, cardamom seeds, and refined sugar, and passing the powder through a sieve. **C. aurantio′rum** or **C. auran′tii cor′ticis**, confection of orange or of orange-peel (sweet orange-peel, rectified sugar); stomachic and agreeable vehicle, corrigent, and adjuvant for other remedies; dose, ℥ss (16.0). **C. cardi′aca**, confectio aromatica. **C. cas′siæ**, cassia confection (cassia pulp, manna, tamarind pulp, syrup of roses); gently laxative; dose, ℥ss (16.0). **C. cat′echu compos′ita**, compound confection of catechu, catechu, kino, cinnamon, nutmeg, opium, sherry, syrup of red roses); 1 grain of opium is contained in 200 grains of the mass; dose, as an astringent, ʒss–j (2.0–4.0). **C. Damoc′ratis**, mithridate. **C. Ham′ec**, from an Arabian physician (yellow myrobalans, black myrobalans, violets, pulp of colocynth, polypodium of the oak, leaves of wormwood, thyme, aniseed, fennel, red roses, pulp of prunes, raisins, sugar, honey, senna, rhubarb, etc.); was used as a purgative in clysters. **C. hyacin′thi**, hyacinth confection; tonic and slightly astringent confection (terra sigillata, crabs' stones, cinnamon, leaves of dittany of Crete, myrrh, saffron, syrup of lemon, camphor, Narbonne honey, oil of lemon, hyacinth, etc.). **C. o′pii** or **opia′ta**, opium confection (compound powder of opium, gr. c, syrup, gr. ccc); narcotic and stimulant; dose, gr. x–xx (0.65–1.3). **C. ex capit′ibus papav′eris**, diacodium. **C. pauli′na**, confectio archigeni. **C. pi′peris** (Ph. Br.), black pepper, caraway fruit, clarified honey; dose, ʒj–ij (4.0–8.0), three or four times a day; used for fistula. **C. raleigha′na**, confectio aromatica. **C. ro′sæ** (Ph. U. S.), confection of red rose (red rose leaves, 8 parts, sugar, in fine powder, 64 parts, clarified honey, 16 parts, rose-water, 12 parts); astringent, and chiefly used as a vehicle for other remedies. **C. ro′sæ cani′næ**, confection or conserve of dogrose or hips (pulp of dogrose, refined sugar); acidulous and refrigerant; chiefly used as a vehicle for other remedies. **C. ru′tæ**, confection of rue (rue leaves, caraway seed, bayberries, sagapenum, black pepper, honey); given in clysters as an antispasmodic and carminative. **C. de san′talis**, confection of sanders; formerly used as an astringent. **C. scammo′nii**, confection of scammony (powdered scammony, oil of cloves, powdered ginger, oil of caraway, syrup, clarified honey); stimulating cathartic; dose, gr. x–xx (0.65–1.3). **C. sen′næ** (Ph. U. S. and Br.), confection of senna, lenitive, electuary, etc. (senna in fine powder; coriander in fine powder; purging cassia; tamarind; sliced prune; bruised fig; sugar, in coarse powder; water); laxative; used in habitual constipation and in constipation during pregnancy; dose, ʒj–ij (4.0–8.0). **C. sulph′uris** (Ph. Br.), confection of sulphur (sublimed sulphur, potassium bitartrate, syrup of orange-peel); laxative and alterative; dose, ʒj–ij (4.0–8.0). **C. terebin′thinæ,** confection of turpentine (oil of turpentine, powdered licorice, clarified honey); agreeable mode of administering turpentine; dose, ʒj–ij (4.0–8.0). **C. de thu′re,** frankincense confection; a compound of coriander seeds, nutmeg, spruce resin, licorice, mastich, cubebs, prepared hartshorn, conserve of red roses, sugar, etc.

**Confec′tioners′ disease.** Disease of the nails resulting from handling the ingredients of confectionery.

**Confer′tus.** Pressed together or standing close together, as a cutaneous eruption.

**Confer′va helminthocor′tos.** Corallina corsicana. **C. riva′lis,** species of river weed, which has been recommended in cases of spasmodic asthma, phthisis, etc.

**Confer′vus.** Strophulus.

**Configura′tion.** Shape of an object.

**Confine′ment.** Parturient state; childbed.

**Confirmed′.** Established, as confirmed consumption.

**Con′fluence.** Point of union of two or more canals. **C. of the si′nuses,** torcular Herophili.

**Con′fluent** (*confluo,* to flow together). Running together; an epithet for certain exanthematous affections, in which the pimples, pustules, etc., run together; particularly applied to smallpox. **C. articula′tion,** running together of the syllables in speaking.

**Confo′cal.** Having the same focus; term applied to lenses.

**Conforma′tion** (*conformo,* to arrange). Structure; natural disposition or arrangement of the body. *Faulty conformation* is a vice of original formation, existing, of course, from birth.

**Con′formator.** An appliance for taking an outline in reduced size of the skull; used by hatters as well as by anthropologists.

**Confrica′tion** (*confrico,* to rub together). The action of reducing a friable substance to powder by rubbing it between the fingers. Masturbation.

**Confrica′trix.** Female masturbator.

**Confronta′tion.** Method employed as an aid in the diagnosis of syphilis, which consists in bringing together the patient and the one from whom the affection was contracted.

**Confu′sæ feb′res.** Intermittents whose paroxysms are irregular and confused.

**Confu′sio** (*confundo,* to mix together). Confusion, derangement, synchysis; a term formerly applied to a morbid state of the vitreous body; see *Synchysis.*

**Confu′sion col′ors.** Colors used in testing for color-blindness.

**Confu′sional.** Characterized by mental uncertainty or confusion; a term applied to a form of insanity.

**Confus′tus.** Irregular; a term applied to fevers.

**Congee′ dischar′ges.** Rice-water discharges.

**Congela′tio.** Congelation; catalepsy; frost-bite. **C. bulbo′sa,** frost-bite accompanied with the formation of blebs. **C. erythemato′sa,** frost-bite accompanied with erythematous reddish or purplish spots, which become gangrenous and slough. **C. escharot′ica,** frost-bite accompanied with gangrene.

**Congela′tion.** The action of congealing, of passing to the solid state by the abstraction of heat; as congelation of water, mercury, etc. The term had once other acceptations, as concretion, coagulation; any disease produced by cold, or disease in which there is a kind of stupor or torpor, particularly catalepsy; also frost-bite. Congelation of a part by the application of powdered ice or of a freezing mixture, in a bladder or gauze bag, has been employed to induce local anæsthesia in minor surgical operations; also used in external inflammation.

**Con′gener** (Lat., of the same race). Of the same kind or species; resembling each other in some manner. When applied to muscles it means that they concur in the same action; in opposition to *antagonist,* acting in the opposite direction.

**Congener′ic** or **Congen′erous.** Of the same genus or species.

**Congen′ital** *congenitus,* born with). Originating or existing at birth.

**Conge′ries.** Collection of small bodies or particles into one mass.

**Conges′ted.** Hyperæmic.

**Conges′tio** (*congero,* to carry, to amass, accumulate, etc.). Congestion; hyperæmia.

**Conges′tion.** Engorgement; accumulation of blood in an organ; an important symptom in febrile and other disorders; may arise either from an extraordinary flow of blood by the arteries or from a difficulty in the return of blood to the heart by the veins. More often, perhaps, it is owing to the latter cause, and is termed *venous congestion, stasis,* or *stagnation,* being not unusually attended with symptoms of oppression and collapse. **Ac′tive c.,** see *Hyperæmia.* **Hypostat′ic c.,** congestion resulting from long maintenance of the position on the back in bed, as in pneumonia, in infancy, etc. **Pas′sive c.,** venous c., see *Congestion.* **C. papil′la,** see *Papilla.*

**Conges′tive.** Belonging or relating to or affected with congestion. **C. chill, C. fe′ver,** pernicious malarial fever complicated by congestion of the lungs, brain, or abdominal organs.

**Con′gius.** A gallon.

**Conglacia′tion** (*glacies,* ice). Congelation.

**Conglo′bate** (*conglobo,* to collect, to gather into a ball). Collected into a ball. **C. gland,** globate gland, lymphatic ganglion; a round body formed of lymphatic vessels, connected together by cellular structure, but having neither cavity nor excretory duct, as mesenteric, inguinal, and auxiliary glands.

**Conglom′erate** (*conglomero,* to gather in a heap). Composed of large or small lobes. **C. glands,** those whose lobules are united under the same membrane, as the liver, kidney, testicle, mamma, etc.; acinous glands.

**Conglutin′.** Emulsin.

**Conglu′tinant** (*gluten,* glue). Causing or promoting adhesion; substance that causes adhesion.

**Conglutina′tion.** Gluing together, as in atresia of the os uteri or in adhesion of the pleura to the lungs, or in the massing together of the erythrocytes of the blood.

**Con′go-red test.** Test for free acid from the stomach by means of Congo-red paper, which becomes blue when brought in contact with hydrochloric acid.

**Con′gregate glands.** Agminated glands.

**Con′gress** (*congradior,* to go together). Coition.

**Conhydrine′.** $C_8H_{17}NO$. Alkaloid from the flowers of Conium maculatum.

**Co′ni** (pl. of *conus,* cone) **Hal′leri.** C. vasculosi. **C. hu′muli** or **lu′puli,** strobiles of hops. **C. Malpigh′ii,** pyramids of Malpighi, see *Papillæ of the kidney.* **C. re′num,** see *Papillæ of the kidney.* **C. ret′inæ,** cones of the retina. **C. testic′uli,** c. vasculosi. **C. tubulo′si,** see *Papillæ of the kidney.* **C. vasculo′si,** conical bundles formed by the vasa efferentia of the testis, having their base toward the epididymis, into the tube of which they enter.

**Coni′a.** Coniine.

**Coni′asis** (*konia,* plaster). Incrustation. **Bil′iary c.,** biliary calculus.

**Con′ical.** Cone-shaped. **C. cor′nea,** keratoconus. **C. papil′læ,** papillæ on the surface of the tongue.

**Conid′iospore.** A mould spore.

**Coniferin′.** Glucoside analogous to salicin, from a special species of *Coniferæ*, the Abies excelsa, for example.

**Coni′ic acid.** Acid in conium, probably malic acid.

**Coniine′.** $C_8H_{17}N$. A liquid alkaloid, the active principle of conium. It or a salt—hydrobromate or hydrochlorate—has been given as a sedative to the nervous centres in neuralgic and spasmodic diseases, but it is an energetic poison, and is chiefly used as a collyrium in ophthalmia and locally in neuralgia. Also (then spelled coniin) a ptomain or cadaveric alkaloid resembling coniine, probably identical with cadaverin.

**Conine′.** Coniine.

**Coniosele′nium canaden′se.** Hemlock parsley, growing in the northern parts of the United States and Canada; antidysenteric.

**Conio′sis.** A morbid condition caused by the inhalation of dust.

**Coniosto′sis** (*konis*, dust). Pulverization.

**Conito′mia** (*konis*, dust). Multiplication of cells by the successive division of the nuclei, or multiplication by pulverization.

**Coni′um** or **C. macula′tum.** Common or poison hemlock, poison parsley, spotted parsley, St. Bennett's herb; ord. *Umbelliferæ*. The fresh leaves and young branches, *Conii folia* (Ph. Br.), are narcotic. The full grown fruit of Conium maculatum is official under the name *conium* (Ph. U. S. and Br.). The powder has been used as a palliative in cancer and other painful affections. Externally, it has been applied in fomentation to cancerous and scrofulous ulcers. Its active alkaloid principle is coniine or cicutine, an oily liquid, forming crystalline salts. Conium also contains another alkaloid, *methylconine*. The ripe fruit dried, *Conii fructus*, hemlock fruit, and juice, *succus conii* (Ph. Br.), are also employed, the latter in doses of ʒss–j (2.0–4.0). The Ph. U. S. contains the *extract* (extractum conii), dose, gr. ss–j (0.032–0.065), and the *fluid extract* (extractum conii fluidum), dose, ♏ij–vj (0.12–0.36).

**Conjoined′.** Joined together. **C. manipula′tion,** examination of the parturient uterus with both hands; bimanual version. **C. ten′don,** the blended tendinous mass from the internal oblique and transversalis muscles.

**Con′jugal** (*con*, with, *jugum*, yoke). Relating to married life; applied to diseases affecting both man and wife or conveyed from one to the other.

**Con′jugate.** Joined or acting together. **C. devia′tion of the eyes,** condition noticed in early stages of hemiplegia, in which the head and eyes are turned to the side of the lesion. **C. diam′eter,** anteroposterior diameter of brim of pelvis, taken in median plane from promontory of sacrum to pubic symphysis. **Exter′nal c.,** distance from posterior part of upper portion of sacrum to anterior part of pubic symphysis, including soft parts. **C. fo′ci,** foci so placed that a ray from one will be reflected to the other. **Obstet′rical c.,** shortest line from promontory of sacrum to pubic symphysis.

**Conjuga′tion** (*con*, with, *jugum*, yoke). Assemblage; union; copulation; fusion of spores; anastomosis (erroneously so called) of the nerves. **C. nu′cleus,** segmentation nucleus.

**Conjugatio′nis foram′ina.** Apertures at the sides of the spine, formed by union of the notches of the vertebræ, giving passage to the spinal nerves and to vessels entering or issuing from the vertebral canal.

**Conjunc′ti** (*conjungo*, to join together) **mor′bi.** Diseases joined together, going on either simultaneously, *morbi connexi*, or succeeding each other, *morbi consequentes*.

**Conjuncti′va.** Mucous membrane uniting the globe of the eye with the eyelids. It covers the anterior surface of the eye, *c. bulbi;* the inner surface of the eyelids, *c. palpebrarum;* and the caruncula lacrymalis. It possesses great general sensibility, communicated to it by the fifth pair. The place where the conjunctiva is reflected upon the globe is called fornix conjunctivæ. **C. cor′neæ,** a layer of epithelium on the cornea, really a continuation of the conjunctiva proper. **C. for′nicis,** part of c. uniting ocular and palpebral portions. **Oc′ular c.,** c. bulbi. **C. scle′ræ,** portion of c. covering the sclerotic. **C. tar′si,** c. palpebrarum.

**Conjuncti′val.** Appertaining or relating to the conjunctiva. **C. fold,** fold formed by reflection of the conjunctiva from the lids to the eyeball. **C. mem′brane,** conjunctiva. **C. re′flex,** see *Reflex*.

**Conjunc′tive tis′sue.** Connective tissue.

**Conjunctivi′tis.** Inflammation of the conjunctiva. See *Ophthalmia*. **C. ægypti′aca,** purulent ophthalmia endemic in parts of Egypt; trachoma. **C. ar′ida,** inflammation of the conjunctiva unattended by discharge. **C. blennorrha′gica,** gonorrhœal ophthalmia. **C. catarrha′lis,** catarrhal ophthalmia. **Croup′ous c.,** c. with the formation of membrane on the lids. **Cutic′ular c.,** c. arida. **Diphtherit′ic c.,** croupous c. **Exanthem′atous c.,** see *Ophthalmia*. **Follic′ular c.,** a form of catarrhal ophthalmia in which the follicles contain adenoid tissue. **C. gonorrho′ica,** gonorrhœal ophthalmia. **Gran′ular c.,** trachoma. **Gum′my c.,** c. with a deposit of gummatous matter in the conjunctiva or tissues underlying it. **Lac′rymal c.,** c. caused by obstruction of the lacrymal gland or its ducts. **Mem′branous c.,** croupous c. **Phlycten′ular c.** or **C. phlyctenulo′sa,** see *Ophthalmia*. **C. pustulo′sa,** see *Ophthalmia*. **C. scrofulo′sa,** see *Ophthalmia*. **Spring c.,** a form of c. occurring in the spring and summer months. **C. strumo′sa,** see *Ophthalmia*. **C. trachomato′sa,** trachoma; granular conjunctivitis. **Ver′nal c.,** spring c.

**Con′nate** (*connatus*, born together). Congenital. United. Ossifying from the same centre. **C. diseas′es,** those which an individual is born with. Diseases or conditions dependent upon original conformation may be called congenital, while those supervening during gestation or delivery are termed connate.

**Conna′tion.** Fusion or coalescence of parts, as in fetal life.

**Connect′ing car′tilages.** Fibrocartilages between osseous structures.

**Connec′tion.** Relation of parts; joining. **Sex′ual c.,** coition.

**Connec′tive** (*connecto*, to bind together) **tis′sue.** Cellular tissue; a group of tissues forming the skeleton with its various connections—bones, cartilages, and ligaments—and affording a supporting framework and investment to the various organs. The term is usually restricted to what is variously called reticulated, filamentous, laminated, cribriform, porous, areolar, cellular, conjunctive tissue, or reticular or cellular substance. This is the most common organic tissue. It contains irregular areolæ—not cells, therefore not properly called cellular tissue—between the fibres, as well as serum, fat, and adipose tissue. Of the fibres, some are of yellow elastic, but the greater part are of white fibrous tissue, and frequently present a form of broad, flat bands without distinct fibrous arrangement. Connective tissue unites every part of the body, determines its shape, and by its elasticity and contractility, and by fluid contained in its areolæ, facilitates motion of parts on each other. It has been divided by anatomists into external, general, or common connective tissue, which does not penetrate organs; connective tissue forming envelopes of organs; and that which penetrates into organs, accompanying and enveloping all their parts, constituting the basis of all the organs.

**Connec′tive-tis′sue tu′mors.** These include a variety of neoplasms of differing pathology, such as fibroma, chondroma, lipoma, myxoma, angioma, myoma, osteoma, and sarcoma.

**Con′nell su′ture.** A through-and-through suture, with the knot turned into the lumen of the intestine.

**Connerva′tion** (*nervus*, sinew). Union by means of ligament.

**Connex′io cartilagin′ea.** Synchondrosis. **C. liga-**

**mento′sa,** union by means of ligaments. **C. os′sium carno′sa,** union or connection of bones by muscles.

**Connicta′tion** (*nicto*, to wink). Winking.

**Conni′vens** (drawing together). In circular folds, as the valvulæ conniventes of the intestine.

**Connutri′tus** (*con*, with, *nutrio*, to nourish). A disease is so called which has grown up, as it were, with an individual or been connate with him.

**Conocephal′ic** (*konos*, cone, *kephale*, head). Having a cone-shaped skull.

**Conoho′ria cus′pa.** Tree of tropical America, bark of which (fever bark) is febrifuge.

**Co′noid** (*konos*, cone, *eidos*, shape). Conical; resembling a cone. **C. bod′y,** pineal gland. **C. lig′ament,** ligament passing from the coracoid process to the scapula, and forming part of the coracoclavicular ligament of some anatomists. **C. sub′stance of the kid′ney,** pyramids of Malpighi, see *Kidney*. **C. tu′bercle,** tuberosity of the scapula for attachment of the conoid ligament.

**Conomyoidin′** (*konos*, cone, *mys*, muscle, *eidos*, like). A material existing between the cones of the retina, to which it imparts motion as it contracts or expands under the stimulus of light.

**Conoph′ilis america′na.** Squawroot, cancerroot of U. S. and Canada; astringent and tonic.

**Conophthal′mia** (*konos*, cone + *ophthalmia*). Staphyloma corneæ; conical cornea.

**Conquinine′.** Quinidine.

**Conra′di's line.** Imaginary line from the base of the xiphoid process to the point of the apex beat of the heart. This usually indicates the superior limit of dulness on percussion of the left lobe of the liver.

**Consanes′cent** (*sanus*, well). Convalescent.

**Consanguin′eous** (*con*, with, *sanguis*, blood). Related by common origin or descent, as of same family.

**Consanguin′ity.** Blood relationship.

**Con′scious** (*conscio*, to know). Occurring with cerebral appreciation, as conscious movement.

**Con′sciousness.** Cerebral appreciation. **Doub′le c.,** somnambulistic condition in which the individual leads, as it were, two lives, recollecting in each condition what occurred in previous conditions of the same character, but knowing nothing of the occurrences of the other; see *Duality*. **Mus′cular c.,** muscular sense.

**Consec′utive** (*consequor*, to follow). Following in order or as a sequel. **C. phenom′ena** or **symp′toms,** such as appear after the cessation of a disease or during its decline, but without having direct connection with it.

**Consenes′cence** (*consenesco*, to grow old). Progress toward old age.

**Consen′sual** (*con*, with, *sentio*, to feel). Not regulated by will; sympathetic; reflex. See *Instinctive*.

**Consen′sus.** Agreement; concord; sympathy. **C. oculo′rum,** united action of the two eyes.

**Conser′va.** Conserve.

**Conserva′tion** (*conservo*, to preserve). Preservation of health, or of any object from decay.

**Conserv′ative.** Tending to the saving of injured parts, as c. surgery.

**Con′serve.** A pharmaceutical preparation composed of a vegetable substance and a sufficient quantity of sugar beaten into a uniform mass; electuary, confection.

**Consol′ida in′dica.** Nicotiana tabacum. **C. ma′jor,** symphytum. **C. me′dia,** ajuga; Chrysanthemum leucanthemum. **C. mi′nor,** prunella. **C. rega′lis,** Delphinium consolida. **C. ru′bra,** tormentil. **C. saracen′ica,** Solidago virgaurea.

**Consolida′tion.** Change to a more solid condition, as in hepatization of the lungs, healing and cicatrization of wounds, and union of fractures.

**Con′sonance** (*consono*, to sound together). Agreement of parts. See *Sound*.

**Con′sonant.** Alphabetic sound only properly expressed when conjoined with a vowel; physiologically, a breath or sound produced in the larynx, which suffers more or less interruption in passing through the vocal tube.

**Consor′tium** (*con*, with, *sors*, lot). Sympathy.

**Con′stancy.** Quality of not changing, as possessed, for example, by bacteria under cultivation.

**Con′stant.** Unfailing; term applied to a current of electricity which is uninterrupted or of not greatly varying intensity. The term constant is also given to the galvanic current as distinguished from the faradic or interrupted current.

**Consterna′tion** (*consterno*, to confuse). Stupor; night-terrors of children.

**Con′stipated** (*constipo*, to cram close). Costive; affected with constipation.

**Con′stipating.** Rendering the bowels less open; having the power to induce constipation.

**Constipa′tion.** Costiveness, fecal retention, alvine obstruction, stopping or stoppage of the bowels; state of the bowels in which the evacuations do not take place as frequently as usual, or are inordinately hard and expelled with difficulty, owing to diminished action of the muscular coat of the intestines or to diminished secretion from the mucous membrane, or to both. The exciting and predisponent causes must be inquired into and obviated to render the cure permanent. A distinction is sometimes made between constipation (infrequency of stool) and costiveness (dryness and hardness of the fæces).

**Constit′uent.** Vehicle; ingredient; component.

**Constitu′tio** (*constituo*, to set up, to make). Constitution. **C. lymphat′ica,** status lymphaticus.

**Constitu′tion.** Nature or temperament or individual characteristics; collection of several parts, forming a whole structure; state of all the organs of the body considered as to arrangement, order, or activity A good constitution is one in which every organ is well developed and endowed with due energy, so that all perform their functions with equal facility. **Apoplec′tic c.,** condition supposed to predispose to apoplexy, as a large head, short neck, red face, etc. **Arte′rial c.,** form of plethora in which the blood is rich in fibrin and red corpuscles. **C. of at′mosphere,** condition of the atmosphere, as regards dryness and humidity, temperature, etc., considered in its influence on the animal economy. **Epidem′ic c.,** aggregate of meteorological conditions, during which diseases prevail epidemically.

**Constitu′tional.** Belonging to the constitution of an individual, to his manner of being. Sporadic disease is said to be constitutional when arising from some tendency to morbid development impressed on the cells of nutrition, but independently of communication from without. See *Cachectic*. Epithet given also to diseases produced by the constitution of the atmosphere. Congenital.

**Constric′tion** (*constringo*, to bind). Stricture; narrowing or drawing together; systole.

**Constric′tive.** Styptic.

**Constric′tor.** Compressor. A muscle which binds in a circular direction or closes an orifice, as the sphincters. Instrument for occluding an artery by constriction. **C. a′læ na′si,** compressor naris. **C. a′ni,** sphincter ani externus. **C. cun′ni,** sphincter vaginæ, see *Constrictores cunni*. **C. fau′cium,** see *Constrictores pharyngis*. **C. isth′mi fau′cium,** palatoglossus and palatopharyngeus muscles, glossostaphylinus. **C. isth′mi ure′thræ,** deep fibres of ischio-urethralis muscle. **C. labio′rum,** orbicularis oris. **C. na′si,** compressor naris. **C. of Nuck,** compressor of Nuck. **C. œsoph′agi,** constrictor of the œsophagus; fasciculus of fleshy, circular fibres at the upper part of the œsophagus. **C. o′ris,** orbicularis oris. **C. palpebra′rum,** orbicularis palpebrarum. **C. pharyn′gis,** see *Constrictores pharyngis*. **C. radi′cis pe′nis,** bulbocavernosus muscle. **C. ure′thræ,** ischio-urethralis muscle. **C. vagi′næ,** c. cunni. **C. v. profun′dus,** fibres of ischio-urethralis surrounding the vagina. **C. v. urina′riæ,** detrusor urinæ. **C. vestib′uli,** c. vaginæ profundus. **C. v. laryn′gis,** arytenoepiglottic muscle. **C. vul′væ,** c. cunni.

**Constricto′res** (pl. of constrictor) **ala′rum na′si.** Depressor alæ nasi. **C. cun′ni** or **vagi′næ** or **vul′væ,** small muscles which originate beneath the clitoris, descend along the sides of the vagina, and terminate by becoming confounded with the transversus perinæi and external sphincter ani muscles. They contract the entrance of the vagina. **C. laryn′gis,** cricoarytenoideus lateralis, and thyroarytenoideus muscle combined. **C. na′si,** compressor naris. **C. o′ris,** orbicularis oris. **C. palpebra′rum,** orbicularis palpebrarum. **C. pharyn′gis,** constrictors of pharynx; muscular expansions assisting in forming the parietes of the pharynx: 1. Constrictor pharyngis or faucium inferior, cricopharyngeus, and thyropharyngeus; broad, very thin, quadrilateral, seated superficially, extending from the thyroid and cricoid cartilages as far as the middle of the pharynx, and uniting on the median line with that of the opposite side. 2. Constrictor pharyngis medius, hyopharyngeus and chondropharyngeus, syndesmopharyngeus, occupying the middle part of the pharynx; triangular, and attached anteriorly to the great and little cornu of the os hyoides, to the stylohyoid ligament, and terminating, posteriorly, by joining its fellow of the opposite side. 3. Constrictor pharyngis superior, cephalopharyngeus, gnathopharyngeus, glossopharyngeus, mylopharyngeus, pterygopharyngeus, quadrilateral, and extending from the internal ala of the pterygoid process, from the intermaxillary ligament, from the internal oblique line of the jaw, and from the base of the tongue, to the posterior part of the pharynx. The constrictors contract the pharynx, and can likewise approximate the ends to each other. **C. vagi′næ,** c. cunni. **C. vul′væ,** c. cunni.

**Constrin′gent.** Astringent; styptic.

**Construc′tive** (*construo*, to build). Building up; anabolic.

**Constupra′tion** (*constupro*, to commit rape). Rape.

**Consuetu′do** (*con*, with, *suesco*, to become accustomed). Habit. **C. men′strua,** menses.

**Consul′tant.** Consulting physician or surgeon.

**Consulta′tion** (*consulo*, to hold council). Meeting of two or more practitioners to deliberate on any case of disease.

**Consult′ing physic′ian** or **sur′geon.** Consultant; one who consults with the attending practitioner regarding any case of disease.

**Consumma′tus** (*consummo*, to accomplish). Confirmed, established, as phthisis consummata, confirmed consumption; incurable.

**Consump′tion** (*consumo*, to waste away). Wasting, wearing; progressive emaciation or wasting away; condition preceding death in some chronic diseases, particularly in phthisis pulmonalis; on this account phthisis has received the name consumption; see *Phthisis*. **Apostem′atous c.,** pulmonary phthisis with purulent expectoration. **Black c.,** anthracosis. **C. of the bow′els,** tuberculosis of the intestines; enterophthisis; tabes mesenterica. **Bron′chial c.,** bronchial phthisis. **Catar′rhal c.,** catarrhal phthisis. **Dyspep′tic c.,** dyspeptic phthisis. **Fe′brile c.,** see *Phthisis pulmonalis*. **Gal′loping c.,** phthisis pulmonalis rapidly running its course to a fatal termination. **C. of the lungs,** phthisis pulmonalis. **Mi′ners′ c.,** anthracosis. **Ner′vous c.,** condition in which all the symptoms of phthisis are present except those of a pulmonary character. **Pot′ters′ c.,** potters′ bronchitis; pathological condition similar to that observed in grinders′ bronchitis; see *Asthma, grinders′*. Primarily, it is an acute or subacute bronchitis; secondarily, chronic bronchitis with emphysema. **Pul′monary c.,** phthisis pulmonalis. **Se′nile c.,** see *Phthisis*. **C. of the spi′nal cord,** progressive locomotor ataxia; tabes dorsalis. **Tuber′culous c.,** phthisis pulmonalis.

**Consump′tive.** Affected with phthisis; one so affected. **C. fe′ver,** hectic fever. **C.′s weed,** Eriodictyon californicum.

**Contabes′cence** (*contabesco*, to grow lean). Consumption; marasmus; atrophy.

**Con′tact** (*con*, with, *tango*, to touch). State of two bodies touching each other. In the theory of contagious diseases we distinguish immediate or direct contact, as when we touch a patient laboring under such disease; mediate or indirect contact, when we touch objects that have touched him. See *Contagion*. **C. ac′tion,** catalysis. **C. break′er,** rheotome.

**Conta′gion.** Transmission of a disease from one person to another by direct or indirect contact. See *Contact*. Also at one time applied to the supposed action of miasmata arising from dead animal or vegetable matter, bogs, fens, etc. Contagion and infection are generally esteemed synonymous. Frequently, however, the latter is applied to diseases not produced by contact, as measles, etc., while contagion is used for those that require positive contact, as itch, syphilis, etc. Diseases which are produced only by contagion are said to have their origin in specific contagion or infection, as smallpox, cowpox, syphilis, etc. **Men′tal** or **psy′chic c.,** transference of nervous disease by imitation on the part of the second person.

**Conta′gionist.** One who believes in or advocates the contagious character of any particular disease.

**Contagios′ity.** Property of being contagious.

**Conta′gious.** Communicable; capable of being transmitted by mediate or immediate contact.

**Conta′giousness.** Property of being contagious.

**Conta′gium.** Contagion; miasm; contagious matter; disease germ; pathogenic bacterium. **C. halituo′sum,** contagion by exhalation, as by the breath. **C. vi′vum,** contagion by a living organism.

**Conten′tion** (*con*, with, *tendo*, to stretch). Tension; retention.

**Contex′ture** (*con*, with, *texo*, to cover, to weave). Arrangement of parts; texture. See *Tissue* and *Texture*.

**Contigu′ity** (*con*, with, *tingo*, to touch). Close relation, contact, continuity; the condition of two things which are near each other or touch without uniting, as the head of the humerus and the glenoid cavity of the scapula. **Amputa′tion in c.,** amputation performed through a joint. **Diarthro′sis of c.,** see *Continuity*. **Sym′pathy of c.,** see *Sympathy*.

**Con′tinence** (*contineo*, to restrain). Self restraint; abstinence from or moderation in indulgence of the sexual appetite.

**Con′tinent.** Restrained; continued. **C. cause,** proximate cause. **C. fe′ver,** continued fever; one preserving during its whole course the same degree of intensity, without remission or sensible exacerbation.

**Contin′ued.** Uninterrupted in its course; free from intermissions or remissions. **C. cur′rent,** galvanic current. **C. disease′,** disease continuing uninterruptedly. **C. fe′ver,** one which preserves, during its whole course, nearly the same degree of intensity, without remission or sensible exacerbation. Older writers made distinction between continual fever (febris continua) and synochus (febris continens); the latter fever being of one paroxysm from beginning to end, the former being allied to intermittents.

**Continu′ity.** Adhesion of two things to each other, so that they cannot be separated without fracture or laceration. **Amputa′tion in c.,** amputation performed through a bone and not through a joint. **Diarthro′ses of c.,** movable joints in which the bones do not touch immediately, having between them a ligamentous substance permitting motion; the vertebral articulations are examples. *Diarthroses of contiguity* are movable articulations in which the bones are not continuous, but touch by surfaces covered with a cartilaginous layer moistened by synovia. **Le′sion of c.** or destruction of continuity from disease. **Solu′tion of c.,** division of parts previously continuous, as occurs in wounds and fractures. **Sym′pathy of c.,** see *Sympathy*.

**Contin′uous.** Uninterrupted. **C. cur′rent,** direct current from a galvanic battery. **C. tre′mor,** form of clonic spasm, continuous during waking hours; may be diminished or arrested for a short time by voluntary effort.

**Contor′tion** (*contorqueo*, to twist about). Violent movement of a part, accompanied with torsion, twisting, or writhing; sprain; partial dislocation.

**Con'tour.** The outline or configuration of a part.

**Contra-** (Lat.). In composition, counter, against.

**Con'tra-ap'erture** (*aperio*, to open). Counteropening; incision made in the most depending part of a wound or abscess when the first opening is not situated in a manner favorable for the discharge of the pus.

**Contrac'tile** (*contraho*, to draw together). Capable of contracting, as fibre of muscles.

**Contractil'ity.** Vital property which gives to certain parts the power of contracting. Muscles of locomotion are endowed with a power of voluntary contractility dependent immediately on the action of the brain. Muscles of the viscera of digestion and other internal organs possess involuntary contractility. Contractility and irritability are frequently used synonymously to signify the property of contracting on the application of appropriate stimulus. **Elec'trical c.**, muscular contractility under electric stimulation.

**Contrac'tion.** Action of contracting. Contraction. **Ano'dal clo'sure c., Ano'dal o'pening c.**, see *Anodal*. **Carpope'dal c.**, a spasmodic affection in children, marked by a disposition to convulsions, with a cramp-like contraction of the joints of the upper and lower extremities. **Catho'dal clo'sure c., Catho'dal o'pening c.**, see *Cathodal*. **Cicatric'ial c.**, contraction of a scar. **Clon'ic c.**, a series of contractions alternating with periods of relaxation; the opposite to tonic c. **Dupuytren's' c.**, contraction of the palmar fascia, causing permanent flexion of the fingers. **C. of the extrem'ities**, tetanilla. **Fi'brillar** or **Fi'brillary c.**, contraction of different fibrillæ of muscles after division of the main trunks or their motor nerves. **Front-tap c.**, variety of ankle clonus excited when the muscles of the front of the leg are tapped. **Gow'ers's c.**, front-tap c. **Hour-glass c.**, irregular contraction of the uterus, which assumes such shape. **Idiomus'cular c.**, c. produced by direct stimulation of a weakened muscle. **Idiopath'ic** or **Intermit'tent rheumat'ic c.**, tetanilla. **Myotat'ic c.**, tendon reflex. **Paradox'ical c.**, tetanic contraction of the tibialis anticus muscle, noticed in the early stage of locomotor ataxia, in multiple sclerosis, paralysis agitans, etc. **Pel'vic c.**, narrowness of the diameters of the pelvis. **Peristal'tic c.**, see *Peristalsis*. **Per'manent c.**, contracture. **Remain'der c.**, power of contraction still existing in a muscle after the withdrawal of the stimulus. **Rheumat'ic c.**, tetany. **C. ring of Bandl**, firm ring made by unequal contractions of segments of the uterus in parturition, a precursor of rupture of that organ. **Tetan'ic c.**, prolonged continuous contraction of a muscle, like that occurring in tetanus. **Ton'ic c.**, tetanic c. **Vermic'ular c.**, peristalsis. **West'phal's c.**, paradoxical c., see *Westphal*.

**Contrac'tor chor'dæ.** Muscular fibres in the chordæ tendinæ of the heart.

**Contrac'ture.** Muscular stiff-joint; permanent rigidity and progressive atrophy of the flexor muscles, preventing the motion of extension beyond a certain limit. The affected muscles form hard cords beneath the skin; on dissection they are found converted into tendinous fibres, the fleshy fibres having almost disappeared when the disease has been of any duration. Warm baths, vapor baths, or thermal waters, oleaginous embrocations, mechanical extension of the limbs, electricity, etc., are the chief means of treatment. **Essen'tial c.**, tetanus. **Myopath'ic c.**, c. from morbid alterations in the muscular structure. **Ner'vous, neuropath'ic,** or **pri'mary c.**, c. arising from disorder of the nervous system. **Nur'ses' c.**, tetany in nursing mothers. **Paralyt'ic c.**, c. of normal muscular structure, in which the extremities of the muscles are permanently approximated to a condition due to paralysis of their antagonists. **Protopath'ic c.**, myopathic c. **Rheumat'ic** or **rheumatis'mal c.**, tetany. **Sec'ondary c.**, paralytic c.

**Contraexpec'torants.** Medicines that diminish the amount of expectoration.

**Contraexten'sion.** Counterextension.

**Contrafissu'ra** (*findo*, to cleave). Counterstroke; fracture, contusion, or injury produced by a blow in a part distant from that struck; of frequent occurrence in the cranium.

**Contrain'dicated.** Prohibited by the pathological condition, or not in accordance with the indications for treatment or diet of the patient.

**Contraindica'tion.** Counterindication.

**Contrairrita'tion.** Counterirritation.

**Contralat'eral mus'cles.** Muscles which act in conjunction with muscles of the opposite side, the sternomastoid muscle, for example.

**Contraluna'ris** (*luna*, moon, month). Epithet for a woman who conceives during menstruation.

**Contrastim'ulant.** Medicine that diminishes vital action; nauseant, for example.

**Contrastimula'tion.** Action or employment of a contrastimulant.

**Contrastim'ulus, Controstim'ulus,** or **Contrastim'ulism, doc'trine of.** Name given by Rasori to a medical doctrine founded on the contrastimulant or Rasorian property attributed to certain medicines, by virtue of which living beings are endowed with aptitude for feeling the action of external agents or exciting influences, and of reacting to those influences. When this excitability is too great, there is excess of stimulus or hypersthenia; when too little, there is deficiency or hyposthenia. Diseases, general and local, were divided into three great classes—hypersthenic, hyposthenic, and irritative. Contrastimulant physicians admitted only two classes of medicines—stimulants and contrastimulants.

**Con'trast-stain.** Counter-stain.

**Contrayer'va.** Dorstenia contrayerva. **C. balls**, pulvis contrayervæ compositus. **Lis'bon c.**, Dorstenia contrayerva. **Mex'ican c.**, Psoralea pentaphylla. **C. no'va**, Psoralea pentaphylla. **C. virginia'na**, Aristolochia serpentaria.

**Contre-coup**, kontr-koo' (Fr.). Contrafissura.

**Control'.** Check; determination of the accuracy of one experiment by means of another, the latter, called the *control experiment*, being made under certain determinate or normal conditions. A *control animal* is one not previously treated (immunized, for example) which is subjected to the same conditions as those employed in the experiment; if such animal dies while the previously treated animal survives the assumption is that immunity has been conferred by such treatment.

**Contund'ing** or **Contu'sing** (*contundo*, to bruise). Causing contusions, as vulnerating projectiles, which bruise or lacerate parts without cutting them.

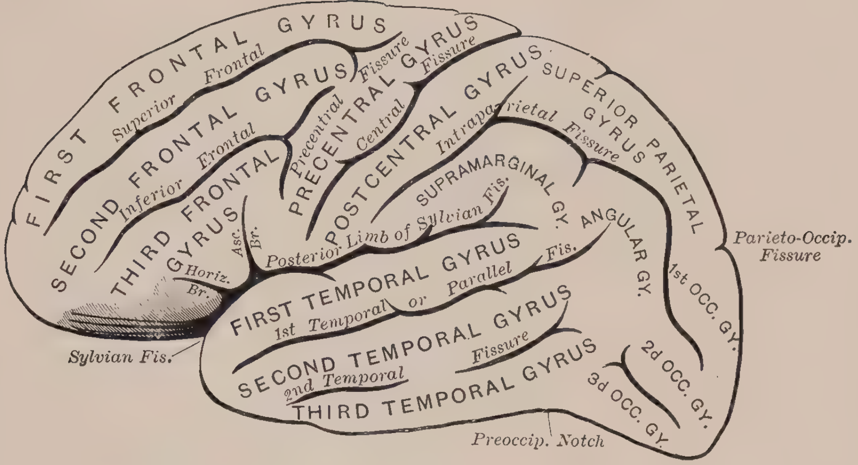
**Conturba'tion** (*conturbo*, to disturb). Night-terrors of children.

**Contused'.** Bruised. **C. wound**, see *Contusion*.

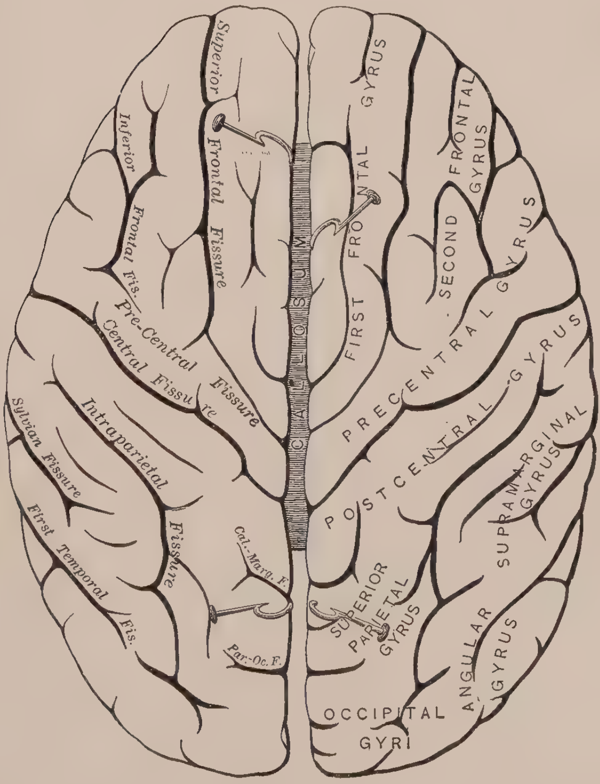
**Contu'sion.** Bruise; an injury or lesion arising from the impact of a body with a blunt surface, and presenting no loss of substance and no apparent wound. If the skin be divided the injury takes the name of contused wound. Deep contusion of the soft parts has been called sarcothlasis and sarcothlasma. **C. pneumo'nia**, inflammation of the lungs following a contusion or injury of the chest. **Wind c.**, see *Wind of a ball*.

**Contu'sor.** Instrument for crushing the head of the fœtus.

**Co'nus.** Cone; posterior staphyloma; modiolus of the ear; pineal gland. **C. arterio'sus** (arterial cone), infundibulum of the heart; portion of the right ventricle from which the pulmonary artery proceeds, forming a prominence on the right side of the anterior furrow of the heart, and prolonged toward the left, becoming narrower so as to form a funnel-shaped projection (conus arteriosus) extending a little beyond the base of the ventricles. **C. coch'leæ**, modiolus. **C. cor'dis**, ventricle of the heart; c. arteriosus. **C. cor'poris stria'ti**, anterior rounded extremity of the corpus striatum. **C. elas'ticus**, cone-shaped inferior portion of the submucous membrane of the larynx. **C. Malpigh'ii**, one of the



The gyri and fissures of the external lobes of the left hemisphere. (Gerrish.)



The hemispheres viewed from above. The fissures are labelled on the left side, the gyri on the right. (Gerrish.)

THE CEREBRAL CONVOLUTIONS.

The mesial and tentorial surfaces of the left hemisphere, showing the gyri (Gerrish.)

THE CEREBRAL CONVOLUTIONS.

pyramids of Malpighi. **C. medulla′ris** or **termina′lis,** conical part of the spinal cord below its enlargement in the lumbar region. **C. vasculo′sus,** see *Coni vasculosi.*

**Convales′cence** (*convalesco,* to grow well). Recovery of health after disease; time which elapses between the termination of a disease and complete restoration.

**Convales′cent.** In a state of convalescence.

**Convallamaretin′.** Product of the action of sulphuric acid on convallamarin.

**Convallamarin′.** $C_{23}H_{44}O_{12}$. Bitter glucoside from Convallaria maialis; emetic; strengthens the action of the heart and augments the blood pressure; dose, gr. ss–j (0.032–0.065).

**Convallaretin′.** $C_{25}H_{52}O_6$. Product of the decomposition of convallarin by dilute acids; emetic.

**Convalla′ria.** Official (Ph. U. S.) name of the rhizome and roots of Convallaria maialis, or lily of the valley. The official preparation is the *fluid extract of convallaria* (extractum convallariæ fluidum); dose, ♏iv–viij (0.25–0.5). **C. angulo′sa,** C. polygonatum. **C. canalicula′ta,** great Solomon's seal, and **C. pubes′cens,** smaller Solomon's seal; indigenous; a decoction of the roots is cathartic, diuretic, and diaphoretic. **C. maia′lis, maja′lis,** or **map′pi,** lily of the valley, May lily; recent flowers are aromatic, cephalic, errhine, cathartic, and cardiac stimulant; the rhizome and roots are official (Ph. U. S.); it contains two active principles—convallarin and convallamarin; the former is purgative, the latter emetic and sedative, resembling digitalis, aconite, and veratrine. **C. multiflo′ra,** growing in this country and Europe; has properties analogous to those of C. maialis. **C. polygona′tum,** systematic name of Solomon's seal, Convallaria angulosa; root is astringent and tonic; also a reputed cosmetic. **C. pubes′cens,** see *Convallaria canaliculata.*

**Convallarin′.** $C_{34}H_{31}O_{11}$. A glucoside extracted from Convallaria maialis; dose, gr. ss–j (0.032–0.065).

**Convec′tion** (*con,* with, *veho, vectum,* to carry). Conveyance of heat or electricity by continuous onward movement of heated or electrified particles and their replacement by new particles not yet subjected to the same influences.

**Conver′gence.** Tending toward a common point; said, for example, of the visual axes. **C. cen′tre,** special nerve centre controlling the convergence of the eyes. **C. excess′,** exaggerated impulse from the c. centre, producing excessive convergence. **C. insuffi′ciency,** diminished or deficient impulse from the c. centre, producing insufficient convergence. **C. near-point,** nearest point to which the two eyes may converge. **C. paral′ysis,** absence of all impulse from the c. centre, resulting in inability to focus the eyes equally on a near-point. **C. reac′tion,** contraction of the pupil accompanying convergence of the eyes.

**Conver′gent.** Proceeding toward a common point. **C. fi′bres,** see *Fibres.* **C. squint** or **strabis′mus,** see *Strabismus.*

**Conver′sion** (*converto,* to turn round). Change from one state into another. **C. of diseas′es,** change or transformation of one disease into another.

**Con′vex.** Having a rounded, protruding surface.

**Convex′ity.** Rounded prominence or protrusion; the opposite of *concavity.*

**Convex′o-con′cave.** See *Concavo-convex.*

**Con′voluted tu′bules.** Twisted or convoluted portions of the uriniferous tubules.

**Convolu′tion** (*convolvo,* to entwine). Rolling of anything upon itself. The convolutions or *gyri* of the brain are numerous smooth and tortuous eminences which characterize the surface of the hemispheres of the brain, with intervening fissures or sulci. See also *Gyrus.*

**Convolvulin′.** $C_{31}H_{50}O_{16}$. A glucoside derived from jalap; purgative in doses of gr. j–ij (0.065–0.13).

**Convol′vulus** (*convolvo,* to entwine). Ileus; intussusception; volvulus. A genus of plants of the order *Convolvulaceæ.* **C. africa′nus,** Ipomæa cathartica. **C. america′nus,** jalapa. **C. arven′sis,** small bindweed; purgative. **C. bata′tas,** sweet potato; only esculent root of the genus. **C. cantab′rica,** cantabrica, lavender-leaved bindweed; anthelmintic and cathartic. **C. dis′color,** species of S. America; leaves are used in gonorrhœa. **C. formo′sus,** root is purgative; leaves are used for poultices in skin diseases. **C. in′dicus,** C. batatas. **C. jala′pa,** name of the plant once thought to be the jalap plant; now referred to Ipomœa jalapa; see *Jalapa.* **C. ma′jor al′bus,** Convolvulus sepium. **C. marit′imus,** Convolvulus soldanella. **C. mecho′acan,** Mexican convolvulus, root of which is aperient; used instead of jalap in dropsy. **C. megalorrhi′zus,** C. panduratus. **C. nil,** blue morning glory; Indian plant, naturalized in Western States; seeds and root are cathartic. **C. opercula′tus,** see *Batata de purga.* **C. orizaben′sis,** see *Convolvulus jalapa.* **C. pandura′tus,** fiddle-leaved bindweed, hog potato, Virginian bindweed, wild potato, mechameck, wild jalap, man in the ground, wild rhubarb, kassauder, kassader, kussauder; in some parts of the United States the root is used in cases of gravel, in powder or decoction. **C. pelta′tus,** species used in inflammation of the lungs and in bronchial affections. **C. peren′nis,** Humulus lupulus. **C. pesca′præ,** bargada; plant used in India as a cataplasm in arthritis. **C. re′pens,** C. sepium. **C. scammo′nea** or **scammo′nia,** systematic name of the scammony plant, Syrian and Mexican plant, concrete gum-resinous juice of which (scammony, mahmoudy) is in blackish-gray fragments. See *Scammony.* **Sea c.,** C. soldanella. **C. se′pium,** great or hedge bindweed; concrete juice of this plant is German scammony; violently purgative, and given in dropsical affections. **C. soldanel′la,** systematic name of sea convolvulus, sea bindweed, soldanella; leaves of this plant are drastic cathartic. **C. syri′acus,** C. scammonea. **C. tugurio′rum,** C. sepium. **C. turpe′thum,** systematic name of turbith plant; cortical part of root of this species, from East Indies, is cathartic.

**Convul′sant.** A medicine that produces tetanic effects or convulsions.

**Convulsed′** (*convello,* to pull together). Affected with convulsions.

**Convulsibil′ity.** Tendency to convulsions.

**Convul′sio.** Convulsion. **C. cani′na,** risus sardonicus, see *Canine laugh.* **C. cerea′lis,** singular disorder of the convulsive kind, attended with a peculiar tingling and formication in the arms and legs, said to have been endemic in Germany, and to arise often from the use of spoiled corn; see *Raphania.* **C. flatulen′ta,** muscular spasm from flatulence. **C. habitua′lis,** chorea. **C. in′dica,** tetanus. **C. rapha′nia,** raphania. **C. solonien′sis,** c. cerealis; ergotism. **C. ton′ica** tonic spasm. **C. u′teri,** abortion.

**Convul′sion.** Clonic spasm; alternate contraction, violent and involuntary, of muscles which habitually contract only under the influence of the will. Contracture or tonic spasms. Such contraction, when slight, is called tremor; when strong and permanent, tetanus, trismus, etc. Spasms, cramp, eclampsia, risus sardonicus, and St. Vitus's dance are forms of convulsions. **Catalep′tic c.,** irregular muscular action seen in catalepsy. **C. cen′tre,** see *Centre.* **Chore′ic c.,** spasms characteristic of St. Vitus's dance. **Clon′ic c.,** c. characterized by alternate contraction and relaxation of muscles involved. **Epilep′tic c.,** c. associated with epileptic paroxysms. **Epilep′tiform c.,** c. which resembles that of epilepsy. **Essen′tial c.,** spontaneous c. **Hyster′ical c.,** a convulsive hysterical attack. **Hysteroepilep′tic c.,** c. occurring in hysteroepilepsy. **Inter′nal** or **in′ward c.,** slight convulsion without unconsciousness, of brief duration; asthma thymicum. **Lo′cal c.,** spasm. **Mim′ic** or **mimet′ic c.,** convulsive tic. **Puer′peral c.,** c. occurring during pregnancy or parturition. **Salaam′ c.,** c. in children in which there is peculiar bobbing of the head forward, and sometimes spasm of the face and eyelids, squinting, or cramps of the limbs. **Stat′ic c.**, convulsive condition in which movements of position or locomotion are not controllable. **Suf′focative c.**, laryngismus stridulus. **Tetan′ic c.**, spasms of tetanus. **Ton′ic c.**, c. apparently without relaxation, as in tetanus. **Uræ′mic c.**, c. from uræmia.

**Convulsionnaire′** (Fr.). Name given, during the eighteenth century, to individuals who had or affected to have convulsions produced by religious impulses, but who were really subjects of epidemic chorea.

**Convul′sive.** That which is accompanied by or is analogous to convulsion, as c. cough, c. disease, etc. A spastic or tetanic agent, such as strychnine. **C. tic**, spasm in the area of distribution of the facial nerves. **C. trem′or**, severe paroxysmal affection attended with marked muscular tremor.

**Cony′za.** Inula dysenterica. **C. bifolia′ta**, Sericocarpus tortifolius. **C. co′ma au′rea**, Solidago virgaurea. **C. ma′jor**, C. squarrosa. **C. me′dia**, Inula dysenterica. **C. pycnostach′ya**, Pterocaulon pycnostachyum. **C. squarro′sa**, great fleabane or spikenard, European plant, whose strong and disagreeable odor was considered destructive to flies, fleas, etc. Infusion of the plant in wine was regarded as emmenagogue and antiicteric; in vinegar antiepileptic.

**Cool′wood.** Pilea pumila.

**Cool′wort.** Tiarella cordifolia.

**Coöper′culum oc′uli.** Eyelid.

**Coop′er's disease.** Cystic disease of the mammary gland. **C.'s fas′cia**, deep layer of superficial fascia of the groin, fascia transversalis; cellular layer under the dartos muscle; Scarpa's fascia. **C.'s her′nia**, encysted hernia of the tunica vaginalis. **C.'s ir′ritable breast**, neuralgia mammæ; neuralgia of the breast. **C.'s ir′ritable tes′ticle**, neuralgia of the testis. **C.'s ir′ritable tu′mors of the breast**, small, very sensitive tumors of that region, of a fibromatous or neuromatous nature. **C.'s lig′ament**, a name given to two ligaments: 1. inferior part of fascia transversalis, passing from the pubic spine to the iliopectineal eminence; 2. fibres from olecranon to coronoid process, on the inner side of the elbow-joint. **C.'s suspen′sory lig′aments**, these pass between the convex portion of the mammary gland and the adjacent skin.

**Coöperto′rium.** Thyroid cartilage.

**Coor′dinate.** Working in harmony; of the same degree. **C. cramps**, compulsory movements.

**Coordina′tion.** Consentaneous action, as of muscles; adjustment or regulation of separate actions of muscles.

**Coor′dinator, oculonu′chal.** Posterior longitudinal fasciculus beneath the floor of the fourth ventricle.

**Coös′trum.** Middle part of the diaphragm.

**Copahin′.** Resinous extract from copaiba.

**Copai′ba.** (Ph. U. S. and Br.) Resinous juice or oleoresin of various species of copaifera. Balsam of copaiba or copaiva has a pungent, bitter taste and syrupy consistence; is yellowish and transparent; is soluble in ether, alcohol, and expressed oils. It is stimulant and diuretic; in large doses purgative. It acts on the lining membrane of the urethra and on mucous membranes in general; is given in gonorrhœa, gleet, leucorrhœa, bronchitis, etc., in doses of ♏x–xxx (0.65–2.0). The following are the official (Ph. U. S.) preparations: *Massa copaibæ;* dose, gr. x–ʒj (0.65–4.0). *Oleum copaibæ;* dose, ♏v–xv (0.32–1.0). *Resina copaibæ;* dose, gr. x–xx (0.65–1.3). Brazil is the chief source of supply. **West In′dian c.**, Copaifera officinalis.

**Copai′fera.** See *Copaiba.*

**Copai′va.** Copaiba.

**Co′pal.** Gum copal; resinous substance from E. Indies, S. America, and western coast of Africa, flowing spontaneously from Elæocarpus copalliferus and different species of hymenæa. Stimulant like all resins, but is now employed only in varnishes.

**Copal′che** or **Copal′chi bark.** Bark of Croton pseudoquina and Strychnos pseudoquina. A bitter principle found in it is called *copalchin.*

**Copallin′.** Resin of Liquidambar styraciflua.

**Copho′ma, Copho′sis,** or **Copho′tes** (*kophos*, deaf). Diminution or loss of hearing.

**Copho′nia.** Auscultatory percussion; see *Acouophonia.*

**Copio′pia** or **Copiop′sia** (*kopos*, fatigue, *opsis*, sight). Fatigue or weakness of vision; asthenopia.

**Copodyskine′sia** (*kopos*, fatigue, *dyskinesia*, difficulty of movement). Difficulty of movement from the fatigue of repeating similar actions; occupation neurosis; professional cramp.

**Cop′per,** symbol Cu. A reddish metal, many of the salts of which are of importance in therapeutics or in toxicology. See *Cuprum.*

**Cop′peras.** Ferri sulphas. **Blue c.**, cupri sulphas. **White c.**, zinci sulphas.

**Cop′pernose.** Gutta rosea.

**Copracra′sia** or **Copracra′tia** (*kopros*, excrement, *a.*, priv., *kratos*, strength). Inability to retain fæces; involuntary evacuation of the bowels.

**Copræ′mia** (*kopros*, excrement, *haima*, blood). Condition arising from retention of fæces and absorption of excrementitious matters into the blood.

**Co′pragogue** (*kopros*, excrement, *ago*, to bring away). Cathartic.

**Cop′raol.** A solid fat from cocoanut, used as a substitute for cocoa-butter in making suppositories.

**Copreme′sia, Coprem′esis,** or **Copriem′esis** (*kopros*, excrement, *emeo*, to vomit). Vomiting of fæces.

**Coprodæ′um.** Inner cloacal chamber of the embryo.

**Coproëm′esis.** Vomiting of fæces.

**Coprolal′ia** (*kopros*, excrement, *laleo*, to talk). Indecency of language as symptomatic of disease of the brain.

**Cop′rolith** (*kopros*, excrement, *lithos*, stone). Concretion of fecal matter in the bowels.

**Coproph′agy** (*kopros*, excrement, *phago*, to eat). Eating fæces.

**Coprophore′sis** or **Copropho′ria** (*kopros*, excrement, *phoreo*, to carry forward). Catharsis.

**Coproplane′sis** (*kopros*, excrement, *planesis*, wandering). Passage of fæces through an unusual outlet, as in fistula.

**Copropoie′sis** (*kopros*, excrement, *poiesis*, making). Formation of fæces.

**Coprorrhœa** (*kopros*, excrement, *rheo*, to flow). Diarrhœa.

**Cop′ros.** Fæces.

**Coprosclero′ma** or **Coprosclero′sis** (*kopros*, excrement, *skleros*, hard). Induration of fecal matters.

**Copro′sis.** Formation of fæces; defecation.

**Coprosta′sia** or **Copros′tasis** (*kopros*, excrement, *stasis*, standing). Constipation or obstruction of the bowels, usually from stricture or constriction.

**Coptine′.** An alkaloid derived from Coptis trifolia.

**Cop′tis** or **C. trifo′lia.** Goldthread; mouthroot. The root of this evergreen is used in aphthous and other ulcerations of the mouth as a local application; internally it is a pure bitter. The alkaloid *coptine* has been obtained from it. **C. tee′ta**, root is a tonic and stomachic.

**Cop′ula** (band). Ligament, articulation, commissure. Immune body. **C. carna′lis**, coition. **C. cartilagin′ea**, see *Synchondrosis.* **C. mag′na cer′ebri**, corpus callosum. **C. nervo′rum optico′rum**, optic chiasm.

**Copula′tion** (*copulo*, to bind together). Coition.

**Cop′ulatory.** Assisting or effecting copulation, as the *copulatory organs.*

**Cor.** Heart. Corn. **C. adipo′sum**, fatty degeneration of the heart muscle or increase of fat around the heart. **C. arterio′sum**, left auricle and ventricle together. **C. bilocula′re**, congenital deficiency of both auricles and ventricles may exist, the heart consisting of only two chambers. **C. bovi′num** (ox heart), an excessively hypertrophied heart. **C. dex′trum**, right auricle and ventricle of heart together.

**C. hirsu′tum** or **his′pidum**, cor villosum. **C. membrano′sum**, auricular portion of the heart. **C. musculo′sum**, ventricular portion of the heart. **C. pulmona′le**, c. dextrum. **C. sem′inis**, embryo. **C. sinis′trum**, left auricle and ventricle together. **C. tauri′num**, hypertrophy of the heart. **C. tomento′sum**, cor villosum. **C. veno′sum**, right auricle and ventricle of the heart. **C. villo′sum**, condition of the heart at times after pericarditis, when it is studded with projections of fibrinous matter from its surface.

**Coraco-.** In composition, appertaining or relating to the coracoid process.

**Coracoacro′mial.** Relating to the coracoid and acromion processes, as coracoacromial ligaments.

**Coracobrachiæ′us.** Coracobrachialis.

**Coracobra′chial.** Belonging to both the coracoid process and the arm, as coracobrachial bursa and ligament.

**Coracobrachia′lis** or **Coracobrachiæ′us.** Muscle situated at the inner and upper part of the arm, arising from the coracoid process of the scapula and inserted at the middle part of the inner side of the humerus. It carries the arm forward and upward, raising the humerus a little, and can also, by acting inversely, depress the shoulder.

**Coracocapsula′ris.** Relating to the coracoid process and capsular ligament of the shoulder; anomalous muscle is so called which has a similar origin and insertion.

**Coracocervica′lis.** Relating to the coracoid process and cervical region; anomalous muscle with such origin and insertion.

**Coracoclaviax′illary lig′ament.** Suspensory ligament of the axilla.

**Coracoclavic′ular.** Belonging to the coracoid process and clavicle. **C. lig′ament**, omoclavicular ligament, unites the clavicle to the coracoid process; it is very irregular and formed of two fasciculi, the conoid and trapezoid ligaments.

**Coracoclavicula′ris anti′cus** or **singula′ris.** Anomalous muscle from the clavicle and capsular ligament of the shoulder to the coracoid process. **C. posti′cus**, anomalous muscle from the clavicle inserted into the coracoid process and superior surface of the scapula.

**Coracocosta′lis.** Relating to the coracoid process and ribs.

**Coracocubita′lis.** Relating to the coracoid process and forearm.

**Coracoglenoida′lis.** Relating to the coracoid process and glenoid cavity.

**Coracoglenoradia′lis.** Relating to the coracoid process, glenoid cavity, and radius; term applied to the biceps flexor cubiti muscle.

**Coracohu′meral.** Coracobrachialis.

**Coracohy′oid.** Omohyoideus muscle.

**Cor′acoid** (*korax*, crow, *eidos*, resemblance). Resembling the beak of a crow; name given by Galen to the short, thick process situated at the anterior part of the upper margin of the scapula. **C. lig′ament**, small, fibrous fasciculus converting the notch at the superior margin of the scapula into a foramen. **C. notch**, suprascapular notch. **C. pro′cess**, see *Coracoid*.

**Coraco-olecrana′lis.** Muscular slip from coracoid process, uniting with the common tendon of the triceps muscle.

**Coracopectora′lis.** Pectoralis minor.

**Coracoradia′lis.** Biceps flexor cubiti, or its short head only.

**Coracoscap′ular.** Relating to the coracoid process in its relation to other parts of the scapula, as coracoscapular foramen.

**Coraco-ulna′ris.** Relating to the coracoid process and ulna; part of the biceps flexor cubiti muscle inserted into the fascia of the forearm near the ulna.

**Corallin′.** A reddish-pink pigment containing rosolic acid. **Red c.**, pæonin.

**Cor′alloid** (*coral*+*eidos*, like) **fun′gus.** Clavaria coralloides.

**Corallorrhi′za multiflo′ra** or **odontorrhi′za.** Coral-root; plant of the United States, whose root is diaphoretic.

**Cor′alroot** or **Cor′alwort.** Clavaria coralloides.

**Cor′chorus hu′milis.** Weed of the East Indies; demulcent, emollient, astringent, diuretic, and aphrodisiac.

**Cor′culum** (dim. of *cor*, heart). Small heart. **C. germ′inis**, germinal spot, see *Molecule*.

**Cord.** An anatomical structure resembling a cord or string. See *Chorda*. **Ax′is c.**, primitive streak in embryology. **Bioplas′son c.**, reticulum of branching cells; reticulum of the umbilical cord. **Braun's c.**, see *Braun*. **Dor′sal c.**, notochord. **False c.**, superior vocal cord of the larynx. **C. of Ferrein′**, true vocal c. **Gan′gliated c.**, trisplanchnic nerve. **Gen′ital c.**, cord-like appearance made by fusion of the Wolffian ducts with the ducts of Müller; see *Genital*. **Gubernac′ular c.**, fibrous part of the gubernaculum testis, see *Gubernaculum*. **Lumbosa′cral c.**, lumbosacral nerve. **Lymphat′ic c.**, see *Bubonulus*. **Lymph′oid c.**, lymph-tube. **Med′ullary c.**, medullary tube. **C. of Mül′ler**, duct of Müller. **Sex′ual c.**, one of the seminiferous tubules in the embryo. **Sono′rous c.**, membranous, semicircular canals of the ear. **Spermat′ic c.**, see *Spermatic*. **Spi′nal c.**, medulla spinalis, see *Spinal*. **Testic′ular c.**, spermatic cord. **Tympan′ic c.**, chorda tympani. **Umbil′ical c.**, funiculus umbilicalis. **Vo′cal c.**, one of two ligaments in the larynx, to the vibration of which voice production is due; these ligaments (called also cords of Ferrein) are the inferior thyreoarytenoid ligaments; the superior thyreoarytenoid ligaments are called the *false* vocal cords, the inferior being the *true;* see *Thyreoarytenoid ligament*. **C. of Weit′brecht**, the orbicular ligament of the elbow. **Wilde's c.**, see *Wilde*.

**Cor′da.** Chorda; cord. **C. Hippoc′ratis** or **C. mag′na**, Achillis tendo. **C. spina′lis**, medulla spinalis.

**Cord′ate.** Heart-shaped.

**Cor′dia africa′na** (after Cordius, a German botanist). Sebestena. **C. bossie′ri**, Mexican species, the source of anacahuite wood; used in consumption. **C. calococ′ca**, species from Jamaica; fruit is expectorant and aphrodisiac, and the root and leaves are used in skin diseases. **C. domes′tica**, sebestena. **C. globo′sa**, from this West Indian species gout-tea is prepared; the leaves are used in dropsy and cutaneous affections. **C. myx′a, obli′qua**, or **officina′lis**, sebestena. **C. sebeste′na** or **specio′sa**, sebestena. **Smooth-leaved c.**, sebestena.

**Cor′dial** (*cor*, heart). Tonic or excitant medicine, judged to be proper for exciting the heart; warm stomachic. **God′frey's c.**, see *Godfrey*. **War′ner's c.**, see *Tinctura rhei et sennæ*.

**Cor′diceps purpu′rea.** Claviceps purpurea.

**Cord′iform.** Heart-shaped. **C. ten′don of the di′aphragm**, central tendon of the diaphragm.

**Cordo′lium** (*cor*, heart, *dolor*, pain). Cardialgia.

**Cordon′ sanitaire′** (Fr.). Line of soldiers or others to prevent communication with an infected district.

**Co′re.** Pupil; axile body or corpuscle. In composition, the pupil.

**Core.** Furunculus; central part of a boil or carbuncle.

**Corec′lisis** or **Coroclei′sis** (*kore*, pupil, *kleio*, to close). Closure or obliteration of the pupil.

**Corecta′sia** or **Corec′tasis** (*kore*, pupil, *ektasis*, dilatation). Dilatation of the pupil.

**Corecte′nia** (*kore*, pupil, *ektenia*, extension). Dilatation of the pupil by prolapse of the iris, from external injury of the cornea.

**Cor′ectome.** A knife for performing corectomy.

**Corectomedial′ysis** (*kore*, pupil, *ektome*, excision, *dialysis*, separation). Coretomy.

**Corec′tomy** (*kore*, pupil, *ektome*, excision). See *Coretomy* and *Iridectomy*.

**Corecto′pia** (*kore*, pupil, *ek*, out of, *topos*, place). Displacement of the pupil; condition of the iris in which one segment is larger than the other, so that the pupil is not in the centre.

**Coredial′ysis.** Iridodialysis; coretomy.

**Coredias'tasis** or **Coredias'tole** (*kore*, pupil, *diastasis* or *diastole*, dilatation). Dilatation of the pupil.

**Corel'ysis** (*kore*, pupil, *lysis*, solution). Operation for the detachment of adhesions between the edge of the pupil and the anterior capsule of the lens.

**Coremetamorpho'sis** (*kore*, pupil, *metamorphosis*, transformation). Irregularity in contour of the pupil.

**Coremetath'esis.** Operation for artificial pupil. See *Iridodesis*.

**Coremorpho'ma** (*morphe*, shape). Morbid change in the shape of the pupil; artificial pupil.

**Coremorpho'sis** or **Coromorpho'sis** (*morphosis*, formation). Coreplasty; operation for artificial pupil. See *Coretomy* and *Iridectomy*.

**Corenclei'sis** (*kore*, pupil, *enkleio*, to include). Operation for artificial pupil, consisting in drawing out, through an incision in the cornea, a portion of the iris and cutting it off; iridencleisis.

**Coreom'eter.** Instrument to measure the diameter of the pupil. The process is called *coreom'etry*.

**Coreon'cion,** or **Coron'cion** (*kore*, pupil, *onkos*, a hook). Instrument hooked at its extremity, used by Langenbeck for the formation of artificial pupil; double-hooked forceps, used by von Gräfe, is similarly named.

**Coreop'sis trichosper'ma.** Tickweed or tickseed sunflower; indigenous plant, with large golden-yellow rays; used as an alterative.

**Coreparel'kysis** (*kore*, pupil, *parelkysis*, drawing aside). Operation for artificial pupil. See *Iridodesis*.

**Corephthi'sis** (*kore*, pupil, *phthisis*, wasting). Shrinking or contraction of the pupil.

**Cor'eplasty** (*kore*, pupil, *plasso*, to form). Operation for artificial pupil.

**Coresteno'ma** (*stenos*, narrow). Narrowness of the pupil, congenital or acquired, by growths from the margin of the iris.

**Coretodial'ysis.** Coretomy; iridodialysis.

**Coretomedial'ysis.** Coretomy; iridectomy.

**Coret'omy** (*kore*, pupil, *tome*, incision). Iridectomy. Various operations for the formation of artificial pupil are included under this term. Simple incision of the iris for that purpose is variously called coretomy, iridotomy, coretotomy, and corotomy. Excision of the iris or incision with loss of substance is called iridectomy, coretonectomy, and corectomy. Simple separation or tearing asunder of the iris from the ciliary ligament is termed iridodialysis, corodialysis, coredialysis, and coretodialysis. Such separation with excision of the iris is called coretomedialysis and iridotomedialysis. Such separation with excision of the part of the iris detached is termed iridectomedialysis. When a portion of the iris is left strangulated in the wound it is termed iridencleisis.

**Coretonec'tomy.** See *Coretomy*.

**Coretot'omy.** Coretomy.

**Coriamyrtin'.** See *Coriaria myrtifolia*.

**Corian'der.** Coriandrum.

**Corian'drol.** A derivative of coriander seed, resembling borneol in composition.

**Corian'drum.** (Ph. U. S.) The fruit or seeds of *Coriandrum sativum;* carminative; used chiefly as a flavoring ingredient in prescriptions; dose of the powder, gr. v–x (0.32–0.65). The *oleum coriandri*, oil of coriander, is also official; dose, ♏j–v (0.065–0.32). **C. cicu'ta,** C. sativum, Cicuta aquatica, Conium maculatum. **C. cyna'pium,** Æthusa cynapium. **C. latifo'lium,** Sium latifolium. **C. macula'tum,** Conium maculatum. **C. sati'vum,** coriander.

**Coria'ria** (*corium*, leather, owing to its leaves containing tannin). Small genus of plants, of which the most known is **C. myrtifo'lia,** myrtle-leaved sumach; plant of Southern Europe; its leaves were formerly used for the adulteration of senna. The leaves and fruit are narcotico-acrid poisons in large doses, owing to the presence of a peculiar principle, *coriamyrtin*, $C_{30}H_{36}O_{101}$, resembling picrotoxin in its action; an alkaloid, *coriarine*, is also extracted from it.

**Coriarimyrtin'.** Coriamyrtin.

**Coriarine'.** An alkaloid derived from Coriaria myrtifolia.

**Cor'igin.** Fucus crispus.

**Corii'tis.** Inflammation of the corium, a form of dermatitis.

**Corindin'.** Ptomain analogous to parvolin and collidin.

**Corinthia'ceæ.** See *Vitis corinthiaca*.

**Co'rion.** Corium, chorion. Hypericum perforatum, Ranunculus sceleratus.

**Co'ris.** A genus of plants, ord. *Primulaceæ*, the only known species of which is **C. monspelien'sis,** Symphytum petræum.

**Co'rium.** Skin of animals. Cutis vera, or thickest part of the skin, of which it constitutes the inner layer; derma; enderon. Connective-tissue basis for epithelium of mucous membranes. **C. phlogis'ticum,** inflammatory crust or buff, buffy coat, a grayish crust or buff, varying in thickness, observed on blood drawn from a vein during existence of violent inflammation, pregnancy, etc.; particularly manifest in pleurisy. For its production there must be increase in the proportion of the fibrous element of the blood over that of the red corpuscles, with augmented aggregation of the latter. The blood is then longer in coagulating, and the red corpuscles have time to subside. In highly inflammatory conditions the buffy coat assumes a concave appearance on its upper surface, and the blood is therefore said to be *cupped*. When blood presents the above appearance it is said to be buffy or sizy. The buffed and cupped appearance are also seen in chlorosis on account of the deficiency in the number of the white corpuscles.

**Cork tree, East In'dian.** Adansonia digitata.

**Cork'wood.** Duboisia myoporoides; agave.

**Corm.** Solid portion of the bulb of a plant that is beneath the surface of the ground.

**Cormotrid'ymus** (*kormos*, neck, *tridymos*, triple). Monster with three distinct heads and necks.

**Corn** (*cornu*, horn). In Great Britain, ceralia, or seeds which grow in ears, not in pods; in the United States, Indian corn, *Zea mays*. Small, hard, corneous tumor forming upon the foot, generally the toes; commonly produced by the friction of ill-fitting shoes. The deeper portion, its base, is of conical shape, buried in the integuments, occasionally as far as the tendons and periosteum. Corns can be destroyed by knife or caustic, or by paring them down and pulling them out by the roots. In the way of palliation they must be constantly pared; and to prevent pressure a thick plaster may be applied, with a central hole to receive the corn. Lunar caustic, rubbed over the surface, will generally diminish its irritability. A combination of salicylic acid, cannabis indica, and collodion has been found efficacious in removing the corn. **C.-cock'le,** Lychnis githago. **C.-er'got,** see *Ergot*. **C.-flag,** Gladiolus vulgaris. **C.-flow'er,** Centaurea cyanus. **Guin'ea-c.,** Panicum italicum. **In'dian c.,** Zea mays. **C.-mint,** Mentha arvensis. **C.-pop'py,** Papaver rhœas. **C. sal'ad,** Valeriana dentata. **C.-silk,** long, delicate stigmata of Zea mays; diuretic in the dropsy of heart and kidney disease. **C.-smut,** stigmata of maize and Indian corn. **Soft c.,** a corn between the toes which is constantly macerated by the sweat. **Squir'rel c.,** Dicentra canadensis. **C.-starch,** starch from seed of Zea mays. **Wild c.,** Matricaria chamomilla.

**Corna'lian bod'ies.** Corpuscles of Cornalia, or sporospermia, a parasitic organism in pebrine, a disease of silkworms.

**Cor'nea** (*cornu*, horn). One of the coats of the eye, so called because of its resemblance to horn. It is termed transparent to distinguish it from the opaque—cornea opaca or sclerotic. It is convex anteriorly, concave posteriorly, forming nearly one-fifth of the anterior part of the eye, and representing a segment of a sphere about 0.625 in. in diameter. It is constituted of fine laminæ or lamellæ, in superposition: 1. Epithelial layer, made up of three layers of cells of different shape, flattened, tooth-like, and cylindrical. 2. Bowan's membrane or anterior basal membrane. 3. Parenchyma or proper substance. 4. Posterior basal membrane, or membrane of Demours or of Descemet. 5. Endothelial layer. Between these layers are areolæ or spaces—interlamellar spaces—assuming a tubular arrangement, hence called corneal tubes. The corneal groove, limbus corneæ, is the margin of the cornea where it joins the sclerotica. **C. cacumina′ta,** staphyloma of the cornea. **Cloud′iness of the c.,** caligo. **Con′ical c.,** see *Keratoconus*. **C. consump′ta,** atrophy of the cornea. **C. globo′sa,** see *Keratoglobus, Buphthalmos, Hydrophthalmos,* all of which are characterized by prominence of the cornea. **Her′nia of the c.,** keratocele. **C. lu′cida,** cornea. **C. opa′ca,** sclerotic. **C. pellu′cida,** cornea. **C. scle′ra,** sclerotic. **C. semicircula′ris,** tænia semicircularis. **Su′garloaf c.,** staphyloma of the cornea. **C. tabefac′ta,** atrophy of the cornea.

**Cor′neal.** Relating or appertaining to the cornea. **C. cor′puscles,** star-shaped bodies in the corneal spaces. **C. lacu′næ,** c. spaces. **C. mu′coid,** a mucus-like substance from the cornea. **C. spa′ces,** interstices between the lamellæ of the cornea. **C. tubes,** c. spaces.

**Cornei′tis.** Keratitis; inflammation of the cornea; may be simple, strumous, or scrofulous, marginal, commencing at the extreme border of the cornea, chronic interstitial—dependent on hereditary syphilis—suppurative (see *Keratitis suppurans*), phlyctenular (see *Herpes corneæ*), or complicated with iritis, corneo-iritis. Fascicular corneitis is a rare form, in which a narrow bundle of subconjunctival vessels is seen to extend on to the surface of the cornea.

**Cor′nel, alter′nate-leaved.** Cornus alternifolia. **Amer′ican red-rod c.,** Cornus sericea. **Large-flow′ered c.,** Cornus florida. **Pan′icled c.,** Cornus paniculata. **Round-leaved c.,** Cornus carcinata. **C. tree,** Cornus mas. **White c.,** Cornus paniculata. **Wild c.,** Cornus florida.

**Corneobleph′aron** (*cornea* + *blepharon,* eyelid). Adhesion between the cornea and the eyelid.

**Corneo-iri′tis.** Inflammation of both cornea and iris.

**Cor′neoscle′ra.** Cornea and sclerotic considered as one membrane.

**Cor′neous** (*cornu,* horn). Horny; having the nature or appearance of horn. **C. lay′er of skin,** see *Skin*. **C. tis′sue,** that which forms the nails.

**Cornic′ula** (pl. of corniculum). Small horns. **C. of the hy′oid bone,** small cornua of that bone. **C. inter′na,** c. of the hyoid bone. **C. laryn′gis or santorinia′na,** supra-arytenoid cartilages, cartilages of Santorini; small, very movable cartilages articulating with the upper part of the arytenoid cartilages.

**Cornic′ular pro′cess.** Coracoid process.

**Cornic′ulopharyn′geal.** Relating to the cornicula of the larynx and the pharynx.

**Cornic′ulum** (dim. of cornu). Horn-shaped body; also a corneous nodule, as **C. laryn′gis,** a horny nodule on the arytenoid cartilage.

**Cornifica′tion** (*cornu,* horn, *fio,* to become). Conversion into corneous or horny tissue.

**Corn′ified.** Converted into corneous or horny tissue.

**Cornin′.** Bitter principle from Cornus florida; an alkaloidal principle from it has been called *cornine*.

**Cor′nix** (crow's beak). Fornix cerebri. Sharp process of bone.

**Corn-stalk disease′.** Disease of cattle caused by a bacillus, probably the same as B. zeæ, and having for its main character severe enteritis, septicæmia, or catarrhal pneumonia.

**Cor′nu.** Corn. Horn; conical, hard, epidermic projection, growing on the heads of certain animals, serving as a weapon of offence and defence. Anatomists have given this name to parts of the human body having nearly the same shape as the horns of animals. Horny excrescence; a corneous wart growing from the skin. Zygomatic process of the temporal bone. **C. acus′ticum** ear-trumpet. **C. ammo′nis,** hippocampus major or pes hippocampi major; broad eminence, curved on itself, and situated at the posterior part of the lateral ventricle; the accessorius pedis hippocampi, prominence usually formed by the base of the inferior cornu of the lateral ventricle of the brain, is merely a fold of the hemisphere. **C. ante′rius, or anti′cum ventric′uli latera′lis,** anterior cornu of the lateral ventricle; portion of the lateral ventricle lodged in the middle of the lobe, and forming the commencement of that cavity. **C. arie′tis,** c. ammonis; hipppocampus major. **C. cartilag′inis thyroide′æ,** one of the eminences on the thyroid cartilage—great or superior, articulated with the great cornu of the os hyoides, and small or inferior, united with the cricoid cartilage. **C. cer′vi or cervi′num,** hartshorn; horns of various species of the stag; they contain about 27 per cent. of gelatin. The shavings, boiled in water, have been esteemed emollient and nutritive. When burnt the shavings constitute *cornu cervi calcinatum* or *cornu ustum,* consisting of 57.5 per cent. of phosphate of lime. It has been given in osteomalacia, from a presumption that the latter is due to deficiency of earthy matter in the blood, the fault, however, being in the agents of assimilation or the cells of nutrition. It has been proposed also as an excitant to the healthy action of the cells in tuberculosis. See also *Cervus, Plantago coronopus*. **C. coccyge′um,** one of two small tubercles at the base of the coccyx which articulate with corresponding eminences on the sacrum. **C com-bus′tum,** cornu cervi. **C. cuta′neum,** cornu; horny excrescence from the skin; ichthyiasis. **C. descen′dens ventric′uli latera′lis,** digital cavity, descending or inferior cornu of the lateral ventricle; termination of the lateral ventricle in the middle lobe of the brain, behind the fissure of Sylvius. **C. el′aphi,** c. cervi. **Ethmoid′al c.,** middle turbinated bone. **C. huma′num,** cutaneous horn. **C. of hy′oid bone,** four fragments of the os hyoides situated above the body of the bone, and distinguished as the small or superior and the great or lateral. **C. lacryma′lium,** lacrymal duct. **C. lima′cum,** lacrymal duct, see *Lacrymal puncta*. **C. medul′læ spina′lis,** anterior and posterior cornua of the spinal cord. **Mid′dle c.** middle turbinated bone, descending horn of the lateral ventricle. **C. occipita′le,** posterior horn of the lateral ventricle. **C. poste′rius or posti′cum ventric′uli latera′lis,** posterior cornu of the lateral ventricle; triangular prolongation of the lateral ventricle of the brain into the substance of the occipital lobe. **C. rupica′præ,** horn of the chamois, having the same properties as cornu cervi. **C. sa′cri,** one of two tubercles situated at the posterior and inferior surface of the sacrum, sometimes united. **Sphenoid′al c.,** see *Sphenoidal cornua*. **Sty′loid c.,** see *Hyoid bone*. **C. of thy′roid car′tilage,** c. cartilaginis thyroideæ. **C. us′tum,** c. cervi. **C. u′teri,** angles of the uterus where the Fallopian tubes arise; Fallopian tubes themselves. **C. ventric′uli,** c. cerebri.

**Cor′nua** (pl. of cornu). See *Cornu*.

**Corn′ual.** Relating to the cornua of the spinal cord, as *cornual myelitis*.

**Cornucommissu′ral.** Relating to one of the cornua and to a commissure in the spinal cord.

**Cornuco′pia.** Extensions of the choroid plexuses of the fourth ventricle of the brain in the lateral recesses.

**Cor′nus al′ba.** C. sericea. **C. alternifo′lia,** alternate-leaved cornel; indigenous; ord. *Cornaceæ;* the bark is diaphoretic and astringent. **C. amo′mus,** C. sericea. **Blue′berried c.,** C. sericea. **C. circina′ta,** round-leaved cornel or dogwood; the bark has been used for similar purposes with that of Cornus florida. **C. fem′ina,** C. sericea. **C. flor′ida,** dogwood, dog-tree, box-tree, bitter redberry, large-flowered cornel, male great-flowered dogwood, Florida dogwood, Virginian dogwood, boxwood; the bark of this tree, growing everywhere in the United States, has been long employed as a substitute for cinchona; the bark of the root was formerly official (Ph. U. S.) under the name *cornus;* dose, ʒss–j (2.0–4.0). Active principle separated from it has received the name of *cornin*. **C. mas** or **mas′cula,** cornel tree, cornelian cherry; indigenous in Greece; the fruit, called krania, is agreeably acid and prized by the Turks; flowers are astringent. **C. mas odora′ta,** Laurus sassafras. **C. panicula′ta,** panicled or white cornel or dogwood; indigenous; it has been used as a substitute for Cornus florida. **C. rubigino′sa,** C. sericea. **C. sanguin′ea,** C. sericea. **C. seri′cea,** swamp dogwood, red willow, rose willow, New England dogwood, female dogwood, silky-leaved dogwood, American red-rod cornel, red rod, red osier, blueberried dogwood, blueberried cornus; the bark, it is said, is little inferior to that of Cinchona pallida in intermittents. **C. tomento′sa,** C. circinata.

**Cornutine′.** Alkaloid, active derivative from ergot by the action of hydrochloric acid; very poisonous, acting upon the vascular system; used in hemorrhage from abortion and as a putrifacient; dose, gr. $\frac{1}{12}$–$\frac{1}{6}$ (0.005–0.01). **C. cit′rate,** a salt employed in uterine hemorrhage or atony; dose, gr. $\frac{1}{24}$–$\frac{1}{12}$ (0.003–0.005).

**Corol′la** (dim. of corona) **infundibulifor′mis.** See *Fallopian tube.*

**Coro′na.** Crown; rim of the os uteri externum. **C. cilia′ris,** ciliary body. **C. cor′dis,** auricle of the heart. **C. den′tis,** crown of a tooth. **C. glan′dis,** crown of the glans penis. **C. infe′rior,** coronoid process of the ulna. **C. poste′rior ul′næ,** olecranon. **C. ra′dians** or **radia′ta,** radiating crown of Reil, fibrous cone; fasciculi of white fibres radiate from the surface of the optic thalamus, excepting its inner side; the anterior fibres pass directly forward, the middle fibres outward, and the posterior backward, forming the corona radians; expansion of the fibres of the cerebral peduncles; remains of the discus proligerus; c. ciliaris. **C. re′gia,** trifolium melilotus. **C. Reil′ii,** c. radians. **C. supe′rior,** olecranon. **C. trep′ani,** crown of trephine. **C. ul′næ,** olecranon. **C. vene′rea** or **Ven′eris,** crown of Venus; syphilide of the forehead.

**Cor′onad.** Toward the corona or crown.

**Coro′næ** (gen. or pl. of corona) **cilia′ris membran′ula.** Ciliary zone. **C. palpebra′rum,** see *Tarsus.* **C. tubulo′rum,** crypts of Lieberkühn. **C. vagina′les,** pieces of cotton for local intravaginal applications of remedies.

**Cor′onal.** Relating to a crown. **C. aponeuro′sis,** epicranial aponeurosis. **C. as′pect,** aspect toward the plane of the corona or crown. **C. bone,** frontal bone. **C. su′ture,** suture of the head extending from one temporal bone to the other over the crown of the head, and uniting the parietal bones with the frontal. The French anatomists call by this term the suture uniting the two halves of the os frontis at the early period of life; prolongation of the sagittal suture.

**Corona′ria.** Coronary artery or vein. **C. ventric′uli,** a gastric artery found on the lesser curvature of the stomach; it connects the superior pyloric branch of the hepatic artery with the gastric artery.

**Corona′rius.** Coronal; coronary; term applied to a nerve, the branches of which take the shape of a crown. **C. stomach′icus,** ramification of the eighth pair of cranial nerves in the vicinity of the cardiac orifice of the stomach.

**Cor′onary.** Resembling a crown. **C. ar′teries of the heart,** cardiac arteries. **C. ar′teries of the lip,** branches of the facial artery supplying the lips, labial glands, etc. **C. ar′tery of the stom′ach,** branch of the cœliac passing toward the superior orifice of the stomach, extending along its lesser curvature, and ending by anastomosing with the pyloric branch of the hepatic. It furnishes branches to the inferior part of the œsophagus, the cardiac orifice, the great cul-de-sac, the middle part of the stomach, and the lesser omentum, and anastomoses with the other arteries of those organs. **C. lig′ament of the liv′er,** reflection of the peritoneum surrounding the posterior margin of the liver. The same term is likewise applied to ligaments uniting the radius and ulna, and to the internal ligaments of the knee-joint. **C. plex′us of the heart,** anterior and posterior coronary plexuses of the heart are derived from the anterior and posterior cardiac plexuses; see *Cardiac plexus.* **C. plex′us of the stom′ach,** plexus of nerves given off from the upper part of the solar plexus. **C. si′nus of the heart,** sinus coronarius. **C. si′nus of Rid′ley,** sinus coronarius. **C. ten′dons,** fibrocartilaginous rings at the orifices of the coronary arteries and aorta. **C. valve,** fold of the lining membrane of the auricle of the heart, protecting the orifice of the coronary sinus. **C. vein of the stom′ach** accompanies the artery and terminates in the vena porta; pyloric vein. **C. veins of the heart,** cardiac veins.

**Coro′ne.** Coronoid process of lower jaw; cornix.

**Cor′oner** (*corona,* crown). Officer of the Crown in Great Britain, or of a county in the United States, whose duty it is to verify death and its causes, with the assistance of a jury, in all questionable cases. **C.'s in′quest,** examination by the coroner as to the cause of accidental, sudden, or violent death.

**Cor′onet.** Superior portion of a horse's hoof at its union with the skin.

**Coronil′la em′erus.** Plant of Southern Europe; purgative. **C. jun′cea,** plant of Southern Europe; galactagogue. **C. scorpioi′des,** species of leguminous plant of the south of France, which with its glucoside, *coronillin,* is a diuretic and heart tonic. **C. va′ria,** juice of this plant is emetic; leaves are purgative and diuretic.

**Coronillin′.** $C_7H_{12}O_3$. A glucoside derived from Coronilla scorpioides; dose, gr. j–ij (0.065–0.13).

**Coroni′tis.** Inflammation of the coronary substances of a horse's hoof.

**Coro′nofa′cial an′gle.** Angle formed by a line from the incisor teeth and protuberance of the forehead, prolonged to meet a line projected in the plane of the coronal suture.

**Cor′onoid** (*korone,* a crow, *eidos,* resemblance). Resembling the beak of a crow; name given to two processes, one situated at the anterior and superior part of the ramus of the inferior maxillary bone, and affording attachment to the temporal muscles; the other, a sharp process, situated at the superior part of the ulna, anterior to the great sigmoid fossa, and forming a part of the hinge of the elbow-joint. **C. depres′sion** or **fos′sa,** depression on the humerus for the reception of the coronoid process of the ulna.

**Coro′noju′gal in′dex.** Frontozygomatic index.

**Coro′nopari′etal in′dex.** Relation of the greatest frontal and the transverse diameter of the skull.

**Coronopo′dium.** Plantago coronopus.

**Coron′opus.** Cochlearia coronopus. **C. depres′sus,** Cochlearia coronopus. **C. ruel′lii,** Cochlearia coronopus. **C. vulga′ris,** Cochlearia coronopus.

**Coros′copy** (*kore,* pupil, *skopeo,* to look at). Skiascopy.

**Corosys′tele** (*kore,* pupil, *systole,* contraction). Contraction of the pupil.

**Corot′omy.** Coretomy; iridotomy.

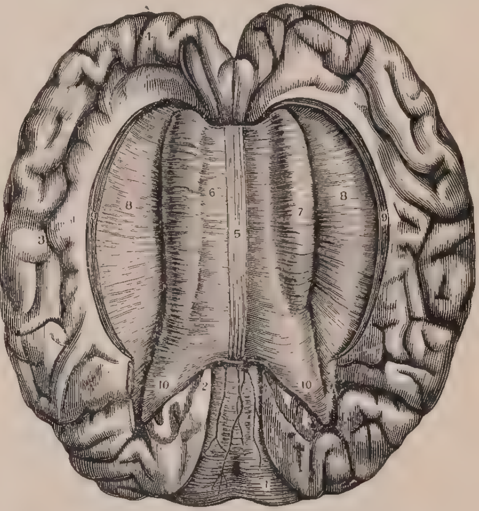
**Cor′pora** (pl. of corpus). Bodies. **C. albican′tia,** mammillary eminences. **C. amyla′cea,** amylaceous or amyloid bodies, starch corpuscles, animal starch; a name given by Virchow to microscopic bodies found in the human brain and spinal marrow—in the ependyma ventriculorum and its prolongations, in the prostate, and in the lungs, mingled with the proper nerve elements; having chemical characters of cellulose; see *Glycogenic matter;* they differ, however, from starch in being nitrogenized. **C. Aran′tii,** noduli Arantii tubercula. **C. arena′cea,** abnormal concretions like grains of sand in the dura mater; psammoma. **C. bigem′ina,** see *Quadrigemina.* **C. bul′bi forn′icis,** c. candicantia. **C. candican′tia,** corpora albicantia; mammillary eminences. **C. caverno′sa,** cavernous bodies of the penis. **C. chalcedo′nica,** c. arenacea. **C. erectil′ia,** erectile tissues, as of the penis. **C. fibro′sa,** tough, semiopaque fibrous bodies occasionally found in the ovaries, probably due to fibrous changes in the tissue of the corpus luteum. **C. fibrospongio′sa,** cavernous bodies. **C. fimbria′ta,** fimbriated or fringed bodies; thin, flattened, and delicate band situated along the concave edge of the cornu ammonis, which is a continuation of the posterior crura of the fornix. **C. genicula'ta,** eminences situated at the lower and outer part of the optic thalami; each optic tract commences at the corpus geniculatum externum; the corpus geniculatum internum is merely a tubercle inserted into the bend or knee formed by the corpus geniculatum externum. **C. glandulo'sa,** seminal vesicles. **C. globo'sa cervi'cis u'teri,** Nabothi glandulæ. **C. granulo'sa,** granular leucocytes; corpuscles of the colostrum. **C. labo'sa,** Malpighian corpuscles. **C. latera'lia,** cavernous bodies. **C. lie'nis,** see *Spleen.* **C. lu'tea,** see *Corpus luteum.* **C. malpighia'na,** Malpighian bodies, corpuscles or glomerules of Malpighi; scattered through the plexus formed by the blood-vessels and uriniferous tubes in the kidney, a number of small dark points may be seen with the naked eye, which received their name from Malpighi, their describer; each of these, under the microscope, consists of a convoluted mass of blood-vessels, constituting the true glandule, corpuscle, or glomerule of Malpighi; it has been supposed that their office may be to separate the watery portions of the blood to be mixed with proper urinous matter; see *Kidney.* For corpora malpighiana of the spleen, see *Spleen.* **C. mammilla'ria,** mammillary eminences. **C. menstrua'lia,** see *Corpus luteum.* **C. Morgagn'ii,** hydatids of Morgagni; one or more short processes of the tunica vaginalis testis, containing fine blood-vessels, situated on the front of the globus major. **C. ner'veospongio'sa pe'nis,** cavernous bodies. **C. nervo'sa,** cavernous bodies. **C. oliva'ria** or **ova'ta,** oblong, whitish eminences situated at the occipital surface of the medulla oblongata, exterior to the corpora pyramidalia. **C. op'tostria'ta,** optic thalami and corpora striata regarded as one mass. **C. oryzoi'dea,** rice-like growths in the sheaths of tendons, bursæ, or joints; sputa sometimes seen in phthisis. **C. ova'ta** or **ova'lia,** corpora olivaria. **C. Pacchio'ni,** Pacchionian bodies. **C. period'ica,** see *Corpus luteum.* **C. pisifor'mia,** mammillary tubercles. **C. pyramida'lia,** two medullary bundles placed on either side of the anterior fissure; called corpora pyramidalia antica to distinguish them from c. olivaria or pyramidalia lateralia; over a space commencing eight or ten lines below the pons and extending to the lower end of the medulla oblongata, a portion of each pyramid crosses to the opposite side—decussation of the pyramids. **C. pyramida'lia posterio'ra,** see *Corpora restiforma.* **C. pyramida'lia tes'tis,** coni vasculosi. **C. quadrigem'ina,** see *Quadrigemina.* **C. restifor'ma,** posterior pyramids, peduncles of the medulla oblongata, inferior peduncles of the cerebellum; two medullary projections, oblong and of whitish appearance, proceeding from each side of the upper extremity of the medulla oblongata, and contributing to the formation of the cerebellum; the posterior pyramids—fasciculi graciles—described as distinct from the restiform bodies, are situated in contact with each other, one on each side of the posterior median fissure; they become closely applied to the restiform bodies, and have been considered to be blended with them, and to proceed to form the cerebellum; according to some, they ascend to the cerebrum. **C. santorinia'na,** cornicula laryngis. **C. sesamoide'a,** c. Arantii. **C. spongio'sa,** cavernous bodies; bulbi vestibuli; see *Corpus spongiosum urethræ.* **C. stria'ta,** the anterior cerebral ganglion; pyriform eminences, of slightly brownish-gray color, forming part of the floor of the lateral ventricles of the brain; when cut a mixture of white and gray substance is seen, arranged alternately, to which they owe their name; the tract of fibres ascending from the anterior pyramids passes chiefly into them. **C. stria'ta super'na posterio'ra,** thalami nervorum opticorum. **C. tendin'ea,** cavernous bodies. **C. triti'cea,** see *Hyoides os.* **C. vestib'uli,** bulbi vestibuli. **C. wolffia'na,** see *Corpus wolffianum.* **C. wrisbergia'na,** cuneiform cartilages.

**Corpse** (*corpus,* body). Dead body; cadaver. **C. fat,** adipocere. **C. poi'sons,** ptomains.

**Corp'ulence.** Obesity.

**Cor'pulent** (*corpus,* body, *lentus,* thick). Fat, fleshy, obese; having unusual development of fat or flesh in proportion to the frame of the body.

**Cor'pus.** Body; any object which strikes one or more of the senses. Gases, liquids, metals, vegetables, animals are so many bodies. Natural bodies have been divided into animal, vegetable, and mineral; or into inorganic, including the mineral kingdom, and organized, including the animal and vegetable. The chief differences between organized and inorganic bodies consist in the former having an origin of generation, growth by nutrition, and termination by death; the latter a fortuitous origin, external growth, and termination by chemical or mechanical force. See *Body* and *Corpora.* **C. adenifor'me adeno'des** or **adenoi'des,** prostate. **C. adipo'sum,** pinguedo. **C. adventi'tium** or **alie'num,** extraneous or foreign body. **C. al'bicans,** see *Corpora albicantia.* **C. al'bum subrotun'dum,** anterior tubercle of the optic thalamus. **C. alie'num,** extraneous or foreign body. **C. annula're,** pons Varolii. **C. bigem'inum,** see *Quadrigemina.* **C. callo'sum,** white, medullary band perceived on separating the two hemispheres of the brain, which it connects with each other; it was formerly regarded as the seat of the soul; on it are seen longitudinal and transverse fibres—striæ longitudinales Lancisii, nerves of Lancisi (see *Raphe*) and striæ or chordæ transversales Willisii; the anterior portion is termed genu, the posterior flexure, splenium or tuber; fibres curving backward into the posterior lobes from the posterior border of the corpus callosum have been termed forceps; those passing directly outward into the middle lobes from the same point, tapetum; and those curving forward and inward from the anterior border to the anterior lobe, forceps anterior; the part extending backward from the genu is the rostrum. **C. camera'tum,** fornix cerebri. **C. cand'icans** or **cand'idum,** see *Corpora albicantia.* **C. cauda'tum,** see *Corpus striatum.* **C. caverno'sum,** see *Cavernous bodies* and *Corpus spongiosum urethræ.* **C. caverno'sum vestib'uli,** bulbus vestibuli. **C. cilia're,** ciliary body; corpus dentatum; see *Ciliary.* **C. cine'reum,** lamina cinerea; corpus dentatum. **C. clitor'idis,** body of clitoris. **C. collic'uli stria'ti,** anterior extremity of the corpus striatum. **C. communio'nis cer'ebri,** fornix cerebri. **C. con'icum Rosenmüll'eri,** paro-



Corpus callosum, seen from above, the hemispheres being turned over on either side. 1, cerebellum; 2, 3, 4, convolutions on the inner side of the hemispheres; 5, median tract or raphe; 6, transverse fibres; 7, fibres curved inward upon the outer side; 8, 8, converging fibres of hemispheres; 9, 9, concave surface of hemispheres which overlap the corpus callosum; 10, 10, posterior extremities.

varium; epoöphoron. **C. conifor′me** or **conoi′des,** pineal gland. **C. cor′dis,** ventricle of the heart. **C. cribro′sum,** rete mucosum. **C. crystal′linum** or **crystalloi′des,** crystalline lens. **C. denta′tum** or **denticula′tum,** central oval nucleus, of cineritious substance, met with in the cerebellum, the circumference of which exhibits a number of indentations, surrounded by medullary substance; it is seen by dividing the cerebellum vertically into two equal parts. The term corpus dentatum, nucleus olivæ, is also given to the ganglion of the corpus olivare, a yellowish-gray, dentated capsule, open behind and containing medullary matter, from which a fasciculus of fibres proceeds upward to the corpora quadrigemina and thalami optici. **C. discoi′des,** crystalline. **C. epididym′idis,** body of the epididymis. **C. exter′num** or **extra′neum,** extraneous or foreign body. **C. fibro′sum,** fibrous tumor. **C. fimbria′tum,** olivary nucleus, see *Corpora fimbriata.* **C. genicula′tum,** see *Corpora geniculata.* **C. glandifor′me** or **glando′sum** or **glandulo′sum,** prostate; corpus luteum. **C. glandulo′sum muli′erum,** vascular, spongy eminence surrounding the orifice of the female urethra and projecting at its under part. **C. globo′sum,** pons Varolii. **C. Highmo′ri** or **highmoria′num,** oblong eminence along the superior edge of the testicle, which seems formed of a reflection of the tunica albuginea, through which the principal trunks of the seminiferous vessels pass before reaching the epididymis. **C. hyali′num** or **hyaloide′um,** c. vitreum. **C. incomprehensib′ile,** thymus gland. **C. innomina′tum,** see *Organ of Giraldès;* paradidymis. **C. lenticula′tum,** lenticular nucleus; dentate nucleus of cerebellum. **C. Lieutau′dii,** trigone of the bladder. **C. lu′teum** (yellow body), a small, yellowish body perceived in the ovarium and left after the rupture of one of the vesicles; for every follicle in the ovary from which the ovum is discharged a corpus luteum will be found; it was for a long time considered an evidence of impregnation, but corpora lutea or menstrualia or periodica are met with in unquestionable virgins, although the corpora lutea of virgins differ materially in size and character from those of impregnation, *true corpora lutea,* in contradistinction to the other, *false corpora lutea.* The following table by Dalton well exhibits the distinguishing characteristics of these two forms of corpus luteum:

| | *Corpus luteum of menstruation.* | *Corpus luteum of pregnancy.* |
|---|---|---|
| At the end of 3 weeks. | ¾ in. in diameter; central clot reddish; convoluted wall pale. | |
| One month. | Smaller; convoluted wall bright yellow; clot still reddish. | Larger; convoluted wall bright yellow; clot still reddish. |
| Two months. | Reduced to the condition of an insignificant cicatrix. | ⅞ in. in diameter; convoluted wall bright yellow; clot perfectly decolorized. |
| Four months. | Absent or unnoticeable. | Size about as at two months; clot pale and fibrinous; convoluted wall dull yellow. |
| Six months. | Absent. | Still as large as at the end of the second month. Clot fibrinous; convoluted wall paler. |
| Nine months. | Absent. | ½ in. in diameter; central clot converted into a radiating cicatrix; external wall tolerably thick and convoluted, but without any bright yellow color. |

Sometimes the corpora lutea assume a cystic form, cystic corpora lutea. **C. Luys′ii,** c. subthalamicum. **C. mam′mæ,** strictly glandular part of mamma. **C. mammilla′re,** mammillary eminences, see *Corpora albicantia.* **C. mandib′ulæ,** body of lower jaw. **C. mediasti′num,** c. highmorianum. **C. medulla′re,** c. dentatum of cerebellum; centrum ovale. **C. menstrua′le,** see *Corpus luteum.* **C. muco′sum,** rete mucosum, second layer of the skin, situated between the cutis vera and cuticle, and giving color to the body; in the white varieties of our species it is colorless, in the negro black. **C. nervo′sum cu′tis,** c. papillare; papillary layer of the skin. **C. ni′gricans** or **ni′grum,** c. luteum containing dark pigment or blood clot. **C. occip′itis,** basilar process. **C. oken′se,** corpus wolffianum, mesonephros. **C. oli′væ, oliva′re,** or **oliva′rium,** see *Corpora olivaria* and *Corpora restiformia.* **C. op′tostria′tum,** thalamus opticus and corpus striatum, regarded as anatomically one. **C. pampinifor′me,** plexus or retiform arrangement of the spermatic arteries and veins in the cavity of the abdomen, anterior to the psoas muscle; parovarium; epoöphoron. **C. papilla′re,** nervous and vascular papillæ situated beneath the epidermis, called by Breschet *neurothelic apparatus;* derma. **C. phacoi′des,** crystalline lens. **C. pinea′le,** pineal body. **C. pituita′re** or **pituita′rium,** pituitary gland. **C. psalloi′des,** lyra. **C. pyramida′le,** pyramid; restiform body; c. dentatum; septum lucidum; c. striatum; olivary body; pineal gland; see *Corpora pyramidalia.* **C. restifor′me,** see *Corpora restiformia.* **C. reticula′re,** c. mucosum; c. papillare. **C. retifor′me,** bulbus vestibuli. **C. rhomboida′le** or **rhomboide′um,** c. dentatum; trapezium; c. fimbriatum. **C. ru′brum,** c. luteum, reddened by blood passing through it. **C. semiova′le,** see *Corpora olivaria.* **C. serra′tum,** c. dentatum. **C. specula′re,** septum lucidum. **C. sphenoida′le,** body or central portion of sphenoid. **C. spongio′sum ure′thræ,** this substance arises before the prostate gland, surrounds the urethra, and forms the bulb; it then proceeds to the end of the corpora cavernosa, and terminates in the glans penis, which it forms; where the urethra enters the bulb it is surrounded by a layer of erectile tissue, called by Kobelt colliculi bulbi. Kobelt describes in the female, as the analogue of the corpus spongiosum of the male, a venous plexus, which, as it lies between the glans clitoridis and the part that corresponds in the male to the bulb of the urethra, he terms pars intermedia. **C. spongiovascula′re,** c. spongiosum urethræ. **C. stern′i,** mesosternum. **C. stria′tum,** lentiform nucleus, see *Corpora striata.* **C. subthalam′icum,** nucleus of gray matter in the tegmentum of the crus cerebri. **C. suprarena′le,** renal capsule. **C. te′res,** eminentia or fasciculus teres. **C. thymia′num** or **thy′micum,** thymus. **C. thyreoide′um,** thyroid gland. **C. tib′iæ,** shaft of tibia. **C. trapezoi′des** or **trapezoide′um,** trapezium. **C. trigo′num,** see *Urinary bladder.* **C. trit′icum** or **tritic′eum,** cartilago triticea. **C. turbina′tum,** pineal gland. **C. varicifor′me** or **varico′sum tes′tis,** epididymis. **C. varico′sum,** c. pampiniforme; spermatic cord; spermatic plexus; see *Spermatic veins.* **C. ver′tebræ fronta′lis** or **ter′tiæ,** presphenoid bone. **C. v. nasa′lis,** vomer. **C. v. occipita′lis** or **pri′mæ,** basioccipital bone. **C. v. parieta′lis** or **secun′dæ** basisphenoid bone. **C. vit′reum,** vitreous humor or body; transparent mass of a gelatinous consistence which fills the eye behind the crystalline lens; it is contained in cells formed by the tunica hyaloidea. **C. wolffia′num,** Wolffian body; primordial kidney. At a very early period of fetal formation bodies are perceptible, first described by Wolff as existing in the fowl, and by Oken in the mammalia; according to Müller, they disappear in man very early, so that but slight remains of them are perceptible after the ninth or tenth week of intrauterine life; they cover the region of the kidneys and renal capsules, which are formed afterward; remains of the tubules of the Wolffian body sometimes become the seat of formation of large cysts, Wolffian cysts, cysts of the broad ligament.

**Cor'puscle** (dim. of *corpus*, body). Small body or particle; cell. **Amniot'ic c.**, small growths from the amnion surrounding the umbilical cord. **Amyla'ceous** or **Am'yloid c.**, corpora amylacea. **Assimila'tion c.**, c. assisting in the assimilation of food. **Ax'ile** or **Ax'is c.**, central part of tactile corpuscle. **Ben'nett's c.**, Drysdale's cell, see *Drysdale*. **Bizzo'zero's c.**, a form of corpuscle considered by some as a hæmatoblast. **Black c.**, osteoplast. **Blood c.**, globule of the blood. **Bone c.**, see *Lacunæ of bone*. **Burck'hardt's c.**, see *Burckhardt*. **Calca'reous c.**, calcigerous cell. **Car'tilage c.**, see *Cartilage;* granular matter separating the nucleus of a cartilage-cell from the capsule. **Cau'date c.**, see *Caudate*. **Cement' c.**, bone-cell in the cement of the teeth. **Chro'mophile c.**, a Nissl body, making up small, granular masses in the protoplasm of the nerve cells; see *Chromophilic*. **Chyle c.**, see *Chyle*. **Col'loid c.**, one of the corpora amylacea. **Colos'trum c.**, bodies in colostrum containing oil globules. **Concen'tric c.**, Hassall's c. **C. of Corna'lia**, ovoid body in the blood, tissues, etc., of silkworms; see *Cornalia*. **Cor'neal c.**, corpuscle of Toynbee or Virchow; nucleated cell, giving off processes to unite with other processes to form a cellular network traversing the whole cornea. **Cy'toid c.**, leucocyte, see *Cytoid*. **C. of Donné'**, colostrum c. **Drys'dale's c.**, see *Drysdale*. **Dust c.**, hæmokonia. **Eich'horst's c.**, microcyte in the blood of those affected with pernicious anæmia. **Elemen'tary c. of Zim'mermann**, see *Globules of blood*. **End c.**, terminal c.; end bulb. **Exuda'tion c.**, plastic corpuscle; organizable nucleus, exudation-cell; one of the cells contained in fibrinous fluids, which are the origin of the new tissues formed from such fluid. **Fec'undating** or **fer'tilizing c.**, spermatozoids. **Gan'glion** or **ganglion'ic c.**, see *Neurine*. **Gas'tric c.**, epithelial cell or corpuscle of the stomach. **Gen'ital c.**, nerve terminal in the external genitalia. **Germ c.**, germ cell. **Gi'ant c.**, giant cell; megalocyte. **Glan'diform c.**, acinus, see *Spleen*. **C. of Glu'ge**, one of the fat-granules seen in chronic cerebral softening and fatty degeneration. **Gran'dry's c.**, see *Grandry*. **Hæm'atoblast c.**, see *Hæmatoblast*. **Has'sall's c.**, striated c. in the medulla of the thymus gland. **C. of Hayem'**, blood plaque. **Hen'sen's c.**, elliptical c. in the outer hair cells of the organ of Corti. **Herbst's c.**, see *Herbst*. **Inflam'matory c.**, exudation c. **C. of Krau'se**, end bulb of Krause; Pacinian corpuscle. **C. of Laennec'**, fibroid granule on the pericardium. **C. of Lang'erhans**, see *Langerhans' cells*. **Le'ber's c.**, Hassall's c. **Los'torfer's c.**, see *Lostorfer*. **Lymph, lymphat'ic**, or **lymph'oid c.**, see *Lymph*. **C. of Malpig'hi**, one of the corpora malpighiana. **Mar'ginal c.**, see *Marginal*. **Med'ullary c.**, cells of marrow; odontoblast. **C. of Meiss'ner**, tactile c. **Mer'kel's c.**, Grandry's c. **C. of Mie'scher**, Rainey's body. **Mi'gratory c.**, wandering cell; lymph corpuscle. **Milk c.**, oil globule of that fluid. **Mu'cous c.**, see *Mucus*. **Mus'cular c.**, cell-like body in striated muscular tissue. **Nerve c.**, see *Neurine*. **C. of Nor'ris**, hæmatoblast; one of the colorless transparent bodies in the blood, probably red blood corpuscles deprived of hæmoglobin. **Nu'clear c.**, nucleolus. **Os'seous c.**, see *Lacunæ of bone*. **C. of Pacchio'ni**, glands of Pacchioni. **Pacin'ian c.**, from Pacini, an Italian physician; the Pacinian corpuscles appear to have been depicted in 1741 by Lehmann, from a preparation by A. Vater, who called them papillæ and papillæ nervæ; hence called Vaterian corpuscles or corpuscles of Vater; they are small bodies connected with the cutaneous nerves of the palm and sole; found sparingly and inconstantly in the nerves at the wrist and elbow, the upper arm, forearm, and thigh, and in the intercostal nerve, the sacral plexus, solar plexus, and the plexuses adjacent to it; in each corpuscle there is the termination of a nervous filament. **Palpa'tion c.**, tactile c. **Phan'tom c.**, decolorized erythrocyte. **Plas'tic c.**, exudation corpuscle. **Po'lar c.**, centrosome. **C. of Purkin'je**, see *Purkinje*. **Pus** or **py'oid c.**, see *Pus*; **Rai'ney's c.**, see *Rainey*. **Red c.**, erythrocyte. **C. of Reiss'ner**, see *Reissner*. **Sal'ivary c.**, globule in the saliva like a white corpuscle of the blood. **Sen'sual c.**, end bulb. **Shad'ow c.**, decolorized erythrocyte. **Spleen** or **sple'nic c.**, corpuscle of Malpighi, see *Spleen*. **Starch c.**, one of the corpora amylacea. **Tac'tile** or **touch c.**, corpuscle of Wagner or of Meissner, axile body; body composed of a horizontally laminated mass of areolar tissue, found in the papillæ of parts endowed with great tactile sensibility; nerves of touch communicate with the touch c., and their function is probably to render the sense more acute. **Ten'don c.**, one of the connective-tissue cells between the primary bundles in the tendons. **Ter'minal c.**, one of the terminal points of the sensory nerves. **Third c.**, see *Blood globules*. **C. of thy'mus**, Hassall's c. **Touch c.**, tactile c. **C. of Toyn'bee**, one of the star-shaped bodies in the corneal lacunæ. **Transpa'rent c. of Nor'ris**, hæmatoblast. **Trau'be's c.**, phantom c. **C. of Tröltsch**, c. situated between the fibres of the layers of the membrane of the tympanum. **Valen'tin's c.**, Valentinian vesicle, see *Molecule*. **C. of Va'ter**, Pacinian c. **C. of Vir'chow**, see *Corpuscle, corneal*. **C. of Wag'ner**, tactile c. **Weber'ian c.**, uterus masculinus, see *Ejaculatory ducts*. **White c.**, see *Blood globule*. **C. of Zim'mermann**, hæmatoblast.

**Corpus'cula.** Plural of corpusculum.

**Corpus'cular.** Relating to or containing corpuscles or atoms.

**Corpuscula'tion.** Increase in dimensions and number of the blood corpuscles.

**Corpus'culum** (dim. of *corpus*, body). Corpuscle.

**Corra'go.** Borago officinalis.

**Correc'tant.** Corrective; corrigent.

**Correc'tion** (*corrigo*, to correct). Act of correcting medicines—that is, of diminishing their energy or obviating unpleasant effects—by mixing them with substances which modify their operation. Removing abnormal condition or deformity.

**Correc'tive.** Corrigent.

**Correc'tor.** Corrigent.

**Correla'tion** (*cor*, with, *refero*, *relatum*, to accomplish). Relation or dependence of one part on another. See *Synergy*.

**Correspond'ing points.** Points on the two retinas which coincide and are absolutely identical.

**Cor'rigan's cau'tery.** Button cautery. **C.'s disease'**, insufficiency of the sigmoid valves of the aorta; also cirrhosis of the lung. **C.'s line**, a bluish or purplish line on the gums in chronic lead poisoning. **C.'s pulse**, jerking or water-hammer pulse produced by aortic regurgitation. **C.'s respira'tion**, peculiar weak, blowing respiration of low fevers. **C.'s sign**, peculiar dilatory sensation of pulsation noticed in aneurysm of the abdominal aorta.

**Cor'rigent.** That which corrects; in a pharmaceutical formula a substance added to a medicine to mollify or modify its action, as oleum menthæ in a prescription containing aloes.

**Corrobal'.** Corroval.

**Corrob'orant** or **Corrob'orative** (*corroboro*, to strengthen). Restorative, bracing; substance which strengthens and gives tone; tonic.

**Corro'dent** or **Corro'ding** (*corrodo*, to gnaw to pieces). Corrosive.

**Corro'sion.** Action or effect of corrosive substances. **C. anat'omy**, branch of anatomy which displays the important features of a part or region by the use of corrosive materials which destroy the less important parts. **C. prepara'tions**, a name given to the result thus obtained, sometimes only a cast of the original.

**Corro'sive.** Epithet applied to substances which when placed in contact with living parts gradually disorganize them, as caustic alkalies, mineral acids, corrosive sublimate, etc. They act either directly, by chemically destroying the part, or indirectly, by causing inflammation and gangrene. **C. chlo'ride**, hydrargyri chloridum corrosivum. **C. poi'son**, see

*Poison.* **C. sub′limate,** hydrargyri chloridum corrosivum.

**Corroval′.** An arrow poison used by the aborigines of Colombia, causing symptoms similar to those produced by curare. A poisonous alkaloid called *corrovaline* has been procured from it.

**Corruga′tion** (*corrugo*, to wrinkle). Wrinkling, frowning; contraction of the corrugatores supercilii muscles. Corrugation of the skin may be produced by the application of styptics.

**Cor′rugator.** A muscle drawing the skin into folds. **C. coite′rii** or **supercil′ii,** a muscle situated in the eyebrows, attached by its inner extremity to the superciliary ridge, and confounded externally with the occipitofrontalis and orbicularis palpebrarum; it carries the eyebrow inward and wrinkles the skin of the forehead. **C. cu′tis a′ni,** dilator ani internus; termination of the fibres of the muscularis mucosæ of the rectum. **C. glabel′læ,** c. supercilii. **C. la′bii inferior′is,** part of depressor anguli oris from the angle of the mouth, which puckers the lower lip. **C. posti′cus,** occipitalis transversus.

**Corrup′tion** (*corrumpo*, to destroy). Act of corrupting; state of being corrupted; state of puriform, putrid, or other breaking down of parts or humors; pus; abortion.

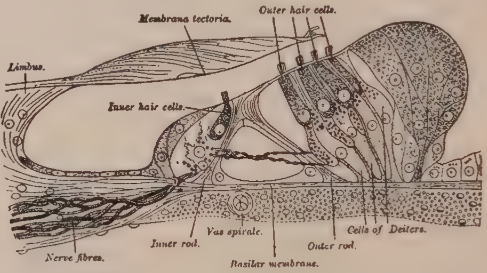
**Cor′set** (*corpus*, body). Article of dress for women closely embracing the trunk. Bandages or other close-fitting apparatus embracing the greater part of the chest and abdomen are also called corsets. An orthopedic corset is one intended to obviate deviation of the stature or spinal deformity.

**Cor′sican fe′ver.** Form of malarial fever endemic in Corsica.

**Cort.** (abbrev. for cortex). Bark.

**Cor′tex.** Bark; often applied exclusively to cinchona, but it means also any bark. **C. adstrin′gens brasilien′sis,** astringent bark first introduced from Brazil into Germany; said to be obtained from Mimosa cochleacarpa or virginalis, but now referred to Stryphnodendron barbatimao; used in all cases in which astringent barks are indicated. **C. alcorno′co,** alcornoco bark. **C. ma′rus,** bark of Croton pseudochina. **C. angustu′ræ,** cusparia bark. **C. ani′si stella′ti,** see *Illicium anisatum.* **C. antifebri′lis,** cinchona bark. **C. antiquar′tius,** cinchona bark. **C. antiscorbu′ticus,** Canella alba. **C. auran′tii,** see *Citrus aurantium.* **C. auran′tii ama′ri,** bitter orange-peel. **C. bebe′ru,** Nectandræ cortex. **C. benedic′tus,** bark of Guaiacum officinale. **C. braye′ræ anthelmint′icæ,** see *Rottlera schimperi.* **C. cabar′ro,** alcornoco bark. **C. canel′læ malabar′icæ,** Laurus cassia. **C. Cardina′lis del Lu′go,** cinchona. **C. caryophylla′tus,** see *Myrtus caryophyllata.* **C. caryophylloi′des,** Laurus culilawan. **C. cerebel′li,** the greater part of the gray substance of the cerebellum is on the surface or cortex. **C. cer′ebri,** cortical, cineritious, vesicular, or gray substance of the brain; the gray portion is observed at the exterior of the cerebrum and cerebellum. **C. chabar′ro,** alcornoco bark. **C. chacaril′læ,** Croton cascarilla. **C. chi′næ,** cinchona. **C. chi′næ calisa′yæ,** yellow cinchona. **C. chi′næ fla′vus** or **lu′teus,** yellow cinchona. **C. chi′næ ru′ber,** red cinchona. **C. cincho′næ,** cinchona bark. **C. c. flav′æ,** yellow cinchona. **C. c. fus′cus** or **pal′lidæ,** pale cinchona. **C. c. ru′ber,** red cinchona. **C. corno′va** or **coro′a,** bark of an East Indian plant; stomachic and febrifuge. **C. cor′ticis,** external part of the cortical portion of the kidney. **C. crass′ior,** Laurus cassia. **C. culil′aban** or **culi′lawan,** Laurus culilawan. **C. den′tium,** enamel. **C. eleuthe′riæ,** Croton cascarilla. **C. febrif′ugus** or **febri′lis,** cinchona bark. **C. fla′vus,** yellow cinchona; Cinchonæ cordifoliæ cortex. **C. garou′,** bark of Daphne mezereum. **C. of hair,** the fibrous portion of shaft of hair. **C. hippocas′tani,** horse-chestnut bark. **C. jesuit′icus,** cinchona. **C. lavo′la,** see *Illicium anisatum.* **C. magellan′icus,** see *Wintera aromatica.* **C. malico′rii,** pomegranate rind. **C. monspeli′acus,** C. garou. **C. muse′næ,** see *Rottlera schimperi.* **C. nectan′dræ,** bebeeru bark. **C. os′seus den′tis,** see *Tooth.* **C. o′vi,** cortical membrane; usually regarded as a uterine production, and designated decidua reflexa; see *Decidua membrana.* **C. pal′lidus,** pale bark; Cinchonæ lancifoliæ cortex; C. cinchonæ fuscus. **C. pa′trum,** cinchona. **C. perua′nus** or **peruvia′nus,** cinchona. **C. proflu′vii,** Nerium antidysentericum. **C. re′gius,** Cinchonæ cordifoliæ cortex. **C. re′nis,** see *Kidney.* **C. ru′ber,** red cinchona bark; Cinchonæ oblongifoliæ cortex. **C. sapona′rius,** bark of Mimosa saponaria. **C. stria′tus den′tium,** enamel of the teeth. **C. thu′ris,** Croton cascarilla. **C. thyme′leæ,** mezereon. **C. ul′mi,** slippery-elm bark. **C. wintera′nus,** Winter's bark. **C. wintera′nus spu′rius,** Canella alba.

**Cor′ti's arch′es.** See *Corti's organ.* **C.'s canal′,** see *Corti's organ.* **C.'s cells,** external hair cells of C.'s organ. **C.'s fi′bres,** see *C.'s organ.* **C.'s gan′glion,** ganglion Cortii. **C.'s mem′brane,** see *C.'s organ.* **C.'s or′gan,** peculiar and complicated arrangement in the cochlea, including various cellular and rod-like structures covered by the membrana tectoria or membrane of Corti, resting on the membrana basilaris or basilar membrane—lamina spiralis membranacea—and arranged like piano-forte keys. The fibres or rods or arches of Corti are attached to the margins of the inner zone of the basilar membrane; they meet like the beams of a roof, and from their junction a very delicate network extends, the lamina or membrana reticularis or velamentosa. Resting on the articulating ends of the inner rods is a row of ciliated cells, while three rows are placed external to the outer rods, attached by their pointed extremities to the membrana basilaris (cells of Corti). Alternating with the latter are the cells of Dieters, while epithelial cells cover the upper surface of the remaining portion of the basilar membrane. Rods and cells of Corti probably admit of movement on one another, and, from their intimate connection with the ganglionic nervous structure, doubtless play an important part in the perfection of audition. The part of the membranous labyrinth between the tectorial and basilar membranes is called the *canal of Corti.* The tunnel formed by the arches of Corti and the basilar membrane is called the *tunnel of Corti.* **C.'s rods,** see *C.'s organ.* **C.'s teeth,** auditory teeth; tooth-like processes on the border of the limbus laminæ spiralis of the ear. **C.'s tun′nel,** see *C.'s organ.*



Section through the organ of Corti, magnified. (Retzius.)

**Cor′tical** (*cortex*, bark). Belonging to the bark or cortex. **C. arch,** part of the cortex of the kidney passing from one cortical column to another. **C. ar′teries,** those distributed to the cortical part of the brain or spinal cord. **C. blind′ness,** blindness dependent on disease or injury of the cortical part of the brain. **C. cat′aract,** cataract dependent on opacity of the cortex of the crystalline lens. **C. col′umns,** processes of the cortical substance of the kidney, passing between the pyramids. **C. ep′ilepsy,** Jacksonian epilepsy. **C. mat′ter of the brain,** cortex cerebri. **C. mem′brane,** cortex ovi. **C. paral′ysis,** paralysis from disease or injury of the cortical portion of the brain. **C. sub′stance of the brain,** cortex cerebri. **C. s. of the kid′ney,** see *Kidney.* **C. s. of the teeth,** see *Tooth.*

**Corticine′.** Alkaloid from the bark of Populus tremula.

**Corticin′ic ac′id.** $C_{12}H_{10}O_6$. An acid obtained from cork.

**Cor′ticopedun′cular.** Relating to or associated with the cerebral cortex and peduncles.

**Cor′ticospi′nal.** Relating to or associated with the cortex of the cerebrum and spinal cord.

**Cortu′sa america′na** (after Prof. J. A. Cortusi, botanist of Padua). Heuchera cortusa.

**Corty′ces vari′olæ.** A supposed protozoan parasite of cowpox and variola.

**Corun′dum.** An aluminum oxide of extreme hardness; used in grinding porcelain, dental enamel, etc.

**Corusca′tion** (*corusco*, to flash). A subjective sensation of flashes of light.

**Corvisar′tia helen′ium** (after Corvisart, physician to Napoleon I.). Inula helenium.

**Corvisart's** (kor-ve-sars′) **disease′.** Idiopathic hypertrophy of the heart. **C.'s fa′cies,** the appearance of the face in cardiac insufficiency.

**Coryban′tiasm** or **Coryban′tism** (from Corybas, one of the Corybantes). Name formerly given to frenzy or acute mania and convulsive movements in which the sick were tormented by fantastic visions and perpetual want of sleep.

**Corydaline′.** $C_{18}H_{19}HO_4$. Alkaloid from Corydalis formosa and Corydalis tuberosa; tonic, diuretic, alterative, and antiperiodic; dose, gr. j–v (0.065–0.32).

**Coryd′alis bulbo′sa.** Fumaria bulbosa. **C. canaden′sis,** Dicentra canadensis. **C. ca′va,** Fumaria bulbosa. **C. formo′sa,** turkey corn or pea; the root of this indigenous plant is tonic, diuretic, and alterative. **C. tubero′sa,** Fumaria bulbosa.

**Cor′yl.** A local anæsthetic mixture of ethyl and methyl chloride.

**Coryleur′.** Apparatus for atomizing coryl.

**Cor′ylus** or **C. avella′na.** Hazelnut tree, ord. *Amentaceæ.* **C. rostra′ta,** beaked hazel; indigenous shrub; the short, thick bristles have been given as an anthelmintic in the same cases and doses as mucuna.

**Cor′ymbose** (*korymbos*, cluster). Term used for cutaneous affections characterized by the arrangement of eruption in groups or clusters.

**Cory′za** (*korys*, the head). Catarrh; nasal catarrh; vulgarly, running at the nose, cold in the head; inflammation attended with increased discharge of the Schneiderian membrane lining the nose and the sinuses communicating with it; it generally subsides without medical treatment. Chronic coryza is termed also ozæna when accompanied by an offensive discharge. See *Ozæna.* **C. blenorrho′ica,** purulent coryza. **C. caseo′sa,** caseous matter in the nasal passages. **C. contagio′sa equo′rum,** strangles, a swelling in the throat of the horse. **C. diplococ′cus,** Micrococcus cereus aureus. **C. enton′ica,** ozæna. **Idiosyncrat′ic c.,** hay fever. **C. malig′na,** ozæna. **C. neonato′rum,** nasal catarrh or snuffles of newborn children. **C. œdemato′sa,** œdema of the inferior and middle turbinated bones. **C. ozæno′sa** or **purulen′ta,** ozæna. **Period′ic c.,** hay fever. **C. scarlatino′sa,** morbid condition of the Schneiderian membrane in bad cases of scarlatina. **C. ulcero′sa** or **virulen′ta,** ozæna. **C. u′teri,** leucorrhœa. **Vasomo′tor c.,** hay fever.

**Cosaprin′.** Compound of acetyl and sodium sulphanilate; antipyretic; used as a substitute for acetanilid.

**Cosme′sis** (*kosmeo*, to adorn). Use of cosmetics; method of improving and preserving natural beauty.

**Cosmet′ic.** That which beautifies or preserves the beauty; art of improving the beauty, and different means employed for that purpose. All the compounds used, however—as zinc oxide, bismuth subnitrate, magnesia, etc.—injure the skin and may give rise to unpleasant cutaneous affections. Frequent ablution with cold water and bathing are the best cosmetics. Cosmetics include essences, soaps, and all the preparations intended for the toilet. **C. opera′tion,** an operation performed with a view of correcting any defect which mars the personal appearance.

**Cosmetol′ogy** (*kosmeo*, to adorn, *logos*, discourse). Treatise on dress and cleanliness of the body.

**Cosmibue′na acumina′ta.** Peruvian tree once supposed to be a source of cinchona; cascarilla.

**Cos′mic disease′** (world-wide disease). Syphilis.

**Cosmin′.** Agathin.

**Cosmoline′.** See *Petrolatum.*

**Cos′sus** or **Cos′sis.** Worm in intestines of horses. Small, vermiform pimples on the face (comedo), from inflammation of the sebaceous follicles.

**Cos′ta** (Lat.). Rib. The ribs are twenty-four in number, twelve on each side. They are irregular, long, bony curves, slightly flattened, and situated obliquely at the sides of the chest. Intervals between them are called intercostal spaces, and they are numbered first, second, third, etc., reckoning from above to below. They have been distinguished into *costæ veræ* or true ribs, and *costæ spuriæ* or false ribs. *True* or *sternal ribs* are the first seven, articulated at one extremity to the spine, and at the other by cartilages, hæmopophyses of Owen, to the sternum. The *false, asternal,* or *short ribs* are the remaining five, the uppermost three being united by cartilages to the cartilage of the last true rib. The others are free at their sternal extremity, and hence have been called *floating ribs,* costæ fluctuantes. The slightly expanded vertebral extremity of each rib is called the head of the rib, capitulum costæ; the space between this and the tubercle is the collum or neck. Anterior to the tubercle is the angle, angulus or cubitus costæ. The angle is the part where the bone bends to form the lateral part of the thorax.

**Cos′tal.** Appertaining or relating to a rib. **C. an′gle,** angle of rib. **C. arch,** curve made by the edges of the inferior costal cartilages at the lower opening of the thorax. **C. car′tilages,** the cartilaginous prolongations uniting the ribs to the sternum or to the cartilage of the last true rib; see *Costa.* **C. nerves,** intercostal nerves. **C. pleu′ra,** pleura lining the ribs and spaces between. **C. respira′tion,** respiration effected by the rising and falling of the ribs.

**Costal′gia** (*costa*, rib, *algos*, pain). Pain over the ribs; intercostal neuralgia.

**Costa′lis.** Muscle attached to a rib. **C. dor′si,** iliocostalis dorsi muscle.

**Cos′tatome.** See *Costotome.*

**Costicar′tilage.** Costal cartilage.

**Costicervica′lis.** Cervicalis ascendens muscle.

**Costicosta′lis.** Musculus accessorius ad sacrolumbalem.

**Costif′erous** (*costa*, rib, *ferro*, to carry). Having ribs, as *costiferous vertebræ.*

**Cos′tiform** (*costa*, rib, *forma*, shape). Rib-shaped. **C. apoph′ysis,** anterior tubercle of the transverse process of a vertebra of the neck.

**Costispina′les.** Levatores costarum muscles.

**Cos′tive.** Constipated.

**Costo-** (*costa*, rib). In composition, relating or appertaining to a rib.

**Costoabdom′inal.** Relating to the ribs and the belly. Obliquus externus abdominis muscle.

**Costoacro′mioclavicula′ris.** Costodeltoid muscle.

**Costoarticula′ris.** Relating to the ribs and the sternoclavicular articulation.

**Costoax′illary veins.** Branches from the intercostal veins to the axillary.

**Costoba′siscapula′ris.** Serratus magnus muscle.

**Costocen′tral.** Name given to articulations of the ribs with the bodies of the vertebræ or to ligaments connected with them.

**Costocer′vical ar′tery.** Portion of the superior intercostal artery.

**Costocervica′lis.** An occasional slip from the sternothyroid muscle to the cervical fascia.

**Costochon′dral.** Relating to a rib and its cartilage.

**Costoclavic′ular.** Belonging to the ribs and clavicle. **C. lig′ament,** cleidocostal or rhomboid ligament; fibrous, flattened fascia, extending obliquely from the cartilage of the first rib to the inferior surface of the clavicle. **C. line,** line from internal extremity of the clavicle to the tip of the eleventh costal cartilage.

**Costoclavicula′ris.** Subclavius muscle.

**Costocol′ic.** Relating to both ribs and colon. **C. lig′ament,** phrenocolic ligament.

**Costocor′acoid.** Relating to the ribs and the coracoid process. **C. lig′ament,** inferior edge of c. membrane. **C. mem′brane,** see *Pectoralis minor.*

**Costocoracoide′us.** Pectoralis minor muscle.

**Costodel′toid.** Muscular slip from the axillary surface of the scapula, joining with the deltoid at its insertion on the acromion, or inserted into the aponeurosis.

**Costoepitrochlea′ris.** Occasional muscle from the front of the thorax to the internal condyle of the humerus,

**Costofascia′lis cervica′lis.** Costocervicalis muscle.

**Costohumera′lis.** Muscle generally fused with pectoralis major, arising from the aponeurosis of the external oblique muscle, variously inserted on the humerus or scapula. Wandering slip of sternothyroid muscle from cartilage of first rib to hyoid bone.

**Costohy′oid.** Omohyoid muscle.

**Costoinfe′rior.** Pertaining to the lower ribs; a term applied to respiration in which expansion is confined almost entirely to the lower portion of the thorax.

**Costointer′nus.** Lumboabdominalis muscle.

**Costolumba′lis.** Relating to the ribs and lumbar region.

**Costopericar′dial lig′ament.** Upper of two bands passing from the pericardium to the manubrium and ensiform process of the sternum.

**Costopleu′ral.** Relating to both ribs and pleura.

**Costopleu′rover′tebral.** Relating to ribs, vertebræ, and pleura.

**Costopu′bic mus′cle.** Rectus abdominis muscle.

**Costopul′monary.** Relating to both ribs and lung.

**Costoscapula′ris.** Serratus magnus muscle.

**Costospi′nal.** Costocentral.

**Costoster′nal.** Relating to the ribs and sternum, as articulation of the latter with the anterior extremity of the first seven ribs.

**Costosupe′rior.** Relating to the upper ribs; term applied to respiration effected almost entirely by expansion of the upper portion of the thorax.

**Costothorac′ic ar′tery.** Long thoracic artery.

**Costothy′roid mus′cle.** Rare muscular slip from sternothyroid muscle, passing from the cartilage of the first rib to the thyroid cartilage.

**Cos′totome** (*costa*, rib, *tome*, incision). Instrument for cutting a rib or its cartilage; the operation is called *costot′omy* or *Est′lander's operation.*

**Costotrache′lian.** Relating to the ribs and the neck; anterior and posterior scaleni muscles.

**Costotransverse′.** Relating to the ribs and the transverse processes, as articulation of the tuberosities of the ribs with the transverse processes of the vertebræ, connected with which are the c. ligaments.

**Costover′tebral.** Belonging to the ribs and vertebræ. **C. articula′tion,** that of the head of the ribs with the vertebræ, connected with which are the costovertebral or centrovertebral ligaments.

**Costoxi′phoid.** Ligament uniting the cartilage of the seventh rib to the xiphoid or ensiform cartilage.

**Cos′tus.** The ancients gave this name to several plants, C. arabicus, C. indicus, C. speciosus or amarus, C. dulcis or orientalis, Amomum hirsutum, Hellenia grandiflora, Banksia speciosa, the root of which is aromatic, tonic, carminative, diuretic, emmenagogue, etc. **C. ama′rus,** costus; Canella alba. **C. arab′icus,** costus. **C. costico′sus,** Canella alba. **C. dul′cis,** bark of Canella alba. **C. horto′rum,** Tanacetum balsamita. **C. horto′rum mi′nor,** Achillea ageratum. **C. in′dicus,** costus. **C. ni′gra,** Cynara scolymus. **C. specio′sus,** costus. **C. spica′tus,** root is stimulant, diuretic, and diaphoretic.

**Co′ta.** Anthemis cotula.

**Cotard's** (ko-tars′) **syn′drome.** A suicidal form of paranoia with delusions of denial, sensory vagaries, etc.

**Cotarnine′** (word formed from letters of narcotine). $C_{12}H_{13}NO_3$. Alkaloid formed by the oxidation and decomposition of narcotine; styptic, sedative, and analgesic. **C. hydrochlo′ride,** stypticin; it has been used per os or subcutaneously in the treatment of severe hemorrhages from the uterus, stomach, or lungs, in doses of gr. ss–j (0.032–0.065).

**Co′tis.** Occiput; nucha.

**Co′to bark.** Bark of E. Indian tree used in diarrhœa, cholera, and profuse sweating; dose of the powder, gr. v–xv (0.32–1.0); of the fluid extract, ♏v–xv (0.32–1.0); of the tincture, ♏x–xxx (0.65–2.0). Three principles, *cotoin, paracotoin,* and *cotonetin,* have been obtained from it. Cotoin has been given in dose of gr. ss (0.032) in night-sweats and cholera.

**Cotoin′.** $C_{22}H_{18}O_6$. See *Coto bark.*

**Coto′nea.** Pyrus cydonia.

**Cotonetin′.** An active principle derived from coto bark, possessing properties similar to those of cotoin.

**Cot′ting's opera′tion.** Slicing off the side of the toe for the relief of ingrowing toe-nail.

**Cot′ton** (Arab., *kutn* or *kutun*). Gossypium. **Absorb′ent c.,** see *Gossypium.* **Gun-c.,** see *Pyroxylin* and *Collodion.* **Hæmostat′ic c.,** absorbent cotton saturated with astringent solutions, as Monsel's, or with alum, ferric chloride, etc.; used for the stilling of surface bleeding. **C. oil,** c.-seed oil. **C. phthi′sis,** see *Phthisis.* **C. pneumo′nia,** see *Phthisis.* **C.-root,** see *Gossypium.* **C.-seed,** see *Gossypium.* **C.-seed oil,** fixed oil from seed of Gossypium herbaceum and other species; used in liniments and to adulterate sweet oil. **Styp′tic c.,** hæmostatic c. **C. wool,** absorbent cotton, see *Gossypium.*

**Cotugno's** (ko-toon′yos) **aq′ueduct, canal′,** etc. See *Cotunnius.*

**Cot′ula.** Anthemis cotula. **C. fœt′ida,** Anthemis cotula. **C. multif′ida,** S. African plant; used in rheumatism, scalds, and cutaneous diseases.

**Cotun′nius's aq′ueduct** or **canal′.** Aqueduct of vestibule. **C.'s disease′,** sciatica. **C.'s liq′uor,** perilymph; transparent, slightly viscid fluid surrounding the membranous labyrinth. **C.'s nerve,** nasopalatine nerve. **C.'s wa′ter,** C.'s liquor.

**Cot′yle** or **Cot′yla** (*kotyle*, cup). Cotyledon. Hollow cavity of a bone receiving the head of another bone, and particularly the cotyloid cavity. Hollow of the hand.

**Cotyle′don.** Cotyle. The embryonic leaf in the seed of a plant. One of numerous tubercular projections from the uterine mucous membrane in certain animals. One of the aggregations of villi on the uterine surface of the placenta, forming the so-called lobes. **C. mari′na,** Umbilicus marinus. **C. orbicula′ta,** plant of S. Africa; fresh juice is used in epilepsy; leaves form a good application to hard corns. **C. umbili′cus,** pennywort, navelwort, Venus's navelwort; plant growing in Europe on old walls and rocks; leaves are emollient, and are applied externally to piles, inflamed parts, etc.; internally the juice has been given in epilepsy; the flowers in urinary lithiasis and dropsy.

**Cot′ylis.** Acetabulum.

**Cot′yloid** (*kotyle*, drinking cup, *eidos*, form). Relating to the acetabulum, or hemispherical cavity in the os innominatum which receives the head of the os femoris; variously called *fossa cotyloidea, sinus coxæ, acetabulum, a. cotyle, pyxis.* **C. bone,** acetabular bone. **C. cav′ity,** acetabulum, see *Cotyloid.* **C. fora′men,** a foramen formed by the transverse ligament closing in the cotyloid notch. **C. lig′ament,** very thick fibrocartilaginous ring surrounding the cotyloid cavity, the depth of which it increases. **C. ma′rgin,** margin of cotyloid cavity. **C. notch,** depression in the margin of the acetabulum for the passage of vessels and nerves to the joint.

**Cotylopu′bic.** Relating to the acetabulum and pubis. **C. arch,** pubic arch.

**Cotylosa′cral.** Relating to the acetabulum and sacrum. **C. arch,** arch above and back of the acetabulum.

**Cot′ylus.** Cotyle.

**Couch′grass.** Triticum repens.

**Couch′ing.** Operation of depressing the lens in the vitreous humor, by means of an instrument called a *couching-needle,* and allowing it to undergo absorption there, in cases of cataract. The operation is now practically obsolete. See *Cataract.*

Couching-needle.

**Coucin′ea coccin′ea.** Cacoucia coccinea.

**Cough.** Tussis. **Bronch′ial c.,** tubal c. **C. cen′tre,** see *Centre.* **Chin-c.,** whooping-cough. **Dry c.,** cough without expectoration. **Ear-c.,** see *Ear.* **Hoop′ing-c.,** pertussis. **Hu′mid c.,** mucous cough. **Hyster′ical** or **ner′vous c.,** see *Hysteria* and *Asthma thymicum.* **Laryn′geal c.,** c. from the irritation of the larynx. **Mu′cous c.,** c. with copious expectoration of mucus. **Re′flex c.,** c. caused by some irritation external to the respiratory passages. **C. root,** Trillium latifolium. **Spasmod′ic c.,** asthma thymicum. **Tooth-c.,** reflex cough from dental irritation. **Trigem′inal c.,** form of continuous and violent sneezing, coughing, etc., due to reflex action of the trigeminal nerve, induced by irritation in the nose, pharynx, or ears. **Tu′bal c.,** bronchial cough; cough in which the succussion communicated by it to the parietes of the chest is very energetic, and a sensation is experienced by the ear as if a column of air were traversing tubes with solid walls, with much noise, strength, and rapidity. **U′terine c.,** c. induced by disease of the uterus. **Va′gus c.,** c. from irritation of the vagus nerve. **Whoop′ing-c.,** pertussis. **Win′ter c.,** c. of chronic bronchitis, recurring each winter.

**Cough′wort.** Tussilago.

**Coulomb′** (after French electrician). Unit of electrical quantity produced by the force of one volt operating for one second against one ohm of resistance; in static electricity, unit determined by the charge developed in a Leyden jar having a capacity of one farad by one volt of force.

**Coulombmeter,** koo-lom′me-ter. Galvanometer to measure the quantity of electricity.

**Coumarin′.** Odorous principle of tonka bean.

**Coumarou′na odora′ta.** Dipterix odorata.

**Coun′tenance.** Visage; form of the face; features.

**Coun′terbane.** Antidote.

**Coun′terdie.** A female die, used in dentistry.

**Counterexten′sion.** This consists in retaining firmly and immovably the upper part of a limb while extension is practised on the lower; used in fractures, luxations, joint diseases, etc.

**Coun′terfissure.** Contrafissura.

**Counterindica′tion.** Indication contrary to another; any circumstance acting as an obstacle to the employment of such therapeutical means as seem to be indicated by other circumstances.

**Counterir′ritant.** See *Counterirritation.* **Gran′-ville's c.'s.** See *Granville.*

**Counterirrita′tion.** Irritation excited in one part of the body with the view of relieving a morbid process existing in another part; remedies so used are called counterirritants. See *Derivation.*

**Countero′pening.** Contra-aperture.

**Coun′terpoison.** Antidote.

**Coun′terpressure.** Pressure to accomplish a certain result by force applied to opposite points.

**Coun′terpuncture.** A puncture made opposite to one already existing.

**Coun′tersink.** Conical enlargement of an orifice, a term employed in dentistry.

**Coun′terstain.** A stain used to color elements little or not at all affected by a stain previously employed, the object being to bring out the latter more vividly by contrast.

**Coun′terstroke.** Contrecoup; contrafissura.

**Count′ess's pow′der.** Powdered cinchona bark.

**Coun′try fe′ver.** Malarial fever.

**Coup de soleil,** kood-sol-aye′ (Fr.). Sunstroke; insolation; affection produced by the action of the sun on some region of the body, as the head, hands, arms, etc. It is also called thermic fever, heat asphyxia, solar asphyxia, heatstroke, solar exhaustion, heat apoplexy.

**Coup′le.** Pair. To unite; to join in a series.

**Cou′rap.** Distemper common in India, in which there is perpetual itching and an herpetic eruption on the skin of the axilla, groins, breast, and face.

**Couron′di** or **Couron′do.** Evergreen tree of Malabar, juice of which, mixed with warm whey, is used in dysentery.

**Cou′ros.** Human fœtus at full term.

**Couroupi′ta guianen′sis.** Cannon-ball tree of Guiana; decoction of the fruit is given by enema in chronic diarrhœa.

**Cour′ses.** Menses.

**Court plas′ter.** Isinglass plaster on silk or other fine material.

**Courvoisier's** (koor-voaz-yaze′) **law.** When the common bile-duct is obstructed by gallstones the gall-bladder does not enlarge, but it does enlarge when the obstruction is from other causes.

**Cous′so.** Hagenia abyssinica.

**Couta′rea specio′sa.** Plant of Guiana; tonic, antiperiodic, and laxative.

**Coutou′bea al′ba** or **spica′ta.** Plant of Guiana; very bitter, tonic, emmenagogue, anthelmintic, antidyspeptic, and antipyretic.

**Couvage′,** koo-vazh (Fr.). Incubation; preservation and rearing of a child in a couveuse.

**Couveuse′** (Fr.). Incubator for ill-developed or prematurely born children.

**Cov′er.** Operculum.

**Cov′er-shame.** Juniperus sabina; so called because employed to produce abortion.

**Co′volam.** Bengal quince, bael, bela; bark of this E. Indian tree is tonic; the unripe fruit astringent; used in diarrhœa and dysentery; see *Extractum belæ liquidum.*

**Cow′age.** Cowhage.

**Cowa′nia stansburia′na** (after James Cowan, English botanist, and Captain Stansbury, U. S. army). Plant growing in the vicinity of Salt Lake; general astringent and local styptic.

**Cow′bane.** Cicuta aquatica. **Spot′ted c.,** cicuta maculata.

**Cow bas′il.** Vaccaria vulgaris.

**Cow′bean.** Cicuta virosa.

**Cow′berry.** Vaccinium vitis idæa.

**Cow′flop.** Digitalis purpurea.

**Cow′hage** or **Cow′itch.** Dolichos pruriens.

**Cow′lick.** Tuft of hair on the head, pressed out of place and seeming as if it had been licked by a cow.

**Cowl′-muscle.** Trapezius.

**Cow-mum′ble.** Anthriscus sylvestris; Heracleum spondylium.

**Cow pars′nip.** Heracleum.

**Cowpe′rian cysts.** Nabothi glandulæ.

**Cowperi′tis.** Inflammation of Cowper's glands.

**Cow′per's glands.** Accessory glands, bulbocavernous glands, glands of Méry; two small, ovoid groups of reddish mucous follicles, situated behind the bulb of the urethra, anterior to the prostate, the excretory ducts of which open into the bulbous portion of the urethra. The terms anterior prostate and anteprostatic glands are sometimes given to them, but usually these are applied to a third glandular body, occasionally found in front of and between Cowper's glands. **C. glands in the fe′male,** glands of Duverney or of Bartholin; these are situated at each side of the entrance of the vagina, beneath the skin covering the posterior or inferior part of the labia; they are rounded, but elongated, flat, and bean-shaped; they are not invariably present. The secretion from them is a thick, tenacious, grayish-white fluid, emitted in quantity during sexual intercourse; probably the fluid supposed, of old, to be female sperm. **C.'s lig'ament**, portion of the fascia lata attached to the pubic crest.

**Cow'pock** or **Cow'pox.** Vaccina. **C. inocula'tion**, vaccination. **C. itch**, see *Itch*. **C. ves'icle**, see *Vaccination*.

**Cow's mouth.** Primula veris.

**Cow'slick.** Bryonia dioica.

**Cow'slip.** Caltha palustris; Primula veris. **Jeru'salem c.**, pulmonaria.

**Cowstrip'ling** or **Cowstrop'ple.** Primula veris.

**Cowth'wort.** Matricaria; Leonurus cardiaca.

**Cow' tree of Ceylon'.** Gymneura lactiferum. **C. of S. Amer'ica**, Galactodendron utile.

**Cow'weed.** Chærophyllum sylvestre; Anthriscus sylvestris.

**Cow'wort.** Geum urbanum.

**Cox'a.** Haunch, hip, or hip-joint. Optic thalamus. **C. va'ra**, inclination outward of the head of the femur, with resulting deformity.

**Coxag'ma** (*coxa*, hip, *agma*, fracture). Fracture of the hip.

**Coxag'ra** (*coxa*, hip, *agra*, seizure). Pain in the hip; sciatica; hip-joint disease.

**Cox'al.** Relating to the hip. **C. bone**, ilium.

**Coxal'gia** (*coxa*, hip, *algos*, pain). Pain in the hip; hip-joint disease. Sciatica.

**Coxankylom'eter** (*coxa*, hip, *ankyle*, adhesion, *metron*, measure). Instrument to measure the amount of deformity at the hip-joint.

**Coxarthri'tis** (*coxa*, hip, *arthritis*, inflammation of joint). Inflammation of the hip-joint.

**Coxarthrocace**, kox-ar-throk'a-se (*coxa*, hip, *arthron*, joint, *kakos*, evil). Fungous inflammation of the hip-joint.

**Coxarthrop'athy** (*pathos*, disease). Coxarum morbus.

**Coxa'rum mor'bus.** Hip-disease; tuberculous caries, and often spontaneous luxation of the head of the os femoris, occasioning permanent shortening of the limb, and not infrequently hectic fever and death—*ischiophthisis*. In advanced life another form of chronic hip-disease sometimes occurs, often attended with osseous protuberances, known as morbus coxæ senilis, a variety of chronic osteo-arthritis.

**Coxen'dix.** Haunch; ischium; ilia.

**Coxe's hive syr'up.** Syrupus scillæ compositus.

**Coxi'tis.** Inflammation of the hip-joint. **C. cotyloide'a**, hip-joint inflammation, involving especially the acetabulum. **Se'nile c.**, rheumatoid affection of the hip-joint in old persons.

**Coxocace**, kox-ok'a-se. Coxarum morbus.

**Coxodyn'ia** (*coxa*, hip, *odyne*, pain). Coxalgia.

**Coxofem'oral.** Belonging to the coxal bone or ilium and to the os femoris; iliofemoral has the same signification. **C. articula'tion**, iliofemoral a.; hip-joint; the head of the femur and the articular cavity are covered by a diarthrodial cartilage and synovial capsule, and by a very strong capsular or articular ligament attached to the circumference of the cotyloid cavity and to the neck of the femur; the round or interarticular ligament passes from the inferior notch of the cotyloid cavity to the rough depression at the top of the caput femoris; and the cotyloid ligament, a thick, cartilaginous ring, is situated on the edge of the cotyloid cavity, converting the inferior notch into a foramen.

**Crab'-louse.** Pediculus pubis.

**Crabs' claws, eyes, or stones.** Abrus precatorius; cancrorum chelæ.

**Crab'yaws.** In the W. Indies, ulcers on the soles of the feet, with edges so hard that they are difficult to cut.

**Cracked-met'al res'onance.** Bruit de pot félé.

**Cracked-pot sound.** Bruit de pot félé.

**Crack'ling.** Crepitant, crepitation, or crepitus.

**Cradi'na.** Ferment from the juice of the common fig-tree; yellow mass, with action similar to that of pepsin and papain.

**Cra'dle.** Semicircle of thin wood, or strips of wood, to prevent contact of bedclothes in wounds, fractures, etc. **C. cap**, seborrhœal incrustations on the heads of young children.

**Cramp.** Sudden, involuntary, and highly painful contraction of a muscle or muscles; most frequently experienced in the lower extremities, and a common symptom of certain affections, as of colica pictonum and cholera morbus. Friction and compression of the limb by a ligature applied around it above the muscles affected will usually remove the spasm, and the latter applied at bedtime will often prevent frequently recurring nocturnal attacks. **Auctioneers'' c.**, analogous cramp to that of writers except that the orbicularis oris muscle is affected. **C.-bark**, bark of Viburnum opulus. **C.-bone**, patella of sheep. **Cigar'makers' c.**, see *Cramp, writers'*. **Coach'men's c.**, see *C., writers'*. **Compos'itors' c.**, see *C., writers'*. **Coor'dinate c.**, see *Compulsory movements*. **Dan'cers' c.**, see *C., writers'*. **Glass'-blowers' c.**, see *C., writers'*. **Intermit'tent c.**, tetany. **Milk'ing c.**, see *C., writers'*. **Musi'cians' c.**, see *C., writers'*. **Occupa'tion c.**, professional c. **Pian'ists' c.**, see *C., writers'*. **Profes'sional c.**, involuntary cramp or spasmodic contraction of a part upon attempted use of it, caused by strain of the affected muscles from overuse; *writers' c.* is the type of this form of neurosis. **C. rings**, rings, solemnly consecrated, given out by English kings of old for the prevention or cure of cramp. **Scriv'eners' c.**, writers' cramp. **Semp'stress's c.**, see *C., writers'*. **Shoe'makers' c.**, see *C., writers'*. **C. of the stom'ach**, sudden, violent, and most painful affection of the stomach, with a sense of constriction in the epigastrium; effect of the spasmodic contraction of the muscular coat of the stomach, and requiring the use of the most powerful stimulants and antispasmodics, of which opium is the best. **C. stone**, stone carried as a preventive of cramp. **Wri'ters' c.**, scriveners' cramp or palsy, pen palsy, stammering of the fingers; the type of professional neuroses; a functional spasm of the fingers in which they are unable to hold the pen, or in which one or more muscles of the fingers are irregularly and irresistibly contracted. A similar condition of the nerves and muscles concerned is seen in other occupation cramps.

**Crampto'nian mus'cle.** Muscular fibres passing from the annular ligament to the sclerotic coat in the eyes of some birds.

**Cram-stunt.** College term to express the effect on the mind of the student of cramming or overtaxing his mental resources.

**Cran'berry.** Vaccinium oxycoccos. **Al'pine c.**, Vaccinium vitis idæa. **Up'land c.**, Arbutus uva ursi.

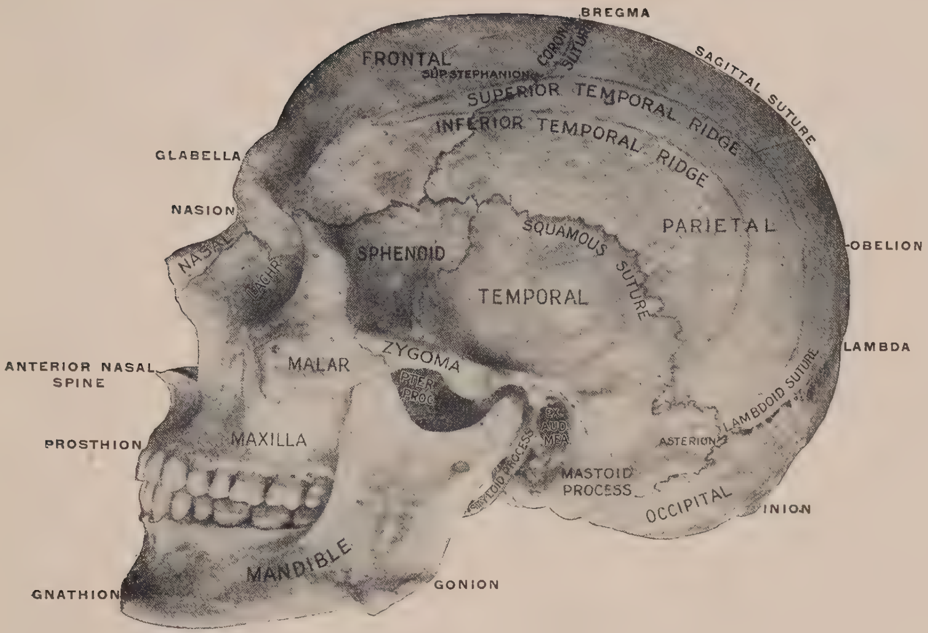
**Crane's bill.** Geranium. **Spot'ted c. b.**, Geranium maculatum. **Stink'ing c. b.**, Geranium robertianum.

**Craniacro'mial.** Relating to the skull and shoulder.

**Cra'nial.** Relating to the cranium. **C. bones**, the eight bones of the skull as distinguished from those of the face. **C. flex'ures**, curving of those of the medullary tube on itself in early embryonic life, by which the primary vesicles are displaced and the future head commences its development; flexures of the brain. **C. fos'sæ**, fossæ of the skull. **C. nerves**, the twelve pairs of nerves which emerge from foramina in the skull, see *Nerve*. **C. re'flex**, see *Reflex*. **C. seg'ments**, three divisions of the bones of the skull corresponding to the three cerebral vesicles of the embryo; these segments are the frontal (frontal bones and part of the sphenoids), parietal (parietals and part of the sphenoid bones), and occipital (the occipital bone). **C. si'nuses**, sinuses of the dura mater. **C. su'tures**, see *Sutures*. **C. ver'tebræ**, see *Vertebræ*.

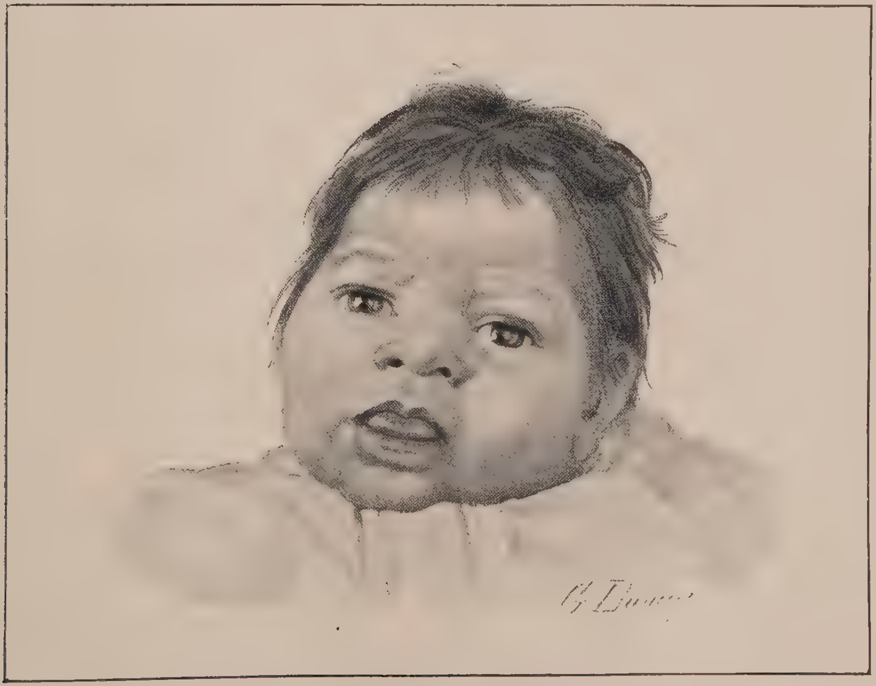
**Craniec'tomy** (*kranion*, skull, *ektome*, excision). Excision of a strip of skull in young children for the

## CRANIOMETRY



Skull, viewed from the left side, showing the principal craniometric points. (Cryer.)

## CRETIN



Congenital sporadic cretinism. Infant, four weeks old. (Koplik.)

condition of microcephalia, hyperostosis, or hydrocephalus. **Lin′ear c.**, linear craniotomy, practised in cases of early closure of the sutures.

**Cranio-.** In composition, the cranium.

**Cra′nioabdom′inal.** Relating to cranium and abdomen.

**Cra′nioau′ral.** Relating to both skull and ear.

**Cra′niocele** (*kranion*, skull, *kele*, tumor). Encephalocele.

**Craniocer′ebral.** Relating to the skull and brain in common.

**Craniocer′vical.** Relating to the cranium and cervical region.

**Cranioc′lasis** or **Cra′nioclasm** (*kranion*, skull, *klao*, to break). Breaking up of the child's head, as by the craniotomy forceps.

**Cra′nioclast.** Instrument for crushing the head of the fœtus.

**Craniodid′ymus** (*didymos*, twin). Cephalopagus; monstrosity with two heads.

**Craniofa′cial.** Relating to the cranium and face. **C. an′gle**, the angle formed by the meeting of the basifacial and basicranial axes. **C. notch**, a defect in the bone between the orbital and the nasal cavities in the median line.

**Craniog′nomy** (*kranion*, skull, *gnome*, judgment). Deductions as to the character, mental characteristics, etc., from a study of the external configuration of the skull.

**Cra′niograph** (*grapho*, to describe). Apparatus for graphic outlining of the skull, *craniog′raphy* or *cephalol′ogy*.

**Craniohæmaton′cus** (*kranion*, skull, *haima*, blood, *onkos*, swelling). Cephalæmatoma.

**Craniola′ria an′nua.** A tropical plant, root of which is a bitter tonic.

**Craniolin′gual.** Relating to the cranium and tongue.

**Craniol′ogy** (*logos*, description). The science relating to the size, configuration, and other characteristics of the skulls of individuals and races.

**Craniomala′cia** (*kranion*, skull, *malakia*, softness). Softening and thinning of the cranial bones, especially the occipital bone, from pressure, often due to rickets; craniotabes.

**Cra′niomancy** (*kranion*, skull, *manteia*, divination). Divination by means of the cranium.

**Craniomandib′ular.** Relating to the cranium and inferior maxillary bone.

**Craniom′etry** (*kranion*, skull, *metron*, measure). Measurement of the skull; a compass used for this purpose is called a *craniom′eter* or *cephalom′eter*.

**Craniop′agus** (*kranion*, skull, *pegnymi*, to join together). Cephalopagus; double monster, the twins being joined by the heads. The condition is called *craniop′agy*.

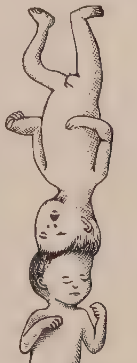
**Craniop′athy** (*pathos*, disease). Disease of the skull.

**Craniopharynge′us.** Relating to the cranium and pharynx.

**Cra′niophore** (*phoreo*, to bear). Apparatus for holding a skull in a proper position for study of it.

**Cra′nioplasty** (*kranion*, skull, *plasso*, to form). Operation for the restoration of the soft parts and bones of the cranium.

**Craniorrhachischisis**, kra-ne-or-ak-is′kis-is (*kranion*, skull, *rhachis*, spine, *schisis*, fissure). Congenital fissure of the skull and spine.



Craniopagus.

**Cranioschisis**, kran-e-os′kis-is (*schisis*, fissure). Congenital fissure of the skull and spine.

**Craniosclero′sis.** Induration and enlargement of the bones of the skull.

**Cranios′copy** (*kranion*, skull, *skopeo*, to view). Craniomancy; phrenology; description or simply an examination of the different parts of the external surface of the cranium to deduce from it a knowledge of the different intellectual and moral dispositions. The incorrect theory upon which this assumed science is based is that the cranium being moulded to the brain there are as many prominences on the bone as there are projections at the surface of the brain. According to Gall, each projection, which he calls an organ, is the seat of a particular intellectual or moral faculty, and all persons endowed with the same faculty have, at the same part of the brain, a prominence, indicated externally by a bump or projection in the bony case.

**Craniospi′nal.** Cephalospinal. **C. ax′is**, see *Encephalon*.

**Craniostegno′sis** or **Craniosteno′sis** (*kranion*, skull, *stenos*, narrow). Contraction of the skull. See *Microcpehalus.*

**Craniosto′sis** (*kranion*, skull, *osteon*, bone). Early ossification of sutures of the skull.

**Cra′niostyle** (*stylos*, column). Cartilage of the nasal septum.

**Craniota′bes** (*tabes*, wasting). Craniomalacia.

**Cra′niotome** (*kranion*, skull, *tome*, incision). Instrument used in craniotomy; trephine.

**Craniot′omy.** Operation of opening the fetal head in parturition. **C. for′ceps**, instrument, resembling the lithotomy forceps, for laying hold of and breaking down the bones of the fetal head in parturition.

**Craniotonos′copy** (*tonos*, tone, *skopeo*, to view). Determination of the capability of the cranial bones for conveying sound.

**Craniotrac′tor** (*traho*, to draw). Cranioclast used for traction.

**Craniotrip′sotome** (*tribo*, to crush, *tome*, incision). Cranioclast arranged as a trephine perforator.

**Craniotrype′sis** (*trypao*, to perforate). Trephining.

**Craniotympan′ic.** Relating to the skull and drum of the ear conjointly.

**Craniover′tebral.** Cephalospinal; cephalorrhachidian.

**Crani′tis.** Inflammation of the cranial bones.

**Cra′nium** (*kranion*, skull). Brain-pan; the skull; collection of bones forming the case for lodging the brain and its membranes, as well as their vessels and some of the nerves. These bones are eight in number—the frontal, occipital, two parietal, two temporal, the sphenoid, and ethmoid. There might also be considered as belonging to the cranium the cornua sphenoidalia, the bones of the ear, and the ossa Wormiana. Typical forms of the skull are sometimes described according to the width of the bregma or space between the parietal bones: *stenobregmate*, narrow or Ethiopian variety; *mesobregmate*, middle or Caucasian variety; and *platybregmate*, broad or Mongolian variety. (See cuts under *Skull.*) **Cartilag′inous c.**, chondocranium. **Mem′branous c.**, c. of the embryo before the period of ossification.

**Cra′nomancy** (*kranion*, head, *manteia*, divination). Art of divining, from the inspection of the head or cranium, the moral dispositions and inclinations of individuals; phrenology.

**Cran′ter** (*kraino*, to finish). Wisdom tooth.

**Crap′ula** (Lat., drunkenness) or **Crap′ulence.** Alcoholic intemperance.

**Crap′ulent** or **Crap′ulous.** Produced by or indulging in the excessive use of alcoholic drinks; crackling sound heard on auscultation, as in tuberculosis of the lungs.

**Craquement de cuir neuf**, krak-mon(g)′ d'kweer-nuff′ (Fr.). Sound like new leather heard on auscultation when the pericardium is thickened with plastic deposits.

**Cra′sis.** Mixture of the constituents of a fluid, as blood, humors, etc. Constitution, temperament, etc. **Parasit′ic c.**, a debilitated condition favoring infestation by parasites, or one caused by such infestation.

**Cras′pedon.** Staphylœdema.

**Cras′sa** (thick, *membrana*, understood). Sclerotica; decidua reflexa.

**Crassa'men** or **Crassamen'tum** (*crassus*, thick). Thick part or deposit of any fluid; particularly applied to clot of blood. **C. san'guinis,** see *Blood*.

**Cras'sitas** or **Crassitu'do.** Thickening, as of the valves of the heart; corpulence.

**Cras'sula** (dim. of *crassus*, thick). Sedium telephium. **C. arbores'cens,** see *Cotyledon orbiculata*. **C. ma'jor,** sedum. **C. tetrago'na,** S. African succulent plant, somewhat astringent; boiled in milk it is used in diarrhœa.

**Cras'sum** (thick, *intestinum*, understood). Colon.

**Cras'sus** (thick). Corpulent. Full or turgid—a term applied to the pulse.

**Cratæ'gus a'ria.** White bean tree; fruit of size of small pear, slightly astringent; employed in diarrhœa.

**Cratæ'va mar'melos.** Plant of Society Islands, etc.; leaves are diuretic and tonic; root is alterative. **C. ner'vula,** same habitat; leaves are aromatic, stomachic, and diuretic; root is alterative; bark is used externally in rheumatism. Covolam.

**Craterauch'en** (*krateros*, strong, *auchen*, neck). One with a strong neck; a strong neck itself.

**Cratic'ula.** Omentum.

**Cravat'.** Form of necktie or neckcloth; name given to different bandages or slings, as carpocervical c., carpo-olecranial c., etc. **Swiss c.,** band of the longitudinal or superficial layer of the muscular fibres of the stomach, along the lesser curvature.

**Craw.** Crop of fowl. Ranunculus bulbosus.

**Craw'craw.** Species of itch or eczematous parasitic disease common on the African coast.

**Crawcrow'foot** or **Craw'foot.** Ranunculus.

**Craw'feet.** Scilla nutans; Orchis mascula.

**Cra'yon.** Pencil or stick with which caustics, astringents, etc., as nitrate of silver, sulphate of copper, tannic acid, or iodoform, may be locally applied.

**Cra'ziness.** Insanity.

**Crazolaryngis'mus** (*krazo*, to crow). Laryngismus stridulus.

**Cra'zy.** Insane. **C. bone,** funny bone.

**Cre'a.** Shin.

**Crealbin'.** An albumin compound of creolin; an internal antiseptic.

**Cream.** Thick, unctuous matter of a yellowish-white color and sweet, agreeable taste, which rises to the surface of milk if kept at rest. It constitutes about 15 per cent. of the milk, and is composed of butter, serum, and casein. **Cold c.,** ceratum Galeni; unguentum aquæ rosæ. **C. of tar'tar,** potassii supertartras; Adansonia gregorii. **C. whey,** beverage made by adding two teaspoonfuls of cream of tartar to a pint of milk.

**Crease.** Line caused by folding. **Gluteofem'oral c.,** the crease just below the nates on each side. **Ileofem'oral c.,** the groin.

**Cre'asol.** $C_8H_{10}O_2$. Phenol from wood-tar creosote.

**Cre'asotal.** Creosotal; carbonate of creosote.

**Cre'asote** (*kreas*, flesh, *soter*, preserver). Creosote.

**Creatin'** (*kreas*, flesh). $C_4H_9N_3O_2$. Nitrogenized, crystallizable alkaloid obtained from muscular tissue of man and other animals. By the action of strong acids creatin is converted into creatinin or kreatinin, $C_4H_7N_3O$, a substance having a strong alkaline reaction and forming crystallizable salts with acids. It pre-exists to a small extent in the juice of flesh and in conjunction with creatin in the urine.

**Creatinæ'mia.** An excess of creatin in the blood.

**Creatinin'.** $C_4H_7N_3O$. See *Creatin*.

**Creatoph'agus** (*kreas*, flesh, *phago*, to eat). Carnivorous.

**Creatozo'ma** or **Creazo'ma** (*kreas*, flesh, *zomos*, broth). Meat broth.

**Credé's** (kreh-days') **meth'od.** Assistance rendered the uterus to expel the placenta, consisting in seizing that organ between the fingers and thumb through the abdominal walls, thus producing expulsion of the after-birth; also a plan for the prevention of ophthalmia of the newborn by disinfecting the vagina during delivery and treatment of the eyes at once after delivery by the application of a 2 per cent. solution of nitrate of silver. **C.'s oint'ment,** an ointment of soluble silver, applied by inunction in dose of ʒss–j (2.0–4.0) twice a day, in the treatment of pyæmia and septicæmia.

**Creep'er, trum'pet.** Tecoma radicans. **Virgin'ia c.,** Ampelopsis quinquefolia; Tecoma radicans.

**Creep'ing sick'ness.** Ergotism.

**Cremas'ter** (*kremao*, to suspend). The spermatic cord, or all the parts by which the testicle is, as it were, suspended, formerly received this name; but its meaning is now limited to a very thin muscular fascia, sometimes hardly perceptible, which detaches itself from the internal oblique muscle, passes through the abdominal ring, and vanishes around the tunica vaginalis; serving to draw up the testicle and to move it slightly. Suspensory muscle of the testicle; in the fœtus the gubernaculum testis.

**Cremaster'ic.** Appertaining or relating to the cremaster. **C. ar'tery,** branch of the epigastric artery; corresponding artery in the female supplies the labia majora. **C. re'flex,** retraction of the testicle following irritation of the integument of the thigh at its upper and inner part; see *Reflex*.

**Crema'tion** (*cremo*, to burn). Reduction to ashes by intense heat; method of disposing of a dead body in a furnace or room arranged with this object—*cre'matory* or *cremato'rium*; also similar disposal of garbage.

**Crem'nos** or **Crem'nus.** Labium pudendi; prominent edges of an ulcer.

**Cre'mor** (Lat.). Cream. **C. frig'idus,** cold cream. **C. lac'tis,** cream. **C. tar'tari,** potassii tartras; cream of tartar. **C. uri'næ,** pellicle on urine, see *Urine*.

**Cre'na** (notch) or **Cren'ature.** In plural, the small teeth or projections in the bones of the cranium producing accurate junction at the sutures. **C. a'ni,** clunium, fissure between the nates.

**Crena'ted** (*crena*, notch). Notched.

**Crena'tion** (*crena*, notch). Notched appearance of the red corpuscles of the blood.

**Cren'othrix** (*krene*, spring, *thrix*, hair). A genus of schizomycetes of the family *Chlamydobacteriaceæ*, found in stagnant and running water. It consists of unbranched threads, cell-division occurring in three planes; a deposit of oxide of iron is often found within the sheath. **C. goers'teri** (Cohn), Cladothrix foersteri. **C. kühnia'na** (Saccardo and Rabenhorst), C. polyspora. **C. polyspo'ra** (Cohn), found in stagnant or running water, and contains iron; it is uncertain whether or not it is pathogenic for man.

**Cre'ole** (Sp., *criollo*). White native of America or of the West Indies.

**Creolin'.** Dark brown, syrupy liquid from the dry distillation of coal-tar, some resins, etc. It forms a milky emulsion with water, and is used as a local antiseptic, germicidal, deodorant, and disinfectant in cases in which corrosive sublimate and carbolic acid are applicable, in one to two per cent. solution. It has also been used internally in gastric and intestinal fermentation, dysentery, phthisis, vesical catarrh, etc.

**Creoph'agus** (*kreas*, flesh, *phago*, to eat). Carnivorous.

**Creoph'ila.** Flesh flies.

**Cre'osal.** Tannosal, tannic acid ester of creosote; used as a substitute for creosote.

**Creo'soform.** Compound of creosote and formaldehyde; antiseptic; dose, ♏v–xxx (0.32–2.0).

**Cre'osol.** Creasol; homoguaiacol; an antiseptic, oily liquid.

**Creoso'tal.** Creosote carbonate, a liquid preparation consisting of 92 per cent. of the purest beechwood-tar creosote in combination with 8 per cent. of carbonic acid; used as a substitute for creosote, in pneumonia and tuberculosis, in doses of gr. iij–xv (0.2–1.0).

**Cre'osote** or **Creoso'tum.** (Ph. U. S. and Br.) Colorless, oily, neutral liquid, of a strong, characteristic, penetrating odor and acrid, burning taste, consisting of a mixture of phenols (chiefly creosol and guaiacol) obtained from beechwood-tar by distillation; transparent, freely soluble in alcohol and acetic acid; sp. gr. 1.035–1.085. It coagulates albumin, whence its hæmostatic power, and is a powerful antiseptic. It has been largely administered in hemorrhages, both internally and externally, and as an external application in burns, ulcers, especially those of a sloughing character, fetid discharges, diphtheria, etc., and chronic cutaneous affections. Internally, it is a sedative in small doses; it has been administered in pulmonary phthisis, pneumonia, vomiting, cholera morbus, diarrhœa, typhoid fever, fermentative diseases of the stomach and bowels, diabetes mellitus, nervous diseases, glanders, etc. In overdoses it is a violent poison. Dose internally, ♏ss–ij (0.032–0.13); externally, it is sometimes applied pure, at others diluted, and commonly with water (ʒss–℥vj), or in the form of ointment (ʒss–℥j of cerate). *Aqua creosoti* (Ph. U. S.), creosote-water, is made of creosote 1 part, distilled water 99 parts; dose, ʒj–iv (4.0–16.0). *Mistura creosoti* (Ph. Br.) is a flavored solution, weaker than the water; dose, ʒij–℥j (8.0–32.0). *Unguentum creosoti* (Ph. Br.) is of 10 per cent. strength. **C. car′bonate**, creosotal. **Coal-tar** or **min′eral c.**, heavy oil of coal-tar, containing carbolic acid; sometimes used as substitute for creosote; carbolic acid. **C. formal′dehyde**, creosoform. **C. plant**, Laurea mexicana. **C. phos′phate**, phosphotal, an oily liquid; antiseptic; dose, ♏j–v (0.065–0.32). **C. vale′rianate**, eosote, an oily liquid; antiseptic; dose, ♏j–v (0.065–0.32). **C.-water**, aqua creasoti.

**Crepa′lia temulen′ta.** Lolium temulentum.

**Crepanel′la.** Plumbago europæa.

**Crepatu′ra.** Hernia of the intestines. Discharge of wind per anum.

**Crepid′ines** (pl. of *crepido*, border) **palpebra′rum.** Cartilages of the eyelids.

**Crep′itant** or **Crep′itating** (*crepito*, to crackle). Crackling; subcrepitant. **C. râle**, sound heard during respiration in severe pneumonia and œdema of the lung; it resembles the sound produced by rubbing slowly and firmly between the finger and thumb a lock of hair near the ear, and is probably produced by the air of inspiration passing into the air cells obstructed by viscid secretion from their interior.

**Crepita′tio.** Crepitation. **C. den′tium**, chattering of the teeth. **C in′dux**, crepitant râle heard at the commencement of hepatization of the lung in pneumonia. **C. re′dux**, crepitant râle heard when solidification of lung is disappearing in pneumonia. **C. vesicula′ris**, crepitation.

**Crepita′tion** (*crepito*, to make a noise). Crackling. In surgery, noise of fractured bones when moved in certain directions; detected by the immediate application of the ear or by the use of the stethoscope. It is likewise met with in gangrene when air is effused into the areolar membrane, if the part be carefully examined with the fingers. Cracking of the joints in health or disease. In medicine a form of râle; see *Crepitant*.

**Crep′itus.** Crepitation; crepitant râle; discharge of wind from the rectum. **Bo′ny c.**, see *Crepitation*. **False c.**, a sensation of crepitation obtained in the movement of a joint containing little or no synovia. **C. in′dux**, see *Crepitatio*. **Joint c.**, false c. **C. lu′pi**, lycoperdon. **C. re′dux**, see *Crepitatio*. **Sil′ky c.**, a joint c. resembling friction between two pieces of silk, obtained in certain cases of serous effusion.

**Cres′alol.** A salicylic ester of cresols; a white powder produced by heating together, at an elevated temperature, salicylate of sodium and cresylate of sodium with phosphoric chloride. There are three cresalols, metacresalol, orthocresalol, and paracresalol, all possessing similar properties, being antiseptic, especially in intestinal conditions, and also antiarthritic. Dose, gr. iij–x (0.2–0.65).

**Cresamin′.** Mixture of tricresol and ethylene diamin; antiseptic in ulcers and skin diseases.

**Cres′aprol.** Disinfectant liquid produced by the action of a solution of cresol on a solution of sodium cresoxyl acetate.

**Cres′cent.** Anything shaped like the moon in its first or last quarter. One of the cornua of gray matter in the spinal cord. One of the forms of the malarial plasmodium. White, semilunar appearance at the macular margin of the optic disk, from deficient or atrophied choroid. **C. of Gianuz′zi**, see *Gianuzzi*. **Mala′rial c.**, see *Plasmodium malariæ*. **Myo′pic c.**, crescentic appearance of the papilla from choroidal atrophy and detachment from the sclerotic; observed especially in myopia.

**Crescen′tia** (*cresco*, to grow). Growth. **C. ala′ta** (after Crescentio, Italian writer on agriculture), Mexican plant; used in Mexico in hæmoptysis. **C. cuje′te**, narrow-leaved calabash tree; pulp of the fruit of this W. Indian plant is acidulous; used in diarrhœa, headache, and diseases of the chest.

**Cres′era** (a sieve). See *Cribration*.

**Cresin′.** Cresaprol.

**Cresochin**, kres-o-kin′. A soluble preparation of chinolin and tricresol; antiseptic and disinfectant.

**Cre′sol.** Cresylic acid. Cresols are derived from coal-tar by fractional distillation, and are present in the portion distilled over between 200° and 210° C.; they are named orthocresol, metacresol, and paracresol; antiseptic and disinfectant, and not so toxic as carbolic acid. **C. an′ytol**, solution of metacresol in anytin (a 33 per cent. aqueous solution of sulphoichthyolic acid). **C. bis′muth**, bismuth cresylate. **C. i′odide**, yellow, resinous powder; antiseptic. **C. naph′thol**, an antiseptic fluid preparation. **C. sal′icylate**, see *Cresalol*. **C. tan′nate**, tannosal. **C. val′erate**, eosote, a fluid employed in tuberculosis and diseases of the bowels.

**Cresolin′.** Creolin.

**Cresol-sal′ol.** Cresol salicylate.

**Cresomagne′sol.** A combination of caustic potash, magnesia, and creosote.

**Cresot′ic acids.** There are three of these, orthocresotic, metacresotic, and paracresotic acids, made by the mutual action of sodium and carbon dioxide and the three isomeric cresols, and by other processes. They are white, prismatic needles. The paracresotic salt of sodium is alone employed therapeutically as an antipyretic.

**Cresotin′ic acid.** Crystallized acid obtained by the action of carbonic acid on sodium cresylate; resembles salicylic acid therapeutically.

**Crespi′nus.** Oxyacantha galeni.

**Cress.** Plants of the order *Cruciferæ*. **Bit′ter c.**, Cardamine pratensis. **Dock c.**, Lapsana. **Gar′den c.**, Lepidium sativum. **In′dian c.**, Tropæolum majus. **Marsh wa′ter-c.**, Nasturtium palustre. **Mead′ow c.**, Cardamine pratensis. **Pen′ny c.**, Thlaspi. **Sciat′ica c.**, Lepidium iberis. **Swine′s c.**, Cochlearia coronopus. **Wa′ter-c.**, Sisymbrium nasturtium or Nasturtium officinale.

**Cress′wort.** Eupatorium perfoliatum.

**Crest.** Crista. **Aud′itive c.**, crista acustica. **Canine′ c.**, prominence on superior maxillary bone over root of canine teeth. **C. of clit′oris**, bony ridge for attachment of crura clitoridis. **Den′tal c.**, projections of vascular fibrous tissue along the line of future teeth in the fœtus. **C. of eth′moid bone**, crista galli; superior turbinate crest. **Fron′tal c.**, crest on internal surface of frontal bone. **Gin′gival c.**, dental c. **Il′iac c.** or **C. of il′ium**, crista ilii. **Inci′sor c.**, prolongation anteriorly of the nasal crest. **Infe′rior tur′binate c.**, prominence on nasal surface of superior maxilla to articulate with inferior turbinate bone. **Infratem′poral c.**, prominence on external surface of greater wing of sphenoid bone. **Lac′rymal c.**, ridge dividing the outer surface of the lacrymal bone. **Na′sal c.**, c. on palatal process of superior maxilla; prolongation backward of internal face of nasal bone. **Occip′ital c.**, vertical ridge on exterior of occipital bone. **Or′bital c.**, inferior edge of orbital surface of sphenoid bone. **C. of the pu′bis**, see *Cristi ilii*. **C. of the sa′crum**, longitudinal c. on the posterior surface of that bone. **Sphenoi′dal**

c., prominent margin of bone on front part of body of sphenoid bone. **Sphenomax′illary c.,** bony ridge formed partly by the front portion of the great wing of the sphenoid and partly by the pterygoid process, forming the margin of the sphenomaxillary fissure. **Supramas′toid c.,** ridge of bone above the external auditory meatus. **Tem′poral c.,** c. of os frontis from external angular process, continuous with temporal line of parietal bone. **C. of the tib′ia,** crista tibiæ. **Tur′binated c.,** two ridges on the internal surface of the palate bone. **C. of the ure′thra,** gallinaginis caput. **Zygomat′ic c.,** anterior margin of great wing of sphenoid, articulating with malar bone.

**Cres′yl.** $C_7H_7$. A hypothetical radical of a number of aromatic compounds. **C. hy′drate,** cresylic alcohol.

**Cres′ylate.** A combination with cresol in which the hydrogen of its hydroxyl is substituted by a base.

**Cresyl′ic.** Relating to cresyl. **C. acid,** cresol. **C. al′cohol,** $C_7H_8O$, cresyl hydrate, a colorless fluid found in certain tars and mineral creosote.

**Cre′ta.** $CaCO_3$. Chalk; carbonate of lime; native friable carbonate of calcium. **C. præpara′ta** (Ph. U. S. and Br.), prepared chalk (prepared by levigation); used externally as an absorbent; internally, antacid; dose, gr. x–ʒj (0.65–2.0).

**Creta′ceous** (*creta,* chalk). Containing or relating to or having the characters of chalk.

**Cretefac′tion** or **Cretifica′tion** (*creta,* chalk, *facio,* to make). Mineral or earthy degeneration; calcification; calcareous degeneration; formation of or conversion into chalk, as the conversion of tubercles into calcareous or cretaceous concretions. Calcification was formerly erroneously regarded as synonymous with ossification.

**Cre′tin.** One affected with cretinism.

**Cre′tinism.** Endemic goitre, occurring in deep, narrow valleys in Switzerland, the Pyrenees, Tyrol, China, Syria, etc., associated with idiocy, dwarfish deformity of the head and body, due to premature ossification, sometimes with deaf-mutism and loss of reproductive power; regarded by some as a congenital myxœdema. It is sometimes remarkably benefited by thyroid-gland preparations. **Sporad′ic c.,** congenital myxœdema or cretinism occurring elsewhere than in the regions where the endemic affection prevails.

**Cre′tinoid.** Resembling a cretin; having appearance like that of cretinism. **C. œde′ma,** myxœdema.

**Cre′tinous.** Relating to a cretin or affected with cretinism.

**Crew′el.** Primula veris; cowslip.

**Crew′els.** Cruels.

**Crib′ra** (pl. of cribrum). See *Cribration.* **C. orbita′lia,** porous condition of orbital plate of frontal bone behind margin of orbit.

**Crib′rate.** Having holes like a sieve.

**Cribra′tion** (*cribro,* to sift). Sifting; a pharmaceutical operation consisting in separating the finer parts of drugs from the coarser.

**Crib′riform** (*cribrum,* sieve, *forma,* form). Sieve-like; the ethmoid bone was formerly called os cribriforme. **C. com′press,** square piece of linen pierced with holes; spread with cerate and applied to a suppurating surface, the holes being intended for the escape of the pus. **C. fas′cia,** see *Fascia.* **C. lamel′la,** lamina cribrosa; a circular spot perforated with small holes, seen when the optic nerve is regarded from the inside after removing the retina and choroid. **C. mac′ulæ,** maculæ cribrosæ. **C. mem′brane,** membrana decidua. **C. plate,** the horizontal lamina of the ethmoid bone, so called because perforated like a sieve; through the perforations (foramina cribrosa) the olfactory nerves pass.

**Cribro′sa** (*membrana,* understood). Decidua vera.

**Cribro′sum** (*os,* understood). Ethmoid bone.

**Crichton** (kri′ton) **-Browne's sign.** Tremor of the commissures of the lips and eyelids in paralytic dementia.

**Crick in the neck.** Acute torticollis; sudden, painful, rheumatic affection of the muscles of the neck, causing a person to hold his head to one side in a characteristic manner.

**Crico-.** In composition, cricoid cartilage.

**Cri′coaryt′enoid.** Relating to the cricoid and arytenoid cartilages. **C. mus′cle,** cricoarytænoideus anterior, anticus, or lateralis; muscle proceeding from the lateral part of the superior edge of the cricoid cartilage to the outer and anterior part of the base of the arytenoid cartilage. It carries the arytenoid cartilage outward and forward. **C. m., poste′rior,** cricoarytænoideus posticus; small, triangular muscle in the back part of the larynx, extending from the prominent line at the middle of the posterior surface of the cricoid cartilage to the outer and posterior part of the base of the arytenoid cartilage. The cricoarytenoideus superior of Winslow forms part of the arytenoideus muscle of modern anatomists.

**Cricocornicula′tus.** Occasional slip from the cricoid cartilage to the corniculum laryngis.

**Cricocornic′ulopharynge′us.** Relating to the cricoid cartilage, cartilages of Santorini, and pharynx.

**Cricoepiglot′ticus.** Relating to the cricoid cartilage and epiglottis; epiglotticus muscle.

**Cricohy′oid.** Relating to the cricoid cartilage and hyoid bone; anomalous muscle from the hyoid bone to the cricoid cartilage.

**Cri′coid** (*krikos,* a ring, *eidos,* form). Having the form of a ring; name given to a cartilage of the larynx (cartilago innominata) situated at its lower part, between the thyroid and the first ring of the trachea.

**Cricoidec′tomy** (*ektome,* excision). Excision of the cricoid cartilage.

**Cricomembrano′sus.** Cricoepiglotticus.

**Cricoœsophage′us.** Relating to the cricoid cartilage and œsophagus; muscle related to those parts.

**Cricopharyn′geal.** Relating to the cricoid cartilage and pharynx. The cricopharyngei muscles of Winslow are a fleshy bundle forming part of the constrictor pharyngis inferior, the other part being called thyropharyngeus, the whole mass being named thyrocricopharyngeus.

**Cricosantorin′ian.** Relating to the cricoid cartilage and cartilages of Santorini, as cricosantorinian ligaments.

**Cricothy′reoarytænoide′us.** Relating to the three cartilages named.

**Cricothy′reoid** or **Cricothy′roid.** Relating to the cricoid and thyroid cartilages. **C. ar′tery,** a small branch from the lower cornua of the thyroid cartilage. **C. mem′brane,** fibrous membrane extending from the upper edge of the cricoid cartilage to the inferior edge of the thyroid. **C. mus′cle,** small, fleshy bundle of a triangular shape at the anterior and inferior part of the larynx, extending from the outer surface of the cricoid cartilage to the lateral parts of the inferior margin of the thyroid cartilage. **C. space,** space on anterior part of the neck between the cricoid and thyroid cartilages.

**Cricothyreopharynge′us.** Relating to the cartilages named and the pharynx.

**Cricothyreot′omy.** Operation of opening into the air-passages through the cricoid and thyroid cartilages.

**Cricot′omy** (*krikos,* ring, *tome,* incision). Laryngotomy through the cricoid cartilage.

**Cricotra′cheal.** Relating to the cricoid and trachea; name given to anomalous muscular fibres between the tracheal rings and cricoid cartilage; also to c. ligament connecting the cricoid cartilage and trachea.

**Cricotracheot′omy.** Cricotomy and tracheotomy combined.

**Cri′no.** Dracunculus; nematoid worm in the skin of animals; comedo.

**Crin′on.** Lilium candidum.

**Crino′ses** (*krino,* to separate). Diseases of secretion.

**Crinos′ity.** Hairiness.

**Crin′um asiat′icum, bractea′tum,** or **defix′um.** Species of amaryllideæ; diaphoretic, emetic, and used externally in local inflammations, felon, etc.

**Crip′ple.** One who is so injured, malformed, or diseased as to be disturbed in his natural powers of movement or exercise of his functions.

**Cri′ses.** Plural of crisis. **Bron′chial c.,** attacks of bronchial pain or cough and dyspnœa occurring in tabes dorsalis. **Car′diac c.,** intense, lancinating pain in the cardiac region, with dyspnœa, distress, etc. **Clit′oris c.,** paroxysms of sexual excitement in women, noticed in tabes dorsalis. **Cer′ebral c.,** attacks of apoplexy, convulsions, or hemiplegia occurring in tabes dorsalis. **Gas′tric c.,** violent shooting and burning pains radiating from the epigastric region, accompanied with nausea and vomiting. **Gen′ital c.,** violent burning and boring pain in the genital organs in tabes dorsalis, or intensely painful venereal orgasm. **Genitou′rinary c.,** violent pain in the ureters or urethra, with tenesmus of the bladder. **Intes′tinal c.,** pains similar to those of gastric crises occurring particularly in the umbilical region. **Laryn′geal c.,** paroxysmal cough with intense pain, hoarse, rough respiration, etc. **Mus′cular c.,** muscular fatigue and soreness. **Nephral′gic c.,** violent pain in the kidney or along the ureter occurring in tabes dorsalis. **Pain c.,** paroxysms of excessive pain occurring in tabes dorsalis; a pathognomonic symptom. **Rec′tal c.,** burning pain radiating from the rectum. **Ure′thral c.,** attacks of violent pain in the urethra met with in tabes dorsalis. **Ves′ical c.,** attacks of violent pain in the bladder met with in tabes dorsalis.

**Cri′sis** (decision). Sudden change in the course of an acute disease, usually applied to a change for the better. A disease which terminates by crisis is one in which the beginning of recovery is marked by a sudden and unmistakable decrease in the intensity of the febrile and other symptoms; one in which the improvement is so gradual as to be imperceptible, except by comparison with the previous day, for example, is said to terminate by lysis. The term is also applied to painful paroxysms occurring in the course of tabes and other spinal diseases. See *Crises.*

**Crispa′tion** (*crispo,* to wrinkle). Contraction or spasmodic contraction, supervening in certain parts, either spontaneously or under the influence of some morbific cause or therapeutic agent. Crispation of the nerves is a slight, involuntary convulsive motion of external or internal parts.

**Crispatu′ra.** Contracture. **C. ten′dinum,** contraction of palmar aponeurosis or tendons.

**Cris′ta.** Crest; name given to several bony projections, to the clitoris, and also to a fimbriated excrescence forming at the anus and near the genital organs, commonly of syphilitic origin. **C. acus′tica,** yellowish-white, semicircular spot on the ampullæ of the semicircular canal, near the mouth of the utriculus, at the termination of the twig of the nervus acusticus. **C. ampulla′ris,** one of the ridges between the ampullæ of the semicircular canals and the vestibule. **C. arcua′ta,** oblique line of thyroid cartilage. **C. basila′ris,** prominence on ligamentum spirale for attachment of lamina basilaris; ridge on basilar process of occipital bone. **C. capit′uli,** ridge on head of rib, dividing its articular portion into two parts. **C. of clit′oris,** or **C. clitor′idis,** one of the bony ridges for the attachment of the crura clitoridis nymphæ. **C. cribro′sa** or **ethmoida′lis** ethmoidal spine of sphenoid bone; superior turbinate crest. **C. falcifor′mis,** circular ridge at bottom of internal auditory meatus. **C. fem′oris,** linea aspera. **C. for′nicis,** elevation on caudal surface of fornix. **C. gal′li** (comb of a cock), flat, triangular process rising above the cribriform plate of the ethmoid bone, and resembling a cock's comb; it gives attachment to the anterior part of the falx cerebri. **C. gallina′cea,** Verbena officinalis. **C. gingiva′lis,** gingival crest. **C. glutæo′rum,** intertrochanteric line. **C. hel′icis,** portion of the cartilage of the ear above the orifice of the external auditory canal. **C. il′ii,** crest of the ilium, the superior margin of the ilium. **C. iliopectine′a,** iliopectineal line. **C. incisi′va,** incisor crest. **C. inter′na,** frontal spine. **C. intertrochanter′ica,** intertrochanteric line. **C. juga′lis,** zygomatic crest. **C. lacryma′lis,** lacrymal crest. **C. ligamen′ti spira′lis,** ridge on the stria spiralis, parallel with the ligamentum spirale. **C. mandib′ulæ,** prominence on the anterior surface of coronoid process of lower jaw for origin of buccinator muscle. **C. mastoide′a,** prominence on mastoid portion of temporal bone. **C. obturato′ria,** spine of pubes; ridge along upper edge of obturator foramen. **C. orbita′lis,** orbital crest. **C. pectora′lis hu′meri,** pectoral ridge. **C. pe′nis,** ridges on descending rami of pubes for attachment of crura penis. **C. petro′sa** external auditory process. **C. pharynge′a,** pharyngeal spine. **C. pu′bis,** crest of the pubis, the posterior sharp edge on the upper surface of that bone. **C. pyramida′lis,** c. vestibuli. **C. Reiss′neri,** ridge in the pelvis of the fenestra rotunda. **C. sagitta′lis,** linea semicircularis. **C. scap′ulæ,** spine of scapula. **C. semiluna′ris,** anterior part of the border of fenestra rotunda. **C. sphenoida′lis,** sphenoidal spine. **C. spina′rum,** ridge on anterior arm of tympanic ring, above the anterior spine. **C. spira′lis,** see *Lamia spiralis.* **C. supercilia′ris,** superciliary ridge. **C. teg′minis tym′pani,** ridge on roof of the tympanum; the continuation of it on the roof of the mastoid antrum is called *crista tegminis mastoidei.* **C. tib′iæ,** crest of the tibia; the anterior edge or shin. **C. transver′sa,** superior turbinate crest; crista falciformis. **C. turbina′lis,** turbinate crest. **C. tympan′ica,** ridge on anterior arm of tympanic ring, below the anterior spine. **C. ul′næ,** external border of the ulna. **C. ure′thræ** or **urethra′lis,** crest of the urethra; gallinaginis caput; verumontanum. **C. vagi′næ,** rugæ or folds of the vagina. **C. vestib′uli,** crest dividing the vestibule of the ear into two fossæ—one inferior and hemispherical, fovea or cavitas or fossa orbicularis, subrotunda, rotunda, or hemisphærica, sinus rotundus; the other superior and semielliptical, fovea or cavitas or fossa ovalis, semiovalis, orbicularis, elliptica, semielliptica, or hemielliptica, terminating in a conical projection—*pyramis vestibuli, eminentia pyramidalis.* Morgagni has described a third groove-like fossa, recessus or fovea or fossa sulciformis, sinus sulciformis, sulcus ad aquæductum vestibuli, recessus labyrinthi, situated at the mouth of the common orfice of the two superior semicircular canals.

**Cristallin′.** Collodion made with methyl alcoho .

**Cristalloidi′tis.** Inflammation of the crystalline lens; phacitis.

**Crith′mum mari′num** or **marit′imum.** Plant growing on the seacoasts, having a spicy, aromatic flavor; diuretic, anthelmintic, and aromatic, and used, pickled, as a condiment.

**Crit′ical.** Belonging to a crisis, real or expected. **C. age,** age when menstruation ceases. **C. days,** those on which a crisis, it is imagined, is most likely to happen. According to Hippocrates and Galen, the greatest number of fevers terminated favorably on the seventh day, many on the fourteenth—these days being the most propitious; next to these came, in order of efficiency, the ninth, eleventh, twentieth or twenty-first, seventeenth, fifth, fourth, third, eighteenth, twenty-seventh, and twenty-eighth. On the sixth day the crises were generally unfavorable; after this the most unfavorable were the eighth, tenth, twelfth, sixteenth, and nineteenth. The thirteenth was a neutral day. **C. pe′riod** or **time,** period of cessation of the menses, see *Menses.*

**Cro′cated.** Containing saffron (crocus), as crocated tincture or wine of opium.

**Cro′cus.** C. sativus; saffron, ord. *Iridaceæ;* stigmata of crocus (Ph. U. S. and Br.) brought from the East are the parts used in medicine; its virtues are yielded to alcohol, wine, vinegar, and water; it is stimulant, exhilarating, and diaphoretic. Dose, gr. x–xx (0.65–1.3) in infusion. The *tincture, tinctura croci,* is official; used as a coloring-matter, and given internally in doses of ʒj–ij (4.0–8.0). **C. antimo′nii**, oxidum stibii sulphuratum. **C. austri′acus**, crocus. **C. autumna′lis**, Colchicum autumnale. **Frog c.**, Colchicum autumnale. **C. german′icus**, Carthamus tinctorius. **C. in′dicus**, Curcuma longa. **C. mar′tis adstrin′gens**, colcothar. **C. mar′tis ape′riens**, ferri subcarbonas. **C. mar′tis vitriola′tus**, colcothar. **Mead′ow c.**, Colchicum autumnale. **C. metallo′rum**, oxidum stibii sulphuratum. **C. officina′lis**, crocus. **C. orienta′lis**, crocus. **Pur′ple c.**, Colchicum autumnale. **C. saracen′icus**, Carthamus tinctorius. **C. sati′vus**, crocus. **C. silves′tris**, Carthamus tinctorius.

**Crocydocarcino′ma** (*krokys*, wool). Fibrous form of cancer; fibroma.

**Crom′myon.** Allium cepa.

**Crookes's tube.** A glass tube, exhausted of air, through which electricity is passed in the production of the Roentgen rays.

**Crop.** Expansion of the lower part of the œsophagus of birds; ingluvies. Polyponum fagopyrum.

**Cross of aor′ta.** See *Aorta*. **C. of Jeru′salem**, Lychnis chalcedonica. **Plan′tar c.**, plantar arch.

**Cross-birth.** Presentation of fœtus by any other part than the head or breech.

**Cross-breed.** Progeny of parents of different breeds.

**Crossed.** Term applied to decussating nervous fibres, or to paralysis occurring in the side of the body opposite to that of the lesion producing it; to amblyopia and diplopia from similar cause. **C. amblyo′pia**, amblyopia in one eye produced by a lesion of the brain on the opposite side, possibly in the angular and supramarginal convolutions. **C. anæsthe′sia**, anæsthesia of one side of the face and of the body on the opposite side, from disease in the upper portion of the pons. **C. diplo′pia**, heteronymous diplopia; the image of the left eye is on the right side; the visual axes are divergent. **C. hemiple′gia**, paralysis of the upper extremity on one side and of the lower on the other. **C. lens**, one in which there is a different curvature to the front and back surfaces. **C. paral′ysis**, c. hemiplegia; also paralysis of the facial muscles on one side and of the extremities on the other. **C. re′flexes**, reflex irritation in the side of the body opposite to the point affected.

**Cross-eye.** Strabismus.

**Cross-eyed.** Affected with strabismus.

**Cross-flower.** Polygala vulgaris.

**Cross-foot.** Talipes.

**Cross′ing.** Union of an animal of one race with one of another, to improve the breed.

**Cross-legged.** Walking with one foot crossing the other or getting in front of it; a condition noticed in certain lesions of the spinal cord.

**Cross′wort.** Eupatorium perfoliatum; Lysimachia quadrifolia.

**Crotala′ria al′ba.** Baptisia alba. **C. espadil′la**, shrub of Venezuela; sudorific. **C. verruco′sa**, plant of E. and W. Indies; its bitter leaves are emetic, and are also used in skin diseases; the root is given in colic.

**Crotalin′.** A poisonous proteid in rattlesnake virus.

**Crotaloph′orus** (*krotalon*, rattle, *phero*, to carry). Crotalus horridus.

**Crot′alus duris′sus** or **hor′ridus.** Rattlesnake; class *Reptilia*, ord. *Ophidia*; venomous reptile of North America; its poison, *crotalin*, is virulent. Crotalus is so called from the rattle on its tail.

**Crotaph′ion.** Pulsatory pain in the temples, with tinnitus aurium. The tip of the great wing of the sphenoid regarded as a point in craniometry.

**Crot′aphite ar′teries.** Temporal arteries.

**Crotaphit′ic.** Temporal. **C. nerve**, superior maxillary branch of the fifth nerve.

**Crotaphoceph′alus** (*krotaphos*, temple, *kephale*, head). Double monster having the temporal bones fused.

**Crotaphogan′glion** (*krotaphos*, temple). Otic ganglion.

**Crot′chet** (dim. of *croc*, hook). Small hook or crook; obstetrical instrument whose name indicates its shape; used in extraction of the fœtus when necessary to destroy it to expedite delivery.

**Crotin′.** A general name for the toxic albumins, crotonallin and croton globulin, in the seeds of Croton tiglium.

**Cro′ton.** A genus of plants, ord. *Euphorbiaceæ*. **C. antisyphilit′icus**, from Brazil; the leaves are used in syphilis, and externally in poultices. **C. argyran′themum**, indigenous in the Southern States; infusion is used in colic, in diarrhœa, and in sore throat. **C. ben′zoe**, benjamin. **C. cascaril′la**, the bark of Croton eluteria of the Bahamas, Cortex thuris, cascarilla (Ph. U. S.), has a slightly aromatic odor and bitterish, aromatic taste; the active parts are essential oil and bitter extractive; it is tonic and stomachic; dose, gr. xv–xxx (1.0–2.0), in powder. The bitter principle is called cascarillin. **C. chlo′ral**, butyl chloral, see *Chloral*. **C.-chlo′ral hy′drate**, butyl-chloral hydrate. **C. dioi′cus**, plant of Mexico; root and seeds are drastic purgatives; the oil has similar effects to croton oil. **C. eleute′ria, eleuthe′ria**, or **elute′ria**, C. cascarilla. **C. ful′vus**, root of this Brazilian plant is antisyphilitic. **C. jamalgo′ta**, C. tiglium. **C. laccif′erum**, see *Lacca*. **C. linea′ris**, species from the Antilles; used in colic. **C. loba′tum**, species from E. Indies, oil of which is used externally in rheumatism, and leaves for abscesses and furuncles. **C. malam′bo**, see *Matias*. **C. oblongifo′lium**, bark of root of this plant of E. Indies is a cholagogue cathartic; externally applied in sprains and rheumatic pains. **C. oil**, see *C. tiglium*. **C. perd′iceps**, herb of Brazil; the leaves are used for wounds; diuretic and antisyphilitic. **C. pseudochi′na**, copalche or copalchi bush; S. American plant yielding a bark, cortex copalche or copalchi, very like cascarilla. **Purg′ing c.**, C. tiglium. **C. racemo′sum**, beenel; small Malabar tree, the aromatic root of which is employed as a liniment in headache and rheumatism. **C. seeds**, see *C. tiglium*. **C. tig′lium**, purging croton; Ceylonese plant, every part of which is endowed with medicinal power. The root is a drastic cathartic; the wood (pavana-wood) and the seeds have like virtues. The croton seeds, purging nuts, yield croton oil, *oleum tiglii* (Ph. U. S. and Br.), by expression; of a pale brownish-yellow color, and hot, biting taste, owing to crotonic acid; a most powerful drastic cathartic; dose, half a drop to two drops (0.032–0.13), made into pills with crumbs of bread. Applied externally, it is a rubefacient, three to five drops being rubbed on the part, or one part of the oil and three parts of olive oil.

**Crotonallin′.** See *Crotin*.

**Crotonarin′.** A substance extracted from croton oil.

**Croto′ne** (a tick). Fungus growing on trees and produced by an insect; by analogy, a fungous tumor developed on the periosteum.

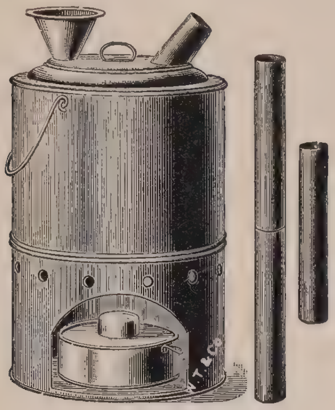
**Croton′ic acid.** $C_4H_6O_2$. An acrid acid found in croton oil.

**Crotonine′.** An alkaloid from the seeds of Croton tiglium.

**Cro′tonol.** $C_9H_{14}O_2$. Crotonoleic acid.

**Crotonole′ic acid.** An acid in croton oil; its active vesicating and cathartic principle.

**Croup.** Term variously applied to acute inflammation of the mucous membrane of the larynx alone, or larynx and trachea combined, with production of fibrinous exudation, diminishing the calibre of this portion of the air passages and causing a peculiar cough and breathing characteristic of this disease. The term is often used synonymously with diphtheria with laryngeal or laryngotracheal symptoms. **Ascen′dant c.**, see *Pharyngeal c.* **Bron′chial c.**, croupous bronchitis; polypus bronchialis. **Catar′rhal c.**, see *Cynanche trachealis.* **Cer′ebral c.**, asthma thymicum. **Cer′ebral spasmod′ic c.**, carpopedal spasm. **Chron′ic c.**, polypus bronchialis. **Diphtherit′ic c.**, see *Croup*. **False c.**, laryngismus stridulus. **Fi′brinous c.**, see *Croup*. **Hyster′ical c.**, spasmodic affection of the laryngeal muscles in hysterical females. **C.-ket′tle**, a kettle from which steam escapes in the room occupied by a croupous patient. **Laryn′geal c.**, croup restricted to the larynx. **Mem′branous c.**, pseudomembranous c.; true c.; see *Croup*. **Pal′pebral c.**, diphtheritic conjunctivitis. **Pharyn′geal c.**, condition of the pharyngeal mucous membrane in which, in addition to the symptoms of catarrhal angina, croupous deposits are seen, which spread from the larynx to the pharynx, or conversely. **Pseu′do-c.**, false croup; asthma thymicum. **Pseudomem′branous c.**, cynanche trachealis. **Sec′ondary c.**, see *Cynanche trachealis*. **Spasmod′ic c.**, false croup. **Spu′rious c.**, false croup; asthma thymicum. **True c.**, see *Croup*. **U′terine c.**, croupous endometritis.



Croup-kettle.

**Croup′al.** Croupous.

**Croup′ine.** Laryngismus stridulus.

**Croup′ion.** Sacrococcygeal region.

**Croup′ous** or **Croup′y.** Relating or appertaining to or resembling croup; attended with pseudomembranous exudation; hoarse, husky. **C. cough**, a husky cough. **C. inflamma′tion**, inflammation of the mucous membrane attended with pseudomembranous exudation. **C. mem′brane**, pseudomembrane, an unorganized, fibrinous exudation. **C. pneu′monia**, acute lobar pneumonia. **C. voice**, a hoarse, husky voice.

**Crow′corn.** Aletris farinosa.

**Crowd′-poisoning.** Ochlesis.

**Crow′foot.** Geranium maculatum; ranunculus. **Brist′ly c.**, Ranunculus pennsylvanicus. **Bul′bous c.**, Ranunculus bulbosus. **Bul′bous-rooted c.**, Ranunculus bulbosus. **Cel′ery-leaved c.**, Ranunculus sceleratus. **Crushed c.**, Ranunculus sceleratus. **Marsh c.**, Ranunculus sceleratus. **Mead′ow c.**, Ranunculus acris. **Small-flow′ered c.**, Ranunculus abortivus. **Tall c.**, Ranunculus acris. **Wa′ter c.**, Ranunculus flammula.

**Crown.** See *Corona*. In anatomy, name given to parts of a circular form surmounting other portions of the same body. The os uteri acts as a crown to the child's head during expulsion in labor. **C. bark**, Loxa bark. **Cil′iary c.**, ciliary zone. **C. of the glans**, round, almost circular ring circumscribing the base of the glans penis. **C. of the head**, vertex. **C. pars′nip**, Leontodon taraxacum. **C. rhu′barb**, Russian variety of rhubarb. **C. of a tooth**, portion of a tooth projecting above the gum. **C. of the trepan′**, species of saw, in form of a crown, or rather of a portion of a cylinder, having grooves on its external surface and teeth at its lower extremity; the other being fitted to the handle of the trepan. **C. of Ve′nus**, red, rosy pustules, dry or moist, on the face, particularly on the forehead and temples, owing to constitutional syphilis.

**Crown′ing.** Action of retraction of the neck of the uterus over the head of the fœtus or other presenting part during labor.

**Cru′cial** (*crux*, cross). Having the shape of or relating to a cross. **C. ban′dage**, T-bandage. **C. inci′sion**, incision made in the form of a cross, employed for exposing the cranium for application of the trepan. **C. lig′ament of the at′las**, annular ligament of the atlas. **C. lig′aments**, two strong ligaments within the knee-joint; the anterior passes obliquely from a depression anterior to the spine of the tibia to the posterior and inner part of the external condyle of the femur; the posterior extends from the posterior part of the spine of the tibia to the anterior and outer part of the internal condyle.

**Cru′cible.** Vessel for incineration, as of bodies in a crematory.

**Crucifix′ion at′titude.** Peculiar attitude of patient with hysteroepilepsy, described by Charcot, in which the head is thrown back, the spine curved, the feet extended, the patient resting on the occiput and heels, the arms being thrown back above the level of the shoulders; it is really *hysterical opisthotonos*.

**Cru′ciform** (*crux*, cross, *forma*, shape). Cross-shaped; name given to the ligaments closing the articulations of the phalanges, and to the crucial ligaments.

**Crude.** Raw, unripe; not digested.

**Cru′dity** (*crudus*, raw). Rawness; crudeness; quality of aliments which have not experienced the action of fire. Condition of undigested matters in the digestive tube, *cruditas ventriculi;* condition of morbific matter in a sick individual, *cruditas morbi*. In the plural, *crudities* signifies crude matters contained in the stomach and intestines.

**Crudiv′orous** (*crudus*, crude, *voro*, to eat). Eating raw food habitually.

**Cru′els.** Zoster; scrofulous adenitis in the neck.

**Cruenta′tion.** Bloody oozing, as from a dead body.

**Cruentin′.** Substance formed by the action of sulphuric acid on hæmoglobin.

**Cruenture′sis** (*cruentus*, bloody, *ouron*, urine). Hæmaturia.

**Cru′men.** Lacrymal sinus.

**Crume′na.** Small sac or bag. **C. nuptia′lis**, scrotum. **C. urina′riæ** or **vesi′cæ**, urinary bladder.

**Crumenophthal′mus** (*crumena*, sac, *ophthalmos*, eye). Hairy, baggy, or sac-like appearance around the eye.

**Cru′or** (Lat.). Coagulated blood; gore; blood in general. **C. san′guinis**, see *Blood*.

**Cruorin′.** Hæmoglobin.

**Crup′per** (*croupe*, rump). Croupion; the buttocks of a horse. **C. bone**, coccyx. **C. inci′sion**, originated by Malgaigne in oval amputation, of the shape of a longitudinal cut, extending from the apex of the oval, and having the appearance of a crupper.

**Cru′ra** (pl. of *crus*, a leg). Applied to some parts of the body from resemblance to legs or roots, as c. cerebri, c. cerebelli, etc. **C. anterio′ra medul′læ oblonga′tæ**, peduncles of the brain. **C. bifurca′ta**, c. helicis. **C. cerebel′li**, peduncles of the cerebellum. **C. cerebel′li ad cor′pora quadrigem′ina**, see *Peduncles of the cerebellum*. **C. cerebel′li ad pon′tem**, see *Peduncles of the cerebellum*. **C. cer′ebri**, peduncles of the brain. **C. clitor′idis inter′na**, bulbus vestibuli. **C. cor′porum cavernoso′rum pe′nis**, see *Cavernous bodies*. **C. diaphrag′matis**, see *Diaphragm*. **C. of the for′nix**, pillars of the fornix. **C. hel′icis**, two ridges on the outer surface of the external ear. **C. labio′rum majo′rum**, crura of nymphæ. **C. medul′læ oblonga′tæ**, corpora restiformia; thalami nervorum opticorum; see *Peduncles of the cerebellum*. **C. of nym′phæ**, folds of nymphæ embracing the clitoris. **C. of pe′nis**, part of corpora cavernosa attached to the rami of the ischium and pubis. **C. posterio′ra medul′læ oblonga′tæ**, peduncles of the cerebellum. **C. u′teri**, round ligaments of the uterus. **C. ventriculo′rum**, horns of the lateral ventricles of the brain.

**Cruræ′us.** Cruralis.

**Cru′ral** (*crus*, thigh or leg). What belongs to the thigh or lower limb. **C. arch**, inguinal or femoral arch, Poupart's ligament, ligament of Fallopius; arch formed by the internal portion of the inferior edge of the aponeurosis of the obliquus externus muscle, which is attached at one end to the pubis, at the other to the anterior and superior spinous process of the ilium. At its posterior and inner part the aponeurosis forming the arch sends off a falciform reflection attached along the crest of the pubis, and known under the name of Gimbernat's ligament. **Deep c. arch,** a band of fibres passing from Poupart's ligament to the iliopectineal line over the beginning of the crural sheath. **C. ar'tery,** femoral artery; continuation of the external iliac artery extending from the crural arch to the aperture in the triceps or to the ham; also trunk extending from the primitive or common iliac to the tibial arteries, embracing, of course, the external iliac, femoral, and popliteal. **C. bulb,** enlargement of the spinal cord in the lumbar region. **C. canal'** or **ring,** femoral canal or ring; canal nearly an inch long, triangular, more spacious above than below, and shorter and broader in the female than in the male. Upper orifice is bounded anteriorly by the crural arch; posteriorly by the crista of the pubis; on the outer side by the psoas and iliacus muscles, covered by the iliac aponeurosis; and at the inner by Gimbernat's ligament. This orifice is covered by the peritoneum, and is closed by a septum, septum crurale, crural septum. Its inferior orifice is formed by the foramen of the fascia lata, giving passage to the vena saphæna. At the upper orifice of this canal the femoral or crural hernia occurs, which would be more common were it not for the fibrous, cellular septum. **C. her'nia,** femoral hernia, see *C. canal* and *Hernia.* **C. mo'nospasm,** spasm limited to the leg. **C. nerve,** this proceeds from the lumbar plexus, and is situated at the outer side of the psoas muscle and crural artery; after it has passed under the crural arch it divides into cutaneous and muscular branches. One branch, larger than the rest, is called the saphæna nerve. The remainder of the branches of the crural are distributed to the anterior and inner part of the thigh. The accessory of the crural nerve includes the fourth and fifth pairs of lumbar nerves. **C. plex'us,** union of the anterior branches of the last four pairs of lumbar nerves and the first four sacral, forming the lumbar and sacral plexuses. **C. pro'tospasm,** spasm beginning in one leg and extending to the other limb and half the body, or both sides of the body. **C. ring,** crural canal. **C. sep'tum,** see *C. canal.* **C. sheath,** sheath formed by the transversalis fascia continued in front of, and the pelvic fascia behind, the upper portion of the femoral artery. **C. vein,** femoral vein, has the same arrangement as the artery; it receives only one great branch, the saphæna vein.

**Crura'lis** or **Cruræ'us.** Muscle situated at the anterior, outer, and inner part of the thigh; arising, fleshy, from between the two trochanters, adhering firmly to most of the forepart of the os femoris, and inserted, tendinous, into the upper part of the patella, behind the rectus. It assists the vasti and rectus muscles in the extension of the leg. Small, muscular slips, sometimes found under the cruræus muscle and inserted into the capsular ligament of the knee-joint, have been called subcruræi and subcrurales.

**Cru'ris ra'dius.** Fibula.

**Crurogen'ital.** Relating to the thigh and genital organs.

**Cruro-in'guinal.** Relating to the thigh and groin.

**Crus** (Lat.). Leg. See *Crura.* **C. ante'rius hel'icis,** crista helicis. **C. barbad'icum,** elephantiasis, see *Barbadoes leg.* **C. cerebel'li,** see *Crura cerebelli.* **C. cer'ebri,** see *Crura cerebri.* **C. commu'ne,** combined part of the posterior and superior semicircular canals. **C. exter'num,** folds of nymphæ forming the prepuce. **C. for'nicis,** see *Fornix.* **C. glan'dis,** folds of nymphæ passing beneath the clitoris and attached to the glans forming the frenulum. **C. inter'num,** c. glandis. **Lam'ellated c.,** see *Crusta.* **C. me'dium,** middle peduncle of cerebellum. **C. pe'nis,** see *Penis.* **C. præputia'le,** c. externum. **C. transver'sum,** transverse ligament of the atlas. **C. u'teri,** round ligament of the uterus.

**Crush'er.** Ecraseur; lithotrite.

**Crusocreatinin'.** $C_5H_8N_4O$. Golden-yellow leucomain found in muscular tissue.

**Crust.** Scab; eschar. See *Crusta.* **French c.,** syphilis. **Lam'ellated c.,** see *Crusta.* **Milk c.,** crusta lactea; porrigo larvalis. **C. of ped'uncle,** anterior portion of crus cerebri, see *Peduncles of the brain.*

**Crus'ta.** Crust or scab; assemblage of small flakes formed by the drying up of a fluid secreted by the skin; ordinary crust is a solid mass, the result of the drying up of exuded fluids or of extravasated blood; at times it is lamellated, consisting of layers placed one over the other. The lower or anterior portion of each crus cerebri, pes pedunculi. The lining membrane of the stomach and intestines has been called crusta villosa. **C. adamanti'na den'tium,** enamel of the teeth. **C. carno'sa,** muscular coat of the stomach and intestines. **C. cru'ris cer'ebri,** crust of the cerebral peduncle. **C. fibro'sa,** cement, see *Tooth.* **C. ge'nu equi'næ,** sweat-scab or knee-scab, encircled hoof-knees, hangers, dewclaws, night-eyes, horse-crust; morbid secretion from the horse, formerly used in epilepsy and other nervous diseases. **C. inflammato'ria,** buffy coat; corium phlogisticum. **C. lac'tea,** porrigo larvalis; porrigo lupinosa. **C. lamello'sa,** see *Crusta.* **C. membrana'cea,** villous or mucous coat of the intestines. **C. petro'sa,** see *Tooth.* **C. phlogis'tica** or **pleurit'ica,** buffy coat; corium phlogisticum. **C. prurigino'sa,** gutta rosea. **C. serpigino'sa,** gutta rosea. **C. vermicula'ris,** mucous coat of the stomach and bowels. **C. villo'sa,** mucous membrane of the stomach and bowels. **C. v. lin'guæ,** see *Tongue.* **C. v. ventric'uli,** mucous membrane of the stomach.

**Crus'tal.** Relating to the crusta cruris cerebri.

**Crusta'tion.** Incrustation.

**Crus'tula** (dim. of crusta). Small shell or scab; ecchymosis of the conjunctiva.

**Crutch.** Staff with a cross-piece at the top, placed under the shoulder or arm-pit, to support the lame or infirm in walking. **C. disease',** simple gastric ulcer. **C. pal'sy** or **paral'ysis,** paralysis produced by pressure of a crutch on the nerves of the axilla.

**Cruveilhier's** (krue-vel-yaze') **at'rophy.** Progressive muscular atrophy. **C.'s fas'cia,** superficial layer of perineal fascia. **C.'s paral'ysis,** C.'s atrophy. **C.'s plex'us,** plexus of nerves from the great occipital nerve and first and second cervical nerves; plexus of varicose veins, as in angioma. **C.'s ul'cer,** simple gastric ulcer.

**Crux cer'vi.** Bone in the heart of the stag, once used as a remedy in heart diseases.

**Cry.** Sound of the unarticulated voice; native voice. The cry of the newborn child has been called vagitus. The *hydrocephalic cry* or shriek is a single, violent cry or shriek, resembling the cry of a person suddenly exposed to great danger. The *epileptic cry* is a peculiar, discordant cry or yell uttered just before arrest of respiration in an epileptic fit. **C. cen'tre,** nervous centre in the rabbit, puncture of which causes a peculiar cry. It lies between the optic thalamus and the corpus striatum.

**Cryæsthe'sia** (*kryos,* cold, *aisthesis,* sensation). Extreme sensitiveness to cold.

**Cryalge'sia** (*kryos,* cold, *algos,* pain). Pain caused by the application of cold.

**Cry'ing.** Production of cry. **C. cen'tre,** see *Cry centre.*

**Crymo'des** (*krymos,* cold). Intensely cold sensation in algid fever. Term applied to continued fever in which the skin feels cold.

**Crymodyn'ia** (*krymos,* cold, *odyne,* pain). Pain of chronic rheumatism which is worse in cold and damp weather.

**Crymo'ses** (*krymos,* cold). Diseases caused by cold.

**Crymother'apy** (*krymos*, cold, *therapeuo*, to cure). The therapeutic use of cold. One form is the stimulation of the appetite, applying cold to the epigastrium and region of the liver half an hour before meals by interposing cotton-wool between the skin and a packet containing 2 grammes of "carbonic snow," so that while the temperature of the snow is very many degrees (centigrade) lower, that of the skin is about +5° C. (41° F.).

**Cryohy'drate** (*kryos*, cold). A salt whose water of crystallization is at a very reduced temperature.

**Cryos'copy** (*kryos*, cold, *skopeo*, to examine). Determination of the freezing point of an organic fluid by means of which information is obtained regarding the amount of matter held in solution therein.

**Cry'ostase.** An antiseptic mixture, in equal proportions, of camphor, carbolic acid, and saponin, with a minute amount of oil of turpentine.

**Cryph'alum** (*kekryphalos*, a net hood). Reticulum; second stomach of ruminant animals.

**Crypsor'chis.** Cryptorchis.

**Crypt** or **Cryp'ta** (*kryptos*, concealed). Folliculose gland, follicle; a small, pit-like secreting cavity formed by a depression of the skin or mucous membranes, *crypta mucosa, folliculus mucosus.* Cryptal or follicular secretion keeps the parts on which it is poured supple and moist, and preserves them from the action of irritating bodies. Little, rounded appearances or glomeruli at the ends of the small arteries in the cortical substance of the kidney are also called *crypts.* **Den'tal c.**, the bony space occupied by a developing tooth. **C. of the i'ris**, one of the small crypts or follicles on the anterior surface of the iris. **C. of Lie'berkühn**, see *Lieberkühn.* **C. of Littré'**, see *Littré.* **C. of Morgagn'i**, one of numerous small depressions in the mucous membrane of the rectum; one of numerous pits in the mucous membrane of the urethra, especially in the bulbous portion. **Syno'vial c.**, bursa mucosa. **C. of Ty'son**, preputial gland.

**Cryptan'drous** (*kryptos*, concealed, *aner*, man). Not having distinct male generative organs.

**Cryptidine'.** $C_{11}H_{11}N$. Alkaloid produced by the dry distillation of quinine.

**Crypti'tis.** Folliculitis; inflammation of a crypt or follicle.

**Crypto-** (*kryptos*, concealed). In composition, concealed.

**Cryptocar'ya densiflo'ra.** Bark contains bitter substance, used in puerperal convulsions, etc.

**Cryptoceph'alus** (*kryptos*, concealed, *kephale*, head). Monster whose head is excessively small or does not appear externally.

**Cryptococ'cus** (*kryptos*, concealed, *kokkos*, berry). Saccharomyces. **C. alvea'reus**, Bacillus alvei. **C. cerevis'iæ** (Robin), Saccharomyces cerevisiæ. **C. cla'va** (Wedl), detected in the contents of the stomachs of ruminantia. **C. fermenta'tum** (Kützing), Saccharomyces cerevisiæ. **C. glu'tinus** (Ferson), Saccharomyces glutinus. **C. guttula'tus** (Robin), Saccharomyces guttulatus. **C. na'tans**, Bacterium termo. **C. nebulo'sus** (Kützing), Bacterium termo. **C. xanthogen'icus** (Domingo Freire), supposed by its discoverer to be the germ of yellow fever.

**Cryptocys'tis trichodec'tis.** Larva of Dipylidium caninum.

**Cryptodid'ymus** (*kryptos*, concealed, *didymos*, twin). Monstrosity in which one fœtus is found contained in another—fœtus in fœtu, included fœtus.

**Cryptog'amous** or **Cryptogam'ic** (*kryptos*, concealed, *gamos*, marriage). Epithet applied to plants whose organs of fructification are concealed or not manifest, there being no flowers, reproduction occurring by means of spores.

**Cryptogen'ic** or **Cryptogenet'ic** (*kryptos*, concealed, *genesis*, production). Term applied to inflammations or other morbid processes in which the causes are obscure, there being no obvious mechanical, chemical, or physical injury. *Idiopathic* is an almost synonymous term.

**Cryptogenous**, krip-toj'en-us. Cryptogenic.

**Cryptoglio'ma.** An early stage in retinal glioma, before its presence becomes apparent.

**Crypto-impeti'gines.** Group of skin diseases, such as maculæ and squamæ.

**Cryp'tolith** (*kryptos*, concealed, *lithos*, stone). Encysted calculus, or one concealed in a crypt or follicle.

**Cryptolithi'asis.** Formation of or tendency to formation of encysted calculi, or calculi concealed in crypts or follicles. Calcification of tumors of the skin.

**Cryptoneu'rus** (*kryptos*, concealed, *neuron*, nerve). Having no apparent or visible nervous system.

**Cryptophan'ic acid.** $H_2C_5H_7NO_5$. Acid to which the acidity of the urine is credited.

**Cryptophlogo'sis** (*kryptos*, concealed, *phlogosis*, inflammation). Inflammation of the follicles of the skin.

**Cryptophtha'lmia.** Congenital atresia of the eyelids, hiding the eyeball from sight; closure of palpebral fissure by skin, the globe and orbit being absent. One so affected is said to be *cryptophthal'mus.*

**Crypto'pia** or **Cryptopine'** (*kryptos*, concealed, +*opium*). $C_{21}H_{23}NO_5$. Alkaloid obtained from weak, spirituous washings of crude, precipitated morphine; hypnotic in dose of gr. $\frac{1}{8}$ (0.008).

**Cryptopy'ic** (*kryptos*, concealed, *pyon*, pus). State of disease kept up by concealed suppuration.

**Cryptorchid**, krip-tor'kid (*kryptos*, concealed, *orchis*, testicle). One whose testicles have not descended into the scrotum.

**Cryptor'chidism** or **Cryptor'chism.** Non-descent of the testes.

**Cryptor'chis.** Cryptorchid.

**Cryp'toscope** (*kryptos*, concealed, *skopeo*, to see). Apparatus for holding a fluorescent screen in making examination with the *x*-rays; fluoroscope.

**Crypto'ses.** Diseases of the crypts or mucous follicles.

**Cryptosteno'sis.** Diseases of the follicles of the skin in which they are in a contracted condition.

**Crys'tal.** A solid body having a definite outline formed of various plane surfaces. **Asth'ma c.**, Charcot's c. **Blood c.**, c. of hæmatoidin in the blood. **Bött'cher's c.**, see *Böttcher.* **Charcot', C.-Ley'den, C.-Neu'mann, C.-Robin' c.**, see *Charcot.* **Cof'fin-lid c.**, c. of triple phosphate in the urine. **Dumb-bell c.**, microscopic c. of lime oxalate in the urine. **Ear c.**, otolith. **Hedge'hog c.**, see *Hedgehog.* **Knife-rest c.**, coffin-lid c. **Lu'nar c.**, nitrate of silver. **Teich'mann's c.**, see *Teichmann.* **Ve'nus's c.**, copper sulphate c. **Vir'chow's c., Whet'stone's c.**, see these names.

**Crystallin'.** Globulin of the crystalline lens. A substitute for collodion, consisting of guncotton dissolved in methyl alcohol and amyl acetate.

**Crystalli'na** (*krystallos*, crystal). Vesicle or phlyctæna filled with serum and appearing on the prepuce or in the vicinity of the anus, surrounded by a reddish, extravasated aureola. **C. tu'nica**, arachnoid membrane.

**Crys'talline.** Resembling crystal; transparent. Crystalline lens. Formed of crystals. **C. lens** or **bod'y** or **hu'mor**, lenticular, transparent body, situated between the vitreous and aqueous humors of the eye, at the union of the anterior third with the two posterior thirds of the organ. It is composed of a soft exterior substance, and an interior made up of albuminoid substance, forming a solid nucleus, in which a number of elliptical layers is perceptible. It is contained in a capsule, capsule of the lens, which receives, at its posterior surface, a small branch of the central artery of the retina, always readily distinguishable in the fœtus prior to the seventh month of uterogestation. The crystalline refracts rays of light and serves as an achromatic glass, for which its laminæ or layers, increasing in refractive power from the circumference to the centre, admirably adapt it.

**Crystalli'no-capsuli'tis.** Inflammation of the lens and its capsule. See *Phakitis*. **C. ante'rior,** inflammation of anterior portion of the capsule of the lens.

**Crystal'linocele.** Hernia of the crystalline lens.

**Crystal'lion.** Plantago psyllum.

**Crystalli'tis.** Phakitis.

**Crystalliza'tion.** Aggregation of component particles into regular geometrical shapes.

**Crystallocatarac'ta.** Cataract.

**Crystallocatath'esis** (*katathesis*, laying down). Couching the lens. See *Cataract.*

**Crys'talloid.** Resembling crystal or the crystalline; capsule or membrane of the crystalline; crystalline lens itself. Substance passing with facility through porous septa. See *Colloid.*

**Crystalloidi'tis.** Inflammation of the crystalline lens.

**Crys'tallose.** Soluble crystalline sodium salt of saccharin.

**Cs.** Chemical symbol of cæsium.

**Cte'don.** Fibre.

**Cu.** Chemical symbol of copper (cuprum).

**Cuba'tio** (*cubo*, to lie down). Decubitus; anteversion or retroversion of the uterus.

**Cu'beb.** Cubeba.

**Cube'ba.** (Ph. U. S. and Br.) Cubeb; the unripe fruit of Piper cubeba; it is a stimulant expectorant and diuretic; employed in the treatment of bronchitis, asthma, gonorrhœa, and leucorrhœa; dose, of the powder, ʒss–ij (2.0–8.0). The following preparations are official: *Fluid extract* (extractum cubebæ fluidum); dose, ♏x–ʒj (0.65–4.0). *Oleoresin* (oleoresina cubebæ); dose, ♏v–xx (0.32–1.3). *Oil* (oleum cubebæ); dose, ♏v–xv (0.32–1.0). *Tincture* (tinctura cubebæ); dose, ʒss–iv (2.0–16.0). *Trochees* (trochisci cubebæ); dose, 1–6 daily. **C. cam'phor,** $C_{30}H_{48}.2H_2O$; obtained from the oil of cubeb. **C. officina'lis** or **officina'rum,** Piper cubeba.

**Cubeb'ic acid.** $C_{14}H_{16}O_4$. Resin derived from cubebs, laxative and diuretic.

**Cubebin'.** $C_{10}H_{10}O_3$. Crystallized substance derived from cubebs.

**Cu'bic.** Solid in three dimensions; relating to a cube. **C. cen'timetre,** etc., see *Weights and Measures.* **C. space,** amount of space that should be allowed to a patient in a hospital, 1000 cubic feet being considered the proper amount.

**Cu'biform** (*cubus*, cube, *forma*, shape). Cuboid.

**Cu'bit.** Ulna; elbow; forearm. **Top of c.,** olecranon.

**Cubitæ'us.** Cubital; cubitalis.

**Cu'bital.** Connected with or relating to the cubitus or to the inner and posterior part of the forearm. **C. ar'tery,** this artery arises from the humeral a little below the bend of the elbow, proceeds along the anterior and inner part of the forearm, passes anterior to the annular ligament of the carpus, and goes to form, in the palm of the hand, the superficial palmar arch. Besides the numerous other branches which it gives off it sends posteriorly the common trunk of the interosseous arteries, and internally the two cubital recurrents, anterior and posterior—articular branches anastomosing on the inside of the elbow with the divisions of the humeral artery. **C. mus'cles** are two in number: 1. *Cubitalis anterior* or *internus*, flexor carpi ulnaris or flexor ulnaris internus, a long muscle situated at the anterior and inner part of the forearm, arising from the inner condyle of the os humeri, at the inner side of the olecranon, and from the posterior edge of the ulna, and inserted by a tendon into the os pisiforme. It bends the hand on the forearm by directing it slightly inward. 2. *Cubitalis posterior* or *externus*, extensor carpi ulnaris, ulnaris externus, cubitæus externus, situated at the posterior part of the forearm. It arises from the external condyle of the os humeri, and is inserted into the superior extremity of the fifth bone of the metacarpus. It extends the hand, inclining it a little inward. **C. nerve,** ulnar nerve; this is furnished by the last two or three nerves of the brachial plexus, and is distributed to the inner and anterior side of the forearm, to the inner part of the palm and the back of the hand, and to the little and ring fingers. **C. veins,** the recurrent cubital veins, accompanying the corresponding arteries. The superficial or cutaneous cubital belong to the basilic.

**Cubita'le** (*os*, understood). Cuneiform bone.

**Cubita'lis.** Cubital; anconæus; cuneiform bone of the hand. See *Cubital muscles.* **C. ante'rior,** flexor carpi ulnaris. **C. exter'nus,** extensor carpi ulnaris. **C. gra'cilis,** palmaris longus. **C. inter'nus,** flexor carpi ulnaris. **C. poste'rior,** extensor carpi ulnaris. **C. Riola'ni,** anconæus.

**Cubito-.** In composition, the cubitus or ulna.

**Cubitocar'pal.** Relating to the forearm or ulna and carpus or wrist.

**Cubitocarpe'us.** Cubitocarpal; flexor carpi ulnaris.

**Cubitocuta'neous nerve.** Internal cutaneous nerve of the arm.

**Cubitodig'ital.** Relating to the forearm or ulna and fingers.

**Cubitopalma'ris.** Relating to the forearm or ulna and palm of the hand. **C. ar'tery,** superficial palmar arch.

**Cubitophalangettia'nus.** Relating to the forearm or ulna and phalanges; flexor digitorum profundus.

**Cubitopræphalange'us.** Analogue in some lower animals of the extensor minimi digiti.

**Cubitora'dial.** Relating to the radius and ulna; pronator quadratus muscle.

**Cubitosuprametacar'pal.** Relating to the ulna and upper part of metacarpus; extensor carpi ulnaris; extensor ossis metacarpi pollicis.

**Cubitosuprapalma'ris.** Belonging to the cubitus and suprapalmar or dorsal surface of the hand; small artery given off by the cubital or ulnar, a little above the wrist; vein accompanying this artery.

**Cubitosupraphalan'geal.** Relating to the ulna or forearm and the upper part of the phalanges, as cubitosupraphalangeal muscle, extensor primi internodii pollicis.

**Cu'bitus** or **Cu'bitum.** Elbow; ulna. Decubitus. Ancient name of a measure 18 inches long. **C. cos'tæ,** see *Costa.* **C. supi'nus,** see *Decubitus.*

**Cu'boid** (*kybos*, cube, *eidos*, form). Having the form of a cube. A bone of the tarsus, situated at the anterior and outer part of the tarsus, and articulated, behind, with the calcaneum; before, with the last two metatarsal bones; and within, with the third cuneiform bone, and sometimes with the scaphoid.

**Cuboidonavic'ular** or **Cuboidoscaph'oid.** Relating to the cuboid and scaphoid bones.

**Cu'ca.** Coca.

**Cucaine'.** Cocaine.

**Cuck'le** or **Cuck'old.** Arctium lappa. **C. cap,** Aconitum napellus.

**Cuck'oo-bread.** Oxalis acetosella; Cardamine pratensis. **C. flow'er,** Cardamine pratensis; lychiris. **C. pint,** Arum maculatum; Orchis mascula.

**Cucu'balus bac'cifer.** Herb employed as an astringent and styptic. **C. be'hen,** spatling poppy; plant once considered alexipharmic and cordial. **C. visco'sus,** species employed as emetic. All the forms of cucubalus are varieties of silena.

**Cucul'la** (monkshood). Lower portion of the trapezius muscle, so called from its shape.

**Cucul'læ** (pl. of cuculla). Cartilages of the nose.

**Cuculla'ris.** Trapezius muscle.

**Cuculla'ta.** Sanicula; pinguicula.

**Cucul'lus** (hood). Cucupha; infundibulum of the cochlea. **C. Hippoc'ratis,** turbinate bone.

**Cu'cumber.** Cucumis sativus. **Ass's c.,** Momordica elaterium. **In'dian c.,** Medeola virginica. **Squirt'ing** or **wild c.,** Momordica elaterium. **Star c.,** one-seeded c.; Sycios angulatus. **C. tree,** Magnolia acuminata.

**Cu'cumer.** Cucumis sativus.

**Cu'cumis** (gourd). Cucumber; Cucumis sativus. **C. agres'tis,** Momordica elaterium. **C. amaris'simus,** species used as a substitute for colocynth. **C. caf'fer,** see *Cucurbita citrullus.* **C. citrul'lus,** watermelon; Cucurbita citrullus; diuretic. **C. colocyn'this,** colocynth or bitterapple, bittergourd, bitter-cucumber; ord. *Cucurbitaceæ;* Turkish and Cape of Good Hope plant; the spongy part or medulla of the fruit, *colocynthis* (Ph. U. S. and Br.), is the fruit of Citrullus colocynthis deprived of its rind; it has a bitter, nauseous, and acrimonious taste, and is a strong cathartic, acting chiefly on the upper part of the intestines; its virtues are dependent upon a bitter principle, colocynthin or colocynthite; but another principle, colocynthitin, has been derived from it. **C. me′lo,** systematic name of melon plant, melo, common melon; fruit is an agreeable article of diet, but not very digestible unless when ripe; seeds possess mucilaginous properties. **C. sati′vus,** systematic name of cucumber plant; the cucumber is used, when young, as a pickle, when it is called a gherkin; it is not easy of digestion; seeds are mucilaginous. Ointment of green cucumbers—cucumber ointment—is used as a cooling, emollient salve; made by combining, by means of heat, the juice of green cucumbers with lard and suet. **C. sylves′tris,** Momordica elaterium. **C. trigo′nus,** species from E. Indies; purgative.

**Cucur′bita.** Gourd; cupping-glass. **C. angu′ria,** C. citrullus. **C. cathar′tica,** Citrullus colocynthis. **C. citrul′lus,** systematic name of the watermelon plant; juice of fruit is very abundant, whence its name; seeds of the watermelon have been employed as a domestic remedy in strangury and other affections of the urinary passages. **C. cruen′ta,** wet-cup, or cup applied to promote flow of blood after scarification, etc.; see *Cupping.* **C. lagena′ria,** the gourd; the pulp of the root is a drastic purgative. **C. leucan′tha,** see *Cucurbita pepo.* **C. le′vis,** dry cup. **C. max′ima,** red gourd, growing in Europe, Asia, and America; diuretic and anthelmintic. **C. melope′po,** see *Cucurbita pepo.* **C. occidenta′lis,** species from W. Indies; anthelmintic. **C. par′va,** cupping-glass, originally made of a gourd. **C. pe′po,** systematic name of common pumpkin; seeds of this plant, *pepo* (Ph. U. S.), as well as those of Cucurbita lagenaria, bottle-gourd, contain a large proportion of oil, capable of forming an emulsion, and are used in the treatment of tapeworm in doses of ℥ss–℥ij (16.0–64.0). The fixed oil of the seeds has been given with success in the same cases in doses of ℥ss (16.0). The fruits of Cucurbita lagenaria or C. leucantha or C. melopepo, round or pattypan squash, and of C. verrucosa, warted or long-necked squash, are eaten. **C. pinnatif′ida,** C. citrullus.

**Cucurbita′tio.** Wet cupping. **C. sic′ca,** dry cupping.

**Cucurbiti′nus.** Name formerly given to Tænia solium, because composed of rings resembling seeds of the gourd, cucurbita.

**Cucurbit′ula** (dim. of cucurbita). Cupping-glass; see *Cupping.* **C. cruen′ta,** cupping with the scarificator. **C. cum fer′ro,** cupping with the scarificator. **C. le′vis** or **sic′ca,** dry cupping.

**Cud.** Food of ruminant animals swallowed and regurgitated.

**Cud′bear.** Carnation powder; the dried, thick, white crusts of certain species of lichens.

**Cud′weed.** Antennaria plantaginifolia; Gnaphalium margaritaceum.

**Cuichunchil′li** or **Cuichunchul′li.** Root of Ionidium parviflorum of Peru; diaphoretic, diuretic, and emetocathartic.

**Cuirass′.** Shield-shaped bandage, usually immovable, applied to the chest. **C. can′cer,** shield-shaped cancer of the chest. **Tabet′ic c.,** an anæsthetic area of the skin covering the thorax, sometimes present in tabes dorsalis.

**Cul-de-sac** (Fr., blind alley). Blind sac or sac-like cavity. **Doug′las's c.,** a sac formed by the peritoneum dipping down between the uterus and the rectum.

**Cu′lex.** A genus of dipterous insects constituting one variety of mosquito. **C. fascia′tus,** a species of *Culex* which has been found instrumental in the transmission of yellow fever; it is now regarded as a distinct genus; see *Stegomyia.* **C. pip′iens,** one of the species of *Culex* common in temperate regions.

**Culi′cide** (*culex*+*cædo,* to kill). An agent destructive of mosquitos.

**Culi′cifuge** (*culex*+*fugo,* to drive away). An agent capable of driving away mosquitos, such as the smoke of a smudge fire or the fumes of burning pyrethrum powder.

**Cul′men.** Acme. **C. cerebel′li,** upper portion of superior vermiform process.

**Culmina′tion** (*culmen,* the top). Acme, as of a fever.

**Cultiva′tion.** See *Culture.*

**Cul′tural.** Relating to culture, as the cultural peculiarities of a bacillus.

**Cul′ture.** Cultivation, multiplication, and propagation of microorganisms in nutritive material, as broth, gelatin, etc., for closer study and investigation. These fluids are called *culture media.* **Drop c.,** hanging-drop c. **Hang′ing-drop c.,** one in a drop of bouillon or salt solution adherent to the under surface of a cover glass over a well in the slide. **Nee′dle c.,** stab c. **Plate c.,** one in which the medium, agar-agar or gelatin, is inoculated while in a fluid state and then poured over a plane surface, usually a Petri dish, to solidify; the various kinds of microorganisms thus become separated, and as they grow each forms its own colony; cultures are thus obtained which consist of only one form of organism; these are called *pure cultures.* **Punc′ture c.,** stab c. **Pure c.,** see *Plate c.* **Slant c.,** one on a slanting surface obtained by solidifying gelatin or agar-agar in a test-tube held obliquely during the process. **Slide c.,** a form of plate c. on a microscopical slide. **Smear c.,** one which follows the swabbing of the surface of the medium with the infected material. **Stab c.,** c. resulting from inoculation of the medium by thrusting a needle into its substance. **Streak c.** or **Stroke c.,** c. resulting from inoculation of the medium by stroking the surface with a needle. **Test-tube c.** or **Tube c.,** one in which the medium is contained in a test-tube sealed by a loose plug of cotton.

Hanging-drop culture. (Abbott.)

**Cul′ver's root.** Leptandra.

**Cumarin′.** Coumarin; a crystallizable constituent of Tonga bean; used to conceal the taste of iodoform.

**Cu′mene.** $C_9H_{12}$. An oily substance produced by boiling cuminic acid with lime; antiseptic, and used to sterilize catgut.

**Cumin′.** Cuminum cyminum.

**Cumi′num cymi′num.** Systematic name of cummin or cumin plant, a native of Egypt, ord. *Umbelliferæ.* The seeds have a warm, bitterish, disagreeable taste; they are used in the form of a plaster. **C. minu′tum,** C. cyminum. **C. ni′grum,** nigella. **C. praten′se,** carum. **C. roma′num,** C. cyminum.

**Cum′min.** Cuminum cyminum.

**Cu′mol.** Cumene.

**Cu′mulative** (*cumulus,* a heap). Increasing by successive additions. Cumulative action of medicines generally means violent action supervening after several successive doses have been taken with little or no apparent effect.

**Cu′mulus.** A heap; rounded prominence in the centre of the proligerous disk, in which there is a small, opaque cavity containing the ovum. **Ger′minal c., C. germinati′vus** or **prolig′erus,** embryoni carea; discus proligerus.

**Cunduran′go.** Tree of Ecuador, the wood and bark of which once enjoyed a reputation in the cure of cancer of the stomach; the remedy was also used in syphilis.

**Cu′neal** or **Cu′neate** (*cuneus,* wedge). Wedge-shaped. **C. fascic′ulus,** lateral column of the spinal cord. **C. funic′ulus,** see *Funiculus cuneatus.* **C. lobe** or **lob′ule,** triangular space on the middle surface of the cerebral hemispheres between the parieto-occipital and calcarine fissures. **C. nu′cleus,** mass of gray nervous matter in the funiculus cuneatus. **C. su′ture,** suture formed between the great and little alæ of the sphenoid bone and os frontis.

**Cu′neiform** (*cuneus*, wedge, *forma*, shape). Wedge-shaped. **C. bone,** name given to sphenoid bone; to a bone of the carpus, situated between the os lunare and os orbiculare, also called os pyramidale, os triquetrum, and os cubitale; to the basilary process of the occipital bone, and to three bones of the tarsus, distinguished according to situation, reckoning from within outward, as first, second, and third, or internal, middle, and external, and according to size, reckoning in the same order, as great, small, and middle-sized. **C. car′tilages of the lar′ynx,** cartilages of Wrisberg; two small cylinders of fibrocartilage enlarged at each extremity; by the base the cartilage is attached to the middle of the external surface of the arytenoid; its upper extremity forms a prominence on the border of the arytenoepiglottidean fold of membrane. **C. col′umns,** columns of Burdach; white nervous fibres in the posterior columns of the spinal cord.

**Cuneihysterec′tomy.** Excision of a wedge-shaped portion of the uterus.

**Cuneo-.** In composition, the cuneiform bones.

**Cuneocu′boid.** Belonging to the cuneiform bones and cuboid. **C. articula′tion** is formed by the third cuneiform bone and cuboid, and furnished with a synovial capsule and two cuneocuboid ligaments, dorsal and plantar.

**Cuneonavic′ular.** Articulation between cuneiform and scaphoid bones.

**Cuneoscaph′oid.** Belonging to the cuneiform bones and scaphoid. **C. articula′tion** is formed by the posterior surfaces of the three cuneiform bones and the anterior surface of the scaphoid; it is furnished with a synovial capsule and ligaments, dorsal and plantar.

**Cu′neus.** Cuneate lobule on the surface of the occipital lobe of the brain. **C. cine′reus,** ala cinerea.

**Cunic′ular** or **Cunic′ulate.** Having a furrow or sulcus.

**Cunic′ulus** (rabbit, hence burrowing). Sulcus, groove. One of the semicircular canals of the ear. **C. scabie′i,** groove made by Sarcoptes scabiei in itch.

**Cuni′la.** Satureia capitata. **C. bu′bula** origanum. **C. maria′na,** dittany, American or mountain dittany, mint-leaved or Maryland cunilla, stonemint, wild basil, sweet horsemint; small, indigenous herb, growing from New England to Georgia. Its medical properties are dependent upon essential oils, like the mints. **C. mus′cula,** Inula dysenterica. **C. pulegioi′des,** Hedeoma pulegioides. **C. sati′va,** Satureia hortensis.

**Cunila′go.** Inula dysenterica; Inula pulicaria.

**Cunnilin′guist.** A sexual pervert; one who applies the tongue to the vulva of another.

**Cun′nus.** Vulva.

**Cup.** A small vessel for containing liquids; a cupping-glass. **Bit′ter c.,** cup made of quassia-wood, in which water is allowed to stand over night and is taken in the morning as a bitter tonic. **Dry c.,** cupping-glass to bring blood to the surface without scarification, see *Cupping*. **Fa′vus c.,** pit or depression in a favus lesion around a hair. **Glauco′matous c.,** see *Optic papilla*. **Montgom′ery′s c.,** see *Montgomery*. **Oc′ular** or **Op′tic c.,** secondary optic vesicle in embryonic life. **Physiolog′ical c.,** a natural cup or concavity in the optic papilla. **C. plant,** Silphium perfoliatum. **Ret′inal c.,** a pit or concavity in the optic disk, either natural or the result of disease. **Wet c.,** see *Cupping*.

**Cupa′nia.** Loblolly-wood, of Jamaica. **C. americ′na** or **tomento′sa,** Antille chestnut; fruit and leaves are astringent, and employed in catarrh; seeds in dysentery and hæmoptysis.

**Cu′phea antisyphilit′ica.** Plant of Central and South America, used in syphilis.

**Cu′pola** (It., dome). Vaulted roof of apex of cul-de-sac of the cochlea; see *Infundibulum of the cochlea*. Top expanded part of a solitary gland in the small intestines. **C. space,** the tympanic attic.

**Cupped.** Subjected to the application of a cup. Having a depression in the centre, as the *corium phlogisticum*, which see. **C. disk,** see *Disk*.

**Cup′ping** (*couper*, to cut, or to draw blood in cups). Species of bloodletting, performed by a scarificator and glass called a cupping-glass; after scarification, the cupping-glass, previously exhausted by heat or by an exhausting syringe, is applied; pressure of the air within the glass being thus diminished, the necessary quantity of blood may be drawn. This is wet cupping. See *Bdellometer*. *Dry cupping* is the application of the glasses or dry cups without previous scarification. **C.-glass,** see *Cupping*.

Cupping-glass.

**Cuprammo′nia.** See *Schweitzer*.

**Cupratin′.** A proprietary remedy said to be an albuminate of copper.

**Cu′prea bark.** Bark of two varieties of remijia, yielding a small percentage of quinine.

**Cupreine′.** $C_{19}H_{22}N_2O_2+2H_2O$. Name given to homoquinine, an alkaloid obtained from cuprea bark.

**Cu′preol.** $C_{20}H_{34}O$. Cholesteroid substance obtained from Cinchona calisaya.

**Cu′preous** (*cuprum*, copper). Relating to, consisting of, or resembling copper.

**Cupres′sus.** A genus of coniferous trees; cypress. **C. ar′bor vi′tæ,** Thuya occidentalis. **C. dis′ticha,** Taxodium distichum. **C. glau′ca** or **lusitan′ica,** E. Indian plant, cones of which are stomachic; powder is tonic and antipyretic. **C. pyramida′lis,** C. sempervirens. **C. sempervi′rens,** systematic name of cupressus or cyparissus; cypress; berries, leaves, and wood are astringent and diaphoretic, and used in intermittents. The whole plant abounds with bitter, aromatic, terebinthinate fluid; the cones and oil yielded by them are used in febrile conditions, hemorrhage, etc. **C. thu′ja,** Thuja orientalis. **C. thyoi′des,** white cedar; indigenous. Infusion of the tops is stomachic, and, when taken warm, diaphoretic.

**Cu′pri ace′tas.** $Cu(C_2H_3O_2)_2,H_2O$. Acetate or subacetate of copper; verdigris; subacetate of copper; impure subacetate of copper; tonic, emetic, escharotic, and detergent, but scarcely ever employed internally; chiefly used in detergent ointments. An ointment of one drachm of finely powdered verdigris, with an ounce of lard or spermaceti ointment, is used in psoriasis, tetter, etc. **C. et ammo′nii sul′phas** or **C. ammoniosul′phas,** cuprum ammoniatum; ammoniated copper, ammoniacal sulphate of copper, ammonio-sulphate of copper; crystalline powder of a rich violet color and hot, styptic taste. By exposure to air it becomes partly converted into carbonate of copper. It is tonic and astringent, and has been chiefly employed in epilepsy and other obstinate spasmodic diseases. Dose, gr. ¼–ij (0.016–0.13). **C. ar′senis,** arsenite of copper. **C. diace′tas,** c. subacetas. **C. limatu′ra,** filings of copper; have been used in hydrophobia, but are inert. **C. ni′tras,** nitrate of copper; has been employed as a caustic. **C. ox′idum,** black oxide of copper; prepared by heating the nitrate to redness, and employed in the form of ointment in frictions for the treatment of chronic glandular induration. **C. rubi′go** (rust of copper), cupri subacetas. **C. subace′tas** or **diace′tas,** c. acetas. **C. sul′phas** (Ph. U. S. and Br.), $CuSO_4,5H_2O$, sulphate of copper, cupric sulphate, blue stone, blue vitriol, blue copperas, Roman vitriol; it is tonic, emetic, astringent, and escharotic. As a tonic it has been used in epilepsy, intermittents, etc.; dose as a tonic, gr. ¼–j (0.016–.065), in pill; as an emetic, gr. iij–v

(0.2–0.32), in water. A very weak solution is sometimes used in ophthalmia and in gleet. **C. sul′phas ammoniaca′lis,** cuprum ammoniatum. **C. vitri′olum,** cupri sulphas.

**Cu′pric.** Relating to copper. **C. sul′phate,** cupri sulphas.

**Cuprohæ′mol.** See *Hæmol.*

**Cu′prol.** A nucleinate of copper.

**Cu′prum.** Copper. This metal in its metallic state exerts no action on the system; when swallowed it undergoes no deleterious change. Copper cannot be dissolved while tin is in the mixture, and hence the utility of tinning copper vessels. Copper culinary vessels are harmless under ordinary cleanliness, provided the substances be not suffered to remain in them until cold. The salts of copper are poisonous. See *Cupri.*

**Cu′pula.** Cupola. **C. ampul′læ** or **termina′lis,** generally called membrana tectoria, embryonic membranous formation in ampullæ of the ear.

**Cu′pular** (*cupula,* dim. of *cupa,* vat). Of or belonging to a cup or cupule; cup-shaped. **C. cau′tery,** an iron in the shape of a cup, used to cauterize the skin of the cranium in certain diseases, as epilepsy, chronic headache, etc.

**Cu′ra** (care). Attention to or treatment or cure of a disease.

**Cu′rable.** Medicable; sanable; that which is susceptible of cure; epithet applied to both patients and diseases.

**Curacao** or **Curacoa** (koo-ra-so′). Cordial whose ingredients are orange-peel, brandy, water, and sugar, with a little coloring-matter.

**Curan′ga ama′ra.** Species of *Scrophularineæ* of E. Indies and Moluccas; bitter, and employed in constipation, worms, and intermittent fevers.

**Curangin′.** A glucoside from Curanga amara, a febrifuge.

**Cura′ri, Cura′ra,** or **Cura′re.** Very energetic vegetable poison, employed by the American Indians to poison their arrows, and obtained from various plants, as cocculus, arum, strychnos, etc., also from a species of convolvulus, called vejuco de mavacure, but referred by Martius to Strychnos guianensis, and by Dr. Schomburg to S. toxicaria or toxifera. The juice of Echites suberecta, another apocynaceous plant, is said to enter into its composition. The poison acts directly on the heart, probably through the ganglia in its tissue. Curari is a sedative narcotic, and must be prescribed endermically or hypodermically on account of its tardy absorption, or perhaps non-absorption, by the stomach. It is used to calm the spasms in hydrophobia, tetanus, etc., in doses of gr. $\frac{1}{200}$–$\frac{1}{50}$ (0.0003–0.0013), and to induce motor paralysis in animal experimentation.

**Curarine′.** $C_{10}H_{15}N$. Alkaloid, active principle of curare; crystallized, soluble, and at least twenty times the strength of curari.

**Cura′rism.** Subjection to the influence of curari or its alkaloid.

**Curariza′tion.** Process of producing curarism.

**Curatel′la america′na.** Leaves of this species, growing in Guiana, are used locally, applied to sores; inner bark is astringent. **C. cambai′ba,** Brazilian shrub; astringent; decoction is used as a wash for wounds.

**Cura′tion.** Treatment.

**Cu′rative.** Sanative, sanatory, healing; relating to or tending to the cure of a disease.

**Cura′tor** (*cura,* care). One whose duty it is to take care of anything, as a museum or collection of valuable materials or papers. **C. infirmo′rum** (caretaker of the sick), one employed in a hospital or infirmary to take care of the sick.

**Curb.** A cause of lameness in the horse, consisting of a thickening of the calcaneometatarsal ligament.

**Cur′cas.** Jatropha, a genus of plants of the order *Euphorbiaceæ.* **C. pur′gans,** Jatropha curcas, seeds of which, called purging nuts, contain an oil having laxative properties.

**Curcin′.** Toxic principle from Jatropha curcas; analogue of ricin.

**Curcu′ligo orchioi′des.** Species of amaryllidaceous herb of Japan, E. Indies, and Eastern hemisphere generally; bitter roots are tonic, and employed also in gonorrhœa. **C. uncifo′lia,** root of E. Indian herb, used as demulcent, tonic, and diuretic in asthma, piles, diarrhœa, gonorrhœa, etc.

**Cur′cuma angustifo′lia.** See *Arrowroot.* **C. aromat′ica,** Kæmpferia rotunda. **C. lon′ga,** turmeric-root—the rhizome of Curcuma longa. Curcuma is brought from the East Indies, but is possessed of little medicinal efficacy; it is an ingredient in curry powder. **C. zedoa′ria,** see *Kæmpferia rotunda.* **C. zerum′bet,** see *Kæmpferia rotunda.*

**Curcumin′.** $C_{14}H_{14}O_4$. Yellow coloring-matter of turmeric.

**Cur′cumol.** $C_{10}H_{14}O$. Volatile oil from the distillation of turmeric.

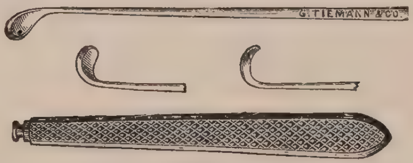
**Curd.** Coagulated or curdled part of milk. **Al′um c.,** coagulum aluminosum. **Soap c.,** sago animalis.

**Cure** (*cura,* care). Course of treatment; restoration to health; remedy; restorative. **Air c.,** pneumatic treatment. **Bant′ing c.,** Bantingism. **Grape c.,** see *Grape.* **Move′ment c.,** kinesitherapy. **Pota′to c.,** treatment in cases in which a foreign body has been swallowed, the patient being stuffed with potatoes, which surround the foreign body, so that it becomes coated and escapes from the bowels without injury to them. **Swe′dish move′ment c.,** kinesitherapy. **C. by sym′pathy,** see *Sympathy.* **Wa′ter c.,** hydrotherapy. **Whey c.,** see *Whey.*

**Cure′all.** Geum virginianum, Œnothera biennis. A panacea.

**Curet′tage.** Curetting.

**Curette′.** Scoop; instrument for the removal of foreign bodies, secretions, local growths, etc., from the surface or canals by scraping.



Curettes.

**Curet′ting.** Operation of using the curette for scraping a surface or canal; curettage.

**Curin′.** Weak base derived from curari.

**Curl.** Fimbriated extremity of the Fallopian tube in animals.

**Cur′ling's ul′cer.** Ulcer of the duodenum consequent upon a burn of the external surface of the body.

**Cur′rant jel′ly clots.** Masses expectorated in many cases of malignant growth in the lungs.

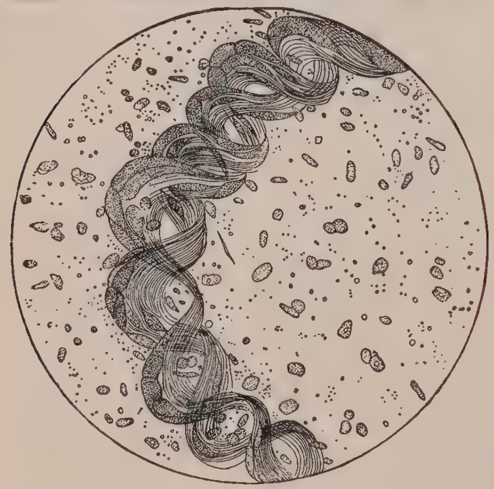
**Cur′rants.** See *Vitis corinthiaca.*

**Cur′rent** (*curro,* to run). Flow, as of electric fluid. **Af′ter-c.,** the passive current left in nervous or muscular tissue after stoppage of a continuous current. **Al′ternating c.,** faradic current alternately made and broken. **Ascend′ing c.,** centripetal c. **Centrif′ugal c.,** descending c. **Centrip′etal c.,** current from the outer surface to the nervous centre. **Contin′uous c.,** constant uninterrupted current. **D'Arsonval′ c.,** see *D'Arsonval.* **Demarca′tion c.,** see *Demarcation.* **Descend′ing c.,** current passing from the nervous centre outward. **Direct′ c.,** c. in which the direction is constant. **Farad′ic c.,** induced electrical current. **Galvan′ic c.,** constant c. developed by a galvanic battery. **High-fre′quency c.,** D'Arsonval c. **Induced′ c.,** induced c. in secondary faradic coil by making and breaking current in primary coil. **Interrup′ted c.,** current made and broken alternately. **La′bile c.,** c. in which the electrodes are moved over the surface to be treated. **C.-reg′ulator,** rheostat. **Reversed′ c.,** c. made by changing the electrodes. **Sec′ondary c.,** induced c. **Sta′bile c.,** c. produced when the poles are in a fixed position. **Tes'la c.,** D'Arsonval c.

**Cur'rier's su'mach.** Cosiaria myrtifolia.

**Curric'ulum.** A course of study in a college or university which must be passed through in order to obtain a degree.

**Cursch'mann's spi'rals.** Small, grayish, rounded bodies in the sputa of asthma, made up of fine spirals of mucus, which are supposed to have received their shape in the delicate bronchioles.



Curschmann's spirals, magnified. (v. Noorden.)

**Cursu'ma hæmorrhoida'lis her'ba.** Ranunculus ficaria.

**Cursu'ta.** Gentiana purpurea.

**Curtom'eter.** Cyrtometer.

**Cur'tum.** Coloboma.

**Curu'ba.** Chronic, painless form of psoriasis affecting the hands and feet of the Indians of Brazil.

**Curu'pa.** Herb of S. America, having, when powdered, the exhilarating qualities of hasheesh.

**Curva'men.** Curvature, as of the spine.

**Curva'tor coccy'gis.** Occasional small bundle of fleshy fibres descending on the middle of the coccyx, uniting on each side with the ischiococcygei muscles; fasciculus of levator ani muscle; fasciculus of the coccygeus muscle.

**Curvatu'ra.** Curvature. **C. prostat'ica,** curvature forward of the inferior portion of the rectum. **C. sacra'lis,** sacral curvature of the rectum. **C. sigmoide'a,** sigmoid flexure of the colon; curve of the internal carotid artery in its passage through the carotid canal. **C. un'guium,** see *Onychogryphosis.*

**Cur'vature.** Approximation of a line or surface more or less to the form of an arc; as the curvature of the spine, duodenum, stomach, etc. Accidental curvatures of bones are the effect of rickets or mollities ossium. **C. ametro'pia,** ametropia caused by changes in the curvature of ocular refractive media. **Lat'eral c. of the spine,** scoliosis. **Pott's c.,** angular curvature of the spine, due to vertebral disease. **C. of the spine,** abnormal deviation of the spinal column.

**Curve.** A continuous deviation, without angles, from a straight line. **Aor'tic c.,** arch of the aorta. **C. of Barnes,** see *Barnes.* **C. of Ca'rus,** imaginary curved line representing the axis of the pelvis, see *Pelvis.* **Caud'al c.,** caudal flexure of the embryo. **Cephal'ic c.,** cephalic flexure of the embryo. **Mus'cle c.,** myogram. **Skull c.,** cephalic flexure. **Tem'perature c.,** chart of the variations of temperature occurring in fever. **Ten'sion c.,** arrangement of the cancellous structure of bone to withstand the varying lines of tension. **Trau'be's c., Trau'be-Her'ing c.,** see *Traube.*

**Curved lines.** Two crooked lines or projections on the posterior surafce of the occipital bone; some lines on the os ilium are also so called.

**Cuscamin'.** Crystalline substance in Cinchona succirubra.

**Cus'co bark.** Variety of Cinchona pubescens, variant *Pelletieriana.*

**Cuscocinchonine'.** Cusconine; aricine.

**Cusconidin'.** Amorphous principle in Cusco bark.

**Cusconine'.** $C_{23}H_{26}N_2O_4+2H_2O$. Alkaloid from Cusco and cuprea barks.

**Cus'cus.** Andropogon muricatus.

**Cuscu'ta america'na.** A plant of the order *Convolvulaceæ;* diuretic, laxative, cholagogue. **C. chlorocar'pa,** see *C. glomerata.* **C. epith'ymum,** systematic name of the dodder of thyme, ord. *Convolvulaceæ;* parasitical plant possessed of a strong, disagreeable smell and durable, pungent taste; once used as a laxative in diseases of the liver; cathartic in melancholia. **C. europæ'a** possesses properties similar to those of C. epithymum. **C. filifor'mis,** C. europæa. **C. glomera'ta,** dodder, American dodder; indigenous plant; is bitterish, subastringent, tonic, and antiperiodic. **C. ma'jor,** C. europæa. **C. mi'nor,** C. epithymum. **C. nimia'ta,** juice of this species is astringent and styptic. **C. reflex'a** grows in E. Indies; used in skin diseases, disorders of the liver, etc. **C. tetran'dra,** C. europæa. **C. umbella'ta,** species of C. americana; used for sore throat, hoarseness, etc.

**Cush'ia.** Heracleum spondylium.

**Cush'ion.** A small, soft bed of fatty or other tissue. **C. of the epiglot'tis,** tubercle of the epiglottis. **Eusta'chian c.,** see *Eustachian.* **Passavant's' c.,** see *Passavant.* **Suck'ing c.,** see *Sucking.*

**Cusp.** Pointed prominence, as the crown of a tooth; part of a valve of the heart.

**Cuspa'ria bark.** See *C. febrifuga.* **False c. bark,** Brucea antidysenterica and Strychnos nux vomica. **C. febrif'uga,** ord. *Rutaceæ,* S. American tree which furnishes cusparia or angustura bark. Angustura bark is also derived from Galipea officinalis. Cuspariæ cortex is the dried bark of Galipea cusparia. It yields its virtues to water and to proof spirit. It is tonic, stimulant, aromatic, and in large doses cathartic. Dose, gr. v–xx (0.32–1.3) or more, in powder. **C. trifolia'ta,** C. febrifuga.

**Cusparin'.** Crystalline principle from cusparia bark.

**Cus'pidate** (*cuspis,* a point). Having sharp points, as canine teeth.

**Cus'so.** (Ph. U. S. and Br.) Cousso or kousso, brayera; the female inflorescence of Hagenia abyssinica. Anthelmintic, especially employed in the treatment of tapeworm; dose, of the *infusion* (infusum cusso), ℥ss–j (16.0–32.0); of the *fluid extract* (extractum cusso fluidum), ʒij–iv (8.0–16.0).

**Cus'tard ap'ple.** Edible fruit of Anona reticulata.

**Cut.** Common expression for the division or solution of continuity made by a sharp instrument; incised wound. In embryology, a cleft or fissure. As a verb, to incise; to castrate; to appear through the gums, said of the teeth.

**Cu'tal.** Aluminum borotannate; a disinfectant astringent, used in the treatment of diseases of the skin. **Sol'uble c.,** aluminum borotannotartrate.

**Cuta'neal.** Cutaneous.

**Cuta'neophalan'geal.** Relating to the skin and fingers, as ligaments from the sides of the phalanges.

**Cuta'neous** (*cutis,* skin). Cutaneal; tegumentary; resembling, composed of, or belonging to the skin. **C. cal'culus,** pearly white tumor in the skin—milium—infiltrated with calcareous matter. **C. dis-ea'ses,** diseases of the skin; eruptions; affections of a morbid character to which the skin is liable —*dermatopathiæ, dermatoses.* It is difficult to classify them systematically; the following is the classification adopted by the American Dermatological Association:

### CLASSIFICATION OF CUTANEOUS DISEASES.

CLASS I. DISORDERS OF THE GLANDS.

1. *Of the sweat glands.*
   - Hyperidrosis.
   - Sudamen.
   - Anidrosis.
   - Bromidrosis.
   - Chromidrosis.
   - Uridrosis.
2. *Of the sebaceous glands.*
   - Seborrhœa:
     - oleosa.
     - sicca.
   - Comedo.
   - Cyst:
     - milium.
     - steatoma.
   - Asteatosis.

CLASS II. INFLAMMATIONS.

- Exanthemata.
- Erythema:
  - simplex.
  - multiforme.
  - papulosum.
  - bullosum.
  - nodosum.
- Urticaria:
  - pigmentosa.
- Dermatitis (indicating affections of this class not properly included under other titles):
  - traumatica.
  - venenata.
  - calorica.
  - medicamentosa.
  - gangrænosa.
- Erysipelas.
- Furunculus.
- Anthrax.
- Phlegmona diffusa.
- Pustula maligna.
- Herpes simplex.
- Herpes zoster.
- Dermatitis herpetiformis.
- Psoriasis.
- Pityriasis maculata et circinata.
- Dermatitis exfoliativa.
- Pityriasis rubra.
- Lichen:
  - planus.
  - ruber.
- Eczema:
  - erythematosum.
  - papulosum.
  - vesiculosum.
  - madidans.
  - pustulosum.
  - rubrum.
  - squamosum.
- Prurigo.
- Acne.
- Acne rosacea.
- Sycosis.
- Impetigo.
- Impetigo contagiosa.
- Impetigo herpetiformis.
- Ecthyma.
- Pemphigus.

CLASS III. HEMORRHAGES.

- Purpura:
  - simplex.
  - hæmorrhagica.

CLASS IV. HYPERTROPHIES.

1. *Of pigment.*
   - Lentigo.
   - Chloasma.
2. *Of epidermal and papillary layers.*
   - Keratosis:
     - pilaris.
     - senilis.
   - Molluscum epitheliale.
   - Callositas.
   - Clavus.
   - Cornu cutaneum.
   - Verruca.
   - Verruca necrogenica.
   - Nævus pigmentosus.
   - Xerosis.
   - Ichthyosis.
   - Onychauxis.
   - Hypertrichosis.
3. *Of connective tissue.*
   - Sclerema neonatorum.
   - Scleroderma.
   - Morphœa.
   - Elephantiasis.
   - Rosacea:
     - erythematosa.
     - hypertrophica.
   - Frambœsia.

CLASS V. ATROPHIES.

1. *Of pigment.*
   - Leucoderma.
   - Albinismus.
   - Vitiligo.
   - Canities.
2. *Of hair.*
   - Alopecia.
   - Alopecia furfuracea.
   - Alopecia areata.
   - Atrophia pilorum propria.
   - Trichorexis nodosa.
3. *Of nail.*
   - Atrophia unguis.
4. *Of cutis.*
   - Atrophia senilis.
   - Atrophia maculosa et striata.

CLASS VI. NEW GROWTHS.

1. *Of connective tissue.*
   - Cheloid.
   - Cicatrix.
   - Fibroma.
   - Neuroma.
   - Xanthoma.
2. *Of muscular tissue.*
   - Myoma.
3. *Of vessels.*
   - Angioma.
   - Angioma pigmentosum et atrophicum.
   - Angioma cavernosum.
   - Lymphangioma.
4. Rhinoscleroma.
   - Lupus erythematosus.
   - Lupus vulgaris.
   - Scrofuloderma.
   - Syphiloderma:
     - erythematosum.
     - papulosum.
     - pustulosum.
     - tuberculosum.
     - gummatosum.
   - Lepra:
     - tuberosa.
     - maculosa.
     - anæsthetica.
   - Carcinoma.
   - Sarcoma.

CLASS VII. NEUROSES.

- Hyperæsthesia:
  - pruritus.
  - dermatalgia.
- Anæsthesia.

CLASS VIII. PARASITIC AFFECTIONS.

1. *Vegetable.*
   - Tinea favosa.
   - Tinea trichophytina:
     - circinata.
     - tonsurans.
     - sycosis.
   - Tinea versicolor.
2. *Animal.*
   - Scabies.
   - Pediculosis capillitii.
   - Pediculosis corporis.
   - Pediculosis pubis.

**C. inflamma′tion**, dermatitis. **C. nerves**, *of the upper extremity*, two in number, are given off from the brachial plexus. The *internal cutaneous* descends along the inner part of the arm and divides above the elbow into two branches, the outermost of which follows the outer edge of the biceps and spreads over the anterior and inner part of the forearm; the innermost accompanies the basilic vein, passing to the corresponding side of the hand and little finger. *Lesser internal cutaneous* nerve, nerve of Wrisberg, takes its origin from the axillary plexus, but is more particularly connected with the ulnar nerve. It soon separates from the ulnar, running afterward between it and the inner side of the arm. Below the axilla it divides into two branches, distributed to the arm. The *external cutaneous* passes outward, perforates the coracobrachialis, descends along the anterior and outer part of the arm, passes as far as the middle fold of the elbow under the median cephalic, and descends along the anterior and outer edge of the forearm. At some distance above the wrist it divides into two branches, distributed to the hand and fingers. Cutaneous nerves, *of the lower extremity*, middle cutaneous, two in number, are branches of the crural or femoral nerve; they are distributed to the integument of the middle and lower part of the thigh and of the knee. **C. re′flex,** see *Reflex*. **C. respira′tion,** passage of gases through the skin by transpiration. **C. veins,** the cephalic and basilic veins have been called radial and cubital cutaneous.

**Cu′ticle** (dim. of cutis). This membrane covers the whole surface of the body; scarf-skin; epidermis; see *Cutis*. **Den′tal c.** or **C. of the enam′el,** see *Cuticula dentis*. **Ker′atose c.,** the outer surface. **Liq′uid c.,** collodion.

**Cutic′ula.** Cuticle; epidermis. **C. cer′ebri,** dura mater; also layer of epithelial cells under the pia mater on the surface of the cerebrum and cerebellum. **C. den′tis,** Nasmyth's membrane; thin membrane which peels off the surface of the enamel of an unworn tooth, said by Tomes to be coronal cement, the homologue of a similar thick cement of herbivorous animals; see also *Enamel*. **C. pi′li,** hair cuticle.

**Cutic′ular.** Relating to the cuticle. **C. mem′brane,** cuticula dentis.

**Cuticulariza′tion.** The process of covering a surface with fresh cuticle, as after an injury; the formation of skin.

**Cutic′ulum.** Cuticula.

**Cutifica′tion** (*cutis*, skin, *fio*, to become). Formation of skin, as in the healing of ulcers or wounds.

**Cutipunc′tor** (*cutis*, skin, *punctum*, point). Instrument for puncturation of the skin, as in nævus.

**Cu′tis.** Skin; dense, resisting membrane, of flexible and extensible nature, forming the general envelope of the body, and continuous with the mucous membranes through the different natural apertures. It is generally considered to be formed of three distinct layers—the epidermis, rete mucosum, or more properly corpus mucosum, and corium (*cutis vera, derma*). Some anatomists, however, separate it into several others. Its outer surface is covered by a number of small eminences, called papillæ, papillæ cutis or tactus, which are generally regarded as essentially nervous and vascular. The skin is a medium of communication with external bodies. It protects the subjacent parts, is the seat of touch, and through it are exhaled the watery parts of the blood not needed in the nutrition of the body. Its color varies according to the age, sex, race, etc. As a rule, the skin is finer in the female and child than in the male and adult. In old age it becomes light colored, thin, and dry. (See cut under *Skin*.) The following measurements have been made of the skin and its component parts, especially as regards the thickness of the skin (Krause):

| | Mm. |
|---|---|
| *Subcutaneous connective tissue free from fat:* | |
| On the eyelids | 0.6 |
| On the superior and inferior part of the ear | |
| On the penis | 0.7 |
| Membrane at vault of cranium, at forehead, and nose | 2 |
| In general | 4–9 |
| In fat people, up to | 30 |
| *Thickness of the entire abdominal wall:* | |
| Anteriorly and laterally | 15–30 |
| Posteriorly (median plane) | 90–110 |
| In the lumbar region | 60–70 |
| *Corium:* | |
| Of eyelids, prepuce, and internal side of labia majora | 0.6 |
| Glans penis | 0.3 |
| Face, eyes, penis, scrotum, areola of nipple | 0.7–1 |
| Forehead | 1.5 |
| In general, usually | 1.7–2 |
| Back, seat, bottom of foot | 2–3 |
| *Papillæ of the skin:* | |
| Base and height | 0.07 |
| Large papillæ in the volar surface of the hand, foot, and sole of foot | 0.1–0.2 |
| Dorsal surface of hand and foot | 0.09 |
| Face, neck, in most of the regions of the nates and extremities | 0.07–0.05 |
| Glans penis | 0.06–0.1 |
| On one square mm. on the volar surface of the hand there were 80 papillæ (Moleschott). | |
| *Epidermis:* | |
| Deep and middle layer | 0.03–1 |
| Outer layer | 0.03–2 |
| Entire thickness of epidermis on most places of the body | 0.07–0.17 |
| Anterior side of neck, breast, abdomen, flexor side of arm and thigh, areola of nipple, prepuce, and glans penis | 0.07–0.1 |
| Volar surface of hand | 0.6–1.2 |
| Sole of foot | 0.4–1.8 |
| Below the sole and at anterior end of metatarsus, below the heads of metacarpal bones | 2 |
| Weight of epidermis (Moleschott), 488.5 grammes. | |

**C. aë'na** or **aë'rea,** bronzed skin, as in Addison's disease; see *Capsule, renal.* **C. anseri'na,** gooseskin; horripilation; see *Horrida cutis.* **C. carno'sa,** panniculus carnosus. **C. exter'na, ex'tima,** or **extre'ma,** epidermis. **C. gallina'cea** or **hor'rida,** horrida cutis. **C. lax'a,** dermatolysis; molluscum fibrosum. **C. lin'guæ,** see *Tongue.* **C. pen'dula,** molluscum fibrosum, see *Dermatolysis.* **C. suil'la,** buffy coat. **C. sum'ma** or **supre'ma,** epidermis. **C. ten'sa chron'ica,** scleroderma; induration of the cellular tissue. **C. testa'cea,** ichthyosis sebacea of newborn children; seborrhœa generalis. **C. ul'tima,** epidermis. **C. unctuo'sa,** seborrhœa; stearrhœa. **C. variega'ta,** achroma. **C. ve'ra,** corium, see *Cutis.*

**Cutisec'tor** (*cutis*, skin, *seco*, to cut). Instrument for removing small pieces of skin for examination.

**Cuti'tis.** Dermatitis; erysipelatous inflammation.

**Cutiza'tion.** Development of or transformation into true skin.

**Cut'leaf.** Fucus vesiculosus; Fucus serratus; Laminaria digitata.

**Cut-off mus'cle.** Compressor urethræ.

**Cu'tol.** Cutal.

**Cut'ting edg'es.** Sharp edges of the incisor teeth.

**Cut'tlefish.** Sepia.

**Cut'weed.** Fucus vesiculosus.

**Cuvier's** (kue-vyaze') **an'gle.** Facial angle. **C.'s canals'** or **ducts,** two canals in fetal life opening laterally into the sinus venosus, formed by the union of the anterior and posterior cardinal veins.

**Cyanæ'mia.** Deficient oxidation of the blood, as in cyanosis.

**Cyanal'cohol.** Cyanhydrin.

**Cy'anate.** Salt of cyanic acid.

**Cyanephidro'sis** (*kyanos*, blue, *ephidrosis*, perspiration). Blue perspiration.

**Cyanhæ'matin.** A combination of hæmatin and potassium cyanide.

**Cyanhy'dric acid.** Hydrocyanic acid.

**Cyanhy'drin.** An alcohol in which the hydrogen of the alcohol radical is substituted by cyanogen.

**Cyanhydro'sis** (*kyanos*, blue, *hidros*, sweat). Blue sweat or a light-blue discoloration of the sweat.

**Cyan'ic** (*kyanos*, blue). Epithet for the blue stage of a malady, as cholera. **C. acid,** HCNO, cyanogen hydrate; volatile liquid forming cyanates.

**Cy'anide.** A binary compound of cyanogen

**Cyanidro'sis.** Cyanhidrosis.

**Cyano-** (*kyanos*, blue). In composition, blue.

**Cyanochroi'a** (*kyanos*, blue, *chroa*, color). Blue discoloration of the skin; cyanosis.

**Cyanoch'rous.** Having a blue skin.

**Cyanoder'ma** or **Cyanoder'mia** (*kyanos*, blue, *derma*, skin). Cyanopathy; cyanosis.

**Cyan'ogen** (*kyanos*, blue, *gennao*, to generate). So called from being an ingredient in Prussian blue or ferric ferrocyanide. It forms, with oxygen, cyanic and other acids; with hydrogen, hydrocyanic acid; and with mercury, potassium, etc., cyanides of these metals.

**Cyanohy'dric acid.** Hydrocyanic acid.

**Cyanomyco'sis.** The presence of Micrococcus pyocyaneus in pus.

**Cyanop'athy** (*kyanos*, blue, *pathos*, affection). Blue jaundice; cyanosis. Disease in which the surface of the body is colored blue, commonly depending on a direct communication remaining between the cavities of the right and left side of the heart, patency of the foramen ovale. Such communication does not, however, always occasion the blue disease, but it is generally thought that the disease probably never exists without some obstacle to the circulation in the right side of the heart. A child thus affected is called a *blue baby*

**Cy'anophile** (*kyanos*, blue, *phileo*, to love). A cell which readily takes a blue stain.

**Cyanophil'ic** or **Cyanoph'ilous.** Readily stainable with blue dyes; a term applied to leucocytes and other elements.

**Cyano'pia** or **Cyanop'sia** (*kyanos*, blue, *opsis*, vision). Condition of sight in which everything appears of a blue color.

**Cy'anosed.** Affected with cyanosis.

**Cyano'sis** (blueness). Cyanopathy; lividity from plethora of the venous system. **C. bul'bi,** violet discoloration of the sclerotic coat, seen at birth. **C. pulmona'lis,** see *Atelectasis pulmonum.*

**Cyanot'ic.** Relating or appertaining to cyanosis.

**C. indura'tion**, chronic passive hyperæmia of the kidneys.

**Cyan'uret.** Cyanide.

**Cyanurin'** (*kyanos*, blue, *ouron*, urine). Blue coloring-matter in urine, in which indican is present.

**Cy'anus** (*kyanos*, blue). Centaurea cyanus. **C. ægypti'acus,** Nymphæa nelumbo. **C. seg'etum,** bluebottle; blue flowers of this European plant when distilled with water are used in ophthalmia.

**Cyas'ma.** Freckled condition in pregnancy.

**Cyathe'a** (small cup) **arbor'ea.** Species of arborescent ferns of S. America, root of which is demulcent and diuretic.

**Cyathis'cus** (dim. of *kyathos*, a bowl). Concave part of a sound, made like a small spoon; curette for the ear.

**Cy'athus.** A bowl. **C. cer'ebri,** infundibulum of the brain.

**Cybis'tax antisyphilit'ica.** Caroba.

**Cy'cas circina'lis** or **revolu'ta.** See *Sago*.

**Cycla'men europæ'um.** Fresh root is acrid, bitter, drastic emmenagogue, and anthelmintic. The powerful qualities of the root are due to its poisonous active principle, cyclamin or arthanitin or arthanita, acting like curari.

**Cyclamin'.** $C_{20}H_{34}O_{10}$. The active principle of cyclamen.

**Cyclarthro'sis.** Circular articulation.

**Cy'cle** (*kyklos*, circle). Period or revolution of a certain number of years or days; recurring succession of symptoms; course of diet or exercise. **Car'diac c.,** the round of physiological action of the heart embraced in the period from the commencement of one pulsation to that of another. **Hebdom'adal** or **hep'tal c.,** period of seven which, according to some, either in its multiple or submultiple, governs many phenomena of animal life.

**Cyclencepha'lia** (*kyklos*, circle, *kephale*, head). Cyclocephalia.

**Cyclenceph'alous.** Cyclocephalous.

**Cyclenceph'alus.** Cyclocephalus.

**Cy'clic.** Taking place in or relating to cycles. **C. albuminu'ria,** periodical, daily appearance of albumin in the urine.

**Cyclicot'omy** (*kyklikos*, circular, *tome*, incision). Intraocular myotomy; division of the ciliary body in glaucoma.

**Cycli'tis** (*kyklos*, circle). Inflammation of the ciliary circle, neighboring parts of the sclerotica, and ciliary processes; or inflammation of the ciliary body alone, the iris escaping, in this case usually qualified as *pure cyclitis*.

**Cyclocepha'lia** (*kyklos*, circle, *kephale*, head). Kind of monstrosity referred to under *Cyclocephalus*.

**Cyclocephal'ic** or **Cycloceph'alous.** Having head or eyes as described under *Cyclocephalus*.

**Cycloceph'alus** (*kyklos*, circle, *kephale*, head). Monstrosity in which malformed or imperfectly developed eyes become approximated in the middle line or even fused; olfactory organs are absent. Term also applied to the shape of the head seen in hydrocephalus.

**Cyclochoroidi'tis.** Inflammation of the ciliary body and choroid.

**Cycloganglion'ic nerves.** See *Nerves*.

**Cyclophor'ia** (*kyklos*, circle, *phoreo*, to bear). Circulation of blood or other fluids. State in which the vertical meridians of the cornea diverge or converge. Imbalance of the oblique muscles of the eye.

**Cyclo'pia** (*kyklos*, circle, *ops*, eye). Cyclocephalia. State of a monster that has both eyes united into one, the orbits being fused; called also monopsia and rhinencephalia. **C. genistoi'des,** S. African plant, decoction and infusion of which are used as expectorants in chronic bronchitis and phthisis; the glucoside *cyclopin* is derived from it.

**Cyclople'gia** (*kyklos*, circle, *plege*, stroke). Paralysis of the ciliary muscle.

**Cyclople'gic.** One suffering from paralysis of the ciliary muscles. An agent producing cycloplegia.

**Cy'clops** (*kyklos*, circle, *ops*, eye). Monster having but one eye, and that placed in the middle of the forehead, as in the fabulous Cyclops.

**Cy'closcope** (*kyklos*, circle, *skopeo*, to see). Instrument for measuring direction circles of the eye in the field of fixation.

**Cyclo'sis** (*kyklos*, circle). Circulation; gyration.

**Cyclother'apy.** The use of the bicycle as a therapeutic agent.

**Cy'clotome** (*kyklos*, circle, *tome*, incision). Instrument used in the performance of cyclotomy.

**Cyclot'omy.** Division of the ciliary muscle, as practised for the relief of glaucoma.

**Cydo'nia.** A genus of plants of the order *Rosaceæ;* quince; Pyrus cydonia. **C. chinen'sis,** fruit of this Chinese tree is sedative, astringent, stomachic. **C. europæ'a, malifor'mis,** or **vulga'ris,** Pyrus cydonia.

**Cydonin'.** A mucilage obtained from the quince.

**Cydo'nium.** Quince, the fruit of Pyrus cydonia.

**Cye'sis.** Conception; fecundation; pregnancy.

**Cyet'ic** (*kyesis*, pregnancy). Relating to pregnancy.

**Cylindarthro'sis.** Pivot and hinge-joint articulation.

**Cyl'inder.** Tube-cast. Villus; see *Villous membrane*. **Ax'is c.,** axis. **Bence-Jones c.,** see *Bence-Jones*. **Cor'tical c.,** cell trabecula. **Gold c.,** piece of gold-foil rolled into a short cylinder; used in filling cavities in carious teeth. **Med'ullary c.,** see *Serous canaliculi*.

**Cylin'drical.** Shaped like a cylinder or relating to one. **C. lens,** lens having plane surface in one axis, and a concave or convex surface in axis at right angles to it.

**Cylindroadeno'ma.** An adenoma which has undergone hyaline degeneration.

**Cylindrocephal'ic** (*kylindros*, cylinder). Term applied to heads of cylindrical shape; the condition is called *cylindroceph'aly*.

**Cylindroden'drite.** Paraxon.

**Cylin'dro-enchondro'ma.** Cylindroma.

**Cyl'indroid** (*kylindros*, cylinder, *eidos*, form). Having the form of a cylinder. A peculiar body resembling a tube-cast found in the urine in various pathological conditions; formed probably in the renal tubules as a result of congestion or irritation; mucous cast, pseudocylinder. **C. an'eurysm,** see *Aneurysm*.

**Cylindro'ma.** Tumor having the appearance of myxoma, contents of which are made up of clear, cylindrical masses. See *Chondroma*.

**Cylindrosarco'ma.** Tumor composed of cylindroma and sarcoma.

**Cylindrotæ'nium.** A term formerly applied to an assumed microparasitic vegetable growth found in choleraic discharges.

**Cylindru'ria.** Presence in the urine of cylindroids or false casts.

**Cyllo'sis** (*kyllosis*). Lameness, mutilation, or vicious conformation; clubfoot. See *Kyllosis*.

**Cyl'lum.** Knock-knee; dislocation of the leg or foot outward.

**Cymato'des** (undulating). Vacillating, undulatory character of the pulse in adynamic individuals.

**Cym'ba** (*kymbos*, a cavity). Scaphoid bone. Vulva. Fossa of concha situated above spine of helix.

**Cymbala'ria elati'ne.** Antirhinum elatine. **C. mura'lis,** Antirhinum linaria.

**Cymbala'ris** (*kymbalon*, cymbal). Cricoid.

**Cym'biform** (*kymbe*, canoe, *forma*, shape). Scaphoid.

**Cymbocephal'ic** or **Cymboceph'alous** (*kymbe*, canoe, *kephale*, head). Having a boat-shaped skull, the condition being called *cymboceph'aly*.

**Cymbopo'gon schœnan'thus.** Juncus odoratus.

**Cy'mene.** $C_{10}H_{14}$. A substance derived from cumin, eucalyptus, and thyme.

**Cy'mograph** (*kyma*, a wave, *grapho*, to describe). Kymograph.

**Cymop'teris** or **Cymop'terus fendle'ri.** New Mexican plant, used as a stomachic tonic.

**Cy′na.** Artemisia vulgaris.

**Cynagros′tis.** Triticum repens.

**Cynanche,** si-nang′ke (*kyon*, dog, *ancho*, to suffocate). Angina; sore throat; inflammation of the supradiaphragmatic portion of the alimentary canal and of the lining membrane of the upper part of the air-passages. **C. cellula′ris malig′na gangræno′sa,** angina Ludovici. **C. contagio′sa,** diphtheritic cynanche. **C. dysarthrit′ica,** angina arthritica. **C. epidem′ica,** c. maligna. **C. exanthemat′ica,** angina variolosa. **C. exter′na,** c. parotidea. **C. fau′cium,** c. tonsillaris. **C. gangræno′sa,** c. maligna. **C. larynge′a,** laryngitis. **C. malig′na,** gangrenous, putrid, or ulcerated sore throat, gangrenous or malignant inflammation of the pharynx; characterized by crimson redness of the mucous membrane of the fauces and tonsils, ulcerations covered with mucus, and spreading sloughs of an ashen or whitish hue. It is frequently found accompanying scarlet fever, especially scarlatina maligna. Cynanche maligna is described sometimes as including both diphtheritic and gangrenous pharyngitis; see *Pharyngitis, diphtheritic*. **C. maxilla′ris,** c. parotidea. **C. mercuria′ils,** mercurial stomatitis. **C. œsophage′a,** œsophagitis. **C. parotide′a,** mumps, parotid bubo; characteristic symptoms are a painful tumor of the parotid gland or of the areolar tissue surrounding it, or of both, not suppurative; frequently extending to the maxillary gland. It is very conspicuous externally, and is often accompanied with swelling of the testis or of the mammæ, the testes being sometimes atrophied afterward. It is generally epidemic, and is contagious. Treatment is very simple; under the antiphlogistic plan it usually soon disappears; inflammation of the mammæ or testes must be treated as if idiopathic. Epidemic parotitis or mumps is also called parotitis polymorpha, epidemica, or specifica. **C. pharynge′a,** acute catarrhal inflammation of the pharynx; it can hardly be said to differ, in pathology or treatment, from cynanche tonsillaris. **C. prunel′la,** c. tonsillaris. **C. pur′puro-parotide′a,** c. maligna. **C. sim′plex,** simple angina; isthmitis. **C. strapito′ria** or **strid′ula,** c. trachealis; croup. **C. sublingua′lis malig′na,** angina Ludovici. **C. suffocati′va,** croup. **C. thyreoide′a,** goitre. **C. tonsilla′ris,** inflammatory sore throat, common quinsy; characteristic symptoms of this affection are swelling and florid redness of the mucous membrane of the fauces, and especially of the tonsils; painful and impeded deglutition, with inflammatory fever. It is generally ascribed to cold, and is a common affection of cold and temperate climates; it usually goes off by resolution, but frequently ends in suppuration. Ordinary tonsillitis is usually of no consequence, requiring merely rest and the observance of the antiphlogistic regimen; when more violent—in addition to this—local bleeding, purgatives, inhalation of the steam of medicated water, emollient gargles, and rubefacients externally or sinapisms or blisters are called for. When suppuration must inevitably occur an opening should be made into the abscess as soon as pus shall have formed. If the patient is being suffocated by the tumefaction, tracheotomy may be necessary. **C. trachea′lis,** laryngotracheitis with diphtheritic exudation, croup; disease characterized by sonorous and suffocative breathing, harsh voice, ringing cough, and fever. It is apt to be speedily attended with the formation of a false membrane, lining the trachea beneath the glottis, and occasioning violent dyspnœa and suffocation, but being sometimes expectorated. Dyspnœa, as in all other affections of the air-passages, has evident exacerbations. The inflammation is much more severe in some cases than in others. It chiefly affects children, and is apt to recur, but the subsequent attacks are usually less severe. It requires, as a rule, the most active treatment. The majority of cases of so-called croup are not of this inflammatory cast, but are more of a spasmodic character, being called false croup and spasmodic or catarrhal croup. They generally yield to an emetic and the warm bath. **C. trachea′lis spasmod′ica,** asthma acutum, asthma thymicum. **C. ulcero′sa,** c. maligna.

**Cynan′chum.** Genus of plants, ord. *Asclepiadaceæ*, of which several are used in medicine. **C. ar′gel,** C. oleæfolium. **C. ipecacuan′ha,** Tylophora asthmatica. **C. monspeli′acum,** scammony of Montpellier; the plant furnishes a blackish and purgative gum-resin. **C. oleæfo′lium,** Egyptian, Nubian, and Arabian shrub, the leaves of which form a portion of most samples of Alexandrian senna; they resemble senna in their action. **C. tomento′sum,** Tylophora asthmatica. **C. vincetox′icum,** Asclepias vincetoxicum. **C. viridiflo′rum** or **vomito′rium,** Tylophora asthmatica.

**Cynan′themis** (*kyon*, dog, *anthemis*). Anthemis cotula.

**Cynan′thropy** (*kyon*, dog, *anthropos*, man). Variety of melancholia in which the patient believes himself changed into a dog, and imitates the voice and habits of that animal.

**Cynapine′.** Toxic alkaloid from Æthusa cynapium; æthusine.

**Cyna′pium.** Æthusa cynapium.

**Cyn′ara** (*kynaros*, dog-brier). Systematic name of artichoke or garden artichoke, C. scolymus, juice of which is diuretic, and leaves are used in arthritic affections and neuralgia; ord. *Compositæ*. Indigenous in southern parts of Europe; used as an agreeable article of diet; juice of leaves, mixed with white wine, has been given in dropsies. **C. cardun′culus,** prickly artichoke of S. Europe. **C. scol′ymus,** see *Cynara*. **C. silves′tris,** C. carduncul us.

**Cyniatri′a** (*kyon*, dog, *iatreia*, medical treatment). Medical treatment of diseases of the dog.

**Cyn′ic** or **Cyn′ical.** Relating to or resembling a dog. **C. spasm,** convulsive contraction of muscles of one side of the face—dragging the eye, cheek, mouth, nose, etc., to one side. See *Canine*.

**Cyn′obex.** A dry cough occurring at puberty.

**Cynocepha′lia** or **Cynocepha′lion** (*kyon*, dog, *kephale*, head). Condition in which the head is shaped like that of a dog.

**Cynoceph′alous.** Having a head like that of a dog.

**Cynoc′oprus** (*kyon*, dog, *kopros*, excrement). Album græcum.

**Cynoc′tonon.** Aconitum; mitreola.

**Cynocyt′isus.** Rosa canina.

**Cynodes′ma** (*kyon*, dog, *desmos*, band). Frænum penis. Infibulation; ring for infibulation.

**Cynodes′mesis.** Infibulation.

**Cyn′odon dac′tylon** or **officina′le.** Bermuda-grass; indigenous; roots have been used as a substitute for sarsaparilla; diuretic and alterative.

**Cynodon′tes.** Canine teeth.

**Cynoglos′sum** (*kyon*, dog, *glossa*, tongue) **amplexicau′le.** C. virginicum. **C. bi′color,** hound's tongue; caballation; it is aromatic, mucilaginous, and narcotic. **C. ma′jus** or **officina′lis,** common hound's tongue; leaves and root are used in coughs and catarrhs and affections of the bowels, and externally as an application to burns, ulcers, etc. **C. moriso′ni,** beggar's lice; Virginia mouse-ear; dysentery-weed; root is tonic, astringent, and mucilaginous. **C. officina′le,** hound's tongue; cynoglossum. **C. virgin′icum,** wild comfrey; indigenous; has mucilaginous properties. The leaves are smoked, and are said to produce effects like those of tobacco.

**Cynolys′sa** (*kyon*, dog, *lyssa*, madness). Hydrophobia; rabies.

**Cynomet′ra agal′locha.** Agallochum. **C. cauliflo′ra,** tree of E. and W. Indies, the root of which is cathartic; oil of the fruit is used in skin diseases. **C. ramiflo′ra,** E. Indian tree; root is applied externally in several skin diseases.

**Cyno′mia** or **Cynomoi′a.** Plantago psyllium.

**Cynomo′rion** or **Cynomo′rium coccin′eum.** Improperly called Fungus melitensis, or scarlet fungus of Malta, as it is not a fungus. The powder is astringent in hemorrhage, dysentery, etc.

**Cynopho'bia** (*kyon*, dog, *phobos*, fear). Lyssophobia; fright at being bitten, not hydrophobia.

**Cynophrenol'ogy.** Phrenology of the dog.

**Cynorex'ia** (*kyon*, dog, *orexis*, appetite). Boulimia; voracious appetite.

**Cynor'rhodon.** Rosa canina; hips.

**Cynosor'chis.** Orchis mascula.

**Cynospas'mus.** Cynical spasm. See *Cynic*.

**Cynurin'.** $C_{18}H_{14}N_2O_2$. A derivative of cynurenic acid.

**Cynurin'ic acid** (*kyon*, dog, *ouron*, urine). $C_{20}H_{14}N_2O_6+2H_2O$. A crystalline acid found in urine of the dog.

**Cyonorrhaph'ia.** Staphylorrhaphy.

**Cyopho'ria** (*kyos*, fœtus, *phero*, to carry). Pregnancy.

**Cyophorin'.** Kyestein.

**Cyopin'** (*kyanos*, blue, *pyon*, pus). Coloring-matter of blue pus.

**Cyoto'cia** (*kyos*, fœtus, *tokao*, to bring forth). Parturition.

**Cyot'rophy** (*kyos*, fœtus, *trepho*, to nourish). Embryotrophy; nutrition of the embryo; fetal nutrition.

**Cyparis'sus** (*kyparissos*). Cupressus sempervirens.

**Cype'rus antiquo'rum.** Lawsonia inermis. **C. articula'tus,** jointed sedge of W. Indies and S. America; anthelmintic. **C. canes'cens,** plant of E. Indies; leaves are used for colic and amenorrhœa. **C. distach'yos,** plant of E. Indies; root is diuretic and diaphoretic. **C. in'dicus,** Curcuma longa. **C. lon'gus** possesses aromatic and bitter properties; emmenagogue and stomachic tonic; see *Dorstenia contrayerva*. **C. odo'rus** or **perua'nus,** Dorstenia contrayerva. **C. roman'us,** C. longus. **C. rotun'dus, syri'acus,** or **tetras'tachys,** round cyperus, a more grateful aromatic bitter than C. longus; tonic, stimulant, diaphoretic, diuretic.

**Cy'phoid.** Hump-like.

**Cypho'ma** (*kyphos*, hump). Kyphos; gibbosity of the spine; humpback.

**Cyphortho'sis** (*kyphos*, gibbus, *orthoo*, to straighten). Orthopedics.

**Cy'phos.** Kyphos.

**Cyphoscolio'sis** (*kyphos*, gibbus, *skolios*, crooked). Kyphoscoliosis; cyphoma; gibbosity.

**Cypho'sis.** Kyphosis; cyphoma.

**Cyphot'ic.** Relating to kyphosis, or one so affected; kyphotic.

**Cy'press.** Cupressus sempervirens, Taxodium distichum. **Amer'ican c.,** Schubertia disticha. **Bald c.,** Taxodium distichum. **C. tree,** liriodendron.

**Cypripe'dium** (*Kypris*, Venus, *pedion*, for *podeion*, sock). Official name (Ph. U. S.) of ladies' slipper, the rhizome and roots of C. pubescens. Antispasmodic; dose, gr. v–xv (0.32–1.0). The *fluid extract* (extractum cypripedii fluidum) is official; dose, ♏v–xxx (0.32–2.0). **C. acau'le,** stemless ladies' slipper, moccasin-flower, Noah's ark; indigenous; roots have been used, like valerian in nervous diseases; narcotic. **C. calce'olus,** C. luteum; C. spectabile. **C. canaden'se,** C. spectabile. **C. flaves'cens,** C. luteum. **C. hu'mile,** C. acaule. **C. lu'teum,** yellow ladies' slipper, moccasin-flower, moccasin-plant, yellows, bleeding heart, American valerian, yellow umbil, male mervine, Noah's ark; indigenous plant, found all over the United States; the rhizome and rootlets of C. pubescens and C. parviflorum are official (Ph. U. S.) under the name *cypripedium;* are antispasmodic, and used in the same cases as valerian. **C. parviflo'rum, C. pubes'cens,** C. luteum. **C. spectab'ile,** showy ladies' slipper, the most beautiful of the genus, said to possess properties identical with those of C. luteum.

**Cypripho'bia** (*Kypris*, Venus, *phobos*, fear). Morbid dread of sexual intercourse.

**Cyrtocor'yphus** (*kyrtos*, convex, *koryphe*, crown or head). Term applied to skulls in which the parietal angle of Lissauer is from 122° to 132°.

**Cyr'tograph** (*kyrtos*, curved, *grapho*, to write). Instrument for describing curves of the thorax; cyrtometer.

**Cyr'toid.** Crooked; humpbacked; gibbous.

**Cyrto'ma** (*kyrtos*, curved). Curvature; cyphoma.

**Cyrtom'eter** (*kyrtos*, curved, *metron*, measure). Instrument for measuring curved parts of the body.

**Cyrtomet'opus** (*kyrtos*, curved, *metopon*, forehead). Term applied to skulls in which the angle between the lines projected from metopion to bregma and to nasion is from 130.5° to 120°.

**Cyrtopisthocra'nius** (*kyrtos*, convex, *opisthokranion*, occiput). Term used to denote skulls in which the occipital angle is from 117° to 140°.

**Cyrto'sis.** Kyphosis; spinal curvature; rickets.

**Cyssan'themon** or **Cyssophyl'lon.** Cyclamen europæum.

**Cys'sotis** (*kysos*, anus). Lower part of the rectum. Tenesmus.

**Cys'sus.** Anus.

**Cyst** (*kystis*, bladder or pouch). Term generally applied to a pouch or sac—cystoma—without opening, and commonly with a membranous envelope, either normal or pathological, the contents of which are soft or fluid. Some cysts are formed by a thin, translucent membrane, having scarcely the thickness of the arachnoid; others of a whitish, fibrocellular membrane, more or less thick; some contain cartilaginous or bony flakes. The greater part have but one cavity; others have several, separated by incomplete or imperfect septa, as is frequently seen in those developed in the ovaries. The matter contained in cysts is sometimes limpid, serous, yellowish-white, or reddish, and at others more or less thick, albuminous, fatty, or caseous. The tumor formed by them is called encysted. Cysts are either simple (or barren) or compound (or proliferous), the former containing fluid or organized matter, the latter various organized bodies. According to the nature of their contents they are called serous, synovial, mucous, sebaceous, sanguineous, colloid, salivary, seminal, or dermoid. Cysts may be most conveniently classified according to their mode of origin (Green):

### Classification of Cysts.

I. *Cysts formed by the Accumulation of Substances within the Cavities of Pre-existing Structures.*

1. Retention Cysts. Cysts resulting from the retention of normal secretions. These include:
   a. *Sebaceous Cysts.* These are formed by the retention of secretions in the sebaceous glands. They possess a very thin connective-tissue wall lined by stratified epithelium. They contain a mass of fatty epithelium, débris, cholesterin, etc.
   b. *Mucous Cysts.* These are formed by the retention of secretions in the glands of mucous membranes.
   c. *Cysts from the retention of secretions in other parts,* including ranula, when due to occlusion of the salivary ducts; encysted hydrocele, from occlusion of the tubuli testis; cysts in the mammary gland, from obstruction of the lacteal ducts; simple and some compound cysts of the ovary, from dilatation of the Graafian follicles; and simple cysts of the liver and kidneys.
2. Exudation Cysts. Cysts resulting from excessive secretion in cavities unprovided with an excretory duct. These include bursæ, ganglia, hydrocele, meningocele, cystic bronchocele, and many cysts in the broad ligament.
3. Extravasation Cysts. Cysts resulting from extravasation into closed cavities. These include hæmatocele and some other forms of sanguineous cysts.

II. *Cysts of Independent Origin.*

1. Cysts from Softening of Tissues. These are especially common in new formations, as in chondroma, lipoma, sarcoma, etc.

2. Cysts from Extravasation into Solid Tissues, as the brain, or soft new growths.
3. Cysts from Expansion and Fusion of Spaces in Connective Tissue. These include:
   - *a. Bursæ*, originating from irritation.
   - *b. Serous cysts in the neck*, hygroma (often congenital).
   - *c. Many compound ovarian cysts.*
4. Cysts formed around Foreign Bodies, Extravasated Blood, and Parasites. These include echinococcus cysts or hydatids.
5. Congenital Cysts. Many hygromata, dermoid cysts. Sometimes these appear to be the remains of blighted ova, but usually they are due to inclusion of a piece of epiblast. Their wall has more or less perfectly the structure of skin; they contain fatty matters, long, fair hair, teeth, bones, etc.

**Adventit′ious c.**, cyst or enclosure around an extraneous body or effused fluid. **Allan′toic c.**, urachus c. **Alve′olar c.**, cyst connected with alveolus of tooth. **Aneurys′mal c.**, sac of aneurysm. **Apoplec′tic c.**, see *Degeneration.* **Arach′noid c.**, hæmatoma of arachnoid membrane. **Athero′matous c.**, atheroma. **Blood c.**, cyst containing blood. **Boy′er's c.**, see *Boyer.* **C. of the broad lig′ament,** see *Corpus Wolffianum.* **Bur′sal c.**, c. developed by the gradual enlargement of a bursa. **Chyle c.**, a c. of the mesentery containing chyle. **Col′loid c.**, see *Cyst.* **Com′pound c.**, multilocular cyst. **Cowpe′rian** or **Cow′per's c.**, see *Nabothi glandulæ.* **Cuta′neous** or **cutic′ular c.**, c. of the skin, see *Dermoid.* **Daugh′ter c.**, cyst developed within another. **Degenera′tion c.**, see *Degeneration.* **Dentig′erous c.**, see *Dentigerous.* **Der′moid c.**, see *Cyst* and *Dermoid.* **Dilata′tion c.**, see *Retention.* **Disten′tion c.**, see *Retention.* **Echinococ′cus c.**, see *Echinococcus.* **Epider′mal c.**, atheroma. **Extravasa′tion** or **Exuda′tion c.**, adventitious c. **False c.**, adventitious c. **Follic′ular c.**, cyst of follicle. **Gärt′ner's c.**, see *Gärtner.* **Gas c.**, a c. containing gas of bacillary origin. **Hæmat′ic c.**, blood c. **Hydat′ic** or **hydat′id c.**, echinococcus; hydatid. **Inclu′sion c.**, a c. in tissue of mesoblastic origin resulting from an inclosed portion of the epiblast. **Involu′tion c.**, a milk c. occurring at the menopause. **Meibo′mian c.**, chalaza. **Milk c.**, cystic enlargement of a lactiferous duct. **Morgagn′ian c.**, hydatid of Morgagni. **Moth′er c.**, outer cyst of a multilocular cyst. **Mu′cous c.**, see *Cyst.* **Multiloc′ular c.**, cyst divided in several partitions from formation of daughter cells in mother cells. **Nabo′thian c.**, see *Nabothi glandulæ.* **Næ′void c.**, a c. with sac composed almost entirely of blood-vessels. **Neu′ral c.**, cystic enlargement of a lymph space in the brain or spinal cord. **Oil c.**, lipomatous tumor whose contents are oily. **Oöphorit′ic c.**, unilocular and multilocular cysts of the oöphoron, or egg-bearing portion of the ovary. **Ova′rian c.**, see *Ovary.* **Papillo′matous c.**, cyst containing papillomatous growths, especially ovarian. **Pa′rent c.**, mother c. **Paroöphorit′ic c.**, cyst of the paroöphoron, usually unilocular. **Parova′rian c.**, cyst connected with the parovarium. **Pilif′erous c.**, a dermoid c. containing hair. **Prolifera′tion** or **prolif′erative** or **prolif′erous c.**, mother cyst; cyst having solid matter growing out from its surface. **Prolig′erous c.**, adenosarcoma. **Psorosper′mal c.**, a c. containing psorosperms, see *Psorospermosis.* **Re′nal c.**, cyst-like enlargement of the kidney. **Reten′tion c.**, see *Retention.* **Sal′ivary c.**, c. from obstruction of a salivary duct. **Sanguin′eous c.**, see *Cyst* and *Blood cyst.* **Seba′ceous c.**, atheroma. **Sec′ondary c.**, cyst within a cyst. **Sem′inal c.**, c. of seminiferous tubule. **Se′rous c.**, c. containing thin, clear liquid; hygroma. **Sin′gle c.**, cyst with a single cavity. **Spermat′ic c.**, seminal c. **Ster′ile c.**, an hydatid c. containing no brood-capsules. **Sublin′gual c.**, see *Ranula.* **Subsyno′vial c.**, distended synovial follicle. **Syno′vial c.**, cyst of synovial sheath, see *Cyst.* **Tar′sal c.**, chalazion. **Testic′ular c.**, seminal c. **The′cal c.**, cystic tumor or cystoma found sometimes in the tendons about the wrist and ankle; usually called ganglion. **Umbil′ical c.**, cyst at umbilicus, existing at birth. **Uniloc′ular c.**, c. with a single cavity. **U′rachus c.**, dilatation of the urachus so as to form a cyst, sometimes as large as the bladder, and sometimes communicating with the latter. **U′rinary c.**, c. of the cortical substance of the kidney. **Wolff′ian c.**, see *Corpus wolffianum.*

**Cystadeno′ma.** Adenoma having cysts in its interior.

**Cystal′gia** or **Cystidal′gia** (*kystis*, bladder, *algos*, pain). Pain in the bladder.

**Cystanastro′phia** (*kystis*, bladder, *anastrophe*, inversion). Inversion of the bladder.

**Cystanencepha′lia** (*kystis*, bladder, *anencephalia*, absence of brain). Monstrosity in which in place of a brain a bladder is found filled with fluid.

**Cystatro′phia** or **Cystat′rophy** (*kystis*, bladder, *atrophia*, atrophy). Atrophy or wasting of the bladder.

**Cystau′chen** (*kystis*, bladder, *auchen*, neck). Neck of the bladder.

**Cystaucheni′tis.** Inflammation of the neck of the bladder.

**Cystau′xe** (*kystis*, bladder, *auxe*, increase). Hypertrophy of the coats of the urinary bladder.

**Cystec′tasy** (*kystis*, bladder, *ektasis*, dilatation). Dilatation of the bladder; lithectasy.

**Cystec′tomy.** Excision of the cystic duct or of a cyst or of the bladder.

**Cystelco′sis** (*kystis*, bladder, *helkosis*, ulceration). Ulceration of the urinary bladder.

**Cystenceph′alus** (*kystis*, bladder, *kephale*, head). Monster having a head with a vesicular brain.

**Cysteogen′esis.** Formation of a cyst.

**Cysteolaparot′omy** (*kystis*, bladder, *lapara*, belly, *tome*, incision). Suprapubic cystotomy, performed in lithotomy.

**Cyster′ethism** (*kystis*, bladder, *erethizo*, to irritate). Irritability of the bladder.

**Cysthepat′ic** (*kystis*, bladder, *hepar*, liver). Belonging to the gall-bladder and liver; name given formerly to imaginary excretory ducts for the bile, supposed to pass directly from the liver to the gall-bladder.

**Cysthepatolithi′asis** (*kystis*, bladder, *lithiasis*, formation of calculus). Cholelithiasis.

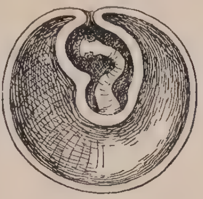
**Cysthi′tis** (*kysthos*, vagina). Inflammation of the vagina.

**Cysthygro′ma.** Lymphatic cyst.

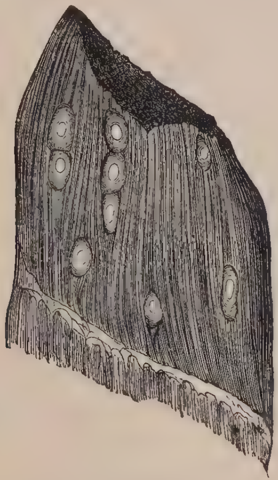
**Cysthypersarco′sis** (*kystis*, bladder, *hyper*, over, *sarkosis*, fleshy growth). Fleshy thickening of the coats of the bladder.

**Cys′tic.** Belonging to a cyst or cysts, to the bladder or gall-bladder; containing cysts; cystous; cyst-like. **C. ar′tery** is given off from the right branch of the hepatic, and divides into two branches, which proceed to the gall-bladder; it is accompanied by two cystic veins, which open into the vena porta abdominalis. **C. bile,** bile contained in the gall-bladder. **C. bron′chocele,** cystic goitre. **C. cal′culi,** calculi formed in the gall-bladder; also urinary calculi of cystic oxide. **C. can′cer,** carcinoma with cysts. **C. degenera′tion,** degeneration of any organ from the presence of cysts, as the kidney; form of follicular degeneration of the cervix uteri, with loss of substance. **C. duct,** duct proceeding from the gall-bladder, which, by its union with the hepatic duct, forms the ductus communis choledochus. **C. fos′sa,** depression on the under surface of the liver for the gall-bladder. **C. hyperpla′sia,** excessive follicular degeneration of the cervix uteri resembling a new growth. **C. ox′ide,** cystin. **C. plex′us,** plexus formed by branches of the hepatic plexus to the gall-bladder. **C. sarco′ma of Ab′ernethy,** multiple cystic tumor, with oval cysts, currant-sized or grape-sized, containing serous fluid; sometimes caseous; found in the thyroid gland (forming bronchocele), testis, ovaries, etc. **C. valve,** spiral duplication of the mucous membrane at the entrance of the cystic duct. **C. worm,** scolex; cestode worm.

**Cysticer'cus** (*kystis*, bladder, *kerkos*, tail). Genus of *Entozoa* of the family of the *Hydatids*, distinguished by the caudal vesicle in which the cylindrical or slightly depressed body of the animal terminates. The C. cellulosæ or C. telæ cellulosæ has been often found in the areolar or cellular membrane, and is considered to be the offspring of the tapeworm in one stage of its growth, having the power of developing a large number of individuals resembling itself. Cysticercus tenuicollis is the offspring of Tænia marginata. **C. bo'vis,** C. saginata. **C. ca'nis,** C. cellulosæ. **C. cellulo'sæ,** see *Cysticercus.* **C. cerebra'tus,** larva of Tænia cœnurus. **C. clava'tus,** C. tenuicollis. **C. cu'tis,** hydatid of the skin. **C. dicys'ta,** cysticercus in the human skull. **C. fin'na,** C. cellulosæ. **C. globo'sa,** C. tenuicollis. **C. linea'ta,** C. tenuicollis. **C. mediocanella'ta,** C. saginata. **C. pyrifor'mis,** C. cellulosæ. **C. racemo'sa,** c. branching out into the arachnoid membrane of the brain. **C. sagina'ta,** larval state of Tænia mediocanellata. **C. tæn'iæ mediocanella'tæ** or **sagina'tæ,** C. saginata. **C. te'læ cellulo'sæ,** C. cellulosæ. **C. tenuicol'lis** or **viscera'lis,** scolex of Tænia marginata in the human intestines.



Diagrammatic section through a cysticercus bladder in which a tapeworm is sprouting. (Fleishmann.)



Flesh of pig with cysticerci. (Heller.)

**Cysticot'omy.** Incision into the cystic duct.

**Cystidal'gia** (*kystis*, bladder, *algos*, pain). Cystalgia.

**Cystidelco'sis** (*kystis*, bladder, *helcosis*, ulceration). Suppuration or ulceration of the urinary bladder.

**Cys'tidocele.** Cystocele.

**Cystidolaparot'omy** (*kystis*, bladder, *lapara*, flanks, *tome*, incision). Abdominal section into the bladder.

**Cystidomyelo'ma.** Myeloma of the bladder.

**Cystidople'gia** (*kystis*, bladder, *plege*, stroke). Paralysis of the urinary bladder.

**Cystidorrha'gia.** Hemorrhage of the urinary bladder.

**Cystidorrhex'is.** Rupture of the urinary bladder.

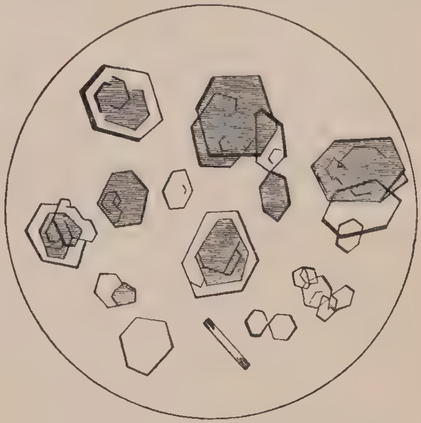
**Cystidot'omy.** Cystotomy.

**Cystidotrachelot'omy** (*kystis*, bladder, *trachelos*, neck, *tome*, incision). Incision into the neck of the bladder.

**Cystifellot'omy** (*kystis*, bladder, *fel*, bile, *tome*, incision). Cholecystotomy.

**Cys'tiform.** Cystoid.

**Cys'tin.** $C_3H_5NO_2S$. Sulpho-amidolactic acid; a grayish, crystalline substance occurring in six-sided plates, found in the urine, of little pathological significance except in rare instances in which it forms vesical calculi. These are soft and waxy in consistency.



Crystals of cystin in the urine. (Roberts.)

**Cystinæ'mia.** The presence of cystin in the blood.

**Cystinu'ria.** Condition in which cystin is present in urine.

**Cystirrhœ'a** (*kystis*, bladder, *rheo*, to flow). Cystorrhœa; copious discharge of mucus from the bladder with the urine, generally attended with dysuria, and commonly dependent upon inflammatory or subinflammatory condition of the lining membrane; polyuria.

**Cys'tis.** Cyst; follicle; urinary bladder. **C. bi'lis, choled'ochus,** or **fel'lea,** gall-bladder. **C. sero'sa,** see *Hygroma.*

**Cysti'tis.** Inflammation of the bladder characterized by pain and swelling in the hypogastric region, discharge of urine painful or obstructed, and tenesmus. Commonly it is confined to the mucous coat. It must be treated upon the energetic principles required in other internal inflammations. Cantharides must be avoided, even in the form of a blister, unless with precautions, as the disease is often occasioned by this drug. **Croup'ous** or **diphtherit'ic c.,** c. with plastic deposit on the interior of the bladder or of thickened, dead mucous membrane. **Exfo'liative c.,** croupous c. **C. fel'lea,** cholecystitis. **C. parenchymato'sa,** inflammation of the whole structure of the bladder. **Pseu'domem'branous c.,** croupous c. **C. submuco'sa** or **subsero'sa,** c. parenchymatosa. **C. u'rica,** cystitis.

**Cys'titome.** Cystotome.

**Cystoadeno'ma** (*cystis*, cyst, *aden*, gland). Glandular tumor or adenoma, with cysts formed within its structure.

**Cys'toblast** (*kystis*, bladder, *blastos*, germ). Cytoblast; cell-nucleus.

**Cystoblennorrhœ'a.** Cystorrhœa.

**Cystobubon'ocele** (*kystis*, bladder, *boubon*, groin, *kele*, tumor). Hernia of the bladder through the abdominal ring.

**Cystocarcino'ma.** Cystic degeneration complicating or complicated with cancer.

**Cystocatar'rhus.** Catarrh of the bladder; cystorrhœa.

**Cys'tocele** (*kystis*, bladder, *kele*, tumor). Hernia of the bladder; it occurs most frequently at the abdominal ring, less so at the crural arch, perineum, and vagina — vesicovaginal hernia — and foramen thyreoideum. It may exist alone or be accompanied by a sac containing some abdominal viscus. The tumor is soft and fluctuating, disappears on pressure, and increases in size when the urine is retained.

It must be reduced and kept in position by a truss. Vaginal cystocele, hernia of the vagina, is kept in place by a pessary. **C. bilio′sa,** turgescence of the gall-bladder. **Cru′ral c.,** crural or femoral hernia of the bladder. **Fem′oral c.,** crural c. **In′guinal c.,** inguinal hernia of the bladder. **Perine′al c.,** hernia of the bladder through the perineum. **Vag′inal c.,** see *Cystocele.*

**Cystoceph′alus.** Cystencephalus; monster having a cyst instead of a brain.

**Cystochondro′ma.** Enchondroma with cysts.

**Cystococ′cus** (*kystis,* sac, *kokkos,* kernel). Nucleus of impregnated ovum.

**Cystocolos′tomy** (*kystis,* bladder, *colon* + *stoma,* mouth). Establishment by operation of a fistulous communication between the colon and the bladder.

**Cystocol′picus** (*kystis,* bladder, *kolpos,* vagina). Vesicovaginal.

**Cystocolpi′tis** (*kystis,* bladder, *kolpos,* vagina). Inflammation of the bladder and the vagina; colpocystitis.

**Cystocol′pocele** (*kystis,* bladder, *kolpos,* vagina, *kele,* hernia). Prolapse of the bladder into the vagina.

**Cystodyn′ia** (*kystis,* bladder, *odyne,* pain). Pain, particularly rheumatic pain, of the bladder.

**Cys′toen′terocele** (*kystis,* bladder, *enteron,* intestine, *kele,* hernia). Hernia, the contents of which are the bladder and intestine.

**Cys′toenteroëpip′locele** (*kystis,* bladder, *enteron,* intestine, *epiploön,* omentum, *kele,* hernia). Hernia of the bladder, intestine, and omentum.

**Cys′toepip′locele** (*kystis,* bladder, *epiploön,* omentum, *kele,* hernia). Hernia of the bladder and omentum.

**Cystoepithelio′ma.** An epithelioma undergoing cystic changes.

**Cystofibro′ma.** Cystic degeneration of a fibroid tumor. See *Fibrocystic.*

**Cystogen′esis** or **Cystog′eny** (*kystis,* bladder, *genesis,* formation). Formation of a cyst.

**Cystohæ′mia** (*kystis,* bladder, *haima,* blood). Congestion of the bladder.

**Cyst′oid** (*kystis,* bladder, *eidos,* resemblance). Cyst-like; resembling a cyst.

**Cystolipo′ma.** Encysted form of lipoma.

**Cys′tolith** (*kystis,* bladder, *lithos,* stone). Vesical calculus.

**Cystolithi′asis** (*kystis,* bladder, *lithiasis,* formation of calculi). Formation of vesical calculi; diathesis tending to such formation; gravel.

**Cystolith′ic** (*kystis,* bladder, *lithos,* a stone). Relating to stone in the bladder.

**Cystol′ogy.** The study and description of cysts.

**Cystolutein′.** Yellow coloring-matter from ovarian cysts.

**Cysto′ma.** Cystic tumor, as of the ovary. See *Cyst.*

**Cystomer′ocele** (*kystis,* bladder, *meros,* thigh, *kele,* hernia). Femoral hernia formed by the bladder protruding beneath the crural arch.

**Cystomyxoadeno′ma.** A mixed tumor, adenoma and cystomyxoma.

**Cystomyxo′ma.** Myxomatous tumor containing cysts.

**Cyston′cus** (*kystis,* bladder, *onkos,* tumor). Swelling or tumor of the bladder.

**Cystonephro′sis** (*kystis,* sac, *nephros,* kidney). Cyst of the kidney; cyst-like enlargement of the kidney.

**Cystoneural′gia.** Cystalgia.

**Cystopapillo′ma.** Hypertrophy of papillæ upon the surface or wall of a glandular cyst.

**Cystoparal′ysis** or **Cystidoparal′ysis** (*kystis,* bladder, *paralysis,* palsy). Paralysis of the urinary bladder; vesical palsy. See *Enuresis.*

**Cystopex′ia** or **Cys′topexy** (*kystis,* bladder, *pexis,* fastening). Treatment of cystocele by abdominal incision and passing catgut sutures through the edges of the wound and the anterior wall of the bladder.

**Cystophlegmat′ic** (*kystis,* bladder, *phlegma,* mucus). Belonging to vesical mucus. **C. disease′,** cystorrhœa.

**Cystophotog′raphy.** Photography, through a cystoscope, of the interior of the bladder.

**Cystophthi′sis** (*kystis,* bladder, *phthisis,* wasting). Tuberculous ulceration of the bladder.

**Cys′toplast** (*kystis,* cyst, *plasso,* to form). Nucleated cell having an envelope, such as the epithelial cells and red blood cells.

**Cystoplas′tic.** Epithet for the operation for the cure of fistulous openings into the bladder.

**Cys′toplasty.** Cure of malformation of the bladder by grafting, etc.; operation for vesicovaginal fistula by grafting.

**Cystople′gia** (*kystis,* bladder, *plege,* stroke). Paralysis of the bladder.

**Cystople′gic.** Relating to paralysis of the bladder.

**Cystoproctos′tomy** (*kystis,* bladder, *proktos,* anus, *stoma,* mouth). Establishment artificially of a fistulous communication between the bladder and rectum.

**Cystopto′sis** (*kystis,* bladder, *ptosis,* falling). Relaxation of the inner membrane of the bladder which projects into the canal of the urethra.

**Cystopyeli′tis** (*kystis,* bladder, *pyelos,* pelvis). Inflammation of the bladder and pelvis of the kidney.

**Cystopyelonephri′tis.** Inflammation of both the bladder and renal pelvis or pelves.

**Cystopy′ic** (*kystis,* bladder, *pyon,* pus). Relating to suppuration of the bladder.

**Cystorectos′tomy** (*kystis,* bladder, *rectum* + *stoma,* mouth). Cystoproctostomy; proctocystostomy.

**Cystorrha′gia** (*kystis,* bladder, *rhage,* rupture). Hemorrhage from the vessels of the urinary bladder.

**Cystor′rhaphy** (*kystis,* bladder, *rhaphe,* suture). Suture of the bladder.

**Cystorrhex′is** (*kystis,* bladder, *rhexis,* rupture). Rupture of the urinary bladder.

**Cystorrhœ′a.** Cystirrhœa; catarrh of the bladder.

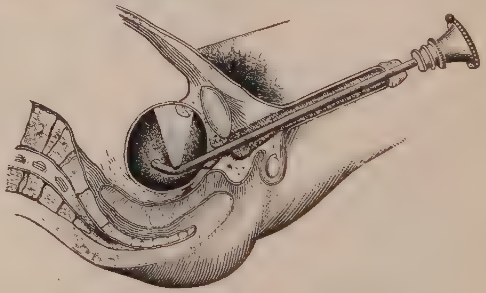
**Cystorrhon′chus** (*kystis,* cyst, *rhonchus,* râle). Vesicular râle.

**Cystosarco′ma.** A sarcoma containing cysts.

**Cystos′chisis** (*kystis,* bladder, *schisis,* fissure). Fissure of the bladder.

**Cystoscir′rhus.** Scirrhus of the bladder.

**Cys′toscope** (*kystis,* bladder, *skopeo,* to examine). A hollow tube, provided with mirrors and an electric light, which is introduced through the urethra and enables the eye to observe the interior of the bladder.



Illumination of anterior vesical wall by Nitze's cystoscope. (Park.)

**Cystoscop′ic.** Relating to the cystoscope or cystoscopy.

**Cystos′copy.** Examination of the bladder with a cystoscope.

**Cys′tose.** Cystic.

**Cys′tospasm.** Spasm of the bladder or its sphincter.

**Cystospas′tic** (*kystis,* bladder, *spao,* to contract). Relating to spasm of the bladder, particularly of its sphincter.

**Cystospermi′tis** (*kystis,* bladder, *sperma,* sperm). Inflammation of the vesiculæ seminales.

**Cystosteato′ma.** Sebaceous cyst.

**Cystos′tomy.** Establishment by operation of a vesical fissure.

**Cystothrom′boid** (*kystis*, bladder, *thrombos*, clot). Relating to the presence of clots in the bladder.

**Cys′totome** or **Cys′titome** (*kystis*, bladder, *tome*, incision). Instrument intended for cutting the bladder; more frequently, although improperly, called lithotome. Instrument for division of the anterior capsule of the crystalline lens.

**Cystot′omy.** Incision of the bladder; term commonly applied to puncturing of the bladder for the purpose of removing urine—*paracentesis vesicæ*. The term lithotomy has been employed for the incisions made with the view of extracting calculi from the bladder. It is termed *rectal* or *retrovesical* when the incision in the bladder is made between the prostate gland and rectovesical pouch; *suprapubic*—epicystotomy—when the incision is made above the pubes, but below the peritoneal sac in front of the bladder.

**Cystotrachelot′omy** (*kystis*, bladder, *trachelos*, neck, *tome*, incision). Incision into the neck of the bladder. See *Lithotomy*.

**Cystotrau′ma** (*kystis*, bladder, *trauma*, wound). Wound or injury of the bladder.

**Cys′tous.** Cystic.

**Cystova′rium** (*kystis*, cyst, *oarion*, ovary). Presence of cysts in the ovary; ovarian cyst or cystoma.

**Cytamœ′ba** (*kytos*, cell). An amœba inhabiting an erythrocyte.

**Cy′tase.** Complement.

**Cytas′ter.** Aster.

**Cyte** (*kytos*, hollow). A cell; used in many words as a prefix or suffix.

**Cyten′chyma.** Substance in reticulum of cytoplasm.

**Cythæmol′ysis** (*kytos*, cell, *haima*, blood, *lysis*, solution). Dissolution of the blood corpuscles.

**Cythe′rean** (*Cythera*, island sacred to Venus). Venereal. **C. shield,** condom.

**Cytheroma′nia.** Nymphomania.

**Cyt′inus hypocis′tis.** Small parasitical plant, growing in the south of France and Greece, on the roots of the woody cistus; juice of the fruit is acid and very astringent; used in form of extract in hemorrhages, diarrhœa, etc.

**Cyt′ioblast.** Cytoblast.

**Cyt′ioplasm.** Cytoplasm.

**Cytisin′.** $C_{20}H_{27}N_3O$. Poisonous alkaloid in the seeds of Cytisus laburnum or bean-trefoil tree. It has analogous properties to emetin; in the dose of one or two grains it produces vomiting and purging, and in a stronger dose acts as an acrid poison; seeds of Cytisus laburnum produce vomiting and purging. The nitrate of the drug is usually administered; has been used hypodermically; dose gr. $\frac{1}{20}$–$\frac{1}{12}$ (0.003–0.0054), in cases of paralytic migraine, having a hypnotic effect.

**Cytis′ma ec′zema.** Eczema. **C. her′pes,** herpes.

**Cytisogenis′ta.** Spartium scoparium.

**Cyt′isus antilla′rum,** species of leguminous plants; flowers and seeds are stomachic and antipyretic. **C. hirsu′tus,** leaves of this species of S. Europe are diuretic. **C. labur′num,** false ebony, golden chain; used as a nervous sedative and in some cutaneous diseases; poisonous in large doses. **C. scopa′rius,** Spartium scoparium.

**Cyti′tis.** Inflammation of the skin.

**Cy′toblast** (*kytos*, cell, *blastos*, germ). Cell-germ; cell-nucleus; granule from which all animal and vegetable bodies are presumed to be formed. See *Cell*.

**Cytoblaste′ma.** Formative fluid; intercellular substance; hyaline substance. Fluid material in which it was supposed that cells originated by the combination and aggregation of particles of matter.

**Cytoblas′tion** (*kytos*, cell, *blastos*, germ). Cell with spherical nuclei or cellules.

**Cytochem′ism.** Action of chemical agents and processes on the cells.

**Cy′tochrome.** Coloring-matter of cells.

**Cytochyle′ma** (*chylos*, juice). Cell-juice.

**Cytocla′sis.** Necrosis of a cell.

**Cytococ′cus.** The nucleus of a cytula or impregnated ovum.

**Cy′tode.** Non-nucleated protoplasmic cell.

**Cytoden′drite** or **Cytoden′dron.** A dendron given off from a cell directly as distinguished from the axodendrite or lateral branch of the axis cylinder.

**Cytodiagno′sis.** Diagnosis based upon a study of the cells, bacterial or other, found in the fluids or tissues of the body or in the excretions.

**Cytodiëresis** (*kytos*, cell, *dieresis*, division). Cell-segmentation.

**Cytodis′tal.** Farthest from the cell of origin, as distinguished from cytoproximal.

**Cytogen′esis.** Cytogeny.

**Cytogenet′ic** or **Cytogen′ic.** Relating or belonging to cytogeny.

**Cytog′enous.** Cell-producing; cytogenic.

**Cytog′eny** (*kytos*, cell, *genesis*, generation). Cell-genesis; cell-formation. Continuous development of cells, in tissue-formation, has been called by Virchow proliferation of cells.

**Cytoglo′bin.** A nuclein-like proteid found in white blood corpuscles and preventing coagulation.

**Cytohy′aloplasm.** Transparent primitive organic cell-matter.

**Cy′toid** (*kytos*, cell, *eidos*, resemblance). Cell-like. **C. cor′puscles,** leucocytes.

**Cytokine′sis** (*kytos*, cell, *kinesis*, movement). Movements and changes in the ovum in the course of its progress and development.

**Cytolem′ma** (*kytos*, cell, *lemma*, wall). Cell-wall.

**Cytolog′ical.** Relating to cytology. **C. for′mula,** description of the kind and number of cells in the blood or other fluid under examination.

**Cytol′ogy** (*kytos*, cell, *logos*, description). Science of cells in relation to their form, origin, and transformations, and to the significance of their presence in the blood and other fluids (cystodiagnosis).

**Cy′tolymph.** Cell-juice.

**Cytolysin′** (*kytos*, cell, *lysis*, solution). Cytotoxin, an antibody possessing a specific destructive action in relation to certain cells; formed in the organism in response to the repeated introduction of these cells into the body of the animal.

**Cytol′ysis** (*lysis*, solution). Disintegration of cells.

**Cytometagen′esis** (*kytos*, cell, *meta*, beyond, *genesis*, production). Regular alteration of sexual and non-sexual forms of cell multiplication.

**Cytom′eter** (*kytos*, cell, *metron*, measure). Apparatus for estimating the number of corpuscles of any kind.

**Cytomi′crosome.** Minute granules in primitive organic cell-matter.

**Cytomito′ma** or **Cyto′mitome** (*kytos*, cell, *mitos*, thread). Fibril of cell-body.

**Cytoph′agous** (*phago*, to eat). Feeding or subsisting on cells; phagocytic.

**Cytoph′agy.** Phagocytosis.

**Cy′tophile** (*kytos*, cell, *phileo*, to love). Term designating the haptophore group in the intermediary or immune-body which combines with the receptor of the cell protoplasm.

**Cy′toplasm** (*kytos*, cell, *plasma*, formative matter). Protoplasm; material constituting the body of the cell outside of the nucleus.

**Cytoplastin′.** Viscous, proteinaceous matter in cell-nuclei or protoplasm.

**Cytoprox′imal.** Nearest the cell of origin, as distinguished from cytodistal.

**Cytoretic′ulum.** See *Cytomytome*.

**Cytorrhyc′tes.** An amœbiform microorganism. **C. vacci′næ** or **vari′olæ,** the supposed protozoal cause of cowpox and smallpox.

**Cy′tose.** Ferment found in some of the lower animals, as the snail and carp, having the power of dissolving cellulose.

**Cy′tosome** (*kytos*, cell, *soma*, body). Cell-body.

**Cytos'tasis** (*kytos*, cell, *stasis*, stagnation). Arrest of red or white blood cells or corpuscles in the small vessels.

**Cytotæ'nia.** Tænia.

**Cytotac'tic.** Relating to cytotaxis.

**Cytotax'is** (*kytos*, cell, *taxis*, arrangement). The power of self-arrangement existing in the cell.

**Cytothe'sis.** Cell-repair.

X **Cytotoxin'.** Cytolysin, a specific cell-poison formed in the blood-serum after repeated injections of foreign cells, such as erythrocytes, bacteria, etc., into the tissue of the animal.

**Cytozo'ön.** Living cell. Protoplasmic matter in various cells and corpuscles. Generic name designed to include all the parasites of erythrocytes or red corpuscles. **C. mala'riæ**, includes several variously named parasites met with in malarial conditions.

**Cyt'ula.** Ovum that has been fecundated.

**Czer'mak's spaces.** Interglobular spaces; irregular spaces in the crusta petrosa and dental enamel.

**Czer'ny su'ture.** Method of uniting fragments of ruptured tendon by splitting one of the pieces longitudinally and attaching it by suture to the other piece.

**Czer'ny-Lem'bert su'ture.** Suture of Lembert, reinforced by a row of deep sutures, the stitch being extraperitoneal, and the Czerny sutures being concealed by the Lembert sutures; a form of suture applicable to circular enterorrhaphy.

# D.

**D.** Abbreviation for diopter, dexter (right), dose, and duration. Greek △, according to Galen, was the sign for quartan fever.

**Da Costa's disease'.** Retrocedent gout.

**Dacry-** (*dakry*, tear). In composition, lacrymal.

**Dacryadenal'gia** or **Dacryoadenal'gia** (*dakry*, tear, *aden*, gland, *algos*, pain). Disease or pain in the lacrymal gland.

**Dacryadeni'tis** or **Dacryoadeni'tis.** Inflammation of the lacrymal gland.

**Dacryadenoscir'rhus.** Scirrhus of the lacrymal gland.

**Dacryagogatre'sia** (*dakry*, tear, *agogos*, leading, *atresia*, narrowing). Stricture of a lacrymal duct.

**Dac'ryagogue** (*dakry*, tear, *agogos*, leading). Tear-conducting, as lacrymal canals; promoting the flow of tears.

**Dac'rycyst.** Dacryocyst.

**Dacrycystal'gia.** Pain in the lacrymal sac.

**Dacrycysti'tis.** Dacryocystitis.

**Dacryd'ion.** Convolvulus scammonia.

**Dacrygelo'sis** (*dakry*, tear, *gelao*, to laugh). Kind of insanity in which the patient weeps and laughs at the same time; it may be simply hysterical.

**Dacryhæmor'rhysis** (*dakry*, tear, *haimorrhysis*, hemorrhage). Sanguineous lacrymation; flow of bloody tears.

**Dacryhelco'sis** (*dakry*, tear, *helcosis*, ulceration). Ulceration of the lacrymal apparatus.

**Dacryo-** (*dakryon*, tear). In composition, lacrymal.

**Dacryoadenal'gia.** Pain or disease in the lacrymal gland.

**Dacryoadeni'tis.** Inflammation of the lacrymal gland.

**Dacryoblennorrhœ'a** (*dakryon*, tear, *blenna*, mucus, *rheo*, to flow). Discharge of tears mixed with mucus.

**Dac'ryocele** (*dakry*, tear, *kele*, tumor). Cyst of the lacrymal sac.

**Dac'ryocyst** (*dakry*, tear, *kystis*, sac). Lacrymal sac.

**Dacryocystal'gia** (*dakry*, tear, *kystis*, sac, *algos*, pain). Pain in the lacrymal sac.

**Dacryocysti'tis.** Inflammation of the lacrymal sac; it may be catarrhal, blennorrhœal, phlegmonous, or purulent.

**Dacryocystoblennorrhœ'a** (*dakryokystis*, lacrymal sac, *blenna*, mucus, *rheo*, to flow). Chronic dacryocystitis or inflammation of the lacrymal sac and its appendages, characterized by a circumscribed, painless tumor, with obstruction and accumulation of tears, mucus, and pus.

**Dacryocystoblennos'tasis** (*dakry*, tear, *kystis*, sac, *blenna*, mucus, *stasis*, stagnation). Abnormal collection of mucus in the lacrymal sac.

**Dacryocyst'ocele** (*dakry*, tear, *kystis*, sac, *kele*, tumor). Hernia of the lacrymal sac.

**Dacryocystopto'sis** (*dakry*, tear, *kystis*, sac, *ptosis*, falling). Prolapse of the lacrymal sac.

**Dacryocystosyringocataclei'sis** (*dakry*, tear, *kystis*, sac, *syrinx*, fistula, *katakleisis*, locking up). Term proposed by Dieffenbach for the healing of lacrymal fistulæ by transplantation.

**Dacryocys'totome.** An instrument for incising a lacrymal sac or cutting a lacrymal stricture.

**Dacryocystot'omy** (*dakry*, tear, *kystis*, sac, *tome*, incision). Incision of the lacrymal sac or division of a lacrymal stricture.

**Dacryo'des.** Weeping, as some sores; resembling tears.

**Dacryohæmorrhœ'a.** Hemorrhage from the lacrymal apparatus.

**Dac'ryoid.** Like a tear.

**Dacryolin'.** Albuminoid derived from tears.

**Dac'ryolite** or **Dac'ryolith** (*dakry*, tear, *lithos*, stone). Lacrymal calculus; tear-stone; concretion formed in the lacrymal passages.

**Dacryolithi'asis** (*dakry*, tear, *lithiasis*, formation of calculi). Formation of lacrymal calculi.

**Dacryo'ma.** Epiphora; effusion of tears occasioned by occlusion of the puncta lacrymalia. Lacrymal tumor.

**Dac'ryon.** Tear. Point of meeting of the frontal and lacrymal bones and ascending process of the superior maxillary bone on the side of the root of the nose.

**Dac'ryonome** (*dakry*, tear, *nome*, ulcer). Corrosive ulcer of the lacrymal apparatus.

**Dac'ryops** (*dakry*, tear, *ops*, eye). Weeping eye. Tumefaction of the lacrymal ducts or lacrymal cyst. **D. fistulo'sa,** fistula of the lacrymal gland.

**Dacryopto'sis.** Prolapse of the lacrymal sac.

**Dacryopyorrhœ'a** (*dakry*, tear, *pyon*, pus, *rheo*, to flow). Discharge of tears mixed with purulent matter.

**Dacryopyo'sis** (*dakry*, tear, *pyon*, pus). Suppuration in lacrymal apparatus.

**Dacryorrhœ'a** (*dakry*, tear, *rheo*, to flow). Morbid flow of tears.

**Dacryoso'len** (*dakry*, tear, *solen*, canal). Lacrymal duct.

**Dacryosoleni'tis.** Inflammation of the lacrymal duct.

**Dacryosta'gia** or **Dacryostag'ma** (*dakry*, tear, *stazo*, to let fall). Continuous falling of tears.

**Dacryosteno'sis.** Stricture or congenital narrowing of the tear-duct.

**Dacryosyr'inx** (*dakryon*, tear, *syrinx*, fistula). Fistula lacrymalis; syringe for the lacrymal duct or canals.

**Dacryrrhœ'a.** Dacryorrhœa.

**Dacryu'ria** (*dakry*, tear, *ouron*, urine). Hysterical flow of urine in crying.

**Dac'tyl** (*daktylos*, finger). Finger or toe.

**Dac'tylate.** Resembling a finger or fingers.

**Dactyl'ion** or **Dactyl'ium.** Webbed fingers; syndactylism; union of the fingers or toes with each other; generally congenital, but may be owing to burns, ulcerations, inflammation, etc.

**Dactyli'tis.** Inflammation of a finger or toe; paronychia. **D. syphilit'ica,** gummatous swelling of the fingers or toes.

**Dactyl'ius.** A ring. Troche or lozenge, shaped like a finger. The anus.

**Dactylo-** (*daktylos*, finger). In composition, finger.

**Dactylocampsodyn'ia** (*daktylos*, finger, *kampsis*, bending, *odyne*, pain). Painful bending or contraction of the fingers.

**Dactylogrypo'sis** (*daktylos*, finger, *grypos*, curved). Abnormal bending or curvature of the fingers or toes.

**Dac'tyloid.** Finger-like.

**Dactylol'ogy** (*daktylos*, finger, *logos*, discourse). Conversing with the fingers, as by the deaf and dumb.

**Dactylol'ysis** (*daktylos*, finger, *lysis*, separation). Ainhum.

**Dac'tylospasm** or **Dactylospas'mus.** Spasmodic contraction of the fingers.

**Dactylosym'physis** (*daktylos*, finger, *symphysis*, union). Syndactylism; adhesion of the fingers to each other.

**Dac'tylus.** Finger; digit; especially (Wilder) a toe or digit of the hind limb, as distinguished from *digitus*, a finger or digit of the fore limb. Smallest measure of the Greeks; the sixth part of a foot. Date.

**Da′dane.** African lethargy.

**Dædal′ea suaveo′lens.** Champignon, ord. *Fungi*, growing on the trunks of old willows. It has a smell of anise, and has been recommended in phthisis pulmonalis.

**Dæ′mia exten′sa.** E. Indian shrub, infusion of which is administered in diseases of the lungs, and the juice applied locally in rheumatism.

**Dæmo′nia.** Demonomania.

**Dæmonoma′nia** or **Dæmonopath′ia.** Demonomania; monomania as to being possessed by an evil spirit.

**Daf′fodil.** Narcissus.

**Daf′fy's elix′ir.** Compound tincture of senna.

**Daft.** Insane.

**Dah′lia.** Root of this plant, ord. *Compositæ*, is stomachic, diuretic, and diaphoretic.

**Dais′y.** Chrysanthemum leucanthemum; Erigeron strigosus; Bellis perennis. **Dev′il's d.,** Chrysanthemum leucanthemum, Achillea millefolium, Anthemis cotula. **Eng′lish** or **Europe′an d.,** Bellis perennis. **Ox-eye d.,** Chrysanthemum leucanthemum.

**Dalber′gia cochinchinen′sis** or **dipha′ca.** Tree of China and other regions of the East, used in skin diseases. **D. frondo′sa,** tree of E. Indies; leaves are applied externally in skin diseases, bark as a stomachic, oil of the seeds in rheumatism. **D. scan′dens,** tree of E. Indies; seeds are cathartic, leaves are emollient. **D. sis′sos** and **D. sympathet′ica** are employed as alteratives.

**Dal′by's carmin′ative.** A celebrated empirical remedy much used as a carminative for children. A committee of the Philadelphia College of Pharmacy recommended the following form: Aquæ, Ox; sacchar. alb., ℥xxxij; potass. carbon., ℥ss; magnes. carb., ℥xij; tinct. opii, f℥vj; ol. menth. pip., ol. anethi fœnicul., āā ℈ij. M.

**Dal′ea citriodo′ra.** Leguminous plant of Mexico; antispasmodic.

**Dalma′tian pow′der.** Persian insect powder; pyrethrum.

**Dal′rymple's sign** or **symp′tom.** Slight retraction of the upper eyelid in exophthalmic goitre.

**Dal′tonism.** Color-blindness; achromatopsia.

**Dal′ton's laws.** Several are recognized under this head: 1. The law of reciprocal proportions. 2. The law of multiple proportions. 3. See *Charles's law*. 4. The tension of a gas in a limited space is the same whether other gases are present in this space or not; therefore the tension of a mixture of gases in such a space is equal to the sum of the tensions of all the separate gases.

**Dam.** A sheet of thin rubber tissue used in surgery and dentistry to protect the field of operation from fluids, such as blood or saliva.

**Damar′ra** or **Damma′ra austra′lis.** Dammar.

**Damia′na.** Mexican plant considered aphrodisiac; various species of Turnera, T. aphrodisiaca especially. Leaves of Aplopappus discoideus applied in rheumatism.

**Dam′mar.** A resinous substance derived from various species of Dammara; see *Pinus damarra*. **D. cement′ing flu′id,** preparation for mounting pathological sections, consisting of gum dammar, gum mastic, and benzole.

**Damoiseau's** (dam-was-oze′) **curve.** See *Ellis's sign*.

**Damp.** Moisture. A poisonous vapor. **Af′ter-** or **black-d.,** irrespirable gases following the explosion of fire-damp. **Choke-d.,** carbonic acid, see *Hydrogen, carbureted*. **Cold-d.,** term used for air in mines apparently loaded with carbonic acid, chilled and very moist from passing through the workings. **Fire-d.,** a mixture of gases, chiefly carbureted hydrogen given off from coal.

**Dam′son.** Prunum damascenum. See *Prunum*. **Moun′tain d.,** Quassia simarouba. **D. tree,** Prunus domestica.

**Danaidine′.** Alkaloid from Danais fragrans.

**Dana′is fra′grans.** Root and bark of this tree of Madagascar are tonic and antiperiodic, and used also in cutaneous affections. **D. rotundifo′lia** has similar properties.

**Dance.** Active rhythmical movements. **St. Guy's d.,** chorea. **St. John's d.,** epidemic chorea; dancing mania. **St. Vi′tus's d.,** chorea.

**Dance's sign.** Depression in the iliac fossa, presumed to denote invagination of the cæcum.

**Dan′cers' cramp.** Painful, spasmodic affection or cramp of the leg in dancers.

**Dan′cing disease′.** Tarantism. **D. ma′nia** or **plague,** epidemic chorea. **D. spasm,** saltatory spasm.

**Dan′delion.** Leontodon taraxacum.

**Dan′der.** Dandriff or dandruff.

**Dan′do.** Old name for prostration before attack of fever.

**Dan′driff** or **Dan′druff.** A scaly affection of the scalp. See *Pityriasis*.

**Dan′dy fe′ver.** Dengue.

**Dane's blood.** Anemone pulsatilla; Sambucus ebulus.

**Dane′weed** or **Dane′wort.** Sambucus ebulus.

**Dan′iell.** Unit of electrical measurement, equivalent to 1.124 volts.

**Daniel′lia thurif′era.** Frankincense tree of W. Africa, furnishing the product termed African frankincense.

**Dan′ielssen's disease′.** Anæsthetic leprosy.

**Dan′ube fe′ver.** A remittent malarial fever, endemic along certain parts of the shores of the Danube river.

**Dan′ysz rat bacil′lus.** A bacillus found in cases of an epidemic disease of mice; it is pathogenic for rats and mice, but not for man or the domestic animals; has been proposed as a means of exterminating rats when they menace man in threatened plague.

**Daph′ne.** Laurus. **D. alpi′na,** sort of dwarf olive; an acrid, volatile, alkaline principle is separated from the bark, called *daphnin*, to which its vesicating property is due. **D. can′dicans,** shrub of France and Italy, leaves of which are cathartic. **D. cneo′rum,** garland-flower; bark is vesicant. **Flax-leaved d.,** Daphne gnidium. **D. gnid′ium,** spurge flax, flax-leaved daphne; plant of S. Europe, furnishing garou bark, chiefly used for exciting irritation of the skin. Garou bark and Grana gnidia are also obtained from Daphne laureola. The whole plant is poisonous. **D. laure′ola,** systematic name of dwarf bay, wood laurel, or spurge laurel, bark of which has similar properties to the last; it is a source of mezereum. **D. liottar′di,** D. mezereum. **D. ma′jor,** D. laureola. **D. meze′reon** or **meze′reum,** systematic name of mezereon or spurge olive; bark of mezereon possesses analogous properties to the other varieties of daphne. *Mezereum* (Ph. U. S.) is the bark of Daphne mezereum and other species of daphne; is stimulant and diaphoretic, and in large doses emetic; it is employed in syphilis. Soaked in vinegar—mezereum acetatum—it has been employed to irritate the skin, especially to keep tissues open. Berries are drastic cathartic. **D. olæofo′lia** or **oleoi′des,** species growing in S. Europe; cathartic. **D. panicula′ta,** D. gnidium. **D. papyra′cea,** shrub of China and India; bark and root are purgative. **D. pil′lu,** Chilian shrub; emetocathartic. **D. salicifo′lia** grows in Mexico; leaves are vesicant. **D. thymelæ′a,** shrub of S. France and Spain; root is hydragogue cathartic; bark resembles mezereon.

**Daphnelæ′on** (*daphne*, laurel or bay tree, *elaion*, oil). Oil of bay; oil of berries of Laurus nobilis.

**Daphnetin′.** $C_9H_6O_4+2H_2O$. A yellow substance resulting from the disintegration of daphnin.

**Daphnid′ium cube′ba.** Species of *Lauraceæ* from China and S. Asia, berries of which resemble cubebs and are carminative. **D. myr′rha,** plant having similar habitat, resembling myrrh; excitant and diuretic; the root is anthelmintic and menstruant; the oil is employed in cutaneous affections.

**Daphnin′.** Bitter glucoside in mezereon bark. See *Daphne alpina*.

**Dar′by's disinfec′ting flu′id.** See *Condy.*

**Darier's** (dar-yays′) **disease′.** Keratosis follicularis; psorospermosis follicularis.

**Dark bod′ies of Nissl.** See *Nissl.*

**Dark′nesses.** See *Epilepsy.*

**Darksche′witsch's fi′bres.** Nerve fibres between the optic tract and the ganglion of the habenula. **D.'s nu′cleus,** mass of gray matter at the anterior part of the oculomotor nucleus.

**Dar′nel.** Lolium tenulentum.

**Darse′ni** or **Darsi′ni.** Laurus cinnamomum.

**Dar′sis** (*darsis,* excoriation). Anatomical preparation made by removing the skin for exposure of the organs covered by it. Excoriation.

**D'Arsonval′ cur′rent.** Discharge of high potency, through a solenoid of wire, from a condenser.

**Dart, caus′tic.** Caustic pencil which disappears by solution in the part into which it is introduced.

**Dar′ta.** Impetigo. **D. excoriati′va** or **malig′na,** herpes exedens; lupus.

**Darto′ic** or **Dar′toid.** Resembling the dartos muscle, either in appearance or in movement. **D. myo′ma,** see *Myoma.*

**Dar′tos** (skinned). Layer of tissue beneath the skin of the scrotum, formerly conceived to be muscular, hence called dartos muscle, but which is merely areolar tissue containing some unstriped muscular fibres. In women there is a corresponding structure lying beneath the integument of the labia majora.

**Dar′trous.** Herpetic; participating in the characters of herpes; also one affected with herpes. **D. diath′esis,** peculiar state of health which renders its subject liable to cutaneous eruptions of different forms; see *Herpes.*

**Darwin′ian ear.** Congenital absence of the helix at the upper outer angle of the ear. **D. the′ory,** see *Darwinism.* **D. tu′bercle,** tubercle or prominence on the margin of the helix of the ear, corresponding with the pointed ear of the ape.

**Dar′winism.** Theory that the evolution of animals and plants has occurred through slight hereditary variations from simpler forms, and that the fittest variations have survived; in other words, that individuals which have the slightest advantage over others are more likely to survive and perpetuate their kind. This is termed natural selection, or the survival of the fittest.

**Dasy′ma** (*dasys,* rough, hairy). Disease of the eye—the same as trachoma, but less in degree.

**Dasym′eter,** (*dasys,* thick, *metron,* measure). Instrument to determine the density of gases by the comparative loss or increase of weight undergone by a body suspended in air and other gases. See *Manometer.*

**Das′ys.** Rough, as the tongue when thick or rough; or urine when cloudy or thick.

**Date.** Fruit of the Phœnix dactylifera or excelsa, Palma dactylifera. Unripe date is astringent; when ripe it resembles the fig. Juice of the tree is refrigerant.

**Date-plum, In′dian.** Diospyrus lotus.

**Datis′ca cannab′ina.** Yellow hemp, of S. Europe; antiperiodic, and employed like cinchona. Glucoside from the root is called *datiscin,* $C_{21}H_{22}O_{12}$.

**Datu′ra.** D. stramonium. **D. al′ba,** E. Indian plant, having properties of D. stramonium. **D. fastuo′sa,** E. Indian species, narcotic and stimulant; used in epilepsy and herpes; seeds are hypnotic. **D. fe′rox,** of E. Indies, smoked in asthma. **D. metel′** or **meteloi′des,** E. Indian plant; febrifuge, and applied externally in arthritis. **D. nilhumma′tu,** shrub of Malabar; seeds are antiperiodic; juice is used externally in syphilis. **D. sanguin′ea,** red thornapple, grave plant; plant from which the Peruvian Indians prepare a narcotic drink called tonga. **D. stramo′nium,** thornapple, apple of Peru, Jamestown weed, jimson weed, stink weed. The leaves, seeds, and root are the parts used in medicine. They are narcotic, and sedative when applied externally in the form of fomentation; the leaves are smoked like tobacco in asthma. See *Stramonium.* **D. tat′ula,** properties are similar to those of D. stramonium.

**Daturi′na** or **Daturine′.** $C_{17}H_{23}NO_3$. Active principle of Datura stramonium, employed for obtaining the effects of stramonium; its action resembles that of atropine. **D. sul′phate,** white, granular crystals; hypnotic; given internally to control mania in doses of gr. $\frac{1}{120}$–$\frac{1}{60}$ (0.0005–0.001).

**Dat′urism.** The symptoms resulting from the toxic action of stramonium or its alkaloid.

**Daubenton's′ an′gle.** Occipital angle. **D.'s line,** line drawn from opisthion to nasion. **D.'s plane,** plane passing through opisthion and inferior margins of the orbits.

**Dau′cus au′reus.** Plant of N. Africa, used in leprosy. **D. candia′nus,** Athamanta cretensis. **D. caro′ta,** systematic name of the carrot plant. The fruit—carrotseed, *carota*—and the root have been used in medicine. The root is sweet and mucilaginous; the seeds have an aromatic odor and warm, pungent taste. The root is emollient, applied to fetid and ill-conditioned sores; seeds are stomachic, carminative, and diuretic. **D. cre′ticus,** Athamanta cretensis. **D. cyan′opus,** Pimpinella magna. **D. german′icus,** D. carota. **D. nos′tras, officina′rum, sati′vus,** or **vulga′ris,** D. carota. **D. seprin′ius,** Scandix cerefolium. **D. sylves′tris,** D. carota. **D. vulga′ris,** D. carota.

**Daugh′ter cells.** Cells originating from division of parent cells. **D. cyst,** cyst growing from the inner wall of a parent cyst. **D. glomer′uli,** convoluted filaments, *skeins,* produced in course of cleavage of the protoplasm; see *Mitosis.* **D. nu′clei,** nucleoli within nuclei. **D. rosettes′,** festooned filaments formed in the process of mitosis. **D. star,** diaster. **D. wreaths,** d. rosettes.

**Dau′ra.** Helleborus niger; Conocarpus latifolius.

**Daval′lia aculea′ta.** Fern of W. Indies; astringent and expectorant.

**Da′vidsohn's sign.** If an electric bulb is held in the closed mouth in a dark room the pupils will be illuminated if the maxillary sinuses are normal; the absence of luminosity in one or both pupils constitutes D.'s sign and is indicative of disease in the antrum of the darkened side.

**Da′vidson's syr′inge.** A syringe used chiefly for vaginal and rectal injections, consisting of an inlet and an outlet tube connected by a bulb with valves, the alternate compression and relaxation of which propels the fluid.

**Daviel's′ spoon.** Curette used to remove the lens in the operation of cataract extraction.

**Da′vies and Col′ley opera′tion.** Operation for cleft of the hard palate.

**Day-blind′ness.** Hemeralopia.

**Day′mare.** See *Incubus vigilantim.*

**Day′nettle.** Lamium album; L. purpureum; Galeopsis tetrahit.

**Day-nur′sery.** Crèche.

**Day-sight** or **vis′ion.** Nyctalopia.

**Dazz′ling.** Momentary disturbance of the sight occasioned by the sudden impression of powerful light.

**D. D.** Disk diameters.

**De ven′tre inspicien′do.** "Of inspecting the belly." When there is reason to suppose that a woman feigns herself pregnant a writ *de ventre inspiciendo* may be issued to determine whether she is so or not. In England the decision was formerly left to twelve matrons and twelve respectable men, according to the strict terms of the ancient writ.

**Dead.** Deprived of life; exanimate; paralyzed; cold, as if life was extinct in a part. **D. fin′gers,** paleness and coldness of the fingers, sometimes a precursor of senile gangrene. **D. space,** part of a fluid in which no reaction occurs between substances dissolved in it.

**Dead′house.** Morgue.

**Dead′ly.** Lethiferous; mortal; fatal. **D. night′shade,** Atropa belladonna.

**Dead′men's bells.** Digitalis.

**Dead′nettle.** Lamium album and other species of lamium.

**Dead′tongue.** Œnanthe crocata.

**Dead′wort.** Sambucus ebulus.

**Deaf.** Devoid of hearing; hard of hearing. **D. and dumb,** one who can neither hear nor talk.

**Deaf-mute.** One who is both deaf and dumb.

**Deaf-mu′tism.** Deafness combined with dumbness.

**Deaf′ness.** Hardness of hearing, or diminution or total loss of hearing, the effect of acute or chronic inflammation of the internal ear, closure of the Eustachian tube—throat deafness—paralysis of the auditory nerve or its extremity, or mechanical obstruction to the sonorous rays. **Bass d.,** inability to hear low notes in music. **Boil′er-makers' d.,** d. produced in the internal ear from the occupation. **Cer′ebral d.,** d. from changes in the brain. **Ceru′minous d.,** d. caused by the impaction of wax in the external auditory meatus. **Cor′tical d.,** d. dependent on a lesion of the auditory centre in the cortex of the superior left temporosphenoidal convolution. **Intellect′ual d.,** acoustic amnesia; condition in which, from lesion of certain portions of the brain, sounds are heard, but not appreciated. **Labyrin′thine d.,** nervous d. **Mind d.,** intellectual d. **Mu′sic d.,** amusia; inability to hear musical sounds. **Ner′vous d.,** deafness dependent primarily on lesion of some part of the nervous apparatus of the ear. **Paradox′ical d.,** increase of the hearing power in a noisy place, as on a railway train; a sign of deafness from middle-ear trouble; called also Willis's paracousia. **Psych′ical d.,** intellectual d. **Sen′sory d.,** intellectual d. **Tone d.,** music d.; amusia. **Throat d.,** deafness dependent upon a morbid condition of the throat, with involvement of the Eustachian tube. **Vas′cular d.,** deafness dependent upon a morbid condition of the blood-vessels of the ear. **Word d.,** a form of sensory aphasia dependent on lesion of the left temporal lobe; in this form sounds are heard, but not understood.

**Dealba′tion.** Paleness; bleaching; whitening of bones for anatomical purposes.

**Dearticula′tion** (*de,* from, *articulus,* joint). Diarthrosis; dislocation; disarticulation; abarticulation.

**Death.** Decease; definite cessation of all the functions, the aggregate of which constitute life. Real death, apothanasia, is distinguished from asphyxia or apparent death, the latter being merely a suspension of those functions. The only certain sign of real death is the commencement of putrefaction. Death is commonly preceded by distressing symptoms depending on lesion of respiration, circulation, or cerebral functions, and which constitute the agony of death. That which occurs suddenly, without any or with few precursory signs, is called sudden death, and is ordinarily caused by disease of the heart, apoplexy, rupture of an aneurysm, or by some other organic affection. Death is natural when it occurs as the result of disease; violent, when produced by some forcible agency. It may affect the whole body or a part only; hence the difference between somatic and molecular death. The chief varieties of the modes of death may be thus given:

| | |
|---|---|
| Death beginning at the heart, | Syncope (when death is sudden).<br>Asthenia (when death is gradual). |
| " " in the lungs, | Apnœa. |
| " " in the brain, | Apoplexy. |
| " " in gray matter of the medulla, | Paralysis of pneumogastrics, etc. |
| " " in the blood, | Necræmia. |

As it was at one time conceived that death must commence in the heart, lungs, or brain, these organs were called atria mortis, the halls of death. **Appa′rent d.,** asphyxia; unconsciousness; see *Death.* **Black d.,** black plague; plague of the fourteenth century, which is supposed to have proved fatal in Europe to 25,000,000 people. **Lo′cal, mo′lar,** or **molec′ular d.,** gangrene, sphacelus, caries, necrosis. **D. of man,** Cicuta maculata. **D. rate,** number of deaths in a fixed number—as 1000—of the population; see *Mortality.* **D. rat′tle,** sound produced by air passing through mucus which collects in the throat of a dying person. **Somat′ic** or **System′ic d.,** suspension of life in the individual as distinguished from local or molecular death. **D. stiff′ening,** rigor mortis. **D. strug′gle,** agony. **D. trance,** apparent death; see *Asphyxia.*

**Death's herb.** Atropa belladonna.

**Deaura′tion** (*deauro,* to gild). Gilding, as of pills.

**Deb′ilis** (weak). Infirm; unsteady.

**Debil′itants** (*debilito,* to weaken). Remedies exhibited for the purpose of reducing excitement, such as antiphlogistics.

**Debil′itas.** Debility. **D. an′imi,** weak or ill-developed condition of the mental functions. **D. erethis′ica,** see *Irritable.* **D. memo′riæ,** amnesia. **D. nervo′sa,** neurasthenia, see *Irritable.* **D. vi′sus,** asthenopia; amblyopia.

**Debil′itated.** Weakened.

**Debil′itating.** Weakening.

**Debilita′tion.** Debility; therapeutic action of debilitant medicines.

**Debil′ity.** Weakness; atonic condition induced by a number of causes, and not to be confounded with fatigue, which is temporary; debility is generally more permanent. **Ner′vous d.,** neurasthenia. **Spi′nal d.,** spinal weakness.

**Debove's′ forced feed′ing.** Method of forced feeding employed in tuberculosis of the larynx, in which the stomach is washed out with cold water, and food is introduced through a stomach tube. **D.'s mem′brane,** subjacent layer of germinal cells under the epithelium, in the bronchi especially.

**Débridement,** da-breed-mon(g)′ (Fr.). Removal of filaments, etc., in a wound or abscess which prevent the discharge of pus; cutting of a soft membranous or aponeurotic part which interferes with the exercise of any organ or outlet of any fluid, as pus.

**Débris,** da-bree′ (Fr.). Refuse; remains; fragments.

**Dec′agram** or **Dec′agramme** (*deka,* ten, *gramma,* gramme). Weight of ten grammes, 154.34 grains Troy.

**Decal′cified.** Deprived of lime or calcareous matter. The process is *decalcification.*

**Decal′cifying flu′id.** Fluid, such as weak hydrochloric acid, etc., used for the purpose of removing the lime and calcareous matter from hard tissues, etc., and to dissolve the cement in some tissues; employed in preparing pathological specimens.

**Dec′alitre** (*deka,* ten+*litre*). Ten litres, equivalent in the metric system to 610.28 English cubic inches.

**Decal′vant** (*calvus,* bare, bald). Depilatory; having the property of removing hair or rendering bald.

**Dec′ametre** (*deka,* ten). Ten metres, in the metric system equivalent to 393.704 English inches.

**Decanta′tion.** Pharmaceutical operation, consisting of pouring off gently, by inclining the vessel, any fluid which has a deposit.

**Decapita′tion** (*de,* from, *caput,* head). Trachelotomy; derotomy; detruncation; decollation; separating the head from the body; embryotomy, with removal of the head from the body to make birth of the child practicable.

**Decap′itator.** Sharp-edged hook for decapitating the fœtus.

**Decarboniza′tion** or **Decarbura′tion.** Depriving any substance of carbon, as the blood in its passage through the lungs. See *Hæmatosis.*

**Decay′.** Decline of health or strength; decomposition by putrefaction.

**Decease′** (*decedo, decessum,* to depart). Death.

**Decentra′tion.** Removal of or from a centre.

**Decephaliza′tion** (*de*, from, *kephale*, head). Decapitation. Flatness of the frontal region.

**Decerebra′tion** (*de*, from, *cerebrum*, brain). Removal of the brain-mass, as in craniotomy.

**Decer′ebrize.** To remove the cerebrum.

**Decid′ua** (*deciduus*, falling off, *membrana*, understood). Deciduous membrane; so called on account of its being considered to fall off from the uterus. The present view as to the decidua is as follows (Gray): The decidua is formed from the mucous membrane of the uterus; even before the arrival of the fecundated ovum in the uterus the mucous membrane of the latter is vascular and tumid, and when the ovum has reached the uterus it becomes imbedded in the folds of the mucus membrane, which grow up around it and finally completely encircle it, so as to cover it in entirely and exclude it from the uterine cavity. Thus two portions of the uterine mucous membrane (decidua) are formed—viz., that which coats the muscular wall of the uterus, *decidua vera*, and that which is reflected over the ovum, *decidua reflexa*. The decidua vera at the os internum and at the openings of the Fallopian tubes is continuous with the lining membrane of these canals, the thickening of the original mucous membrane of the uterus which converts it into decidua abruptly ceasing at these points. The neck of the uterus after conception is closed by a plug of mucus. The decidua vera is perforated by the openings formed by the enlarged uterine glands, which become much hypertrophied and developed into tortuous tubes. It contains at a later period numerous arteries and venous channels continuous with the uterine sinuses, and it is from it that the uterine part of the placenta is developed. The portion of the decidua vera which takes part in the formation of the placenta is called the *decidua serotina*. The decidua reflexa is shaggy on its outer aspect, but smooth within. The vessels which it contains at first disappear after about the third month. About the fifth or sixth month the space between the two layers of the decidua disappears, and toward the end of pregnancy the decidua reflexa is transformed into a thin, yellowish membrane, which constitutes the external envelope of the ovum. It seems to be well established that every discharge of an ovum, whether impregnated or not, is, as a rule, accompanied by congestion of the uterine mucous membrane and that there is a separation of a thin decidual layer of the mucous membrane from the uterus, *decidua catamenialis* or *menstrualis*. In the case of pregnancy there is no exfoliation of the membrane until the period of delivery, but, on the contrary, it undergoes further development, as already described. **D. catamenia′lis**, see *Decidua*. **D. cho′rii**, d. reflexa, see *Decidua*. **Epicho′rial d.**, d. reflexa, see *Decidua*. **D. exter′na**, d. vera, see *Decidua*. **Interu′teroplacen′tal d.**, d. serotina, see *Decidua*. **D. menstrua′lis**, see *Decidua*. **D. o′vulæ**, see *Decidua*. **Placen′tal d.**, see *Decidua*. **D. protru′sa**, decidua reflexa. **D. reflex′a**, see *Decidua*. **D. seroti′na**, see *Decidua*. **D. tu′nica**, decidua. **D. tu′nica reflex′a**, d. reflexa. **D. tu′nica u′teri**, d. vera. **D. u′teri** or **uteri′na**, d. vera. **D. ve′ra**, see *Decidua*.

**Decid′ual.** Relating to or bearing resemblance to the decidua. **D. cells**, granular, nucleated cells arising from the uterine mucous membrane and forming the decidua. **D. mem′brane**, decidua.

**Decid′uate.** Having a decidua.

**Decidui′tis.** Inflammation of the decidua of pregnancy.

**Deciduo′ma.** Vascular, connective-tissue new-growth in the cavity of the uterus, met with after abortion, produced by excessive development of part of the decidua previously existing. **D. malig′num**, a malignant and rapidly fatal form of deciduoma, with local and metastatic abscesses, etc.

**Decid′uous** (falling off). Caducous; shedding, as in some forms of skin disease. Relating to the decidua. **D. cells**, nucleated cells in the connective tissue and endothelium of the lining membrane of the uterus. **D. endometri′tis**, see *Endometritis*. **D. mem′brane**, decidua. **D. teeth**, temporary or milk teeth, see *Dentition*.

**Decigram** or **Decigramme**, des′e-gram (*decimus*, tenth part, *gramma*, gramme). Tenth part of a gramme in weight, equal to a little less than two grains French, 1.543 Troy.

**Decilitre**, des′e-lee-ter. One-tenth of a litre, equivalent to 6.1 English cubic inches.

**Decim′ana** (*decem*, ten) **fe′bris.** An intermittent whose paroxysms return every tenth day.

**Decimetre**, des′e-me-ter. One-tenth of a metre, equivalent to 3.937 English inches.

**Decinor′mal.** One-tenth of the normal. **D. solu′tion**, a solution of one-tenth the strength of a normal solution. It is a solution of approximately this strength of sodium chloride (0.6 per cent.), often incorrectly termed normal salt solution, which is employed in intravenous injections.

**Decip′ara** (*decem*, ten, *pario*, to give birth). Term applied to a woman who has been pregnant ten times.

**Declina′tion** (*declino*, to bend). Deviation, as from the normal standard; decline. **Neg′ative d.**, a change in position of the eye, in which its vertical meridian is on the nasal side of its normal position. **Pos′itive d.** is when this meridian is to the temporal side of its normal position.

**Dec′linator.** Instrument for pushing away the dura mater in the operation of trephining.

**Decline′.** Decay; wasting. Period of a disorder or paroxysm at which the symptoms begin to abate in violence. Period of life when the physical and mental faculties lose their usual activity and energy. Wasting disease, as phthisis.

**Declive′** (*declivis*, sloping). Inclined part of monticulus cerebelli. Depending lowest part of a wound or abscess.

**Decli′vis cerebel′li.** The inclined part of the monticulus cerebelli.

**Decoc′tion** (*decoquo*, *decoctum*, to boil). Operation of boiling certain ingredients in a fluid, to extract the parts soluble at that temperature; also product of this operation; decoctum. **Zitt′mann′s d.**, a combination of remedies much employed in Germany in syphilis; composed of sarsaparilla, pulvis stypticus, calomel, and cinnabar, boiled in water with aniseed, fennelseed, and licorice-root. A stronger and a weaker decoction were directed by Zittmann.

**Decoc′tum.** Decoction. **D. agropy′ri** (Ph. Br.), decoction of Triticum repens or couch-grass; dose, ℥ss–ij (16.0–64.0). **D. al′bum**, mistura cornu usti. **D. al′oës compos′itum** (Ph. Br.), balsam of life, compound decoction of aloes (extract of licorice, carbonate of potassium, aloes, myrrh, saffron, distilled water, and compound tincture of cardamom); gently cathartic; dose, f℥ss–ij (16.0–64.0). **D. althæ′æ**, decoction or mixture of marshmallows (althæa-root, raisins, and water); demulcent. **D. ama′rum**, bitter decoction (gentian-root, water, and bitter species); tonic; dose, f℥ss–ij (16.0–64.0). **D. am′yli**, mucilago amyli. **D. anthem′idis no′bilis**, decoction of chamomile (chamomile flowers, caraway seed, and water); used as a vehicle for tonic powders, pills, etc., and in fomentations and clysters. **D. ara′liæ nudicau′lis**, decoction of false sarsaparilla (Aralia nudicaulis and water); stomachic. **D. cas′siæ**, decoction of cassia (cassia pulp, water, syrup of violets, and pure manna); laxative in dose of ℥vj (192.0). **D. cetra′riæ** (Ph. U. S.), decoction of Iceland moss (cetraria and water); tonic, demulcent, and nutrient; dose, ℥j–iv (16.0–128.0). **D. chamæme′li**, d. anthemidis nobilis. **D. chimaph′ilæ**, decoction of pipsissewa (chimaphila, bruised, and water); a pint may be given in the twenty-four hours. **D. cincho′næ**, decoction of cinchona or of bark (cinchona bark, bruised, and water); it can be given in place of powdered bark; dose, ℥j–iv (16.0–128.0). **D. colom′bæ compos′itum**, compound decoction of colomba (colomba, bruised, quassia, orange-peel, powdered rhubarb, potassium carbonate, and water); tonic and stomachic. **D. commu′ne pro clyste′re,** d. malvæ compositum. **D. cor′nu cervi′ni,** mistura cornu usti. **D. cor′nûs flor′idæ,** decoction of dogwood (dogwood, bruised, and water); dose, ℥iss (48.0). **D. cydo′niæ,** decoction of mucilage of quince seeds (quince seeds and water; solution of mucilage in water; used as a demulcent. **D. daph′nes meze′rei,** decoction of mezereon (mezereon, bruised licorice, water); somewhat stimulant; used in secondary syphilis; dose, ℥iij–vj (96.0–192.0). **D. diaphoret′icum,** d. guaiaci compositum. **D. digita′lis,** decoction of foxglove (digitalis leaves and water); possesses properties of the plant; dose, ʒij–iij (8.0–12.0). **D. dulcama′ræ,** decoction of woody nightshade, d. of bittersweet (dulcamara, bruised, water); diuretic and diaphoretic, and administered in skin diseases. **D. pro enem′ate,** d. malvæ compositum. **D. pro fomen′to,** d. papaveris. **D. gossyp′ii radi′cis co′rtis** (Ph. Br.), emmenagogue; dose, ℥ss–ij (16.0–64.0). **D. geoffræ′æ iner′mis,** decoction of cabbage-tree bark (Geoffræa inermis bark, powdered, and water); anthelmintic, purgative, and narcotic; dose, to children, as anthelmintic, ʒij (8.0); to adults, ℥ss–ij (16.0–64.0). **D. grana′ti radi′cis** (Ph. Br.), decoction of pomegranate-root (pomegranate-root and distilled water); has virtues of the root. **D. guai′aci compos′itum** or **guai′aci officina′lis compos′itum,** compound decoction of guaiacum, decoction of the woods (guaiacum-wood shavings, raisins, sassafras-root, licorice-root, and water); stimulant, and given in syphilitc, cutaneous, and rheumatic affections. **D. guai′aci compos′itum et pur′gans,** compound purgative decoction of guaiacum (guaiacum-wood, sarsaparilla-root, carbonate of potassium, senna leaves, rhubarb, sassafras-wood, licorice-root, coriander seeds, and water); the title indicates the properties of the composition. **D. hæmatox′yli** (Ph. Br.), decoction of logwood (logwood and water); astringent; dose, ℥ss–ij (16.0–64.0). **D. helleb′ori,** d. veratri. **D. hor′dei** or **hor′dei dis′tichi,** barley-water, decoction of barley (barley and water); nutritive and demulcent; chiefly used as a common drink and in clysters. **D. hor′dei compos′itum,** compound decoction of barley (decoction of barley, figs, licorice-root, raisins, and water); similar properties to the last. **D. hygroph′ilæ** (Ph. Br.), demulcent and diuretic; dose, ℥ss–ij (16.0–64.0). **D. ispaghu′læ** (Ph. Br.), from Plantago ovata; demulcent; dose, ℥ss–ij (16.0–64.0). **D. ki′næ ki′næ,** d. cinchonæ. **D. ki′næ ki′næ compos′itum et lax′ans,** compound laxative decoction of cinchona (cinchona bark, water, senna leaves, sodium sulphate, syrup of senna); its title indicates its properties. **D. liche′nis islan′dici,** decoctum cetrariæ. **D. ligno′rum,** d. guaiaci compositum. **D. li′ni compos′itum,** compound decoction of flaxseed (flaxseed, licorice, and water); demulcent, nutritive. **D. mal′væ compos′itum,** compound decoction of mallow (mallow, dried chamomile flowers, and water); chiefly used for clysters and fomentations. **D. meze′rei,** d. daphnes mezerei. **D papav′eris,** decoction of poppy or poppies (poppy capsules and distilled water); it contains the narcotic principle of the poppy in mucilage and water; is anodyne and emollient, and employed as such in fomentation to painful swellings, ulcers, etc. **D. parei′ræ,** decoction of pareira or pareira brava (pareira brava and distilled water); dose, ℥j–ij (32.0–64.0). **D. pectora′le,** d. hordei compositum. **D. polyg′alæ sen′egæ,** d. senegæ. **D. quer′cûs** or **quer′cûs al′bæ, D. quer′cûs ro′boris,** decoction of white oak or of white-oak bark, d. of oak bark (oak bark and water); astringent; used in injections in leucorrhœa, uterine hemorrhage, etc., and in fomentations to unhealthy ulcers. **D. sap′pan** (Ph. Br.), decoction of Cæsalpina sappan; astringent resembling logwood; dose, ℥ss–ij (16.0–64.0). **D. sar′sæ,** decoctum sarsaparillæ. **D. sar′sæ compos′itum,** decoctum sarsaparillæ compositum. **D. sarsapa-ril′læ,** decoction of sarsaparilla (sarsaparilla-root and boiling distilled water); it is demulcent, and has been used in the sequelæ of syphilis; dose, ℥iv–viij (128.0–256.0). **D. sarsaparil′læ compos′itum** (Ph U. S.), compound decoction of sarsaparilla (sarsaparilla, sassafras bark, guaiacum-wood, licorice-root, mezereon, and water); this is considered to possess analogous properties to the celebrated Lisbon diet-drink, decoctum Lusitanicum, which it resembles in composition; dose, ℥iv–vi (128.0–192.0). **D. scil′læ,** decoction of squill (squill, juniper, senega, spirit of nitrous ether, and water); dose, ℥ss (16.0). **D. scopa′rii,** decoction of broom (broom, dried, and distilled water). **D. scopa′rii compos′itum,** compound decoction of broom (broom, juniper, taraxacum, and distilled water); dose, ℥viij–xvi (250.0–500) daily; diuretic in dropsy. **D. sen′egæ,** decoction of senega (senega and water); diuretic, purgative, and stimulant; given in dropsy, rheumatism, etc. **D. smi′lacis sarsaparil′læ,** d. sarsaparillæ. **D. sudorif′icum,** d. guaiaci compositum. **D. tarax′aci,** decoction of dandelion (taraxacum and distilled water); dose, ℥iss (48.0). **D. tormentil′læ,** decoction of tormentil (tormentilla and distilled water); dose, as an astringent, ℥i–ij (32.0–64.0). **D. ul′mi** or **ul′mi campes′tris,** decoction of elm bark (slippery-elm bark and distilled water); diuretic, and used in lepra and herpes; dose, ℥iv–viij (128.0–256.0). **D. u′væ ur′si,** decoction of uva ursi (uva ursi and water); dose, ℥iss (48.0). **D. vera′tri,** decoction of white hellebore (veratrum-root, water, and alcohol); stimulant, acrid, and cathartic, but used only externally; a useful wash in tinea capitis, psora, etc., alone or diluted with water. **D. Zittman′ni,** see *Decoction.*

**Decolla′tion** (*de,* from, *collum,* neck). Decapitation. Act of separating the fetal head from the trunk by section of the neck, employed in some cases of dystocia or difficult delivery.

**Decol′lator.** Instrument used for decollation or decapitation.

**Decolora′tio.** Decoloration; discoloration. **D. argente′a,** discoloration from the therapeutic use of silver preparations; argyriasis.

**Decolora′tion** (*de,* from, *coloro,* to color). Loss of natural color; condition of absence of color. In pharmacy, process by which liquids, or solids in solution, are deprived of color, as by passing them through animal charcoal.

**Decoloriza′tion.** Decoloration.

**Decombus′tion.** Deoxygenation.

**Decompensa′tion.** Want of compensation, as of the heart.

**Decomposi′tion** (*decompono,* to decompose). Dissolution or separation of parts composing a body; putrefaction.

**Decompres′sion.** Removal of excessive pressure —atmospheric pressure, for example—as in the production of caisson disease. The latter is regarded as a *decompression accident.*

**Decoordina′tion.** Interference with or cessation of coordination, as of movements.

**Decor′ticate** (*cortex,* bark). To peel or remove the bark or cortex; hence extended to include such treatment of the external pyogenic membrane in pulmonary empyema.

**Decortica′tion.** Operation consisting in separating the bark from roots, stalks, etc. Detachment of portions of enamel from a tooth is sometimes termed the decorticating process.

**Decos′tate.** Without ribs.

**Dec′rement** (*decresco,* to decrease). Decline.

**Decrep′it** (*decrepitus,* very old). See *Decrepitude.*

**Decrepita′tion.** Crepitation or crackling.

**Decrep′itude.** Last period of old age and of human life, ordinarily occurring about the eightieth year; but it may be accelerated or protracted. One in this stage of existence is said to be *decrepit.*

**Decrescen′tia.** Decline.

**Decrusta′tion.** Removal or falling off of a crust.

**Decuba′tion.** Lying down.

**Decu′bital.** Relating to the posture in bed or to a bedsore.

**Decu'bitus** (*decumbo, decubitum,* to lie down). Lying down; assuming the horizontal posture. Also bedsore. **D. acu'tus,** acute sloughing over the gluteal region from continuous position; acute bedsore. **D. chron'icus,** bedsore. **Dor'sal d.,** lying on the back. **Lat'eral d.,** lying on the side. **D. paral'ysis,** paralysis caused by pressure on a nerve in a case in which the patient has occupied one position for a length of time; pressure paralysis. **Prone, sternocos'tal,** or **ven'tral d.,** lying on the belly. **Supine' d.,** dorsal d. **D. traumat'icus,** bedsore.

**Decum'bence, Decum'bency,** or **Decum'biture.** Decubation; decubitus.

**Decum'bent.** Reclining.

**Decur'sus.** Duration or progress of disease.

**Decur'tate.** Cut short. **D. pulse,** see *Decurtatus.*

**Decurta'tion** (*decurto,* to cut short). Shortening; removal of a part.

**Decurta'tus.** Applied to the pulse, it signifies progressive diminution in the strength of arterial pulsations, which at last cease. If the pulsations return and gradually acquire all their strength it is called *pulsus decurtatus reciprocus.*

**Decur'vature** (*de,* down, *curvus,* curved). Curved downward.

**Decus'sate.** To cross like an X.

**Decussa'tion.** Union in the shape of an X or cross. Term used chiefly in the case of nerves—as decussation of the optic nerves, which cross each other within the cranium. **Foun'tain d.,** crossing of nerve fibres in the cortex of the anterior corpora quadrigemina. **Infe'rior** or **mo'tor d.,** d. of the pyramids, see *Corpora pyramidalia.* **Pin'iform d.,** sensory d. of the pyramids. **D. of the pyr'amids,** see *Corpora pyramidalia.* **Sen'sory** or **supe'rior d.,** crossing of fibres from the funiculus cuneatus to the opposite side; crossing of the external fasciculi of the anterior pyramids of the spinal cord. **Sen'sory d. of the pyr'amids,** crossing of nerve fibres in the upper portion of the medulla oblongata, between the anterior pyramids and the floor of the fourth ventricle. **Tegmen'tal d.,** fountain d. **Up'per pyram'idal d.,** sensory d. of the pyramids. **Ven'tral d.,** d. of the pyramids.

**Decusso'rium** (*decutio, decussum,* to shake down). Instrument for depressing the dura mater and facilitating the exit of substances effused on or under that membrane.

**Dedenti'tion.** Shedding of teeth. See *Dentition.*

**Dedola'tion** (*dedolo,* to hew with an axe). Action by which a cutting instrument divides obliquely any part of the body, and produces a wound with loss of substance; commonly observed in wounds on the head.

**Deduplica'tion** (*de,* priv., *duplico,* to double). Segmentation.

**Deep.** Beneath the surface. **D. re'flex,** tendon, bone, or muscle reflex, as distinguished from a superficial or cutaneous reflex. **D. su'tures,** sutures uniting the deeper parts of a wound.

**Deer'balls.** Elaphomyces granulatus.

**Deer'berry.** Gaultheria procumbens; Vaccinium stamineum.

**Deer'food.** Brasenia hydropeltis or peltata.

**Deer-plague.** Cattle-plague; rinderpest.

**Deer's tears.** Bezoar of the deer.

**Deer'tongue.** Liatris odoratissima.

**Defatiga'tion.** Fatigue; sensation of weakness and exhaustion caused by overtaxing the strength of the muscular or nervous system.

**Def'ecate** (*de,* away, *fæx,* dregs). To empty the bowels; go to stool.

**Defeca'tion.** Act by which excrement is extruded from the body. Fæces generally accumulate in the colon, being prevented by the annulus at the top of the rectum from descending freely into that intestine. In producing evacuations, therefore, in obstinate constipation, it is well, by means of a long tube, to throw the injection into the colon. In pharmacy, defecation means separation of any substance from a liquid in which it may be suspended. See *Clarification.* **D. cen'tre,** anospinal centre.

**Defect'** (*deficio,* to be wanting). Want of perfectness in structure, function, or development.

**Defec'tio** or **Defec'tus.** Defect.

**Defemina'tion.** Throwing off the female character, as when a woman practises male sexual acts.

**Defen'sive.** Preservative, as local applications to diseased parts to guard them from the impression of extraneous bodies, and particularly from the contact of air. **D. pro'teids,** alexins; substances which, produced endogenously in the body or introduced by artificial processes, as by inoculation, exert an immunizing effect in the prevention of disease.

**Def'erens.** Deferent. **Vas d.,** spermatic duct; spermiduct; excretory canal of the sperm, arising from the epididymis, describing numerous convolutions, and with the vessels and nerves of the testicles concurring in the formation of the spermatic cord, entering the abdominal ring, and terminating in the ejaculatory duct.

**Def'erent.** Relating to the vas deferens; carrying away from a part, as ducts carrying semen from the testicles.

**Deferentec'tomy.** Excision of the vas deferens.

**Deferen'tial.** Deferent. **D. ar'tery,** artery of the vas deferens.

**Deferenti'tis.** Inflammation of the vas deferens.

**Deferred' shock.** Shock late in its appearance after its cause.

**Deferves'cence** (*defervesco,* to cease boiling). Declination of morbidly elevated temperature of the body toward the natural standard.

**Defi'brinated.** Defibrinized.

**Defibrina'tion.** See *Defibrinized.*

**Defi'brinized.** Defibrinated; deprived of fibrin; term applied to blood from which the fibrin has been removed, as by whipping. The act of removing fibrin from the blood has been termed defibrination.

**Defigura'tion.** Disfiguration; deformation.

**Defini'tion.** Power of an object-glass to bring out upon the field of a microscope a sharp image of the object looked at.

**Deflagra'tion** (*deflagro,* to set on fire). In pharmacy, the rapid combustion of a substance with flame, great elevation of temperature, violent motion, and more or less noise, as in deflagration of the nitrate and the chlorate of potassium, of gunpowder, etc.

**Def'lagrator.** Thermoelectric cautery.

**Deflec'tens** (*de,* from, *flecto,* to bend). Bending from a definite course; derivative.

**Deflec'tion** or **Deflex'ion.** Derivation; act of bending from a definite course. Flexion, as of the uterus. Restoration of flexion of the head of the fœtus during delivery.

**Deflora'tion** (*defloresco,* to deflower). Depucelation; depudication; devirgination; act of depriving a female of her virginity, not necessarily by force.

**Deflow'ered.** Deprived of virginity.

**Deflu'vium** (*de,* from, *fluo,* to flow). Emanation. A falling off. **D. capillo'rum,** alopecia; loss of hair. **D. pilo'rum,** alopecia.

**Deflux'io.** Catarrh; defluxion; diarrhœa; fever with mucous discharge. **D. capillo'rum,** falling out of the hair as a result of independent disease; also alopecia. **D. catarrha'lis,** influenza. **D. cilio'rum,** falling out of eyelashes; madarosis. **D. dysente'ria,** dysentery. **D. supercilio'rum,** falling out of the eyebrows.

**Deflux'ion.** Flowing down; inflammation.

**Deflux'us dysenter'icus.** Dysentery.

**Defœda'tio** (*fœdus,* dirty) **un'guium.** Morbid condition in which the nails are discolored and horny.

**Defor'mans.** Deforming, as arthritis deformans.

**Deforma'tion** (*de, forma,* form). Production of morbid alteration in some part of the body, as disfiguration or deformity.

**Deformed'.** Having an unnatural form.

**Deform′ing.** Causing disfiguring change of shape. **D. arthri′tis,** arthritis deformans. **D. ostei′tis,** osteitis deformans.

**Deform′ity.** Morbid alteration in form of some part of the body. **Gun′stock d.,** fixation of the forearm at an angle with the arm, as in fracture of the condyle of the humerus. **Spreng′el's d.,** see *Sprengel.* **Volk′mann's d.,** see *Volkmann.*

**Defunctionaliza′tion.** Destruction or great impairment of a function.

**Defurfura′tion** (*furfur,* bran). Branny desquamation.

**Defu′sion** (*de,* from, *fundo,* to pour). Decantation.

**Degan′glionate.** To excise a ganglion or ganglia.

**Deganglioniza′tion.** Excision of a ganglion or ganglia.

**Degen′eracy.** Change to an inferior type or plane. See *Degeneration.*

**Degen′erate.** To change for the worse; also as an adjective, characterized by degeneration; and as a substantive, one whose mind or body has reverted to a lower type than that characterizing the race to which he belongs.

**Degenera′tion** (*de,* from, *genus,* family). Change for the worse—degradation—in the intimate composition of the solids or fluids of the body; metamorphosis. In pathological anatomy, degeneration or degenerescence means the change occurring in the structure of an organ when transformed into fat, for example, or other matter essentially morbid. To be a true degeneration, chemical change must take place and the tissue become changed into a lower and simpler form. In other forms the fibrous tissue may increase abnormally at the expense of the parenchyma, or some foreign substance may be infiltrated in a tissue, as in amyloid degeneration, or calcareous matter may be deposited in it, as in atheroma. Necrobiosis is employed in a similar signification and for morbid metamorphosis in general. Also reversal to a lower type than that characteristic of the race to which the individual belongs. **Acute′ fat′ty d.,** acute yellow atrophy of the liver of lying-in women; foothalt of young horses. **Ad′ipose d.,** fatty d. **Albu′minoid d.,** amyloid d. **Albu′minous d.,** albuminous infiltration. **Am′yloid d.,** see *Lardaceous.* **Angiolith′ic d.,** calcareous atheroma. **Ascend′ing d.,** Wallerian d. proceeding in a centripetal direction. **Athero′matous d.,** see *Atheroma.* **Ba′cony d.,** see *Lardaceous.* **Black d.,** melanosis; anthracosis. **Calca′reous d.,** see *Calcareous* and *Cretefaction.* **Ca′seous d.,** caseation. **Cell′ulose d.,** see *Lardaceous.* **Chees′y d.,** caseation. **Cholesterin′ d.,** see *Lardaceous.* **Cloud′y d.,** see *Cloudy swelling.* **Col′loid d.,** see *Colloid* and *Lardaceous.* **Cys′tic d.,** formation of cysts in any organ, or of a tumor which is a large cyst; vesicular mole. **Cys′toid d. of ret′ina,** form of œdema of that membrane. **Descend′ing d.,** Wallerian d. of nerve fibres in a downward direction. **Earth′y d.,** calcareous d.; cretefaction; calcification. **Fascic′ular d.,** atrophy of paralyzed muscles from lesion of the nervous centres. **Fat′ty d.,** fatty metamorphosis; conversion of a substance, as muscle, into fat. **F. d. of the heart,** see *Steatosis cordis.* **Fi′broid d.,** transformation into substance having appearance of fibres, see *Fibroid.* **Fi′brous d.,** this is not a true degeneration, being an increase of the normal fibrous tissue of a part or organ by the action of a chronic irritant; see also *Fibroma.* **Gelat′iniform d.,** see *Colloid.* **Glas′sy d.,** a form of lardaceous d. sometimes seen in the muscles in acute febrile diseases. **Gran′ular d.,** form of tissue metamorphosis characterized by a deposit of minute albuminous particles. **G. d. of the kid′ney,** Bright's disease. **Gray d.,** change resulting in nervous tissue from chronic inflammation. **G. d. of spi′nal cord,** locomotor ataxia. **Hy′aline d.,** formation of homogeneous shining tissue, probably caused by chronic neurotic irritation; it is also met with in sarcomatous growths, tuberculosis of the lungs, etc. **Hy′aloid d.,** see *Lardaceous.* **Larda′ceous d.,** see *Lardaceous.* **Liquefac′tive d.,** see *Liquefactive.* **D. of the liv′er,** see *Adiposis hepatica.* **Min′eral d.,** see *Cretefaction.* **Mu′coid** or **myxo′matous d.,** jelly-like alteration in connective tissue. **Ossif′ic d.,** ossification. **Parenchy′matous d.,** see *Cloudy swelling.* **Pig′mentary d.,** see *Pigmentation.* **Pu′trid d.,** hospital gangrene. **Quain's d.,** cardiac cirrhosis; fibroid degeneration of the heart; see *Quain.* **Reac′tion of d.,** see *Reaction.* **Sec′ondary d.,** Wallerian d. **Se′nile d.,** the involution changes occurring in old age. **The′roid d.,** mental degeneration to a level almost that of brutes. **Urat′ic** or **U′ric d.,** condition characterized by deposits of uric acid or urates. **Vir′chow's d.,** see *Lardaceous.* **Vit′reous d.,** see *Lardaceous.* **Walle′rian d.,** adipose degeneration in a nerve after its division; the degenerative changes may proceed upward toward the centre or downward toward the periphery. **Zenk′er's d.,** glassy d.

**Degen′erative.** Relating to degeneration. **D. neural′gia,** neuralgia associated with degeneration of the central nervous system. **D. tic,** tic with similar association.

**Degeneres′cence.** Degeneration.

**Deglu′tible.** Capable of being swallowed.

**Deglutina′tion** (*de,* priv., *glutino,* to glue). Separation of parts naturally associated together by destruction of connective tissue uniting them, as in case of burns, etc.

**Degluti′tion** (*de,* down, *glutio,* to swallow). Act by which substances are passed from the mouth into the stomach through the pharynx and œsophagus; the first step is voluntary, the remainder executed under spinal and involuntary nervous influence. **D. cen′tre,** centre in medulla oblongata supposed to control deglutition. **Dif′ficult d.,** dysphagia. **D. pneumo′nia,** condition due to loss of sensitiveness of the larynx, in which nourishment or drink enters into the larynx and the bronchial tubes and gives rise to inflammation.

**De Graaf, fol′licles of.** See *Graafian.*

**Degrada′tion** (*degredior,* to descend). Degeneration; progress toward an inferior type or plane.

**Degree′.** Title conferred by a college, as the degree of doctor of medicine. Degree was formerly used to indicate the qualities of certain drugs. The term is also used to indicate intensity of an affection, as a burn; particular stage of an incurable disease. Graded division, as on a thermometric scale.

**Degusta′tion** (*degusto,* to taste of). Gustation; appreciation of sapid qualities by the gustatory organs.

**Dehis′cence** (*dehisco,* to break open in chinks). Separation of a shut organ along the line of union; regular and determinate separation, or even bursting open, taking place in a shut organ, as in the bursting of a Graafian follicle.

**Dehumaniza′tion.** Loss of usual characteristics of a human being.

**Dehu′manized.** Deprived of human characteristics. **D. vi′rus,** vaccine virus obtained by vaccination of the cow with humanized virus.

**Dehydra′tion** (*de,* priv., *hydor,* water). Loss or abstraction of water from a chemical substance or compound.

**Dehy′drodimeth′ylphen′ylpy′razin′.** Antipyrin.

**Dei′ters's cells.** Epithelial cells on basilar membrane; outer hair cells of the organ of Corti; cells like those of connective tissue in the central nervous system. **D.'s nu′cleus,** auditory nucleus. **D.'s phalan′ges,** structures forming the reticular lamina of Corti. **D.'s pro′cesses,** axis-cylinder processes; of the various processes proceeding from a nerve cell, Deiters discovered that one, the nerve process, keeps on its course without division, while the others—protoplasma, protoplasmic, or ramified processes—undergo frequent subdivision. **D.'s ter′minal frames,** plates in the reticular lamina of the organ of Corti connecting the external phalanges with Hensen's cells.

**Dejec′ta.** Alvine evacuations.

**Deject′edness.** Depression.

**Dejec′tion** (*dejicio, dejectum,* to cast down). Expulsion of the fæces; stool, passage, evacuation, or movement. Depression of spirits.

**Déjerine's′ disease′.** Hypertrophic interstitial neuritis of very young children. **D.'s type,** D.'s disease. **D.-Sol′la disease′** or **type,** D.'s disease.

**Deka′mali.** Resinous exudation from Gardenia lucida, used in E. Indies in dyspepsia.

**Delacryma′tion** (*de*, down, *lacryma*, tear). Epiphora.

**Delacta′tion.** Weaning; stoppage of lactation.

**Delamina′tion.** Splitting into layers; development of the ectoderm by detachment from the yolk over the whole extent of the ovum.

**Delap′sus.** Prolapsus. **D. pal′pebræ,** falling down of the upper lid, see *Blepharoptosis*.

**Delete′rious** (*deleo*, to injure). Pernicious; noxious; that which produces destructive disorder in the exercise and harmony of the functions; poisonous.

**Delete′rium.** Poison.

**Del′hi boil.** Inveterate cutaneous affection, prevalent at Delhi in India, which assumes the form of a boil, ulcerating afterward, and forming the Delhi ulcer; it is called there Arungzebe, owing to the emperor of that name having died with it. **D. sore** or **ul′cer,** see *Delhi boil*.

**De′lia.** Artemisia vulgaris.

**Deliga′tion** (*deligo, deligatum*, to bind). Ligation; tying off; application of a bandage.

**Deligatu′ra.** Deligation.

**Delimita′tion.** Term used in physical diagnosis to designate the finding out and limiting the boundaries of organs.

**Deliquesce′.** To become liquid by attracting moisture from the air.

**Deliques′cent** (*deliquesco*, to melt, to dissolve). Any salt becoming liquid by attracting moisture from the air. Deliquescent salts require to be kept in bottles well stopped. Chloride of calcium, acetate of potassium, and carbonate of potassium are examples of such salts.

**Deliq′uium.** Syncope; mental impairment.

**Deliramen′tum.** Delirium.

**Delira′tio.** Delirium. **D. se′num** or **seni′lis,** senile insanity; dotage.

**Delir′iant** or **Delirifa′cient.** Causing delirium.

**Delir′ious.** Attended by delirium; raving.

**Delir′ium.** Mental derangement occurring in the course of febrile or exhausting disease; wandering of the mind. Violent temporary insanity. Delirium is usually symptomatic. **Acute′ d.,** sudden attack of acute delirious mania. **D. alcohol′icum,** d. tremens. **Chron′ic d.,** insanity. **D. cor′dis,** irregular trembling movements of the heart. **D. ebriosita′tis** or **ebrioso′rum,** delirium of drunkenness; also d. tremens. **Epilep′tic d.,** see *Epilepsy*. **D. fe′rox,** d. attended with violent excitement. **D. furio′sum** or **furibun′dum,** mania. **D. of gran′deur,** form of delirium in which there exist in the patient's mind absurd and exalted ideas of his social standing, influence, and power. **D. maniaca′le** or **mani′acum,** mania. **D. melanchol′icum,** melancholia. **D. mi′te,** quiet mental wandering with muttering. **Mut′tering d.,** form of d. occurring in typhoid states in which the patient is quiet, but out of his mind and constantly muttering to himself; d. mite. **D. nervo′sum,** d. from alcohol or psychic causes, or following surgical operations; also form of delirium accompanying nervous lesions. **D. palingnos′ticum,** delusional insanity, the patient believing that he has been a long time in a spot to which he has but recently come. **D. of persecu′tion,** delirium in which the patient imagines himself under surveillance and subject to persecutions. **D. a** or **e potû** or **D. pota-to′rum,** d. tremens. **Se′nile d.,** see *Dementia*. **Senso′rial d.,** d. from or with hallucinations. **D. traumat′icum,** delirium from wounds, surgical or other, especially when associated with alcoholism. **D. tre′mens,** mania a potu; state of delirium and agitation—often termed *the horrors*—peculiar to those addicted to spirituous liquors, with great sleeplessness. It is preceded by indisposition, lassitude, watchfulness, headache, and anorexia, the delirium and tremors, *tremor potatorum*, most commonly recurring in paroxysms. It is caused by the habitual and intemperate use of ardent spirits or of opium or tobacco, or by abandoning them after prolonged use. Treatment is various. Many have regarded stimulants, with large doses of opium to induce rest, to be indispensable. The expectant system, with large doses of potassium bromide and chloral, will often, if not generally, be successful; and it is probable that a cure effected in this manner will be more permanent than when produced by excitants. **D. tremifa′ciens,** d. tremens. **D. verbo′rum,** d. with marked loquaciousness. **D. vesan′icum,** d. of insanity as distinguished from that of febrile or debilitating diseases or poisons.

**Delites′cence** (*delitesco*, to abscond, to lie hid). Sudden disappearance, as of a disease.

**Delitescen′tia.** See *Repercussion*.

**Deliv′er** (*de*, from, *libero*, to set free). To disburden of a child.

**Deliv′erance.** The final stage of labor; extrusion of the secundines, either spontaneously or by the efforts of art. This completion of delivery is produced by the same laws as the expulsion of the fœtus. Sometimes the after-birth follows the child immediately; at others it is retained, and requires manual interference to remove it. The latter procedure has been practised in cases of intimate adhesion between the placenta and parietes of the uterus; in spasmodic contraction of the orifice of the uterus; in hour-glass contraction; in torpor or hemorrhage after the expulsion of the child; and in the insertion of the placenta at the orifice of the uterus.

**Deliv′ery.** Parturition. **False d.,** a discharge of water, which sometimes collects between the amnion and chorion, before the birth of the child.

**Deloca′tio** (*de*, from, *locus*, place). Luxation.

**Delomor′phous** (*delos*, visible, *morphe*, shape). Term applied to large cells having a definite form, such as those seen in the secreting portion of the peptic glands.

**Delore's′ meth′od.** Operation for surgical fracturing of the bone in genu valgum; redressement forcé.

**Delpech's′ opera′tion.** Ligation of the axillary artery through the space between the pectoralis major and deltoid muscles.

**Delphi′næ o′leum.** Porpoise oil, used in tuberculosis of the lungs and other debilitating conditions as a substitute for cod-liver oil.

**Delphinine′.** A very powerful alkaloid obtained from the seed of staphisagria. See *Delphinium staphisagria*. Its action is similar to that of aconitine; has been used in spasmodic asthma, facial neuralgia, etc., in dose of gr. $\frac{1}{60}$ (0.001); externally it is applied in an ointment of one or two per cent. strength.

**Delphin′ium.** A genus of plants of the order *Ranunculaceæ*. **D. consol′ida** or **seg′etum,** branching larkspur, staggerweed; has been employed as a vermifuge; the flowers have been used in ophthalmia, and the seeds have the same property as those of stavesacre. **D. staphisa′gria,** systematic name of stavesacre, staphisagria; seeds are cathartic, emetic, and vermifuge; dose, gr. j (0.065). Owing, however, to the violence of their operation, they are seldom given internally, and are chiefly used pulverized, mixed with hair-powder, to destroy lice. See *Staphisagria*. **D. versic′olor,** delphinium.

**Delphinoïdine′.** Amorphous alkaloid separable from Delphinium staphisagria.

**Delphi′nus glo′biceps.** See *Acidum valerianicum*.

**Delphisine′.** Crystallizable alkaloid obtained from the seeds of Delphinium staphisagria.

**Del′ta** (the Greek letter Δ). A triangular area. Also employed (δ) to denote the fourth of a series. **D. for′nicis,** triangular space of the lower surface of the fornix over the foramen commune anterius. **D.-gran′ules,** basophile granules of small size, found normally in polymorphonuclear leucocytes. **D.**

mesoscap′ulæ, a triangular space at the root of the spine of the scapula.

**Del′tiform.** Deltoid.

**Del′toid** (*delta*+*eidos*, resemblance). Of the shape of the Greek letter delta (△), triangular. Specifically, the triangular muscle forming the fleshy part of the shoulder and covering the shoulder-joint; it extends from the outer third of the clavicle, from the acromion and spine of the scapula, to near the middle and outer part of the os humeri, where it is inserted by means of a strong tendon. This muscle raises the arm directly upward when the shoulder is fixed, and carries it anteriorly or posteriorly, according to the direction of the fibres which are thrown into action. If the arm be rendered immovable the deltoid acts inversely and depresses the shoulder. The term deltoid is also applied to the process or sheath covering the muscle, *deltoid aponeurosis* or *fascia;* to the artery, branch of the acromiothoracic, descending between the deltoid and pectoralis major muscles, *deltoid artery*. **D. impres′sion,** rough surface furnishing attachment to the deltoid muscle on the external side of the humerus. **D. lig′ament,** internal lateral ligament of the ankle, so called from its shape. **D. ridge,** deltoid impression. **D. tu′bercle,** eminence to which the deltoid muscle is attached on the clavicle.

**Deltoide′us.** Deltoid muscle. **D. accesso′rius,** independent muscular fascicle originating in the base of the acromion between the deltoid and subscapularis, and inserted either on the capsule of the shoulder-joint or humerus between the deltoid and triceps.

**Del′tospina′lis.** Muscle formed by separation of the fibres of the deltoid which are attached to the spine of the scapula.

**De lunat′ico inquiren′do** (concerning the examination of a lunatic). The title of a court order appointing a commission to determine the mental condition of a supposed lunatic.

**Delu′sion.** Hallucination. **Expan′sive d.,** d. of grandeur. **D. of gran′deur,** exaltation of ideas, noticed particularly in mania, paretic dementia, etc. **D. of lit′tleness,** micromaniacal d. **Macromani′acal d.,** delusion that the body is of excessive size; d. of grandeur. **Micromani′acal d.,** delusion that the body is very small in size. **D. of nega′tion,** delusion that the body or parts of it are absent. **D. of persecu′tion,** delusion that the patient is being constantly followed, pursued, abused, or tormented.

**Delu′sional.** Relating to or characterized by delusions. **D. insan′ity,** insanity occurring after fever, particularly typhoid fever; considered to be due to impaired nutrition and exhaustion of the nervous centres.

**Demagnetiza′tion.** Act of removing the condition of magnetization.

**Demag′netize.** To deprive of magnetic properties; to render a magnetic body non-magnetic..

**Demarca′tion.** Boundary line. *Line of demarcation* in cases of gangrene denotes a line along which the dead and living parts touch. **D. cur′rent,** a current of electricity obtained from a muscle which has been divided. **Sur′face d.,** the line separating live muscle from that in which the electromotive properties are abolished.

**Demarquay′s′ symp′tom.** In syphilis of the trachea the larynx is either motionless or depressed during deglutition or use of the voice.

**Dement′.** A subject of dementia.

**Demen′ted.** Insane. See *Dementia*.

**Demen′tia** (*de*, from, *mens*, the mind). Incoherency; imbecility; incoherent insanity. In common parlance, and even in legal language, this word is synonymous with insanity. Physicians, however, have applied it to cases of unsound mind characterized by a total loss of the faculty of thought, or by such imbecility of intellect that the ideas are extremely incoherent, there being at the same time a total loss of the reasoning power. Mania and melancholy are apt to end in this, if possible, more deplorable state. *Dotage* is the dementia of the aged. Senile insanity, senile dementia, insanity of the aged, is a form of insanity in which there is hopeless decadency or loss of the mental faculties. **D. acciden-ta′lis,** see *Lunatic*. **Acute′ d.,** a form occurring in the young or middle aged, which is occasionally curable or may run on into the chronic form. **D. adven-ti′tia,** see *Lunatic*. **D. agita′ta,** d. with occasional attacks of excitement. **D. alcohol′ica,** d. from the abuse of alcohol. **D. apoplec′tica,** d. as a result of an apopletic attack. **D. chore′ica,** d. as a result of chorea. **Chron′ic d.,** secondary d. **D. congen′ita,** idiocy. **D. epilep′tica,** d. as a sequel of epilepsy. **D. natura′lis,** idiotism. **D. organ′ica,** d. from various forms of change of structure of the brain. **D. paralyt′ica,** general paralysis of the insane. **D. paret′ica,** general paralysis of the insane. **Pri′mary d.,** d. in young persons not mentally strong, usually due to mental shock. **Sec′ondary** or **sequen′tial d.,** d. consequent on acute attacks; a form largely represented in hospitals for the insane. **D. seni′lis,** dotage; see the prime. **Ter′minal d.,** dementia coming on near the termination of some form of insanity. **D. tox′ica,** d. from the abuse of alcohol, opium, hemp, etc., or from lead poisoning.

**Demeph′itize** (*de*, from, *mephitis*, bad smell). To destroy foulness in the atmosphere.

**Demera′ra pink.** Spigelia anthelmintica.

**Demes′merize.** To restore a person who has been hypnotized to his normal condition.

**Demi-aponeurot′icus.** Semimembranosus.

**Demi-arcades′.** Arches of branches of the renal artery in the kidney.

**Demi-interos′seus.** Flexor brevis pollicis.

**Dem′ilune.** Crescent. **D. of Adamkie′wicz,** see *Adamkiewicz*. **D. cells,** crescentic cells found in various glands and elsewhere. **D. of Wei′denhain,** see *Giannuzzi's crescents*.

**Demimembrano′sus.** Semimembranosus.

**Demimonstros′ity.** Condition in which only partial malformation exists.

**Deminervo′sus.** Semimembranosus.

**Demi-orbicula′ris.** Each half of the orbicularis oris muscle may be so called.

**Demis′sio an′imi** (*demitto*, to lower). Depression.

**Demis′sor.** Catheter.

**Demitendino′sus.** Semitendinosus.

**Dem′me, bacil′lus of.** A microorganism found in tumors and fistulas, and in the blood in cases of erythema nodosum.

**Dem′odex folliculo′rum** (*demos*, fat, *dex*, boring-worm). Acarus folliculorum, mange-mite; a minute parasite inhabiting the sebaceous follicles of man and certain animals.

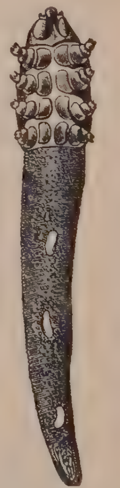
**Demog′raphy** (*demos*, people, *grapho*, to write). Study of population in its various aspects.

**Demo′nia.** Demonomania.

**Demoni′acal.** Wild; acting as if possessed with devils. **D. pos-ses′sion,** demonomania.

**Demonol′atry.** Worship of demons.

**Demonoma′nia** (*daimon*, demon, spirit of good or evil, *mania*, madness). Variety of madness in which the person conceives himself possessed of devils, and is in continual dread of malignant spirits, the pains of hell, etc.; also religious insanity.



Demodex folliculorum, enlarged. (Hyde.)

**Demonop′athy** (*daimon*, demon, *pathos*, affection). Demonomania.

**Demonopho′bia** (*daimon*, demon, *phobos*, fear). Insane dread of devils.

**Dem′onstrator** (*demonstro*, to exhibit). One who exhibits. Index finger; see *Digitus*. **D. of anat′omy,** one who exhibits the parts of the human body; teacher of practical anatomy.

**De Mor′gan's spots.** Red spots or patches, like nævus, in the skin in cases of cancer.

**Demorphiniza′tion.** Breaking the morphine habit by withdrawal of the drug.

**Demours′, mem′brane of.** See *Aqueous humor*.

**Demul′cents** (*demulceo*, to assuage). Medicines supposed to be capable of correcting certain acrid conditions imagined to exist in the humors. Substances of a mucilaginous or saccharine nature belong to this class. Demulcents may act *directly* on the parts with which they come in contact; but in other cases, as in catarrh, their effect is produced by contiguous sympathy, the top of the larynx being soothed by them first, and *indirectly* the inflamed portion of the air passages. Some demulcents are also emollients, but the former are generally considered as applicable to mucous membranes, the latter to the skin.

**Demus′culate** (*de*, from, *musculus*, muscle). Emaciated; devoid of flesh.

**De Mus′sy's point** and **symp′tom.** See *Mussy*.

**Demutiza′tion.** Training of deaf-mutes to speak or communicate by means of the sign language.

**Denan's′ meth′od.** Operation for uniting a divided intestine, including the introduction of cylinders of metal into the bowel.

**Denar′cotize.** To deprive of narcotin.

**Denar′cotized o′pium.** Powdered opium freed from constituents soluble in ether. Narcotin and other constituents have thus been extracted, and the residuum is brought with sugar of milk to 14 per cent. morphine strength.

**Dendrax′on.** A neuron whose axis divides at once into branches, as distinguished from inaxon.

**Den′dric.** Dendritic.

**Den′driform** (*dendron*, tree, *forma*, form). Dendroid; dendritic.

**Den′drite.** A ramifying afferent process of a nerve cell.

**Dendrit′ic** (*dendron*, tree). Tree-shaped; villous; branching; relating to a dendrite. **D. vegeta′tion,** see *Cancer, villous*.

**Dendroden′tine** (*dendron*, tree, *odous*, tooth). A dental tissue formed by the amalgamation of the enamel, dentine, and cementum of several teeth.

**Den′droid** (*dendron*, tree, *eidos*, form). Branching, ramifying; dendritic.

**Dendrolib′anus** (*dendron*, tree, *libanos*, frankincense). Rosmarinus.

**Den′dron.** Dendrite.

**Den′ecke's cheese bacil′lus.** Spirillum tyrogenum.

**Denerva′tio** (*de*, from, *nervus*, tendon). Aponeurosis.

**Dengue,** den′gay (Spanish name). Dandy, bouquet or bucket fever, eruptive articular fever, rheumatic fever, breakbone, neuralgic, solar, or sun fever. Disease which was first recognized in the years 1827 and 1828 in the West Indies and in the Southern States of North America. It usually commences with great languor, chilliness, and pain in the tendons about the smaller joints; to these symptoms succeed burning heat and redness of the skin, pains in the muscles of the limbs or in the forehead, with vomiting or nausea. The fever continues for one, two, or three days, and usually terminates by copious perspiration. The symptoms are often extremely violent, but the disease is seldom fatal. Cases in which the pains are subordinate have occasionally been mistaken for yellow fever, and *vice versa*. It is believed by some that the disease is due to the presence of an amœboid parasite in the blood, and it has been suggested that the inoculation of this parasite is effected by means of mosquito-bites, analogous to the mode of propagation of malaria and of yellow fever. **Micrococ′ci of d.,** Scheutzia laughlini.

**Den′guis.** Dengue.

**Denida′tion** (*de*, from, *nidus*, nest). Dislodgement of epithelium during menstruation.

**Denigra′tion** (*denigro*, to become black). The act of becoming black, as in cases of sphacelus, suggillation, etc.

**Denisen′sko's meth′od.** Hypodermic injections of celandin in cancer.

**Denitrifica′tion.** The breaking up or abstraction of nitrates.

**Deni′trify.** To break up or abstract nitrates. See *Bacillus denitrificans*.

**Denonvil′lier's fas′cia.** Rectovesical fascia. **D.'s opera′tion,** rhinoplastic operation for the formation of a new ala of the nose, consisting in cutting a triangular flap with a peduncle from the intact side of the nose above the defective ala.

**Dens.** Tooth. **D. acu′tus,** incisor tooth. **D. angula′ris,** canine tooth. **D. bicuspida′tus,** molar tooth. **D. bucca′lis,** premolar tooth. **D. cani′nus** or **cuspida′tus,** canine tooth. **D. clava′lis,** molar tooth. **D. columella′ris,** canine tooth. **D. cto′nis,** incisor tooth. **D. decid′uus,** milk tooth. **D. epistroph′ei,** see *Odontoid*. **D. incisi′vus,** incisor tooth. **D. infanti′lis** or **lac′teus,** milk tooth. **D. lania′rius,** canine tooth. **D. leo′nis,** Leontodon taraxacum. **D. maxilla′ris,** molar tooth. **D. mola′ris ante′rior** or **mi′nor,** premolar tooth. **D. mola′ris ma′jor, poste′rior, ve′rus, multicuspida′tus,** true molar teeth. **D. ocula′ris,** eye tooth. **D. opsig′onus,** wisdom tooth. **D. premola′ris,** premolar tooth; incisor tooth. **D. pro′lifer,** term used by Bartholin for a supernumerary tooth which appears to grow upon a primitive or parent tooth. **D. raso′rius,** incisor tooth. **D. saphronis′ter, saphroret′icus, sapien′tiæ,** or **sophronis′tus,** third molar or wisdom tooth. **D. seroti′nus,** permanent tooth. **D. to′micus,** incisor tooth.

**Densim′eter** (*densus*, dense, *metron*, measure). Areometer; instrument for determining specific gravity of any kind.

**Den′sity.** Compactness. **Elec′trical d.,** the quantity of electricity per unit of volume or area.

**Dentag′ra** (*dens*, tooth, *agra*, seizure). Tooth forceps. Toothache.

**Den′tal.** Concerning the teeth. See *Dentiform*. **D. arch′es,** arches formed by the range of alveoli in each jaw. **D. ar′teries** are those which nourish the teeth. They proceed from several sources. The teeth of the upper jaw, *e. g.*, receive their arteries from the infraorbital and superior alveolar, themselves branches of the internal maxillary. The teeth of the lower jaw receive their branches from the inferior dental or inferior maxillary, which is given off by the internal maxillary, and runs through the dental canal, issuing at the dental foramen, after having given numerous ramifications to the teeth and jaw. **D. band,** a band of epithelial involution which precedes tooth-formation. **D. bulb,** dentinal papilla. **D. canals′,** maxillary canals; bony canals through which the vessels and nerves pass to the interior of the teeth. **D. car′tilage,** cartilaginous elevation, divided by slight fissures, on the biting margins of the gums in infants prior to dentition; is a substitute for the teeth. **D. cav′ity,** cavity in the interior of the teeth, in which is situated the dental pulp; see *Tooth*. **D. cord,** epithelial bud giving origin to an enamel organ. **D. crypt,** see *Crypt*. **D. cu′ticle,** see *Cuticula*. **D. defect′,** histological malformation of any of the hard dental tissues. **D. die,** metallic model over which a plate for holding false teeth is given the desired form. **D. en′gine,** rapidly rotating apparatus employed in dentistry and general surgery, with which burs, drills, etc., can be applied. **D. ex′cavator,** instrument for the removal of the decayed part of a tooth preparatory to filling it. **D. fault,** defect in the histological structure of a tooth. **D. fol′licle,** membranous follicle, formed of double lamina, in which the tooth is contained before it issues from the alveoli, and which consequently aids in the formation of the alveolodental periosteum and of the membrane that envelops the pulp of the tooth. Dental follicles are lodged in the substance of the jaws. **D. fora′men**, orifice of dental canal on ramus of the jaw. **D. gan′grene**, gangrene or caries of the teeth, see *Caries*. **D. germ**, germ of a tooth. **D. groove**, see *Groove, dental*. **D. lam′ina**, a sheet of epithelial tissue from which dental cords are given off. **D. lig′ament**, that portion of the pericementum which embraces the neck of a tooth. **D. lobe**, one of the great sections of which a composite tooth is made up. **D. machine′**, light-running instrument, consisting of stand, wheel, and pulley and a treadle, by means of which the operator imparts a rotary motion to various tools for removing caries and for cleansing the surface of teeth; it may also be run by electricity or water power; d. engine. **D. mod′el**, a plaster cast which is to be accurately reproduced in other material. **D. nerves**, nerves which pass to the teeth. Those of the upper incisors and canines are furnished by the infraorbital nerve, a branch of the superior maxillary, and those of the molars by the trunk of the same nerve; the teeth of the lower jaw receive the nerves from the inferior maxillary, which, as well as the superior maxillary, arises from the fifth pair. **D. papil′læ**, elevations in the dental groove for the development of the teeth. **D. perim′eter**, instrument to measure the circumference of the teeth. **D. plate**, a sheet of metal, vulcanite, or celluloid, holding one or more false teeth, moulded to fit the palatal and alveolar portions of the jaws. **D. plex′uses**, communications formed by looped anastomoses of dental nerves in the maxillary bones. **D. pro′cess**, alveolar process. **D. pulp**, pulp of the tooth; pultaceous substance of a reddish-gray color, very soft and sensitive, which fills the cavity of the teeth; well supplied with capillary vessels; it has been described as a special tissue, with the epithet *phanerogenous* or *phanerophorous*. **D. sac**, part of dental groove investing the papillæ and teeth before eruption. **D. sac′culus**, d. follicle. **D. splint**, see *Splint*. **D. sur′geon**, dentist. **D. sur′gery**, dentistry. **D. to′phi**, gouty deposits upon the roots of the teeth. **D. tu′buli**, minute wavy and branching tubes, seen microscopically, which make up the ivory or dentine. **D. veins** have a similar distribution with the arteries.

**Dental′gia.** Odontalgia; toothache.

**Dent′aphone** (*dens*, tooth, *phone*, sound). A box like a large watch, with a diaphragm and a cord attached connected with a mouth-piece; through the latter, held between the teeth, sound-vibrations are transmitted through the cranial wall to the auditory nerve.

**Denta′ria.** Anthemis pyrethrum; Plumbago europæa. **D. diphyl′la**, pepper-root; native of North America; antiscorbutic, stimulant, and diuretic.

**Den′tary.** Dental.

**Denta′ta** (*vertebra*, understood). The second cervical vertebra or axis, so called because of the tooth-like process on which the atlas turns.

**Den′tate.** Dentated, denticulate, serrated; cut in the shape of teeth, having tooth-like processes. **D. bod′y**, nucleus dentatus. **D. convolu′tion**, convolution of the brain lying within the hippocampal fissure. **D. fas′cia**, see *Fascia dentata*. **D. fis′sure**, hippocampal fissure. **D. lam′ina**, portion of the spinal lamina. **D. nu′cleus**, collection of gray matter in the central white substance of the cerebellum. **D. su′ture of bone**, suture in which the edges resemble teeth.

**Dentella′ria.** Plumbago europæa.

**Den′tes** (pl. of dens). Teeth.

**Den′ticeps** (*dens*, tooth, *capio*, to seize). Tooth forceps.

**Den′ticle.** A small tooth.

**Dentic′ola hom′inis** (*dens*, tooth, *colo*, to inhabit). A microorganism which has been found in dental concretions. See *Odontolith*.

**Dentic′ulate.** Dentate. **D. bod′y**, dentate nucleus. **D. lam′ina**, dentate lamina. **D. lig′ament**, a slender cord situated between the anterior and posterior fasciculi of the spinal nerves, and between the tunica arachnoidea and pia mater; it is attached to the dura mater where that membrane issues from the cranium, and accompanying the spinal marrow to its inferior extremity. It sends off, from its outer edge, about twenty slender processes, in the form of denticuli, each of which passes outward and connects itself with the dura mater in the intervals between the anterior and posterior roots of the nerves. **D. mus′cle**, serratus magnus.

**Dentic′ulus** (dim. of *dens*, tooth). Crena; one of the serrations in the bones of the skull forming the sutures.

**Dentifica′tion.** Formation of the teeth. Calcareous deposit on the enamel of the teeth; tartar.

**Den′tiform** (*dens*, tooth, *forma*, form). Resembling a tooth in shape; odontoid.

**Den′tifrice** (*dens*, tooth, *frico*, to rub). Tooth-powder, tooth-paste; name given to different powders and pastes proper for cleansing the enamel of the teeth and removing the tartar which covers them. Orris root is a very common ingredient.

**Dentig′erous** (*dens*, tooth, *gero*, to carry). Tooth carrying, as dentigerous cysts, cysts containing teeth.

**Dentila′bial** (*dens*, tooth, *labium*, lip). Relating to both teeth and lips.

**Den′tilave.** Tooth-wash.

**Dentilin′gual** (*dens*, tooth, *lingua*, tongue). Relating to both teeth and tongue.

**Den′tin.** Dentine.

**Den′tinal.** Relating to the dentine of the teeth, as *dentinal fibres*, *dentinal cells*, etc. See *Tooth*. **D. car′tilage**, residuum after action of dilute acid on dentine, the lime salts being dissolved. **D. cells**, see *Tooth*. **D. fi′bres**, protoplasm contained in the dentinal tubules. **D. germ**, d. papillæ. **D. glob′ules**, spheroidal masses of matrix at the outer edge of dentine. **D. ma′trix**, substance of close texture between the dentinal tubules. **D. papil′læ**, dental papillæ. **D. sheath**, lining of the dentinal canals. **D. tu′bules**, long and sinuous tubes in the dentine.

**Dentinal′gia.** Pain in the dentine; toothache.

**Den′tine.** The tooth substance proper. See *Tooth*. **Indura′tion of the d.**, see *Eburnitis*. **D. of repair′**, dentine which is deposited in dental pulp cavity on the inner surface of dentine when its outer surface becomes denuded of enamel. **Sec′ondary d.**, irregular deposits of d. in a pulp chamber, due to abnormal irritation.

**Dentinifica′tion.** Process of formation of dentine.

**Dentini′tis.** Inflammation of the dentine tubules or of the dentinal fibres.

**Den′tinoid.** Like dentine or tooth structure.

**Dentinos′teoid.** Composed of dentine and bone, as osteoma of the teeth.

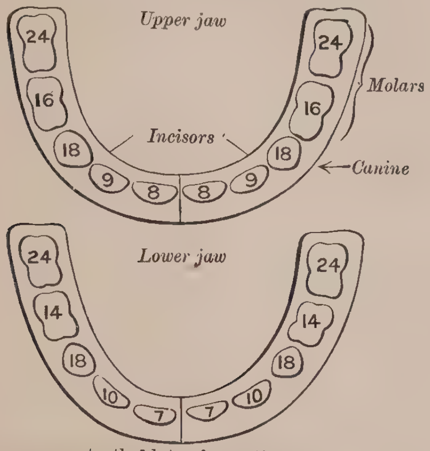
**Dentiscal′pium** (*dens*, tooth, *scalpo*, to scrape). An instrument used for scaling the teeth; toothpick or toothrake. Gum lancet.

**Den′tist.** Dental surgeon, surgeon dentist; one who devotes himself to the study of the diseases of the teeth and their treatment.

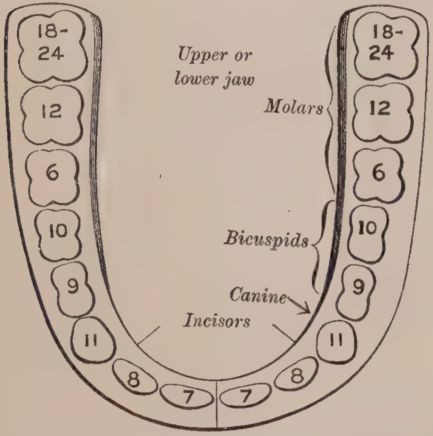
**Den′tistry.** Dental surgery; the art of the dentist.

**Denti′tion** (*dentio*, to cut teeth). Teething; exit of the teeth from the alveoli and gums, or rather the phenomena characterizing the different periods of their existence. The germs of the first teeth, *dentes lactei* or *milk teeth*, are visible in the fœtus about the end of the second month, and begin to be ossified from the end of the third to that of the sixth month. At birth the corona of the incisors is formed, but that of the canine is not completed, and the tubercles of the molars are not yet all united. Gradually the fang becomes developed, and at about six or eight months begins what is commonly called the *first dentition*. The two middle incisors of the lower jaw commonly appear first, and some time afterward those of the upper jaw; afterward, the two lateral incisors of the lower jaw; and then those of the upper, followed by the four anterior molars; the canine or eye teeth at first, those of the lower and afterward those of the upper jaw, next appear; and subsequently and successively the first four molars—two above and two below, one on each side. The whole number of the *primary, temporary, deciduous, shedding,* or *milk teeth* (*dentes temporarii*) is 20.

The eruption of the milk teeth takes place, approximately, in the order shown in the illustration.



Temporary teeth; date of eruption given in months.



Permanent teeth; date of eruption given in years.

The *second dentition* or shedding of the milk teeth begins about the age of 6 or 7 years. The germs or membranous follicles of these second teeth—to the number of 32—as well as the rudiments of the teeth themselves, are visible, even in the fœtus, with the exception of those of the small molars, which do not appear until after birth. They are contained in alveoli of the same shape as those of the first dentition. Their ossification commences at from 3 to 6 months after birth in the incisors and first molars; at 8 or 9 months in the canine; about 3 years in the molars; 3½ in the second great molars, and about 10 years in the last. As the alveolus of a new tooth becomes gradually augmented the septum between it and that of the corresponding milk tooth is absorbed and disappears. The root of the milk tooth is likewise absorbed; its corona becomes loose and falls out, and all the first teeth are gradually replaced by the permanent teeth. The second dentition becomes necessary in consequence of the increased size of the jaws. The new teeth have neither the same direction nor the same shape as the old, and are more numerous, amounting, until about the age of 25, to 28. About this period a small molar appears at the extremity of each jaw, which is called the wisdom tooth or wit tooth, making the whole number of permanent teeth 32.

The eruption of the permanent teeth is remarkable for its general regularity, so that it constitutes an important means of ascertaining the age of the individual during the early period of life (see the illustration). The teeth of the lower jaw generally precede by a few weeks those of the upper.

During first dentition the infant is especially liable to disease, the irritation produced by the pressure of the tooth on the superincumbent gum sometimes occasioning pyrexia, convulsions, diarrhœa, etc., symptoms often strikingly relieved by free division of the distended gum. This disordered condition is called teething.

**Dentog′raphy** (*dens,* tooth, *grapho,* to write). Description of the teeth.

**Den′toid** (*dens,* tooth, *eidos,* resemblance). Odontoid.

**Dentoli′va.** Olivary body.

**Dentol′ogy** (*dens,* tooth, *logos,* discourse). Study and description of the teeth; odontology.

**Denton′omy** (*dens,* tooth, *nomos,* arrangement or law). Classification of the teeth.

**Den′ture.** Set or row of false teeth mounted on metal or ivory, to be adjusted to the alveolar margin.

**Denucé's** (den-ue-says′) **lig′ament.** A short band of fibrous tissue in the wrist-joint between the radius and ulna.

**Denu′cleated.** Deprived of the nucleus.

**Denuda′tion** (*denudo,* to lay bare). Condition of a part deprived of its natural coverings, whether by wounds, gangrene, or abscess; particularly applied to the bones when deprived of periosteum, and to the teeth when they lose their enamel or when the gums recede from them and their sockets are destroyed.

**Denu′ding pro′cess.** Denudation.

**Denutri′tion.** Opposite to nutrition, as denutrition or breaking down of tissue.

**Deob′struent** (*de,* priv., *obstruo,* to obstruct). Medicine given with the view of removing any obstruction.

**Deo′dorant** (*de,* priv., *odor,* smell). Destructive of odor; antibromic.

**Deo′dorizer.** Antibromic; an agent which destroys odor.

**Deontol′ogy** (*deon,* what is right, *logos,* description). The science of duty. **Med′ical d.,** medical ethics; medical etiquette; the duties and rights of medical practitioners.

**Deop′pilant** or **Deop′pilative** (*de,* priv., *oppilo,* to stop up). Deobstruent.

**Deoppila′tion.** The act of getting rid of an obstruction.

**Deor′sum.** Downward. **D. ter′gens,** directed downward, said of the eyes. **D. ver′gens,** directed downward.

**Deorsumduc′tion.** Movement downward of a part or organ.

**Deorsumver′sion.** Turning of both eyes downward at the same time.

**Deossifica′tion.** Absorption or removal of the osseous elements; the opposite to ossification.

**Deoxida′tion.** Separation of oxygen from a compound.

**Deox′idizer.** A substance which deprives another of oxygen.

**Deoxygena′tion.** The withdrawal or deprivation of oxygen.

**Deo′zonize.** To deprive of ozone.

**Dephlegma′tion** (*de,* from, *phlegma,* phlegm). Process of removing water from a body by distillation.

**Dephlogis′ticated** (*de,* from, *phlogiston,* hydrogen). Deprived of hydrogen. **D. air,** oxygen gas. **D. muriat′ic acid,** chlorine.

**Depigmenta′tion.** Decoloration; abstraction of pigment.

**Dep′ilate** (*de*, from, *pilus*, hair). To remove or extract hair.

**Depila′tion.** Loss of hair, either spontaneously or by art; removal of hair.

**Depil′atory.** Anything which causes loss of hair. Depilatories are usually caustic applications in which quicklime or some other alkaline substance, sulphuret of iron, etc., enters. A pitch plaster, pitch cap, is sometimes used as a depilatory; it, of course, pulls the hair out by the roots.

**Dep′ilous.** Devoid of hair.

**Deplete′.** To empty. To reduce in strength.

**Deple′tion** (*depleo*, to unload). Act of emptying or unloading; for example, the vessels, by bloodletting and the different evacuants. Inordinate evacuation. Great reduction of strength.

**Deple′tory.** Depleting; having the power of causing depletion.

**Depluma′tion** (*de*, from, *pluma*, feather). Disease of the eyelids, in which they are swollen and the eyelashes fall out. See *Madarosis*.

**Depolariza′tion.** Removal of polarity; neutralization of opposite poles, applying the term to electrical, magnetic, and light phenomena.

**Depo′larize.** To deprive of polarity, as light. See *Depolarization*.

**Depo′larizer.** An attachment to a cell of a battery for checking the accumulation of gas on the collecting or generating plate.

**Depos′it** (*de*, from, *pono*, to lay or put down). Anything laid or thrown down; sediment; in pharmacy, anything which is precipitated and thus separated from a chemical or mechanical mixture; in physiology and pathology, a structureless substance, separated from the blood or other fluid. **Brick-dust d.**, a reddish, uratic deposit in the urine.

**Depos′itive.** Epithet used to express that condition of a membrane in which plastic lymph is exuded into the derma, giving rise to the production of small, hard elevations of the skin or pimples. *Depositive inflammation of the derma* comprises strophulus, lichen, and prurigo.

**Deprava′tion** (*de*, from, *pravus*, bad). Perversion, corruption; as depravation of the taste, etc.

**Depraved′.** Degenerated; corrupt.

**Depres′sants.** Agents which reduce the mental or physical condition below the normal level. They are more than sedatives, which reduce an elevated condition to the normal. Tobacco, veratrum viride, and aconite are examples of depressants.

**Depressed′.** Below the normal level. In a reduced state of general or mental activity.

**Depres′sion** (*de*, from, *premo*, to depress). An excavation, hollow, or fossa. A state of being below the general level, as of the bone in depressed fracture of the skull, of the physical forces in debility, or of the mind in melancholic states. The act of reducing below the general level. Also operation for cataract, see *Cataract*. **Auric′ular d.**, the lowering of the venous pulse tracing at the period of diastole of the right cardiac auricle. **Dig′ital d.**, descending cornu of a cerebral lateral ventricle. **Ner′vous d.**, nervous shock. **Pacchio′nian d.**, see *Pacchionian*. **Ra′dial d.**, see *Radial fossa*. **Supratro′chlear d.**, see *Supratrochlear fossa*. **Vi′tal d.**, nervous shock.

**Depres′sive.** Producing depression.

**Depressomo′tor.** Checking the action of motor centres; retarding motor activity.

**Depres′sor.** Several muscles so called depress the parts on which they act. **D. a′læ na′si** arises from the superior maxillary bone immediately above the junction of the gums with the two incisor and canine teeth, and passes upward to be inserted into the upper lip and root of the ala nasi, which it pulls downward. **D. an′guli o′ris**, muscle situated at the lower part of the face, triangular in shape; arises from the outer oblique line on the lower jawbone, and termintates at a point at the commissure of the lips, which it pulls downward. **D. ap′icis na′ris**, nasolabialis muscle. **D. auricula′re**, auriculoglossus muscle. **D. cartilag′inis arytænoide′æ**, musculofibrous slip extending from the cricoarytænoideus lateralis of one side to the arytænoideus obliquus of the other side. **D. c. Santori′ni**, arycorniculatus rectus muscle. **D. clitor′idis**, see *Ischiocavernosus*. **D. epiglot′tidis**, thyroaryepiglotticus muscle. **D. glan′dulæ thyroide′æ**, fibres from the thyrohyoid muscle inserted on the middle lobe of the thyroid gland. **D. la′bii inferio′ris**, small, thin, and quadrilateral muscle arising from the external oblique line of the lower jaw, and ascending to the lower lip, where it becomes confounded with the orbicularis oris; pulls the lip downward and outward. **D. l. superio′ris alæ′que na′si**, d. alæ nasi. **D. l. s. pro′prius**, d. alæ nasi. **D. labio′rum commu′nis**, d. anguli oris. **D. nerves**, nerves which when stimulated diminish blood pressure; see *Inhibitory*. **D. oc′uli**, rectus inferior oculi. **D. pal′pebræ inferio′ris**, fleshy bundle forming part of the palpebralis muscle. **D. pupil′læ**, rectus inferior oculi. **D. sep′ti mo′bilis na′rium**, nasolabialis. **Sims's d.**, instrument used in gynecology for the purpose of pressing the anterior vaginal wall forward; it is made of copper, and is provided with a ring at the end. **D. sub′stance**, one of two substances found by Schäfer and Vincent in the infundibular part of the pituitary body, one of which, the *depressor substance*, produces a fall, the other, the *pressor substance*, a rise in blood pressure. **D. supercil′ii**, muscular slip from the orbital portion of the orbicularis oculi muscle to the skin of the eyebrow. **D. ten′dinis subscapula′ris majo′ris**, brachiocapsularis. **Tongue d**, an appliance for keeping the tongue out of the line of vision during inspection of the throat. **D. vesi′cæ**, pubovesical muscle.

**Depresso′rium.** Instrument for depressing and protecting the dura mater in operations on the skull.

**Dep′rimens auric′ulæ** (*deprimo*, to depress). Retrahens auris. **D. maxil′læ biven′ter**, digastricus. **D. oc′uli**, rectus inferior oculi.

**Deprimen′tia.** Sedatives.

**Depri′val, Depriva′tion,** or **Deprive′ment.** Loss or taking away of a part.

**Depth, fo′cal.** The penetrating power of a lens.

**Depucela′tion** (*pucelle*, a virgin). Defloration.

**Depudica′tion** (*depudico*, to dishonor). Defloration.

**Dep′urants** (*depurare*, to purify). Depuratives. Formerly used to denote a class of medicines which were supposed to purify the system; in pharmacy, articles that clarify.

**Dep′urated.** Purified; cleaned.

**Depura′tion.** Process by which the animal economy is purified, either by the agency of some eruptive disease or some spontaneous evacuation, or by the assistance of medicine.

**Dep′uratives.** Depurants.

**Dep′urator.** Agent or drug for promoting cleansing.

**Dep′uratory.** That which causes depuration, as the urinary and cutaneous depurations; also appropriated to medicines producing such action. See *Depuration*.

**Deradel′phus** (*dere*, neck, *adelphos*, brother). Double monocephalous monster, whose two trunks are united above the umbilicus and separated below.

**Der′aden** (*dere*, neck, *aden*, gland). Gland in the neck.

**Deradeni′tis.** Inflammation of a gland or glands of the neck.

**Deradenon′cus** (*dere*, neck, *aden*, gland, *onkos*, swelling). Tumefaction of the glands of the neck.

**Deranencepha′lia** (*dere*, neck, *anencephalia*, absence of brain). Monstrosity in which only a small portion of the brain exists, resting on the cervical vertebræ—more properly *derencephal′ia;* the monster is called *derenceph′alus*. According to St. Hilaire, a monstrosity characterized by the total absence of encephalon and of the medulla spinalis in the cervical region; the upper part of the skull is rudimentary, and the back part of the occipital region entirely deficient.

**Deranged′** (*de*, from, *ranger*, to put in order). Insane.

**Derange′ment.** Insanity.

**Der′bia.** Impetigo.

**Der′byshire neck.** Bronchocele; endemic goitre.

**Der′cum′s disease′.** Adiposis dolorosa.

**Derencepha′lia.** See *Deranencephalia.*

**Derenceph′alus** (*dere*, neck, *kephale*, head). Monster whose brain is in the neck. See *Deranencephalia.*

**Der′ic.** Relating to the ectoderm.

**De′ris.** Skin.

**Der′ivant.** Derivative.

**Deriva′tion** (*derivo*, to draw away). Revulsion; counterirritation. The term derivation has—like aspiration—been applied to the suction power of the heart, a presumed agency in the circulation of the blood.

**Deriv′ative.** Revellent; revulsive; apospastic. Remedy which, by producing a modified action in some organ or texture, draws out the morbid condition from some other organ or texture. Derivatives, of which counterirritants form a subdivision, act by altering the circulation, withdrawing the blood from a diseased part and so modifying the morbid process. They include every physical and moral agent which is capable of modifying the function of innervation, and therefore almost every article of the materia medica. **D. circula′tion,** circulation through collateral vessels.

**Derm** or **Der′ma.** Cutis.

**Der′mad.** Toward the external surface.

**Dermag′ra.** Dermatagra; pellagra.

**Dermahyper′trophy** (*derma*, skin, *hyper*, excess of, *trophe*, nourishment). Thickening of the skin.

**Der′mal** or **Der′mic.** Relating or belonging to the skin. **D. as′pect,** aspect toward the skin or external surface. **D. mus′cle,** muscle connected with the skin. **D. skel′eton,** dermoskeleton, see *Skeleton.*

**Dermalax′ia** (*malaxis*, softening). Softening of the skin.

**Dermal′gia** (properly dermatalgia) (*derma*, skin, *algos*, pain). Pain in the skin; neuralgia of the skin. *Rheumatic dermalgia* or *rheumatism of the skin* is a form of neuralgia referred at times to the nervous trunks, muscles, etc., but appears to be seated in the cutaneous nerves.

**Der′manoplasty.** Skin-grafting.

**Dermanys′sus a′vium** and **D. galli′næ.** Acarus infesting birds and domestic fowls and producing an eruption of prurigo.

**Dermaphyl′la penduli′na.** Plant of Brazil, root of which, payenya, is an alterative in syphilitic and cutaneous affections.

**Der′maphyte.** Dermatophyte, vegetable parasite of the skin.

**Dermaphyt′icide** (*derma*, skin, *phyton*, vegetable, *cedo*, to kill). Agent that will destroy vegetable parasites of the skin.

**Derm′aplasty** or **Derm′atoplasty** (*derma*, skin, *plasso*, to form). Plastic operation for the restoration of the skin.

**Dermapos′tasis** (*derma*, skin, *apostasis*, defection or loss). A suppurative skin disease.

**Der′mata.** See *Epidermata.*

**Dermatag′ra** (*derma*, skin, *agra*, seizure). Pellagra.

**Dermatal′gia** (*derma*, skin, *algos*, pain). Dermalgia.

**Dermataneu′ria** (*derma*, skin, *a*, priv., *neuron*, nerve). Paralysis or loss of sensibility of the skin.

**Dermatatroph′ia.** Atrophy of the skin.

**Dermataux′e** (*derma*, skin, *auxe*, increase). Tumefaction or hypertrophy of the skin.

**Dermathæ′mia** (*derma*, skin, *haima*, blood). Congestion of the blood-vessels of the skin.

**Dermatiat′ria** (*derma*, skin, *iatreia*, healing). Treatment of diseases of the skin.

**Dermat′ic.** Relating to the skin.

**Dermati′tis.** Inflammation of the skin. **D. ambustio′nis,** burn. **Blastomyce′tic** or **blastomycot′ic d.,** see *Blastomycetic.* **D. calor′ica,** inflammation of the skin produced by the action of heat or cold, as burns and frost-bites. **D. circumscrip′ta herpetifor′mis,** inflammation of the skin, herpetic in character, characterized by small, red papules having a bluish-white centre, which form thick brown plates with excoriations underneath their surface. **D. combustio′nis,** burn. **D. congelatio′nis,** frost-bite. **D. contusifor′mis,** erythema nodosum. **Epidem′ic exfo′liative d.,** name given to an epidemic skin disease which developed in 1891 in some London asylums and hospitals, resembling moist eczema or pityriasis rubra. **D. erythemato′sa,** erythema. **D. exfolia′cea,** pityriasis rubra. **D. exfoliati′va,** inflammation of the skin accompanied with excessive desquamation. **D. e. infan′tum,** disease in very young children, with pronounced redness of the skin and plentiful furfuraceous and foliaceous desquamation. **D. fe′rox,** a form of inflammation of the skin with repeated desquamation and constitutional disturbances. **Fun′goid d.,** mycosis fungoides. **D. gangræno′sa,** d. associated with gangrene, see *Raynaud's disease.* **D. g. infan′tum,** rupia escharotica. **D. g. mul′tiplex,** d. in which there are numerous gangrenous centres. **D. glandula′ris erythemato′sa,** lupus erythematosus. **D. herpetifor′mis,** Duhring's disease; a rare condition of the skin, having the appearance of multiform lesions in varied combinations—macular, papular, vesicular, pustular, or bullous in type, with subjective sensations of itching and burning; usually chronic, with irregular exacerbations; at times grave and terminating fatally. **Malig′nant pap′illary d.,** Paget's disease. **D. medicamento′sa,** from the action of certain drugs, as belladonna, quinine, iodide of potassium, etc. **D. multifor′mis,** d. herpetiformis. **D. papilla′ris capillit′ii,** keloid acne. **D. papillomato′sa,** yaws. **D. phlegmono′sa,** see *Erysipelas.* **D. re′pens,** d. usually of traumatic origin, spreading with a marginate border, as a rule over the upper extremities. **D. sanamo′sa,** pityriasis rubra. **D. scarlatinifor′mis recid′ivans,** erythema scarlatiniforme. **D. seborrho′ica,** eczema seborrhoicum. **D. skiagraph′ica,** *x*-ray d. **D. symptomat′ica,** erysipelas. **D. traumat′ica,** inflammation of the skin produced by mechanical agencies. **D. venena′ta,** inflammation of the skin produced by acrid or poisonous agents. **X-ray d.,** d. from the direct action of the Roentgen rays.

**Dermatoaut′oplasty** (*autos*, self, *plasso*, to form). Transplantation of skin from one region to another on the same patient.

**Dermato′bia** (*derma*, skin, *bios*, life). The bot-fly, the eggs of which are often deposited beneath the skin and give rise to swelling.

**Dermatocelluli′tis.** Cellulitis, with extension of the inflammation to the overlying skin.

**Dermatocholosis,** der-mat-o-kol-o′sis (*derma*, skin, *chole*, bile). Icterus.

**Dermatochysis,** der-mat-ok′is-is (*derma*, skin, *chysis*, effusion). Anasarca.

**Dermatocop′tes** (*derma*, skin, *kopto*, to injure). Minute animal parasites in the skin.

**Der′matocyst.** Cyst or cystic tumor of the skin.

**Dermatodyn′ia** (*derma*, skin, *odyne*, pain). Dermalgia.

**Dermatodyschroi′a** (*derma*, skin, *dyschroia*, discoloration). Skin discoloration.

**Dermatog′raphy** (*derma*, skin, *grapho*, to describe). Description of the skin. Dermographism.

**Dermatohæ′mia** (*derma*, skin, *haima*, blood). Congestion of the skin.

**Dermatohet′eroplasty** (*heteros*, another, *plasso*, to form). Transplantation of skin from another person or animal.

**Der′matoid** (*derma*, skin, *eidos*, form). Dermoid.

**Dermatoker′as** (*derma*, skin, *keras*, horn). Horny growth on the skin.

**Der′matol.** Bismuth subgallate.

**Dermatoleucas′mus** (*derma*, skin, *leukos*, white). Achroma; morbid whiteness of the skin.

**Dermatolog′ical.** Relating to dermatology.

**Dermatol′ogist.** Specialist in skin diseases.

**Dermatol′ogy** (*derma*, skin, *logos*, discourse). The science of the skin and its diseases.

**Dermatol′ysis** (*derma*, skin, *lysis*, loosing). Abnormal relaxation of the skin.

**Dermato′ma.** Form of perverted nutrition of the skin accompanied with hypertrophy, as mole, nævus, etc.

**Dermatomala′cia** (*derma*, skin, *malakia*, softening). An abnormal softening of the skin.

**Der′matome** (*derma*, skin, *temno*, to cut). Needle-bladed knife used in skin affections.

**Dermatomelas′ma.** Disease of the skin, consisting of augmentation of black pigment. See *Melanopathia.* **D. suprarena′le,** Addison's disease.

**Der′matomere** (*derma*, skin, *meros*, part). A segment of the integument in the embryo.

**Dermatomyco′sis** (*derma*, skin, *mykes*, mushroom). Disease of the skin and its appendages dependent upon vegetable parasites or fungi, such as tinea favosa or tinea tonsurans. **D. favo′sa,** favus. **D. furfura′cea,** tinea versicolor. **D. ton′surans,** tinea tonsurans.

**Dermatomyo′ma.** Myoma of the skin.

**Dermatomyosi′tis.** Inflammation of the skin and muscles.

**Dermatoneu′ria** or **Dermatoneuro′sis** (*derma*, skin, *neuron*, nerve). Neurosis of the skin; skin disease of nervous origin.

**Dermatoneurol′ogy.** Study of the cutaneous nerves and their diseases.

**Dermaton′osis.** Disease of the skin.

**Dermatopathol′ogy** (*derma*, skin, *pathos*, disease, *logos*, discourse). Pathology of the skin.

**Dermatop′athy** (*derma*, skin, *pathos*, affection). Cutaneous disease.

**Dermatoperisclero′sis.** Induration of the cellular tissue.

**Dermatoph′ilus** (*derma*, skin, *phileo*, to love). Chique, a parasite infesting the skin, called by various names, as chiggre, jigger, etc.

**Dermatoph′ony** (*derma*, skin, *phone*, sound). Stethoscopy of the skin; listening to the sounds of the cutaneous blood-vessels.

**Dermatophthal′mus** (*derma*, skin, *ophthalmos*, eye). Condition of retraction of the eyelid so that it does not cover the eye during sleep.

**Dermatophy′ma** (*derma*, skin, *phyma*, tumor). Tumefaction of the skin. Condyloma.

**Der′matophyte** (*derma*, skin, *phyton*, vegetable). Fungous parasite of the skin.

**Dermatophyt′ic.** Relating or appertaining to dermatophytes. **D. diseas′es,** cutaneous diseases that depend on or are characterized by the presence of fungous parasites.

**Der′matoplasty.** Plastic operation for the restoration of skin.

**Dermatorrha′gia** (*derma*, skin, *rhage*, rupture). Discharge of blood from the skin; hæmatidrosis.

**Dermatorrhœ′a** (*derma*, skin, *rheo*, to flow). Morbidly increased secretion from the skin; hyperidrosis.

**Dermatosclero′sis** or **Dermatosclero′ma** (*derma*, skin, *skleros*, hard). Callosity; scleroderma.

**Dermatoscrof′ula.** Manifestation of scrofula in the skin by ulcers, etc.

**Dermato′sis.** Cutaneous disease. **Kap′osi's d.,** xeroderma pigmentosum. **Sta′sis d.,** cutaneous disease characterized by venous congestion. **Un′na's d.,** seborrhœic eczema.

**Der′matosome.** A part of the equatorial plate.

**Dermatospas′mus** (*derma*, skin, *spasmos*, spasm). Horrida cutis; gooseflesh.

**Dermatostru′ma.** Manifestation of scrofula in the skin by ulcers, etc.

**Dermatosyph′ilis.** Exanthematous affections connected with syphilis; syphiloderma.

**Dermatother′apy** (*derma*, skin, *therapeia*, care or treatment). Treatment of cutaneous affections. Introduction of remedies through the skin.

**Dermatotylo′ma** or **Dermatotylo′sis** (*derma*, skin, *tylos*, callosity). Callosity.

**Dermatoxera′sia** (*derma*, skin, *xeros*, dry). Diminution of secretion of sebaceous glands.

**Dermatozo′a** (*derma*, skin, *zoon*, animal). Minute animal parasites in the skin. See *Ectozoa.*

**Dermatozoöno′sis.** Disease caused by dermatozoa.

**Dermatroph′ia.** An atrophied condition of the skin.

**Dermecta′sia** (*derma*, skin, *ektasis*, extension). Abnormal stretching or relaxation of the skin.

**Dermen′chysis** (*derma*, skin, *encheo*, to pour into). Hypodermic or subcutaneous injection.

**Dermepen′thesis** (*derma*, skin, *epenthesis*, insertion). Skin-grafting.

**Dermexanthe′sis** (*derma*, skin, *exantheo*, to blossom). Exanthematous disease of the skin.

**Der′mic.** Dermatic; dermal; relating to the derma or skin. **D. graft,** graft on the skin. **D. lay′er of membra′na tym′pani,** middle layer (connective tissue) of that membrane. Term also applied to the epidermal layer.

**Der′mis.** Used erroneously at times for derma.

**Dermi′tis.** Inflammation of the skin.

**Der′moblast.** A portion of the mesoblast which later becomes the corium.

**Dermocy′mus** (*derma*, skin, *kyma*, fœtus in utero). Fœtus within a fœtus.

**Dermograph′ia.** Dermographism.

**Dermograph′ic.** Relating to or characterized by dermographism.

**Der′mographism** (*derma*, skin, *grapho*, to write). A dermatoneurosis in which a line or figure drawn on the skin with a hard stylus appears as an urticarial elevation and remains visible for a variable period.

**Dermohæ′mia** (*derma*, skin, *haima*, blood). Hyperæmia or congestion of the skin.

**Der′moid.** Resembling or relating to the skin. **D. cysts,** cysts containing skin and analogous structures, as hair, nails, etc. **D. sys′tem,** this embraces the skin together with the parts belonging thereto.

**Der′mol.** Bismuth chrysophanate, employed in the treatment of certain cutaneous affections.

**Dermol′ogy.** Dermatology.

**Dermomyco′sis.** Dermatomycosis.

**Dermoneuro′sis.** Dermatoneurosis.

**Dermonosol′ogy** (*derma*, skin, *nosos*, disease, *logos*, description). Description of or treatise on skin diseases; dermatology.

**Dermop′athy** (*derma*, skin, *pathos*, disease). Skin disease.

**Dermophlebi′tis** (*derma*, skin, *phleps*, vein). Inflammation of cutaneous veins.

**Dermophy′mata vene′rea.** Condylomata.

**Der′mophyte** or **Der′matophyte** (*derma*, skin, *phyton*, a vegetable). Parasitic vegetable growth on the skin.

**Dermophyt′ic.** Relating to dermophytes.

**Der′moplasty.** Dermatoplasty.

**Dermorrha′gia.** Dermatorrhagia.

**Dermoskel′eton.** Exoskeleton. See *Skeleton.*

**Dermosteno′sis** (*derma*, skin, *stenosis*, narrowing). Morbid contraction of the skin.

**Dermosto′sis** (*derma*, skin, *osteon*, bone). Ossification of the cutaneous surface.

**Dermosynovi′tis.** Perforating ulcer of the foot. Inflammation seated in the sole of the foot, between the derma and epidermis, which becomes enlarged and ulcerates, leaving a fistulous opening. This soon involves also the bursa mucosa lying below, and, if neglected, the periosteum and articular synovial membrane. Occurs in anæsthetic leprosy and also at times in tabes dorsalis and other spinal affections.

**Dermosyph′ilide.** Cutaneous eruption of a syphilitic character.

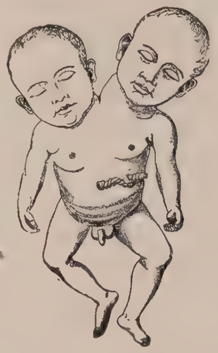
**Dermosyphilop′athy.** Syphiloderm; syphilitic skin disease.

**Dermot'omy** (*derma,* skin, *tome,* incision). Incision of the skin.

**Dermotylo'sis** (*derma,* skin, *tylosis,* hardening). Hardening of the skin.

**Derodeni'tis** (*dere,* neck, *aden,* gland). Deradenitis; inflammation of the glands of the neck.

**Derodid'ymus** or **Derod'ymus** (*dere,* neck, *didymos,* twin, *duo,* to mingle). Dicephalus; a monster with two heads and necks on one body.



Derodidymus. (Ahlfeld.)

**Deron'cus** (*dere,* neck, *onkos,* swelling). Bronchocele or goitre.

**Derot'omy** (*dere,* neck, *tome,* incision). Decapitation of the fœtus to facilitate delivery.

**Der'rid.** An acrid, poisonous resin from Derris elliptica.

**Der'ris ellip'tica.** A tree of the Malay peninsula furnishing derrid.

**Der'tron.** Omentum or peritoneum; according to others, the small intestine.

**De Salle's line.** Line of the nose.

**Desanima'nia.** Amentia.

**Desault's' appara'tus** or **ban'dage.** Bandage, sling, and pad for fracture of the clavicle. **D.'s splint,** long splint employed in fracture of the femur.

**Descemet** (des-em-a'), **mem'brane of.** See *Aqueous humor* and *Cornea.*

**Descemeti'tis.** Inflammation of the membrane of Descemet.

**Descemet'ocele.** Hernia of Descemet's membrane.

**Descen'dens no'ni.** See *Hypoglossus.*

**Descend'ing.** Anatomical term employed to designate structures that tend in a downward direction, as descending cava, descending colon, descending aorta. **D. convolu'tion,** gyrus descendens. **D. cur'rent,** current passing from the nerve centre. **D. degenera'tion,** Wallerian degeneration of a nerve passing in a centrifugal direction. **D. neuri'tis,** neuroretinitis. **D. sclero'sis,** form of sclerosis of the cord in which the process extends from above downward. **D. tracts,** nerve tracts in which descending Wallerian degeneration occurs after injury.

**Descen'sus.** Descent. **D. testiculo'rum,** descent of the testicles.

**Descent'.** Tendency, action, or movement downward. **D. of the o'varies,** descent in the fœtus of the ovaries from their primitive position beside the lumbar vertebræ to their final situation in the broad ligament. **D. of the tes'ticles,** passage of the testicles through the inguinal canal into the scrotum.

**Deschamps's' an'gle.** Iniofacial angle. **D.'s compres'sor,** an instrument for making direct compression of an artery.

**Desh'ler's salve.** Ceratum resinæ compositum.

**Des'iccant** (*desicco,* to dry up). Drying; a remedy which dries the surface to which it is applied.

**Des'iccate.** To dry thoroughly.

**Desicca'tion.** Drying.

**Des'iccative.** Desiccant; a remedy which when applied externally dries up the surface moisture.

**Des'ma.** Bandage; ligament.

**Desmal'gia** (*desma,* band, *algos,* pain). Pain in the ligaments.

**Desmecta'sis** (*desma,* band, *ektasis,* extension). Stretching of a ligament.

**Desmi'tis.** Inflammation of a ligament.

**Desmobacte'ria.** Elongated bacteria, including bacillus and vibrio. See *Bacteria.*

**Desmo'dium ganget'icum.** A plant of India, supposed to possess febrifugal and anticatarrhal properties.

**Desmodyn'ia** (*desmos,* band, *odyne,* pain). Pain in the ligaments.

**Desmogna'thus** (*desmos,* band, *gnathos,* jaw). Double parasitic monster, characterized by supernumerary imperfect head, united under the neck by muscular and cutaneous—not bony—attachments to the principal subject.

**Desmog'raphy** (*desmos,* band, *graphe,* description). Anatomical description of the ligaments.

**Desmohæ'moblast** (*desmos,* band, *haima,* blood, *blastos,* germ). That part of the blastoderm which furnishes blood-vessels and connective tissue of the embryo.

**Des'moid** (*desmos,* band, *eidos,* resemblance). Having the character of or resembling ligament; ligamentous. **D. carcino'ma,** scirrhus. **D. tis'sue,** ligamentous tissue; very generally diffused over the human body; has a very close connection with the areolar tissue, and is continuous with it in divers places; it constitutes the ligaments, aponeuroses, etc. **D. tu'mor,** a very hard and compact fibroid tumor.

**Desmol'ogy** (*desmos,* band, *logos,* discourse, treatise). That part of anatomy describing ligaments. Science of bandaging.

**Desmo'ma.** Abnormal perverted condition of the connective-tissue layer of the skin seen in fibroma, osteoma, chondroma, neuroma, etc.

**Des'mon** (*desmos,* bond). The immune-body.

**Desmone'oplasm** (*desmos,* band, *neos,* new, *plasma,* formation). New formation or growth of connective tissue.

**Desmonosol'ogy** (*desmos,* band, *nosos,* disease, *logos,* description). Description or classification of diseases of ligaments.

**Desmopathol'ogy.** Desmonosology.

**Desmop'athy** (*desmos,* band, *pathos,* disease). Disease of the ligaments.

**Desmopex'ia** or **Des'mopexy** (*desmos,* band, *pexis,* fixation). Hysteropexy by suture of the round ligaments to the vaginal or abdominal wall.

**Desmophlo'gia** (*desmos,* band, *phlogoo,* to inflame). Inflammation of a ligament.

**Desmorrhex'is** (*desmos,* band, *rhexis,* rupture). Rupture of an articular ligament.

**Desmo'sis.** A connective-tissue disease of the skin.

**Desmot'omy** (*desmos,* band, *tome,* incision). The science of the structure, location, and function of the ligaments. Section of a ligament.

**Desnos's' pneumo'nia.** Grancher's disease; pseudopleuritic pneumonia.

**Desozyaliza'ria.** Anthrarobin.

**Desprez's' opera'tion.** Operation for nasopharyngeal polyp, in which the cartilaginous part of the nose is separated, for the purpose of obtaining more room for the removal of the polyp.

**Despuma'tion** (*de,* from, *spumo,* to skim, to remove the froth). Removal of froth and other impurities which rise to the surface of any fluid.

**Desquama'tion** (*desquamo,* to scale off). Exfoliation, or separation of the epidermis, in the form of scales or of sheets of a greater or less size. This form of exfoliation is a common sequence of exanthematous diseases.

**Desquam'ative** or **Desquam'atory.** Exfoliative.

**Dessert'spoonful.** A measure containing about two fluidrachms (8 cubic centimetres), equivalent to two teaspoonfuls or half a tablespoonful.

**Desternaliza'tion.** Removal of or from the sternum by disarticulation or otherwise.

**Destilla'tio** (*de,* from, *stillo,* to drop). Distillation. **D. pec'toris,** catarrh. **D. u'teri,** leucorrhœa.

**Destruc'tion** (*destruo,* to pull down). Annihilation; corruption in general.

**Destruc'tive.** Relating to, associated with, or assisting destruction, as *destructive distillation* and *destructive metamorphosis.* **D. metab'olism,** see *Catabolism.*

**Desuda'tion** (*desudo,* to sweat profusely). Profuse and inordinate sweating. An eruption of small pimples, similar to milletseed, appearing chiefly on children, due to want of cleanliness.

**Desul′phurize** or **Desul′phurate.** To deprive of sulphur.

**Desym′physize** (*de*, from, *symphyo*, to grow together). Section of symphysis to facilitate childbirth; symphyseotomy.

**Detan′nated.** Freed from tannin.

**Deter′gens** (*detergeo*, to wipe off). Abstergent.

**Deter′gents.** Medicines possessing the power to deterge or cleanse parts, as wounds, ulcers, etc. They belong to the class of stimulants or to that of emollients.

**Determina′tion.** Strong direction to a given point, as determination of blood to the head.

**Deter′sives** or **Deterso′ria.** Detergents.

**Dethy′roidism.** Artificial myxœdema, due to the removal of the thyroid gland.

**Detionel′la ochra′cea** (Saccardo). Leptothrix ochracea.

**Detona′tion.** Combustion of deflagration of a noisy, explosive kind.

**Detri′tion.** Wasting or wearing away of a part, the teeth, for example.

**Detri′tus** (*detero*, to rub away). Residuum occupying the place of the organic texture of parts which have undergone disorganization.

**Detrunca′tion** (*de*, from, *truncus*, trunk). Separation of the trunk from the head of the fœtus, the latter remaining in the uterus.

**Detru′sion** (*detrudo*, to thrust from). The act of thrusting or forcing down or away; applied to lateral displacement of the heart by extraneous pressure. Expulsion by alternate contraction and expansion of parts.

**Detru′sor.** A muscle that expels or causes a discharge or ejection. **D. fæ′cium,** folds of the rectum. **D. uri′næ,** muscular coat of the urinary bladder; also the longitudinal fibres of that organ; it was also named *constrictor vesicæ urinariæ.*

**Deus′tio** (*deuro*, to burn). A burn; the act of burning.

**Deutenceph′alon** (*deuteros*, second, *enkephalos*, brain). Embryologically, the posterior portion of the anterior vesicle; thalamencephalon.

**Deute′rion.** Secundines.

**Deutero-.** As a prefix, meaning the second of a series, the same as beta- (β-). See also *Deuto-*.

**Deutero-al′bumose.** Variety of hemialbumose precipitated by sodium chloride with an acid.

**Deuterobro′mide.** The one of two bromides of a base which has the most bromine. *Deuterochloride* is similarly named.

**Deuteroglob′ulose.** Substance similar to deutero-albumose, result of the action of the gastric juice on globulin.

**Deuteropath′ia** or **Deuterop′athy** (*deuteros*, second, *pathos*, disease). Secondary disease; one produced by another, and of which it is only, in some measure, symptomatic or the sympathetic effect.

**Deuteropath′ic.** Relating to deuteropathy or a secondary disease.

**Deuteropep′sia** (*deuteros*, second, *pepsis*, digestion). Secondary process of digestion in the large intestine.

**Deuteropine′.** One of the unimportant alkaloids of opium.

**Deu′teroplasm** (*deuteros*, second, *plasma*, formation). Proteid substance of the egg, which nourishes, but does not form, the body of the embryo.

**Deuteropro′teose.** Deutero-albumose.

**Deuteros′copy** (*deuteros*, second, *skopeo*, to view). Second-sight; fancied power of seeing future things or events. A form of hallucination in which the patient sees a spectral image of himself.

**Deuteros′toma.** Secondary blastophore or portion of sperm cell not producing a spermatozoon.

**Deuto-** (*deuteros*, second). Prefix denoting two or double—as *deutoxide*, having two degrees of oxidation; deutoiodide, deutosulphate, deutosulphide, etc.

**Deu′toplasm** (*deuto*, second, *plasma*, formation). Yellow of the egg.

**Deutosco′lex** (*deuto*, second, *skolex*, worm). A daughter cyst; cysticercus.

**Deutosperm′atoblast.** A cell from which the spermatozoid is developed.

**Deutox′ide.** Dioxide, binoxide; compound containing two equivalents of oxygen to one of another substance.

**Deval′gate** (*de*, from, *valgus*, bowlegged). Bowlegged.

**De′vehens** (*de*, from, *veho*, to carry). Efferent.

**Devel′opment.** In physiology it means growth or increase, and in pathology its signification is similar. It—as well as *differentiation*—is at times used, in physiology, for the kind of increase which takes place by the formation of new tissues from those already existing, as in the embryo, while *growth* is restricted to the increase of the same tissues. By development of the pulse is understood an increase in its strength and fulness. Diseases of development, *morbi evolutionis*, are such as are peculiar to the period of growth. **D. of the fœ′tus,** growth of the embryo from conception to the period of parturition; see *Fœtus.* **D. tak′ing,** term used by phrenologists to signify the act of measuring prominences of the skull, which are regarded by them as indicating the size of corresponding cerebral organs. **D. ves′icle,** see *Vesicle of development.*

**Developmen′tal.** Relating to development or growth. **D. diseas′es,** special diseases, the incidental result of the formative, reproductive, and nutritive powers.

**Deven′ter, diam′eter of.** Oblique diameter of the pelvis.

**Devergie′s′ at′titude.** Position of a corpse in which the elbows and knees are flexed, the fingers closed, and the ankles extended. **D.′s disease′,** pityriasis rubra pilaris.

**Devia′tion** (*de*, from, *via*, way). Taking a course or direction out of the usual way. By this word is meant a vicious curvature of the spine or other bones; faulty direction of the teeth or other part; the passage of blood, bile, urine, milk, etc., into vessels not natural to them; the divergence of an individual or group from the general type of the species. **Con′jugate d.,** simultaneous deviation of two parts, as the eyes, in one direction. **Min′imum d.,** minutest deviation of a ray of light through a prism. **Paralyt′ic d.,** d. of the eye in paralytic strabismus. **Pri′mary d.,** deviation of the visual axis in strabismus. **Sec′ondary d.,** condition existing in paralysis of the ocular muscles; the sound eye deviates, while the affected eye fixes. **Spas′tic d.,** d. of the eye in spastic strabismus. **Strabis′mic d.,** d. of the eye in ordinary strabismus.

**Dev′il in a bush.** Nigella.

**Dev′il's bit.** Veratrum viride, Alteris farinosa, Scabiosa succisa, Chamelirium luteum. **D.′s bite,** liaris. **D.′s drug,** asafœtida. **D.′s shoe′strings,** Galena virginiana; Zephrosia virginiana.

**Devirgina′tion** (*de*, from, *virgo*, virgin). Defloration. See *Stuprum.*

**Deviscera′tion** (*de*, from, *viscus*, entrail). Operation of taking out the bowels.

**Devi′talize.** To deprive of vitality or vital force.

**Devi′talizing fi′bres.** Absorbent cotton containing arsenical paste; used in dentistry. **D. paste,** arsenical paste.

**Devolu′tion.** Degeneration; the opposite of evolution.

**Dev′onshire col′ic.** Lead colic.

**Devora′tion.** The act or process of devouring.

**Devor′ative.** Devouring.

**Dew′berry plant.** Rubus cæsius.

**Dew-claws.** Morbid secretion from the horse—knee-scab—formerly used in epilepsy.

**Dew cure.** The so-called Kneipp treatment of disease by walking barefooted in the early morning dew.

**De Weck′er's opera′tion.** Operation for the removal of staphyloma of the cornea.

**Dewees′s′ carmin′ative.** A preparation containing magnesium carbonate, tincture of asafœtida, tincture of opium, sugar, and distilled water.

**Dew′lap.** Duplicature of hanging skin on the inferior portion of the neck of the ox.

**Dew′point.** Temperature at which dew forms.

**Dexiocar′dia** (*dexios*, right, *kardia*, heart). Dextrocardia; case in which the heart is found to beat on the right side; met with occasionally in pleurisy and pneumothorax, and as a congenital anomaly.

**Dex′trad** (*dexter*, right). Term used to signify toward the dextral aspect.

**Dex′tral as′pect.** On the right side; looking toward the right. **D. pre-em′inence,** greater use and strength of the right arm and leg compared with the left.

**Dextral′ity** (*dexter*, right). State of being on the right side; the state of being right-handed.

**Dex′tran.** $C_6H_{10}O_5$. Gelatinous substance resulting from the action of Leuconostoc mesenterioides on dextrose in the *dextran fermentation* of molasses and sugar.

**Dex′trinase.** Ferment in starch, which changes starch to isomaltose.

**Dextrine′** (*dexter*, right). British gum, artificial gum. (So called from its refracting the rays, in the polarization of light, to the right). It is obtained by the continued action of diluted sulphuric acid upon starch at the boiling point; it is isomeric with starch. It is used in the treatment of fractures by the immovable apparatus. **An′imal d.,** glycogenic matter. **Hepat′ic d.,** glycogenic matter.

**Dex′trinize.** To change into dextrine.

**Dextrinu′ria.** The excretion of dextrine in the urine.

**Dextrocar′dia** (*dexter*, right, *kardia*, heart). Dexiocardia.

**Dextrococaïne′.** Isococaine.

**Dextroduc′tion** (*dexter*, right, *duco*, to lead). Movement to the right, as of the eyes.

**Dex′troform.** Result of action of dextrine on formaldehyde.

**Dextroglu′cose.** See *Glucose*.

**Dextrogy′rate** or **Dextrog′yrous** (*dexter*, right, *gyros*, turn). Rotating plane of polarization to the right.

**Dex′trogyre.** Dextrorotary; dextrogyrate.

**Dextromen′thol.** Menthol oxidized through the agency of chromic acid.

**Dextroro′tary** (*roto*, to turn). Rotating the plane of polarization to the right.

**Dex′trorse.** Turning toward the right, as glucose.

**Dextrosaccharin′.** A mixture of 1 part of saccharin in 2000 parts of glucose.

**Dex′trose.** Glucose; so called on account of its deflecting rays of polarized light to the right.

**Dextrosinis′tral.** From right to left.

**Dextrotor′sion** (*torqueo*, to twist). Rotation of vertical meridians of both corneæ to the right.

**Dextrover′sion** (*dexter*, right, *verto*, to turn). Turning to the right, as dextroversion of the uterus, the fundus of which turns to the right of the middle line.

**Dezy′motize** (*zyme*, ferment). To free from ferments or germs.

**Dhatu′ra.** Datura alba.

**Dho′bie's itch.** Indian name of tinea circinata tropica of the thighs and genital region; tinea cruris.

**Di-, Dis-.** In composition, *bis*, twice, double; also, as well as *dif* and *dis*, separation or division, and at times negation and privation.

**Dia-.** In composition, through, asunder, out of, separated; when prefixed to any therapeutical agent it meant, in ancient pharmacy, a preparation into which that agent entered.

**Diab′ebos.** Astragalus; malleolus.

**Diabète′ bronzé′** (Fr.). Bronze diabetes.

**Diabe′tes** (*dia*, through, *baino*, to pass). Disease characterized by great augmentation, and often manifest alteration, in the secretion of urine, with excessive thirst and progressive emaciation. Two species are usually described—*diabetes insipidus* and *diabetes mellitus;* the former being simply a superabundant discharge of limpid urine not containing sugar; the latter—saccharine diabetes—falls under the definition given above. The quantity of urine discharged in the twenty-four hours is sometimes excessive, amounting to 30 pints and upward, each pint containing sometimes 2¼ oz. of saccharine matter. The exciting causes are often found in diseases of the nervous centres, tumors, and injuries, especially those involving the fourth ventricle. Fehling's test is the most useful means of detecting sugar in the urine. See *Fehling*. Bouchardat's formula for estimating the amount of sugar by a knowledge of the specific gravity is as follows: The last two figures of the specific gravity are multiplied by 2, the product is multiplied by the amount of urine (in litres) in twenty-four hours, and then 30 or 40 (if large quantity of urine, 50 or 60) are subtracted; the result gives the amount of sugar in grammes. For example, the specific gravity being 1.025, the amount of urine is 4 litres:

$$\begin{aligned} 25\times\ 2 &= 50. \\ 50\times\ 4 &= 200. \\ 200-30 &= 170\text{ g. of sugar.} \\ 40 &= 160\text{ g. `` ``} \end{aligned}$$

The treatment of diabetes includes a number of articles of the materia medica, but there is no specific remedy for it. Particular attention must be paid to the diet (which should exclude saccharine and starchy articles), in view of the fact that the greater portion of the glucose in the blood is derived from saccharine and starchy substances. *Diabetes insipidus* or *ureal diabetes*, which occurs in hysterical habits, and has hence been called *diabetes hystericus*, is of comparatively trifling moment. Exclusive diet and attention to the state of the cutaneous transpiration have most commonly failed in this affection. **D. al′ternans,** d. alternating with symptoms of gout. **D. an′glicus,** see *Diabetes*. **D. bark,** caju; bark of Anacardium occidentale; employed in the treatment of diabetes insipidus. **Bil′iary d.,** hypertrophic cirrhosis of the liver. **Bronze d.,** d. accompanied with pigmentation of the organs of secretion and sclerosis of the liver and pancreas. **Cer′ebral d.,** cerebrosuria. **D. chylo′sus,** chyluria. **Con′jugal d.,** d. affecting husband and wife simultaneously. **D. decip′iens,** d. in which a large amount of sugar is present, but the amount of urine passed is normal. **D. hyster′icus,** see *Diabetes*. **In′osite d.,** inosituria. **D. insip′idus,** see *Diabetes*. **D. lac′teus,** chyluria. **Lean d.,** d. with great loss of flesh. **Lipog′enous d.,** d. with obesity. **Masked d.,** the obesity or gout which may precede the development of d. mellitus. **D. melli′tus,** see *Diabetes*. **Mos′ler's d.,** inosituria. **Pancreat′ic d.,** d. dependent on disintegration or degenerative changes in the pancreas. **Phloridzin′ d.,** d. caused by ingestion of phloridzin. **Phosphat′ic d.,** form of diabetes accompanied with polyuria, loss of flesh, and thirst, and in which the phosphates are excreted in excess; usually the urine does not contain sugar. **Punc′ture d.,** d. produced by puncture of the medulla oblongata near the diabetic centre. **Sac′charine d.,** d. mellitus. **D. spu′rius,** see *Diabetes*. **Ure′al d.,** see *Diabetes*. **D. ve′rus,** diabetes mellitus.

**Diabet′ic.** Relating to diabetes. One having diabetes. **D. cat′aract,** cataract depending on complicated disturbances in the nutrition of the crystalline lens in diabetes. **D. cen′tre,** centre on the floor of the fourth ventricle of the brain; puncture of this spot is followed by glycosuria. **D. co′ma,** coma occurring usually in that form of diabetes characterized by rapid emaciation and cachexia; the urine is reduced in quantity, dyspnœa is generally present, there are nausea and vomiting, and the coma is fatal within two or three days. **D. ear,** inflammation of the mastoid cells occurring in diabetes. **D. gan′grene,** sphaceloderma. **D. su′gar,** see *Glucose*. **D. u′rine,** glycosuria.

**Diabetide′.** Diabetes with cutaneous appearances.

**Diabetin′.** Levulose.

**Diabetogen′ic** or **Diabetog′enous.** Causing diabetes. *Diabetogenous* also means caused by diabetes.

**Diabetom′eter** (*diabetes*+*metron*, measure). Instrument consisting of a polariscope for estimating the quantity of sugar in diabetic urine.

**Diabolep′tic.** One who holds imaginary converse with demons while mentally deranged.

**Diabro′sis** (*dia*, through, *brosko*, to eat). Erosion; corrosion.

**Diabrot′ic.** Substance capable of causing erosion of the part to which it is applied; ordinarily a medicine whose activity places it between escharotics and caustics. See *Corrosive*.

**Diacathol′icon** or **Diacathol′icum** (*dia*, through, *katholikos*, universal). Name of a purge, so called from its general usefulness. It was an electuary, and composed of the pulp of cassia, tamarinds, leaves of senna, root of polypody, flowers of the violet, rhubarb-root, aniseed, sugar, licorice, and fennel.

**Diacaus′tic.** That which is caustic by refraction, as a double convex lens, which has sometimes been used for cauterizing an ulcer by directing the sun's rays upon it.

**Di′acele.** Diacœle.

**Diacetæ′mia.** The presence of diacetic acid in the blood.

**Diacetan′ilid.** A product of the action of heating glacial acetic acid at a temperature of over 200° with acetanilid, whose virtues it possesses, being, however, stronger in its action.

**Diace′tic acid.** $C_4H_6O_4$. An acid found in the urine in diabetes, indigestion, the acute exanthemata, and other morbid conditions.

**Diace′tin.** $C_7H_{12}O_5$. Liquid resulting from a combination of glycerol and two radicals of acetic acid.

**Diacetonu′ria** or **Diacetu′ria.** Excretion of diacetic acid in urine, as in diabetes.

**Diacet′yl-piperazin′.** Derivative of piperazin. **D.-tan′nin**, tannigen.

**Diachala′sis** (*dia*, through, *chalao*, to be opened or relaxed). Fracture of the bones of the skull, or relaxation and separation of the sutures in consequence of a wound of the head.

**Diachalas′ma** (*dia*, through, *chalasma*, dislocation). A fissure.

**Diachore′ma** or **Diachore′sis** (*dia*, through, *choreo*, to retire, to separate from). Every kind of excreted matter. **D. xysmato′des**, evacuation of shreds or patches of the mucous membrane of the bowels in malignant dysentery.

**Diachoret′ic.** Laxative.

**Diachris′ma.** Ointment.

**Diach′ylon** or **Diach′ylum** (*dia*, through, *chylos*, juice). A plaster of this name was formerly made of certain juices. The term is now confined to emplastrum plumbi or lead plaster. **D. gummo′sum** or **Gum d.**, emplastrum gummosum. **D. oint′ment**, unguentum diachyli; Hebra's lead ointment. **D. sim′plex**, emplastrum plumbi. **White d.**, emplastrum plumbi. **Yel′low d.**, emplastrum gummosum.

**Diacine′ma** (*dia*, through, *kineo*, to move). Slight dislocation; subluxation.

**Diacla′sia** or **Diacla′sis** (*diaklao*, to break in two). Former method in which the bone was first broken and then followed by amputation. Refraction.

**Di′aclast** (*dia*, through, *klao*, to break off). Screw-pointed instrument for perforating the fetal skull.

**Di′aclysm** or **Diaclys′ma.** Gargle.

**Diaco′dion** or **Diaco′dium.** Ancient preparation of poppies. The syrup of poppies—syrupus papaveris—is now substituted for it.

**Di′acœle** (*dia*, through, *koilia*, cavity). Third ventricle of the brain.

**Diac′ope** (*dia*, through, *kopto*, to cut). Abscission; dissection; intersection. **D. cra′nii**, opening the head and separation of the bones of the cranium. **D. en′cope**, cut, incision, fissure, or longitudinal fracture; generally an oblique incision made in the cranium by a sharp instrument, without the piece being removed.

**Diacous′tic.** Relating to diacoustics.

**Diacous′tics.** The science of refracted sound.

**Diacra′nian** (*dia*, lightly, *kranion*, skull). Attached to the skull by movable articulation, as the lower jaw.

**Diacrisiog′raphy** (*diakrisis*, separation, *graphe*, description). Description of the organs of secretion.

**Diac′risis** (*dia*, through, *krino*, to separate). Critical discharge. Diagnosis from the character of the crisis. Disease characterized by alteration of secretion.

**Diacrit′ic.** Diagnostic; distinguishing. **D. signs**, signs by which one disease can be accurately discriminated from another.

**Diactin′ic** (*dia*, through, *aktis*, ray). Having the power of transmitting actinic rays.

**Diac′tinism.** The condition of being diactinic.

**Di′ad** (*dis*, twice). A bivalent element.

**Di′aderm** (*dia*, through, *derma*, skin). Blastoderm consisting of two layers, the ectoderm and entoderm.

**Diader′mic.** Endermic.

**Diado′sis** (*diadidomi*, to distribute). Distribution of nutritive matter—in other words, nutrition—over the whole body. Remission or cessation of a disease. See *Anadosis*.

**Diædœ′us.** Monster whose organs of generation and urinary bladder are double.

**Diæ′resis** (*dia*, through, *haireo*, to take away, to divide). Division or solution of continuity. Surgical operation consisting in dividing any part of the body. **D. un′guiæ**, falling off of the nails.

**Diæ′ta.** Diet.

**Diagnose′.** Diagnosticate; to determine, by a study of the history, symptoms, etc., the nature of a disease.

**Diagno′sis** (Gr., a distinguishing). Discrimination. That part of medicine whose object is the recognition or determination of the nature of diseases and the knowledge of the pathognomonic signs of each. See *Symptom*. **Clin′ical d.**, diagnosis based upon symptoms which present themselves independently of the pathological changes which cause them. **Differen′tial d.**, study of the signs by which one disease can be accurately discriminated from another. **D. by exclu′sion**, diagnosis obtained by critically comparing diseases which have analogous points with the affection under consideration, and after reviewing and finding some of the more important features lacking, arriving at but one possible conclusion. **Patholog′ical d.**, diagnosis based on the character of a lesion irrespective of its location. **Phys′ical d.**, discrimination of diseases by physical signs afforded by auscultation, percussion, etc. **Presump′tive d.**, diagnosis which is not based on facts. **Re′gional d.**, topographical d. **Retrospec′tive d.**, diagnosis based on a previous affection, the true character of which can only be arrived at by studying the history of the case and the effects which present themselves. **Symptomat′ic d.**, diagnosis based on the most salient symptoms presented by a case. **Topograph′ical d.**, diagnosis of the situation in which a lesion is located.

**Diagnos′tic.** Symptom which is characteristic of a disease.

**Diagnos′ticate.** To diagnose.

**Diagnostica′tion.** The act of making a diagnosis.

**Diagnosti′cian.** One experienced in diagnosis.

**Diagnos′tics.** Art of diagnosis.

**Diagogom′eter** or **Diagom′eter** (*diagoge*, transmission, *metron*, measure). Apparatus for estimating the conductivity of different bodies.

**Diag′onal con′jugate.** Conjugate diameter. See *Pelvis*.

**Di′agram.** Schematic representation of the main points of a structure for the purpose of illustration.

**Diagrammat′ic.** Of the nature of a diagram; sketchy.

**Di'agraph** (*diagrapho*, to mark by lines). Instrument for delineating the outlines of the cranium.

**Diagryd'ium.** Scammony. **D. cydonia'tum, D. glycyrrhiza'tum, D. sulphura'tum,** combinations of scammony with quince juice, extract of licorice, and sulphur, respectively; energetic purgatives.

**Diahy'dric** (*dia*, through, *hydor*, water). Applied to a sound, elicited by percussion, which is heard through intervening fluid.

**Dialeip'sis** (*dialeipo*, to intermit). Apyrexia; intermission.

**Dialem'ma** (an interval). Apyrexia.

**Dialep'sis** (*dialambano*, to intercept). Interstice or interval left between the turns of a bandage.

**Dial'ion.** Heliotropium europæum.

**Dialip'sis.** Apyrexia; intermission.

**Dialy'sable.** Capable of being dialyzed.

**Dial'ysates.** Fluid extracts from plants obtained by dialyzation. They have the standard strength of the official fluid extracts.

**Dial'ysis** (*dialysis*, solution). Dissolution or loss of strength; weakness of the limbs. Solution of continuity. The separation from liquids of substances in solution—crystalloids and colloids, for example—by passage through a porous membrane.

**Dialyt'ic.** Pertaining to dialysis.

**Di'alyzed.** Prepared by dialysis.

**Di'alyzer.** Apparatus for dialyzing, which floats in pure water the crystalloids of the substance undergoing treatment which pass through its membrane, while the colloids are retained by the same membrane.

**Diamagnet'ic.** Movement eastward or westward, of copper or antimony and other substances, when introduced into the magnetic field.

**Diame'nia.** Interruption of the menstrual flow.

**Diamesosteomy'ces** (*diamesos*, in the middle line, *osteon*, bone, *mykes*, fungus). Fungous growth in the substance of a bone.

**Diam'eter** (*dia*, through, *metron*, measure). The distance between opposite sides of a rounded body measured along a straight line passing through its centre. **Deven'ter's d., D. of the fe'tal head, pel'vis,** etc., see these words.

**Di'amide.** Double amide; that is, a double molecule of ammonia in which an acid radical partially replaces the hydrogen.

**Diam'ine.** Hydrazine; compound formed by two hydrogen atoms in a double ammonia molecule being replaced by a base.

**Diaminu'ria.** The excretion of diamine in the urine.

**Diammon'ic.** Having two molecules of ammonium.

**Diamorpho'sis** (*diamorphoo*, to shape). Growing out or shaping.

**Diam'yl.** Double molecule of amyl.

**Diamyl'ic.** Containing diamyl.

**Dian'dria** (*dis*, twice, *aner*, male). Condition in which the male organs are double.

**Dian'geious** (*dis*, twice, *angeion*, vessel). Possessing two vessels.

**Dian'thera bi'fida.** Species of East Indies, employed in infusion in rice-water against the bites of venomous serpents.

**Dian'thus caryoph'yllus.** Clove pink, gilliflower, carnation. Flowers were once much used, but are now only employed in syrup as a useful and pleasant vehicle for other medicines.

**Diapa'son.** Tuning-fork. **Ver'tex d.,** process of determining hearing-power for a vibrating fork by placing the foot of the latter on the cranial vertex.

**Diapede'sis** (*diapedao*, to leap through). Exhalation, as of blood, in the form of dew, at the surface of the skin or of any membrane; sweating of blood; passage of blood or its elements through the unbroken walls of the vessels.

**Diapedet'ic.** Relating to diapedesis.

**Diapen'sia cortu'sa.** Sanicula.

**Di'aphane.** Transparent membrane enclosing a sac or cell. The light used in diaphanoscopy.

**Diaphane'ity.** Transparency.

**Diaphan'ic.** Transparent.

**Diaphanom'eter** (*dia*, through, *phaino*, to appear, *metron*, measure). Apparatus for determining the amount of solids contained in a liquid by noting the degree of its transparency.

**Diaphan'oscope.** See *Diaphanoscopy.*

**Diaphanos'copy** (*diaphanes*, transparent, *skopeo*, to examine). Examination of the interior of a hollow viscus by the introduction of a powerful light into it, either reflected or electric, through a *diaphnoscope.*

**Diaph'anous.** Transparent. **D. test of death** if the person is not dead, a pink or red color of the tips of the fingers is visible when they are held near a light.

**Diaphemet'ric** (*dia*, through, *aphe*, touch, *metron*, measure). Relating to measurements of the tactile sensibility of parts, as diaphemetric compasses.

**Diaphon'ic.** Relating to diaphonics.

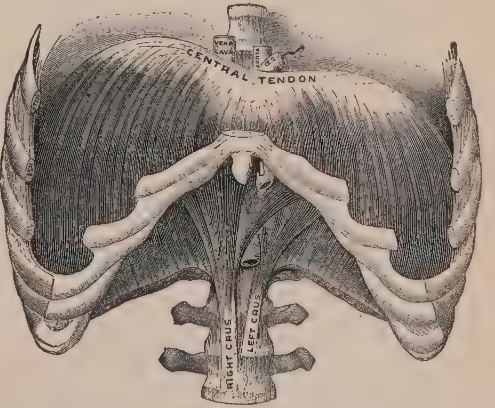
**Diaphon'ics** (*dia*, through, *phone*, sound). Doctrine of refracted sounds.

**Diaphore'sis** (*diaphoreo*, to convey, to dissipate). Greater degree of perspiration than natural.

**Diaphoret'ic.** Increasing perspiration, or marked by the occurrence of perspiration. Agent which increases the secretion of sweat. Diaphoretics are very uncertain as a class. They are all indirect agents—some *sedative* (relaxing the cutaneous capillaries), others *excitant* (increasing the rate of the cutaneous circulation or stimulating the sudoriparous glands)—and cannot therefore be used indiscriminately in disease. See *Sudorific.* **D. min'eral,** antimonium diaphoreticum.

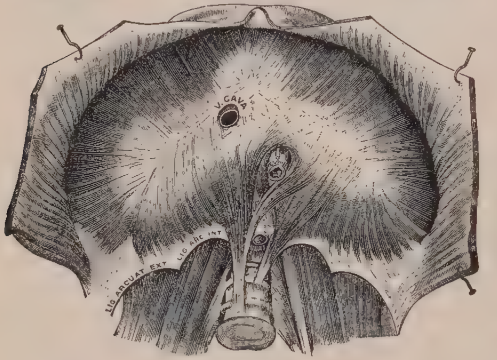
**Diapho'toscope.** Electric apparatus by means of which hollow organs or canals can be illuminated; diaphanoscope.

**Di'aphragm** (*diaphragnymi*, to fence off). Large azygous muscle, stretched transversely between the thoracic and abdominal cavities, which it separates from each other; tendinous in the centre; thin, almost circular, and unequally convex upward. It is fleshy at its circumference, which is attached to the ensiform cartilage, to the last six ribs, to the aponeurosis stretched from the last rib to the transverse process of the first lumbar vertebræ, and, lastly, to the bodies of the first three or four lumbar vertebræ. When it contracts its fibres become straight, the chest is enlarged, and the abdomen diminished. It is then an inspiratory muscle. It may also diminish the capacity of the chest, and be an expiratory muscle. This muscle plays an important part in sighing, yawning, coughing, sneezing, laughing, sobbing, crying, hiccoughing, singing, vomiting, and in the excretion of the fæces and urine, the expulsion of the fœtus, etc. In microscopy and photography an appliance for regulating the illumination. **Cer'ebral d.,** tentorium. **O'ral d.,** mylohyoid muscle. **Na'sal**



Diaphragm, viewed from in front. (Gerrish.)

d., septum narium. **Pel'vic d.**, levator ani muscle. **D. phenom'enon**, first described by Litten; hence called *Litten's sign.* If a person lies with his feet pointed straight toward a window (cross lights being excluded) and the chest exposed, the following appearances can be noted during forced respiration: Along both axillæ a sort of shadow is seen to descend during deep inspiration from about the seventh to the ninth rib, passing up again during expiration. The shadow travels on an average from 2½ to 3 inches. It is not noticed in pleuritic adhesions or effusions, or emphysema. **Rec'tal d.**, see *Rectal.* **Sec'ondary d.**, transverse mesocolon. **D. of the sel'la**, fold of dura mater between the anterior and posterior clinoid processes of the sphenoid bone.



Diaphragm, viewed from below. (Gerrish.)

**Diaphragmal'gia** or **Diaphragmatal'gia** (*diaphragm+algos*, pain). Pain in the diaphragm.

**Diaphragmataposte'ma.** Abscess in the diaphragm.

**Diaphragmat'ic.** Phrenic; belonging to the diaphragm; name given to several vessels and nerves. **D. ar'teries**, phrenic arteries; these are distinguished into *superior* and *inferior*. The former, called also *supradiaphragmatic*, are two in number, one on each side. They arise from the internal mammary, and descend along the phrenic nerve, to be distributed on the upper surface of the diaphragm. The latter, or *infradiaphragmatic*, are also two in number; they arise from the upper part of the abdominal aorta or from the cœliac artery, and divide into two principal branches, which are distributed on the lower surface of the diaphragm and in its substance. The *superior diaphragmatic veins* follow the same course as the arteries, and empty themselves—the right, into the vena cava superior; the left, into the corresponding subclavian vein. The two *inferior diaphragmatic veins* open into the vena cava inferior. **D. her'nia**, phrenic hernia; diaphragmatocele; the abdominal viscera are occasionally protruded through the diaphragm, either through some of the natural apertures in the muscle, or through deficiencies or wounds or lacerations in it. **D. nerves**, phrenic nerves, internal respiratory of Sir Charles Bell, are two in number, one on the left side, the other on the right. They arise from the second and third nerves of the cervical plexus, about the middle of the neck, and receive two or three filaments from the brachial plexus, after which they descend into the chest at the sides of the pericardium, and are distributed to the diaphragm. **D. pleu'risy**, inflammation of that part of the pleura which invests the diaphragm. **D. plex'uses** are two in number, one right, and the other left. They arise from the upper part of the solar plexus by a small number of branches, which are distributed to the diaphragm, following exactly the branches of the inferior diaphragmatic arteries. **D. ring**, the irregularly quadrilateral aperture by which the vena cava inferior passes through the diaphragm.

**Diaphragmati'tis.** Inflammation of the diaphragm, the essential symptoms of which are painful constriction around the præcordia, with small, quick, laborious breathing; a rare disease.

**Diaphragmat'ocele** (*diaphragm+kele*, rupture). Diaphragmatic hernia.

**Diaphragmi'tis.** Inflammation of the diaphragm.

**Diaphrag'mocele.** Diaphragmatocele.

**Diaphragmodyn'ia** (*diaphragm + odyne*, pain). Muscular or other pain of the diaphragm.

**Diaphtherin'.** Oxychinaseptol; said to possess marked antiseptic properties.

**Diaph'thol.** $C_9H_7O_4SN$. Chinaseptol; quinaseptol; orthoöxyquinolinemetasulphonic acid; used internally as an antiseptic.

**Diaph'thora** (Gr). Corruption.

**Diaphthor'oscope** (*diaphthora*, corruption, *skopeo*, to examine). Apparatus for examining the purity of the atmosphere.

**Diaphylac'tic** (*phylasso*, to preserve). Prophylactic.

**Diaphys'eal.** Relating to a diaphysis.

**Diaph'ysis** (*diaphyo*, to rise between). An interstice, interval, division. Middle part or body of a long bone.

**Diaphysi'tis.** Inflammation of the diaphysis of a bone.

**Dia'pia.** Diapyesis; also the opposite to myopia.

**Diaplasmat'ic.** Name given to very small vessels which were supposed to connect the capillaries and lymphatics.

**Di'aplex** or **Diaplex'us.** Choroid plexus of the third ventricle of the brain.

**Diap'ne.** Involuntary micturition.

**Diapneu'sis** (*dia*, through, *pneo*, to exhale). Perspiration.

**Diap'noe** or **Diapnœ'a.** Perspiration.

**Diapno'ic** or **Diapnot'ic.** Gently; diaphoretic.

**Diapodimorphine'.** $C_{62}H_{72}N_4O_{10}$. Obtained by treating codeine with hydrochloric acid at a temperature of 100°.

**Diapoph'ysis.** Articular part of the transverse process of a vertebra.

**Diapru'num.** Purgative electuary, of which the pulps of prunes and rhubarb formed the basis.

**Diapye'ma** (*diapyeo*, to suppurate). Empyema; suppuration.

**Diapye'sis.** Suppuration. **D. oc'uli**, hypopyon.

**Diapyet'ic.** Suppurative; promoting suppuration.

**Diaræ'mia** (*dia + rheo*, to flow, *haima*, blood). Pathological condition in sheep in which the globules of the blood are diminished in quantity, the blood itself thinner and transuding through the coats of the vessels into the cavities.

**Diarrhe'a, Diarrhe'al.** Diarrhœa, diarrhœal.

**Diarrhet'ic.** Diarrhœal.

**Diarrhœ'a** (*dia*, through, *rheo*, to flow). Looseness of the bowels; purging; scouring. Disease characterized by frequent liquid alvine evacuations, and generally owing to inflammation or to irritation of the mucous membrane of the intestines. It is often caused by errors in regimen, the use of food noxious by its quality and quantity, etc., constituting the *diarrhœa stercoraria* or *crapulosa* of writers. Many varieties have been made by nosologists (most of their terms being now obsolete)—*e. g.*, *mucous*, diarrhœa mucosa, blennochezia, mycodiarrhœa; and by some authors enteria, enteritis, diarrhœa catarrhosa or catarrhalis, and erythemides, under the idea that it is associated with an erythematous congestion of the mucous surface; *bilious*, ileocholosis, cholodiarrhœa, diarrhœa biliosa; *serous*, hydrochezia, hydrodiarrhœa, orrhochezia—dependent upon the matters evacuated. Diarrhœa requires different treatment, according to its nature. If caused, as it often is, by improper matters in the intestinal canal, these must be evacuated; and the astringent plan of treatment must not be adopted unless the discharges seem kept up by irritability of the intestines or unless they are colliquative. Indiscriminate use of astringents is to be deprecated. A very fatal diarrhœa prevailed among the native inhabitants of

India—*diarrhœa hectica*, so called because, like hectic fever, it seemed to obtain habitual possession of the constitution, to operate upon it with scarcely any perceptible intermission, and in general to defy the most powerful remedies. **D. ablactato'rum**, d. of infants occurring at the time of weaning; weaning brash. **D. ac'ida**, characterized by green stools which smell sour, and by pains in the abdomen. **D. adipo'sa**, diarrhœa with fatty evacuations and great emaciation. **D. al'ba**, a form of bowel disease sometimes epidemic in Barbadoes, the stools being white and milky. **Albu'minous d.**, d. in which the stools contain albuminous matters. **D. arthrit'ica**, cœliagra. **D. bilio'sa**, d. associated with the discharge of bile. **Camp d.**, variety of diarrhœa occurring among soldiers. **D. carno'sa**, dysentery. **Choler-a'ic d.**, cholerine. **Chron'ic d.**, see *Psilosis*. **Crit'-ical d.**, d. occurring at the crisis of a disease or inducing a crisis. **D. chylo'sa** or **chymo'sa**, cœliac flux. **Co'chin Chi'na d.**, see *Cochin China*. **Colliq'-uative d.**, see *Colliquative*. **D. crapulo'sa**, see *Diarrhœa*. **D. cruen'ta**, mixture of blood with excessive discharges from the bowels. **D. dysenter'ica**, dysentery. **D. dyspep'tica**, lientery. **Endem'ic d.**, see *Psilosis*. **D. erythemoi'des**, see *Diarrhœa*. **Fat'ty d.**, stools are liquid and contain fat or oil, frequently indicating a cancerous affection of the pancreas. **D. hepat'ica**, d. biliosa. **D. ingesto'rum**, lientery. **D. liente'ria** or **lienter'ica**, lientery. **D. muco'sa**, see *Diarrhœa*. **D. purulen'ta**, diarrhœa accompanied with purulent discharges. **D. sanguinolen'ta**, d. cruenta. **Se'rous d.**, d. with watery discharges. **D. stercora'ria**, see *Diarrhœa*. **Su'doral d.**, diarrhœa associated with a disturbance of the functions of the skin, preventing the secretion of sweat, as in fevers accompanying suppuration, exanthematous fevers, etc. **Sum'mer d.**, summer complaint; cholera infantum. **Tuber'culous d.**, a colliquative d. occurring in the tuberculous, not necessarily an indication of intestinal tuberculosis. **D. urino'sa**, diabetes. **Vica'rious d.**, d. occurring as a result of the suspension of the functions of the skin, kidneys, etc. **Wa'tery d.**, serous d. **White d.**, scour of calves.

**Diarrhœ'al.** Relating to diarrhœa.

**Diar'senous** or **Diarsen'ious.** Containing two atoms of arsenic in the molecule. **D. sul'phide**, arsenic disulphide.

**Diarthro'dial.** Relating to a diarthrosis or movable articulation. Diarthrodial cartilages, or incrusting cartilages, are cartilages which invest the articular extremities of bones. See *Articulations*.

**Diarthro'dic.** Diarthrodial.

**Diarthro'sis** (*diaarthroo*, to articulate). Movable articulation, one permitting the bones to move freely on each other in every direction, as in case of the shoulder-joint. **D. rotato'rius**, lateral ginglymus; movement is limited to rotation; the joint is formed by a pivot-like process turning within a ring, or the ring around a pivot, as in the atloaxoid articulation.

**Di'ascope** (*skopeo*, to see). A piece of glass which, when applied firmly to the skin to drive the blood out of the compressed part, enables the observer to note the visible changes that occur.

**Diascor'dium.** An electuary containing seventeen ingredients, among them the water germander or scordium; stomachic and astringent.

**Di'aspasm.** Secretion. Rupture or laceration of organs by external violence.

**Diasphyx'is** (*dia*, through, *sphyzo*, to strike, to beat). Pulse; also a violent beat of the pulse.

**Diastal'tic** (*dia*, through, *stello*, to send). Epithet applied by Marshall Hall to the reflex or excito-motory system of nerves, because the actions they induce are performed through the spinal marrow as their essential centre.

**Diastasæ'mia** (*diastasis*, separation, *haima*, blood). Pathological condition characterized by a separation of the elements of the blood, the fibrin attaching itself to the valves of the heart.

**Di'astase** (*diastasis*, separation) Vegetable principle, allied in its general properties to gluten, which appears in the germination of barley and other seeds, and by its presence converts the starch into grape sugar and gum. See *Maltine*. **Sal'ivary d.**, ptyalin.

**Diasta'sic.** Diastatic.

**Diastasim'etry** (*diastase*+*metron*, measure). Measurement of the quantity of diastase.

**Dias'tasis** (separation). Separation of bones, and particularly of the bones of the cranium, from each other; of the radius from the ulna and the fibula from the tibia. Separation of an epiphysis from the shaft of the bone.

**Diastat'ic.** Relating to diastase; possessing the power of converting starch into sugar.

**Diaste'ma** (Gr., interval). Diastasis. Interstice. Interval between two teeth of different kinds, as canine and incisor.

**Diastematelyt'ria** (*diastema*+*elytron*, vagina). Organic deviation characterized by a longitudinal division or fissure of the vagina.

**Diastematencephal'ia** (*diastema* + *enkephalos*, brain). Organic deviation consisting in a longitudinal division of the brain.

**Diastematenter'ia.** Fissure of the intestinal canal which extends longitudinally.

**Diastema'tia** (*diastema*, interval). Fissure in the mesial line of the body.

**Diastematocau'lia** (*diastema*+*kaulos*, trunk). Organic deviation characterized by a longitudinal division of the trunk.

**Diastematochei'lia** (*diastema*+*cheilos*, lip). Congenital longitudinal division or fissure of the lip.

**Diastematocra'nia.** Organic deviation consisting in a longitudinal division of the cranium.

**Diastematocys'tia** (*diastema*+*kystis*, bladder). Congenital longitudinal division of the urinary bladder.

**Diastematogas'tria** (*diastema*+*gaster*, stomach). Organic deviation characterized by a longitudinal division of the stomach.

**Diastematoglos'sia** (*diastema*+*glossa*, tongue). Congenital longitudinal fissure of the tongue.

**Diastematogna'thia** (*diastema*+*gnathos*, jaw). Organic deviation characterized by a longitudinal division of the jaw.

**Diastematome'tria** (*diastema* + *metra*, womb). Congenital longitudinal division or fissure of the womb.

**Diastematomye'lia** (*diastema*, internal, *myelos*, marrow). Congenital division of the spinal cord into two lateral halves; it occurs with anencephalia.

**Diastematopye'lia** (*diastema* + *pyelos*, pelvis). Congenital longitudinal division or fissure of the pelvis.

**Diastematorrha'chia** (*diastema*+*rhachis*, spine). Congenital longitudinal fissure of the spine.

**Diastematorrhin'ia** (*diastema*+*rhis*, nose). Congenital longitudinal division of the nose.

**Diastematostaphyl'ia** (*diastema*+*staphyle*, uvula). Organic deviation characterized by a longitudinal division of the uvula.

**Diastematoster'nia** (*diastema*+*sternon*, sternum). Organic deviation characterized by a longitudinal division of the sternum.

**Diastemente'ria.** Diastematenteria.

**Dias'ter** (*dis*, twice, *aster*, star). The double-star figure in karyokinesis. See *Amphiaster*.

**Dias'tole** (*diastello*, to dilate). Dilatation of the heart and arteries when the blood enters their cavities; it is the opposite movement to systole, in which the heart and arteries contract to send forth the blood. Diastole and systole are consequently successive movements. Diastole, like systole, occurs simultaneously in the two ventricles; the almost inappreciable time which elapses between the diastole and systole has been called *perisystole*, and that which succeeds to the diastole, *peridiastole*. When we speak of the contraction or systole of the heart, as well as of its diastole or dilatation, we mean only that of the ventricles; this dilatation is active.

**Diastol'ic.** Belonging to the diastole of the heart. **D. im'pulse of the heart**, see *Impulse, diastolic*. **D.**

**mur'mur,** murmur heard over the heart during dilatation of that organ. **D. thrill,** vibration or thrill heard in the cardiac region during dilatation of the ventricle.

**Diastrem'ma** (*diastrepho,* to distort). Distortion; perversion; sprain.

**Diastreph'ia.** A form of insanity characterized by cruelty.

**Dias'trophe.** Distortion; sprain.

**Diate'la** or **Diate'le.** Roof of the third ventricle of the brain.

**Diater'ma** (*dia,* between, *terma,* end). A part of the floor of the third ventricle of the brain.

**Diather'mal** or **Diather'manous.** Possessing the property of diathermancy.

**Diather'mancy** (*dia,* through, *thermaino,* to heat). Property of transmitting radiant heat.

**Diath'esis** (*diatithemi,* to place separately, to dispose). Disposition, constitution, affection of the body; predisposition to certain diseases rather than to others. **Aneurys'mal d.,** tendency to arterial dilatation and aneurysmal formation. **Arthrit'ic d.,** tendency to gouty affections of the joints or skin. **Can'cerous d.,** a supposed predisposition to malignant disease. **Catar'rhal d.,** tendency to inflammations of the mucous membranes. **Dar'trous d.,** tendency to cutaneous affections, such as herpes, eczema, etc. **Furun'cular d.,** tendency to suffer from boils and carbuncles. **Hemorrhag'ic d.,** hæmatophilia. **Lithæ'mic d.,** arthritic d. **Ner'vous d.,** see *Nervous.* **Rheumat'ic d.,** arthritic d. **Rheu'mic d.,** dartrous d. **Stru'mous d.,** tendency to tuberculosis or scrofula. **Tuber'culous d.,** strumous d. **Urat'ic** or **u'ric-acid d.,** arthritic d.

**Diathet'ic** or **Diathet'ical.** Relating or appertaining to a diathesis, as "diathetic diseases," gout and cancer, for example.

**Di'atom.** A member of the group of *Diatomaceæ,* microscopic algæ.

**Diatom'ic.** Containing two atoms.

**Diatre'sis** (Gr., boring through). Perforation.

**Diatrim'ma** (*diatribo,* to rub against). Chafing.

**Diatrype'sis** (*diatrypao,* to perforate). Arrangement of serrations of a cranial suture, interlocking with one another.

**Diax'on.** A neuron with two axis-cylinder processes.

**Diazo'ma** (Gr.). Diaphragm.

**Dia'zo reac'tion.** Called also Ehrlich's reaction. Method employed in typhoid fever for determining the quantity of urea. To equal quantities of urine and sulphanilic acid in a test tube sodium nitrate is added; ammonia (1 cubic cm.) is then added carefully, which forms a brownish-red ring at the junction of the two liquids.

**Diazos'ter** (*zoster,* girdle). Twelfth vertebra of the back, because it corresponds to the girdle.

**Diazos'tra.** Diaphragm.

**Diba'sic** (*dis,* twice, *basis*). Relating to acids in which two atoms of hydrogen are replaceable by a base.

**Diblas'tic** (*dis,* twice, *blastos,* germ). Having two sources of origin.

**Diblas'tula.** Embryo having both ectoderm and entoderm.

**Diboth'rium la'tum.** Bothriocephalus latus.

**Dibrometh'ane.** Ethylene bromide.

**Dibromogal'lic acid.** Gallobromol.

**Dical'cic.** Having two atoms of calcium in the molecule. **D. orthophos'phate,** $Ca_2H_4(Po_4)_2$, found occasionally in urinary deposits.

**Dicamphen'dion.** $(C_{10}H_{14}O)_2$. When metallic sodium acts on bromocamphor, two substances result, one dicamphendion, yellow; the other colorless, dicamphor.

**Dicam'phor.** $(C_{10}H_{15}O)_2$. See *Dicamphendion.*

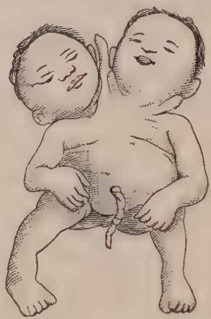
**Dicel'yphous** (*dis,* twice, *kelyphos,* shell). Possessing a double shell; said of eggs.

**Dicen'tra canaden'sis.** Squirrel-corn, colicweed; indigenous plant, ord. *Fumariaceæ;* the flowers have the odor of hyacinths; given internally in syphilis, and applied externally in syphilis and gonorrhœa. **D. exim'ia,** North American species; root is said to have tonic, alterative, and diuretic virtues. **D. succulla'ria,** Dutchman's breeches; has same medicinal properties as D. canadensis.

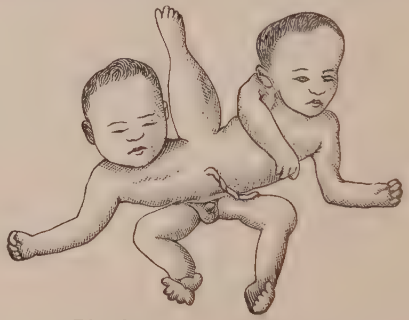
**Dicephal'ium** (*dis,* twice, *kephale,* head). Large sarcoma on the head, seeming to form a double head.

**Diceph'alous.** Double-headed. See *Dicephalus.*

**Diceph'alus.** Janus; monster with two heads. **D. dian'cheros,** each head has a separate neck. **D. dibrach'ius,** dicephalus with two arms. **D. heteroceph'alus,** two-headed monster in which one head is larger than the other. **D. monan'cheros,** dicephalus in which there is one neck. **D. tetrabra'chius,** variety of dicephalus having four arms. **D. tribra'chius,** variety of dicephalus having three arms. **D. tri'pus,** dicephalus having three legs or feet.



Dicephalus.



Dicephalus tribrachius tripus.

**Di'ceras ru'dis** (*dis,* twice, *keras,* horn). Ditrachyceras rudis. See *Worms.*

**Dichas'tic** (*dichazo,* to divide into two parts). Capable of spontaneous division.

**Dichlorace'tic acid.** Colorless liquid of disagreeable odor and possessing caustic properties; derived from acetic acid by substituting two atoms of chlorine for two atoms of hydrogen.

**Dichloralantipyrin'.** Obtained by trituration of antipyrin with chloral hydrate. It has the therapeutic action of both.

**Dichloreth'ane.** Colorless, transparent liquid, soluble in alcohol and ether; product of ethane by substituting two atoms of chlorine.

**Dichlormeth'ane.** Dichloride of methane; methylene chloride.

**Dichophy'ia** (*dicha,* in two, *phyo,* to grow). Disease of the hairs in which they split and grow forked.

**Dichop'sis gut'ta.** Isonandra gutta.

**Dichotomous,** di-kot'o-mus (*dicha,* in two, *tome,* division). Dividing regularly into pairs, as the branching of arteries.

**Dichro'ic.** Having two different colors, according to the medium; that is, one color by reflected light, another by transmitted light, or one color when passed through a thick medium and another through a thin one. See *Dichroism.*

**Di'chroism** (*dis,* twice, *chroa,* color). Property possessed by some translucent bodies by which, depending upon the direction in which rays of light pass through them with reference to the position of the eye, they assume two different colors; hæmoglobin crystals thus may appear bluish-red or scarlet.

**Dichro'masy.** Dichromism.

**Dichromat'ic.** Dichromic.

**Dichro'matism.** Dichromism.

**Dichro'mic vis'ion.** Dichromism; achromatopsia.

**Dichro'mism** (*dis*, twice, *chroma*, color). Dichromic vision; form of color-blindness in which one of the three primary colors, usually red, is not recognized.

**Dichro'mus.** Verbena officinalis.

**Dicinchonicine'.** Alkaloid from cinchonine and cinchonidine.

**Dicinchonine'.** $C_{38}H_{44}N_4O_2$. Alkaloid obtained from bark of Cinchona rosulenta and C. succirubra.

**Dic'lis.** Valve.

**Diconchinine'.** Diquinidine; alkaloid of cinchona.

**Dicor'yphus** (*dis*, twice, *koryphe*, crown of the head). Monster with a double vertex or cranium. **D. dihypogas'trius,** monster in which twins are united from the navel to the vertex.

**Dicra'nus.** Monster with a double vertex or cranium.

**Dicro'tal.** Dicrotic.

**Dicrot'ic** (*dis*, twice, *kroteo*, to strike). Epithet given to the pulse when it seems to beat twice as fast as usual; also synonymous with the term *rebounding*, the artery rebounding after striking, so as to convey the sensation of a double pulsation. It has been considered to foretell hemorrhage in certain diseases. See *Pulse*. **D. crest,** a pronounced secondary elevation on the sphygmographic tracing. **D. eleva'tion,** d. crest, **D. notch,** notch separating the primary and the dicrotic elevation.

**Dic'rotism.** Dicrotic condition of the pulse.

**Dic'rotous.** Dicrotic.

**Dictam'nus al'bus.** White fraxinella, bastard dittany. Fresh root is nervine, anthelmintic, and emmenagogue. **D. cre'ticus,** Origanum dictamnus. **D. fraxinel'la,** Dictamnus albus.

**Dictyi'tis.** Retinitis.

**Dic'tyon.** Network. Retina.

**Dictyop'sia** (*diktyon*, net, *opsis*, vision). Morbid condition in which net-like objects are floating before the eyes.

**Dicypel'lium caryophylla'tum.** Brazillian tree; bark furnishes Cassia caryophyllata.

**Didac'tic** (*didasko*, to teach). Instructive; specifically, the term is applied to instruction imparted in the medical curriculum by means of lectures in the class-room, as distinguished from laboratory or clinical instruction.

**Didac'tyle** (*dis*, twice, *daktylos*, finger). Possessing only two fingers or toes.

**Didactyl'ia** or **Didac'tylism.** Condition in which there are only two fingers or two toes on the hands or feet.

**Diday's' opera'tion.** An operation for webbed fingers, consisting in separating the fingers, and securing flaps from the dorsal side of one finger and the palmar side of the other.

**Didel'phic.** Relating to or possessed of a double uterus.

**Didel'phys** (*dis*, twice, *delphys*, uterus). State in which there is a double uterus. A genus of marsupial mammals; opossum. **D. cancriv'ora,** crab-eating opossum of S. America; said to enter into the preparation of curare.

**Didymal'gia** (*didymoi*, testicles, *algos*, pain). Pain in the testicles.

**Didymin'.** Extract of testicle of the bull.

**Did'ymis.** Testis.

**Didymi'tis.** Orchitis.

**Didymodyn'ia** (*didymos*, testicle, *odyne*, pain). Pain in the testes.

**Did'ymous.** Twin; paired.

**Did'ymus.** Gemellus; testicle. **D. symphyogas'trius,** gastrodidymus. **D. symphyohypogas'trius,** hypogastrodidymus. **D. symphyoperinæ'us,** pygodidymus. **D. symphyothoracogas'trius,** thoracogastrodidymus.

**Die.** See *Expiration* and *Death*. A mould for casting. **Den'tal d.,** see *Dental*.

**Dieffenbach'ia segui'na.** Dumb cane; native of West Indies; juice is exceedingly poisonous; plant has been recommended in dropsy.

**Dief'fenbach's opera'tion.** 1. For restoring the upper lip when the central part of the lip is deficient; consists in two incisions from the apex of the defect extending to the alæ of the nose. The two flaps obtained by these incisions are detached and connected in the median line; the mucous membrane forms the margin of the new lip. 2. For ectropium of the lower lip with cicatrix; a flap of normal tissue is used to replace the cicatrix.

**Dielec'tric.** Non-conducting; admitting the passage of electricity without conduction.

**Dienceph'alon** (*dia*, through, *encephalos*, brain). One of the principal secondary divisions of the primordial medullary tube, the *interbrain*, corresponding to the German Zwischenhirn. It includes the thalami optici, pineal gland, pituitary body, third ventricle, and optic nerve.

**Dier'esis** or **Diær'esis.** Division of tissue or solution of continuity, as in a wound or ulcer.

**Dieret'ic.** Escharotic; corrosive.

**Diervil'la trif'ida.** Bush honeysuckle; indigenous plant of the honeysuckle tribe; has been used as a diuretic, and in gonorrhœa and syphilis.

**Di'es** (a day). The day is, properly, the period during which the solar light illumines our horizon; but commonly, also, we designate by the word *day* the period of twenty-four hours. The medical day is usually reckoned at twenty-four hours—universally in estimating the duration of a disease. As regards the administration of medicine, if a medicine be ordered to be taken four times a day it is generally understood to mean during the twelve hours of day.

**Di'et.** Originally it signified nearly the same thing as hygiene and regimen. At the present day it usually signifies a particular kind or system of food and drink; also abstinence, as putting any one upon diet to deprive him of his usual nourishment. The terms *dry diet; milk diet*, diæta lactis; *flesh* or *meat diet*, diæta carnis; *soup* or *broth diet*, diæta juris or jusculi, etc., explain themselves. See *Aliment*, *Hygiene*, and *Regimen*. **D. drink,** decoction or potion, variously composed and used in considerable quantity for the purpose of purifying the blood. The decoctum Lusitanicum, or Lisbon diet drink, is one of the most celebrated. See *Decoctum sarsaparillæ compositum*. **D. scale,** dietary.

**Di'etary.** A regulated diet or allowance of food.

**Die'ters's cells.** Small cells with delicate processes alternating with Corti's cells in the organ of Corti. **D.'s pro'cesses,** the thick branched processes of the large central ganglion cells.

**Dietet'ic.** Relating or appertaining to dietetics or to diet.

**Dietet'ics.** Branch of medicine comprising the rules to be followed for preventing, relieving, or curing diseases by diet. Dietetics is diet administered according to principle, an important part of hygiene. A well-regulated system of diet may check disease and also prevent it. Knowledge of dietetics is, indeed, as important as that of the materia medica.

**Diethylac'etal.** See *Acetal*.

**Diethylamine'.** Secondary amine of ethyl; colorless, inflammable liquid with marked ammoniacal odor; also a non-poisonous ptomain generated during the putrefaction of fish, poisonous sausage, etc.

**Diethylendiamine'.** Piperazin.

**Diethylke'tone.** $C_2H_5C_2H_5CO$. Hypnotic; employed in nervous conditions, especially mania.

**Diethylsulphondiethylme'thane.** Tetronal.

**Diethylsulphondimethylme'thane.** Sulphonal.

**Diethylsulphonmethylethylme'thane.** Trional.

**Diet'ic.** Relating or appertaining to diet. **D.**

diseas'es, such as are produced by diet in its enlarged sense, as scurvy, rickets, alcoholism, etc.

**Dietl's cri'ses.** Gastric pain and suffering in nephroptosis.

**Dieurys'mus** (*dieuryno*, to dilate). Dilatation.

**Dif'ference the'ory.** Theory of galvanic phenomena.

**Differen'tial.** Distinguishing or discriminating. **D. diagno'sis**, see *Diagnosis*.

**Differentia'tion.** Development of membranes, organs, functions, etc. That phenomenon which, as affecting living matter, Herbert Spencer defines as passage from an indefinite incoherent homogeneity to a definite coherent heterogeneity. Differential diagnosis.

**Dif'fluence.** Condition of being diffluent.

**Dif'fluent.** Semifluid.

**Diffrac'tion.** The deflection which rays of light experience when passing close to the edge of a body or through a narrow aperture.

**Diffu'sate.** Liquid obtained after the process of dialyzation.

**Diffuse'.** To spread over a surface or through a mass, either by the production of greater tenuity in matter or by dissemination with force, as with electricity. Used adjectively in the sense of spread out, not circumscribed, not accurately defined or limited, as diffuse inflammation, aneurysm, etc.

**Diffu'sible** (*difundo*, to pour apart or abroad). Stimulating medicines are so called which speedily pass through the system and augment the action of the vascular and nervous systems in an acute but transitory manner.

**Diffusiom'eter.** Apparatus for determining the rate of diffusion.

**Diffu'sion.** Dissemination; dialysis. **D. cir'cle**, imperfect image resulting from incomplete focussing. **Liq'uid d.**, intermixing of fluids or solutions with each other directly; see *Dialysis*.

**Digas'tric** (*dis*, twice, *gaster*, belly). Having two bellies, as a muscle so formed. **D. fos'sa**, see *Fossa*. **D. groove**, point of attachment on the temporal bone of the digastric muscle. **D. mus'cle**, see *Digastricus*. **D. nerve**, see *Nervus digastricus*.

**Digas'tricus.** Name formerly given to several muscles, now restricted to one of the muscles of the superior hyoid region. The digastricus is thick and fleshy at its extremities, thin and tendinous at its middle; is attached to the mastoid groove of the temporal bone, and to a fossette at the side of the symphysis menti. Its tendon passes through an aponeurotic ring which is attached to the os hyoides. The digastricus depresses the lower jaw or raises the os hyoides, and carries it forward or backward, as in deglutition. The strong double-bellied muscle which forms the gizzard of birds is also called *digastricus*. **D. cra'nii**, occipitofrontalis. **D. maxil'læ inferio'ris** or **D. os'sis hyoi'dei**, digastric muscle.

**Digen'esis** (*dis*, twice, *genesis*, generation). Alternate generation; the alternation of sexual and nonsexual generation; reproduction seemingly of two species in alternate generations, the individuals of the even generations differing widely from those of the odd generations. Also digeny, or bisexual generation.

**Digenet'ic.** Relating to digenesis.

**Dig'eny.** Bisexual generation, as opposed to monogeny or parthogenesis.

**Dig'erant.** Digestant.

**Digest.'** To prepare food, by the action of various ferments in the gastroenteric canal, for assimilation. In chemistry to soften by gentle heat.

**Digest'ant.** Remedying or aiding digestion, as pepsin, ptyalin, etc.; ferment or acid that produces solution of the food in the alimentary canal.

**Digestibil'ity.** Capability with which food can be digested.

**Diges'tible** (*digero*, to digest, *habilis*, able). Capable of being digested. All food is not equally digestible, and some of the most important are the least so—the fat of meat, for example. Certain substances, again, are entirely rebellious. As a general rule, albuminous aliments—as tender mutton and beef—are the most easily appropriated.

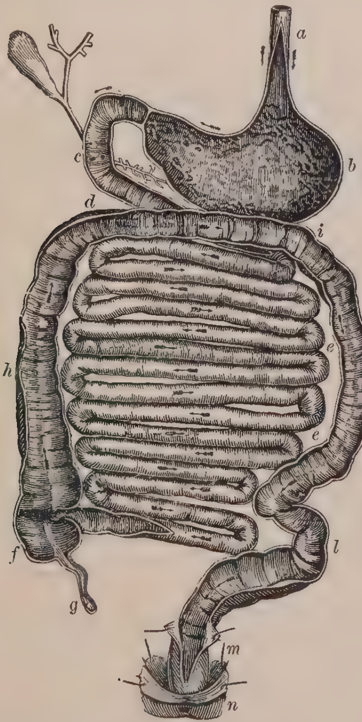
Dr. Beaumont, from his experiments on Alexis St. Martin, who had a gastric fistula, prepared the following table of the digestibility of various articles of food, based on the length of their stay in the stomach (although this is not an absolute proof of digestibility):

| *Food.* | *Mode of preparation.* | *Time required for digestion.* Hours. | Min. |
|---|---|---|---|
| Rice | cooked | 1 | |
| Pigs' feet | " | | |
| Eggs | beaten | 1 | 30 |
| Mountain trout | cooked | | |
| White sweet apples | raw | | |
| Sago | cooked | 1 | 45 |
| Brain | " | | |
| Milk | " | 2 | |
| Ox liver | fried | | |
| Codfish | cooked | | |
| Sour apples | raw | | |
| Eggs | " | | |
| Salad | " | | |
| Milk | uncooked | 2 | 15 |
| Turkey, wild | roasted | 2 | 18 |
| " tame | cooked | 2 | 25 |
| Wild goose | roasted | 2 | 30 |
| Suckling pig | | | |
| Boiled beans | | | |
| Potatoes | roasted | | |
| Lamb | cooked | | |
| Marrow of backbone | | 2 | 40 |
| Chicken fricassé | | 2 | 45 |
| Beef | | | |
| Hard sour apples | | 2 | 50 |
| Oysters | | 2 | 55 |
| " with bread | | 3 | |
| " | steamed | 3 | 30 |
| Eggs | cooked but little | 3 | |
| Beefsteak | | | |
| Ham | raw | | |
| Lean beef | roasted | | |
| Cake | | | |
| Wheat bread | | | |
| Old cheese | | 3 | 30 |
| Potatoes | cooked | | |
| Hard eggs | | | |
| Mutton soup | | | |
| Oyster " | | | |
| White turnips | cooked | | |
| Sausage | | | |
| Very fat beef | | 3 | 38 |
| Mutton | | 3 | 45 |
| Dry bread with potatoes | | | |
| Bread and butter and coffee | | | |
| Beans | cooked | | |
| Pork | roasted | 3 | 50 |
| Tame fowl | cooked | 4 | |
| Beef | roasted | | |
| Salted salmon | cooked | | |
| Veal | fried | | |
| Soup made of tough beef | | | |
| Cartilage | cooked | | |
| Tame duck | roasted | 4 | 15 |
| Soup made of pork and vegetables | | | |
| Corned beef | | | |
| Wild duck | roasted | 4 | 30 |
| Tendons | cooked | 5 | 30 |
| Suet | | | |

The time given in the above table applies in reality only to the time during which the food remains in the stomach, and not to the time actually required for true digestion and solution, the most important part of which occurs in the intestines.

**Diges'tion** (*digero*, to digest). The process by means of which alimentary substances, when introduced into the digestive canal, undergo different alterations. The object of it is to convert them into two parts: the one, a reparatory juice, destined to renew the perpetual waste occurring in the economy; the other, deprived of its nutritious properties, to be rejected from the body. This is effected by a series of organic actions differing according to the particular organization of the animal. In man they are eight in number—viz., prehension of food, mastication, insalivation, deglutition, action of the stomach, action of the small intestine (that of the bile, pancreatic juice, and intestinal secretion), action of the large intestine, expulsion of the fæces. Digestion is also a pharmaceutical operation which consists in treating certain solid substances with water, alcohol, or other menstruum, at a slightly elevated temperature, in a sand bath for example, or by leaving them exposed for some time to the sun. **Artific'ial d.**, that which is effected outside of the stomach by admixture of materials like those of the gastric juice or by the gastric juice itself. **Pri'mary d.**, preparation of the food in the stomach and intestine. **Sec'ondary d.**, absorption and assimilation of the food after primary digestion. **Self-d.**, destruction, through action of the gastric juice, of a portion of the gastric mucous membrane which has lost its vitality.

**Diges'tive.** Relating to digestion. See *Digestives.* **D. appara'tus**, see *Digestion.* **D. fer'ments**, enzymes contained in digestive fluids, as pepsin, trypsin, etc.; see *Ferments.* **D. juices**, see *Gastric juice, pancreatic juice, succus entericus*, etc., and *ferments, digestive.* **D. or'gans**, the alimentary canal and its appendages. **D. pro'cess**, digestion. **D. text'ure**, the particular organic condition of substances affecting their digestibility. **D. tract**, the passage along which the food is conveyed while being digested and prepared for assimilation, extending from the lips to the anus. **D. tube**, alimentary canal.



Digestive tract from œsophagus to anus: *a*, œsophagus; *b*, stomach; *c*, duodenum; *d*, jejunum; *e*, ileum; *f*, cæcum; *g*, appendix; *h*, ascending colon; *i*, transverse colon; *k*, descending colon; *l*, sigmoid flexure; *m*, rectum; *n*, anus; the two openings shown at *c* are the openings of the pancreatic and biliary ducts.

**Diges'tives.** Substances which, when applied to a wound or ulcer, promote suppuration; as ceratum resinæ, warm cataplasms, fomentations, etc; such substances are vulgarly termed *drawing*. Also remedies which aid digestion.

**Digit**, dij'it. A finger or toe. **Supernu'merary d.**, supernumerary finger or toe; may be owing to hereditary transmission.

**Digital**, dij'it-al (*digitus*, a finger). Having the shape of a finger; *digitated*. Belonging to or produced by the fingers, as digital compression, digital examination. The appendix vermiformis cæci is sometimes called the *digital appendix*. **D. ar'teries, veins,** and **nerves** are those distributed to the fingers. **D. bur'sæ**, small, subcutaneous bursæ over the knuckles and the backs of the joints of the fingers. **D. cav'ity**, ancyroid cavity; occipital portion of the lateral ventricle of the brain. **D. compres'sion**, see *Compression*. **D. dilata'tion**, dilatation of a canal or cavity with the finger. **D. examina'tion** or **explora'tion**, examination of any part with the finger. **D. fos'sa of the fe'mur**, see *Fossa, trochanteric.* **D. f. of the tu'nica vagina'lis**, depression occurring where the tunic is reflected from the testis to the epididymis. **D. impres'sions**, slight depressions observable on the inner surface of the bones of the cranium which correspond to the cerebral convolutions.

**Digitalacrin'.** Resin derived from digitalis.

**Digita'le.** Finger-stall. Small iron instrument for measuring the dimensions of the pelvis, which when placed at the end of the index finger adds to its length and enables it to reach the promontory of the sacrum.

**Digitalein'.** Glucoside from digitalis having the properties of digitalin and digitoxin.

**Digitaletin'.** Principle derived from digitalis.

**Digital'ic.** Appertaining or relating to digitalis.

**Digitalin'** or **Digitali'num.** Active principle of digitalis; a white or yellowish powder; dose gr. $\frac{1}{64}$ (0.001). The French digitalin—chloroformic digitalin, *digitaline amorphe*, digitaline of Homolle—is insoluble and of somewhat uncertain composition; the German digitalin—digitalinum purum—is said to be a mixture of digitin, digitonin, and digitalein; it is soluble in water and alcohol, and may be given by hypodermic injection.

**Digitalires'in.** Substance obtained from the decomposition of digitalin and digitalein; it has effects similar to those of picrotoxin.

**Digital'is.** A genus of plants, ord. *Scrophulariaceæ*. **D. min'ima**, baccar, foxglove. **D. purpu'rea**, purple foxglove; it is narcotic, cardiac tonic, diuretic, and sorbefacient; the leaves of this plant, collected from plants of the second year's growth, constitute the official *digitalis* (Ph. U. S. and Br.); indigenous in Great Britain. Digitalis stimulates the cardiac muscle and renders its contractions slower and stronger; in moderate doses tending to remove already existing irregularity of the heart's contractions. In overdoses digitalis causes vomiting, purging, dimness of sight, vertigo, delirium, hiccough, convulsions, and death—all the symptoms, in short, which characterize the acronarcotic class of poisons. Its active principle is called *digitalin*. Several other principles have also been obtained from digitalis, as *digitaliretin, digitalose, digitallin, digitin, digitoxin*, etc. Digitalis has been administered in inflammatory diseases, phthisis, active hemorrhage, dropsy, delirium tremens, etc. The dose is gr. ss–ij (0.032–0.13), repeated every six or eight hours, but as the drug is cumulative in its action it must not be continued, especially in full doses, more than a few days. When cardiac tonics are pushed too far, syncope may ensue and be fatal, so that the patient should be kept in a recumbent position. The official preparations (Ph. U. S.) are: *Extract* (extractum digitalis); dose, gr. $\frac{1}{6}$–$\frac{1}{4}$ (0.01–0.016). *Fluid extract* (extractum digitalis fluidum); dose, ♏j–ij (0.06–0.12). *Infusion* (infusum digitalis); dose, ʒj–iv (4.0–16.0). *Tincture* (tinctura digitalis); dose, ♏x–xx (0.65–1.3). The infusion and tincture are also official in the Ph. Br.

**Digitalose′.** See *Digitalis.*

**Digitalosmin′** (*osme*, odor). Odoriferous principle of digitalis.

**Digita′ria dac′tylon.** Cynodon dactylon.

**Dig′itate.** Possessing finger-like processes.

**Digita′tion.** Division into processes having the form of fingers; several muscles, as the *serrati*, exhibit digitations similar to those which the fingers form when held separate.

**Digitigrade**, dij′it-e-grade (*digitus*, finger or toe, *gradior*, to walk). Walking on the toes and not on the sole of the foot; a term applicable to many of the carnivora; opposed to plantigrade.

**Digitin′.** One of the principles existing in digitalis; crystallizable, tasteless substance, devoid of physiological action.

**Digitofib′ular.** Situated on the fibular side of the toes, as digitofibular arteries.

**Digitonin′.** Principle found in German digitalin, resembling saponin.

**Digitophyllin′.** A substance found in digitalis leaves; of uncertain action.

**Digitora′dial.** Situated on the radial side of the fingers, as digitoradial arteries.

**Digito′rum ten′sor.** Extensor brevis digitorum pedis.

**Digitotib′ial.** Situated on the tibial side of the toes, as digitotibial arteries.

**Digito-ul′nar.** Situated on the ulnar side of the fingers, as digito-ulnar arteries.

**Digitoxin′.** Poisonous glucoside from digitalis; dose, gr. $\frac{1}{200}$–$\frac{1}{100}$ (0.0013–0.0006).

**Dig′itus.** A finger or toe, but especially (Wilder) a finger or digit of the fore limb, the word dactylus being applied to a digit of the hind limb or toe. There are five fingers on each hand: the first, the thumb; the second, the index; the third, the middle or long finger; the fourth, ring finger; and the fifth, the little finger or ear finger. All of these have three phalanges, except the first, which has only two. **D. annula′ris**, ring finger. **D. auricula′ris**, fourth finger. **D. cor′dis**, fourth finger. **D. demonstrati′vus** or **demonstrato′rius**, index finger. **D. famo′sus**, middle finger. **D. hippocrat′icus**, Hippocratic finger. **D. impudi′cus**, middle finger. **D. in′dex**, index finger. **D. indicato′rius**, index finger. **D. infa′mis**, middle finger. **D. mag′nus**, thumb, pollex. **D. medicina′lis** or **med′icus**, ring finger. **D. me′dius**, middle finger. **D. min′imus**, little finger. **D. my′ops**, little finger. **D. obscœ′nus**, middle finger. **D. oti′tes** or **par′vus**, little finger. **D. pe′dis**, dactylus. toe; the toes are five in number, and distinguished numerically, reckoning from within to without; the first is the great toe; the fifth, the little toe; they have nearly the same organization as the fingers. **D. pri′mus**, pollex. **D. quar′tus**, fourth finger. **D. quin′tus**, little finger. **D. saluta′rius** or **salutato′rius**, index. **D. secun′dus**, index. **D. semimor′tuus**, half-dead finger; torpid condition of the fingers met with in connection with chlorosis and cerebrospinal affections. **D. supernumera′rius**, supernumerary finger. **D. ter′tius**, third finger. **D. ver′pus**, middle finger.

**Diglos′sia** (*dis*, double, *glossa*, tongue). Condition in which there is a double tongue.

**Digna′thus** (*dis*, double, *gnathos*, lower jaw). Monster having two lower jaws.

**Dihomocinchonine′.** $C_{38}H_{44}N_4O_2$. Amorphous alkaloid having dextrorotatory property, obtained from Cinchona rosulenta.

**Dihy′drate** (*dis*, double, *hydor*, water). Compound of two molecules of hydroxyl with a base, dihydroxide, or a compound containing two molecules of water.

**Dihy′drated.** Containing two molecules of water.

**Dihy′dric.** Containing in each molecule two atoms of hydrogen.

**Dihydrocollidin′.** Ptomain discovered by Cahours and Etard; made by treating nicotine with selenium.

**Dihydrocoridin′.** Base that is probably identical with a ptomaïn formed in cultures of the Bacillus allii.

**Dihydrolutidin′.** $C_7H_{11}N$. Colorless, alkaline liquid. A ptomain found in cod-liver oil; poisonous, producing insensibility, paralysis, and a fatal result.

**Dihydroresorcin′.** An antiseptic preparation produced by acting on a solution of resorcin in boiling water with sodium amalgam.

**Dihydrox′ide.** Dihydrate.

**Dihydrox′yl-quinine′.** Substance contained in secretions while quinine is being administered.

**Dihypogas′trius.** Monster whose pelvis, together with the lower portion of the abdomen, is double.

**Dihyste′ria** (*dis*, double, *hystera*, uterus). The state in which there is a double uterus.

**Dii′odide.** Compound of a base with two atoms of iodine.

**Dii′odobeta-naph′thol.** Naphtholaristol; combination of iodine, beta-naphthol, potassium iodide, and sodium carbonate and hyperchloride; has antiseptic properties similar to beta-naphthol.

**Diiodocar′bazol.** Made by adding iodine to a solution of carbazol at the boiling point; antiseptic.

**Diiododithy′mol.** Aristol.

**Diiod′oform.** Ethylene periodate; tetraiodoethylene; ethylene tetriodide or periodide. Used as a substitute for iodoform as an antiseptic. It is prepared by treating acetylene periodate with iodine in excess.

**Diiodosalicyl′ic acid.** A white powder, antipyretic and anodyne, in doses of gr. xx–l (1.3–3.3) daily, formed by acting on salcylic acid with iodine and iodic acid.

**Diiodosalicyl′ic-meth′yl es′ter.** See *Sanoform.*

**Diiodosalicyl′ic-phe′nyl es′ter.** A substitute for iodoform externally. Made by the action of salol on alcoholic solution of iodine. Internally used as a substitute for iodide of potassium and salicylate of sodium.

**Diiodosal′ol.** Product of the condensation of diiodosalicylic acid with phenol. Employed in dermatological practice.

**Diiodparaphenolsulphon′ic acid.** Sozoiodol.

**Diisobutylor′thocre′sol i′odide.** Europhen.

**Dik′kop.** Throat-sickness, which attacks horses in Natal; a form of anthrax.

**Diktyi′tis** or **Dictyi′tis** (*diktyon*, net). Retinitis.

**Dilacera′tion.** Laceration.

**Dilal′ia.** Ventriloquism.

**Dila′table.** Capable of being dilated.

**Dil′atant.** A medicine producing dilatation.

**Dilata′tion** (*dilato*, to enlarge). Augmentation of the bulk of a body, occasioned by a separation of some of the molecules, as by heat. In surgery, accidental or preternatural augmentation of a canal or opening, as in aneurysms, varices, etc., or the process of enlarging any aperture or canal. The termination *ectasis* signifies dilatation; bronchiectasis, cardiectasis, and splenectasis, for example, denote dilatation of the bronchial tubes, of the heart, and of the spleen. **D. cyst** or **tu′mor**, see *Retention tumor*. **Dig′ital d.**, enlargement of an opening or canal, as the os or cervix uteri, by insertion of the finger. **D. of the heart, stom′ach**, etc., see these words.

**Dilata′tor.** A muscle which dilates certain parts. See *Dilator.*

**Dila′ting a′gents.** Substances used in surgery to keep parts separate which have a tendency to unite, as the edges of an incision, or to increase and dilate openings of canals, either when natural or formed accidentally or artificially. The chief agents of this kind are prepared sponge tents, bougies, sounds, etc.

**Dila′tor.** Muscle which dilates certain parts. Also an instrument to dilate tubular openings, a wound, excretory canal, or other natural or artificial opening. When employed to obtain an inspection of internal parts it is termed a speculum, dioptra, or dioptron, named, from the part to which it is applied, aural, nasal, vaginal speculum, etc. **Ar′nott's d.,** dilator for strictures of the urethra. **Barnes's d.,** see *Barnes.* **D. con′chæ,** a muscle of the external ear which is not always present, the intertragicus. **Goodell's′ d.,** instrument used for dilating the os uteri and cervical canal, provided with two blades. **D. ir′idis,** radiating fibres of the iris which dilate the pupil. **D. laryn′gis,** a name given to a group of muscles embracing the cricoarytænoideus posticus, cricothyroideus posticus, and keratoarytænoideus. **D. na′ris ante′rior,** muscular fibres passing from the alar cartilage to the skin at the border of the ala nasi, the action of which is to dilate the nostril. **D. n. poste′rior,** muscular fibres from the nasal notch of the superior maxillary bone to the skin at the border of the ala nasi, which dilates the nostril. **Palm′er's d.,** an instrument for dilating the os uteri and cervical canal. **D. pharyn′gis,** the stylopharyngeus muscle. **D. pupil′læ,** d. iridis. **D. pylo′ri,** muscular fibres of the stomach passing over the pylorus, supposed to act as a dilator to it. **D. tu′bæ Eusta′chii** tensor palati. **D. vestib′uli laryn′gis,** thyreo-epiglotticus muscle.

**Dilat′ris tincto′ria.** Lachnanthes tinctoria.

**Dil′doe.** Artificial penis.

**Dilipoxan′thin** (*dis,* double, *lipos,* fat, *xanthos,* yellow). Fatty, yellow pigment in animal tissues having two absorption bands in its spectrum.

**Dill.** Anethum graveolens.

**Dil′ly.** Anthemis cotula.

**Dil′uents** (*diluo,* to dilute). Medicines which have been conceived proper for augmenting the fluidity of the blood and other animal liquids. All aqueous drinks are diluents. They are administered with great advantage in various diseases. In fever, water, which is the most familiar diluent, may be freely allowed. In diseases in which it is considered necessary to abstract blood largely, diluents should not be given too freely, for the abstraction of blood occasions activity of absorption, and the mass is speedily restored. When demulcents are exhibited in cases of urinary disease they act simply as diluents; their mucilaginous portion is digested in the stomach and small intestines, the watery portion alone being separated by the kidney.

**Dilute′.** Diluted. In pharmacy these terms are generally used synonymously. By some, however, a dilute acid, for example, means a weak acid, while a diluted acid is one that has been rendered weaker by the addition of water.

**Dilu′tion.** With the homœopathist, the action by which the dose of a medicine is diminished, as by dissolving a grain of any medicinal article in a certain quantity of a liquid; then taking a drop of the solution and adding it to a like quantity of the liquid, and this may be repeated until the "thirtieth dilution" or beyond.

**Dimethylacetal,** di-meth-il-as′e-tal. An ethereal liquid, sp. gr. 0.867; used as an anæsthetic; obtained by oxidizing a mixture of ethylic and methylic alcohols.

**Dimethylam′ido-antipyrin′.** See *Pyramidon.*

**Dimeth′yl-am′ido-phe′nyl-dimeth′yl-pyraz′olon.** See *Pyramidon.*

**Dimethylamin′.** Substance in Peruvian guano. Ptomain of a non-poisonous character, $(CH_3)_2,NH$, gaseous at ordinary temperatures. It has been found in putrefying gelatin, in decomposing yeast, herring brine, and in poisonous sausage.

**Dimethylben′zine.** Xylol.

**Dimethyle′ther.** A gas generated by subjecting methylic alcohol to heat with sulphuric acid; anæsthetic.

**Dimethylethylcar′binol.** Amylene hydrate.

**Dimethylethylchlo′ral.** Amylene chloral.

**Dimethylke′tone.** Acetone.

**Dimethylphenylpyraz′olon.** Antipyrin.

**Dimethylpiperazin′ tar′trate.** See *Lycetol.*

**Dimethyltrii′odide.** Annidalin.

**Dimethylxan′thin.** Theobromine.

**Dimet′ria** (*dis,* double, *metra,* uterus). State in which there is a double uterus.

**Dimor′phism** (*dis,* double, *morphe,* shape). Condition of being dimorphous; term given to compounds which crystallize in two different forms.

**Dimor′phous.** Existing in two forms.

**Dimor′phus mu′ris.** Cercomonas intestinalis.

**Dineu′ric.** Having two axis-cylinder processes.

**Dingee,** din′ge. Dengue.

**Din′ic** or **din′ical** (*dinos,* vertigo). Relating to vertigo. Antidinic, or agent employed for the relief of vertigo.

**Dini′trate.** A salt containing two molecules of nitric acid.

**Dinitrocel′lulose.** Pyroxylin.

**Din′ner pills.** See *Pilulæ aloës et mastiches.*

**Dinoma′nia** (*dinos,* whirl). Tarantism; choreomania.

**Di′nus.** Vertigo. **D. scoto′ma,** giddiness with impaired sight, often succeeded by headache and perhaps scotomata or fixed blind spots in the field of vision. **D. ver′tigo,** vertigo.

**Diodonceph′alus** (*dis,* double, *odous,* tooth, *kephale,* head). Monster with a double range of teeth or a double jaw.

**Diœ′cious** or **Die′cious** (*dis,* two, *oikia,* habitation). Animals are so called in which the reproductive elements are found in separate individuals belonging to opposite sexes.

**Diog′enes's cup.** Hollow, resembling a cup, formed by bending the fingers and palm of the hand.

**Dionco′sis** (*onkos,* tumor). Tumefaction or plethora occurring either directly from too great a quantity of fluid circulating in the system, or owing to the retention of substances which ought to be excreted. See *Intumescence.*

**Dionin′.** $C_{19}H_{23}NO_3,HCl + H_2O$. Hydrochloride of mono-ethyl ester of morphine. Is narcotic in the same dose as codeine and employed as a substitute for morphine; used also in iritis and other ocular troubles.

**Diophthal′mus** (*ophthalmos,* eye). Bandage applied over both eyes.

**Diopsim′eter** (*diopsis,* clear vision, *metron,* measure). Instrument for measuring the visual field.

**Diop′ter.** Unit of refraction of lenses; ratio of one metre to the focal length of the lens.

**Dioptom′eter.** Instrument for measuring the refraction of the eye.

**Dioptom′etry.** Measurement of refraction and accomodation of the eye by means of the dioptometer.

**Dioptos′copy.** Measurement of refraction of the eye by means of the ophthalmoscope.

**Diop′tral.** Relating to a dioptre.

**Diop′tre.** Diopter.

**Diop′tric.** Relating to dioptrics. Also diopter.

**Diop′trics.** That branch of optics which treats of refraction.

**Dioptrom′etry.** Dioptometry.

**Diop′tron.** Speculum.

**Dio′ptry.** Diopter.

**Diortho′sis** (*diorthoo,* to make straight). Reduction of a fractured or luxated limb; straightening of a curved limb or segment of a limb.

**Diosco′rea.** Yam. **D. villo′sa,** wild yamroot, colic root; indigenous; ord. *Dioscoriaceæ.* Decoction of the root has been prescribed in bilous colic. Said to be expectorant, diaphoretic, and, in large doses, emetic.

**Dioscorein′.** Resinoid substance from diascorea; used in rheumatism.

**Dios′ma.** A genus of plants, ord. *Rutaceæ.* **D. crena′ta,** South African plant, the powder of whose leaves, buchu leaves, is used by the Hottentots to perfume their bodies. Buchu (Ph. U. S.) is employed in chronic affections of the bladder and urinary organs in general.

**Diosmin′.** Active principle contained in buchu.

**Diosmo′sis.** The passage of fluid through a membrane; osmosis.

**Diosmot′ic.** Relating to diosmosis.

**Dios′pyrus.** A genus of trees of the order *Ebenaceæ*. **D. embryop′teris,** an East Indian species, bearing a very astringent fruit. **D. kax′i,** grows in China and Japan. **D. lo′tus,** faba græca, Indian date-plum, a tree grown in Southern Europe; fruit very astringent, and used in dysentery and hemorrhage. **D. melanox′ylon,** ebony tree of Malabar and Coromandel, with an astringent, tonic bark. **D. virginia′na,** persimmon, a common tree in the middle parts of the United States; its fruit is the persimmon, yellow plum, winter plum, seeded plum. The unripe fruit, *diospyros*, is distressingly acerb; has been used as an astringent. Bark of the tree is extremely bitter, and may be used when bitters are indicated.

**Diox′ide.** Binoxide.

**Dioxyan′thranol.** Anthrarobine.

**Dioxyan′throl.** Anthrarobine.

**Dioxyben′zene.** See *Hydroquinone*.

**Dip.** Solution or mixture in which cattle are immersed for the purpose of killing parasites on the skin.

**Diphal′lia** (*dis*, double, *phallos*, penis). Condition of having a double penis.

**Diphenylamin′.** $N(C_6H_5)2H$. Substance used as a test for nitric acid and chlorine.

**Diphenylmeth′ane.** Phenylmethane.

**Diphthe′ria** (*diphthera*, skin or membrane). Diphtheritis, an infectious disease characterized by profound vital depression and the formation, through exudation and necrosis, of a false membrane, usually on the tonsils and pharynx, but affecting sometimes the mouth, nose, or larynx. The membrane formed is grayish-white and adherent, leaving, when detached, a raw surface. Ulceration and gangrene sometimes follow, and other organs, as the glands, become involved. The symptoms, of course, vary with the part affected, whether the seat of it be the fauces, larynx, or nose. In about one-sixth of the cases diphtheritic paralysis occurs, usually in the pharynx. The disease is due to the presence of a specific microorganism, the Klebs-Loeffler bacillus, and the constitutional symptoms are caused by the action of the toxins elaborated by this microbe. **An′imal d.,** diphtheria in some of the smaller animals, and diphtheroid affections in others, caused by various forms of diphtheria bacilli and streptothrix. **D. antitoxin′,** employment has been made of hypodermic injections of the serum of blood obtained from the horse and other animals previously immunized against this disease by frequent inoculation with gradually augmented doses of materials derived from the action of the special bacillus of diphtheria. The action of the antitoxin is both immunizing and curative. **Bretonneau′s′ d.,** pharyngeal d. **Laryn′geal d.,** diphtheritic croup, d. involving the larynx, sometimes producing suffocation. **Loeff′ler′s d.,** Loeffleria. **Malig′nant d.,** d. characterized by typhoidal symptoms. **Na′sal d.,** d. extending to the nasal passages. **Non-mem′branous d.,** Loeffleria. **Pharyn′geal d.,** d. affecting the mucous membranes of the pharynx and produced by streptococci. **Scarlati′nal d.,** membranous tonsillitis, occurring in scarlatina. **Sec′ondary d.,** d. complicating typhoid fever, scarlatina, etc. **Sep′tic d.,** general septic effect of the diphtheritic poison. **Sur′gical d.,** wound d. **D. toxin′,** toxic substance elaborated by the diphtheria bacillus. **Wound d.,** formation of diphtheritic membrane on a wound.

**Diphthe′rial.** Diphtheritic.

**Diphther′ic.** Diphtheritic, diphtherial; relating or appertaining to diphtheria.

**Diphtherin′.** A toxin produced by the Klebs-Loeffler bacillus.

**Diphtherit′ic.** Diphtheric, membranous. **D. chan′cre,** see *Chancre*. **D. diseas′es,** class of diseases characterized by a tendency to the formation of false membranes, and which affect the dermoid tissue, as the mucous membranes and even the skin. **D. nephri′tis,** acute parenchymatous nephritis as the sequela of diphtheria. **D. paral′ysis,** paralysis of the muscles of the soft palate and larynx after subsidence of the chief symptoms in diphtheria.

**Diphtheri′tis.** Diphtheria.

**Diph′theroid.** Resembling diphtheria. **D. angi′na,** see *Angina*. **D. chan′cre,** chancre with membrane simulating the diphtheritic, occurring as a secondary lesion on the glans penis.

**Diphtherotoxin′.** A poisonous albuminoid separated from cultures of the Klebs-Loeffler bacillus.

**Diphthon′gia** (*dis*, twice, *pthongos*, distinct sound). Condition in which two sounds are produced in the larynx simultaneously, but differing in pitch; due to incomplete unilateral paralysis of the recurrent laryngeal nerve, or to a lesion of the vocal cord.

**Diphy′odont** (*dis*, double, *phyo*, to generate, *odous*, tooth). Having two successive sets of teeth, temporary and permanent.

**Diplakou′sis** or **Diplacu′sis** (*diploos*, double, *akouo*, to hear). Abnormal condition of hearing, characterized by a note being duplicated in sound for the same ear, as in *d. monauralis*, or as in *d. binauralis* for the two ears, although the secondary note may be too sharp or too flat.

**Diplecoi′a** (*diploos*, double, *akoe*, hearing). Double hearing; diplakousis.

**Diple′gia** (*dis*, double, *plege*, blow). Double symmetrical paralysis. **D. facia′lis,** double facial paralysis. **Spas′tic d.,** birth palsy.

**Diplo-** (*diploos*, double). In composition, double.

**Diplobacil′lus.** A bacillus which forms two chains.

**Diplobacte′rium.** Bacillus pestis.

**Diploblas′tic** (*diploos*, double, *blastos*, sprout). Provided with two germinal layers.

**Diplocepha′lia** (*diploos*, double, *kephale*, head). Monstrosity characterized by the presence of two heads on the same body.

**Diplococ′cus** (*diploos*, double, *coccus*, berry). Micrococci united in pairs. See *Micrococci* and *Bacteria*. **D. al′bicans am′plus** (Bumm), found in normal vaginal secretions. **D. al′bicans tardis′simus,** same form as the gonococcus. **D. al′bicans tar′dus** (Unna and Tommasoli), in eczema. **D. cit′reus conglomera′tus** (Bumm), from dust and discharges of specific urethritis. **D. cit′reus liquefa′ciens** (Unna and Tommasoli), detected in eczema seborrhoicum. **D. cory′zæ** (Klebs and Hajek), in discharges of acute catarrhal rhinitis. **D. fla′vus liquefa′ciens tar′dus** (Unna and Tommasoli), in eczema seborrhoicum. **D. fluores′cens fœt′idus** (Klamann), procured from the post-nasal region. **D. of Fraen′kel,** Micrococcus lanceolatus. **D. gonorrhœ′æ,** see *Micrococcus gonorrhϾ*. **D. intercellula′ris meningit′idis** (Goldschmidt and Weichselbaum), detected in exudates obtained in cerebrospinal meningitis. **D. lac′teus favifor′mis** (Bumm), detected in the secretions of the vagina. **D. lanceola′tus,** D. pneumoniæ. **D. lanceola′tus capsula′tus,** D. pneumoniæ. **D. lu′teus** (Adametz), in water. **D. of mumps** (von Leyden), in saliva of the parotid gland; pathogenic. **D. of orchi′tis** (Hugouneng and Eraud), in purulent gonorrhœal discharges, especially in blennorrhagic inflammation of the testicle. **D. of ozæ′na** (Loewenberg), in the discharges of that disease. **D. of pem′phigus,** in that disease. **D. of pem′phigus acu′tus** (Gibier and Demme), in that disease. **D. of pertus′sis** (Ritter), in sputa of whooping-cough. **D. pneumo′niæ** (Weichselbaum), see *Bacillus septicus sputigenus* and *Micrococcus lanceolatus*. **D. pneumo′niæ fibrino′sæ** (Friedländer), see *Bacillus pneumoniæ Friedländeri*. **D. of pneumo′nia of hor′ses** (Schütz), from cases of that disease. **D. pyog′enes ure′æ** (Rörsing), in purulent urine. **D. pyog′enes ure′æ fla′vus** (Rörsing), in purulent urine. **D. ro′seus** (Bumm), in the atmosphere. **D. semiluna′ris,** an organism found by Klebs in tuberculous lesions. **D. subfla′vus** (Flügge), found in vaginal mucus;

pathogenic. **D. tracho'ma** (Snydacker), in the secretions of trachoma. **D. ure'æ** (Rörsing), D. pyogenes ureæ. **D. ure'æ trifolia'tus** (Rörsing), in purulent urine.

**Diploco'ria** (*diploos*, double, *kore*, pupil). Condition of the eye in which two pupils are present.

**Dip'loë** (*diploos*, double). Areolar structure separating the two tables of the skull from each other. The diploë has the same use as the cellular structure of the bones in general. See *Cancelli*.

**Diploët'ic.** Diploic.

**Diplogas'tria** (*diploos*, double, *gaster*, belly). Monster having two abdomens.

**Diplogen'esis** (*diploos*, double, *genesis*, generation). Organic deviation consisting in the duplication of parts; monstrosity by duplication, duplicitas monstrosa, double monster.

**Diplogonop'olus gran'dis.** Krabbea grandis; a tapeworm, resembling certain bothriocephali of seals, found rarely in the human intestine, in Japan. The segments are very short and the genital organs are arranged in two sets in each segment. The symptoms are profound anæmia, vertigo, colic, and alternating constipation and diarrhœa.

**Diplo'ic** or **Diploët'ic.** Relating or appertaining to the diploë. **D. veins,** veins in the flat cranial bones, the trunks and larger branches of which, veins of Breschet, run mostly separately in special arborescent larger canals, *Breschet's bone canals*, which terminate in the *emissoria Santorini*.

**Diplo'ma** (*diploo*, to fold double). Letter or writing conferring some privilege; usually applied to a document certifying that a person has obtained a degree from a college or university. It was so called because formerly written on waxed tables folded together. Diploma is also used in pharmacy to denote a vessel with double walls, as a water-bath.

**Diplomye'lia** (*diploos*, double, *myelos*, marrow). Congenital malformation of the spinal cord, with duplication of the cord, appearing in various forms of double monsters.

**Diplopho'nia** or **Diploph'ony** (*diploos*, double, *phone*, voice). Diphthongia.

**Diplo'pia** (*diploos*, double, *optomai*, to see). Double vision. Affection of the sight in which two distinct sensations are produced by the same object, which consequently seems double. Sometimes more than two are seen. The affection arises from some derangement in the visual axes, in consequence of which the images are not impressed on corresponding parts of the retina of each eye. In *homonymous* or *direct diplopia* the image to the right of the patient belongs to his right eye, the left image to his left eye. This occurs in convergent squint. *Crossed diplopia*, in which the image to the right belongs to the left eye, and *vice versa*, arises in divergent squint, *heteronymous diplopia*. When double vision occurs, one image being above the other, the condition is called *vertical diplopia*. At times the diplopia affects one eye, or each eye, when used alone, owing to some irregularity in the curvature, density, or position of the dioptric media; it is then called *uniocular diplopia, monodiplopia*. Diplopia of both eyes has been termed *binocular diplopia, amphodiplopia, amphoterodiplopia, amphamphoterodiopsia*.

**Diplopiom'eter.** An instrument for determining the degree of diplopia.

**Diplo'py** or **Dip'lopy.** Diplopia.

**Diplo'sis.** Diploë; duplication.

**Diploso'ma** (*diploos*, double, *soma*, body) **crena'tum.** An imperfectly described entozoon which has been passed from the urinary bladder; varies in length from four to six or eight inches, and in the middle is bent at an acute angle upon itself, so that the two halves hang nearly parallel, and give to it an appearance as if two worms had been tied together by their heads.

**Diplosoma'tia** or **Diploso'mia.** Organic deviation characterized by the presence of two complete bodies united by one or more of their parts.

**Diploteratog'raphy** or **Diploteratol'ogy** (*diploos*, double, *teras*, monster, *grapho*, to write, or *logos*, discourse). Description or study of double monstrosities.

**Dip'noous** (*dis*, twice, *pnoe*, breath). Bispirus; having two vent-holes; epithet applied to wounds which pass through a part and admit the air at both ends; also to animals, *dipnoi*, which have both gills and lungs.

**Dipodaceph'alus** (*dis*, twice, *pous*, foot, *a*, priv., *kephale*, head). Monster having two feet, but devoid of head.

**Dipo'lar.** Bipolar; having two poles.

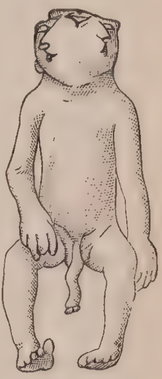
**Dip'pel's an'imal oil.** A fetid oil obtained from animal tissues which, when purified, has been used as a stimulant.

**Dip'ping.** Palpation practised with sudden pressure of the fingers against an organ, thus driving away intervening fluid and rendering diagnosis more clear.

**Dipropylenediamine'.** Lycetol.

**Diproso'pia** (*dis*, twice, *prosopon*, face). Condition of being a diprosopus.

**Diproso'pus.** Monster with double face. **D. diædœ'us** (*aidoia*, parts of generation), double monster in which the duplication affects superiorly the face and inferiorly the anterior pelvic region. **D. dihypogas'trius,** double monster in which the duplication affects superiorly the face and inferiorly the lower part of the body, four lower extremities being always present. **D. diophthal'mus,** double monster with two eyes. **D. tetrophthal'mus,** double monster with four eyes. **D. tetro'tus,** double monster with four ears. **D. triophthal'mus,** double monster with three eyes. **D. trio'tus,** double monster with three ears.



Diprosopus.

**Dip'sa.** Thirst.

**Dip'sacus** (*dipsa*, said to be so called owing to the leaves being able to hold water). A genus of plants of the order *Dipsacaceæ;* teazel. **D. fullo'num** has had similar properties with the next ascribed to it; both have been also regarded as stomachic. **D. pilo'sus,** shepherd's rod; regarded as sudorific. **D. sati'vus,** D. fullonum. **D. sylves'tris,** cultivated teasel; the roots of this European plant are diuretic and sudorific; the water which collects at the base of the leaves has been recommended as an eye-water. **D. vulga'ris,** D. fullonum.

**Dipse'sis.** See *Dipsosis*.

**Dipset'ic.** Capable of exciting thirst.

**Dipsoma'nia** (*dipsa*, thirst, *mania*). Thirst mania; habitual drunkenness; insatiable desire for intoxicating liquors.

**Dipsoma'niac.** One suffering with dipsomania.

**Dipsop'athy** (*dipsa*, thirst, *pathos*, affection). Thirst cure; mode of treatment consisting in abstaining from drinks.

**Dipso'sis.** Morbid thirst, desire for drinking, excessive or abnormal. **D. a'vens,** constant desire for drink, as in fevers, dropsy, diabetes, etc. **D. ex'pers,** absence of thirst.

**Dip'tera** (*dis*, twice, *pteron*, wing). A large order of two-winged, six-legged insects, including ordinary flies and mosquitoes.

**Dip'terix odora'ta.** Coumarouna odorata; the fruit of this large tree of Guiana is a pod enclosing a single seed; the bean, Tonka bean, has a strong, agreeable, aromatic odor, and is used to flavor snuff and as a substitute for the vanilla bean.

**Dipterocar'pus** (*dis*, twice, *pteron*, wing, *karpos*, fruit). Genus of large trees, ord. *Dipteraceæ*, natives of India, which yield a resinous oil that has been employed, like copaiba, in gonorrhœa. The *Gurjun* or *Gurgina* or *Garjina balsam* or *wood oil* is the product of *Dipterocarpus turbinatus;* the resinous secretion of *D. trinervis* has been used as an excitant ingredient of salves to inveterate ulcers.

**Dip′terous.** Belonging to the order *Diptera,* which see.

**Dipy′gus** (*dis,* twice, *pyge,* nates). Double monster, the duplication being confined to the lower end of the trunk, the lumbar region, and pelvis; also used as a synonym of deradelphus. **D. dibra′chius,** d. with two arms. **D. tetrabra′chius,** d. with four arms.

Dipygus tetrabrachius.

**Dipylid′ium cani′num.** A double-pored tapeworm, common in cats and dogs, but rarely found in man; the larva infests the flea.

**Diquinicine′.** $C_{40}H_{46}N_4O_3$. Amorphous alkaloid in commercial chinoidine.

**Dir′ca palus′tris.** Leatherwood, swamp leatherwood, moosewood, rope-bark; indigenous shrub, analogous to mezereon in its action; applied to the skin, the bark vesicates.

**Direct′.** Immediate; straight. **D. cur′rent,** galvanic current; also one passing from the centre directly through a nerve. **D. illumina′tion,** illumination from the immediate front. **D. in′guinal her′nia,** see *Hernia.* **D. mur′mur,** see *Murmur.*

**Direc′tor** (*dirigo,* to rule, to direct). Conductor; grooved sound for guiding a knife in dividing any part. **D. pe′nis,** ischiocavernosus muscle.

**Diribito′rium** (*diribeo,* to separate). Mediastinum.

**Dirigomo′tor.** Directing motor activity.

**Dirt-eat′ing.** See *Chthonophagia* and *Geophagism.*

**Dirup′tion** (*dirumpo,* to break apart). Spontaneous opening or rupture, as of an abscess, or of an organ, as the heart.

**Disaggrega′tion.** Lack of correlation of ideas and perceptions, leading to double consciousness.

**Disarticula′tion.** Amputation through a joint.

**Disassimila′tion.** Retrogressive metamorphosis; katabolism.

**Disc.** See *Disk.*

**Discharge′.** Increased outflow from any part which naturally secretes a fluid; excretion; a setting free or emptying. In electricity, the passing off of the electric fluid from a battery or a charged Leyden jar when the positive pole is brought into communication with the negative one. **Conduc′tive d.,** d. effected by means of a wire or other conductor. **Convec′tive d.,** a leak of electricity or quiet d. taking place through the air. **Disrup′tive d.,** discharge of electricity with emission of sound and light.

**Dischar′ger.** Appliance for discharging electricity.

**Dischar′ging.** Giving vent to an excretion, natural or morbid, as urine or pus. **D. le′sions,** cerebral lesions which are accompanied with a sudden and powerful display of force.

**Dis′ciform.** Having the shape of a disk.

**Discis′sion.** Operation for cataract in which the capsule of the lens is lacerated with a needle, allowing entrance of the aqueous humor. **D. nee′dle,** needle with sharp edges employed in cataract operation.

**Discoblas′tic** (*diskos,* disk, *blastos,* shoot). Term applied to separation of a disk from an ovum.

**Dis′coid** (*diskos,* disk, *eidos,* shape). Disk-shaped. **D. placen′ta,** a placenta, such as the human placenta, which is normally disk-shaped.

**Discolora′tion.** See *Decoloration.*

**Discomy′ces** (*diskos,* disk, *mykes,* fungus). Micrococcus ascoformans.

**Discoplacen′ta.** Discoid placenta.

**Discoplas′ma.** Plasma of the red blood corpuscle.

**Disco′ria.** Dyscoria; deformity of the pupil.

**Discrete′** (*discerno,* to separate). Epithet given to certain exanthemata in which the spots or pustules are separated from each other; opposed to confluent.

**Discri′men** (separation, division). Bandage used in bleeding from the frontal vein; so called because in passing along the sagittal suture it divides the head into two equal parts. **D. calva′riæ me′dium,** diploë. **D. na′rium,** septum narium. **D. na′si,** bandage in the form of letter X, intended to support the nose in transverse wounds of that organ. **D. thora′cis et ven′tris,** diaphragm.

**Dis′cus.** Disk; quoit; plate or platter or anything resembling it in form. **D. ge′nu,** patella. **D. lentifor′mis,** see *Nucleus lenticularis.* **D. oöph′orus,** discus proligerus. **D. op′ticus,** optic disk. **D. prolig′erus,** see *Proligerus.* **D. vitelli′nus,** proligerous disk.

**Discuss′.** To dissolve and remove; said of tumors.

**Discus′sion.** Resolution, as of inflammation.

**Discu′tients.** Substances possessing the power of repelling or resolving tumors.

**Disdiac′lasis** (*dis,* double, *diaklao,* to break). Double refraction.

**Disdi′aclasts.** Sarcous elements; small, doubly refractive contractile disks observed when muscular fibre is examined under the polarization microscope.

**Disease′.** Malady, complaint, sickness, ailment, illness. Opposite state to that of health, consisting in change either in position and structure of parts, or in the exercise of one or more of their functions, or in both. By some, disease is applied to structural change, while *disorder* is restricted to functional derangement. The following table comprises, under the two heads *Diseased Nutrition* and *Altered Mechanism,* the chief elements of structural disease, all of which are dependent on modified cell-action:

| | | | | |
|---|---|---|---|---|
| Diseased Nutrition. | Increased—Hypertrophy. | | | |
| | Diminished—Atrophy. | | | |
| | Perverted. | Inflammation. | | |
| | | Induration. | | |
| | | Softening. | | |
| | | Transformation and degeneration. | | |
| | | Deposits, | Enplastic, | Cicatrices,<br>False membranes. |
| | | | Cacoplastic, | Cirrhosis,<br>Fibrocartilage,<br>Gray tubercle,<br>Atheroma. |
| | | | Aplastic, | Yellow tubercle,<br>Calcareous matter. |
| | | Growths, | Non-malignant, | Cysts,<br>Tumors,<br>Hydatids. |
| | | | Malignant, | Carcinoma,<br>Encephaloma,<br>Melanosis. |
| Altered Mechanism. | Contraction,<br>Dilatation,<br>Obstruction,<br>Compression,<br>Displacement,<br>Rupture, etc. | | | |

**Acute d., Barking d., Corrigan's d., Hodgkin's d.,** etc., see the qualifying words.

**Diseased′.** Sick; one who or that which has undergone a departure from health.

**Disengage′ment.** The act of releasing or detaching; term employed in obstetrics to denote the exit of the fœtus, or any part thereof, from the canal of the pelvis.

**Disfigura′tion** (*disfiguro,* to deform). Deformation.

**Disgorge′ment** (*dis,* away, *gorge,* throat). Opposite condition to that of engorgement. Discharge or abstraction of a certain quantity of fluid which had previously collected in a part, as disgorgement of bile. It also means vomiting.

**Disgust′** (*dis,* priv., *gusto,* to taste). Loathing; aversion for food. Disgust is not the same as anorexia; the latter is only a want of appetite; the former consists in real repugnance for food.

**Disinfect′.** To render innocuous by disinfection.

**Disinfec′tant** (*disinficio,* to disinfect). This term has been restricted by some to agents that are capable of neutralizing morbific effluvia, or deodorizers, but it properly includes also antiseptics or agents that are capable of removing any incipient or fully formed septic condition of the living body or any part of it. Disinfectants are agents destructive to the specific poisons of communicable diseases; and as these are usually due to microorganisms, the disinfectants become also antizymotics. They are employed to destroy morbific germs in the excreta of those suffering from such diseases or in the rooms occupied by them. See *Disinfection.*

**Disinfec′tin.** A compound of 5 parts of the residue remaining in the distillation of crude naphtha and 1 part by volume of concentrated sulphuric acid. Used as a disinfectant.

**Disinfec′tion.** Destruction of pathogenic germs contained in clothing, merchandise, or enclosed spaces such as habitations, the cabins and holds of ships, etc. Various means have been proposed for this purpose. The agents most commonly employed are heat, often in the form of live steam, formaldehyde, chlorine, sulphurous-acid gas, bichloride of mercury, carbolic acid, chlorinated lime, zinc chlorides, or any of the chlorides of the alkalies.

**Disinfec′tol.** Brownish dark liquid, composed of carbolic acid, soap, hydrocarbons, and soda; used as a disinfectant.

**Disin′tegrate** (*dis,* priv., *integro,* to make whole). To reduce to small fragments or particles.

**Disintegra′tion.** Destruction by reducing to small particles, as distinguished from chemical decomposition. **D. cysts,** cysts resulting from degenerative softening and disintegration of normal or pathological tissues. They may occur after hemorrhage into the brain—*apoplectic cysts.*

**Disjunc′tion.** Separation of parts which are normally close together.

**Disk.** Discus; anything of a flattened, circular outline, resembling a plate. A gelatin lamella containing atropine, cocaine, or some other medicament, employed locally in disease of the eye. **Blood d., Bowman's d., Choked d., Placido's d.,** etc., see these words. **Hair d.,** see *Pinkus.*

**Dis′locate.** To cause dislocation, as of an articulation.

**Disloca′tion** (*dis,* priv., *loco,* to place). Displacement of the bones at a joint, or of an organ from its usual situation. See *Luxation* and *Ectopia.* **Closed d.,** simple d. **Complete′ d.,** d. in which there is complete separation of the bones. **Com′plicated d.,** d. attended with injury to the neighboring parts, vessels, nerves, etc. **Com′pound d.,** d. associated with an open wound. **Congen′ital d.,** d. found existing at birth; usually intra-uterine of previous date. **Consec′utive d.,** d. in which the dislocated bones have assumed a new position. **Habit′ual d.,** a form of d. that recurs on account of weakness of the articulations. **Incomplete′ d.,** a partial dislocation, to which the term *subluxation* is usually applied. **Intra-u′terine d.,** congenital d. **D. of mem′ory,** condition in which there exists entire forgetfulness, but only for a short time. **O′pen d.,** compound d. **Par′tial d.,** incomplete d. **Patholog′ical d.,** d. dependent on or associated with disorganization of a joint by disease, paralysis, etc. **Prim′itive d.,** d. in which there has been no subsequent change of position of the bones. **Re′cent d.,** d. of such recent occurrence that no inflammatory or other untoward symptoms have supervened. **Sim′ple d.,** d. unassociated with any open wound. **Traumat′ic d.,** d. dependent on an injury or violence.

**Diso′mata** (*dis,* double, *soma,* body). Double monstrosities.

**Diso′matous.** See *Disomus.*

**Diso′mus** (*dis,* double, *soma,* body). Monster with two bodies. Such a monster is said to be *disomatous.*

**Disor′der.** See *Disease.*

**Disor′dered.** Sick ; deranged ; unhealthy.

**Disorganiza′tion.** Complete morbid change in the structure of an organ or even total destruction of its structure, as in sphacelus and sloughy ulcers.

**Dis′parate.** Unequal; term applied in optics to indicate points of both retinæ which do not correspond.

**Dispareu′nia.** See *Dyspareunia.*

**Dispen′sary** (*dispenso,* to distribute). Shop or place in which medicines are prepared. Also an institution in which the poor are furnished with medical advice and necessary medicines.

**Dispensa′tion.** Composition and distribution of medicines according to prescription.

**Dispen′satory.** Book treating of the composition of medicines. A dispensatory differs from a pharmacopœia in containing the physical and medical history of the various substances, while the pharmacopœia is mainly restricted to the mode of preparing them. The pharmacopœia, too, is published under the official authority and by the members of a college or association, while a dispensatory contains the whole of the pharmacopœia or pharmacopœias, with additions by the author, under whose authority alone it usually appears. Formerly, the words were used indiscriminately.

**Dispense′.** To prepare and give out medicines, food, etc.

**Dispen′ser.** One who dispenses medicines.

**Dispens′ing.** Filling a prescription as directed.

**Disper′min.** Piperazin.

**Disper′sing lens.** A concave lens which causes the light rays to diverge.

**Disper′sion.** Scattering, as in case of inflammation. **Er′ror of d.,** aberration of refrangibility.

**Dispi′ra** or **Dispi′rem** (*dis,* double, *spira,* wreath). Double wreath which nuclei form in karyokinesis after the development of the diaster.

**Displace′ment.** Percolation. Also the condition of being displaced, as displacement of the uterus or other organs when they are not in proper position. **Dor′sal d. of the arm,** position of arm of the fœtus in which that organ is turned outward or inward across the dorsum, thus offering an obstacle to delivery.

**Dispo′ra caucas′ica.** Bacillus caucasicus.

**Disposi′tion** (*dispono,* to arrange). Particular condition of the body, which renders it susceptible of altering suddenly to a state of health or disease —of improving or becoming changed for the worse. See *Diathesis.*

**Dispropor′tion.** Obstetrical term used to denote want of proper proportion between pelvis and fœtus.

**Disputa′tion** (*disputo,* to discuss). Thesis.

**Disrup′tive** (*dis,* asunder, *rumpo, ruptum,* to break). Breaking or tearing apart, sometimes with violence, as of electricity, attended with illumination, heat, or mechanical effects.

**Dissect′.** To cut in pieces; to cut with care, so as to preserve the structure of an organ. See *Dissection.*

**Dissect′ing an′eurysm.** See *Aneurysm.* **D. wound,** dissection wound.

**Dissec′tion** (*dis*, asunder, *seco*, to cut). Operation by which the different parts of the dead body are exposed for the study of their arrangement and structure. Dissection has received various names, according to the organ concerned, as *osteotomy, syndesmotomy, myotomy, angiotomy, neurotomy, desmotomy*, etc. Also, in surgery, the separation of the several tissues during an operation. **D. tu′bercle,** verruca necrogenica. **D. wound,** autopsy wound, wound received in the dissection of bodies recently dead and before putrefaction has set in, especially when death has occurred from pyæmia, malignant erysipelas, cancer, puerperal fever, etc.

**Dissec′tor.** Prosector. Practical anatomist; one who prepares parts for the anatomical lecture. A book treating on the science of dissecting, or an instrument employed in dissection.

**Dissem′inated.** Scattered. **D. myeli′tis,** see *Myelitis.* **D. sclero′sis,** insular sclerosis, see *Sclerosis.* **D. tuberculo′sis,** a form of tuberculosis usually marked for a while by interstitial pleurisy, chronic bronchitis, or emphysema; afterward resembling fibroid phthisis.

**Dissemina′tion.** The spread of disease from one part of the body to other parts or into the surrounding atmosphere.

**Dissepimen′tum** or **Dissep′tum** (*dissepio*, to separate). Diaphragm. **D. na′rium,** septum narium. **D. thora′cis,** mediastinum.

**Disserta′tion, inau′gural.** Thesis.

**Dissiden′tia** (*dis*, apart, *sedo*, to sit). Diastasis.

**Dissimila′tion.** Disassimilation; retrograde metamorphosis; catabolism.

**Dissipa′tion.** Scattering, as of an abscess or other morbid condition.

**Dissocia′tion.** In chemistry, disunion of the elements of chemical compounds. **D. symp′tom,** a condition met with in syringomyelia in which there is local anæsthesia to high or low temperatures and to painful impressions, while the sense of touch remains unaffected.

**Dissolubil′ity.** Capacity of being dissolved by heat or moisture and converted into a fluid.

**Dissol′uble.** Capable of being dissolved; soluble.

**Dissolu′tion** (*dissolvo*, to dissolve). Decomposition or putrefaction of the blood or diminution in its consistence. Solution. Death.

**Dissol′vents.** Solvents; medicines believed to be capable of dissolving swellings, concretions, etc; discutients; resolvents.

**Dis′sonance.** Discord.

**Dis′tad** (*disto*, to stand apart). Away from a centre; toward the far extremity; in anatomy, used adverbially to signify "toward the distal aspect."

**Dis′taff cane.** Arundo donax. **D. this′tle,** Carthamus lanatus.

**Dis′tal.** At the farthest distance from a given centre, as the trunk, heart, or middle line. **D. as′pect,** aspect of a part in a direction away from the the trunk or toward the extremity.

**Distal′ia.** Distal carpal bones (comparative anatomy).

**Dis′tance.** The interval between two objects measured along the nearest route. **Fo′cal d.,** see *Focal.* **Work′ing d.,** the interval between the objective of a microscope and the object viewed.

**Distan′tial aberra′tion.** See *Aberration of sphericity.*

**Distearyllecithin′.** Form of lecithin found in nerve tissue.

**Distem′per** (*dis*, priv., *tempero*, to proportion duly). Disease, especially an infectious disease of animals. **Dog d.,** see *Dog.* **French d.,** syphilis. **Horse d.,** strangles.

**Distem′pered.** Sick.

**Disten′tion.** Abnormal increase in size; turgescence. Reduction of a fracture by extension and counterextension; tension.

**Distich′ia** or **Distichi′asis** (*distichos*, having two rows). Increased number of eyelashes—some turned toward the eye and irritating the organ, while others preserve their natural direction. See *Entropion.*

**Distil′** or **Distill′.** To practise distillation.

**Dis′tillate.** See *Distillation.*

**Distilla′tion** (*de*, down, *stillo*, to drop little by little). Operation by which, by the aid of heat and in closed vessels, the volatile are separated from the fixed parts of bodies, with the view of collecting the former when condensed in appropriate receivers. The product of distillation is the distillate. In *fractional distillation* the ingredients are volatilized at different degrees of heat and separated from each other during the process. When dry organic matter is placed in an apparatus for distillation and heat is applied until all volatile matter is driven out, the process is called *dry* or *destructive distillation.*

**Dis′toma** or **Dis′tomum** (*dis*, double, *stoma*, mouth). Fluke, a genus of parasitic trematoid worms; see *Worms.* **D. buck′ii,** a rare parasite in fæces; occurs through the use of fish and oysters. **D. bus′ki,** variety met with in the human gall-bladder and intestines in Asia and the East Indies. **D. capen′se,** D. hæmatobium. **D. conjunc′tum** occurs in the liver of the American fox and in dogs of India. **D. cra′num,** D. buckii. **D. cras′sum,** variety met with in the human gall-bladder and intestines in Asia and East Indies. **D. endem′icum,** d. found in the liver in the disease called distomiasis, which occurs in certain parts of Japan. **D. felin′eum,** a rare parasite in fæces; length may reach 13 mm. **D. hæmato′bium,** Bilharzia hæmatobia, a parasite giving rise to disturbance of the uropoietic functions; its favorite habitat is the portal veins and those of the bladder; see *Parasites.* **D. hepat′icum,** gourd-worm, fluke, liver fluke; obovate, flat worm, an inch in length and nearly half an inch broad, sometimes found in the gall-bladder of man, whence it occasionally passes into the intestinal canal; one of the most common varieties of worms, infesting the livers of the sheep, goat, ox, horse, ass, hog, hare, etc.; causes rot in sheep and cattle. **D. heterophy′es,** small worm detected in the small intestines; see *Parasites* and *Worms.* **D. japon′icum,** D. endemicum. **D. lanceola′tum,** a species of fluke which has been found in the biliary ducts of man and of different herbivorous mammalia. **D. oc′uli huma′ni,** parasite observed in the eye of a child who had suffered from lenticular cataract. **D. pernicio′-**

Distoma hepaticum, magnified.

Distoma lanceolatum and eggs, magnified. (v. Jaksch.)

**sum,** d. considered to be identical with D. endemicum. **D. pulmona′le,** D. ringeri. **D. rhatoni′sii,** D. buckii. **D. ring′eri,** bronchial fluke; parasite found in the bronchial tubes in an epidemic disease, associated with cough and hæmoptysis, occurring in parts of Formosa, China, and Japan. **D. sibir′icum,** D. felineum. **D. sinen′se,** D. endemicum. **D. spatula′tum,** D. endemicum. **D. westerman′ni,** a parasite found in the lung in the lower animals and sometimes in man.

**Disto′mia** (*dis,* double, *stoma,* mouth). Having two mouths.

**Distomi′asis.** Disease due to the presence of trematodes or flukes in man, occurring in Japan, Egypt, Arabia, Africa, China, and on the island of Formosa. See *Distoma.*

**Distor′tion** (*distorqueo,* to wrest aside). Deformity. Preternatural curvature of a bone, as distortion of the spine, limbs, etc. It signifies also a morbid state of the muscles of the eye, constituting squinting or strabismus. Distortions are said to be paralytic, spastic, or spasmodic, etc.

**Distor′tor o′ris.** Zygomaticus major.

**Distrac′tion.** Separation of apposed surfaces, as of a joint, by a pulling force.

**Distrain′ of the heart.** Heart strain; dilatation of the heart occurring suddenly without being preceded by disease.

**Districh′ia** or **districhi′asis.** Distichiasis.

**Dis′trix** (*dis,* double, *thrix,* hair). Hairs of the scalp, weak, slender, and splitting at their extremities.

**Disul′phate.** Combination of two parts of sulphuric acid with one part of a base.

**Disul′phide.** Combination of two atoms of sulphur with one atom of an element. **D. of car′bon,** carbon disulphide.

**Di′ta bark.** Bark of Alstonia scholaris; possesses tonic, antiperiodic, and anthelmintic virtues.

**Ditaine** (de-ta-een′). Alkaloid from the bark of Alstonia scholaris.

**Ditamine′.** Ditaine.

**Dita′na digitifo′lia.** Mexican plant which promotes the secretion of milk.

**Ditch stone′crop.** Penthorum sedoides.

**Dithiosal′icylate.** A salt of dithiosalicylic acid.

**Dithiosalicyl′ic acid.** Yellow powder formed from equal weights of salicylic acid and sulphur chloride. Two salts of sodium, sodium dithiosalicylates, are employed medicinally: one used as a powerful antiseptic, speedily destroying bacilli; the other as an antiseptic, antiarthritic, and antipyretic.

**Dith′marsch disease′.** Form of endemic syphilis

**Dithy′moldii′odide.** Aristol.

**Dithy′moli′odide.** Aristol.

**Dithy′moltrii′odide.** Annidalin.

**Dito′cia.** Giving birth to twins.

**Dit′ocous.** Relating to twin birth.

**Ditrachy′ceras** (*dis,* double, *trachys,* rough, *keras,* horn). Genus of intestinal worms.

**Dit′tander.** Lepidium sativum.

**Dit′tany.** (See *Dictamnus*). Cunila mariana. **Amer′ican d.,** Cunila mariana. **Bas′tard d.,** Dictamnus albus. **D. of Crete,** Origanum dictamnus. **Moun′tain d.,** Cunila mariana.

**Dittecoi′a** (*dittos,* double, *akoe,* hearing). Double hearing

**Dit′tel's porte remède′.** Instrument consisting of a tube with a flexible obturator, into which nitrate of silver or other remedy is introduced, for making applications to the deep urethra.

**Ditto′pia** or **Dittop′sia** (*dittos,* double, *ops,* eye). Diplopia.

**Dit′trich's plugs.** Dirty yellow pea-sized or bean-sized masses occasionally found in the sputum of putrid bronchitis. **D.'s steno′sis,** narrowness of the conus arteriosus or superior anterior angle of the right ventricle of the heart.

**Diu′reide.** A ureide produced by substituting hydrogen in a double molecule of urea.

**Diure′sis** or **Di′urism** (*dia,* through, *oureo,* to pass urine). Abundant excretion of urine.

**Diuret′ic.** An agent which has the property of increasing the secretion of urine. Diuretics act on the circulation in the kidney, raising the arterial pressure in the glomeruli, or they act on the secreting cells of the tubules, and may increase the amount of water and the amount of solids excreted by them. Their mode of action is more clearly exhibited in the following table (Brunton):

MODE OF ACTION OF DIURETICS.

| | | | | |
|---|---|---|---|---|
| Raise arterial pressure. | Generally | Increased action of the heart | digitalis.<br>alcohol. | Digitalis.<br>Erythrophlœum.<br>Strophanthus.<br>Squill.<br>Convallaria.<br>Strychnine.<br>Caffeine.<br>Cold to surface. |
| | | Contraction of vessels in intestines and throughout the body. | | |
| | Locally in kidney. | Contract efferent vessels or arteriæ rectæ, so as to raise pressure in glomerulus and lessen absorption in tubules, or both. | By action on vaso-motor centres. | Same as in preceding list. |
| | | | By local action on vessels or nervous structures in the kidney itself. | Broom.<br>Turpentine.<br>Juniper.<br>Copaiba.<br>Cantharides. |
| | | Dilate afferent vessels. | Paralyze vasomotor nerves or involuntary muscular fibre, or stimulate vaso-dilating nerves. | Nitrites.<br>Alcohol.<br>Urea. |
| Act on the secreting nerves, or secreting cells of the kidney itself. | | Increase water excreted | | Urea.<br>Caffeine.<br>Calomel. |
| | | Increase solids excreted | | Liquor potassæ.<br>Potassium acetate, etc., and other saline diuretics. |

**Dithi′o-chlor-salicyl′ic acid.** Obtained by heating salicylic acid and sulphur chloride; antiseptic.

**Dith′ion.** Sodium dithiosalicylate. Also a name applied to a mixture of the two sodium salts of dithiosalicylic acid; used as a veterinary antiseptic.

Diuretics are used therapeutically to remove excess of fluid, as in dropsy, to promote the removal of deleterious products of waste or poisonous materials from the blood, or to dilute the urine. The following are the principal diuretics (Brunton):

*Refrigerant Diuretics.*

Water in large quantities.
Carbonic acid (aërated waters).
Sodium salts—*e. g.*, common salt.
Potassium salts, especially the acetate, bitartrate, chlorate, citrate, nitrate.

*Hydragogue Diuretics.*

Adonis vernalis.
Broom.
Caffeine.
Colchicum.
Digitalis.
Erythrophlœum.
Nitrous ether.
Squill.
Strophanthus.

*Stimulant Diuretics.*

Alcohol.
Cantharides.
Blatta orientalis.
Oleoresins, resins, and volatile oils:
  Turpentine,
  Juniper,
  Savin,
  Copaiba,
  Cubebs,
  Black pepper,
  Matico,
  Kawa,
  Guaiac.
Ononis spinosum.
Santonica.
Umbelliferous plants, chiefly containing volatile oils:
  Parsley,
  Carrot,
  Dill,
  Fennel.
Mustard.
Horseradish.
Asparagus.
Uva ursi.
Sarsaparilla.
Buchu.
Pareira.
Chimaphila.
Taraxacum.

**Car′diac d.**, one which increases the flow of urine by regulating the action of the heart and the blood pressure. **Direct′ d.**, one which acts directly by stimulation of the secreting apparatus of the kidney. **Hy′dragogue d.**, one which increases markedly the amount of the watery part of the urine. **Indirect′ d.**, a cardiac d. or any which acts by reducing congestion and tension of the renal parenchyma. **Mechan′ical d.**, direct d. **Refrig′erant d.**, one which renders the urine bland and unirritating. The saline diuretics are also refrigerant. **Sa′line d.**, the potassium and sodium salts possessing a diuretic action. **Stim′ulant d.**, direct d.

**Diuretin′.** Sodiotheobromine salicylate, a double compound of sodium theobromine and sodium salicylate; white, soluble powder; diuretic, and said to excite the action of the heart; used in dropsy, œdema, cirrhosis of the liver, etc. The dose is 15 grains, four or five times a day.

**Di′urism.** Diuresis.

**Diur′nules** (*diurnus*, daily). Pilules or other medicinal preparation, containing each a fraction of the prescribed daily dose; the patient is instructed to take one at such regular intervals that the entire desired dose will be taken in the course of the day.

**Divaga′tion.** Rambling, incoherent speech of the insane.

**Divarica′tion** (*divarico*, to straddle). Ectropion.

**Divel′lent.** Bringing about separation; term used in chemistry.

**Diver′gence.** Term used in ophthalmology to designate the separation of the eyes from one another by the action of the muscles. **D. excess′**, excessive divergence of the eyes producing a variety of exophoria. **Insuffic′iency d.**, insufficient divergence of the eyes, causing a variety of esophoria and convergent strabismus. **D. paral′ysis**, insufficiency d.

**Diver′gent.** Extending from a common point in different directions. **D. rays**, see *Rays*. **D. squint** or **strabis′mus**, see *Strabismus*.

**Di′ver's paral′ysis.** Caisson disease.

**Diverso′rium chy′li.** Receptaculum chyli.

**Diver′ticle.** Diverticulum.

**Divertic′ular.** Relating to a diverticulum. **D. her′nia**, a diverticulum formed by a bulging of the mucous coat of the bowel through the muscular coat, the pouch being then made up of the mucous and serous tunics only.

**Diverticuli′tis.** Inflammation of a diverticulum, especially Meckel's.

**Divertic′ulum** (*de*, away, *verto*, to turn). Turning. Blind tube or cul-de-sac branching out of the course of a longer one, as Meckel's. An organ capable of receiving an unusual quantity of blood, when the circulation is obstructed or modified elsewhere, is said to act as a diverticulum. Also malformation or diseased appearance of a part, in which it passes out of its regular course. Sometimes applied to such a condition of the alimentary canal. **D. cæ′cum** or **Meckel's′ d.**, sacculated condition of the ileum in the embryo, due to non-obliteration of the vitelline duct. **D. of Nuck**, canal of Nuck. **D. pharyn′gis**, pharyngocele. **Pitu′itary d.**, see *Pituitary*. **Pul′sion d.**, a pouch caused by pressure from within. **Trac′tion d.**, a pouch caused by a pulling force from without. **Va′ter's d.**, vertical projection formed at the back part of the duodenum by the mucous membrane.

**Divide′.** To separate or sever, cause a solution of continuity.

**Divi′ding** (*divido*, to part or portion). That which divides or separates. **D. band′age**, bandage employed for the purpose of keeping parts separated from each other; used particularly to prevent improper union, as in cases of burns of the neck or other parts.

**Divis′ion.** Accidental separation of parts naturally united, as a wound or solution of continuity. Also an operation consisting in cutting certain parts to fulfil some therapeutical indication.

**Divul′sio uri′næ.** Cloudiness of urine.

**Divul′sion** (*divello*, to pull asunder). Rupture or laceration of tissues by external violence. Divulsion used in the treatment of strictures has now been almost entirely abandoned.

**Divul′sor.** Instrument for forcibly dilating strictures.

**Diz′ziness.** Vertigo. **Abdom′inal d.**, vertigo dependent upon or associated with disordered stomach.

**Diz′zy.** Vertiginous.

**Djur′nang.** Dragon's blood.

**Do′bell's solu′tion.** A solution employed particularly as a spray in rhinitis; it contains carbolic acid, borax, sodium bicarbonate, and glycerin.

**Do′bie's glob′ule.** Minute, round corpuscle which is noticeable in the centre of the transparent disk of a fibrilla of muscle after staining. **D.'s line**, see *Krause's membrane*.

**Dochmi′asis.** Ankylostomiasis, uncinariasis.

**Doch′mius ankylos′tomus** or **duodenal′is.** Ankylostoma duodenale or Uncinaria duodenalis, occurs in the intestinal canal of man, causing uncinariasis.

**Docima′sia** or **do′cimasy** (*dokimazo*, to try or prove the quality of anything). Act of assaying. **D. pulmo′num**, lung proof, respiration proof. Different proofs to which the organs of respiration of a new-born child are subjected for the purpose of detecting whether it has or has not respired after birth; in other words, whether it was born alive or dead. 1. In testing lungs with water, for the purpose of seeing whether they are specifically heavier or lighter than that fluid—*docimasia pulmonum hydrostatica*, or *hydrostatic test;* if lighter, it would be some evidence that the fœtus had respired. 2. In comparing the weight of the lungs with that of the whole body, the weight of lungs in which respiration has taken place being nearly twice as great—*docimasia pulmonum statica*, or *Ploucquet's static test;* but, according to Casper, unworthy of attention. 3. By measuring the circumference of the thorax and lungs and comparing their dimensions with those of an infant which has not respired—*Daniel's test.* These tests, singly, afford only probable evidence, but when united the deductions may be more conclusive.

**Dock.** Rumex. **Bit′ter d.**, Rumex obtusifolius. **Blood′y d.**, Rumex sanguineus. **Blood′y-veined d.**, Rumex sanguineus. **Blunt′leaved d.**, Rumex obtusifolius. **D. cresses**, lapsana. **Curled d.**, Rumex crispus. **Sour d.,** Rumex acetosus, R. crispus. **Sour d., bo′real,** Oxyria reniformis. **Spat′ter d.,** Nuphar advena. **Wa′ter d.,** Rumex hydrolapathum. **Wild, sharp-point′ed d.,** Rumex acutus. **Yel′low d.,** Rumex crispus.

**Doc′tor** (*doctus,* learned). Frequently applied to any one practising medicine, although properly confined to one who has received his degree of Doctor of Medicine. See *Physician.* "To doctor" is sometimes used vulgarly for "to treat with drugs." **D. gum,** resin of Rhus metopium. **D.'s rash,** a neurotic form of erythema making its appearance on a patient during an examination.

**Doc′trine.** Principles relating to any department of knowledge or maintained by any sect or master. **Physiolog′ical d.,** Broussaism.

**Dod′der.** Cuscuta glomerata. **Amer′ican d.,** Cuscuta glomerata. **D. of thyme,** Cuscuta epithymum.

**Dodecadactyli′tis.** Duodenitis.

**Dodecadac′tylon** (*dodeka,* twelve, *daktylos,* finger). Duodenum.

**Dodecasul′phide.** Compound in which an element or radical is combined with twelve atoms of sulphur.

**Dodecath′eon.** A genus of plants, ord. *Primulaceæ;* sanicula. **D. plin′ii,** Pinguicola vulgaris.

**Dodging** (doj′ing) **time.** Menopause.

**Dodonæ′a** (after R. Dodoens, of Leyden). Myrica gale. **D. angustifo′lia,** species growing in India and the Antilles; in the last-named country a decoction of the wood is used in fevers and as a purgative. **D. salicifo′lia,** Dodonæa angustifolia. **D. thunbergia′na,** shrub growing at the Cape of Good Hope; gentle cathartic.

**Dog but′ton.** Nux vomica. **D. cham′omile,** Matricaria chamomilla. **D. distem′per,** contagious disease of young dogs characterized by catarrh of the mucous membranes generally. **D. fen′nel,** Eupatorium fœniculatum. **D. rose,** see *Rosa canina.* **D. stone,** Orchis macula.

**Dog′choak.** Cynanche.

**Dog′days.** During these days, comprised between the 24th of July and the 23d of August, the temperature of the air is generally high and oppressive; formerly believed to be a period particularly unpropitious to health. They have received this name from the dogstar, *Canicula, Seirios, Sirius,* very brilliant star in the constellation of the *Great Dog,* which rises and sets at this time with the sun.

**Dog′grass.** Triticum repens.

**Dog′hip.** See *Rosa canina.*

**Dog′ma.** Authoritative belief or statement.

**Dogmat′ic** (*dogma,* from *dokeo,* to think). Relating to dogma. Asserting positively and as a fact what is incapable of proof or not yet proven.

**Dogs′bane.** Apocynum androsæmifolium.

**Dog′star.** Canicula.

**Dog's-tooth vi′olet.** Erythronium americanum.

**Dog′tree** or **Dog′wood.** Cornus florida. **Blue′-ber′ried d.,** Cornus sericea. **Fe′male d.,** Cornus sericea. **Flor′id d.,** Cornus florida. **Great-flow′-ered d.,** Cornus florida. **Jamai′ca d.,** Piscidia erythrina. **New Eng′land d.,** Cornus sericea. **Pan′-icled d.,** Cornus paniculata. **Pond d.,** Cephalanthus occidentalis. **Round′leaved d.,** Cornus circinata. **Sil′ky-leaved d.,** Cornus sericea. **Striped d.,** Acer pennsylvanicum. **Swamp d.,** Cornus siricea; Ptelea trifoliata. **Virgin′ian male d.,** Cornus florida. **White d.,** Cornus paniculata.

**Doke.** Contusion.

**Dolbeau's′ opera′tion.** Lithotomy in the median line, in which the calculus is crushed previous to its extraction.

**Doliarin′.** Active principle obtained from the juice of Urostigma doliarium; possesses purgative and anthelmintic properties.

**Dolichocephal′ia** (*dolichos,* long, *kephale,* head). Monstrosity in which the head is abnormally long.

**Dolichocephal′ic** or **Dolicoceph′alous.** Having a long head; term applied to skulls having a cephalic index of 75 or less.

**Dolichoceph′alism** or **Dolichoceph′aly.** Condition of being dolichocephalic.

**Dolichoceph′alus.** Dolichocephalic.

**Dolichofa′cial** (*dolichos,* long, *facies,* face). Having a long face.

**Dolichohier′ic** (*dolichos,* long, *hieron,* sacrum). Relating to a sacrum in which the length exceeds the breadth.

**Dolichopel′lic** or **Dolichopel′vic.** Relating to a pelvis in which the anteroposterior diameter exceeds the transverse.

**Dolichop′odous** (*dolichos,* long, *pous,* foot). Having long feet.

**Dol′ichos.** Genus of plants of the leguminous family; includes a number of species, generally indigenous in India or America. *Dolichos lablab,* or *lablab,* is found in Egypt; the fruit is eaten. *Dolichos sinensis* is eaten in China, and is stored up as a provision for long voyages. *Dolichos tuberosus,* of Martinique, has tuberous roots, and the consistence and taste of the turnip. *Dolichos bulbosus,* of the W. Indies, resembles the turnip; and from the seeds of the *Dolichos soja* the Japanese prepare the well-known sauce *soy,* which they term *sooja.* The most important in medicine is the **D. pru′riens mucu′na,** cowhage, cowitch, ord. *Leguminosæ.* The stiff hairs (*dolichos pubes*) adhering to the pods of the dolichos are the parts used in medicine; they excite an intolerable, prurient sensation when applied to the skin, but do not irritate the mucous membrane over which they pass when administered internally. The dolichos is a mechanical anthelmintic, and is useful in cases of ascarides lumbricoides and oxyures vermiculares. Dose, gr. v–x (0.32–0.65) of the pubes, in molasses. *Mucuna prurita,* a distinct species, but possessing similar properties, grows in the East Indies.

**Doll's-head anæsthe′sia.** Loss of sensation in the skin of the head, neck, and chest.

**Do′lor** (pl. dolores). Pain; labor pain.

**Dolorif′ic** (*dolor,* pain, *facio,* to make). Causing pain.

**Domatopho′bia** (*doma,* building, *phobos,* fear). A morbid fear of being within the walls of a house or other building.

**Dombe′ya excel′sa.** Tree of Chile furnishing *Dombeya turpentine,* a glutinous, milky looking fluid of strong odor and taste.

**Dome cells.** Cells forming the outer layer of the fetal epidermis, or epitrichium.

**Domes′tic** (*domus,* house). The term domestic or popular medicine has been given to treatises written to enable those who are not of the profession to treat diseases which may occur in their families without calling in a physician. A *domestic remedy* is one employed by the laity without a physician's prescription; usually a simple of some sort.

**Domicil′ium.** Choroid coat of the eye.

**Don′da ndu′gu** (brother ulcer). A disease occurring frequently on the east coast of Africa, in the form of an ulcer on the lower extremities; supposed to be due to a parasite.

**Don′ders's glauco′ma.** Simple atrophic glaucoma. **D.'s law,** that the degree of rotation of the eyeball, when vision is directed to an object at a distance, depends on the angular distance of the object from the horizon and from the median plane. **D.'s rings,** colored rings observed in glaucoma, in cataract, and even in healthy eyes, when the iris dilates; they are caused by deflection of the rays of light from the edges of the lens.

**Don′do.** Albino.

**Done′sis.** Agitation.

**Donné's** (don-nays′) **cor′puscles.** Small, non-nucleated bodies found in the blood of mammalia. **D.'s gran′ular bod′ies,** colostrum corpuscles. **D.'s test,** for detection of pus in urine, with potash, the pus becoming thicker and more gummy.

**Don′ovan's solu′tion.** Solution of the iodide of arsenic and mercury, used in cutaneous affections in doses of ♏v–xv (0.32–1.0).

**Doogal′is caf′fra.** Aberia.

**Doom bark.** Erythrophlœum.

**Door′weed.** Polygonum.

**Do′ra.** Cutis.

**Doradil′la.** Asplenium ceterach.

**Dore′ma ammoni′acum.** See *Ammoniac.* **D. an′cheri,** Persian species, yielding ammoniac. **D. au′reum,** Indian species, yielding gum resembling official ammoniac. **D. robus′tum,** Persian species, yielding a gum simulating ammoniac.

**Dor′mant** (*dormio,* to sleep). Sleeping; inactive.

**Dor′miol.** An oily liquid of a yellowish color, a chemical combination of amylene nitrate and chloral; hypnotic and nerve sedative; dose, gr. v–xv (0.32–1.0).

**Dor′mitive.** Tending to produce sleep; hypnotic.

**Doron′icum ar′nica.** Arnica montana. **D. corda′tum,** D. pardalianches. **D. german′icum,** Arnica montana. **D. officina′le,** D. pardalianches. **D. oppositifo′lium,** Arnica montana. **D. pardalian′ches,** Roman leopard's bane; root resembles Arnica montana in its properties. **D. plantag′inis fo′lio,** Arnica montana. **D. roma′num,** D. pardalianches.

**Dor′sad.** Toward the back or dorsum.

**Dor′sal** (*dorsum,* back). Notal, tergal. Relating or appertaining to the back of the body or one of its parts, as the dorsal vertebræ, nerves, etc.; dorsal artery of the tongue, penis, etc.; dorsal region of the foot, hand, etc. **D. as′pect,** aspect toward the dorsum or backbone. **D. decu′bitus,** recumbent position on the back. **D. re′flex,** see *Reflex.*

**Dorsa′lis.** Dorsal. **D. hallu′cis** (arteria), dorsal artery of the thumb, branch of the dorsalis pedis. **D. in′dicis radia′lis ar′tery,** dorsal artery of the index finger. **D. lin′guæ,** dorsal artery of the tongue, a branch of the lingual. **D. na′rium** or **na′si ar′tery,** dorsal artery of the nose. **D. na′si mus′cle,** pyramidalis nasi. **D. pe′dis,** continuation of the anterior tibial artery, passing forward from the bend of the ankle along the tibial side of the foot to the back part of the first interosseous space, where it divides into two branches. **D. pe′nis,** branch of the internal pudic nerve distributed to the upper part of the male organ and the clitoris of the female. **D. p. ar′tery,** dorsal artery of the penis. **D. pol′licis radia′lis ar′tery,** dorsal artery of the thumb on the radial side. **D. p. ulna′ris ar′tery,** dorsal artery of the thumb on the ulnar side. **D. scap′ulæ,** dorsal artery of the scapula.

**Dor′siduct** (*dorsum,* back, *duco,* to lead). To draw or move toward the back or back part. The action is called *dorsiduction.*

**Dorsiflex′ion.** Bending on or toward the dorsum, as of the foot.

**Dorsilum′bar.** Dorsolumbar.

**Dorsime′sad.** Toward the dorsimeson.

**Dorsime′son.** Vertical middle line of the back.

**Dorsispi′nal** or **Dorsospi′nal.** Relating to both back and spine. **D. veins,** veins placed on the exterior of the spinal column.

**Dorso-ante′rior.** Obstetrical term given to the position of the fœtus when its back is pointing toward the anterior surface of the mother.

**Dorsoceph′alad.** Toward the back of the head.

**Dorsodyn′ia.** Rheumatism of the dorsal region.

**Dorso-epitrochlea′ris.** Muscular fascicle occasionally met with extending from the inferior margin of the latissimus dorsi to the interior muscular brachial septum.

**Dorso-intercos′tal.** Relating to the back and the intercostal spaces.

**Dorso-interme′diate.** Relating to the back and the parts intermediate between the centre and the side, as *dorso-intermediate fissure* of the cord.

**Dorsolat′eral.** Placed on one side of the back part, as *dorsolateral fissure* of the cord.

**Dorsolum′bar.** Relating to the dorsal and lumbar regions. **D. curve,** double curve formed by the back in the lumbar regions. **D. nerve,** small nerve connecting the last dorsal with the first lumbar nerve.

**Dorsome′dian.** Situated in the middle part of the posterior dorsal region of the cord, as *dorsomedian fissure* of the cord.

**Dorsome′sial.** Contiguous to the middle or mesial line and in the back part, as the *dorsomesial column* of the cord.

**Dorsona′sal veins.** Nasal veins.

**Dorsoposte′rior.** Obstetrical term given to the position of the fœtus when its back points toward the posterior surface of the mother.

**Dorsora′dial.** Situated on the dorsal surface and radial border of the arm, hand, or finger.

**Dorsoscap′ular.** Relating to the back and shoulder; the dorsoscapular muscle is the rhomboid muscle.

**Dorsospi′nal.** See *Dorsispinal.*

**Dorsos′seus.** Dorsal interosseous muscle.

**Dorsosu′pra-acromia′lis mus′cle.** Trapezius.

**Dorso-ul′nar.** Situated on the dorsal surface and ulnar border of the arm, hand, or finger.

**Dorste′nia brasilien′sis** (after Dr. Dorsten, botanist, of Marburg). The root of this Brazilian plant is emetic and antidiarrhœic. **D. contrayer′va,** Lisbon contrayerva, ord. *Urticaceæ.* Plant of S. America, whose root, *contrayerva,* is aromatic, bitter, and astringent. The plant is tonic, stimulant, and sudorific. **D. cordifo′lia placentoi′des,** or **vitel′la,** D. brasiliensis.

**Dorsua′lis.** Dorsalis.

**Dor′sum.** The back. Posterior part of the trunk, extending from the inferior and posterior region of the neck as far as the loins. Also vertebral column. The back of the foot, *dorsum pedis,* is the upper part of that organ opposite the sole. The back of the hand, *dorsum manus,* is the part opposed to the palm. *Dorsum penis* is the aspect of the organ opposite to that along which the urethra runs. *Dorsum nasi* is the ridge of the nose. **D. ephip′pii,** see *Sella turcica.*

**Doryph′ora decemlinea′ta.** Potato-bug; possesses vesicating power.

**Do′sage.** The study of the subject of doses.

**Dose** (*didomi,* to give). Quantity of any substance which ought to form part of a compound medicine, or ought to be exhibited singly to produce a desired effect. The *daily dose* is the aggregate of all the doses to be given in the twenty-four hours. *Divided doses* are those taken in fractional parts at brief intervals. A *maximum dose* is the largest amount to be prescribed compatible with safety or justice to the patient's condition. A *maximum daily dose* is the largest amount which can be taken in the twenty-four hours, in divided doses. When a prescription calls for larger doses than the maximum the physician should indicate by some sign that the large quantity is ordered intentionally. The *minimum dose* is the smallest quantity that will produce an effect. A *lethal dose* is one that will probably cause death. Many circumstances influence the doses of medicines. Women require smaller doses, as a general principle, than men. Habit has a great effect, as well as climate, age, and idiosyncrasy. All these and other circumstances must be taken into account. *To dose* is to give medicine, and also to drug, or give to excess.

The following table is a convenient table for determining the dose applicable at different ages from childhood to the age of twenty-four years.

*Table of Doses According to Age.*

| | | | |
|---|---|---|---|
| Age 24 | Let the full dose be. . | 1 | 1 drachm. |
| 18 | will require . . . . . . . . | $\frac{2}{3}$ | 2 scruples. |
| 14 | . . . . . . . . . . . . . . . . . . | $\frac{1}{2}$ | $\frac{1}{2}$ drachm. |
| 7 | . . . . . . . . . . . . . . . . . . | $\frac{1}{3}$ | 1 scruple. |
| 4 | . . . . . . . . . . . . . . . . . . | $\frac{1}{4}$ | 15 grains. |
| 3 | . . . . . . . . . . . . . . . . . . | $\frac{1}{6}$ | 10 grains. |
| 2 | . . . . . . . . . . . . . . . . . . | $\frac{1}{8}$ | 8 grains. |
| 1 | . . . . . . . . . . . . . . . . . . | $\frac{1}{12}$ | 5 grains. |

The table of doses, according to age, recommended by Dr. Thomas Young, affords a general approximation. His rule is: For children under twelve years of age the doses of most medicines must be diminished in the proportion of the age, to the age increased by twelve. Thus, at two years, to $\frac{1}{7}$, *i. e.*, $\frac{1}{7}=\frac{2}{2+12}$. At twenty-one the full dose is given.

Dr. Cowling's rule is to divide the number of the young person's next birthday by 24; thus, for a child three years old the fraction representing the dose would be $\frac{4}{24}=\frac{1}{6}$; for a child five years old, $\frac{6}{24}=\frac{1}{4}$.

Dr. Brunton suggests a convenient rule for calculating the dose, especially when the metric system is used. He divides by 25 instead of 24. It is very easy to divide by 25 by simply multiplying by 4 and dividing by 100. *When the metrical system is used* all that is necessary is to multiply the full dose by the number of the child's next birthday, then by 4, and remove the decimal point two places to the left. Thus, if the full dose for an adult be 1 gramme, the dose for a child of three will be $\frac{1\times4\times4}{100}=0.16$ gramme, or 16 centigrammes. If the full dose for an adult be 0.3 gramme, the dose for a child of three will be $\frac{0.3\times4\times4}{100}=0.048$, or 48 milligrammes. If the full dose be 1 gramme, the dose for a child of five will be $\frac{1\times6\times4}{100}=0.24$ gramme, or 24 centigrammes. If the full dose be 0.3 gramme, the dose for a child of five will be $\frac{0.3\times6\times.4}{100}=0.072$ gramme, or 72 milligrammes. To put this rule shortly, the number of grammes in the full dose multiplied by the child's next birthday and by 4 gives the result in centigrammes. The number of decigrammes multiplied in the same way gives the result in milligrammes.

**Do′sia pow′der.** A celebrated secret remedy in Japan, which for a thousand years caused high honors to be paid to Kobodaisi, its discoverer.

**Dosimet′ric.** Relating to dosimetry.

**Dosim′etry** (*dosis*+*metron*, measure). System of medicine in which granules of definite strength are administered in certain doses at definite intervals.

**Dosiol′ogy** (*dosis*+*logos*, doctrine). Doctrine of dosage; posology.

**Do′tage.** Senile mental decrepitude. See *Dementia.*

**Dothienente′ria** or **Dothienenteri′tis** (*dothien*, abscess or boil, *enteron*, intestine+*itis*). Follicular enteritis; inflammation and ulceration of the glands or follicles of Peyer and Brunner, as in typhoid fever. Also used as a synonym of typhoid fever.

**Doub′le.** Paired; reduplicated. **D. con′sciousness**, see *Consciousness.* **D. hear′ing**, the action of the one ear unaccordant with that of the other; sounds heard doubly, and in different tones or keys. **D. mon′sters**, see *Duplication.* **D. refrac′tion**, see *Refraction.* **D. salts**, see *Salt.* **D. stain′ing**, process employed in staining specimens, consisting in using two colors, the one of which will stain the connective tissue and cell protoplasm, and the other the nuclei, thus rendering the different elements more easily discernible. **D. touch**, combined vaginal and rectal digital examination, in which the thumb is introduced into one organ and the finger into the other. **D. u′terus**, dihysteria. **D. vis′ion**, diplopia.

**Doub′let.** Microscope with two lenses.

**Douche**, doosh. Term applied to a column of fluid directed against any part of the body. In the *descending douche* the fluid falls from a height. In the *ascending douche* the fluid is thrown upward, as in those administered in diseases of the uterus. In the *horizontal douche* the fluid is impelled horizontally, etc. Douches may be cold or warm. The douche communicates a considerable and peculiar shock to the nervous system, and is one of the most successful means for taming the furious maniac. It is also useful in chronic rheumatism, stiff joints, etc. **Air d.**, a current of air, such as is occasionally used in cases of obstruction of the Eustachian tube by mucus; the air is sent from a compressed-air cylinder through a catheter introduced through the nose into the Eustachian tube. **Scotch d.**, transition d. **Spi′nal d.**, consists of a single stream of water applied to the spine; stimulant in melancholia, cerebral anæmia, and general debility. **Transi′tion d.**, consists in the successive use of hot and cold water.

**Douche-pan.** Vessel made of zinc, which is filled with water and provided with a rest, on which the patient sits while syringing the vagina.

**Doug′las's crescen′tic fold.** Lunated edge marking a deficiency in the posterior wall of sheath of the rectus abdominis muscle. **D.'s cul-de-sac**, the pouch formed by the recto-uterine fold of the peritoneum; see *Uterus.* **D.'s lig′aments**, recto-uterine duplicature of the peritoneum. **D.'s line**, inferior border of the inner aponeurotic layer of the internal oblique muscle of the abdomen. **D.'s pouch**, D.'s cul-de-sac. **D.'s semilu′nar fold**, D.'s crescentic fold. **D.'s sep′tum**, partition in fetal life formed by the union, in middle line, of Rathke's folds. **D.'s space**, D.'s cul-de-sac.

**Doundake′.** Sarcocephalus esculentus.

**Doundakine′.** Alkaloid derived from doundake.

**Dou′rine.** Contagious malady of horses, characterized by inflamed and swollen genital organs and lymphatic glands, and paralysis of the hind legs. It is believed to be due to a blood parasite, *Trypanosoma equiperdum.*

**Do′ver's pow′der.** See *Pulvis ipecacuanhæ compositus.*

**Dove′tail.** A flaring enlargement given to a dental cavity to retain a filling.

**Down.** See *Attack.* Also short, soft hairs.

**Doyère's** (doi-yares′) **em′inences** or **hil′locks** or **papil′læ.** Slight eminences at the entrance of a nerve filament into the sarcolemma of a muscular fibre.

**Doyle.** Strabismus.

**Dracæ′na dra′co.** Tree, native of East Indies and Canary Islands; dragon's blood is obtained from it.

**Drachion**, drak′e-on. The quantity of any substance which may be taken with the ends of two or three fingers.

**Drachm**, dram. Eighth part of an ounce, sixty grains, three scruples, apothecaries' weight.

**Dra′cic acid.** Anisic acid.

**Dracin′.** Draconin.

**Dracoceph′alum canarien′se.** Turkey or Canary balsam, balm of Gilead tree. Turkish and Siberian plant, used as a tonic. **D. virginia′num**, Physostegia virginiana.

**Dracon′ic acid.** Prussic acid.

**Draconin′.** Red resin of dragon's blood.

**Draco′nis san′guis.** See *Dragon's blood.*

**Draconthæ′ma.** See *Calamus rotang.*

**Draconti′asis.** See *Dracunculus.*

**Dracontiso′mus** (*drakon*, dragon, *soma*, body). Celosomus.

**Dracon′tium.** Dracunculus. **D. angustis′patha**, narrow-spathed skunk cabbage, is possessed of properties similar to those of **D. fœ′tidum**, skunk cabbage, skunkweed, polecat collard, cow collard, collard, itchweed, stinkpoke, swamp cabbage, polecatweed, Irish cabbage. Indigenous plant, extremely fetid. The property on which its medical virtues are dependent resides in a volatile principle. The dose of the dried root is gr. x–xx (0.65–1.3); of the fluid extract, ʒss–j (2.0–4.0). Resembles asafœtida and other fetid gums in its properties, belonging to the class of reputed antispasmodics. **D. polyphyl′lum**, poisonous species.

**Drac′onyl.** Solid substance obtained from dragon's blood by distillation.

**Dracun′culus medinen′sis.** Muscular hairworm, bicho, Guineaworm or threadworm. Genus of worms frequently met with in India and Africa; characterized by a smooth filiform body, of nearly equal thickness throughout. When small it insinuates itself through the cutaneous pores, and penetrates into the areolar membrane and between the muscles, especially between those of the lower limbs, where it occasions a tumor like a boil—*Guineaworm disease* —which suppurates, and the head of the worm gradually emerges. Morbid phenomena induced by the dracunculus have been termed *dracontiasis*. **D. polyphyl′lus,** Arum dracunculus. **D. praten′sis,** Achillea ptarmica. **D. vulga′ris,** snakeroot, European dragonroot; poisonous plant with a fetid odor; root is used for the same purposes as the root of Arum maculatum.

**Draft.** Draught.

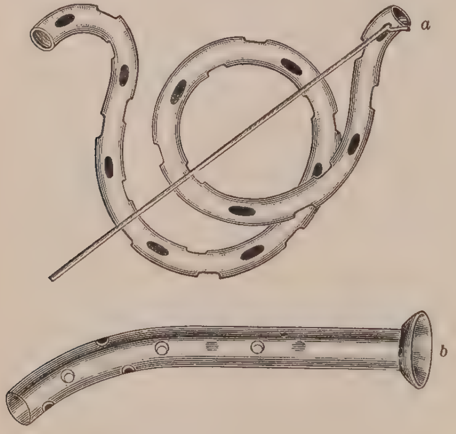
**Drag′ge.** Lolium temulentum.

**Drag′on claw** (scaly). Pterospora andromedea. **Great d.,** Arum maculatum. **Green d.,** Arum dracontium. **D. wort,** Dracunculus vulgaris.

**Dragon's blood.** See *Calamus rotang*. **D.'s head,** Antirrhinum majus. **D.'s root,** corm of Arisæma triphyllum or Indian turnip; diaphoretic and expectorant. **D.'s wa′ter,** Calla palustris.

**Drain.** As a verb, to produce drainage. In surgery, arrangement for procuring proper drainage of a wound, such as a hollow, perforated tube or bundle of catgut. **D. throat,** diphtheroid sore throat.

**Drain′age.** Act of depriving parts gradually of their redundant humidity. In surgery, gradual drawing off of purulent fluids from deep-seated abscesses by means of hollow sounds, drainage-tubes, tubing, etc. **Cap′illary d.,** d. effected by gauze, catgut, horsehair, etc., through capillary action. **Fun′nel d.,** d. of swollen tissues through glass funnels, see *Canalization*. **Through d.,** d. through a perforated tube, both ends of which open on the surface. **D.-tube,** a tube of glass, rubber, or other material, usually with perforated walls, which is introduced into a wound or cavity for the purpose of draining away the secretions. **Keith's d.-t.,** tube for draining the peritoneal cavity; it is open above and below, perforated at the lower third, and provided with a projecting ridge near the orifice. **Koe′berle's d.-t.,** resembling a test-tube in shape, provided with perforations, and having a round, smooth end; employed similarly to Keith's drainage-tube.



Drainage-tubes: *a*, rubber; *b*, glass.

**Drake′na.** Dorstenia contrayerva.

**Dram.** Drachm.

**Dram′atism.** Tendency to talk pompously or dramatically.

**Dra′per's tea′sel.** Dipsacus fullonum.

**Drapetoma′nia** (*drapetes*, deserter). Mental aberration in which the individual has a desire to run away.

**Dras′tic** (*drao*, to be active). Active; epithet given to purgatives which operate powerfully, as elaterium, oil of croton, etc.

**Draught.** Liquid medicinal preparation to be swallowed at once. Sudden rush of blood to the mammæ, occasioned in the mother by the sight or even thought of her infant, and which occasions a greatly increased secretion of milk. Current of air. **Black d.,** see *Infusum sennæ compositum*. **D. of Rive′rius,** solution of sodium citrate, official in the German Pharmacopœia as *potio Riverii*.

**Draw′ing.** See *Digestives*.

**Draw-sheet.** Sheet folded and so placed under a patient in bed that it may be partially withdrawn as it becomes soiled, without necessitating the removal of the entire sheet.

**Draw-tube.** Interior tube to lengthen a microscope.

**Dray′man's bot′tom.** Enlarged condition of the bursa mucosa over the tuberosity of the ischium.

**Dream.** See *Somnium*. **Wa′king d.,** see *Hallucination*.

**Drench.** To give liquid physic by force, as in veterinary practice; also medicine so given.

**Drepanid′ium pana′rum.** Parasite found in the red blood corpuscles of frogs.

**Drepanocar′pus.** Genus of trees and shrubs, natives of Africa and tropical America. **D. senegalen′sis,** species of Western Africa furnishing kino.

**Dress.** To cleanse wounds, ulcers, etc., and to apply the necessary bandages.

**Dress′er.** Hospital assistant whose office it is to dress wounds, ulcers, etc. He corresponds in function to the *élève externe* of the French hospitals.

**Dress′ing.** Methodical application of any remedy or apparatus to a diseased part; also the remedy or apparatus itself. **Absorb′ent d.,** dressing with material intended to absorb the discharges. **Alcohol′ic d.,** dressing saturated with an alcoholic fluid. **Antisep′tic d.,** dressing impregnated with a substance which prevents putrefaction; see *Antiseptic*. **Chloral′cohol d.,** antiseptic and cicatrisant dressing of calcium chloride and tincture of camphor, equal parts of each. **Dry d.,** dressing in which dry, absorbent cotton-wool, wood-wool, or wadding treated with corrosive sublimate, is used for the purpose of absorbing secretions from a wound and to prevent external infection. **Earth d.** consists of yellow clay, after being deprived of grit and organic material, applied to a wound or discharging ulcer, and considered to have deodorizing properties. **Fixed d.,** see *Bandage, starch*. **Immov′able d.,** see *Bandage*. **I′solating d.,** the wounded part is immersed in a continuous bath of carbolized oil, thus seeking to give protection to the wound and to remove discharges. **Lis′ter's d.,** antiseptic and impermeable dressing introduced by Joseph Lister, in which carbolic acid was generally used; it aimed at preventing the access of putrefactive germs. **Occlu′sive d.,** a d. sealing a wound, thus removing all possibility of infection from without. **Protec′tive d.,** an antiseptic or occlusive d. **Scott's d.,** employed in the treatment of fungous arthritis; compound mercurial ointment is first applied, and then followed by a pitch plaster or leather splint. **Wa′ter d.,** method employed to keep a wound constantly wet by the application of wet compresses or immersion in tepid water.

**Dress′ler's disease′.** Paroxysmal hæmoglobinuria.

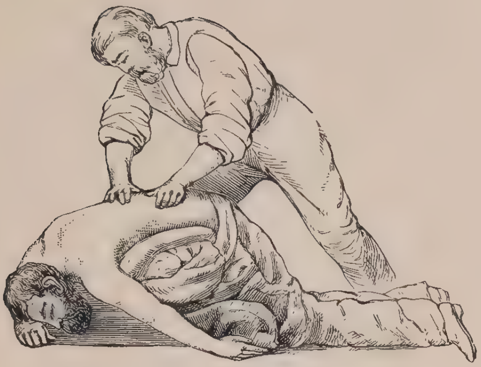
**Drill.** Instrument used for boring holes. **D. bone,** exercise bone; triangular piece of bone arising in the left deltoid muscle from pressure of the musket. The riding bone, riders' bone, in the adductor muscle of the thigh, is produced from pressure of the saddle.

**Dril′ling.** Operation sometimes necessary on bones, as for the insertion of pegs, etc. Drilling of the crystalline lens has been practised in cataract.

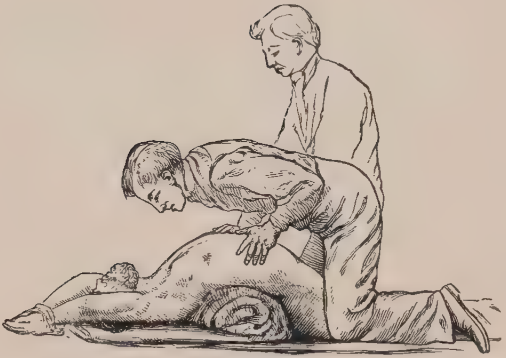
**Drim′ia cilia′ris.** Plant of Southern Africa, possessing vesicant, emetic, expectorant, and diuretic properties.

**Drim′ys win′teri.** Winteria aromatica.

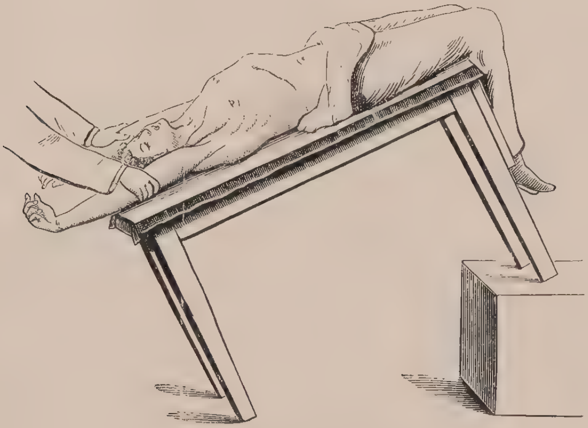
**Drink.** Beverage. Liquid introduced into the alimentary canal for repairing loss of fluid parts of



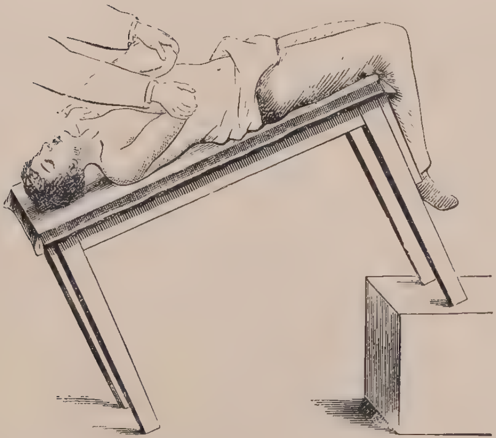
First manipulation in Howard's method.



Direct method of artificial respiration.



Silvester's method—inspiration. (Esmarch.)



Silvester's method—expiration. (Esmarch.)

Artificial Respiration in Apparent Death by Drowning.

the body; the necessity for it is indicated by the sensation of thirst. A small quantity of fluid taken during a meal aids in the digestion of food, but a large quantity impairs it. Drinks are used to appease thirst prevailing in febrile affections, or to act as diluents in those and other cases.

**Drip-cup.** Vessel for catching the liquid which has been removed from a galvanic cell.

**Driv′elling.** Slavering.

**Dri′ving in.** Checking an external eruption suddenly and driving it into the interior, as is supposed, of the body.

**Dro′mograph** (*dromos*, course, *grapho*, to write). Instrument for estimating the rapidity with which the blood circulates in an artery.

**Dromoma′nia** (*dromos*, course + *mania*). Tramping mania; an insane impulse to vagabondage.

**Droop′ing a′vens.** Geum rivale. **D. tu′lip,** Fritillaria meleagris.

**Drop.** A quantity of liquid generally valued at the weight of a grain. This weight, however, varies according to the degree of tenacity of the fluid, extent of moist surface to which the drop is attached before it falls, size of the bottle, and angle of inclination during the dropping. The following is *the number of drops of different liquids equivalent to a fluid-drachm,* or 60 minims, according to Prof. J. P. Remington, of Philadelphia:

| | | | |
|---|---|---|---|
| Acetum opii | 90 | Hydrargyrum | 150 |
| Acetum sanguinariæ | 78 | Liquor am. acet. | 75 |
| Acetum scillæ | 68 | Liquor acid. arseni | 57 |
| Acid. aceticum | 108 | Liquor arsenici et hydrargyri iodidi | 58 |
| Acid. aceticum dilut. | 68 | Liquor ferri chlor. | 71 |

| Tinctura iodi | 148 | Vin. opii | 100 |

**Drop-finger, D.-foot, D.-hand, D.-shoulder, D.-wrist.** Inability to extend these parts in consequence of paralysis of the extensor muscles or rupture of the extensor tendons; usually written finger-drop, foot-drop, etc.

**Dro′pax.** See *Depilatory.*

**Drop′per.** Instrument made of glass, either straight or curved, consisting of a hollow tube opening at both ends, and provided with rubber at one end for drawing up liquids, which can be applied, drop by drop, to the eye.

**Drops.** A form in which medicine is sometimes put up to make it palatable and easy to take, as cough drops and many others. See *Gutta.* **A′gue, Bate′man's, black, Dutch, Jes′uits′,** etc., **drops,** see *Ague, Bateman,* etc.

**Drop′sical** or **Drop′sied.** Hydropic. **D. degenera′tion,** degeneration in which swelling and alteration of cells occur through imbibition of fluid.

**Drop′sy.** See *Hydrops.* **D. of the abdo′men,** ascites. **Acute anæ′mic d.,** an endemic disease in India and the Mauritius, characterized by general anasarca, anæmia, and slight fever. **Amniot′ic d.,** hydramnios. **Anæ′mic d.,** dropsy caused by anæmia. **Arach′noid d.,** collection of fluid in the arachnoid sac. **D. of the are′olar tis′sue,** œdema. **Artic′ular d.,** hydrarthrosis. **D. of the bel′ly,** ascites. **D. of the brain,** hydrocephalus. **Cachec′tic d.,** dropsy due to cachexia, in which the watery constituents of the blood preponderate. **Car′diac d.,** dropsy dependent on heart disease. **D. of the cel′lular mem′brane,** anasarca. **Cer′ebral d.,** hydrocephalus. **D. of the chest,** hydrothorax. **Endem′ic** or **Epidem′ic d.,** acute anæmic d. **D. of the eye,** hydrophthalmia. **D. of the Fallo′pian tube,** hydrosalpinx. **False d.,** retention cyst. **Fi′brinous d.,** effused fluid containing fibrin. **D. of the flesh,** anasarca. **Gen′eral d.,** anasarca. **D. of the head,** hydrocephalus. **D. of the heart,** hydropericardium. **Hepat′ic d.,** d. dependent on disease of the liver. **D. of the kid′ney,** hydronephrosis. **D. of the lac′rymal sac,** fistula lacrymalis; lacrymal hernia. **D. of the lar′ynx,** œdema of the glottis. **D. of the lungs,** œdema pulmonum. **Ova′rian d.,** hydrovarion. **D. of the pericar′dium,** hydropericardium. **D. of the perito-ne′um,** ascites. **D. of the pleu′ra,** hydrothorax. **D. of preg′nancy,** dropsy occurring in pregnant women, due to pressure of the gravid uterus. **Re′nal d.,** dependent on disease of the kidney. **Spi′nal d.,** hydrorrhachis. **D. of the tes′ticle,** hydrocele. **D. of the u′terus,** hydrometra. **Wind d.,** emphysema. **D. of the womb,** hydrometra.

**Drop′wort.** Spiræa filipendula. **Hem′lock d.,** œnanthe. **West′ern d.,** Gillenia trifoliata.

**Dro′sera rotundifo′lia** (*droseros,* dewy, the leaf glands exuding a clear fluid like a dewdrop). Systematic name of the *sundew,* a plant used internally as an expectorant, and externally as a rubefacient and to destroy warts and corns. A *tincture* is made, the dose of which is ʒss (2.0).

**Droserin′.** A ferment from Drosera rotundifolia.

**Drosom′eli.** Fraxinus ornus.

**Drown′ing, asphyx′ia by.** See *Asphyxia by submersion.* **Resuscita′tion from d.,** the following general directions are based on those in use in a number of Government services at home and abroad: If attempts at breathing be made while the patient is in the water, water may pass into the air passages; but this is not a necessary condition of drowning. Hence attempts need not be made to remove water from the chest by rolling the body, face downward, on a barrel, etc. The efforts to restore breathing must be commenced energetically, and persevered in for one or two hours, or until life has been pronounced extinct by a medical man. Efforts to promote warmth and circulation must not be made until the appearance of natural breathing; for if circulation be induced before respiration, restoration will be endangered. Treat the patient *instantly* on the spot, in the open air, with the face downward, exposing the face, neck, and chest to the wind, except in severe weather, and removing all tight clothing from the neck and chest, especially the braces. Prevent unnecessary crowding around the body. Do not allow the body to remain on the back unless the tongue is secured. Do not hold the body up by the feet, or place it in a warm bath, unless under medical direction as a momentary excitant.

1. *Marshall Hall's Method.* To restore the breathing, first clear the throat by placing the patient on the ground with the face downward and one arm under the forehead, in which position fluids will more readily escape by the mouth, and the tongue will fall forward, leaving the entrance into the windpipe free. Wipe and cleanse the mouth. If satisfactory breathing commences, use treatment to promote warmth; but if necessary to excite breathing, turn the patient well and instantly on the side, support the head, and excite the nostrils with snuff, hartshorn, or smelling salts, or tickle the throat with a feather, etc. Rub the chest and face warm, and dash cold water, or cold and hot water alternately, on them. If there be no success, instantly, to imitate breathing, replace the patient on the face, raise and support the chest well on a folded coat or other article of dress, turn the body gently on the side and a little beyond, and briskly on the face, back again; repeating these measures cautiously and perseveringly once every four or five seconds, occasionally varying the side. On each occasion that the body is replaced on the face make uniform but efficient pressure with brisk movement on the back between and below the shoulder-blades, removing pressure immediately before turning the body on the side. By placing the patient on the chest the air is forced out, as in expiration; when turned on the side the pressure is removed, and air enters the chest, as in inspiration. During the whole operation let one person attend solely to the movements of the head and of the arm under it. While these operations are being proceeded with, dry the hands and feet, strip the body, and cover it with dry clothing or blankets, taking care not to interfere with the efforts to restore breathing.

2. *Silvester's Method.* Should these efforts not prove successful in from two to five minutes, imitate breathing by the following method: Place the patient on the back on a flat surface, inclined a little upward from the feet; raise and support the head and shoulders on a small, firm cushion or folded article of dress placed under the shoulder-blades. Cleanse the mouth and nostrils, draw forward the patient's tongue, and keep it projecting beyond the lips by an elastic band over the tongue and under the chin; or a piece of string or tape may be tied around them. Remove all tight clothing from about the neck and chest, especially the braces. Standing at the patient's head, grasp the arms just above the elbows, draw them gently and steadily upward above the head, and keep them stretched upward for two seconds; *air is thus drawn into the lungs.* Then turn down the patient's arms, and press them gently and firmly for two seconds against the sides of the chest. *Air is thus pressed out of the lungs.* Repeat these measures alternately and perseveringly, about fifteen times in a minute, until a spontaneous effort to respire is perceived, immediately upon which proceed to induce circulation and warmth.

3. *Howard's Method.* Instantly turn the patient downward, with a large, firm roll of clothing under his stomach and chest. Place one of his arms under his forehead, so as to keep his mouth off the ground. Press with all your weight, two or three times, for four or five seconds each time, upon the patient's back, so that the water is pressed out of his lungs and stomach and drains freely out of his mouth. Then quickly turn the patient, face upward, with a roll of clothing under his back, just below the shoulder-blades, and make the head hang back as low as possible. Place the patient's hands above his head. Kneel with the patient's hips between your knees, and fix your elbows firmly against your hips. Grasping the lower part of the patient's naked chest, squeeze his two sides together, pressing gradually forward with all your weight for about three seconds, until your mouth is nearly over the mouth of the patient; then, with a push, suddenly jerk yourself back. Rest about three seconds, then begin again, repeating these bellows-blowing movements with perfect regularity, so that foul air may be pressed out and pure air be drawn into the lungs, about eight or ten times a minute, for at least an hour or until the patient breathes naturally. A moment's delay in using this method, and success may be hopeless. Be careful not to interrupt the first short, natural breaths. If they be long apart, carefully continue between them the bellows-blowing movements, as before. After breathing is regular have the patient rubbed, etc., and put to bed.

4. *Laborde's Method.* Tongue traction. After the preliminary treatment common to all the methods, designed to free the air passages, as far as possible, from water, the tongue is firmly grasped between the thumb and forefinger of the operator (slipping being prevented by a napkin or handkerchief), or in the blades of a wide-lipped forceps, and pulled forward forcibly and then allowed to fall back. This manœuvre is repeated rhythmically ten or fifteen times a minute for twenty or thirty minutes, if natural respiration is not excited earlier. The first response to this procedure, if it is to be successful, is a sense of resistance felt when the tongue is drawn forward.

To promote warmth and circulation after natural breathing has been restored, wrap the patient in dry blankets; commence rubbing the limbs upward, with firm, grasping pressure and energy, using handkerchiefs, flannels, etc., the blood being thus propelled along the veins toward the heart, and continue friction under the blanket or over the dry clothing. Promote warmth by hot flannels, bottles or bladders of hot water, heated bricks, etc., to the pit of the stomach, arm-pits, between the thighs, and soles of the feet. On restoration of life a teaspoonful of warm water should be given, and then, if the power to swallow has returned, small quantities of wine, warm brandy and water, or coffee. The patient should be kept in bed, and a disposition to sleep encouraged. This treatment should be persevered in for several hours.

**Drow'siness.** Somnolency.

**Drug.** Name ordinarily applied to simple medicines, but, by extension, to every substance employed in the cure of disease. A strictly physiological classification of drugs is impossible. The following table presents a satisfactory and clear arrangement of the subject (Hare):

1. Alteratives.
2. Anæsthetics.
3. Antacids.
4. Anthelmintics.
5. Antiseptics.
6. Antiperiodics.
7. Antipyretics.
8. Antispasmodics.
9. Astringents.
10. Cardiac sedatives.
11. Cardiac stimulants.
12. Counterirritants.
13. Diaphoretics.
14. Digestants.
15. Disinfectants.
16. Diuretics.
17. Eliminatives.
18. Emmenagogues.
19. Emetics.
20. Expectorants.
21. Hypnotics.
22. Nervous sedatives.
23. Nervous stimulants.
24. Oxytocics.
25. Tonics.
26. Vasomotor depressants.
27. Vasomotor stimulants.

Drug also signifies to prescribe or administer drugs; most commonly, perhaps, to dose to excess with drugs; one who so doses is sometimes called "a drugger." "To drug" also means to tincture with some medicinal article. **D. disease′**, morbid condition which is—or is presumed to be—caused or kept up by the administration of drugs. **D. grind′er**, see *Pulverization*. **D. mill**, see *Pulverization*. **D. rash**, see *Dermatitis medicamentosa*.

**Drug′ger.** One who is fond of giving drugs. See *Drug*.

**Drug′ging.** Prescribing or taking medicine unnecessarily.

**Drug′gist.** One who sells drugs; apothecary.

**Drum.** Tympanum. **D.-bel′ly**, tympanites. **D. cav′ity**, tympanum. **D. head** or **D. mem′brane**, membrana tympani.

**Drumine′.** Alkaloid obtained from Euphorbia drummondii; has anodyne and anæsthetic properties.

**Drum′mond′s whiff.** Phenomenon in which a whiff can be distinguished while the mouth is open during expiration following rest; considered to be an indication of aneurysm of the thoracic aorta.

**Drum′stick bacil′lus.** B. putrificus coli.

**Drunk′ard.** One addicted to excess in alcoholic stimulation. **D.'s itch**, psora ebriorum. **D.'s liv′er**, cirrhosis of the liver.

**Drunk′enness.** Acute alcoholic intoxication.

**Drunk′wort.** Nicotiana tabacum.

**Druse.** Strangles. Hyaline tubercles on the optic papillæ. Simple rupture of tissues without external evidence.

**Dry.** Devoid of moisture. **D. amputa′tion**, a. without loss of blood. **D. bel′lyache**, girdle or cincture pain. **D. ca′ries**, rarefying osteitis; also a parasitic disease of the nails. **D. casea′tion**, see *Caseation*. **D. cup′ping**, see *Cupping*. **D. gan′grene**, see *Gangrene*. **D. la′bor**, labor which is not preceded by or attended with discharge of liquor amnii. **D. nurse**, see *Nurse*. **D. scall**, psoriasis. **D. wines**, those in which the saccharine matter is not in excess. **D. yeast**, yeast from which moisture has been expressed, as in Vienna yeast, by which means it can be kept for a long time.

**Dry′ad.** Yellow-flowered Dryas drummondii.

**Dryin′** (*drys*, oak). Quercin.

**Dry′ing.** Desiccation; evaporation or removal of the superfluous humidity in a body.

**Dryobal′anops cam′phora.** See *Camphor*.

**Dryop′teris fi′lix mas** or **margina′lis.** See *Aspidium*.

**Drys′dale's cells** or **ova′rian cor′puscles.** Transparent cells in the fluid of an ovarian cyst.

**Drysom′eli.** See *Fraxinus ornus*.

**Du′alism** (*duo*, two). Doctrine that there exist two varieties of venereal poison, the one producing chancre, the other chancroid.

**Du′alist.** One believing in dualism.

**Dualis′tic.** Twofold, either as to origin or theory; the latter applying to the dualistic theory of syphilis particularly.

**Dual′ity.** State or quality of being two. **D. of the mind** or **brain**, the organ consists of two hemispheres, and these have been regarded by some as separately and distinctly concerned in the mental and moral manifestations.

**Duane's′ test.** A test for deviation of the eye, the flame of a candle held before the eye being apparently displaced in a direction the reverse of that of the deviation of the eye.

**Dubi′ni's chore′a** or **disease′.** Electric chorea. See *Chorea*.

**Dub′lin meth′od.** Method of treating aneurysm by compressing the affected vessel on the cardiac side of the tumor.

**Dubois's′ caus′tic.** A caustic paste containing arsenic. **D.'s disease′**, congenital syphilis, manifested in the existence of numerous necrotic spots in the thymus gland.

**Duboi′sia myoporoi′des.** Shrub of Australia; the leaves furnish duboisine.

**Duboisine′.** Alkaloid obtained from the leaves of Duboisia myoporoides; it is a mydriatic, resembling atropine in its action, but is more rapid in its effects. The sulphate has similar properties. It is also hypnotic.

**Du Bois-Ray′mond's key.** Appliance by which an electric current can be transmitted at will through the electrodes or through a brief circuit. **D.'s law**, that stimulation of muscular and motor nerve-power depends on variation of density rather than momentary intensity of the current applied.

**Dubreuil's′ amputation.** A wrist-joint amputation with large flap.

**Duchenne′-Aran′ disease′.** Progressive muscular atrophy.

**Duchenne′-Erb paral′ysis.** Paralysis of the arm and shoulder from lesion of the roots of the fifth and sixth cervical nerves.

**Duchenne′-Landou′zy type.** A form of progressive muscular atrophy involving the face, shoulder, and arm.

**Duchenne's** (due-shens′) **at′titude.** Drooping of the shoulder in paralysis of the trapezius muscle, with obliquity of the inner border of the scapula. **D.'s disease′**, labioglossolaryngeal paralysis; also tabes dorsalis. **D.'s paral′ysis**, D.'s disease. **D.'s sign**, collapsed condition of the epigastrium at the time of inspiration, in dropsy of the pericardium or as a result of paralysis or pressure interfering with the movement of the diaphragm. **D.'s syn′drome**, labioglossolaryngeal paralysis. **D.'s tro′car**, exploring instrument for the removal of a small portion of a tumor or deposit for microscopical examination.

**Duck′bill for′ceps.** Instrument resembling a duck's bill formerly used in craniotomy.

**Duck′foot.** See *Kyllosis*.

**Duck′legged.** Having short legs like a duck.

**Ducks′foot.** Podophyllum montanum.

**Duck′worth's syn′drome.** Cessation of process of respiration for some time previous to that of circulation, in some diseases of the brain associated with pressure within the cranium.

**Duct.** Canal; meatus; see also *Ductus*. **Aber′rant d.**, vasculum aberrans. **Alimen′tary d.**, alimentary canal; thoracic duct. **D. of Bar′tholin**, tube formed by the union of one or two of the excretory ducts of the sublingual gland, and opening into the duct of Wharton. **D. of Belli′ni**, uriniferous tube. **Bil′iary d.**, excretory passage of the gall-bladder. **Botal′lo's d.**, ductus arteriosus. **Chol′edoch d.**, see *Choledoch*. **Com′mon bile-d.**, choledoch d. **D. of Cuvier′**, ducts formed by the junction of the anterior and posterior cardinal veins of each side in the embryo of some animals; these again unite into a short trunk, which at an early period opens into the single auricle. **Cys′tic d.**, see *Gall-bladder*. **Ejac′ulatory d.**, see *Ejaculatory*. **Endolymphat′ic d.**, ductus endolymphaticus, a process of the membranous labyrinth of the ear. **D. of Gaert′ner**, prolongation from the epoöphoron, the remains of the Wolffian duct. **Galactoph′orous d.**, a lactiferous vessel or milk-duct of the mammary gland. **Hepat′ic d.**, see *Hepatic*. **Lymphat′ic d.**, see *Lymphatic vessels*. **D. of Mül′ler**, Müllerian ducts (called after the physiologist, Johannes Müller, of Berlin); two canals which descend at the outer border of the Wolffian bodies, of which the vesicula prostatica is the relic in the male, as the Fallopian tubes are in the female. **Na′sal d.**, lacrymal duct. **Omphalomesenter′ic d.**, vesicula umbilicalis. **Pancreat′ic d.**, see *Pancreas*. **Parot′id d.**, see *Parotid*. **D. of Pecquet′**, thoracic duct. **Prostat′ic d.**, duct of the prostate gland. **D. of Rivi′nus**, see *Sublingual gland*. **Sal′ivary d.**, see *Salivary*. **Segmen′tal d.**, see *Segmental*. **Spermat′ic d.**, vas deferens. **D. of Ste′no** or **Sten′son**, see *Parotid*. **Thora′cic d.**, see *Thoracic*. **Umbil′ical d.**, vesicula umbilicalis. **Urogen′ital d.**, see *Urogenital sinus*. **Vitel′line d.**, see *Vesicula umbilicatus*. **D. of Whar′ton**, ductus salivalis inferior. **D. of Wir′sung**, see *Pancreas*.

**Duc′tile.** Having the property of ductility.

**Ductil′ity.** Property of metals which permits them to be drawn into wire without fracturing.

**Duct′less glands.** See *Ganglion.*

**Duc′tule.** Small duct; also extremity of a duct.

**Duc′tus** (*duco,* to lead). Canal; meatus; duct or ducts. **D. aber′rans,** vasculum aberrans. **D. Aran′tii,** venous canal. **D. arterio′sus,** arterial duct. **D. audito′rius,** scala media; the membranous cochlea. **D. aur′is palati′nus,** Eustachian tube. **D. bartholinia′nus,** duct of Bartholin. **D. Bellinia′ni,** uriniferous tubes. **D. bilia′rii,** ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct. **D. bilia′rius commu′nis,** common bile duct. **D. bilif′eri,** d. biliarii. **D. Botal′li,** arterial duct. **D. choled′ochus,** choledoch duct. **D. chylif′erus,** thoracic duct. **D. ciba′rius,** alimentary canal. **D. coch′leæ,** inferior part of the scala media in which is the organ of Corti. **D. cochlea′ris,** three-sided tube in the cochlea, interposed between the scala vestibuli and scala tympani; see *Corti.* **D. commu′nis choled′ochus,** choledoch duct. **D. Cuvier′i,** see *Duct of Cuvier.* **D. cys′ticus,** see *Gall-bladder.* **D. def′erens,** see *Deferens.* **D. ejaculato′rii,** ejaculatory ducts. **D. endolymphat′icus,** little canal situated in the aqueduct of the vestibule, connecting with the saccule and the utricle; externally it expands into a sinus resembling a flask, called the saccus endolymphaticus. **D. excreto′rius,** excretory duct. **D. Ferrei′ni,** canal of Ferrein. **D. galactoph′ori,** lactiferous vessels. **D. hemithorac′icus,** branch of the thoracic duct which empties into the lymphatic duct. **D. hepat′icus,** hepatic duct. **D. hygrobleph′ari** or **hygrophthal′mici,** ducts of Meibomian glands. **D. incisi′vus,** palatine duct (anterior). **D. interlobula′res,** interlobular bile-ducts. **D. intestina′lis,** alimentary canal. **D. lacryma′lis,** lacrymal duct. **D. lac′tei,** lactiferous vessels. **D. lac′teus,** thoracic duct. **D. lactif′eri,** lactiferous vessels. **D. lumbothorac′icus,** thoracic duct. **D. Mül′leri,** ducts of Müller. **D. nasa′lis,** lacrymal canal or duct. **D. nasolacryma′lis,** lacrymal canal or duct. **D. nasopalati′nus,** palatine duct (anterior). **D. ad na′sum,** lacrymal or nasal duct. **D. nutri′tii,** nutritive canals. **D. omphalomesenter′icus,** see *Vesicula umbilicales.* **D. pancreat′icus,** see *Pancreas.* **D. p. mi′nor,** see *Pancreas.* **D. p. recur′rens,** see *Pancreas.* **D. p. supe′rior,** see *Pancreas.* **D. Pecquet′i,** thoracic duct. **D. pecquetia′nus,** thoracic duct. **D. perilymphat′icus,** canal conveying lymph in aquæductus cochleæ. **D. pneumat′icus,** see *Air-bladder.* **D. puncto′rum lacryma′lium,** lacrymal ducts. **D. reces′sus vestib′uli,** ductus endolymphaticus. **D. reu′niens,** a minute canal between the round saccule in the membranous labyrinth and the ductus cochlearis. **D. rivinia′ni,** see *Sublingual gland.* **D. ro′rifer,** thoracic duct. **D. saliva′lis infe′rior,** *duct of Wharton;* excretory duct of the submaxillary gland. **D. saliva′lis supe′rior,** *Stenson's duct;* excretory duct of the parotid gland, which opens into the mouth opposite the second upper molar tooth. **D. Santori′ni,** see *Pancreas.* **D. semicircula′res labyrin′thi,** semicircular canals. **D. semina′les** or **seminif′eri,** see *Testicle.* **D. sero′si,** lymphatic vessels. **D. spermat′icus,** vas deferens. **D. spira′les coch′leæ,** scalæ of the cochlea. **D. stenonia′nus,** ductus salivalis superior. **D. sublingua′les mino′res,** ducts of Rivini. **D. sublingua′lis ma′jor,** duct of Bartholin. **D. submaxilla′ris,** see *Submaxillary gland.* **D. thorac′icus,** thoracic duct. **D. thy′mici,** lymphatic ducts coming from the thymus gland. **D. thyreoglos′sus,** duct existing in the embryo and ending as the foramen cæcum. **D. uri′næ,** ureter. **D. urina′rius,** urethra. **D. urinif′eri belli′ni,** uriniferous tubes. **D. varico′si u′teri,** Fallopian tubes. **D. veno′sus,** venous canal. **D. veno′sus Aran′tii,** vein which takes its course through the liver in the fœtus. **D. vitella′rius,** see *Vesicula umbilicalis.* **D. vitellointestina′lis,** see *Vesicula umbilicalis.* **D. waltheria′nus,** see *Sublingual gland.* **D. whartonia′nus,** ductus salivalis inferior. **D. wirsungia′nus,** duct of the pancreatic gland, see *Pancreas.*

**Dug** (Sw., *dægga,* to give suck). Nipple.

**Du′gass's test.** A test for dislocation of the shoulder. Inability to place the hand upon the opposite shoulder, or to have it placed there by an assistant, while at the same time the elbow touches the breast.

**Du′gong oil.** Derived from an Australian herbivorous, cetaceous animal, and employed as a substitute for cod-liver oil in tuberculous and other affections.

**Duh′ring's disease′** (after Dr. L. A. Duhring, of Philadelphia). Dermatitis herpetiformis. **D.'s pruri′tus,** winter itch.

**Dulcama′ra** (*dulcis,* sweet, *amarus,* bitter). Solanum dulcamara. **D. flexuo′sa,** Solanum dulcamara.

**Dulcamarin′.** Glucoside, $C_{22}H_{34}O_{10}$, in the form of a yellowish powder, obtained from dulcamara.

**Dulcamarrhetin′** (*dulcamara + rhetine,* resin). Resinous substance obtained by subjecting dulcamarin to the action of dilute acid.

**Dulcarine′.** Alkaloid of dulcamara.

**Dul′cify.** To make agreeable to the taste by sweetening.

**Dulcin′.** Paraphenetol carbamide, sucrol, valzin; a derivative of urea, of sweet taste; used in small doses in diabetes mellitus as a powerful sweetening agent; dose, gr. $\frac{1}{3}$ (0.2) twice a day.

**Dul′cit, Dul′sitol.** $C_6H_{14}O_6$. A variety of sugar obtained from Melampyrum nemorosum and other plants.

**Dul′cose.** Dulcit.

**Dull.** Non-resonant, a term employed in relation to percussion.

**Dul′ness.** A sound heard on percussion, in which there is no resonance, but a dull, flat note on account of the solidity of the structure percussed.

**Dulse.** Rhodomela palmata. **D. edu′lis,** used for food. **Pep′per d.,** Laurentia pinnatifida.

**Dumb.** See *Dumbness.* **D. a′gue,** obscure form of intermittent fever.

**Dumb-bell crys′tals.** Crystals of oxalate of lime resembling dumb-bells, occurring occasionally in urine, and visible with the microscope.

**Dumb-bells, Schä′fer's.** See *Schäfer.*

**Dumb′ness.** Impossibility of articulating sounds; a condition associated with deafness, often congenital, of which it is an effect; d. resulting from cerebral disease is called aphasia.

**Dum′my.** Artificial tooth forming part of the body of the bridge, the portion between the abutments.

**Dum′reicher's meth′od.** Method employed to facilitate the passage of bougies through tight urethral strictures, which consists in injecting warm oil into the urethra and forcing the oil with the fingers through the stricture.

**Dun′can-Bird's sign.** Area of dulness on percussion, and absence of respiratory sounds on auscultation, in cases of hydatid cyst of the lung.

**Dun′can's folds.** Folds noticed in the peritoneal covering of the womb after parturition. **D.'s posi′tion,** position of the placenta with its margin presenting at the os.

**Dun′ga.** Dengue.

**Dun′ham's solu′tion.** Solution of peptone, 1 per cent., and chloride of sodium, 0.5 per cent., in distilled water. Employed in bacteriological testing.

**Duod′enal.** Relating or appertaining to the duodenum. **D. glands,** Brunner's glands. **D. ul′cer,** round ulcer of the duodenum; a condition attended with pain and tenderness, diarrhœa, anorexia, and often hemorrhage.

**Duodenec′tomy** (*duodenum + ektome,* excision). Excision of a portion of the duodenum.

**Duodeni′tis.** Inflammation of the duodenum.

**Duodenocholecystos′tomy.** Establishment, by operation, of a fistulous communication between the duodenum and the gall duct.

**Duodenocholecystot′omy** (*duodenum* + *cholecystis*, gall-bladder, *tome*, incision). Operation for the removal of a portion of the duodenum and gall-bladder.

**Duodenoenteros′tomy** (*duodenum* + *enteron*, intestine, *stoma*, mouth). Operation for producing a fistulous communication between the duodenum and some adjacent portion of the intestine.

**Duodenojeju′nal.** Relating to the duodenum and jejunum; a term applied to the fold, flexure, or fossa made by the two portions of the intestine named, in common.

**Duode′no-re′nal.** Relating to the duodenum and kidney. **D.-r. lig′ament**, fold of peritoneum between the transverse mesocolon and posterior wall of the abdomen.

**Duodenos′tomy.** Operation of making a fistula between the duodenum and abdominal wall.

**Duodenot′omy.** Operation of making an incision into the duodenum

**Duode′num** (*duodeni*, twelve each). The first part of the intestinal canal, commencing at the pyloric orifice of the stomach and terminating in the jejunum. Its length was estimated by the ancients to be about twelve fingers′ breadth. As it is only partially covered by the peritoneum, it is susceptible of considerable dilatation. In the duodenum, chylification takes place after the admixture of the biliary and pancreatic fluids with the chyme.

**Duoster′nal.** Second osseous portion of the sternum, corresponding to the second intercostal space.

**Du′otal.** Guaiacol carbonate.

**Duplay′s′ spec′ulum.** Nasal speculum with two valves.

**Duplica′tion** (*duo*, two, *plico*, to fold). Species of malformation or monstrosity characterized by the parts concerned being doubled. See *Diplogenesis.*

**Du′plicature.** Reflection; folding or reflection of a membrane upon itself, as duplicature or reflection of the pleura, peritoneum, etc.

**Duplicitas**, du-plis′it-as (*duplex*, double). A doubling or folding. **D. monstro′sa**, monstrosity by duplication; if the cephalic end is double, it is called *d. m. anterior;* if the pelvic end, *d. m. posterior.* See also *Diplogenesis.*

**Dupré′s** (due-prays′) **syn′drome.** Hysterical pseudomeningitis.

**Dupuytren′s** (due-pwe-trans′) **amputa′tion.** Lisfranc′s amputation of the shoulder. **D.′s contrac′tion**, contraction of the palmar fascia. **D.′s egg′-shell symp′tom**, sensation like cracking of eggshell when the finger is lightly applied to some cases of sarcoma of the long bones. **D.′s finger**, D.′s contraction. **D.′s frac′ture**, fracture of the inferior extremity of the fibula with external and posterior dislocation of the foot. **D.′s hy′drocele**, encysted hydrocele. **D.′s intes′tinal su′ture**, method of suturing intestines, which consists in inverting the margins of the wound and bringing the opposite serous membranes together by continuous suture, in which the mucous membrane is not included. **D.′s paste**, a mixture of gum arabic, arsenous acid, and calomel, moistened with water and employed as a caustic. **D.′s phleg′mon**, phlegmonous suppurative inflammation in the front and lateral portion of one side of the neck. **D.′s splint**, a splint for Pott′s fracture, designed to prevent eversion. **D.′s tour′niquet**, a semicircular metal bar with a bulbous extremity for compression of the abdominal aorta.

**Du′ra** or **D. ma′ter** (hard mother, called *dura* because of its great resistance, and *mater* because it was believed to give rise to every membrane of the body). Fibrous, semitransparent membrane, of a pearly white color, thick, and very resisting, lining the cavity of the cranium and the vertebral canal. It protects the brain and spinal cord, and by its various expansions—the falx cerebri, tentorium, etc.—supports the different parts of the cerebral mass. **Lat′eral pro′cesses of the d. m.**, tentorium. **D. m. tes′tis**, albuginea.

**Du′ral** or **Durama′tral.** Pertaining to the dura mater.

**Duremato′ma.** Hæmatoma of dura mater.

**Dur′ham′s tro′car.** A form of trocar used to facilitate the introduction of a jointed tracheotomy tube.

**Duri′tis.** Inflammation of the dura mater.

**Duroärachni′tis.** Inflammation of the dura mater and arachnoid.

**Duro′ziez′s disease′.** Congenital narrowness of the mitral valve. **D.′s mur′mur**, murmur heard in the femoral artery in insufficiency of the aorta.

**Dur′ra** or **Dur′rah.** Panicum italicum.

**Dust.** Dry earth or other matter in very fine particles. **Blood d.**, hæmokonia.

**Dust′ing-pow′ders.** Powders to be dusted over excoriated or otherwise affected surfaces, to aid in the healing process, protect from the air, etc.

**Dutch liq′uid.** Ethylene bichloride. See *Olefiant gas.* **D. myr′tle**, Myrica gale.

**Dutch′man′s pipe.** Aristolochia hirsuta.

**Dutro′a.** Datura stramonium.

**Duval′s′ amputa′tion.** Supramalleolar amputation by an oblique elliptical incision. **D.′s nu′cleus**, a collection of large ganglion cells near the hypoglossal nucleus.

**Duverger′s′ meth′od of su′ture.** Method of uniting wounds of the intestines; it consists in introducing the trachea of a calf into the gut, and bringing the wound together over it by means of interrupted sutures.

**Duverney′s′ fora′men.** See *Hiatus of Winslow.* **D.′s gland**, Bartholin′s or Cowper′s gland.

**Dwarf.** Any animal or plant that is much below the usual stature. **D. blue′berry**, Vaccinium pennsylvanicum. **D. el′der**, Sambucus ebulus. **D. flag**, Iris lacustris. **D. net′tle**, Urtica urens. **D. sage′-bush**, Artemisia arbuscula. **D. su′mach**, Rhus copallina. **D. teeth**, of much smaller size than natural.

**Dwarf′ish.** Much below the usual stature.

**Dwarf′ishness.** A state in which the entire body, with all its parts, is much smaller than common.

**Dy′ad.** Bivalent element.

**Dy′er′s al′kanet.** Anchusa tinctoria. **D.′s broom**, Genista tinctoria. **D.′s cleav′ers**, Galium trifidum. **D.′s mad′der**, Rubia tinctorum. **D.′s oak**, Quercus lusitanica. **D.′s saf′fron**, Carthamus tinctorius. **D.′s weed**, Genista tinctoria, Reseda luteola.

**Dynam′eter.** Dynamometer.

**Dynam′ia** (*dynamis*, power). Vital activity.

**Dynam′ic** or **Dynam′ical** (*dynamis*, power). Relating to or endowed with power. In mechanics, *dynamics* investigates the powers whereby bodies are put in motion and the laws connected therewith; in biology, that which relates to the vital forces, to the organism in action—*vital dynamics.* The influences of other agents on the organism are sometimes termed *dynamic.* **D. diseas′es**, see *Organic diseases.*

**Dynam′ics, vi′tal.** See *Dynamic.*

**Dynamiom′eter.** Dynamometer.

**Dy′namite.** Highly explosive mixure of nitroglycerin and siliceous earth.

**Dynamiza′tion.** In homœopathy, the repeated trituration of a drug with the idea of increasing its power.

**Dy′namo.** Magnetic electric machine, which, being actuated by mechanical power, causing a magnet to play in face of coils of wire, or vice versa, generates an electric current.

**Dy′namoelec′tric.** Relating to the motive power of electricity.

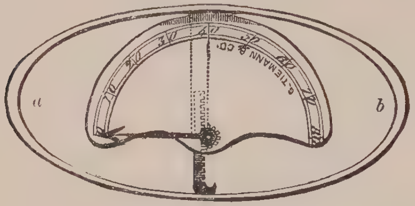
**Dynamogen′esis** or **Dynamog′eny** (*dynamis*, power, *gennao*, to engender). Production or increase of nervous power.

**Dynamogen′ic.** Causing or relating to the production of power.

**Dynam′ograph** (*dynamis*, power, *grapho*, to write). Instrument devised to register, after the principle of the sphygmograph, the muscular power and tone of the individual.

**Dynamog′raphy.** Instrument for recording facts obtained by the dynamometer.

**Dynamom′eter** (*dynamis*, power, *metron*, measure). Dynamiometer, myodynamiometer, myodynamometer. Instrument for measuring the muscular strength; it consists of a spring, which when pressed upon causes a needle to move upon a portion of a circle furnished with a scale. **Medic′inal d.**, instrument to show the quantity of active matter in a given weight or measure of any official compound, with the dose of any preparation which will be equivalent in strength to a given quantity of any other of the same class.



Dynamometer.

**Dynamop′athy.** Homœopathy.

**Dynam′oscope** (*skopeo*, to see). Instrument for determining the amount of muscular power, or for auscultation of muscular sounds. The process is called *dynamos′copy*.

**Dyne.** Unit of force which, acting for one second on a mass weighing one gramme, imparts to it a velocity of one centimetre per second.

**Dyo′ta.** Diota.

**Dys-.** As a prefix, difficult, faulty; sometimes privative; mostly answering to the particles *dis*, *in*, *mis*, or *un*, in English.

**Dysacou′sia, Dysacou′sis**, or **Dysacous′ma** (*dys*, with difficulty, *akouo*, to hear). Difficulty of hearing.

**Dysacu′sis** or **Dysaku′sis.** Dysacousia.

**Dysæ′mia** (*dys*, faulty, *haima*, blood). Morbid condition of the blood.

**Dysæsthe′sia** (*aisthanomai*, to feel). Obscure, diminished, or even abolished sensation. Also painful sensation produced by a slight touch. **D. audito′ria**, diminution or loss of hearing. **D. gustato′ria**, diminution or loss of taste. **D. inter′na**, loss of memory. **D. olfacto′ria**, diminution or loss of smell. **D. visua′lis**, sense of sight vitiated or lost.

**Dysæsthe′sis.** Dysæsthesia.

**Dysal′bumose.** Variety of hemialbumose, insoluble in dilute hydrochloric acid.

**Dysanagno′sia** (*anagnosis*, reading). Alexia.

**Dys′aphe** or **Dysaph′ia** (*dys*, faulty, *haphe*, feeling). Morbid condition of the sense of touch.

**Dysapocatas′tasis.** Condition of unrest and dissatisfaction.

**Dysapu′lous.** Healing with difficulty.

**Dysar′thria.** Difficulty of articulation.

**Dysarth′ric.** Relating to difficult articulation.

**Dysarthri′tis.** Irregular gout.

**Dysarthro′sis** (*arthrosis*, articulation). Difficulty of speech. Congenital defect of a joint.

**Dysba′sia** (*basis*, step). Difficulty in walking.

**Dysbu′lia.** Morbid state affecting the exercise of the will.

**Dyscatap′osis** (*dys*, difficult, *kataposis*, deglutition). Difficulty of swallowing.

**Dyscho′lia.** A morbid condition of the bile.

**Dyschrœ′a** or **Dischroi′a** (*dys*, faulty, *chroia*, color). Sickly and unhealthy color of the skin. Maculæ.

**Dyschro′ma** (*dys*, faulty, *chroma*, color). Morbid discoloration of the skin.

**Dyschroma′sia.** See *Decoloration*.

**Dyschromatoder′mia.** Morbid discoloration of the skin.

**Dyschromatop′sia.** Achromatopsia.

**Dyscine′sia** (*dys*, difficult, *kineo*, to move). Difficulty or utter incapability of moving; dyskinesia.

**Dyscopho′sis.** Defective sense of hearing.

**Dysco′pria** (*dys*, faulty, *kopros*, excrement). Condition in which the fæces are abnormal.

**Dysco′ria** (*kore*, pupil). Irregularity of shape of the pupil.

**Dyscras′ia** (*dys*, faulty, *krasis*, temperament). Bad or depraved habit of body. See *Dysthetica*. **Bil′ious d.**, icterus; dyscholia. **Mala′rial d.**, cachexia due to malaria. **Metastat′ic sup′purative d.**, pyæmia. **Palu′dal d.**, cachexia due to malaria. **D. potato′rum**, dyscrasia of drinkers; cachectic phenomena exhibited in alcohol drinkers. **D. saturni′na**, cachexia from lead poisoning. **D. scrofulo′sa**, scrofula. **D. tuberculo′sa**, see *Tubercle*. **U′ric-acid d.**, uric-acid diathesis.

**Dyscras′ic.** Relating to dyscrasia or bad habit of body.

**Dys′crasy.** Dyscrasia.

**Dyscrin′ia.** Name given diseases in which there are difficult or pathological secretions.

**Dysdac′ria** or **Disdacryo′sis** (*dys*, faulty, *dakryon*, tear). Morbid condition of the tears.

**Dysdiachore′sis** (*dys*, difficult, *diachoreo*, to pass through). Difficult or slow passage of food through the intestinal canal. Also a variety of rheumatism in which locomotion is difficult.

**Dysdynam′ia.** Defective vital activity.

**Dysecbo′lia** (*dys*, difficult, *ekbole*, expulsion). Impeded evacuation. Stricture of the urethra.

**Dyseccris′ia** or **Dysec′crisis** (*ekkrisis*, excretion). Difficult or defective excretion.

**Dysecoi′a** (*dys*, difficult, *akoe*, audition). Difficulty of hearing; deafness.

**Dyse′cous.** Hard of hearing.

**Dysecpneu′sis** (*ekpneusis*, expiration). Difficult expiration.

**Dysecpnœ′a** (*ekpnoe*, expiration). Difficult expiration).

**Dyse′mia.** Dysæmia.

**Dysente′ria.** Dysentery.

**Dysenter′ic.** Relating to dysentery.

**Dysenteroner′via** (*enteron*, intestine, *neuron*, nerve). Colic. **D. saturni′na**, colica metallica.

**Dys′entery** (*enteron*, intestine). Bloody flux; flux. Inflammation of the mucous membrane of the large intestine, the chief symptoms of which are fever, more or less inflammatory, with frequent mucous or bloody evacuations, violent tormina, and tenesmus. When the evacuations do not contain blood it has been called *simple dysentery*. The seat of the disease is generally in the colon and rectum; it occurs particularly during the summer and autumnal months, and in hot climates more than in cold; frequently also in camps and prisons, from impure air and imperfect nourishment, and is often epidemic. Sporadic cases of dysentery are generally easily managed, but when epidemic it often exhibits great malignancy. Frequently it yields to mild laxatives, as castor oil, combined with diaphoretic narcotics and counterirritants to the abdomen; but at times the inflammation runs on speedily to ulceration and death. **Amœ′bic d.**, d. believed to be due to the presence of amœbæ in the intestinal canal, marked by the presence of amœbæ in the stools and by a tendency to intermissions and chronicity; abscess of the liver is a frequent complication. **Bacillary** (bas′il-lary) **d.**, d. believed to be due to the presence of Shiga's bacillus (B. dysenteriæ) in the intestinal canal; it is characterized by the presence of numerous small ulcers of the intestinal mucous membrane, and collections of pus in the dark colored contents. **Bil′ious d.**, d. accompanied with bilious discharges. **Diphtherit′ic d.**, pseudomembranous dysentery developed secondarily in persons having chronic heart disease, or who have had acute croupous pneumonia. In the acute primary form the patient may pass into a typhoid state. **Japanese′ d.**, bacillary d. **Malig′nant d.**, d. with very severe symptoms, usually terminating fatally. **Red d.**, hemorrhagic malady of cattle induced by coccidia. **Trop′ical d.**, amœbic d.

**Dyserethis′ia** (*dys*, with difficulty, *erethizo*, to irritate). Decreased sensibility.

**Dysesthe′sia.** Dysæsthesia.

**Dysgal′ia** or **Dysgalac′tia** (*dys*, faulty, *gala*, milk). Unhealthy condition or depravation of milk.

**Dysgen′esis.** Sterility.

**Dysgeu′sia** or **Dysgeus′tia** (*dys*, faulty, *geusis*, taste). Morbid condition of the sense of taste.

**Dysgraph′ia** (*dys*, with difficulty, *grapho*, to write). Difficulty in expressing one's ideas in writing.

**Dyshid′ria** or **Dyshidro′sis.** Dysidrosis.

**Dysi′atos** (*iaomai*, to heal). Difficult to cure.

**Dysid′ria** or **Dysidro′sis** (*dys*, faulty, *hidros*, sweat). Disease characterized essentially by retention in the follicles of the skin of sweat rapidly and freely secreted, leading to distention and congestion of the follicles, dermatitis, etc., a condition similar to that of the sebaceous follicles in acne.

**Dysid′rous.** Perspiring with difficulty.

**Dyskine′sia** (*dys*, with difficulty, *kineo*, to move). Difficulty in moving, due to lack of nervous coordination.

**Dyslal′ia** (*laleo*, to speak). Stuttering or stammering; difficulty of speech, the cause of which may be mechanical, or in the teeth, lips, larynx, nose, or palate.

**Dyslex′ia** (*lego*, to read). Inability in reading to take in by the eye-impression the normal number of words; a symptom of very grave cerebral disease.

**Dyslo′gia** (*logos*, reason, speech). Difficulty of speech. Impaired power of reasoning.

**Dyslysin′.** Product of decomposition of cholic acid, with the formula $C_{24}H_{36}O_3$.

**Dysmase′sis** (*masesis*, mastication). Difficult or impeded mastication.

**Dysme′nia.** Dysmenorrhœa.

**Dysmenorrhœ′a** (*dys*, difficult, *men*, month, *rhoia*, flow). Laborious, painful, or difficult menstruation. Catamenia passed with great local pain, especially in the loins, with sometimes membranous discharge. In the married woman the morbid action may be broken in upon by gestation, and a perfect cure be obtained. The affection generally depends upon erethism of the interior of the uterus, called into action at each catamenial period. It may also be of ovarian origin (see *Dysootocia*) or dependent upon obstruction of the Fallopian tube—*tubal dysmenorrhœa*. **Conges′tive d.**, d. accompanied with local congestion. **Inflam′matory d.**, d. accompanied with inflammatory symptoms. **Intermen′strual** or **Interme′diate d.**, severe pain occurring between the menstrual periods, ceasing when the flow sets in, probably due to commencing ovulation process in the ovaries. **Mechan′ical d.**, obstructive d. **Mem′branous d.**, disease whose pathognomonic feature is the expulsion of a membrane resembling decidua within a day or two of the advent of menstruation, or even during extramenstrual periods. **Neural′gic d.**, form of dysmenorrhœa chiefly met with in delicate girls at puberty, or in women who have never borne children. **Obstruc′tive d.**, d. caused by anything acting as an impediment to the menstrual flow, as malposition of the uterus, fibromata, etc. **Ova′rian d.**, d. caused by ovarian disease. **Pleth′oric d.**, congestive d. **Spasmod′ic d.**, d. caused by spasmodic contractions of the uterus, simulating labor pains. **Tu′bal d.**, obstructive d., the seat of the trouble being in one or both Fallopian tubes. **U′terine d.**, d. dependent upon some uterine affection. **Vag′inal d.**, obstructive d., the seat of the trouble being in the vagina.

**Dysmenorrhœ′al.** Relating to dysmenorrhœa.

**Dysmim′ia** (*mimeomai*, to imitate). Difficulty in using signs and gestures when speaking.

**Dysmnesia**, dis-ne′se-ah (*dys*, faulty, *mnesis*, memory). Defective memory.

**Dysmor′phe**, **Dysmor′phia**, or **Dysmorpho′sis** (*morphe*, shape). Deformation.

**Dysmorphopho′bia** (*dysmorphe*, deformity, *phobos*, fear). Excessive dread of being deformed, or of having any local deformity.

**Dysmyoto′nia congenita′lis.** Congenital atony and rigidity of muscles existing in Thomsen's disease.

**Dysneu′ria.** Failing condition of the senses; weakmindedness.

**Dyso′dia** or **Dysod′mia** (*ozo*, to smell). Diseases characterized by fetid emanations, from whatever part proceeding—from the mouth, nasal fossæ, bronchia, stomach, axillæ, groins, etc.; also a stench.

**Dysodonti′asis** (*odontiasis*, dentition). Difficult dentition.

**Dysodyn′ia** (*dys*, difficult, *odyne*, pain). Labor pains attended with difficulty.

**Dysomphaloto′cia** (*omphalos*, navel, *tokos*, birth). Difficulty in delivering the umbilical cord.

**Dysoöto′cia** (*ootokeo*, to lay eggs). Difficult ovulation—*ovarian dysmenorrhœa*—as distinct from difficulty in secretion and excretion of the menstrual fluid, which is the duty of the uterus.

**Dyso′pia** or **Dysop′sia** (*optomai*, to see). Difficulty of seeing; obscurity of vision. **D. dissito′rum**, myopia. **D. latera′lis**, skuesight, skewsight, sight askew, a condition in which vision is accurate only when the object is placed obliquely; this state is generally caused by some opacity of the cornea. **D. lu′minis**, day-blindness, hemeralopia. **D. proximo′rum**, near-sightedness. **D. tenebra′rum**, night-blindness, nyctalopia.

**Dysorex′ia** (*orexis*, appetite). Diminution of appetite.

**Dysos′mia** (*osme*, smell). Diminution of smell.

**Dysosphre′sia** or **Dysosphre′sis** (*osphresis*, sense of smell). Morbid state of the sense of smell.

**Dysosto′sis** (*osteon*, bone). Faulty conformation or morbid condition of bone.

**Dyspareu′nia** (*pareunos*, bedfellow). Difficult or painful performance of the sexual function.

**Dyspep′sia** or **Dyspep′sy** (*dys*, difficult, *pepto*, to digest). Indigestion; difficulty of digestion. State of the stomach in which its functions are disturbed, without the presence of other diseases, or when, if other diseases be present, they are of but minor importance. Symptoms of dyspepsia are very various. Those affecting the stomach itself are loss of appetite, nausea, pain in the epigastrium or hypochondrium, heartburn, sense of fulness or weight in the stomach, acrid or fetid eructations, pyrosis, and sense of fluttering or sinking at the pit of the stomach. Sympathetic affections are of the most diversified character. Dyspepsia is generally functional, but when arising from disease of the stomach itself is, of course, serious. Dyspepsia may be of duodenal origin, *duodenal* or *intestinal dyspepsia*, and is generally accompanied with pain over that bowel some hours after food has been taken. As dyspepsia is usually dependent on irregularity of living, either in quantity or quality of the food taken, the most successful treatment is to put the patient on a diet easy of digestion; to combat the causes when such are apparent; and, by proper remedies and regimen, to strengthen the system in every practicable manner. It is often connected with inflammatory or subinflammatory condition of the mucous lining of the stomach. It may be attended with too great a secretion of the gastric acids, *acid dyspepsia;* but these sometimes appear to be too small in quantity, so as to constitute *alkaline* or *neutral indigestion*. **Acid d.**, d. dependent on excessive formation of acids. **Aton′ic d.**, d. dependent on muscular weakness of the stomach walls. **Catar′rhal d.**, d. dependent on inflammation of the stomach. **Ferment′ative d.**, d. associated with or dependent upon fermentation. **Flat′ulent d.**, d. dependent on or associated with inordinate quantity of gas in the stomach or bowels. **Ner′vous d.**, d. accompanied with pain, cardiac palpitation, and other nervous symptoms, or d. due to disturbance of the nervous supply of the stomach. **Reflex′ d.**, d. due to reflex action arising from some other organ or part **Sal′ivary d.**, d connected with alterations in the quality or quantity of the salivary secretion.

**Dyspepsiodyn′ia** (*dyspepsia* + *odyne*, pain). Cardialgia.

**Dyspep′tic.** Relating to or one suffering from dyspepsia.

**Dyspeptodyn′ia** (*dys*, difficult, *pepto*, to digest, *odyne*, pain). Cardialgia.

**Dyspep′tone.** Non-available residue of gastric digestion.

**Dysperistal′sis.** Violent contractions which occur when the plexus myentericus, a nervous plexus between the circular and longitudinal fibres of the intestines, is stimulated.

**Dysperma′sia** or **Dysper′matism.** Difficulty—sometimes incapacity—of voiding the sperm.

**Dyspha′gia** (*dys*, difficult, *phago*, to eat). Difficulty of deglutition. It is almost always symptomatic either of inflammation or of other disease of the organs of deglutition, or of incomplete obstruction of the œsophagus, by some obstacle within it, or by a neighboring tumor. At times it is produced by spasms or paralysis of the œsophagus. The prognosis and treatment vary according to the cause. **D. aton′ica**, d. from paralysis of the pharynx or œsophagus. **D. callo′sa**, d. constricta. **D. constric′ta**, stricture of the pharynx and œsophagus, is an affection which may be the result of pharyngitis or œsophagitis, but more frequently of malignant disease in the parietes of the tube. The only remedy is the bougie. **D. globo′sa** or **D. hyster′ica**, a feeling of strangulation, with dread of suffocation. **D. inflammato′ria**, cynanche tonsillaris. **D. linguo′sa**, d. due to swelling of the tongue. **D. nervo′sa**, œsophagismus. **D. œsophage′a**, d. constricta. **D. paralyt′ica**, d. from paralysis of the pharynx or œsophagus. **D. pharynge′a**, d. constricta. **D. ran′ula**, ranula. **D. spasmod′ica** or **spas′tica**, d. from spasm of the œsophagus. **D. tor′pida**, d. from torpor or paralysis of the pharynx. **D. uvulo′sa**, d. from relaxation and tumefaction of the uvula.

**Dyspha′sia** (*dys*, difficult, *phasis*, speech). Difficult speech due to cerebral lesion.

**Dyspho′nia** or **Dys′phony** (*dys*, difficult, *phone*, voice). Difficulty of producing and articulating sounds; weakness or loss of voice. **D. clerico′rum**, clergyman's sore throat. **D. nasa′lis**, speaking through the nose. **D. palati′na**, defective articulation from diseased palate. **D. spas′tica**, sudden spasm closing the glottis during speaking or singing.

**Dyspho′ria** (*dys*, hard, *phero*, to bear). Dissatisfaction; restlessness; suffering; indisposition. **D. anxi′etas**, anxiety. **D. nervo′sa**, fidgets. **D. sim′plex**, fidgets.

**Dyspho′tia** (*phos*, light). Myopia.

**Dysphra′sia** (*phrazo*, to speak). Difficult speech due to disordered intellect or to paralysis.

**Dysphre′nia** (*phren*, mind). Intellectual disorder.

**Dysplasmat′ic.** Susceptible of only a low degree of organization.

**Dysplas′tic** (*plasso*, to form). Unorganizable; deficiency in formed elements, said of the blood.

**Dyspne′a.** See *Dyspnœa.*

**Dyspnœ′a** (*dys*, difficult, *pneo*, to breathe). Pseudo-asthma, anhelation, short breath, difficulty of breathing. It may be idiopathic or symptomatic. The latter accompanies almost all thoracic diseases. **Car′diac d.**, labored breathing due to cardiac disease. **D. convulsi′va**, asthma. **Expi′ratory d.**, difficulty in expelling the air from the lungs, inspiration being effected with comparative ease. **Inspi′ratory d.**, the opposite to expiratory d. **D. monta′na**, mountain sickness, see *Puna.* **D. pinguedino′sa**, d. accompanied with oppressive fatness. **Re′nal d.**, d. accompanying disease of the kidney. **Trau′be's d.**, see *Traube.*

**Dyspnœ′ic.** Relating to or one suffering from dyspnœa.

**Dyspro′teose.** A product of the gastric digestion of syntonin.

**Dyssial′ia** (*dys*, faulty, *sialon*, saliva). Morbid condition of the saliva.

**Dyssper′mia.** Dyspermia.

**Dyssta′sia** or **Dysta′sia** (*histemi*, to stand). Difficulty in standing.

**Dystax′ia.** Want of regulation of the movements, like that of paralysis agitans. **D. ag′itans**, paralysis agitans.

**Dysteleol′ogy** (*dys*, priv., *teleos*, complete, *logos*, discourse). The theory of the lack of usefulness of rudimentary structures in organisms, as the vermiform appendix in man.

**Dysthana′sia** (*dys*, difficult, *thanatos*, death). Slow and painful death.

**Dysthela′sia** (*thelazo*, to give suck). Inaptitude for suckling.

**Dysthet′ica.** Morbid condition of the system of nutrition, connected with a faulty state of the blood, producing a diseased habit.

**Dysthy′mia** (*thymos*, mind). Depression, despondency, melancholy; a bad sign in acute diseases.

**Dysto′cia** (*dys*, difficult, *tokos*, labor). Painful, slow, or difficult labor. **D. aborti′va**, abortion. **Fe′tal d.**, d. due to malposition or deformity of the fœtus. **Mater′nal d.**, d. due to abnormal conditions in the mother. **Placen′tal d.**, difficulty in delivering the placenta.

**Dystœchi′asis.** Irregular position of the eyelashes.

**Dysto′pia** or **Dys′topy** (*topos*, situation). Displacement; malposition.

**Dystrau′mia.** Condition of wounds when they heal with difficulty, as in some persons and climates.

**Dystro′phia.** Dystrophy.

**Dystro′phic.** Relating to or caused or characterized by dystrophy.

**Dystrophodex′trin.** Substance found in normal blood which has the peculiarities of lardacein.

**Dystrophoneuro′sis.** Neurosis due to disorder of nutrition; atrophic neurotic disorder.

**Dys′trophy** (*dys*, faulty, *trophe*, nourishment). Imperfect or defective nutrition. **Progres′sive mus′cular d.**, progressive muscular atrophy. **Pseudohypertroph′ic d.**, a muscular affection in which the increase of fibrous or fatty elements gives the appearance of hypertrophy, although there is no increase, but rather a decrease in the muscular tissue.

**Dystryp′sia.** Intestinal indigestion.

**Dysure′sia** or **Dysure′sis** (*dys*, faulty, *ouresis*, passing urine). Defective secretion and evacuation of the urine; dysuria.

**Dysu′ria** or **Dys′ury.** Difficulty of passing the urine, which is voided with pain and a sensation of heat in some part of the urethra. It is the first degree of retention of urine; differs from strangury, in which the urine can be passed only in drops and with great straining. **D. calculo′sa**, dysuria from presence of calculi. **D. irrita′ta**, d. from vesical calculi. **D. muco′sa**, copious discharge of mucus from the bladder with the urine.

**Dysu′riac.** One who suffers from dysuria.

# E.

**E** (Lat.). As a prefix, out of, from.

**Ead′ium.** An element derived from Bohemian pitch-blende, which, like radium, and polonium, is possessed of radio-activity.

**Ea′glestone.** Ætites.

**Ea′glewood.** Agallochum.

**Ear.** Organ of audition, composed of a series of more or less irregular cavities, in which the sonorous rays are successively received and reflected until they agitate the nerves which are destined to convey the impression to the brain. The ear is contained partly in the substance of the temporal bone, and a part projects externally behind the joint of the lower jaw. It may be divided into three portions: the *outer* or *external ear*, formed by the auricle and meatus auditorius; the *middle ear*, comprising the cavity of the tympanum and its dependencies; and the *internal ear*, comprehending the three semicircular canals, the cochlea, and the vestibule, which together constitute the *osseous labyrinth*. Within the cavity of this labyrinth are contained membranes having nearly the shape of the vestibule and semicircular canals, but not extending into the cochlea. These membranes form the *membranous labyrinth*. Between the osseous and the membranous labyrinth is situated the liquor of Cotunnius, and within the membranous labyrinth is a fluid, vitreous humor of the ear, from its supposed analogy to the vitreous humor of the eye. The membranous vestibule is not an exact imitation of the osseous cavity, being composed of two distinct sacs which open into each other, the one termed the *sacculus vestibuli;* the other, *sacculus*. Each sac contains in its interior a small mass of white, calcareous matter, which seems to be suspended in the fluid of the sacs by nervous filaments proceeding from the auditory nerve. The auditory nerve is distributed to the cavities of the internal ear. **E.-ache,** otalgia. **Asy′lum e.,** hæmatoma auris. **Blain′ville e.,** see *Blainville*. **E.-bones,** see *Ossicula*. **Cagot′ e.,** see *Cagot*. **E.-cough,** cough excited by titillation of the external ear, by a reflected sensation from sympathy between the ear and the larynx, through a branch of the fifth pair of nerves. **E.-crys′tals,** otoliths. **Dar′win e.,** see *Darwin*. **E. drum,** tympanum. **Exter′nal e.,** that part of the auditory apparatus which is external to the drum membrane; the external auditory meatus and the pinna. **E. fin′ger,** the little finger. **E. flap,** lobe of the ear. **Insane′ e.,** hæmatoma auris. **Inter′nal e.,** the labyrinth. **Keck′er e.,** tonsil. **Mid′dle e.,** the tympanum. **Morel′ e.,** see *Morel*. **E.-pick,** small scoop for extracting hardened cerumen from the meatus auditorius externus, or to remove foreign bodies from the ear. **E.-pow′der,** see *Otoliths*. **E.-sand,** see *Otoliths*. **Stahl e.,** see *Stahl*. **E.-stone,** otolith. **E.-trum′pet,** instrument for collecting sound and increasing its intensity; used by those who are hard of hearing; commonly a kind of cone, formed of silver, tin, or elastic gum, the base of which is turned toward the person who is speaking, and the apex placed in the entrance of the meatus auditorius externus. **E.-wax,** cerumen. **Wil′dermuth e.,** see Wildermuth.

**Earn′ing.** Rennet.

**Earth.** The world. Soil or ground. One of the tasteless, inodorous, and incombustible substances known in chemistry as metallic oxides, as alumina, magnesia, etc. **Al′kaline e.,** one of the earths possessing an alkaline reaction, such as lime and magnesia. **E.-bath,** a bath in which the patient is immersed in earthy matters instead of water. **E. clos′et,** arrangement employed as a substitute for the water-closet, the excrementitious matter being received in earth in an appropriate vessel. **E. club,** Orobanche americana. **E.-eat′er,** geophagist. **E.-eat′ing,** geophagism. **Ful′ler's e.,** Cimolia purpurescens. **E. gall,** Veratrum viride. **Heav′y e.,** baryta. **Japan′ e.,** catechu. **Lem′nian e.,** terra Lemnia. **E. nut,** Bunium bulbocastanum; pignut. **E. oil,** petroleum. **Sa′mian e.,** Sami terra. **E. treat′ment,** method of treatment of wounds, etc.; yellow clay or clayey earth, well dried, finely pulverized, sifted, and changed as soon as it is saturated with the discharge, is applied as a deodorizing agent, exerting also an influence in checking putrefaction and facilitating the healing process. **E.-wax,** ozokerite.

**Earth′y degenera′tion.** Cretefaction. **E. phos′phates,** phosphates of ammonium, magnesium, and calcium occurring in urine.

**Ear′wig** (*eruca*, caterpillar). Technically, Forficula auricularia, an insect which occasionally enters the external auditory meatus and excites intense pain.

**East In′dia ar′rowroot.** See *Arrowroot*. **E. I. bdel′lium,** see *Bdellium*. **E. I. gum,** gum acacia. **E. I. ki′no,** see *Kino*. **E. I. rhu′barb,** see *Rheum*. **E. I. sarsaparil′la,** see *Hemidesmus indicus*. **E. I. sen′na,** see *Senna*. **E. I. tac′amahac,** see *Fagara octandra*.

**East′ningwort.** Scabiosa.

**Eas′ton's syr′up.** Syrup of the phosphates of iron, quinine, and strychnine.

**Eat′able.** Esculent; edible.

**Eat′ing tet′ter.** Lupus.

**Eau de Cologne′.** Cologne water. Celebrated perfume, so called from the place where it is made. For the official preparation of the Ph. U. S., see *Spiritus odoratus*.

**Eberth's** (a′bairts) **bacil′lus.** B. typhi abdominalis. **E.'s lines,** dark lines which separate the muscular cells of the heart when the tissues are stained with nitrate of silver.

**Eb′ner's germ-retic′ulum.** A fine network between the inner cells of the minute seminiferous tubes. **E.'s glands,** mucous glands of the tongue.

**Eb′onite.** Hard or vulcanized rubber.

**Ebrieca′tion.** Mental affection due to indulgence in alcoholic stimulation.

**Ebri′etas** or **Ebri′ety.** Drunkenness.

**Eb′stein's disease′.** Sternberg's disease, febrile pseudoleukæmia. **E.'s le′sion,** a condition met with in diabetes, in which there is hyaline degeneration and necrosis of the epithelial cells of the minute renal tubes. **E.'s meth′od,** method employed for the reduction of corpulence, consisting in excluding the carbohydrates and in the use of fat.

**Ebulli′tion** (*ebullio*, to boil up). Boiling; motion of a liquid by which it gives off bubbles of vapor by heat or fermentation. The boiling point of liquids varies according to the pressure to which they are subjected. (For the point of ebullition of different substances, see *Heat*.)

**Eb′ulus.** Sambucus ebulus. **E. den′tis,** dentine. **E. us′tum,** animal charcoal.

**E′bur.** Ivory. See *Tooth*.

**Eburna′tion** or **Eburnifica′tion** (*ebur*, ivory, *fio*, to be made). Incrustation of the cartilages of the articular surfaces of bones with phosphate of lime, which gives them the whiteness and hardness of ivory.

**Eburni′tis.** A condition in which there is increased hardening of dentine.

**Ec-,** before a vowel, **Ex-** (Gr., *ek* or *ex*). As a prefix, out of, from, of.

**Ecapat′li.** Cassia occidentalis, Mexican plant; leaves are used in place of official senna.

**Ecau′date** (*e*, out of or without, *cauda*, tail). Growing out from a tail. Without a tail.

**Ecbal′ia elate′rium.** Momordica elaterium. **E. fruc′tus**, see *Momordica elaterium*.

**Ecbalin′.** See *Momordica elaterium*.

**Ecbal′ium agres′te.** Momordica elaterium. **E. officina′rum**, Momordica elaterium.

**Ecbleph′aros** (*ek*, out of, *blepharon*, eyelid). An old form of artificial eye consisting of a leather plate on which was painted an eye; it was placed in front of the orbit.

**Ecblo′ma** (*ekballo*, to throw out). See *Abortion*.

**Ec′bole.** Abortion.

**Ecbol′ic.** Abortive; oxytocic. An agent which produces abortion by stimulating the gravid uterus to contract.

**Ecboline′.** Alkaloid derived from ergot.

**Ecbo′lium elate′rium.** Momordica elaterium.

**Ecbras′mata**, pl. of ecbrasma (*ekbrazo*, to boil up). Burning eruptions.

**Eccan′this.** See *Encanthis*.

**Eccen′tric** (*ek*, out of, *kentron*, centre). Away from the centre as to location, function, or movement; peripheral. Odd or erratic in actions or mental processes. **E. at′rophy**, cardiac atrophy with dilatation. **E. fixa′tion**, fixed attention of the eye with some other part of the retina than the yellow spot. **E. hyper′trophy**, hypertrophy of the walls of a cavity, as the ventricle of the heart, with dilatation.

**Eccentri′city.** Condition of being peculiar in disposition or habits, sometimes amounting almost to insanity.

**Ecchondro′ma** or **Ecchondro′sis.** See *Chondroma*.

**Ecchon′drotome** (*ek*, out of, *chondros*, cartilage, *tome*, incision). A knife employed for the cutting of cartilage.

**Ecchore′sis** (*choreo*, to make room). Defecation.

**Ecchylo′ma** (*ek*, out of, *chylos*, juice). Expressed juice.

**Ecchy′mata**, pl. of ecchyma (*ek*, out of, *chyo*, to pour). Burning eruptions.

**Ecchymo′ma** or **Ecchymo′sis** (*ek*, out of, *chymos*, humor). Livid, black, or yellow spot produced by blood effused into the areolar tissue from a contusion. Spontaneous effusions, occurring as the result of disease or after death, are called suggillations. Ecchymoma is more properly an ecchymotic tumor, an ecchymosis in which the extravasation of blood is so great as to cause a distinct swelling. **E. arterio′sum**, see *Aneurysm*. **Bay′ard's e.**, see *Bayard*. **Cadaver′ic e.**, spontaneous effusions occurring in the dependent portions of a dead body; suggillations. **E. cap′itis re′cens nato′rum**, cephalæmatoma; caput succedaneum. **E. hypon′ychon**, hyponychon. **E. lymphat′icum**, phlegmasia dolens. **E. melas′ma**, melasma. **Roe′derer's e.**, Bayard's e. **Tabet′ic e.**, patches of discolored skin scattered irregularly over the lower extremities and lower part of the abdomen in locomotor ataxia, appearing suddenly near the end of paroxysms of intense pain and severe gastric attacks.

**Ecchymot′ic.** Pertaining to ecchymosis.

**Ec′chysis** (*chyo*, to pour). Effusion.

**Ec′clisis** (*kino*, to bend or give way). Luxation.

**Ec′clysis** (*ek*, out, *klysis*, a washing). Washing out by enema.

**Eccopro′sis** (*kopros*, excrement). Defecation.

**Eccoprot′ic.** Ectoprotic; mild purgatives or laxatives, whose operation is confined to simply clearing out the intestinal canal.

**Eccrinol′ogy** (*ek*, out of, *krino*, to separate, *logos*, discourse). Treatise on or description of secretions.

**Eccrinopath′ia.** Disease of excretion or secretion.

**Eccrisiol′ogy** (*ekkrisis*, excretion, *logos*, discourse). Treatise on secretions or excretions.

**Eccrisios′chesis** (*ekkrisis*, excretion, *schesis*, retention). Arrest or retention of excretions or of a critical evacuation.

**Ec′crisis** (*ek*, out of, *krino*, to separate). Excretion.

**Eccrit′ic.** Relating to excretion; also an agent promoting excretion; eliminative.

**Eccye′sis** (*ek*, out of, *kyeo*, to conceive). Extra-uterine pregnancy. **E. abdomina′lis**, abdominal pregnancy. **E. ova′ria**, ovarian pregnancy. **E. tuba′lis**, tubal pregnancy.

**Eccys′tis** (*ek*, out of, *kystis*, bladder). Prolapse or extroversion of the bladder.

**Ecdem′ic** (*ekdemos*, foreign). Name given to diseases which do not arise in the locality or become epidemic.

**Ecdemioma′nia** or **Ecdemoma′nia** (*ekdemeo*, to travel about). Insane impulse to be continually wandering from home or travelling; the antithesis to nostalgia.

**Ecdermopto′sis.** Acne varioliformis; molluscum contagiosum.

**Ec′deron** (*ek*, out of, *deros*, skin). The epidermis.

**Ec′dora** (*ekdero*, to flay). Excoriation in general, but more especially of the urethra.

**Ec′dysis** (*ekdyo*, to put off). Moulting of the skin of animals; desquamation.

**Ecgonine′.** Alkaloid derived from cocaine by subjecting the latter to the influence of hydrochloric acid.

**Ech, fistula of.** An artificial opening made between the vena porta and vena cava.

**Echene′is.** Remora; sucking fish.

**Echetro′sis.** Bryonia alba.

**Echicaoutchin′.** Resin of an elastic nature, derived from bark of Alstonia scholaris.

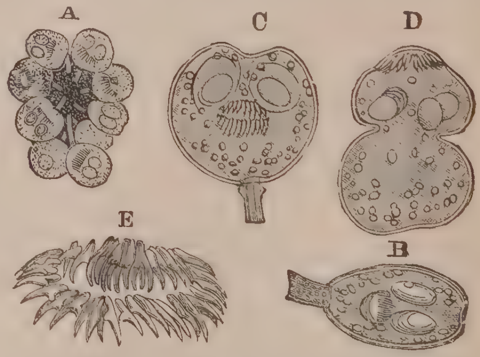
**Echicerin′.** Crystallizable substance found in dita bark.

**Echid′na ocella′ta.** A most formidable viper in the forests of Peru, the bite of which is rapidly fatal.

**Echid′nia.** Ptyaline principle found in viper venom.

**Echina′cea purpu′rea.** Purple coneflower, black Sampson; indigenous in the W. United States. Root is aromatic, and used popularly as a carminative.

**Echinococ′cus** (*echinos*, hedgehog, *kokkos*, grain or berry). The larval form (scolex) of the tapeworm of the dog, Tænia echinococcus; it occurs in various tissues and organs in man in the form of cysts (hydatids). **E. altricipar′iens**, echinococcus in which daughter cysts originate from the head and are embraced in the mother cyst. **E. endog′enus**, echinococcus altriciparens. **E. exog′enus**, echinococcus scolecipariens. **E. hom′inis**, see *Hydatid*. **E. hooks** or **hook′lets**, minute hook-like bodies forming a crown on the head of the echinococcus; their presence in a fluid removed from a cyst establishes the diagnosis of hydatids. **E. huma′nus** or **hydato′sus**, see *Hydatid*. **E. multilocula′ris**, echinococci



Human echinococcus. (Davaine.) A, group of echinococci, still adhering to the germinal membrane by their pedicle, x 40; B, an echinococcus with head invaginated in body, x 107; C, the same compressed, showing suckers and hooks of the retracted head; D, echinococcus with head protruded; E, crown of hooks, showing the two circles, x 350.

of small size situated close together. **E. scolecipa′riens,** echinococcus in which the daughter cysts originate from outside the mother cyst.

**Echinoder′mi** (*echinos*, hedgehog, *derma*, skin). See *Porcupine men.*

**Echinoglos′sum.** Ophioglossum vulgatum.

**Echinophthal′mia** (*echinos*, hedgehog, *ophthalmia*, inflammation of the eye). Inflammation of the eyelids, in which the cilia project like the quills of the hedgehog.

**Echinops,** ek′in-ops. Globe thistle; the root and seeds are reputed to be moderately diuretic.

**Echinorrhyn′chus** (*echinos*, hedgehog, *rhynchos*, snout). Genus of the *Acanthocephala* or thorn-headed worms. **E. gi′gas,** parasite of large size found in the intestines of the hog, and sometimes in man. **E. monilifor′mis,** parasite occurring in a case described by two Italian observers.

**Echi′nus scan′dens.** Allamanda.

**Echirrhetin′.** Resinoid mass obtained from bark of Alstonia scholaris.

**Echitamine′.** Ditaine.

**Echitein′.** Crystallizable resinoid substance derived from dita bark.

**Echitenine′.** Amorphous brown alkaloid derived from bark of Alstonia scholaris.

**Echi′tes acumina′ta.** Growing in Peru; furnishes a variety of condurango. **E. antidysenter′ica,** Holarrhena antidysenterica. **E. difform′is,** Forsterania difformis. **E. hirsu′ta,** growing in Peru; furnishes a variety of condurango. **E. malabar′ica,** grows in India; root is employed in fevers. **E. schola′ris,** Alstonia scholaris. **E. suberec′ta,** see *Curare.* **E. syphilit′ica,** tree of Surinam; employed in syphilis.

**Ech′ium vulga′re.** Blueweed, ord. *Borragineæ;* growing in Europe and N. United States; root is aperient.

**Ech′masis** (*echmazo*, to hinder). Retention; obstruction.

**Ech′o.** A reflected or repeated sound. **Amphor′ic e.,** amphoric voice, in thoracic auscultation, following at an appreciable interval the voice emitted from the mouth. **Metal′lic e.,** see *Metallic.* **E. sign,** disorder of speech in epileptics, in which words are repeated several times in succession. **E. speech,** echoing articulation sometimes noted in hypnotized persons; echolalia.

**Echoacou′sia.** The subjective hearing of an echo, none existing in the outer world.

**Echokine′sis.** Affection occurring in convulsive tic, in which the patient mimics the actions of others.

**Echola′lia** (*echos*, sound, *laleo*, to speak). Automatic repetition of words heard.

**Echo′matism.** Condition the reverse of that known as automatism, the words or actions being consciously imitated or repeated.

**Echop′athy** (*echo*, sound, *pathos*, disease). Abnormal nervous action in which the patient repeats words or actions.

**Echophot′omy** (*echo*, sound, *phos*, light, *tonos*, tone). A mixture of the perceptions of reverberated sound and light.

**Echophra′sia** (*echo*, sound, *phrasis*, speech). Echolalia.

**Ech′oscope.** Stethoscope.

**Echos′copy** (*echo*, sound, *skopeo*, to examine). Auscultation.

**Eck′er's gy′rus.** Descending convolution at the extremity of the occipital lobe. **E.'s sul′cus,** anterior or transverse occipital sulcus.

**Ecla′bium.** Eversion of the lip.

**Eclamp′sia** (*eklampo*, to shine forth). Formerly signified flashes of light before the eyes. Now employed practically exclusively to denote a sudden convulsion resembling in appearance epilepsy, but due to other definite causes. **E. infan′tum** or **In′fantile e.,** convulsions occurring in infants, due to temporary cerebral congestion or of reflex origin, and sometimes epileptic in nature. **E. nu′tans,** convulsion with bowing of the head; salaam convulsion. **Puer′peral e.,** convulsions occurring during or just before or after parturition, due it is thought by many to uræmic intoxication. **E. typho′des,** convulsive disease, a form of ergotism; see *Raphania.* **Uræ′mic e.,** uræmic convulsions.

**Eclamp′sic** or **Eclamp′tic.** Relating to or suffering from eclampsia.

**Eclamp′sism.** A term proposed to denote the syndrome caused by uræmic or other intoxication in the pregnant woman, convulsions, however, being absent.

**Eclec′tic physic′ians** (*eklektikos*, selecting, *ek*, from, *lego*, to choose). Sect of physicians who professed to choose from other sects and from scientific medicine all the opinions which appeared to them best founded. Now in great measure confined to those who reject drugs of mineral origin. The doctrine was called *eclectism, eclecticism.*

**Eclec′tism** or **Eclec′ticism.** See *Eclectic.*

**Eclim′ia** (*limos*, hunger). Inordinate appetite.

**Eclip′sis** (*ekleipo*, to leave out). Syncope.

**Ec′lysis** (*eklyo*, to loosen). Prostration, faintness. **E. pneumocardi′aca,** asphyxia.

**Ecmne′sia.** Loss of memory of events from a certain date, memory of preceding events remaining intact.

**Ecnœ′a** (*eknoia*, lunacy). Dementia.

**E′coid** (*oikos*, house, *eidos*, form). Œcoid; a decolorized red blood corpuscle, or more properly the stroma of the same from which the hæmoglobin has disappeared.

**Ecolog′ical.** Relating to ecology.

**Ecol′ogy** (*oikos*, house, *logos*, discourse). Œcology; the science of the adaptation of plants and animals to their surroundings; the science of vegetable and animal economy.

**Econ′omy** (*oikos*, a house, family, *nemo*, to rule). Regulation or disposition of the parts of an organic whole, such as the human body; the aggregate of the laws governing the organism; the aggregate of parts constituting man or animals; system.

**Ecouvillonage′** (Fr.). The cleansing of cavities or introduction into them of remedies by means of a brush or swab (*écouvillon*).

**Ecphlogo′sis** (*phlogoo*, to set on fire). Inflammation.

**Ec′phlysis** (*phlyo*, to boil). Vesicula.

**Ecphrac′tic** (*ekphraktikos*). Removing obstruction.

**Ecphrax′is** (*ekphrasso*, to remove obstruction). Action of ecphractic or deobstruent remedies.

**Ecphro′nia** (*phren*, mind). Insanity.

**Ecphyadec′tomy** (*ekphyas*, appendix, *ektome*, excision). Excision of the vermiform appendix.

**Ecphyadi′tis.** Inflammation of the vermiform appendix.

**Ec′phyas** (*ekphyomai*, to grow out). Appendix vermiformis.

**Ecphy′ma** (*ekphyomai*, to grow out). Excrescence, small tumor. **E. glob′ulus,** a contagious disease occurring in Ireland, beginning as a tubercle which softens and is replaced by a raspberry-like tumor; it is chronic, but curable by application of nitrate of silver.

**Ecphy′mata** (pl. of ecphyma). Rubeola.

**Ecphyse′sis** (*ekphysao*, to breath through). Quick and forced expulsion of air from the lungs.

**Ec′physis** (*ekphyomai*, to grow out). Apophysis. **E. ventric′uli,** duodenum.

**Ecplex′ia** or **Ecplex′is** (*ekplesso*, to stun). Stupor.

**Ecpneumato′sis** or **Ecpneu′sis** (*pneuma*, air). Expiration.

**Ec′pnoe.** Expiration.

**Ecpye′ma** or **Ecpye′sis** (*pyon*, pus). Abscess, suppuration, empyema.

**Ecpyet′ic.** Suppurative.

**Ecraseur′** (Fr.) (*écraser*, to crush). A crusher. Surgical instrument invented by Chassaignac, consisting of a wire rope or steel chain attached at both ends to a steel mandril which passes through a hollow steel cylinder. The tightening of the chain is made slowly and with great force, and the slow bruising it makes is rarely followed by hemorrhage, even in the case of hemorrhoids and other vascular tumors. The operation with the *écraseur* has been termed *écrasement* or dry amputation.

**Ecrex′is** (*ekregnymi*, to break forth). Rupture, laceration.

**Ecrhyth′mic** (*ek*, out of, *rhythmos*, rhythm). Out of rhythm; applied to the pulse, particularly when irregular.

**Ec′röe** or **Ec′rysis** (*rhoe*, flow). Discharge.

**Ecsarco′ma** (*sarx*, flesh). Fleshy excrescence of various kinds. See *Fungosity* and *Sarcoma*.

**Ecstal′tic.** Name given to nervous activity from the spinal centre.

**Ec′stasis** or **Ec′stasy** (*exhistemi*, to be beside one's self). State in which certain ideas so completely absorb the mind that the external sensations are suspended, voluntary movements arrested, and even the vital actions retarded. In catalepsy there is, in addition, complete suspension of the intellectual faculties—a condition generally described as *trance*.

**Ec′strophy.** Extroversion of the bladder. See *Exstrophy*.

**Ec′tad.** Directed toward the surface of the body.

**Ec′tal** (*ektos*, outward). Relating to the exterior.

**Ecta′sia.** Aneurysm. **E. vena′rum**, varix.

**Ectasin′.** Substance derived from tuberculin, having properties of a vasomotor dilator.

**Ec′tasis** or **Ec′tasy** (*ekteino*, to stretch out). Extension; expansion. **E. i′ridis**, extension or expansion of the iris, occasioning diminution of the pupil.

**Ectat′ic** (*ektasis*, extension). Distensible or dilatable, as *ectatic cicatrices*.

**Ecten′tal** (*ektos*, outward, *entos*, inward). Relating to the line of junction between ectoderm and entoderm.

**Ec′teron.** External and internal epithelial layer.

**Ecteth′moid** (*ektos*, outside). Lateral mass of the ethmoid bone.

**Ectex′is.** Colliquation.

**Ecthlim′ma** (*ekthlibo*, to express). Attrition.

**Ecthlip′sis.** Expression.

**Ecthy′ma** (*ekthyo*, to break out). A papulous scale. A cutaneous eruption characterized by large, round pustules, always distinct and seated upon an indurated and highly inflamed base, which soon break, and olive-brown incrustations are formed which adhere firmly to the skin and separate in time. *Ecthymata* are also hard tumors which appear transitorily on the skin. **E. antimonia′le**, ecthymatous eruption from contact with antimony. **E. bullo′sum**, pustular syphiloderm. **E. cachec′ticum**, pompholyx epinyctis. **E. febri′le**, smallpox. **E. gangræno′sum**, rupia escharotica. **E. lu′ridum**, purplish pustules of the aged. **E. syphilit′icum**, rupia.

**Ecthymat′iform** or **Ecthy′miform.** Resembling ecthyma.

**Ecthyreo′sis** or **Ecthyro′sis.** A condition resembling mxyœdema, following excision of the thyroid gland.

**Ecthysterocye′sis** (*ektos*, outside, *hystera*, uterus, *kyesis*, pregnancy). Extra-uterine pregnancy.

**Ectillot′ic** (*ektillo*, to pluck out). Depilatory.

**Ecti′ris.** External portion of the iris.

**Ectme′sis** (*ektmesis*, cutting out). Excision.

**Ecto-** (*ektos*, outside). As a prefix, outside.

**Ec′toblast** (*blastos*, germ). Ectoderm. Wall of a cell. See *Cytoblast* and *Molecule*.

**Ectocar′dia** (*kardia*, heart). Dislocation or malposition of the heart. From the nature of the misplacement it has been divided into *e. cervicalis*, *e. pectoralis*, and *e. abdominalis*.

**Ectochoroide′a.** External layer of the choroid.

**Ectocon′dylar.** Pertaining to the external condyle. **E. ridge**, ridge of the humerus.

**Ectocor′nea.** External layer of the cornea.

**Ectocu′neiform.** External cuneiform.

**Ec′toderm** (*ektos*, outside, *derma*, skin). Exterior cell-membrane; ectoblast; epiblast.

**Ectoder′mic**, **Ectoder′mal**, or **Ectodermoi′dal.** Pertaining to the ectoderm.

**Ectoen′tad** (*ektos*, outside, without, *entos*, within). From without inward.

**Ectogenous**, ek-toj′en-us (*gennao*, to engender). Developing outside the host, said of external parasites.

**Ectoglob′ular.** Outside of a globule.

**Ectoglute′us.** The outer or greater gluteus muscle.

**Ectokelos′tomy.** Formation of an artificial anus by opening of a hernial sac as a preliminary step to the radical cure.

**Ec′tome** (*ektome*, excision). Castration; excision.

**Ec′tomere** (*meros*, part). One of the cells due to segmentation which finally help to form the ectoderm.

**Ecto′mia.** Castration.

**Ec′tomon.** Helleborus niger.

**Ecto-or′bital** or **Ector′bital.** Connected with or located upon the lateral portion of the orbits.

**Ectopa′gia** (*pegnymi*, to put together). Genus of double monsters having a common umbilicus, comprising those which are united laterally throughout the whole extent of the thorax; such a monster is called *ectop′agus*.

**Ectopar′asites.** Parasitic animals which infect the exterior of the body.

**Ectoperitone′al.** Relating to the attached surface of the peritoneum.

**Ectoperitoni′tis.** Inflammation of the outer portion of the peritoneum.

**Ec′tophyte** or **Ectoph′yton** (*phyton*, vegetable). Vegetable parasite growing on the surface of the body.

**Ecto′pia** or **Ec′topy** (*ektopos*, out of place). Morbid displacement of parts. **E. a′ni**, proctocele. **E. cer′ebri**, encephalocele. **E. cor′dis**, displacement, dislocation, or unnatural position of the heart. **E. hernio′sa**, hernia. **E. intestino′rum**, enterocele. **E. len′tis** dislocation of the crystalline lens, which may take place into the vitreous humor, the anterior chamber, or under the conjunctiva. **E. pulmo′num**, pneumocele. **E. sple′nis**, splenectopia. **E. vesi′cæ**, exstrophy of the bladder.

**Ectop′ic.** Out of place. **E. gesta′tion**, extra-uterine pregnancy. **E. menstrua′tion**, vicarious menstruation.

**Ec′toplasm.** Outer layer of a cell.

**Ectoplasmat′ic**, **Ectoplas′mic**, or **Ectoplas′tic.** Relating to ectoplasm.

**Ectopocys′tic** (*ektopos*, out of place, *kystis*, bladder). Relating to displacement of the bladder.

**Ec′topous.** Ectopic.

**Ectoprot′ic.** Eccoprotic.

**Ectoret′ina.** The outer layer of the retina.

**Ec′tosarc** (*sarx*, flesh). The outer layer or ectoplasm of an animal microorganism, such as the amœba.

**Ectoskel′etal.** Relating to the ectoskeleton.

**Ectoskel′eton.** Superficial or external support of the animal body, as the skin, hairs, feathers, hoofs, etc.

**Ectos′teal** (*osteon*, bone). Relating to the external surface of a bone.

**Ectosto′sis.** Ossification beginning within the perichondrium and reaching to the cartilage.

**Ectotoxæ′mia** (*ektos*, out of, *toxikon*, poison, *haima*, blood). Systemic poisoning from a cause which has its origin outside the organism.

**Ectozo′on**, pl. ectozoa (*zoon*, animal). Dermatozoon; an animal parasite infesting the exterior of the body, such as the louse. The term ectozoa is also, like *helminthia erratica*, *pseudohelminthes*, *pseudelminthes*, and *pseudoparasites*, applied also to worms or larvæ of insects that have been introduced into the intestinal canal by accident. Those most frequently swallowed are the hairworm, leech, grub of the fly, caddy insect, the larva of the bee, the spider, etc. In animals bots are produced by swallowing the ova of the œstrus or gadfly. See *Helminthia erratica*.

**Ectrim'ma** (*tribo*, to rub off). Ulceration of the skin; bedsore.

**Ectrodactyl'ia** (*ektrosis*, abortion, *daktylos*, finger). Malformation in which one or more fingers or toes are wanting.

**Ectrog'eny** (*ektrosis*, abortion, *genesis*, generation). Monstrosity by defect.

**Ectro'ma.** Abortion.

**Ectro'meles** (*ektrosis*, abortion, *melos*, limb). Genus of monsters in which the limbs are nearly or altogether deficient, as in the ordinary cetacea. The monster is called *ectrom'elus*.

**Ectromel'ic.** Having undeveloped limbs. **E. fœ'tus,** ectromelus.

**Ec'trope** (*ektrepo*, to turn off, to divert). Any duct by which peccant or morbific matter was supposed to be drawn off.

**Ectrop'ic.** Turned outward; everted.

**Ectro'pion** or **Ectro'pium.** Eversion of the eyelids, so that they do not completely cover the globe of the eye; more common in the lower than the upper eyelid. It may be owing to the retraction of the skin after the cure of an ulcer, wound, or burn of the eyelid, or may depend on tumefaction or relaxation of the conjunctiva. Removal of a portion of the conjunctiva will usually effect a cure, but many cases defy the efforts of art. The ancients called ectropion of the upper eyelid *lagophthalmia*. **E. of os u'teri,** condition characterized by projection of the swollen and granulated mucous membrane from the gaping os uteri, particularly when a large speculum is introduced. **E. vesi'cæ,** exstrophy of the bladder.

**Ectro'pionize.** To evert or put in a condition of ectropion.

**Ectro'sis.** Abortion.

**Ectrot'ic.** Abortive. Applied to methods for preventing the development or causing the abortion of any disease, as of chancres by the use of caustic, or of smallpox pustules by the use of mercurial ointment.

**Ec'zema** (*ekzeo*, to boil out, to effervesce). Humid scall or tetter, moist tetter, running scall. Eruption of small vesicles on various parts of the skin, usually set close or crowded together, with more or less inflammation around their bases. The skin becomes infiltrated, the vesicles break down and exude a fluid which dries and forms crusts. There is often burning or itching and the lesions of scratching are imposed upon those peculiar to the disease. Sometimes there are more or less marked constitutional disturbances, though often, especially in the chronic forms, the disease is strictly local. The lesions of eczema vary greatly, and many affections of very diverse character are loosely grouped under this term. To eczema of the legs the term *fluxus salinus* has occasionally been given, on account of the copious secretion from it. **E. cap'itis,** e. of the hairy scalp. **E. diabetico'rum,** form of e. erythematosum about the genital organs of diabetic women, with intense itching and tumefaction. **Epidem'ic e.,** dermatitis epidemica. **E. epizoöt'icum,** foot-and-mouth disease; contagious and accompanied with fever; characterized by a vesicular eruption of the mouth and feet in cattle; may also attack human beings. **E. erythemato'sum,** characterized by redness of the skin and exudation. **E. exfoliati'vum,** a form of e. in which exfoliation is a prominent symptom; dermatitis exfoliativa; e. squamosum. **E. of the face,** at an advanced stage and occurring in young children, has been described under the names *crusta lactea* and *porrigo larvalis*. **E. figura'tum,** lesions are well defined. **E. fis'sum,** chronic eczema with a raw, red, exuding, and cracked surface. **E. folia'ceum,** dermatitis exfoliativa. **E. folliculo'rum,** form of e. resembling sycosis, beginning as an inflammation of the hair follicles. **E. of the hair'y scalp,** eczema capitis, vesicular scall, is often confounded with other affections under the names porrigo and tinea, which are pustular, not vesicular, in their form. It occurs during dentition, and even afterward; the discharge is profuse and apparently glutinous; it dries into crusts and mats the hair. The scalp gives evidence of inflammatory excitement, and the lymphatic ganglions of the neck become inflamed and suppurate. A variety of humid scalled head, in which the secretion runs down upon the hairs and encloses them in little silver particles or sheaths, is named *asbestos scall*. **E. hu'midum,** moist eczema. **E. hypertroph'icum,** eczema with hypertrophy of cutaneous structures. **E. ichoro'sum,** chronic eczema attended with a free and irritating discharge. **E. impetigino'des** or **impetigino'sum,** e. pustulosum; gall, grocers', or bricklayers' itch; eczema produced by the irritation of sugar or lime. **E. infanti'le** or **In'fantile e.,** porrigo larvalis. **E. intertri'go,** eczema affecting parts of the body which come into contact with each other, as about the joints, the inner surface of the nates, in the groins, and beneath the mammæ. **E. labia'le,** eczema of the lips with small pustules. **Li'chenoid e.,** e. characterized by thickening of the epidermis. **E. lot'ricum,** eczema of the hands; washerwoman's itch. **E. mad'idans,** eczema rubrum. **E. mamilla'rum,** eczema of the nipples. **E. margina'tum,** eruption at the inner part of the thigh; but different diseases—as intertrigo, superficial ringworm, lepra vulgaris, etc.—are probably included under it. **E. mercuria'le,** mercurial lepra or rash; variety of eczema arising from the irritation of mercury. **E. muco'sum,** eczema in which the lesions have a similar appearance to mucous membrane. **E. neurit'icum,** linear nævus. **E. neuro'sum,** variety of eczema accompanied with pain and great sensibility of the skin. **E. neurotraumat'icum,** eczema due to injury to a nerve. **E. nummula're,** form of eczema in which the lesions are shaped like coins. **E. papulo'sum,** a form of e. under which are classed all those forms described as lichen simplex, l. eczematoides, eczema lichenoides, and other diseases of the skin. **E. parasit'icum,** chronic parasitic catarrh of the skin. **E. pustulo'sum,** impetigo; form of e. characterized by development and disintegration of pustules; on the scalp and face of infants it is called *milk crust*. **E. rhagadifor'me,** e. fissum. **E. rimo'sum,** eczema fissum. **E. ru'brum,** an inflammatory form of eczema. **E. sclero'sum,** eczema accompanied with cutaneous hardening. **E. seborrho'icum** (Unna), under this title are included a number of separate disorders, such as seborrhœa sicca, pityriasis, some chronic circumscribed forms of eczema, and many cases usually called psoriasis. **E. sic'cum,** eczema unaccompanied by discharge. **E. sim'plex,** eczema. **E. sola're,** eczema following exposure to the sun. **E. squamo'sum,** chronic eczema accompanied with continuous scaliness or even crustiness. **E. of the trop'ics,** lichen tropicus. **E. tubercula'tum,** mycosis fungoides. **E. tuberculo'sum,** form of eczema characterized by elevations in the shape of tubercles on the skin. **Tuber'culous e.,** exudative affection of the skin, seen in proximity to scrofulodermata or occurring in scrofulous patients. **E. tubero'sum,** mycosis fungoides. **E. verruco'sum,** wart-like form of eczema observed on the lower extremities in middle life or advanced years. **E. vesiculo'sum,** eczema characterized by very numerous vesicles, which become filled with fluid and are accompanied with intense itching after the vesicles rupture; the fluid spreads over the surface and dries into crusts. **Weep'ing e.,** e. attended with a moist skin.

**Eczem'atoid.** Resembling eczema.

**Eczemato'ses.** Family of diseases marked by morbid conditions of the cutaneous secretions.

**Eczem'atous.** Relating or appertaining to eczema.

**Edac'ity** (*edo*, to eat). Voracity; gluttony.

**Ed'da-padel'le.** Ophthalmia occurring in epidemic form in Malabar.

**Ed'does.** See *Arum esculentum*.

**Ede'a.** Ædœa, genital organs.

**Ed'ebohls's pos'ture.** The posture on the back, in which the legs and thighs are flexed, the hips elevated, and the thighs abducted.

**Edei′tis.** Ædœitis. Inflammation of the genital organs.

**Ede′ma, Edem′atous.** Œdema, œdematous.

**Eden′tate.** Without teeth.

**Edenta′tion** (*dens*, tooth). Deprivation of teeth.

**Eden′tulous.** Without teeth.

**Edeol′ogy.** Ædealogy.

**Edeopto′sis.** Ædeoptosis.

**Ed′era.** Hedera helix.

**Edge′weed.** Œnanthe phellandrium.

**Ed′ible** (*edo*, to eat, *habilis*, able). Esculent.

**Ed′inger's fi′bres.** Fibres in the visual path in the brain of amphibia. **E.'s nu′cleus,** nucleus or collection of ganglion cells in the gray matter of the third ventricle.

**Ed′inger-West′phal nu′cleus.** Collection of nerve cells in the anterior portion of the oculomotor nucleus.

**Edoceph′alus** (*aidoia*, sexual organs, *kephale*, head). Monster which has the two ears near each other or united under the head, the jaws atrophied, no mouth, and above the single eye a tube or proboscis resembling a penis.

**E′duct.** Substance derived or evolved from organic matter unaltered in composition.

**Eel′grass.** See *Pila marina.*

**Effemina′tion** (*ex*, from, *femina*, female). Change of sexual feeling in the male, whereby the attraction is toward one of the same sex. The state of being effeminate.

**Ef′ferent** (*effero*, to carry out). Centrifugal; exodic; conveying outward, as from the centre to the periphery. *Vasa efferentia* are lymphatic or chyliferous vessels issuing from the glands to convey their lymph to the thoracic duct; those which pass to these glands have been termed *vasa afferentia* or *inferentia.* Also nerves that convey the nervous influence from the nervous centres to the circumference. See *Afferent.* At the upper extremity of the mediastinum testis the ducts of the rete testis terminate in from nine to thirty small ducts, called vasa efferentia or excretoria or Graafiana, which form the coni vasculosi.

**Efferves′cence** (*effervesco*, to boil up). Agitation produced by the escape of gas through a liquid, independently of the heat of the mixture, as from the mixture of acetic acid and carbonate of potassium.

**Efferves′cing draught.** Prepared by neutralizing an aqueous solution of potassium bicarbonate with lemon-juice.

**Effla′tion.** Quick and forced expulsion of air from the lungs.

**Effleurage′** (Fr.). Gentle shampooing or rubbing of the surface. See *Massage.*

**Efflora′tion** (*effloreo*, to bloom). Exanthem.

**Efflores′cence** (*effloresco*, to bloom as a flower). Exanthem; cutaneous blush. Conversion of a solid substance into a pulverulent state by exposure to the air; in salts, this is generally owing to the loss of a part of their water of crystallization.

**Efflores′cent.** Losing water of crystallization and thereby becoming pulverulent.

**Efflu′vium** (*effluo*, to flow out). Emanation from persons or things, often offensive. **E. latrina′rium,** ammoniacal emanation from latrines or privies. **E. palus′tre,** marsh miasm. **E. pilo′rum,** alopecia.

**Ef′fort** (*fortis*, strong). Muscular contraction of greater or less strength to resist an external force, or to accomplish a function which has become naturally laborious, as the act of pushing away or of drawing a body toward us, the painful efforts of the mother to expel the fœtus, etc.

**Effrac′tion.** Breaking through.

**Effrac′ture** (*effringo*, to break). Fracture. **E. cra′nii,** fracture of the cranium with depression.

**Effu′sion** (*effundo*, to pour out). The pouring out of blood or of any other fluid into the areolar or into the cavities of the body; effusion of serum or of coagulable lymph, for instance, is a common result of inflammation of serous membranes. *Infiltration* is the term generally employed for effusion into the areolar tissues.

**Ege′ria.** In ancient mythology, a nymph, by some supposed to have been identical with Lucina, to whom pregnant females offered sacrifices *ut conceptus alvus facilius egeretur.*

**Eges′ta** (*e*, out, *gero*, to carry). Excrementitious matters discharged from the body.

**Eges′tion.** Defecation, dejection, excretion.

**Egg.** Ovum. **E. albu′min,** the white of egg. **E. bed,** ovarium. **E.-cell,** see *Ova.* **E.-c. nu′cleus,** nucleus of egg-cell prior to maturation. **E. mem′brane,** the membrane surrounding the ovum; the *primary* e. m. is derived from the ovum itself, the *secondary* e. m. from the surrounding parts. **E. plant,** Solanum melongea. **E.-shell,** testa ovi. **E.-tubes,** tubes of the ovaries. **White of e.,** albumen. **Yolk of e.,** see *Ovum.*

**E′gilops.** Ægilops.

**Eglan′dular** or **Eglan′dulous.** Devoid of glands.

**Egobronchoph′ony.** See *Egophony.*

**Egoma′nia** (*ego*, I, +*mania*). A form of mental derangement characterized by excessive self-esteem and self-concentration.

**Egopho′nic.** Having the character of or relating to egophony.

**Egoph′ony** (*aix*, goat, *phone*, voice). Resonance of the voice heard through the stethoscope when the chest of one suffering from moderate effusion into one pleural cavity is auscultated. The voice which strikes the ear through the cylinder is more sharp and harsh than usual, and tremulous and broken, like that of a goat. By some the bronchial and bleating voice (*egobronchophony*) is regarded as a symptom of pleuropneumonia. Egophony exists, however, in cases of hepatization when there is no pleural disease.

**Egres′sus** (outlet) **ventric′uli.** Pylorus.

**E′gritude** (*æger*, sick). Disease.

**Egyp′tian chloro′sis.** See *Chorosis.* **E. ophthal′mia,** see *Ophthalmia.* **E. o′pium,** commercial variety of opium from Egypt, of inferior quality.

**Ehr′enritter's gan′glion.** Ganglion jugulare.

**Ehr′lich's meth′od.** Method employed for staining tubercle bacilli with methyl violet; nitric acid is then used for decolorization. **E.'s reac′tion in ty′phoid fe′ver,** see *Diazo reaction.* **E.'s solu′tion,** a solution of basic anilin dye in oil of anilin and water. **E.'s the′ory,** side-chain theory, see *Chain.*

**Eich′horst's cor′puscles.** Microcytic formation in the blood in pernicious anæmia. **E.'s neuri′tis,** neuritis fascians, affecting the sheath of the nerve and the interstitial muscular tissue. **E.'s type,** femorotibial type of progressive muscular atrophy.

**Eich′stedt's disease′.** Pityriasis versicolor.

**Eidoptom′etry.** Measurement of acuteness of vision.

**Eighth nerve.** Auditory nerve.

**Ei′gon.** Name given to certain compounds containing fixed proportions of iodine and albumin, used externally in wounds and other injuries as a substitute for iodoform, and internally as a substitute for potassium iodide.

**Eile′ma** (*eileo*, to roll). Fixed pain in some portion of the intestinal canal, like that which would be produced by a nail driven into the part.

**Ei′loid.** Morbid growth of the cutis, coiled or folded.

**Eisan′thema** (*eis*, in, *anthema*, efflorescence). Eruption on a mucous membrane; enanthem.

**Eiso′dic** (*eis*, within, *odos*, way). Relating to the afferent nerves.

**Eisophor′ria.** Esophoria.

**Eis′pnoe** (*eis*, in, *pnoe*, to breathe). Inspiration.

**Eit′elberg's test.** A test for perception of sound, a large tuning-fork being held before the ear at intervals for a number of minutes. If there is any lesion the appreciation of the vibration diminishes; otherwise it increases.

**Ejacula′tion** (*ejaculor*, to throw out). Emission of sperm or semen. That occurring during coition has also been termed *insemination*. Act by which any fluid is projected out of the urethra. **E. cen′tre,** see *Centre*.

**Ejac′ulator.** That which effects the emission of sperm or urine from the urethra. **E. sem′inis,** accelerator urinæ. **E. ure′thræ,** see *Transversus perinæi*. **E. uri′næ,** bulbocavernosus.

**Ejac′ulatory.** Concerned in the act of ejaculation. **E. ducts** or **canals′** are formed by the union of the vasa deferentia with the ducts of the vesiculæ seminales. They open at the lateral and anterior parts of the verumontanum, and convey into the urethra the sperm which is discharged from the vesiculæ, as well as that which comes directly from the testicle by the vas deferens. Between them there is often a depression, sometimes of a large size, which is termed *utriculus, sinus pocularis,* or *Weberian organ* or *corpuscle* or *vesicle;* regarded as the analogue to the uterus, and hence called *uterus masculinus*.

**Ejec′ta** (*ejico*, to throw out). Excrementitious matters that are cast out from the body.

**Ejec′tion.** Excretion of fæces, urine, sputa, etc.

**E′ka-iod′oform.** A combination of iodoform and paraformaldehyde; antiseptic.

**Elabora′tion** (*elaboro*, to work out). Changes which assimilable substances undergo through the action of living organs before they are capable of serving for nutrition. The food is elaborated in the stomach during the formation of chyme; the chyme in the intestine during the formation of chyle, etc.

**Elacin′.** Elastin, readily colored by basic stains.

**Elæ′a.** The olive.

**Elæag′nus** (*elaia*, olive, *agnos*, chaste). Myrica gale. **E. cor′do,** Myrica gale.

**Elæerin′** (*elaion*, oil, *erion*, wool). Oil of sheep's wool, called by raisers of sheep, "yolk."

**Elæocar′pus copallif′erus.** Copal.

**Elæ′olate.** Liquid in which a volatile oil forms the base.

**Elæom′eter** (*elaion*, oil, *metron*, measure). Very delicate glass hydrometer for testing the purity of olive or almond oil by determining its density.

**Elæomyen′chysis** (*elaion*, oil, *mys*, muscle, *enchysis*, infusion). Injection into the tissues of melted hydrocarbons having a melting point above the temperature of the body. The material congeals and so accomplishes the aim of the injection, which is to arrest local muscular spasm, prevent the union of divided nerves, restore the symmetry of distorted parts, etc.

**Elæ′on.** Oil.

**Elæop′tene** (*elaion*, oil, *ptenos*, volatile). That portion of oxygenated volatile oils remaining after the stearoptene has been separated.

**Elæosac′charum** (*elaion*, oil, *sakcharon*, sugar). Medicine composed of essential oil and sugar.

**Elaidin′.** Substance isomeric with olein, obtained by exposing olive or castor oil to the action of nitric acid.

**Elain′** (*elaion*, oil). Eleoptene. See *Fat*.

**Ela′is guineen′sis.** See *Cocos butyracea*. **E. occidenta′lis,** see *Cocos butyracea*.

**Elal′dehyde.** Paraldehyde.

**Elaphobos′cum** (*elaphos*, deer, *bosko*, to eat). Pastinaca sativa.

**Elaphomy′ces granula′tus.** Hart's truffles, deer balls, lycoperdon nuts. Fungus formerly used in the preparation of *balsamus apoplecticus*, and to promote labor and the secretion of milk; also as an aphrodisiac.

**Elaph′rium elemif′erum.** See *Amyris elemifera*. **E. tomento′sum,** Fagara octandra.

**Elas′tic.** Possessing elasticity. **E. band′age,** see *Bandage* and *Esmarch's*. **E. lam′ina,** see *Lamina*. **E. lay′er of cor′nea,** see *Lamina*. **E. mem′brane** or **tis′sue,** variety of connective tissue, see *Membrane*.

**Elas′tica.** (Ph. U. S., 1890.) India rubber; caoutchouc. Prepared juice of various species of Hevea; known in commerce as *Para rubber*.

**Elasticin′.** Elastin.

**Elasti′city.** Tone, tonicity. Property by which certain bodies return to their proper size and shape, when these have been modified by pressure or otherwise, if only the violence to which they have been subjected is not beyond their specific limit of recoil.

**Elastin′.** Substance resulting from the continued action of boiling water on yellow elastic tissue.

**Elastom′eter.** Instrument or apparatus for examining the amount of elasticity.

**Elasto′ses.** Substances resulting from digestion of the albuminoid body, elastin, in the stomach.

**El′ate.** Pinus picea. **E. thelei′a,** Pinus rubra.

**Elater′ic acid.** Acid obtained from elaterium.

**Elat′erid.** Bitter principle found in Ecballium elaterium.

**Elaterin′.** Elaterinum.

**Elateri′num.** (Ph. U. S. and Br.) A neutral, active principle from elaterium, occurring in hard, colorless, hexagonal plates; dose, gr. $\frac{1}{30}$–$\frac{1}{10}$ (0.0021–0.0065). *Pul′vis elateri′ni compos′itus* (Ph. Br.), same as *tritura′tio elateri′ni* (Ph. U. S.); dose, gr. $\frac{1}{3}$–$\frac{2}{3}$ (0.021–0.042).

**Elate′rium.** The official (Ph. Br.) name of the dried sediment from the juice of Ecballium elaterium or squirting cucumber; a powerful hydragogue cathartic; dose, gr. $\frac{1}{10}$–$\frac{1}{2}$ (0.0065–0.032). **E. cordifo′lium,** Momordica elaterium.

**Elatin′.** See *Momordica elaterium*.

**El′bow.** The bend of the arm; the articulation of the arm with the forearm; the projection of the olecranon process at the back part of the joint; the anterior part of the joint is called also the bend of the elbow. **E. jerk,** reflex movement of the forearm caused by sudden percussion of the biceps tendon. **E. joint,** articulation of the radius and ulna with the humerus. **Mi′ner's e.,** see *Miner's elbow*.

**Elco′ma.** Ulcer.

**El′coplasty.** Operation for healing an ulcer by grafting or plastic operation.

**Elco′sis** (*helkos*, ulcer). Ulceration.

**El′der.** Sambucus. **E. ber′ries,** see *Sambucus*. **Com′mon e.,** Sambucus canadensis. **Dwarf e.,** Aralia hispida, Sambucus ebulus. **E. flow′ers,** see *Sambucus*. **Prick′ly e.,** Aralia spinosa. **Red′berried e.,** Sambucus pubens.

**Elecampane′.** Inula campana, Inula helenium.

**Elec′tion.** A deliberate choice. **Point of e.,** the place where an amputation should be performed or the incision made for ligation of an artery when conditions permit of a choice.

**Elec′tive.** Showing a preference; denoting a tendency of one substance to unite chemically with another.

**Elec′tric** or **Elec′trical.** Relating to electricity. **E. bath,** see *Electricity*. **E. chore′a,** Dubini's disease, see *Chorea*. **E. u′nits,** see *Unit*.

**Electri′cian.** One skilled in the study or application of electricity.

**Electric′ity** (*elektron*, amber, the substance in which it was first noticed). A physical force manifested in several forms, as magnetism, static electricity or franklinism, dynamic electricity—as galvanism or faradism—and thermoelectricity. Electricity is used medicinally as an excitant in paralysis, rheumatism, deafness, amaurosis, amenorrhœa, uterine disease, etc. The *electric bath* consists in placing the patient upon an insulated stool and connecting him with the prime conductor, of which he thus becomes a part; the fluid may be communicated by points, sparks, or by shocks, according to the required intensity. See *Electrization*. A hot-air or vapor electric bath is also employed. **An′imal e.,** e. normally present in the body. **Chem′ical e.,** galvanism. **Con′tact e.,** galvanism. **Cur′rent e.,** e. produced by a battery. **Farad′ic e.,** induced electricity. **Franklin′ic e.,** static electricity. **Fric′tional e.,** e. due to friction; static e. **Galvan′ic e.,** current electricity. **Induced′** or **Induc′tive e.,** electricity produced in the primary or secondary coil of an induction apparatus; see *Induction*.

**Localiza′tion by e.**, electrodiagnosis. **Magnet′ic e.**, electromagnetism. **Med′ical e.**, application of electricity to medical practice. **Neg′ative e.**, resinous e. **Pos′itive e.**, vitreous e. **Res′inous e.**, static e. evolved by friction of sealing wax with flannel; also a form of galvanic e. to which the electroscope is sensitive as it is to friction of sealing wax just mentioned. **Stat′ic** or **Stat′ical e.**, electricity due to friction developed by means of the plate, cylinder, or Holtz machine, and applied in neuralgia, hysteria, paralysis, and various neuroses. **Vit′reous e.**, form of static e. evolved by friction of glass with silk, or of galvanic e. similarly affecting the electroscope. **Volta′ic e.**, current e., galvanism.

**Elec′tricute.** To execute by means of electricity.

**Electricu′tion.** Judicial execution by means of a powerful electric current.

**Elec′trify.** To communicate or charge with electricity. To produce the electrical condition in a body or to render it susceptible of producing electrical phenomena; term especially applicable to static electricity, *electrolize* being the more proper term to use in the case of current electricity. Electrify is often used to signify the act of communicating the electric fluid to man.

**Electriza′tion.** Medical application of electricity. *Localized electrization* consists in concentrating the electrical action in particular parts without electropuncture or any surgical operation. Electrization may also be employed for diagnostic purposes, diverse morbid conditions acting differently in response to it.

**Electro-.** As a prefix, electricity.

**Electroanæsthe′sia.** Insensibility to electric stimulation.

**Electrobiol′ogy.** Science of animal electricity.

**Electrobios′copy.** Application of electricity to ascertain whether life is extinct.

**Electrocau′tery.** Galvanocautery.

**Electrochem′istry.** Science pertaining to the chemical effects of electricity.

**Electrocontractil′ity.** Power possessed by muscles of being excited to contractions by electricity.

**Elec′trocute, Electrocu′tion.** Electricute.

**Electrocys′toscope.** A cystoscope illuminated by electric light.

**Elec′trode** (*hodos*, way). A pole of an electric apparatus. The contrivance on the end of each of the cords attached to a battery or other source of electricity, which serves as the means of application of electricity to the body. The positive pole or extremity of the wire in connection with it is the *anode* (abbreviated, A or An), the negative pole the *cathode* (abbreviated C, Ca, K, or Ka).

**Electrodiagno′sis.** Diagnostic use of a current of electricity.

**Elec′trodynamom′eter** (*dynamis*, force, *metron*, measure). Apparatus for estimating the force of electric currents.

**Electrogen′esis.** Production of electricity.

**Electrog′raphy** (*grapho*, to write). Skiagraphy.

**Electrohæmos′tasis** (*hæmostasis*, arrest of bleeding). Arrest of hemorrhage by the electrocautery.

**Electrolithot′rity.** Disintegration of calculi in the bladder by an electrical current.

**Electrol′ysis** (*lysis*, solution). Decomposition by the electric current.

**Elec′trolyte.** Fluid so constituted that by the passage of the electric current through it it is decomposed.

**Electrolyt′ic.** Relating or appertaining to electrolysis or chemical decomposition induced by electricity, as electrolytic treatment of tumors.

**Electrolyza′tion.** Process by which, outside or inside of the body, upon inert or living matter, the phenomenon of electrolysis is effected.

**Elec′trolyze.** To decompose by means of an electric current.

**Elec′trolyzer.** An instrument for use in treating strictures by electrolysis.

**Electromag′net.** Temporary magnet made by passing an electric current through a piece of soft iron.

**Electromag′netism.** The phenomena which are exhibited in the conjoint action of electricity and magnetism.

**Electromassage′.** Use of electricity in connection with massage.

**Electrom′eter.** Instrument for measuring electromotive force; voltmeter. In electrotherapeutics, preferably milliampère-meter, instrument for measuring potential of static electricity.

**Electromo′tion.** Movement produced by the action of electricity.

**Electromo′tive.** Relating to electromotion. **E. force** (contracted, **E. M. F.**), force of current electricity according to potential.

**Electromus′cular.** Relating to the action exerted by electricity on muscles. **E. contractil′ity**, see *Electrocontractility*.

**Electronecro′sis** (*nekroo*, to kill). Capital punishment by means of electricity; electricution.

**Electroneg′ative.** Element appearing at the positive electrode in electrolysis. See *Electropositive*.

**Electropath′ic.** Relating to electropathy.

**Electropathol′ogy.** The science of disease in relation to electricity.

**Electrop′athy.** Electrotherapy.

**Electropho′bia** (*phobos*, fear). Morbid fear of electricity.

**Electroph′orus** (*phero*, to carry). Instrument for obtaining electricity by induction.

**Electrophotog′raphy.** Skiagraphy.

**Electrophysiol′ogy.** Physiology treating of the relations between function and electricity.

**Electrop′orus.** Instrument for accumulating a number of charges of static electricity.

**Electropos′itive.** Element which appears at the negative electrode or pole in electrolysis. The following substances—those generally employed—may be mentioned in the order of electromotive force, ranging from sodium, the most electropositive, to carbon, the most electronegative: sodium, magnesium, zinc, iron, lead, copper, silver, mercury, platinum, carbon.

**Electroprogno′sis.** Prognosis as aided by the employment of electricity.

**Electropunctura′tion** or **Electropunc′ture.** Galvanopuncture. Operation of inserting two or more needles into a part and then connecting them to the electrodes of the electric or galvanic apparatus; employed therapeutically in cases in which electricity, galvanism, and acupuncturation have been indicated.

**Elec′troscope.** Apparatus with which the presence of static electricity is detected, and its kind determined, whether plus or minus.

**Electrosensibil′ity.** Sensibility of surfaces or organs to electricity.

**Electrostat′ic.** Relating to static electricity.

**Electrostat′ics.** Science of static electricity.

**Electrosur′gery.** Use of electricity in surgical operations, usually for its cauterizing effect.

**Electrothana′sia** or **Electrothanato′sis** (*thanatos*, death). Death by electricity.

**Electrotherapeu′tics** or **Electrother′apy** (*therapeuo*, to treat). Treatment of disease by electricity.

**Electrother′mal.** Relating to both heat and electricity, or to heat produced by electricity.

**Electroton′ic.** Relating to electrotonus.

**Electroto′nus.** Peculiar condition of a motor nerve when a continuous galvanic current of equable strength is passed along it.

**Elec′trozone.** Ozone produced by electrolysis of water, preferably salt water; said to be disinfectant.

**Elec′tuary** (*eligo*, to choose). Electuarium. Pharmaceutical composition of a soft consistence, somewhat thicker than honey, and formed of powders, pulps, or extracts and syrup or honey; confection.

**Eleidin′.** See *Keratohyalin*.

**Elelis′phacus.** Salvia.

**El′ement.** Simple, ultimate constituent or principle. A constituent of a compound organ or tissue. A voltaic cell in electricity. *Inorganic* elements are simple principles. An *organic* element, proximate principle, or compound of organization results from the union of certain inorganic elements; fibrin, albumin, casein, etc., are organic elements. **Anatom′ical e.,** one of the ultimate constituents of a tissue, as a cell or fibre. **Formed e.,** in speaking of the blood, means a globule. **Galvan′ic e.,** a cell. **Morpholog′ical e.,** anatomical e. **Sar′cous e.,** the dark matter of a sarcomere; see *Sarcous.* **Tis′sue e.,** anatomical e.

The following table gives the name of inorganic elements, with the symbol and atomic weight:

Table of Elements.

| Element. | Symbol. | Atomic Weight. |
|---|---|---|
| Actinium (?) | | |
| Aluminum | Al | 27.04 |
| Antimony (stibium) | Sb | 120.0 |
| Argon | A | 39.8 |
| Arsenic | As | 75.0 |
| Barium | Ba | 137.0 |
| Beryllium or glucinum | Be or Gl. | 9.0 |
| Bismuth | Bi | 209.0 |
| Boron | B | 11.0 |
| Bromine | Br | 80.0 |
| Cadmium | Cd | 111.8 |
| Cæsium | Cs | 133.0 |
| Calcium | Ca | 40.0 |
| Carbon | C | 12.0 |
| Cerium | Ce | 141.0 |
| Chlorine | Cl | 35.5 |
| Chromium | Cr | 52.5 |
| Cobalt | Co | 58.9 |
| Copper (cuprum) | Cu | 63.4 |
| Crypton | K | 80.0 |
| Didymium | Di | 145.4 |
| Erbium | Er | 166.0 |
| Fluorine | F | 19.0 |
| Gadolinium | Gd | 156.1 |
| Gallium | Ga | 70.0 |
| Germanium | Ge | 72.3 |
| Gold (aurum) | Au | 196.5 |
| Helium | He | 4.0 |
| Hydrogen | H | 1.0 |
| Indium | In | 113.4 |
| Iodine | I | 127.0 |
| Iridium | Ir | 192.7 |
| Iron (ferrum) | Fe | 56.0 |
| Lanthanum | La | 139.0 |
| Lead (plumbum) | Pb | 207.0 |
| Lithium | Li | 7.0 |
| Magnesium | Mg | 24.0 |
| Manganese | Mn | 55.0 |
| Masrium | Ms | 228.0 |
| Mercury (hydrargyrum) | Hg | 200.0 |
| Metargon | Mt | 40.0 |
| Molybdenum | Mo | 95.5 |
| Neodymium | Nd | 140.5 |
| Neon | Ne | 22.0 |
| Nickel | Ni | 58.0 |
| Niobium or columbium | Nb | 94.0 |
| Nitrogen | N | 14.0 |
| Osmium | Os | 198.5 |
| Oxygen | O | 16.0 |
| Palladium | Pd | 105.7 |
| Phosphorus | P | 31.0 |
| Platinum | Pt | 195.0 |
| Polonium (?) | | |
| Potassium (kalium) | K | 39.0 |
| Praseodymium | Pr | 143.5 |
| Radium (?) | | |
| Rhodium | Rh | 104.0 |
| Rubidium | Rb | 85.3 |
| Ruthenium | Ru | 104.2 |
| Samarium | Sm | 150.0 |
| Scandium | Sc | 44.0 |
| Selenium | Se | 78.8 |
| Silicon | Si | 28.0 |
| Silver (argentum) | Ag | 108.0 |
| Sodium (natrium) | Na | 23.0 |
| Strontium | Sr | 87.4 |
| Sulphur | S | 32.0 |
| Tantalum | Ta | 182.0 |
| Tellurium | Te | 128.0 |
| Terbium | Tb | 159.1 |
| Thallium | Tl | 203.7 |
| Thorium | Th | 233.0 |
| Tin (stannum) | Sn | 118.0 |
| Titanium | Ti | 49.8 |
| Tungsten | W | 184.0 |
| Uranium | U | 240.0 |
| Vanadium | V | 51.3 |
| Ytterbium | Yb | 172.8 |
| Yttrium | Y | 89.8 |
| Zinc | Zn | 65.0 |
| Zirconium | Zr | 90.0 |

**Elemen′tary.** Resembling an element, not compound. **E. cell,** see *Cell.*

**El′emi.** See *Amyris elemifera.*

**Elem′ic acid.** Acid in crystals procured from elemi.

**Ele′nium.** Inula helenium.

**Eleo′charis.** Genus of plants, ord. *Cyperaceæ;* sedges. **E. palus′tris,** indigenous plant; spike-rush. Flowering tops, seeds, and roots are astringent in diarrhœa and hemorrhage.

**Eleomyen′chysis.** Elæomyenchysis.

**Eleop′tene** (*elaion,* oil, *ptenos,* volatile). Liquid component of volatile oils.

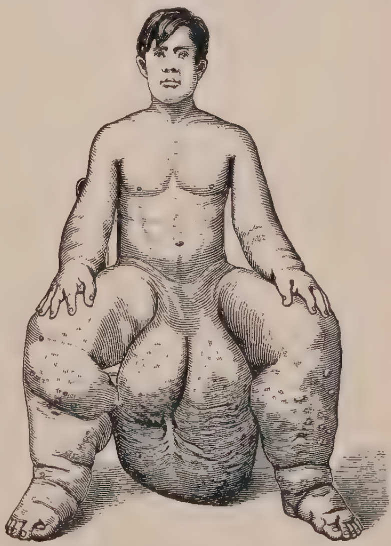
**Eleosac′charum.** Elæosaccharum.

**Eleoseli′num.** Apium petroselinum.

**El′ephant ap′ple.** See *Feronia elephantum.* **E.'s foot,** Elephantopus tomentosa. **E. leg,** elephantiasis.

**Elephan′tiac** or **Elephanti′asic.** Relating to or affected with elephantiasis.

**Elephanti′asis.** A chronic disease marked by hyperplasia of the skin and subcutaneous tissues, with œdema, induration, and more or less pigmentation. It has received various names according to the locality where it was observed by different writers. The underlying condition is a disease of the lymphatic vessels, induced in some cases, if not in all, by the presence of a parasitic worm, *Filaria sanguinis hominis.* This is the affection ordinarily understood by the term elephantiasis, or e. Arabum,



Elephantiasis. (Hyde.)

but the word is applied to leprosy, e. Græcorum, and various other conditions, always then having some qualifying word accompanying it. **E. anæsthet′ica**, lepra anæsthetica, anæsthetic leprosy; form of elephantiasis with insensibility and atrophy. **E. of the Antil′les**, Barbadoes leg, glandular disease of Barbadoes, Bucnemia, Boucnemia, tropical big leg. A form of true elephantiasis or e. Arabum, characterized by the leg being enormously tumid and misshapen; skin thickened, livid, and rugous, often scaly; the scrotum, arms, or other parts sometimes participating in the affection. *Bucnemia tropica*, *Cochin leg*, is an affection of this kind. **E. arab′ica** or **e. Ar′abum**, see *Elephantiasis*. **E. asturien′sis**, variety of elephantiasis; pellagra. **E. of Cayenne′**, a variety of lepra, with red and yellow spots on the forehead, ears, hands, loins, etc., afterward extending and becoming scaly, with deformity, particularly of the face; ultimately producing cracks, ulcers, caries, and sometimes death. **E. congen′ita**, angio-elephantiasis. **E. eczemato′sa**, elephantiasis accompanied with eczema. **E. fus′ca**, elephantiasis accompanied with brown pigmentation. **E. frambœsioi′des**, e. arabica. **E. glab′ra**, anæsthetic leprosy. **E. Græco′rum**, spedalkshed of Norway, true leprosy. **E. of In′dia**, characterized by red, livid, or yellowish spots, slightly prominent, to which succeed indolent tumors in the areolar texture; the phalanges swell and become ulcerated; the bones of the nose carious, the lips thickened, the body emaciated. It likewise belongs to lepra. **E. ital′ica**, pellagra. **E. of Ja′va**, a variety of lepra characterized by large, white tumors on the toes and fingers, resembling scrofulous tumefactions which ulcerate, the ulcerations spreading from the extremities toward the trunk, destroying even the bones. **E. leonti′na**, leontiasis. **E. lymphangiecto′des**, new skin growth accompanied with lymphangiectasis. **E. mu′tilans**, leprosy. **Næ′void e.**, condition in which the inguinal and femoral glands become large and soft, and the scrotum is covered with vesicles and distended with dilated lymphatic vessels filled with coagulated lymph. **E. ni′gricans** or **ni′gra**, elephantiasis arabica associated with excessive black pigmentation. **E. sclero′sa**, scleroderma. **E. sim′plex**, elephantiasis arabica. **E. syphilit′ica**, elephantiasis accompanied with lymphangeitis, due to syphilis. **E. teleangiecto′des**, elephantiasis in which the blood-vessels are enlarged, angioelephantiasis. **E. tuberculo′sa**, leprosy. **E. t. cu′tis**, enormous hypertrophy of the integument, complicated with lymphatic occlusion; elephantiasis.

**Elephan′toid.** Elephant-like.

**El′ephant-skin disease′.** Elephantiasis.

**Elephantu′sia.** Phytelephas macrocarpa.

**Eletta′ria cardamo′mum.** Amomum cardamomum; cardamomum. **E. ma′jor**, native plant of East India, considered to be a variety of Elettaria cardamomum; fruit furnishes long cardamoms.

**Eleuthe′ria.** Croton cascarilla.

**El′evator** (*elevo*, to lift up). Muscle which raises the part into which it is inserted; see *Levator*. A kind of pessary. Surgical instrument for raising depressed bone, one for raising and detaching the portion of bone separated by the crown of the trepan and one for removing stumps of teeth. See *Lever*. **E. a′ni**, levator ani. **Com′mon e.**, a mere lever, the end of which is somewhat bent and roughened, that it may less readily slip away from the portion of bone which is to be raised. **E. la′bii inferio′ris**, levator labii inferioris. **E. la′bii superio′ris pro′prius**, levator labii superioris proprius. **E. labio′rum commu′nis**, levator anguli oris. **E. of Louis**, elevator in which the screw-peg is united to the bridge by a pivot instead of a hinge. **E. oc′uli**, rectus superior oculi. **E. patien′tiæ**, levator scapulæ. **E. of Petit′**, a lever mounted on a handle and straight throughout its whole length, except at its very end, which is slightly curved, that it may be more conveniently put under the portion of bone intended to be elevated. The lever is pierced with several holes for the reception of a movable screw-peg. **E. scap′ulæ**, levator scapulæ. **E. testic′uli**, cremaster. **Trip′loid e.**, elevator consisting of three branches, uniting above in one common trunk. **E. ure′thræ**, see *Transversus perinæi*. **U′terine e.**, see *Pessary*.

**Elf′lock.** Condition of the hair in which it is matted and twisted into locks, as in plica; supposed in olden times to have been the work of elves or fairies.

**Elich′rysum.** Solidago virgaurea. **E. monta′num**, Antennaria dioica.

**Elim′inants** (*elimino*, to turn out of doors). Medicines that increase the excretions.

**Elimina′tion.** Act of separating and expelling.

**Elim′inatives.** Eccritics.

**Elingua′tion** (*e*, out, *lingua*, tongue). Removal of the tongue.

**Elin′guid.** Tongue-tied. Without the power to speak.

**Eliqua′tion** (*eliquo*, to cause to flow). Colliquation.

**Elixa′tion** (*elixus*, boiled). Decoction; act of boiling.

**Elix′ir.** Medicine composed of various substances held in solution; aromatic or sweetened spirituous fluids. Many apothecaries have their own formulæ for elixirs, the proportion of the ingredients, etc., varying according to the taste of the compounder. The name has been used also for preparations which contain no spirit of wine. **E. ac′idum Hal′leri**, a mixture of concentrated sulphuric acid and alcohol; employed as an astringent in hemorrhages, etc. **E. ad′juvans**, contains licorice. **E. al′oës**, tinctura aloës composita. **E. ama′rum**, bitter elixir. **E. anthelmin′ticum succo′rum**, tinctura jalapii composita. **E. an′isi**, anise cordial. **Antiasthmat′ic e. of Boer′haave**, alcohol, aniseed, camphor, orris, asarabacca root, calamus aromaticus, licorice, and elecampane; given in asthma. **E. antihypochondri′acum**, tinctura cinchonæ amara. **E. antinephret′icum**, e. acidum Halleri. **E. aperiti′vum**, tinctura aloës composita. **E. aromat′icum** (Ph. U. S.), aromatic e., used as a vehicle; dose, ʒss–j (2.0–4.0). **E. auran′tii**, elixir of orange, simple elixir; mixture of oil of orange, sugar, alcohol, and water; employed to disguise the taste of drugs. **E. auran′tii compos′itum**, compound elixir of orange. **E. balsam′icum Hoffman′ni**, e. aurantii compositum. **Bit′ter e.**, aromatic elixir of wormwood. **Boer′haave′s e.**, see *Tinctura aloës composita* and *Elixir, antiasthmatic*. **E. of calisa′ya**, calisaya bark, fresh orange-peel, cinnamon, coriander, and angelica seeds, caraway, aniseed, and cochineal, brandy, water, and syrup; tonic and cordial. Other formulæ are mentioned in medical or pharmaceutical works for this elixir. **Carmin′ative e. of Syl′vius**, tinctura carminativa Sylvii. **Daf′fy′s e.**, compound tincture of senna. **E. Dano′rum**, e. pectorale regis Daniæ. **E. fœt′idum**, tinctura castorei composita. **E. of Ga′rus**, tinctura de croco composita. **E. gentian′æ**, the contained gentian is detannated and the elixir can be prescribed with iron. **E. guai′aci vola′tilis**, tinctura guaiaci ammoniata. **E. jal′apæ compos′itum**, tinctura jalapii composita. **E. of long life**, tinctura aloës composita. **E. of o′pium**, under this name have been included different liquid preparations of opium. McMunn's elixir is a watery infusion prepared from opium from which the narcotina has been exhausted by ether, and alcohol then added. The strength is intended to be the same as that of laudanum. **Paregor′ic e.**, paregoric. **P. e. of Ed′inburgh**, tinctura opii ammoniata. **E. pectora′le dul′ce** or **pectora′le re′gis Da′niæ** (licorice juice, fennel-water, ammoniated alcohol), formula formerly in several European pharmacopœias. With the addition of opium it constitutes the *elixir ammoniato-opiatum*, *extractum thebaicum ammoniacale* of some pharmacopœias. **E. proprieta′tis**, tinctura aloës composita. **E. p. Paracel′si**, tinctura aloës composita. **E. phos′phori** (Ph. U. S.), each fluidrachm contains gr. $\frac{1}{64}$ (0.001) of phosphorus; dose, ʒss–j (2.0–4.0). **E. pur′gans**, tinctura jalapii composita. **Rad′cliffe′s e.**, see *Tinc-*

*tura aloës composita.* **E. rhe′i dul′ce**, vinum rhei palmati. **E. ro′borans Whyt′tii**, tinctura cinchonæ amara. **E. sa′crum**, tinctura rhei et aloës. **E. salu′tis**, tinctura sennæ composita; vinum rhei. **E. stomach′icum**, tinctura gentianæ composita. **E. s. spirituo′sum**, tinctura cinchonæ amara. **E. ex suc′co glycyrrhi′zæ**, e. pectorale regis Daniæ. **E. ex s. liquiri′tiæ**, e. pectorale regis Danorum. **E. sulphu′rico-ac′idum**, e. acidum Halleri. **E. trau-mat′icum**, tinctura benzoini composita. **E. vis-cera′le Hoffman′ni**, tinctura gentianæ composita. **E. vi′tæ of Mathi′olus** (alcohol and twenty-two aromatic and stimulating substances), formerly employed in epilepsy. **E. of vit′riol**, acidum sulphuricum aromaticum. **E. of v., sweet**, spiritus ætheris aromaticus. **E. vitri′oli ac′ido-aromat′icum**, acidum sulphuricum aromaticum. **E. vitri′oli dul′ce**, spiritus ætheris aromaticus; acidum sulphuricum aromaticum. **E. vitri′oli Edinburgen′sium**, acidum sulphuricum aromaticum. **E. vitri′oli Mynsich′ti**, acidum sulphuricum aromaticum. **E. vitri′oli cum tinctu′ra aromat′ica**, acidum sulphuricum aromaticum.

**Elk.** Cervus alces. **E. bark**, Magnolia macrophylla. **E. tree**, Andromeda arborea. **E. wood**, Andromeda arborea, Magnolia macrophylla.

**El′koplasty.** Elcoplasty.

**Ellag′ic acid.** Acid produced by boiling a watery solution of gallic acid with arsenic acid.

**El′lebore.** Dracontium fœtidum. See *Hellebore.*

**El′lis's lig′ament.** Portion of rectovesical fascia passing to the side of the rectum. **E.'s line**, curvilinear form assumed by the upper edge of a pleuritic effusion or hydrothorax.

**Ellych′nia.** Stelliform plexus of veins at the surface of the kidney.

**Elm.** Ulmus. **Red e., Rough-leaved e.,** or **Slip′pery e.,** Ulmus americana.

**Elminthocor′ton.** Corallina corsicana.

**El′norne.** Sambucus.

**Elonga′tion** (*elongo*, to lengthen, to extend). Incomplete luxation, in which the ligaments of an articulation are stretched and the limb is lengthened, without total luxation. Also extension required in the reduction of fractures and luxations, and for the increased length of limb in disease of the hip-joint. **E. teeth**, teeth which extend beyond the general line.

**Elu′thera.** Cascarilla.

**Elutria′tion.** In pharmacy, a process by which finer particles of a powder are separated from the coarser by diffusing the powder in water, allowing the larger and heavier particles to subside, and then decanting the liquor. See *Levigation.*

**Elytratre′sia** (*elytron*, vagina, *atretos*, imperforate). Atresia of the vagina.

**Elytreuryn′ter.** Speculum vaginæ.

**Elytri′tis.** Inflammation of the vagina; leucorrhœa.

**Elytro-** (*elytron*, a sheath). In composition, the vagina.

**Elytroblennorrhœ′a.** Leucorrhœa.

**El′ytrocele** (*elytron*, vagina, *kele*, hernia). Vaginal hernia; colpocele. See *Hernia.*

**Elytrocla′sia** (*elytron*, sheath, *klasis*, rupture). Rupture of the vagina.

**Elytrœde′ma.** Œdema of the vagina.

**El′ytroid** (*elytron*, sheath, *eidos*, resemblance). Sheath-like.

**Elytroi′tis.** Elitritis.

**El′ytron.** Sheath; vagina. Membranes enveloping the spinal cord were formerly called *elytra.*

**Elytron′cus** (*elytron*, vagina, *onkos*, tumor). Swelling in the vagina.

**Elytropap′pus rhinocero′tis.** South African bush, the whole of which is bitter and resinous.

**Elytrophy′ma** (*elytron*, vagina, *phyma*, swelling). Swelling in the vagina.

**Elytroplas′tic** (*elytron*, vagina, *plasso*, to form). Pertaining to elytroplasty.

**El′ytroplasty.** Operation for restoration of the vagina.

**Elytropneumato′sis** (*elytron*, sheath, *pneuma*, air). Collection of air in the vagina.

**Elytropol′ypus.** Vaginal polypus.

**Elytropto′sis** (*ptosis*, falling). Prolapsus vaginæ.

**Elytrorrha′gia** (*elytron*, vagina, *rhage*, breaking forth). Discharge of blood from the vagina.

**Elytror′rhaphy** (*elytron*, vagina, *rhaphe*, suture). Colporrhaphy, kolporrhaphy. Operation of closing the vagina by suture in cases of procidentia uteri.

**Elyt′rotome** (*tome*, incision). Scissors employed in elytrotomy.

**Elytrot′omy.** Incision into the vaginal wall.

**Ema′ciate** (*emacio*, to grow lean). To lose flesh, to become lean, to waste away.

**Emacia′tion.** Condition of the body, or of a part of the body, in which it grows lean. State of one who is lean—leanness.

**Emacula′tion** (*e*, from, *macula*). Removal of pigmented spots from the skin.

**Emana′tion** (*emano*, to issue or flow from). Term applied to a body which proceeds or draws its origin from other bodies; effluvium.

**Eman′sio men′sium.** Amenorrhœa, or obstruction of the menses before they have been established; also, according to some, retention which occurs after they have been established.

**Emargina′tion** (*e*, from, *margo*, margin). Notch.

**Emas′culate.** To castrate; also one who has been castrated; eunuch.

**Emascula′tion** (*e*, from, *masculus*, male). Removal or destruction of generative organs, or the testes only, of a male animal; castration.

**Embalm′ing.** Operation consisting in impregnating the dead body with substances capable of preserving it from decay.

**Embarras′ gastrique′** (Fr.). Acute indigestion; "bilious attack," marked by loss of appetite, bitterness, and clamminess of the mouth, white and yellow tongue, sense of epigastric oppression or pain, nausea, vomiting, headache, lassitude, pain in the back and limbs, etc.

**Embed′.** To fix an object in some hard material to facilitate the making of sections for microscopic examination. The process is called *embedding.*

**Embe′lia ri′bes.** Juice of fruit of Asia; anthelmintic.

**Embel′ic acid.** $C_9H_{14}O_2$. Acid, crystalline principle obtained from fruit of Embelia ribes, a plant of Asia, whose fruit is employed as an anthelmintic, especially for tapeworm. The salts of this acid are called *embelates. Ammonium embellate* is chiefly used; dose, gr. iij–v (0.2–0.32).

**Em′blica officina′lis.** Tree of East India; fruit, *emblicæ* or *myrobalini fructus*, formerly employed in diarrhœa; used in Turkestan as a collyrium in ophthalmia.

**Embolæ′mia** (*embolos*, plug, *haima*, blood). State of the blood supposed to have a tendency to produce embolism.

**Embola′lia.** See *Embololalia.*

**Em′bole.** Reduction of a dislocation. Embolus.

**Embol′ic** (*embole*, plug). Relating to plugging or obturation of the vessels, as embolic apoplexy. **E. ab′scess**, see *Abscess, metastatic.* **E. infarc′tion**, see *Infarction.* **E. pneumo′nia**, see *Pneumonia, embolic.*

**Embol′iform.** Resembling an embolus. **E. nu′cleus**, a mass of gray matter in the cerebellum.

**Em′bolism.** Obstruction of a blood-vessel by any body—*embolus* or plug—detached from the interior of the heart or some vessel, and borne along in the current of the circulation to the point of obstruction. Two varieties have been described, arterial and capillary. Arterial emboli directly impede the circulation, while capillary emboli are important from the secondary changes to which they give rise. The plug may be a clot, a fibrinous concretion, fatty matter, bacteria, etc. These obstructions are sometimes met with in diseases of debility or exhaustion; they may cause sudden death, as in embolism of the pulmonary artery, or give rise to hemiplegia, as in embolism of an important cerebral artery. See

*Thrombosis*, *Polypus*, and *Infarction*. **Air e.**, obstruction of a blood-vessel by air bubbles. **Arte′rial e.**, see *Embolism*. **Cap′illary e.**, see *Embolism*. **Cer′ebral e.**, obstruction of an artery or arteries of the brain, as described under embolism; when accompanied by symptoms of apoplexy the condition has been called embolic apoplexy or apoplectiform cerebral apoplexy. See *Apoplexy*. **Bac′illary e.**, infective or pyæmic e. **Fat e.**, e. caused by the entrance of fatty matter into the circulation. **Infec′tive e.**, e. inducing the occurrence of metastatic abscesses through the agency of microbes in the embolus; pyæmic e. **Mil′iary e.**, obstruction of a number of the smallest arterioles. **Mul′tiple e.**, obstruction of a vessel by a number of emboli, or of several vessels simultaneously. **Pyæ′mic e.**, obstruction by purulent emboli. **Ret′inal e.**, obstruction by an embolus in the central artery of the retina. **Ve′nous e.**, obstruction of veins in certain organs, as the liver and lungs.

**Embolola′lia** (*embolus*, plug, *laleo*, to speak). Introduction of insignificant words, or those devoid of meaning, into a spoken sentence, thus obstructing speech.

**Em′bolon** or **Embo′lum.** Embolus. **E. cer′ebri**, infundibulum of the brain.

**Embolophra′sia** (*phrasis*, speech). Embololalia.

**Em′bolus.** Anything which obstructs a blood-vessel from within, giving rise to *embolism*, which see. **Air e.**, e. due to air bubbles entering the circulation through a punctured vein. **Fat e.**, occurs in fractures, the embolus being formed by marrow of bone.

**Em′boly.** Formation of the gastrula by a blastosphere; term employed in embryology.

**Embonpoint′** (Fr., in good point or plight). The state of the animal body when in full health. Excessive embonpoint constitutes corpulence and obesity, and may become a morbid condition.

**Embow′elling.** Operation of taking out the bowels.

**Embroca′tion.** Application of a liquid by rubbing to any part of the body; also the fluid so applied; often used synonymously with liniment.

**Embryec′tomy.** Operative removal of the embryo in ectopic gestation.

**Em′bryo** (*en*, in, *bryo*, to swell). Fecundated germ in the early stages of its development in utero. At a certain period of its increase the name *fœtus* is given to it. Generally the embryo state is considered to extend to the end of the third month, or to the period of quickening. (For a full account of the development of the embryo and of the embryo into the fœtus, see *Fœtus*.) The following table (Chapman) exhibits the

Membranes and Layers of the Embryo and Organs Developed from them.

| *Membranes.* | *Layers.* | *Organs.* |
|---|---|---|
| External blastodermic membrane or epiblast. | Skin, sensory. | Epidermis.<br>Central nervous system.<br>Primitive kidneys. |
| Middle blastodermic membrane or mesoblast. | Skin, sensory. | Dermis.<br>Peripheral nervous system.<br>Osseous nervous system.<br>Muscular nervous system.<br>Testes. |
| | Intestinal fibrous. | Vascular system.<br>Mesentery.<br>Wall of alimentary canal and appendages.<br>Ovaries. |
| Internal blastodermic membrane or hypoblast. | Intestinal glandular. | Epithelium of alimentary canal and appendages. |

**Embryocar′dia** (*embryo*+*kardia*, heart). State of the heart in which the beats resemble those of the fetal heart.

**Embryoc′tony** (*embryo*+*ktonos*, destruction). Destruction of a fœtus in utero.

**Embryogenet′ic** or **Embryogen′ic.** Relating or appertaining to embryogeny. **E. ves′icle**, vesicle in some animals destined to form plastic matter to aid in the development of the new being.

**Embryog′eny** (*embryon* + *gennao*, to generate). Generation or formation of the embryo.

**Em′bryograph.** Instrument in the nature of a microscope with camera lucida attachment, to aid in the graphic representation of embryos.

**Embryog′raphy** (*embryon*+*graphe*, description). Part of anatomy which describes the embryo.

**Embryolog′ical.** Relating to embryology.

**Embryol′ogist.** One devoted to the study of embryology.

**Embryol′ogy** (*embryon* + *logos*, a description). Doctrine of or a treatise on embryonic development.

**Embryo′ma.** A tumor containing embryonic structures.

**Em′bryon** (Gr.). Embryo.

**Embryo′nal** or **Embryon′ic.** Relating or appertaining to an embryo, as embryonic life. **E. abor′tion**, abortion at an early period of intra-uterine life. **E. a′rea**, see *Area germinativa*. **E. cell**, minute cell of embryonal connective tissue. **E. sphere**, segmentation sphere. **E. spot**, area germinativa.

**Embryoplas′tic** (*embryon*+*plasso*, to form). Relating to the formation of an embryo.

**Em′bryoscope** (*embryon*+*skopeo*, to view). Apparatus for studying the development of the embryo in an egg. The study is called *embryos′copy*.

**Embryospas′tic** (*spao*, to draw). Term relating to the instrument employed for the extraction of the embryo or fœtus.

**Em′bryothlast** (*embryon*+*thlao*, to break). Crotchet or other instrument, used in certain cases of laborious parturition to break the bones of the fœtus, for the purpose of extracting them with greater facility; the process being called *embryothla′sis*.

**Embryot′ic.** Embryonic.

**Embryoto′cia** (*embryon*+*tokos*, delivery). Abortion.

**Em′bryotome** (*embryon*+*temno*, to cut). Instrument used in embryotomy.

**Embryot′omy** (*embryon*+*tome*, incision). Division of the fœtus into fragments, to extract it by piecemeal, when the narrowness of the pelvis or other faulty conformation opposes delivery.

**Embryot′rophy** (*embryon*+*trophe*, nourishment). Fetal nutrition.

**Embryul′cia** or **Embryusterul′cia** (*embryon*+*helko*, to extract, to draw). Surgical operation by which the fœtus is extracted by means of appropriate instruments when faulty conformation or other circumstances prevent delivery by the natural efforts.

**Embryul′cus.** Iron hook or crotchet, used to extract the fœtus in some cases of laborious labor.

**Emedul′late.** To extract marrow, as from a bone or the spinal canal.

**Ememorphine′.** Apomorphine.

**Em′erald-green.** Arsenite of copper.

**Emer′gent.** Coming out of, efferent. Also happening suddenly or accidentally.

**Em′ery.** Coarse kind of corundum, used for polishing metals and stones.

**Eme′sia** or **Em′esis.** Vomiting.

**Emetatro′phia** (*emeo*, to vomit, *atrophia*, want of nourishment). Atrophy induced by vomiting.

**Emet′ic** (*emeo*, to vomit). Vomitory; an agent capable of producing vomiting. Topical or local emetics produce their effect by acting locally on the pharynx, œsophagus, or stomach, or generally through the medium of the circulation, but some emetics act both locally and generally. They are valuable agents in disease, and may either act *primarily* on the stomach, or *secondarily* on other parts of the system by sympathy with the stomach. **Direct′ e.**, local e. **Gen′eral e.**, one that acts on the nervous centres rather than on the stomach itself, such as apomorphine, ipecac, tobacco, tartar emetic, squill, and senega. **Indirect′ e.**, general or reflex e. **Lo′cal e.**, one that acts directly upon the nerve terminations in the stomach, such as alum, copper sulphate, ammonium carbonate, mustard, salt, lukewarm water, mercury subsulphate, and zinc sulphate. **Reflex′ e.**, one that acts reflexly through irritation of the nerves of sight or smell, or the mucous membrane of the pharynx. **E. root**, Euphorbia corollata. **System′ic e.**, general e. **Tar′tar e.**, tartrate of antimony and potassium. **E. weed**, Lobelia inflata.

**Emeticol′ogy.** Emetology.

**Emetine′.** Alkaloid in ipecacuanha, to which it owes its emetic power; it is obtained from different ipecacuanhas. Three grains of impure emetine or one grain of pure equal eighteen of ipecacuanha. Dose, as an expectorant, gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.0006–0.0013); as an emetic, gr. $\frac{1}{10}$ (0.0065).

**Em′etize.** To cause nausea or emesis with an emetic.

**Em′etocathar′sis.** Vomiting and purging combined.

**Emetocathar′tic.** Remedy which excites both vomiting and purging.

**Emetol′ogy.** The science of emetics.

**Emetoma′nia.** Morbid desire for emetics.

**Em′etos** or **Em′etus.** Vomiting.

**Emic′tion** (*e*, out, *mingo*, to urinate). Micturition.

**Emic′tory.** Diuretic; promoting micturition.

**Emigra′tion.** The passage of leucocytes through the walls of blood-vessels.

**Em′inence** (*emineo*, to project). Projection at the surface of any organ or part. See also *Eminentia* and *Eminentiæ*. **Antith′enar e.**, the rounded prominence of the upper and inner part of the palm opposite the thenar e. **E. of aquæduc′tus Fallo′pii**, prominentia canalis facialis. **Ca′nine e.**, ridge on the upper jawbone over the canine teeth. **Collat′eral e.**, pes accessorius. **E. of Doyère′**, see *Sarcoglia*. **Iliopectin′eal e.**, ridge on the superior part of the pubic bone. **Na′sal e.**, prominence over the root of the nose. **Occip′ital e.**, prominence in the lateral ventricle of the brain corresponding to the occipital fissure.

**Eminen′tia.** Eminence; protuberance. **E. annula′ris**, pons Varolii. **E. arcua′ta**, see *Jugum petrosum*. **E. articula′ris**, round process of bone anterior to the glenoid fossa of the temporal bone. **E. bicipita′lis**, prominence observed on the arm when the biceps is in contraction. **E. capita′ta**, head of a bone. **E. car′pi radia′lis**, elevation on the radial side of the palmar surface of the wrist, due to the prominence of the trapezium and trapezoid bones. **E. car′pi ulna′ris**, elevation on the ulnar side of the palmar surface of the wrist, due to the prominence of the pisiform and unciform bones. **E. cauda′ta**, caudate lobe of the liver. **E. collatera′lis**, pes accessorius. **E. costa′ria**, projections on the transverse processes of the five lower cervical vertebræ. **E. crucia′ta**, figure resembling a cross on the inner side of the occipital bone. **E. cuneifor′mis**, crista capituli costæ. **E. Fallo′pii**, ridge on the internal wall of the tympanum. **E. foss′æ triangula′ris**, prominence situated posteriorly on the external surface of the ear, which corresponds to the fossa triangularis. **E. fronta′lis**, eminence of the frontal bone. **E. intercondyl′ea**, **E. intercondyl′ica**, or **E. intercondyloide′a**, spine of the tibia. **E. pyramida′lis**, crest dividing the vestibule of the ear into two fossæ. **E. styloide′a**, eminence on the posterior wall of the tympanum. **E. te′res**, fasciculus teres, an eminence on the floor of the fourth ventricle. **E. thyroide′a**, pomum Adami. **E. tym′pani**, pyramid of the tympanum.

**Eminen′tiæ.** Plural of eminentia. **E. bigem′inæ**, quadrigemina tubercula. **E. candican′tes**, mammillary tubercles. **E. car′pi**, carpal eminences. **E. lenticula′res**, corpora striata. **E. mag′næ cer′ebri**, thalami nervorum opticorum. **E. mammilla′res**, see *Mammillary eminence*. **E. media′næ inter′næ**, corpora pyramidalia. **E. oliva′res**, corpora olivaria, **E. ova′les latera′les**, corpora olivaria. **E. pisifor′mes**, corpora albicantia. **E. planta′res**, prominence caused by the muscles of the foot. **E. pyramida′less** corpora pyramidalia. **E. quadrigem′inæ**, quadrigemina tubercula. **E. ter′etes**, processus teretes.

**Emissa′ria Santori′ni.** Small veins communicating with sinuses of the dura mater by apertures in the cranium, as the parietal, posterior condyloid, mastoid veins, etc.

**Emissa′rium.** An outlet; emissary; a canal or channel whose direction is outward. **E. foram′inis lac′eri anti′ci**, emissary of foramen lacerum. **E. hypoglos′si**, anterior condylar emissary vein. **E. occipita′le**, occipital emissary vein. **E. occipita′le infe′rius**, posterior condylar emissary vein. **E. occipita′le supe′rius**, occipital emissary vein.

**Em′issary.** Canal acting as an outlet. **E. veins**, emissaria Santorini.

**Emis′sion** (*emitto*, to send out, to drive out). Act by which any matter whatever is thrown from the body, as emission of urine or of semen. **Noctur′nal e.**, an involuntary discharge of semen occurring during sleep, usually in connection with a lascivious dream.

**Emmen′agogue** (*emmena*, menses, *ago*, to drive or expel). Agent believed to have the power of favoring the discharge of the menses when absent, deficient, or irregular. According to different conditions of the system the most opposite remedies may produce such effect. **Direct′ e.**, one which seems to stimulate directly the uterus itself, such as ergot, digitalis, savin, quinine, asafœtida, myrrh, guaiacum, cantharides, borax, rue, and hydrastis. **Indirect′ e.**, one which acts indirectly by correcting conditions, such as anæmia, debility, etc., on which the disordered menstruation may depend; such are hot foot or hip baths, leeches to the thighs or genitalia, mustard baths or poultices, aloes and other purgatives, iron, cod-liver oil, and other tonics.

**Emme′nia** (*men*, a month). Menses.

**Emmeniop′athy** (*emmenia*, menses, *pathos*, affection). Affection or disorder of menstruation.

**Emmenol′ogy** (*emmenia*, menses, *logos*, a discourse). Treatise on or description of menstruation.

**Em′merich's bacil′lus.** Bacillus coli communis.

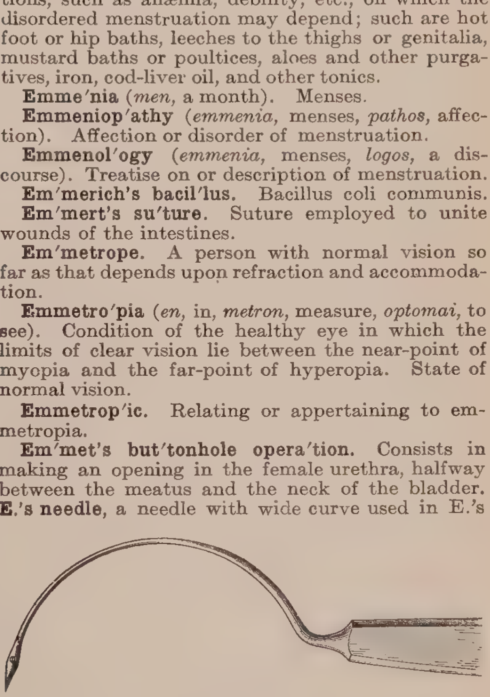
**Em′mert's su′ture.** Suture employed to unite wounds of the intestines.

**Em′metrope.** A person with normal vision so far as that depends upon refraction and accommodation.

**Emmetro′pia** (*en*, in, *metron*, measure, *optomai*, to see). Condition of the healthy eye in which the limits of clear vision lie between the near-point of myopia and the far-point of hyperopia. State of normal vision.

**Emmetrop′ic.** Relating or appertaining to emmetropia.

**Em′met's but′tonhole opera′tion.** Consists in making an opening in the female urethra, halfway between the meatus and the neck of the bladder. **E.'s needle**, a needle with wide curve used in E.'s operation. **E.'s opera′tion**, operation for laceration of the cervix uteri—called trachelorrhaphy or hysterotrachelorrhaphy by Emmet; also one for rupture of the perineum. See *Trachelorrhaphy* and *Perineorrhaphy*.



Emmet's needle.

**Emodin′.** Principle found in rheum and in bark of Rhamnus frangula.

**E′mol.** An earth found in Scotland containing steatite and minute quantities of lime and oxide of iron; of a delicate pink color when pure. It is antipruritic, and is used like a soap to remove hardened masses in eczema, keratosis, and other skin diseases.

**Emoll′ient** (*emollio*, to soften). Any agent which relaxes and softens parts that are inflamed or too tense. Emollients are used both internally and externally; as the former, however, consist of mucilaginous substances, they are generally reckoned as demulcents; the latter, or proper emollients, consist of oils, cataplasms, fomentations, etc. Oleaginous bodies, rubbed on a part, act by diminishing its cohesion. Fomentations, in cases of internal inflammation, act probably through contiguous sympathy. The following are the chief emollients: adeps, amygdalæ oleum, avenæ farina, cera, cetaceum, linum, olivæ oleum, sesamum, tritici farina, and ulmus. **E. spe′cies** or **tea**, equal parts of althæa, malva, melilotus, chamomile, and flaxseed, used to make an infusion which is taken *ad libitum* as a tea.

**Emolli′ties.** Mollities.

**Emo′tion** (*moveo*, to move). Delirium; passion.

**Emo′tional.** Relating to emotion or passion independent of the will. **E. insan′ity**, insanity in which the emotions are conspicuously prominent.

**Emotiv′ity.** The degree in which a person is capable of emotion.

**Em′pasm** or **Empas′ma.** A powder for dusting over any part.

**Em′petrum.** Herniaria glabra.

**Em′phlysis** (*phlysis*, eruption). Ichorous exanthem. Eruption of vesicular pimples, filled with an acrid and colorless or nearly colorless fluid, terminating in scurf or laminated scabs.

**Emphrac′tic** (*phrasso*, to close, to obstruct). Any substance which, when applied to the skin, is presumed to close the pores. **E. tu′mor**, a large abdominal tumor, neither fluctuating nor sonorous; excessive corpulency.

**Emphrag′ma.** Anything that obstructs. Obstacle to delivery on the part of the fœtus when the presentation is preternatural.

**Emphrax′is.** Infarction; obstruction. A detention in canals or cavities of any substance morbid either from quantity or quality.

**Emphy′ma** (*phyma*, swelling). Tumor.

**Emphysather′apy** (*emphysao*, to inflate, *therapeuo*, to treat). Therapeutic injection of gas into the intestine or pleural or peritoneal cavity.

**Emphyse′ma** (*emphysao*, to inflate). Wind-dropsy. Term applied to any white, crepitant, shining, elastic, indolent tumor of the integuments, caused by the introduction of air into the areolar tissues. Injuries of the larynx, trachea, or lungs, and fractures of the ribs or wounds penetrating the chest, are the most frequent causes of this affection, which is owing to the air escaping from the air passages and insinuating itself into the areolar tissues surrounding the wound. Some cases of emphysema are owing to internal causes, and hence a division has been made into accidental and symptomatic and spontaneous and idiopathic. Also, and very commonly employed, without qualifying word to denote *emphysema of the lungs*, which see. **E. abdom′inis**, tympanites. **Atroph′ic e.**, pulmonary e. of the aged, with atrophy of the lung substance; senile e. **Compen′satory e.**, pulmonary emphysema due to deficient expansion of part of a lung. **Cuta′neous e.**, see *Emphysema*. **Gan′grenous e.**, malignant œdema. **Interlob′ular e.**, see *Emphysema of the lungs*. **Intersti′tial e.**, distention of the connective tissue with air; see *Emphysema*. **E. of the lungs**, pneumectasis; considerable pressure or contusion of the chest, or violent concussion of the lung, may produce a laceration in that viscus, without injury being done to the parietes of the thorax and may give occasion to infiltration of air into the areolar texture—*interlobular emphysema*. *Vesicular emphysema* consists in excessive dilatation of the air cells, some of which become as large as hempseed, ultimately break, and give rise to irregular vesicles at the surface of the lung, some of which are as large as a hazelnut; the thorax appears unnaturally convex and prominent; the intercostal spaces are widened, but depressed; the inspiratory efforts are increased; the sound on percussion is morbidly clear, but not tympanitic. On auscultation the inspiratory murmur is feeble or suppressed. Expiration, which is more frequently audible, is prolonged, laborious, and wheezing. **E. orbita′le**, collection of air in orbital tissue. **E. palpebra′le**, emphysema of the eyelids. **E. pec′toris**, pneumothorax. **E. pulmo′num** or **Pul′monary e.**, emphysema of the lungs. **E. scro′ti**, emphysematous tumor of the scrotum. **E. seni′le**, senile atrophy of the lungs; thinning and gradual wasting of the vesicular walls; condition in old persons especially, dependent on imperfect nutrition of the lung. **Substan′tial e.**, e. of the lungs. **Subcuta′neous e.**, see *Emphysema*. **Sur′gical e.**, subcutaneous or interstitial e. due to operation or violence. **E. tympani′tes** or **tympanit′icum**, tympanites. **E. u′teri**, distension of the uterus with air; or abdominal distention, with wind occasionally discharged through the os uteri. **Vesic′ular e.**, see *Emphysema of the lungs*. **Vica′rious e.**, compensatory emphysema.

**Emphysem′atous.** Relating to emphysema; containing air or gas.

**Empies′ma.** Compression of the brain from fractured bone.

**Em′pigo.** Elephantiasis, in Brazil.

**Empime′lium polysar′cia.** Fatty tumor; polysarcia adiposa.

**Empir′ic** or **Empir′ical** (*empeirikos*, experimental). Dependent upon or regulated by experience. Empirical treatment is the treatment of diseases by certain remedies or measures which experience has proved to be useful, but for the action of which there is no scientific or rational explanation. An empiric is one who follows only experience; one of a sect of physicians who took for their guide experience alone. At the present day the word is employed in nearly the same signification as *charlatan* or *quack*.

**Empir′icism.** Medicine founded on experience. Generally, at the present day, signifies quackery.

**Emplas′tic.** Adhering, as a plaster, to the surface. Constipating.

**Emplastra′tion.** Application of a plaster.

**Emplas′trum** (pl. emplastra). Solid and tenacious compound, which is adhesive at the ordinary heat of the human body. Some plasters owe their consistence to wax and resin, and others to the chemical union taking place between the semivitrious oxide of lead and oil. There are thirteen official emplastra in the Ph. U. S. **E. aconi′ti**, aconite plaster (aconite, alcohol, and resin plaster). **E. adhæsi′vum**, adhesive plaster, emplastrum resinæ. **E. adhæsi′vum Woodstock′ii** see *Sparadrapum adhæsivum*. **E. Alexan′dri**, Alexandrine. **E. de althæ′â**, unguentum de althæâ. **E. ammoni′aci**, ammoniac plaster (ammoniaci, ℥v; acidi acetici dil., Oss); discutient plaster. **E. ammoni′aci cum hydrar′gyro** (Ph. U. S.), plaster of ammoniac with mercury (ammoniaci, ʒxiij; hydrargyri, ℥iij, ʒij; olei olivæ, gr. lx.; sulphuris sublimati, gr. viij; acidi acetici diluti, f℥xvij; lead plaster, q. s.). **E. An′dreæ de Cru′ce**, e. de pice et resinis glutinans. **E. an′glicum** or **anglica′num**, see *Sparadrapum adhæsivum*. **E. antimo′nii**, antimonial plaster (antimon. et potass. tart., pix Burgundic.); excitant or warming plaster. **E. ar′nicæ** (Ph. U. S.), arnica plaster (ext. arnicæ alcoholic., ℥iv; emplast. resinæ, ℥viij); warm, strengthening plaster. **E. aromat′icum**, aromatic plaster (cera flava, pulv. cort. cinnam., ol. ess. piment., ol. ess. limon.); stimulating plaster. A *spice plaster*, made with powdered cinnamon and other spices, has been used in cholera infantum and in other conditions. Another, for extemporaneous use, is made by mixing powdered spices with flour and spirits. One formula for this consists of powdered capsicum, cinnamon, and cloves, each ʒij; rye meal, spirits, and honey, q. s. To be rubbed together on a plate, spread upon a close fabric, and applied as a cataplasm. **E. asafœt′idæ,** asafœtida plaster (emplastrum plumbi, asafœtida, āā ℥xiij; galbanum, cera flava, āā ℥vss; alcohol, Oiij); antispasmodic and anodyne in flatulence and whooping-cough. **E. at′trahens,** e. ceræ. **E. auricula′re,** plaster applied behind or under the ear. **E. belladon′næ** (Ph. U. S.), belladonna plaster (belladonnæ radix in pulv. subtil., ℥xvj; alcohol, emplast. resinæ, āā q. s.). The process is similar to that for emplastrum aconiti. In the Ph. Br., extract. belladonnæ alcoholic., ℥iv; emplast. resinæ and emplast. saponis, āā ℥viij. Anodyne application in neuralgia and rheumatism. **E. calefa′ciens** (Ph. Br.), warming plaster (cantharides, oil of nutmeg, yellow wax, resin plaster, soap plaster, boiling water; rubefacient and stimulant. **E. canthar′idis** (Ph. Br.), e. lyttæ. **E. canthar′idis vesicato′rii compos′itum,** e. lyttæ comp. **E. cap′sici** (Ph. U. S.), capsicum plaster (resin plaster, oleoresin of capsicum); rubefacient. **E. cephal′icum,** e. picis compositum. **E. ce′ræ,** wax plaster (cera flava, sevum. præparat., resina flava); stimulating and drawing. **E. cera′ti sapo′nis,** soap cerate plaster (hard soap, yellow wax, olive oil, oxide of lead, and vinegar). **E. cerus′sæ** (litharge plaster, lead carbonate, and olive oil). **E. cicu′tæ,** hemlock plaster (resina abietis, cera flava, pix alba, oleum cicutæ per decoct. præparat., folia cicutæ recent., acetum scillæ, gum ammoniac); discutient, especially to scirrhous tumors. **E. cine′reum,** e. hydrargyri. **E. cit′rinum,** unguentum de althæâ. **E. commu′ne,** e. plumbi. **E. commu′ne cum resi′nâ,** e. resinæ. **E. coni′i,** e. cicutæ. **E. cumi′ni,** cummin plaster (cummini semina, carui semina, lauri baccæ, pix arida, cera flava); warm, discutient plaster. **E. cu′pri aceta′tis,** preparation of the French Codex, containing yellow wax, subacetate of copper, Burgundy pitch, and Venice turpentine. **E. diach′ylon,** diachylon, e. plumbi. **E. diapal′ma** (lead plaster, white wax, zinc sulphate). **E. emol′liens,** unguentum de althæa. **E. epispas′ticum,** e. lyttæ. **E. ferra′tum,** e. ferri. **E. fer′ri** (Ph. U. S.), iron plaster, strengthening plaster, chalybeate plaster (ferri oxidum hydratum, ʒj; emplast. plumbi, ℥vij; pix burgund., ʒj; terebinth. canadensis, ℥j). **E. fer′ri ru′bri,** e. oxidi ferri rubri. **E. fla′vum,** unguentum de althæa. **E. fœt′idum,** e. asafœtidæ. **E. ad fontic′ulos,** ceratum Galeni. **E. gal′bani,** galbanum plaster (galbanum, ℥viij; terebinth, ʒj; pix burgund., ℥iij; emplast. plumbi, ℥xxxviij). **E. gal′bani compos′itum,** compound galbanum plaster (galbanum, emp. plumbi, terebinth, pix burgund.); stimulant and discutient. **E. glutino′sum,** see *Sparadrapum adhæsivum.* **E. cum gummat′ibus,** e. gummosum. **E. e gummat′ibus resino′sis,** e. gummosum. **E. cum gummiresi′nis,** plaster of gum resins (emplast. simpl., cera flava, pix alba, terebinth, gum ammoniac, bdellium, galbanum, sagapenum, and alcohol); discutient. **E. gummo′sum,** gum plaster, yellow or gum diachylon (emp. plumbi, ammoniac., galbanum, cera flava); properties and uses like the last. **E. hydrar′gyri** (Ph. U. S.), mercurial plaster (hydrarg., ℥iij; ol. oliv., resin, āā ʒj; emplast. plumbi, ℥v); stimulant, resolvent, and discutient to venereal and other tumors. **E. h. compos′itum,** compound plaster of mercury (empl. simpl., cera flava, resin, powdered gum ammoniac, bdellium, olibanum, myrrh, saffron, mercury, pure turpentine, liquid and pure storax, essential oil of lavender); same properties as the last. **E. ichthyocol′læ** (Ph. U. S.), isinglass plaster (isinglass, gr. clv; alcohol, f℥j, fʒvj; glycerin, ♏xij; water, tincture of benzoin, āā q. s.); an adhesive plaster, court plaster. **E. i. te′læ induc′tum,** see *Sparadrapum adhæsivum.* **E. ir′ritans,** e. lyttæ. **E. lithar′gyri,** e. plumbi. **E. lyt′tæ,** plaster of cantharides, plaster of Spanish or blistering fly, blistering plaster, fly plaster (cantharides, emplastrum ceræ, adeps præp.). This is the common blistering plaster. It requires to remain on six or eight hours before the full effect is induced. See *Blister.* **E. l. compos′itum,** compound plaster of cantharides or Spanish flies (resina liq. pini laricis, resina concret. pini abietis, meloë vesicat., cera flava, subacetas cupri, semina sinapis alb., fructus piperis nigr.); same properties as the last, but more energetic and speedy in its action. **E. men′thol** (Ph. Br.), menthol plaster (menthol, 1½ parts, dissolved in 1 part yellow wax and 7½ parts resin); used in rheumatism and intercostal neuralgia. **E. e min′io,** see *Emplastrum plumbi.* **E. mucilagino′sum,** unguentum de althæa. **E. mylab′ridis** (Ph. Br.), mylabris plaster (1 part in 3); used as a blistering plaster in place of cantharidal. **E. m. calefa′ciens** (Ph. Br.), a plaster similar in composition to e. califaciens, mylabris being substituted for cantharis. **E. norimbergen′se,** Nuremberg plaster (oxidum plumbi rubrum, ol. oliv., aqua, camphor); desiccative, and employed in gangrene. **E. nygmat′icum,** e. resinæ. **E. o′pii** (Ph. U. S.), opium plaster (ext. opii, ʒj; pix burgund., ℥iij; emplastrum plumbi, ℥xiiss; aquæ, f℥iss). **E. ox′idi fer′ri ru′bri,** plaster of red oxide of iron, strengthening plaster (empl. oxid. plumb. semivitr., resina pin., cera flava, oleum oleæ Europ., oxidi ferri rubr.). **E. oxycro′ceum** (resin, wax, ammoniac, galbanum, turpentine, mastic, myrrh, olibanum, and crocus). **E. phœnic′eum,** diapalma. **E. pica′tum,** e. picis burgundicæ. **E. de pi′ce et resi′nis glu′tinans,** adhesive plaster of pitch and resins (pix alba, resin elemi., terebinth. pur., ol. laur.); used in contusions and fractures as a support. **E. pi′cis,** pitch plaster (Burgundy pitch, frankincense, resin, yellow wax, expressed oil of nutmeg, olive oil, water); rubefacient. **E. pi′cis burgun′dicæ** (Ph. U. S.), Burgundy pitch or pitch plaster (pix Burgund., ℥ix; cera flava, ʒj). **E. pi′cis canaden′sis,** Canada or hemlock pitch plaster (pix canadens., ℥ix; cera flava, ʒj). **E. pi′cis cantharida′tum** (Ph. U. S.), cantharidal pitch plaster, warming plaster (cerat. cantharid. (Ph. U. S.), ℥ij; pix abiet., ℥xxiij); rubefacient and stimulant. **E. pi′cis, compos′itum,** cephalic plaster, compound pitch plaster (pix burgund., abies resinæ, resina flava, cera flava, ol. oliv., aqua); stimulant and rubefacient; sometimes used in headache, applied to the temples; see *Depilatory.* **E. plum′bi** (Ph. U. S.), diachylon simplex, white diachylon, plaster of lead, oleate of lead plaster, lead or diachylon plaster (plumbi oxid. in pulv., ℥xxxij; oleum oliv., f℥lxiij; aquæ, q. s.). In the Ph. Br. it has the following ingredients: plumbi oxidum, lb. v; ol. olivæ, lb. x; aquæ, lb. v. A plaster of red lead, emplastrum e minio, was formerly official; prepared much in the same way as emplastrum plumbi, but it was called black plaster. See *Emplastrum oxidi ferri rubri.* **E. plumbi io′didi** (Ph. Br.), iodide of lead plaster (made by mixing iodide of lead, 1 part, with 10 parts of lead plaster and resin). **E. polychres′tum,** e. resinæ. **E. potas′sii io′didi,** plaster of iodide of potassium (potass. iodid., thus, cera, ol. oliv.); spread on leather, it is applied to indolent tumors. **E. resi′næ** (Ph. U. S.), resin plaster, common adhesive or sticking plaster (resin. pulv., ʒvij; emp. plumb., ℥xl; cera flava, ʒiij); employed in wounds and ulcers as a retaining dressing. **E. resino′sum,** e. resinæ. **E. resol′vens** (soap plaster, conium plaster, plaster of gum resins, and mercurial plaster). **E. ro′borans,** e. ferri (Ph. U. S.); e. oxidi ferri rubri. **E. rube′fians,** e. lyttæ. **E. sapona′ceum** or **sapona′tum,** e. saponis. **E. sapo′nis** (Ph. U. S.), soap plaster (sapon., ℥j; emplast. plumb., ℥ix; aquæ, q. s.); mild discutient to tumors, corns, etc. **E. sapo′nis fus′cum,** brown soap plaster (curd soap, yellow wax, olive oil, oxide of lead, vinegar); this is not strictly a plaster; it is the analogue of soap cerate, formerly official in the Ph. U. S. **E. sim′plex,** e. ceræ. **E. sper′matis ce′ti,** ceratum cetacei. **E. thap′siæ,** thapsia plaster. **E. thu′ris,** frankincense plaster (emp. lithargyri, thus, oxid. ferri rubr.); use, same as plaster of red oxide of iron. **E. ves′icans,** e. lyttæ. **E. vesicato′rium,** blister; e. lyttæ.

**Empleu′rum serrula′tum.** Plant of S. Africa, sometimes used as a substitute for buchu.

**Empneumato′sis** (*pneuma*, air). Emphysema; inspiration; tympanitis.

**Empodis′tic** (*empodizo*, to hinder). Preventive.

**Empo′sis** (*en*, in, *posis*, drink). Imbibition.

**Empre′sis, Empres′ma,** or **Empres′mus** (*en*, in, *presis*, burning). Inflammation.

**Empresmoma′nia** (*empresmos*, burning). Pyromania.

**Emprosthocyrto′ma** or **Emprosthocyrto′sis** (*emprosthen*, forward, *kyrtos*, bent). Curvature of the vertebral column forward.

**Emprosthomeloph′orus** (*emprosthen*, forward, *melos*, member, *phoreo*, to possess). Monstrosity having supernumerary parts of the neck or thorax.

**Emprosthot′onos** (*emprosthen*, forward, *teino*, to stretch, to extend). Variety of tetanus in which the body is drawn forward, the head and feet backward, by muscular contraction.

**Emp′tysis** (Gr., exspuition). Spitting, especially of blood.

**Empu′sa.** A genus of fungi; the spores of one species, *E. muscæ*, develop in flies and destroy them.

**Empye′ma** (*en*, in, *pyon*, pus). Collection of pus in some cavity of the body, and particularly in that of the pleura; one of the terminations of pleuritis. **An′tral e.,** pus in the antrum of Highmore. **E. artic′uli,** abscess of a joint. **Mas′toid e.,** suppuration in the mastoid cells. **E. necessita′tis,** empyema in which an external pulsating tumor is present, caused by the pus burrowing through the intercostal spaces. **E. pul′sans** or **Pul′sating e.,** variety of thoracic empyema in which a collection of pus pulsates with the respiratory movements or the beats of the heart. **Thorac′ic e.,** pyothorax. **True e.,** pleural empyema, suppuration being from the pleura itself.

**Empye′mic.** Relating to empyema.

**Empye′sis.** Suppuration; abscess of internal organs. Eruption of phlegmonous pimples, gradually filling with a purulent fluid and terminating in thick scabs, frequently leaving pits or scabs; pustulous exanthem. **E. oc′uli,** hypopyon; suppuration of the ball of the eye. **E. pec′toris,** empyema. **E. vari′ola,** variola.

**Em′pyocele** (*en*, in, *pyon*, pus, *kele*, tumor). Tumor formed by an accumulation of pus in the scrotum; suppuration of the testicle; empyema of the tunica vaginalis; accumulation of pus in the cavity of a hernial sac; abscess in the areolar texture of the scrotum.

**Empyom′phalus** (*pyon*, pus, *omphalos*, navel). Suppurating tumor at the umbilicus; umbilical hernia, the sack of which is filled with blood.

**Empyreu′ma** (*en*, in, *pyr*, fire). Burnt smell and acrid taste observed when animal or vegetable substances are decomposed by a strong heat; due to *empyreumatic oil*, result of its decomposition.

**Empyreumat′ic.** Belonging to empyreuma. Produced by destructive distillation of animal or vegetable matters. **E. oil,** volatile oil resulting from destructive distillation of organic matters.

**Emul′gent** (*emulgeo*, to milk out). Renal artery and vein were so called because the ancients imagined they milked, as it were, the urine from the kidneys.

**Emulsifica′tion.** Formation of emulsion, as in pharmacy, in the digestion of oily matters in the duodenum, in the last stages of fatty degeneration, etc.

**Emul′sify** (*emulsio*+*fio*, to become). To make or form an emulsion.

**Emulsin′.** Ferment derived from almonds; it changes amygdalin into prussic acid.

**Emul′sio.** Formerly the official name for emulsion; now *emulsum*, which see.

**Emul′sion** (*emulgeo*, to milk). A fluid of a milky white, opaque appearance, composed of oil divided and held in suspension in water by means of mucilage. The pharmaceutical emulsions are composed of resinous substances, balsams, or camphor, rubbed up with dilute alcohol, mucilage, or yolk of egg. See *Emulsum*.

**Emul′sive.** Term for seeds whence oil may be expressed, as almonds, hemp, etc., and of cucurbitaceous and cruciferous plants in general.

**Emul′sum.** Emulsion. **E. aca′ciæ,** gum arabic emulsion. This was formerly in the Ph. Br., consisting of decorticated almonds, sugar, water, and mucilage. Mistura acaciæ, gum arabic mixture, was a similar preparation. **E. ammoni′aci** (Ph. U. S.), ammoniac emulsion; formerly ammoniac mixture (contains 4 gm. of ammoniac to 100 c.c. of emulsion); dose, ℥ss–j (16.0–32.0). **E. amyg′dalæ** (Ph. U. S.), almond emulsion, mixture, or milk; consisted also of sweet almonds, gum arabic, sugar, and water; diluent and demulcent. **E. antihyster′icum,** e. asafœtidæ. **E. asafœt′idæ** (Ph. U. S.), asafœtida emulsion, mixture, or milk (contains 4 gm. of asafœtida to 100 c.c. of emulsion; dose, ℥ss–j (16.0–32.0). **E. cam′phoræ,** camphor emulsion, made of camphor, almonds, sugar, and water, was used as a convenient form for giving camphor. **E. chlorofor′mi,** chloroform emulsion or mixture (contains 4 c.c. of chloroform in 100 c.c. of emulsion); dose, ʒi–iv (4.0–16.0). **E. o′lei amygdala′rum,** emulsion of oil of almonds; made of oil of almonds, gum arabic, syrup, and water; a good pectoral or cough mixture. **E. o. rici′ni,** castor-oil emulsion; aperient. **E. o. terebin′thinæ,** emulsion of oil of turpentine; made as follows: ol. tereb. rect., ℈ij; sacch. alb., ℥ss; vitell. ovi, j; emuls. amygd. or aquæ destill., ℥vj; in rheumatic and nephritic affections; dose, ℥iss (48.0). **E. pur′gans cum jalap′æ resi′nâ,** purging emulsion with resin of jalap; a mixture of resin of jalap, white sugar, and yolk of egg. simple emulsion, and orange-flower water. **E. p. cum o′leo ric′ini,** purging emulsion with castor oil; contained in the French Codex, the emulsion being made with castor oil, powdered gum arabic, distilled peppermint-water, water, and syrup. **E. p. cum scammo′nio,** purging emulsion with scammony; made by rubbing up scammony with white sugar, and adding milk and cherry-laurel water (French Codex). **E. resi′næ guai′aci,** mistura guaiaci. **E. sim′plex,** e. amygdalæ.

**Emunc′tory** (*emungo*, to blow the nose). Organ or canal for issue of excrementitious matters.

**Emun′dant.** Detergent.

**Emunda′tion.** Act of cleansing.

**Emus′culate.** Without muscles; applied to limbs when so extenuated that the muscles cannot be distinguished.

**Emydin′** (*emys*, tortoise). Albuminoid of turtles' eggs.

**Enadel′phia** (*en*, in, *adelphos*, a brother). Fœtus developed or born within a fœtus; fœtus in fœtu.

**Enam′el.** Adamantine or vitreous substance. Substance covering the coronæ of the teeth, of a milky white color, and very hard. It consists of a congeries of minute hexagonal rods. The fibres of the enamel are perpendicular to the surface of the teeth, on the ivory of which they seem planted, as it were, giving them a velvety appearance when examined by the microscope. The enamel has no blood-vessels, and is not renewed when removed. It is formed of phosphate of lime, with traces of other calcium and magnesium salts, and a very small portion of animal matter. A delicate membrane covers the enamel—cuticula, cuticle of the enamel, Nasmyth's membrane, persistent capsule of Nasmyth—but closely united with it; can be demonstrated only by the use of chlorohydric acid. See *Cuticula*. **E. blades,** incisal plates of the incisor teeth. **E. butt′resses,** enamel masses which afford support to the cutting blades of teeth. **E. cap,** portion of enamel organ on top of the dental papilla. **E. cells,** cells forming enamel organ. **E. cu′ticle,** see *Enamel*. **E. germ,**

see *Groove, dental.* **E. gird′ers,** rod-like masses of enamel which bind together the basal segments of teeth. **E. mar′gins,** the portion of enamel adjoining the cementum; the outer edges of a prepared carious cavity. **E. mem′brane,** columnar epithelium covering the enamel. **E. or′gan,** later stage of development of enamel germ; see *Tooth.* **E. prisms,** histological elements of the enamel having the form of wavy prisms. **E. rods,** see *Enamel.*

**En′anthem** or **Enan′thema** (*en,* in, *antheo,* to bloom). Eruption on the mucous membrane; exanthema being an eruption on the skin.

**Enanthem′atous.** Relating to an enanthem or mucous membrane rash.

**Enanthe′sis.** Eruption of various forms, often confluent, terminating in cuticular exfoliations, occurring with a systemic disease as scarlet fever, measles, etc.

**Enan′thrope** (*en,* in, *anthropos,* man). A disease or starting point of disease, originating within the system.

**Enantiomor′phic** or **Enantiomor′phous** (*enantios,* opposite, *morphe,* shape). Of similar form, but belonging to opposite sides, as the two hands or feet.

**Enantiopath′ic** (*enantios,* opposite, *pathos,* affection). Palliative.

**Enantiop′athy.** One disease opposed to another; allopathy.

**Enar′kyochrome** (*en,* in, *arkys,* reticulum, *chroma,* color). A readily stained nerve cell.

**Enarthro′dial.** Relating to enarthrosis. **E. joint,** ball-and-socket joint; enarthrosis.

**Enarthro′sis** (*en,* in, *arthrosis,* articulation). Ball-and-socket joint. Diarthroidal articulation in which the head of a bone is received into the cavity of another, and can be moved in all directions, as the hip-joint.

**Enar′thrum** (*en,* in, *arthron,* joint). Foreign body in a joint.

**Enau′lia.** Inner chamber; cavity of vulva.

**Encan′this** (*en,* in, *kanthos,* angle of the eye). Tumor formed by an increase in size or a degeneration of the caruncula lacrymalis. Morbid growth in the inner angle of the eye. **E. benig′na,** simple excrescence of the caruncula; commonly yields to astringent collyria. **E. calculo′sa,** tumor formed of concretions or calculi in the caruncle of the eye. **E. carcinomato′sa** or **fungo′sa,** condition of the semilunar fold and lacrymal caruncle in which they are the seat of morbid growths. **E. inflammato′ria,** inflammation with enlargement of the semilunar fold and lacrymal caruncle. **E. malig′na,** often cancerous, and requires early extirpation. **E. scirrho′sa,** e. maligna.

**Encap′sulated.** Encysted; enclosed as in a capsule.

**Encapsula′tion.** Enclosing in a capsule, or in a membrane of different texture from that of the part enclosed.

**Encap′suled.** Encapsulated.

**Encardi′tis.** Endocarditis.

**Enca′sing.** Inclusion of germs.

**Encatalep′sis.** Apoplexy; correctly, catalepsy.

**Encatarrhaph′ia** (*en,* in, *katarrhaphos,* stitched together). Operation of stitching together the edges of a cut made around a portion of skin.

**Encau′ma** (*en,* in, *kauo,* to burn). Ulcer of transparent cornea, occasioning loss of humors.

**Encau′sis.** Burn; cauterization.

**Encau′stum.** Enamel.

**Enceinte′** (Fr.) (*incingo,* to surround). Pregnant.

**Enceli′tis.** Encœlitis.

**Encephalæ′mia.** Hyperæmia of the brain.

**Encephalal′gia** (*enkephalon,* brain, *algos,* pain). Headache. **E. hydrop′ica,** hydrocephalus internus.

**Encephalanalo′sis** (*analosis,* wasting away). Atrophy of the brain.

**Encephalasthe′nia.** Cerebral asthenia; weakened brain force.

**Encephalaux′e** (*auxe,* increase). Hypertrophy of the brain.

**Encephal′ic.** Relating to the encephalon or brain.

**Encephalin′.** $C_{68 \cdot 4}H_{11 \cdot 6}N_3O_{17}$. A nitrogenous glucoside derived from brain tissue.

**Encephal′ion** (dim. of encephalon). Cerebellum.

**Encephali′tis.** Synonymous with cephalitis and phrenitis. Inflammation of the brain, in contradistinction to that of the membranes of the brain. Meningocerebritis. **E. exsudato′ria** or **infan′tum,** hydrocephalus internus. **E. insolatio′nis,** insolation. **E. membrano′sa** or **peripher′ica,** meningitis. **E. potato′rum,** delirium tremens. **E. suppurati′va,** abscess of the brain.

**Encephal′ium** (dim. of encephalon). Cerebellum.

**Enceph′alocele** (*enkephalos,* brain, *kele,* hernia). Hernia of the brain; may be congenital or accidental; in the former case dependent upon tardy ossification of the fontanelles or faulty conformation; in the latter, owing to considerable loss of substance in the parietes of the cranium from fractures, wounds, caries, the application of the trephine, etc. Protrusion of the membranes of the brain, containing fluid, but no cerebral substance, is called meningocele and hydromeningocele. See also *Encephalocœle.* **Ante′rior** or **fron′tal e.,** condition of a monster whose encephalon is situated in a great measure out of and in advance of the cranium, which is open in the frontal region. **Or′bital e.,** congenital condition consisting of a cyst containing cephalospinal fluid and brain matter, protruding through the fissure between the ethmoid and frontal bones.

**Encephaloch′ysis** (*enkephalos,* brain, *chyo,* to pour out). Hydrocephalus internus. **E. seni′lis,** serous apoplexy.

**Enceph′alocœle** (*en,* in, *kephale,* head, *koilos,* hollow). The contents of the cranial cavity. Also the sum of the cavities or ventricles of the brain.

**Encephalodial′ysis** (*dialysis,* dissolution). Dissolution or softening of the brain.

**Encephalodyn′ia** (*en,* in, *kephale,* head, *odyne,* pain). Cephalalgia; encephalalgia.

**Encephalœde′ma.** Œdema of the brain.

**Encephalohæ′mia.** Cephalæmia.

**Enceph′aloid** (*enkephalos,* brain, *eidos,* resemblance). Resembling the brain substance. Encephaloma, or soft cancer; name given to it in consequence of its resemblance, when fully developed, to the medullary substance of the brain. It has also been called spongoid inflammation, milt-like tumor, medullary cancer or sarcoma, cellular cancer, fungoid or hæmatocerebriform disease or cancer. See *Cancer.*

The following table exhibits the distinctive characteristics of encephaloid and scirrhus:

| *Encephaloid.* | *Scirrhus.* |
|---|---|
| Resembles lobulated cerebral matter. | Resembles rind of bacon traversed by cellulofibrous septa. |
| Is commonly opaque from its earliest formation. | Has a semitransparent glossiness. |
| Is of a dead white color. | Has a clear whitish or bluish-yellow tint. |
| Contains a multitude of minute vessels. | Is comparatively ill supplied with vessels. |
| Is less hard and dense than scirrhus. | Is exceedingly firm and dense. |
| Is frequently found in the veins issuing from the diseased mass. | Has not been distinctly detected in this situation. |
| The predominant microscopic elements are globular, not always distinctly cellular, and caudate corpuscula. | The main microscopic constituents are juxtaposed nuclear cells; caudate corpuscula do not exist in it. |
| Occasionally attains an enormous bulk. | Rarely acquires larger dimensions than an orange. |
| Has been observed in almost every tissue of the body | Its seat, as ascertained by observation, is somewhat more limited. |

| *Encephaloid.* | *Scirrhus.* |
|---|---|
| Very commonly coexists in several parts or organs of the same subject. | Is not usually solitary. |
| Is remarkable for its occasional vast rapidity of growth. | Ordinarily grows slowly. |
| Is frequently the seat of interstitial hemorrhage and deposition of black or bistre-colored matter. | Is comparatively rarely the seat of these changes. |
| When softened into a pulp, appears as a dead white or pink, opaque matter of creamy consistence. | Resembles, when softened, a yellowish-brown, semitransparent, gelatinous matter. |
| Subcutaneous tumors are slow to contract adhesion with the skin. | Scirrhus thus situated usually becomes adherent. |
| Ulcerated encephaloid is frequently the seat of hemorrhage, followed by rapid fungous development. | Scirrhous ulcers much less frequently give rise to hemorrhage; and fungous growths (provided they retain the scirrhous character) are now more slowly and less abundantly developed. |
| The progress of the disease after ulceration is commonly very rapid. | There is not such a remarkable change in the rate of progress of the disease after ulceration has set in. |
| It is the most common form under which secondary cancer exhibits itself. | |
| Is the species of cancer most frequently observed in young subjects. | Is much less common before puberty. |

**Enceph'alolith** (*enkephalos*, brain, *lithos*, stone). Calcareous or other concretion in the brain. The formation of such concretions is called *encephalolithi'asis*.

**Encephalol'ogy** (*enkephalos*, brain, *logos*, description). Description of the encephalon or its anatomy and physiology.

**Encephalo'ma.** Tumor of the brain. Encephaloid tumor. **E. melano'des,** melanotic cancer. **E. vulga're,** medullary carcinoma or sarcoma.

**Encephalomala'cia** (*enkephalos*, brain, *malakia*, softness), **Encephalomalaco'sis,** or **Encephalomalax'is.** Softening of the brain; mollities cerebri.

**Encephalomeningi'tis.** Meningocephalitis. Cerebral meningitis.

**Encephalomenin'gocele.** Hernia of the encephalon and its membranes.

**Encephalom'eter.** Instrument to determine corresponding points in the brain and on the skull.

**Encephalomyelop'athy.** Simultaneous morbid condition of the brain and spinal cord.

**Enceph'alon** (*en*, in, *kephale*, head). That which is situated in the head: the brain, cerebellum, and mesocephalon; at times the term includes the medulla spinalis, when it is also called the cerebrospinal and neural axis. Under the craniospinal axis or centre of automatic action have been included the sensory ganglia—the respiratory and stomatogastric ganglia, forming the centre of the medulla oblongata and the spinal ganglia or true spinal cord.

**Encephalonarco'sis.** Stupefaction of the brain; stupor.

**Encephalopath'ia** or **Encephalop'athy** (*enkephalon*, brain, *pathos*, disease). Disease of the encephalon or brain. **Albuminu'ric e.,** uræmic e. **Crap'ulous e.,** delirium tremens. **Lead e.,** any encephalic disorder produced by lead poisoning. **Uræ'mic e.,** albuminuric convulsions.

**Encephalophthi'sis.** See *Encephalopyosis*.

**Encephalophy'ma** (*enkephalos*, brain, *phyma*, tumor). Tumor or tubercle of the brain.

**Encephalopyo'sis** (*enkephalos*, brain, *pyon*, pus). Suppuration of the brain; when accompanied with emaciation and hectic it is called *encephalophthisis*.

**Encephalorrhachid'ian.** Cerebrospinal.

**Encephalorrha'gia** (*enkephalos*, brain, *rhage*, breaking forth). Hemorrhage of the brain. See *Apoplexy*.

**Encephalos'copy** (*enkephalos*, brain, *skopeo*, to examine). Cranioscopy; craniology.

**Encephalosep'sis** (*enkephalos*, brain, *sepo*, to corrupt). Septic softening of the brain.

**Encephalo'sis.** Encephaloid tumor; formation of an encephaloma. **E. of the liv'er,** cancer of the liver.

**Encephalospi'nal.** Cerebrospinal.

**Encephalospon'gia** (*spongia*, sponge). Fungous disease of the brain.

**Encephalostrumo'sis** (*enkephalos*, brain, *struma*, scrofula). See *Hydrocephalus internus*.

**Encephalothlip'sis** (*thlipsis*, pressure). Compression of the brain.

**Encephalothlip'tus.** Affected with compression of the brain; monster whose brain is absent or has been compressed during labor until it is a shapeless mass.

**Enceph'alotome.** Knife or instrument with which to perform encephalotomy, or to obtain sections of the brain for examination.

**Encephalot'omy** (*enkephalos*, brain, *tome*, incision). Dissection of the brain; incision into the brain; emptying the fetal brain by operation on it during parturition.

**Encephalotrau'ma.** Injury to the brain by violence or external causes.

**Encephalotylo'ma** (*tyloma*, callosity or growth). Tumor or tubercle of the brain.

**Enchon'drial** (*en*, in, *chondros*, cartilage). Relating to the interior of cartilage.

**Enchondro'ma** (*en*, in, *chondros*, cartilage). Cartilaginous tumor; chondroma. **Gelat'inous e.,** e. molle. **E. mol'le,** jelly-like form of enchondroma. **E. muco'sum** or **myxomato'des,** e. mainly composed of cartilage, but having mucous or mucoid tissue intermingled with it. **Perios'teal** or **peripher'ic e.,** e. growing from the periosteum.

**Enchondrosarco'ma.** A sarcoma containing cartilaginous elements, chondrosarcoma.

**Enchondro'sis.** Local outgrowth from pre-existing cartilage; enchondroma.

**Enchyle'ma** (*en*, in, *chylos*, juice). Any matter present in the reticulum of protoplasm. The basal substance of a cell nucleus.

**Enchylo'sis** (*enchylizo*, to press out juice). Extraction; suggillation.

**En'chyma** (*en*, in, *chyo*, to pour). Infusion. Plethora. Blastema.

**Enchymo'ma** or **Enchymo'sis.** Sudden effusion of blood into the cutaneous vessels from emotion, blushing, for example. In *ecchymosis* there is extravasation of blood into the areolar tissue from external cause, as contusion.

**En'chysis.** Infusion.

**Enclave'.** Anything enclosed in another structure, as a microbe in a phagocyte.

**Enclave'ment.** Retention in a part through enclosure or stricture. Impaction.

**En'clisis.** Bending or inclination.

**Enclit'ic.** Oblique or inclined, as the fetal head. See *Synclitism*.

**Encœ'lia** (*en*, in, *koilia*, belly). Abdominal viscera.

**Encœlial'gia** (*encœlia*+*algos*, pain). Abdominal pain; tormina. **E. inflammato'ria,** encœlitis.

**Encœli'tis** or **Encœlii'tis.** Inflammation of any of the abdominal viscera.

**Encoleo'sis** (*koleos*, sheath). Invagination.

**En'colpism** (*kolpos*, vagina). Injection or introduction of any medicament into the vagina.

**Encolpi'tis** (*en*, in, *kolpos*, vagina). Inflammation of the lining membrane of the vagina.

**En'cope** (*en*, in, *kopto*, to cut). Diacope; incision.

**Encra'nial.** Within the skull; intracranial.

**Encra′nion** (*en*, in, *kranion*, the skull). Cerebellum.

**Encye′sis** (*en*, in, *kyesis*, pregnancy). Fecundation; pregnancy.

**Encymoplas′ma.** Product of the parturient uterus.

**Encymo′sia.** Fecundation; pregnancy.

**Encyocol′ica** (*en*, in, *kyo*, to be pregnant, *kolikos*, colicky). Colic during pregnancy.

**Encysta′tion** or **Encyst′ment.** State of being encysted.

**Encys′ted** (*en*, in, *kystis*, bladder). Sacculated, pouched, encapsulated; enclosed in a cyst or pouch.

**Encyst′ment.** Enclosure in a sac or cyst; encapsulation; sacculation.

**End.** Extremity. **E. ar′tery,** a terminal artery; one that has no anastomotic communication with other arteries. **E. bas′kets,** thick, wavy terminal ramifications, having the appearance of baskets, surrounding the cells of Purkinje. **E. brain,** telencephalon. **E. brush,** e. basket. **E. bulbs** or **buds,** terminal nerve corpuscles, similar to the Pacinian and touch corpuscles, first particularly described by Krause; seen in the lips, tongue, palate, genitals, etc. **E. flake,** e. plate. **E. lobe,** occipital lobe of the brain. **E. or′gan,** apparatus for ending of nerve fibres at the surface of the body. **E. plates,** small bodies in which nerves terminate, varying from $\frac{1}{5000}$ to $\frac{1}{350}$ of an inch in diameter, formed of an expansion of the end of a nerve fibre with a small quantity of connective tissue. They are fixed to the muscular fibres.

**Endadel′phia** (*endon*, within, *adelphos*, brother). Enadelphia.

**Endangei′tis.** Inflammation of the endangium.

**Endan′geium** or **Endan′gium** (*endon*, within, *angeion*, vessel). Serous or lining membrane of a vessel.

**Endaorti′tis.** Inflammation of the lining membrane of the aorta.

**Endarte′rial.** Within an artery; relating to the intima of an artery.

**Endarteri′tis** or **Endarterii′tis** (*endon*, within, *arteritis*, inflammation of an artery). Inflammation of the inner coat of an artery. **E. chron′ica defor′mans** or **nodo′sa,** chronic inflammation of the lining membrane of an artery, with degeneration and deposits —*arteriosclerosis*. **E. oblit′erans** or **obliterati′va,** occlusive inflammation of arteries, chiefly the smaller ones. **E. syphilit′ica,** e. obliterans of luetic causation. **E. tuberculo′sa,** endarteritis of tuberculous origin.

**Endarte′rium.** The intima or lining membrane of an artery.

**Endeixiol′ogy** (*endeixis*, indication, *logos*, discourse). Doctrine of indications.

**Endeix′is** (*en*, in; *deiknymi*, to show). Indication; symptom.

**Ende′mia.** Endemic disease.

**Endem′ic** or **Endem′ical** (*en*, in, *demos*, the people). Prevalent in a locality; indigenous. **E. disease′,** a disease which constantly prevails in a definite locality, differing from *epidemic disease*, or one which prevails temporarily, and *sporadic disease*, or one which does not prevail at all but occurs only in isolated cases. Malaria and cretinism are commonly endemic diseases. **E. hæmatu′ria,** variety of hæmaturia caused by a fluke, the Bilharzia hæmatobia. **E. neuri′tis,** beriberi.

**Endemic′ity.** The state of being endemic.

**Endem′io-epidem′ic.** Having the characters of an endemic and epidemic combined. Relating to a great and temporary increase in the number of cases of a disease in any locality where it habitually prevails.

**Endemiol′ogy.** Doctrine of endemic diseases.

**En′demism.** Endemicity.

**Endepider′mis.** Epithelium.

**Ender′mic** or **Endermat′ic** (*en*, in, *derma*, skin). Epithet given to the method of treating diseases by placing the therapeutical agent in contact with the skin, especially after the cuticle has been removed —*endermic method* or *medication*, *endermism*. Morphine, strychnine, etc., are sometimes administered in this way.

**Ender′mism.** See *Endermic*.

**Ender′mol.** Nicotine salicylate; occurs in soluble crystals, and is employed in the treatment of scabies.

**Endermo′sis.** Eruptive disease of mucous membrane. Endermic method.

**En′deron** (*en*, in, *deros*, skin). Subepithelial layer of the whole body.

**Endin′ion.** Point on the internal surface of the cranium corresponding to the inion externally.

**En′dive.** Cichorium endivia. **Wild e.,** Cichorium intybus.

**Endix′is** (*en*, in, *deiknymi*, to show). Indication.

**Endo-** (*endon*, within). As a prefix, within.

**En′do-abdom′inal.** Within the abdomen.

**Endo-aorti′tis.** Endaortitis.

**Endo-appendici′tis.** Inflammation of the mucous lining of the appendix vermiformis.

**Endo-arteri′tis.** Endarteritis.

**Endo-ausculta′tion.** Auscultation of the sounds of the heart through a tube passed into the œsophagus and stomach.

**En′doblast** (*endon*, within, *blastos*, germ). Hypoblast.

**Endoblas′tic.** Relating to the endoblast or hypoblast.

**Endoblas′tomere** (*endon*, within, *blastos*, germ, *meros*, part). Segment produced by division of an ovum in a direction parallel to its equator.

**Endobronchi′tis.** Inflammation of the epithelial lining of the bronchial tubes.

**Endocar′diac** or **Endocar′dial.** Within the heart. Relating to the endocardium or the interior of the heart; in contradistinction to *exocardiac*, *exocardial*, or *extracardial*, relating to the exterior of the heart.

**Endocardi′tis.** Inflammation of the internal membrane of the heart, Bouillaud's disease. The heart's action is visibly increased and very manifest to the touch; the hand is strongly repelled, and at moments is sensible of a trembling, vibratory motion. Percussion gives a dull sound over a surface of several inches. On auscultation, a bellows sound is generally heard, masking one or both sounds of the heart, and the ear is sensible of a metallic ringing with each systole of the ventricle. Pulsations are rapid as well as strong, and, with few exceptions, irregular, unequal, and intermittent. The pulse does not always indicate the force or number of the heart's contractions. **Fi′brinous e.,** e. in which some of the connective tissue of the heart is converted into fibrous tissue. **E. gonorrho′ica malig′na,** a form of endocarditis accompanying gonorrhœa, and often fatal. **Infec′tious e.,** ulcerative endocarditis. **Pari′etal e.,** e. limited to the cardiac wall, not affecting the valves. **Plas′tic e.,** e. with plastic effusion, affecting the action of the valves and contraction and dilatation of the heart, thus causing abnormal murmurs, etc. **Pol′ypoid** or **pol′ypous e.,** ulcerative e., with the formation of fibrinous masses on the valves. **Pus′tular** or **pus′tulous e.,** ulcerative e. with miliary abscesses in the valves. **Sclerot′ic e.,** e. attended with thickening and increased development of connective tissue of the valves of the heart. **Ul′cerative e.,** septic form of endocarditis, generally a sequence of blood poisoning; the ulcers may pass through the valves and invade the muscular walls of the heart.

**Endocar′dium** (*endon*, within, *kardia*, heart). Membrane lining the interior of the heart.

**Endocer′vical.** Relating to the mucous membrane or the lumen of the cervix uteri.

**Endocervici′tis.** Inflammation of the lining membrane of the cervix uteri.

**Endocholecysti′tis** (*endon*, within, *chole*, bile, *kystis*, bladder). Inflammation of the mucous membrane of the gall-bladder.

**Endochon′dral** (*endon*, within, *chondros*, cartilage). Within cartilage. **E. ossifica′tion,** development of bone within temporary cartilage.

**Endocho′rion.** See *Chorion.*

**Endocœla′rium.** The visceral cœlarium or lining of the body cavity.

**Endocoli′tis** (*endon,* within + *colon*). Dysentery.

**Endocolpi′tis.** Inflammation of the vagina.

**Endocomplement′.** A complement contained within the cell body; the opposite of serum complement.

**Endocra′nial.** Relating to the interior of the skull.

**Endocrani′tis.** Inflammation of the external layer of the dura mater.

**Endocra′nium.** Inner surface of the skull; dura mater.

**En′docrome** (*endon,* within, *chroma,* color). Pigment in the interior of cells.

**Endoc′ular** (*endon,* within, *oculus,* eye). Within the eye; intraocular.

**En′docyme** (*endon,* within, *kyma,* product of conception). Double monster by inclusion.

**Endocy′mia.** Monstrosity alluded to under *Endocyme.*

**En′docyst.** Lining membrane of an hydatid.

**Endocysti′tis** (*endon,* within, *kystis,* bladder). Inflammation of the vesical mucous membrane.

**Endocystomati′tis.** Inflammation of the lining membrane of a cystic tumor.

**Endocy′tic.** Within a cell.

**Endode′ca serpenta′ria.** Aristolochia serpentaria.

**En′doderm.** Innermost layer or lining of simple organisms; hypoblast.

**Endoder′mal** or **Endoder′mic.** Relating to the endoderm.

**Endodonti′tis** (*endon,* within, *odous,* tooth). Inflammation of the lining membrane of a tooth.

**Endoenteri′tis.** Inflammation of the lining membrane of the bowels. See *Enteritis.*

**Endogas′tric** (*endon,* within, *gaster,* stomach). Within the stomach or abdomen.

**Endogastri′tis.** Inflammation of the lining membrane of the stomach.

**Endogas′trius.** Engastrius.

**Endogen′esis.** Endogenous formation.

**Endogenet′ic.** Having origin from internal causes.

**Endogenous,** en-doj′en-us (*endon,* within, *gennao,* to engender). Growing by increase in number or size of internal cells or membranes. **E. an′eurysm,** aneurysm originating spontaneously from lesions of the inner coat of the arteries. **E. cells,** cells formed within cells, as in the sperm vesicles.

**Endog′eny.** Endogenesis.

**Endoglob′ular.** Within the blood globules.

**Endogna′thion.** Middle part of the upper jawbone that has not been united before birth.

**Endolaryn′geal.** Within the larynx.

**Endolem′ma.** Neurilemma.

**Endolepido′ma.** A tumor originating from the endothelium of the blood-vessels or lymphatics. See *Lepidoma.*

**En′dolymph.** Fluid contained within the membranous labyrinth.

**Endolymphan′gial** or **Endolymphat′ic.** Within the lymphatic vessels.

**Endometrec′tomy** (*endon,* within, *metra,* uterus, *ektome,* excision). Excision of the mucous lining of the uterus.

**Endometri′tis.** Inflammation of the lining membrane of the uterus. When accompanied with a diphtheritic exudation it is called e. crouposa; when the fundus is alone involved, fundal endometritis; when of a syphilitic character, e. syphilitica. Corporeal and cervical endometritis express inflammation of the body and neck of the uterus. **Catar′rhal e.,** e. accompanied with discharge of mucus. **Cer′vical e.,** inflammation of the cervical portion of the uterus. **Decid′ual e.,** inflammation of decidua reflexa or uterina, or of both membranes. **Diphtherit′ic e.,** form of e. occurring at childbirth from invasion of the vagina, uterus, and appendages by diphtheritic virus introduced through some exposed part of the generative organs. **E. dis′secans,** e. with tendency to ulcerative disintegration. **Exfo′liative e.,** membranous dysmenorrhœa; characterized by detachment of the outer layer of the endometrium and its expulsion from the uterus. **Fun′dal e.,** e. of fundus of the uterus. **E. fungo′sa,** decidual e. accompanied with fungoid or polypoid growths. **Gland′ular e.,** parenchymatous e. **Hyperplas′tic e.,** a form of e. in which the glands are increased both in size and number. **Hypertroph′ic e.,** e. characterized by increase in size of the epithelial cells. **Intersti′tial e.,** e. characterized by an atrophic process and by conversion of interglandular connective tissue into a hard, fibrous material like cicatricial tissue. **Mem′branous e.,** e. with formation of false membrane; diphtheritic e. **Pol′ypoid e.,** e. characterized by excessive diffuse, glandular, interstitial, and vascular development, and by cystic degeneration of the glands. **Post-abor′tive e.,** interstitial inflammation causing arrest of involution in the mucous membrane. **Se′nile e.,** a form of purulent e., occurring after the menopause, due to earlier infection or to the action of bacteria on the atrophic, less resisting endometrium. **Sep′tic** or **septicæ′mic e.,** e. caused by the presence of putrid matter or its absorption. **Tuber′culous e.,** a form of inflammation due to tuberculosis of the uterus, caused by heteroinfection, or, usually, by autoinfection.

**Endome′trium** (*endon,* within, *metra,* uterus). Lining membrane of the uterus.

**Endometrorrhag′ia** (*endon,* within, *metra,* uterus, *rhegnymi,* to break forth). Hemorrhage from the interior of the uterus; metrorrhagia.

**Endom′etry** (*endon,* within, *metron,* measure). Measurement of the brain within the cavity of the skull.

**Endomyocardi′tis** (*endon,* within, *mys,* muscle, *kardia,* heart). Endocarditis combined with myocarditis or inflammation of the cardiac muscle.

**Endomys′ium** (*endon,* within, *mys,* muscle). Connective-tissue formation between muscular fibres.

**Endonephri′tis** (*endon,* within, *nephritis,* inflammation of the kidney). Inflammation of the lining membrane of the pelvis of the kidney; nephritis; pyelitis.

**Endoneu′ral** (*endon,* within, *neuron,* nerve). Relating to the endoneurium.

**Endoneuri′tis.** Inflammation of the endoneurium.

**Endoneu′rium.** Connective tissue between nerve fibrils.

**Endo-œsophagi′tis.** Inflammation of the lining membrane of the œsophagus.

**Endo-ostei′tis** or **Endoöstitis** (*endon,* within, *osteon,* bone). Inflammation of medulla of bone.

**Endopar′asite.** Parasite in the interior of the body.

**Endopath′ic** (*endon,* within, *pathos,* disease). Relating to disease whose causes are within the body.

**Endop′athy** (*endon,* within, *pathos,* disease). Disease having its origin within the body.

**Endopericardi′tis.** Inflammation of the endocardium and pericardium.

**Endoperimyocardi′tis.** Simultaneous existence of endocarditis, pericarditis, and myocarditis.

**Endoperitoni′tis.** Inflammation of the serous lining of the peritoneum.

**Endophacin′** (*endon,* within, *phake,* lens). Colorless, albuminous fluid obtained from the crystalline lens.

**Endophlebi′tis** (*endon,* within, *phleps,* vein). Inflammation of the inner coat of a vein; phlebitis. **E. porta′lis,** inflammation of the portal vein; pyephlebitis.

**En′dophyte** (*endon,* within, *phyton,* plant). Vegetable parasite in the interior of the body.

**En′doplasm.** Inner part of protoplasm of a cell.

**En′doplast.** Nucleus of cell and cell-body.

**Endoplas′tic.** Relating to or formed of endoplasm.

**Endoplas′tule.** Nucleolus.

**Endorrhini′tis** (*endon*, within, *rhis*, nose). Inflammation of the interior of the nose.

**Endosalpingi′tis.** Inflammation of the lining membrane of the Fallopian tube.

**Endosal′pinx** (*endon*, within, *salpinx*, tube). Mucous lining of the Fallopian tube.

**En′dosarc.** Endoplasm or interior protoplasm of an amœba or other protozoon; the opposite to ectosarc.

**En′doscope** (*endon*, within, *skopeo*, to view). Instrument for inspecting the interior of any hollow organ or part, especially the urethra and bladder. See *Cystoscope, Urethroscope, Speculum.*

**Endos′copy.** Examination of internal parts, especially the urethra, with an endoscope.

**Endosep′sis** (*endon*, within, *sepsis*, infection). Septic infection from internal causes.

**Endoskel′etal.** Relating to the endoskeleton.

**Endoskel′eton.** Inner skeleton. See *Skeleton.*

**Endos′mic.** Endosmotic.

**Endosmom′eter.** Graduated tube closed by membrane for estimating the rapidity of osmosis.

**Endosmose′** or **Endosmo′sis** (*endon*, within, *osmos*, impulse). Double imbibition. Action by which fluids pass from without to within organic membranes. Action of two fluids on each other when separated by a membrane. Endosmosis is sometimes used to signify the passage of the more transmissible fluid, while exosmosis signifies that of the least transmissible, although, strictly speaking, the terms denote passage of fluids inward and outward.

**Endosmot′ic.** Relating to endosmosis.

**En′dosperm** (*endon*, within, *sperma*, seed). Embryo situated in a mass of albumin; albumin.

**En′dospore** (*endon*, within, *sporos*, seed). Spore within a minute organism.

**Endos′porous.** Relating to an endospore. **E. bacte′ria**, bacteria caused by endosporous agency.

**Endos′teal** (*endon*, within, *osteon*, bone). Relating to the interior of bone, or to the ossification in its earliest cartilaginous stages.

**Endostei′tis** or **Endosti′tis.** Inflammation of the endosteum or medullary membrane of bone; osteomyelitis.

**Endosteth′oscope.** A stethoscope to be used internally, as in the œsophagus for auscultation of the heart sounds.

**Endos′teum** (*endon*, within, *osteon*, bone). Medullary membrane of bone.

**Endosto′ma.** Morbid growth in interior of bone.

**Endosto′sis.** Formation of an endostoma. Development of bone in interior of cartilage.

**Endothe′lial.** Relating to the endothelium. **E. carcino′ma**, endothelioma.

**Endothe′lioid.** Resembling endothelium.

**Endothelio-ino′ma** (*endothelium* + *inoma*, fibrous tumor). An endothelial fibrous tumor.

**Endothelioleiomyo′ma.** Myosarcoma.

**Endotheliolysin′.** A cytolysin having a specific action upon endothelial cells.

**Endothelio′ma.** Tumor connected with the endothelium. **E. lymphangiomato′des**, a growth from the endothelium of the lymph vessels.

**Endotheliomyxo′ma.** Endothelial myxoma. Myxoma and endothelioma combined.

**Endothe′lium** (*endon*, within, *thele*, nipple). Lining membrane of the blood-vessels, lymphatics, and serous cavities, formed of flat cells or a delicate, nucleated membrane, the endothelial or perithelial tube, cell membrane of Remak.

**Endothoracic,** en-do-thor-as′ik. Within the thorax.

**En′dotome** (*endon*, within, *tome*, incision). Shears adapted to decollation of the fœtus in utero.

**Endo′toscope** (*endon*, within, *ous*, ear, *skopeo*, to see). Instrument for examining accessible parts of the ear.

**Endotrachei′tis.** Inflammation of the mucous membrane of the trachea.

**Endotracheli′tis** (*endon*, within, *trachelos*, neck). Endocervicitis; cervical endometritis.

**Endouteri′tis** (*endon*, within + *uteritis*). Endometritis.

**Endovas′cular.** Intravascular; within the vessels.

**Endu′sium.** See *Indusium.*

**En′dyma** (*endyma*, garment). Lining membrane of the cerebral cavities; ependyma. **Paracœ′lian e.,** lining membrane of the lateral ventricle of the brain. **E. ventriculo′rum,** lining of cavities of ventricles; ependema ventriculorum.

**Eneche′ma** or **Eneche′sis** (*en*, in, *echema*, sound). Tinnitus aurium.

**Ene′cia** (*enekes*, continuous). Continued fever; synocha.

**En′ema.** Clyster; injection into the lower bowel.

**Enem′ion.** Anemone pulsatilla.

**Enepiderm′ic** or **Enepidermat′ic** (*en*, in, *epi*, upon, *derma*, skin). Upon the surface of the skin. Method of treating diseases by the application of medicines to the skin.

**En′ergy** (*en*, in, *ergon*, work). Action, vigor, force; used in a sense associated with a body in motion—*kinetic energy*, or one at rest—*potential energy.*

**En′ervate.** To weaken.

**Enerva′tion** (*enervo*, to weaken). Act of weakening; state of being weakened. Excision of a nerve.

**Engage′ment.** Passage of presenting portion of the fœtus into the brim of the pelvis; the stage of the descent of the fœtus.

**Engas′trius.** Monster formed by development of a fœtus in the interior of the gastrointestinal region of another fœtus.

**En′gelmann′s interme′diate disk.** See *Krause's disk.* **E.'s lat′eral disk,** narrow, transparent material situated on each side of Krause's disk.

**En′gine, den′tal** or **sur′gical.** Apparatus consisting of motor, shaft, and hand-piece, the latter carrying a burr or other instrument fitted for the cutting of bony tissues.

**Eng′lish cham′omile.** Anthemis nobilis. **E. chol′era,** cholera morbus. **E. disease′,** hypochondriasis; rachitis. **E. gar′lic,** Allium sativum. **E. mal′ady,** hypochondriasis; rachitis. **E. plas′ter,** court plaster. **E. posi′tion,** position of the lying-in woman on the left side, with the right knee drawn up. **E. rhu′barb,** Rheum raponticum. **E. sweat′ing sick′ness,** miliary fever, a contagious disease prevailing in the sixteenth century. **E. wal′nut,** Juglans regia.

**Englo′bing.** Absorption by a white blood globule.

**Engompho′sis.** Gomphosis.

**Engorged′.** Filled; strongly congested. **E. disk,** see *Disk.*

**Engorge′ment.** Obstruction or choking up of the vessels of a part, giving rise to augmentation of volume; vascular congestion.

**Engraft′.** Graft.

**Enhæmato′sis.** Hæmatosis.

**Enix′io** or **Enix′us.** Parturition.

**Enmetri′tis.** Inflammation of the lining membrane of the uterus; endometritis.

**Enœsophagi′tis.** Inflammation of lining membrane of the œsophagus.

**Enoma′nia.** Œnomania.

**Enophthal′mia** or **Enophthal′mos** (*en*, in, *ophthalmos*, eye). Retraction of the globe of the eye.

**Enor′chism** (*en*, in, *orchis*, testicle). Concealed testicle; cryptorchidism.

**Enor′mon** (*enormao*, excite within). Vital principle.

**Enosima′nia** (*enosis*, agitation). Mania associated with quaking terror or delusions as to commission of crimes.

**Eno′sis** (union). Insertion; union.

**Enosto′sis** or **Entosto′sis** (*en*, in, *osteon*, bone). Morbid growth of bone inward into the interior of the medullary canal; bony tumor growing from the interior of the skull; opposite of exostosis.

**Ens.** Being; existence. **E. mor′bi,** the essential nature of a disease

**En′sal** (*ensis*, sword). Sword-shaped. Cardamom.

**En′sate.** Ensiform.

**En′siform** (*ensis*, sword, *forma*, form). Sword-like; xiphoid. **E. apoph′yses** or **pro′cesses,** lesser alæ of the sphenoid bone. **E. appen′dage, appen′dix, car′tilage,** or **pro′cess,** xiphoid appendix of the sternum.

**Ensister′nal.** Relating to the ensiform process of the sternum.

**Ensister′num.** Ensiform process of the sternum.

**Ensomato′sis** (*en*, in, *soma*, body). Incorporation.

**Ensom′phalus** (*omphalos*, navel). Monster composed of two individuals having navels and umbilical cords separate.

**Enstalax′is** (*enstalazo*, to drop in). Instillation.

**Ensta′sis.** Obstruction, as of pores of the skin.

**En′strophe** (*en*, in, *strepho*, to turn). Inversion of a part, as the eyelids.

**Entacous′tic** (*entos*, within, *akouo*, to hear). Relating to sonorous movements originating in the ear or adjacent structures.

**En′tad** (*entos*, within). In an inward direction or toward the interior.

**Enta′da gingalo′bium.** West Indian tree; seeds are emetic and antisyphilitic, and antidotal to poison.

**En′tal.** Relating to the interior; internal.

**Entallan′toic.** Within the allantoic cavity.

**Entamniot′ic.** Within the amniotic cavity.

**Entankyloblephari′tis.** Blepharitis with adhesion of the lids to the ball of the eye. Entankyloblepharon.

**Entan′thema.** Enanthema; eruption on the mucous membrane.

**Entarthrochon′drus** (*entos*, within, *arthron*, joint, *chondros*, cartilage). Interarticular cartilage. Loose cartilage in an articulation.

**Entarthrot′ic.** Within a joint; interarticular.

**Enta′sia** or **En′tasis** (*en*, in, *teino*, to stretch). Contracture; tension; tonic spasm.

**Entat′ic** (*entatikos*, stretching). Aphrodisiac.

**Entelmin′tha** (*entos*, within, *helmins*, worm). Worms.

**Entepicon′dyle.** Inner condyle of the humerus.

**En′tera** (pl. of *enteron*, intestine). Intestines; abdominal organs.

**Enteradel′phia** (*enteron*, intestine, *adelphos*, brother). Enadelphia.

**Enter′aden,** pl. enterad′enes (*enteron*, intestine, *aden*, gland). Glands of the intestines.

**Enteradenog′raphy** (*enteron*, intestine, *aden*, gland, *graphe*, description). Description of the intestinal glands.

**Enteradenol′ogy** (*enteron*, intestine, *aden*, gland, *logos*, treatise). Science in relation to the intestinal glands.

**Enteræ′mia** (*enteron*, intestine, *haima*, blood). Intestinal congestion.

**Enteraërec′tasis** (*enteron*, intestine, *aer*, air, *ektasis*, dilatation). Tympanites; flatulence.

**Enterag′ra** (*enteron*, intestine, *agra*, seizure). Gout in the intestines.

**Enteral′gia** (*enteron*, intestine, *algos*, pain). Pain in the intestines; colic.

**Enteratro′phia** (*enteron*, intestine, *atrophia*, want of nutrition). Atrophy of the coats of the intestines.

**Enteraux′e** (*enteron*, intestine, *auxe*, increase). Hypertrophy of the muscular coat of the intestines.

**Entereche′ma** (*enteron*, intestine, *echema*, sound). Sound of movement of the intestines.

**Enterecta′sia** or **Enterec′tasis** (*enteron*, intestine, *ektasis*, dilatation). Dilatation of the intestines, as in tympanites.

**Enterec′tomy** (*enteron*, intestine, *ektome*, excision). Excision of part of the intestine.

**Enterelco′sis** or **Enterhelco′sis** (*enteron*, intestine, *helcosis*, ulceration). Ulceration of the intestines.

**Enterele′sia** or **Enterelo′sis** (*enteron*, intestine, *eileo*, to involve). Ileus; volvulus.

**Enterem′bole** (*enteron*, intestine, *embole*, insertion). Intussusception of the bowels.

**Enteremphrax′is** (*enteron*, intestine, *emphraxis*, obstruction). Obstruction of the intestines.

**Enterepip′locele.** Enteroepiplocele.

**Enterepiplom′phalocele** (*enteron*, intestine, *epiploön*, omentum, *omphalos*, navel, *kele*, rupture). Hernia of the umbilicus, with protrusion of the omentum and intestine.

**Enterhelco′sis.** Enterelcosis.

**Enterhypertro′phia** (*enteron*, intestine, *hypertrophia*, excessive nutrition). Hypertrophy of the intestines.

**Ente′ria.** Diarrhœa.

**Enter′ic** (*enteron*, intestine). Intestinal. **E. fe′ver,** typhoid fever.

**Enteris′chiocele** (*enteron*, intestine, *ischion*, hip, *kele*, hernia). Intestinal hernia through the greater sciatic notch.

**Enteri′tis.** Inflammation of the intestines. Essential symptoms are violent abdominal pain, increased on pressure, with vomiting and inflammatory fever. Enteritis may affect both the peritoneal and the mucous coat of the intestines, and, in violent cases, all the coats. Inflammation of the mucous coat is generally attended with diarrhœa; inflammation of the peritoneal coat with constipation. **E. arthrit′ica,** gout of the abdomen or its contained viscera. **Catar′rhal e.,** intestinal catarrh; superficial e. with mucous discharge. **Choler′iform e.,** cholera infantum. **E. col′ica,** colitis. **Croup′ous e.,** membranous e. **Diphtherit′ic e.,** e. with adherent white deposit on the lining membrane of the bowels. **E. epiploi′cus,** epiploitis. **E. erythemat′ica,** catarrhal e. **Follic′ular e.,** typhoid fever. **E. folliculo′sa,** typhoid fever; cholera infantum. **E. ili′aca,** e. confined to the ilium. **Mem′branous e.,** pellicular inflammation of the bowels in which deposits collect on the lining membrane. **E. mesenter′ica,** mesenteritis; typhoid fever. **Mucomem′branous e.,** e. accompanied with a discharge of mucus mixed with pseudomembrane. **Mu′cous e.,** catarrhal e. **Pellic′ular e.,** membranous e. **Phleg′monous e.,** severe e., with disposition to the formation of an abscess. **E. polypo′sa,** chronic catarrhal e., with polypoid growths from the lining membrane. **Pseudomem′branous e.,** membranous e.; diphtheritic e. **E. pustulo′sa,** dothinenteritis. **Stru′mous e.,** e. folliculosa. **Ul′cerative e.,** e. often occurring after middle life, in which the mucous membrane of the colon is partially destroyed by ulceration, and sometimes accompanied by increase of the lumen of the colon and hypertrophy of the muscular parietes. Sometimes contraction of the bowel exists.

**Entero-** (*enteron*, intestine). In composition, intestine.

**Entero-anastomo′sis.** Intestinal anastomosis. See *Anastomosis.*

**Entero-apoclei′sis** or **Entero-apoklei′sis** (*enteron*, *apo*, from, *kleisis*, occlusion). Exclusion of a part of the intestine in the operation of intestinal anastomosis.

**Entero-arc′tia** (*arctus*, narrow). Stricture of the bowel.

**Entero′bius** (*bios*, life). Oxyuris vermicularis.

**Enterobro′sia** or **Enterobro′sis** (*brosis*, act of gnawing). Perforation of the intestines.

**Enterocace,** en-ter-ok′a-ase (*kakos*, evil). An old term denoting adynamic dysentery, accompanied by phenomena indicating a pseudomembranous and gangrenous state of the lining membrane of the large intestine.

**En′terocele** (*enteron*, intestine, *kele*, hernia). Intestinal hernia through the abdominal wall. Also *enterocœle*, which see. **Cru′ral** or **fem′oral e.,** femoral hernia containing intestine. **In′guinal e.,** inguinal hernia containing intestine. **Par′tial e.,** hernia involving a portion of bowel only, which may become strangulated and gangrenous. **Perine′al e.,** perineal hernia containing intestine. **Puden′dal e.,** pudendal hernia containing intestine. **Rec′tal e.**, proctocele; rectocele. **Scro′tal e.**, inguinal hernia that has passed into the scrotum. **Vag′inal e.**, hernia into the vagina, enterovaginal hernia.

**Enterocente′sis** (*enteron*, intestine, *kentesis*, puncture). Operation of puncturing the bowel.

**Enterochirur′gia.** Surgery of the intestines.

**Enterochlor′ophyll** (*chloros*, green, *phyllon*, leaf). Green pigment in the liver and other organs of some of the lower forms of animal life.

**Enterocholecystos′tomy** (*enteron*, intestine, *chole*, bile, *kystis*, bladder, *stoma*, mouth). Cholecystenterostomy. Operation of making a fistulous communication between the gall-bladder and intestine.

**Enterocholecystot′omy** (*enteron*, intestine, *chole*, bile, *kystis*, bladder, *tome*, incision). Operation on the gall-bladder and intestine.

**Enteroclei′sis** or **Enteroklei′sis** (*kleisis*, occlusion). Occlusion or obstruction of the bowel.

**Enteroc′lysis.** See *Enteroclysm.*

**En′teroclysm** (*enteron*, intestine, *klysma*, wash). Enema; the application or action is called *enteroclysis.* Especially applied to the injection of saline solution into the intestine in cholera.

**En′terocœle** (*enteron*, intestine, *koilia*, cavity). Cavity of pleura and peritoneum regarded as formed from the primitive alimentary canal; abdominal cavity.

**Enterocœ′lic** or **Enterocœ′liac.** Relating to the cavity of the abdomen.

**Enterocoli′tis** (*enteron* + *colitis*, inflammation of the colon). Inflammation of the small intestine and colon.

**En′terocyst.** Intestinal cyst; enterocystoma.

**Enterocys′tocele** (*kystis*, bladder, *kele*, tumor). Hernia of the bladder and intestine.

**Enterocysto′ma.** Cystic tumor caused by non-obliteration of part of the omphalomesenteric duct.

**Enterocystos′cheocele** (*enteron*, intestine, *kystis*, bladder, *oscheon*, scrotum, *kele*, hernia). Scrotal hernia, contents of which are bowel and bladder.

**Enterodial′ysis** (*enteron* + *dialysis*, separation). Division of the intestine, as by a cut or other traumatic cause.

**Enterodothie′nia** or **Enterodothieno′sis** (*dothien*, pustule). Dothinenteritis; typhoid fever.

**Enterodyn′ia** (*enteron*, intestine, *odyne*, pain). Colic.

**Enteroecta′sia** or **Enteroec′tasis** (*ektasis*, dilatation). Dilatation of the intestines.

**Enteroenteros′tomy** (*enteron* + *enteron* + *stoma*, mouth). Union by operation for anastomosis between two portions of adjacent intestine.

**Enteroepip′locele** (*epiploön*, omentum, *kele*, tumor). Hernia formed by intestine and omentum.

**Enteroepiplom′phalocele** or **Enteroepiplom′phalus** (*omphalos*, umbilicus). Umbilical hernia, containing intestine and omentum.

**Enterogastri′tis.** Inflammation of the stomach and intestines.

**Enterogas′trocele** (*enteron*, intestine, *gaster*, stomach, *kele*, tumor). Hernia of stomach and intestine.

**Enterog′raphy** (*enteron* + *graphe*, description). Part of anatomy which describes the intestines.

**Enterohæmorrha′gia.** Passage of blood with the fecal evacuations.

**Enterohelco′sis.** Ulceration of the intestines.

**Enterohem′orrhage.** Bleeding from the intestine.

**Enterohepati′tis.** Inflammation of bowel and liver.

**Enterohy′drocele** (*hydor*, water, *kele*, tumor). Intestinal hernia complicated with hydrocele.

**Enterohydrom′phalus** (*hydor*, water, *omphalos*, navel). Umbilical hernia in which the sac contains, along with a portion of intestine, a quantity of serum.

**Enterointes′tinal.** A hybrid word denoting relation of one part of the intestines to another part, as in certain fistulous communications, the operation of intestinal anastomosis, etc.

**Enteroïs′chiocele** (*enteron*, intestine, *ischion*, ischium, *kele*, tumor). Ischiatic hernia formed of intestine.

**En′terol** (*enteron*, intestine). A combination of three cresols, used as an intestinal antiseptic.

**En′terolite.** Enterolith.

**En′terolith.** Intestinal calculus.

**Enterolithi′asis** (*lithiasis*, formation of stone). Formation or presence of concretions in the intestines.

**Enterol′ogist.** One who has made a special study of the intestines.

**Enterol′ogy** (*enteron* + *logos*, discourse). Part of anatomy which treats of the intestines.

**Enteromala′cia, Enteromalaco′sis**, or **Enteromalax′is** (*malakia*, softening). Softening of the mucous or other coats of the intestine.

**Enteromelanorrhœ′a.** Melæna.

**Enterome′nia.** Menstruation by the intestines.

**En′teromere** (*enteron* + *meros*, part. A segment of the embryonic intestinal tract.

**Enteromer′ocele** (*enteron* + *meros*, thigh, *kele*, tumor). Crural hernia, formed of intestine.

**Enteromesenter′ic.** Relating to the intestine and mesentery. **E. fe′ver**, typhoid fever in which the intestines are ulcerated, with enlargement of the corresponding mesenteric glands.

**Enteromesenteri′tis.** Tabes mesenterica.

**Enterom′eter** (*enteron* + *metron*, measure). An instrument for measuring the diameter of any part of the intestine.

**Enteromor′pha compres′sa.** One of the algæ, used by the Sandwich Islanders as an esculent.

**Enterom′phalocele** or **Enterom′phalus** (*omphalos*, umbilicus). Umbilical hernia, formed of intestines.

**Enteromycoder′ma** (*enteron* + *mykes*, fungus, *derma*, skin). An old term for the mucous membrane of the intestines. An intestinal fungous growth.

**Enteromyco′sis** (*enteron* + *mykes*, fungus). Generation of fungi in the intestines.

**Enteromyi′asis** (*enteron* + *myia*, common fly). Morbid condition of the intestines from larvæ developed in them.

**En′teron.** Intestine. Uterus.

**Enteron′cos** or **Enteron′cus** (*enteron* + *onkos*, tumor). Tumor of the intestines.

**Enteroner′via** or **Enteroneu′ria**, (*enteron* + *nervus* or *neuron*, nerve). Morbid condition of the intestines from disturbed action of the nerves.

**Enteroparal′ysis.** Paralysis of the intestines.

**Enteropath′ia** or **Enterop′athy** (*enteron* + *pathos*, disease). Disease of the intestines in general.

**Enteroperis′tole** (*enteron* + *peristello*, to contract). Constriction or obstruction of the intestines, from a cause acting either within the abdomen or without it, as in strangulated hernia. Peristaltic action of the intestines.

**Enteroperitoni′tis.** Inflammation of the peritoneal coat of the intestines.

**En′teropexy** (*enteron* + *pexis*, fixation). Fixation of the intestine to the wall of the abdomen by suture, etc.

**Enterophlogo′sis** (*enteron* + *phlogoo*, to inflame). Enteritis.

**Enterophthi′sis** (*enteron* + *phthisis*, consumption). Tuberculosis of the bowels.

**Enterophy′mata** (sing. enterophyma) (*enteron* + *phyma*, swelling). Tubercles of the intestines.

**Enteroplas′tic.** Relating to enteroplasty.

**En′teroplasty** (*plasso*, to form). Plastic operation for restoration of the intestine.

**Enterople′gia.** Paralysis of the intestine.

**En′teroplex.** Instrument for use in enteroplexy.

**En′teroplexy** (*enteron*, intestine, *plexis*, pleating). Operation for bringing the edges of a wounded bowel together by aluminum rings, after proper adjustment of the cut surfaces.

**Enteropneumato′sis** (*enteron* + *pneuma*, air). Morbid generation and accumulation of intestinal gas.

**Enterop′onus** (*enteron* + *ponos*, pain). Enteralgia.

**Enteroproc′tia.** Artificial anus. Colostomy.

**Enteropto'sis** (*enteron* + *ptosis*, falling). Glénard's disease. Falling or dragging down (prolapse) of the bowel from relaxed condition or decreased tension of the walls of the abdomen, frequently with movable kidney or liver and narrowness of the bowel.

**Enterop'yra** (*enteron* + *pyr*, fever). Enteritis. **E. asiat'ica**, cholera asiatica. **E. bilio'sa**, bilious fever.

**Enterorrha'gia** or **Enteror'rhagy** (*enteron* + *rhage*, rupture). Hemorrhage or excessive discharge from the bowels. **Sim'ple e.**, discharge of blood with the fecal evacuations.

**Enteror'rhaphy** (*enteron* + *rhaphe*, suture). Suture of the intestines, for repairing wounds.

**Enterorrheu'ma** (*enteron* + *rheuma*, defluxion, rheumatism). Rheumatism of the intestines.

**Enterorrhex'is.** Rupture of the intestines.

**Enterorrhœ'a** (*enteron* + *rheo*, to flow). Diarrhœa.

**Enterosar'cocele** (*enteron* + *sarx*, flesh, *kele*, tumor). Intestinal hernia complicated with sarcocele.

**Enterosarco'ma** (*enteron* + *sarx*, flesh). Sarcoma of the intestines.

**Enteros'cheocele** or **Enteros'chocele** (*enteron* + *oscheon*, scrotum, *kele*, tumor). Scrotal hernia of the intestine.

**Enteroscir'rhus.** Scirrhous cancer of the intestines.

**En'teroscope** (*enteron* + *skopeo*, to see). Instrument for inspection of the bowel by the aid of reflected light, the process being called *enteros'copy.*

**Enterosep'sis** (*enteron*, intestine, *sepsis*, putrefaction). Sepsis of intestinal origin, from the poisonous effects of the production and absorption of putrefactive ptomains developed from the contents of that canal. Intestinal toxæmia.

**Entero'sis.** Disease of the intestines.

**En'terospasm.** Spasmodic colic.

**Enterosphig'ma** (*enteron*, intestine, *sphingo*, to bind tightly). Intestinal constriction; strangulated hernia.

**Enterosphinx'is.** Formation of enterosphigma.

**Enterosphongio'ma** (*enteron* + *sphongos*, fungus). Fungous growth of the intestines.

**Enterosteno'sis** (*enteron*, intestine, *stenosis*, stricture). Stricture or constriction of the intestines; ileus. **E. organ'ica**, cancer of the intestines. **E. scirrho'sa**, cancer of the intestines. **E. vol'vulus**, ileus.

**Enteros'tomy** (*enteron* + *stoma*, mouth). Operation for making a fistulous opening in the bowel by incision and suture.

**En'terotome** (*enteron* + *tome*, incision). Instrument for promptly opening the intestinal canal through its whole extent, for autopsies. **Dupuytren's' e.**, clamp used in artificial anus to cut through the spur.

**Enterot'omy.** Dissection of the intestines. In surgery, operation of cutting into the intestines in order to evacuate the matters or to create an artificial anus.

**Enteroty'phus.** Typhoid fever.

**Enterovag'inal.** Intestinovaginal; relating to the intestine and vagina, as e. fistula, artificial opening between the two parts mentioned.

**Enterozo'a** (*enteron* + *zoön*, animal). Intestinal worms or other animal parasites.

**Enteru'ria** (*enteron*, intestine, *ouron*, urine). Discharge of urine by the bowels.

**Enthelmin'tha** (*entos*, within, *helmins*, worm). Intestinal worms.

**Entheoma'nia** (*Theos*, God). Demonomania; religious mania.

**Enthet'ic** (*enthetos*, introduced). Introduced from without; as enthetic diseases, those produced by inoculation or infection.

**En'thlasis** (*en*, in, *thlao*, to break). Fracture, especially of the cranium, with comminution, in which the bone is depressed.

**Enthu'siasm.** Term sometimes applied to maniacal raving.

**Enthysterophy'ma** (*entos*, within, *hystera*, uterus, *phyma*, growth). Abnormal growth in the uterus or projecting into it.

**En'tity** (*ens*, being). Being or essence of anything.

**Ento-** (*entos*, within). In composition, within.

**En'toblast** (*blastos*, germ). Rudimentary hypoblast. Nucleolus.

**Entoblas'tic.** Relating to the entoblast. Hypoblastic.

**Entocarot'id.** Internal carotid artery.

**Ent'ocele** (*entos*, within, *kele*, rupture). Internal hernia. **E. of the lens**, dislocation of the crystalline into the anterior chamber of the eye.

**Entocephal'ic** (*entos*, within, *kephale*, head). Intracranial.

**Entochoroide'a.** Inner layer of the choroid membrane.

**Entocine'rea** (*entos*, within, *cinereus*, gray). Central gray matter of the brain and spinal cord.

**Entocœ'lial.** Between the ventricles of the brain; intraventricular.

**Entocœ'lic** (*koilia*, cavity). Intra-abdominal Within the intestines.

**Entocor'nea.** Membrane of Descemet.

**Entocu'neiform.** Internal cuneiform bone.

**En'tocyte.** Within a cell. Contents of a cell.

**En'toderm** (*entos*, within, *derma*, skin). Internal germ layer; hypoblast; blastoderm.

**Entoder'mic.** Relating to the entoderm. Hypoblastic.

**Entoëc'tad.** From within outward.

**Entogas'tric** (*entos*, within, *gaster*, stomach). Within the stomach or abdomen.

**Entogastrocne'mius.** Gastrocnemius internus muscle.

**Entog'enous** (*entos*, within, *gennao*, to produce). Developing from within.

**Entoglos'sal** (*entos*, within, *glossa*, tongue). Within the substance of the tongue.

**Entoglute'us.** Glutæus minimus muscle.

**Entohy'aloid.** Within the vitreous humor. **E. mus'cæ**, see *Metamorphopsia.*

**En'tome** (*tome*, incision). Scarificator for stricture of the urethra.

**En'tomere** (*entos*, within, *meros*, part). Cell resulting from early segmentation of the ovum, entering afterward into formation of the hypoblast.

**Entomi'asis** (*entomon*, insect). Disease caused by insects.

**Ento'mion.** Anterior point of the mastoid angle of the parietal bone.

**Entomol'ogy** (*entomon*, insect, *logos*, discourse). Description of or treatise on insect life.

**Entomo'sis.** An affection of the skin due to animal parasites, as lice, fleas, etc.

**Entomot'omy.** Insect anatomy.

**Enton'ic** (*en*, in, *tonos*, tone). Having great tension or exaggerated action.

**Entopar'asites.** Intestinal worms.

**Entopar'asitism.** Existence or presence of a parasite in the interior of the body or of any organ.

**Entopectora'lis.** Inner pectoral muscle; pectoralis minor.

**Entophthal'mia.** Ophthalmia affecting the interior of the eye.

**En'tophyte** (*entos*, within, *phyton*, vegetable). Vegetable parasite living in the interior of the body.

**Entophyt'ic.** Of or belonging to an entophyte.

**Entop'ic** (*en*, in, *topos*, place). In a natural place. **E. preg'nancy**, intra-uterine pregnancy.

**En'toplasm.** Endoplasm.

**Entoplas'tic** (*entos*, within, *plasso*, to form). Epithet for tissues developed through changes within the cells themselves.

**Entopterygoid**, ent-o-ter'e-goid. Internal alæ or wings of the sphenoid; internal pterygoid muscle.

**Entop'tic** or **Entop'tical** (*entos*, within, *opsis*, vision). Relating to the vision of objects within the organ of sight, as of the blood-vessels of the retina. **E. phenom'ena**, phenomena depending upon perception of objects which are present within the eyeball.

**Entoptos'copy** (*entos*, within, *ops*, eye, *skopeo*, to see). Examination of the interior of the eye.

**Entor'bital.** On the inner side of the orbit or orbital lobes.

**Entoret'ina.** Inner layer of the retina.

**Entor'ganism.** Entoparasite.

**Entorrhi'nal** (*entos*, within, *rhis*, nose). Intranasal.

**En'tosarc.** Endosarc.

**Ent'oscope.** Endoscope.

**Entosphe'noid.** On or to the inner side of the sphenoid bone. **E. bone,** anterior sphenoid bone of fishes.

**Entosteomy'ces** (*entos*, within, *osteon*, bone, *mykes*, fungus). Fungus growth in the interor of a bone.

**Entos'thoblast** (*entosthe*, from within, *blastos*, germ). Granule within a cell nucleolus; entoblast.

**Entosto'sis** (*entos*, within *osteon*, bone). Enostosis.

**Entosyl'vian.** Within the fissure of Sylvius.

**Entotento'rial.** To the inner side of the tentorial convolution or fissure.

**Entothal'amus.** Inner gray thalamic zone.

**Entot'ic** (*entos*, within, *ous*, ear). Within the ear; relating to the internal ear.

**Entotrochan'ter.** Trochanter minor of the femur.

**Entotympan'ic.** Within the tympanum.

**Entozæ'na** (*entos*, within + *ozæna*). Ozæna.

**Entozo'a** (*entos*, within, *zoön*, animal) (pl. of entozoon). Animal parasites living in the interior of other animals. See *Parasites* and *Worms*.

**Entozo'al.** Relating to entozoa.

**Entozoa'ria.** Entozoa. See *Parasites* and *Worms*.

**Entozoögen'esis** (*entozoa* + *genesis*, generation). Helminthiasis.

**Entozoöl'ogy** (*entozoa* + *logos*, description). Helminthology.

**Entozoö'ma.** Tumor made up of entozoa cysts, as the ecchinococcus.

**Entozo'ön.** See *Entozoa*. **E. folliculo'rum,** Acarus or Demodex folliculorum.

**En'trails** (*enteralia*, word of low Latin, from *enteron*, intestine). The bowels or intestines.

**Entrichi'asis.** Trichiasis. See *Entropion*.

**Entricho'ma** (*en*, in, *thrix*, hair). Tarsal cartilage, and the edge of the eyelids, in which the cilia are implanted. Trichiasis. See *Entropion*.

**Entro'pion** or **Entro'pium** (*en*, in, *trepo*, to turn). Inversion of the eyelids, so that the eyelashes irritate and inflame the globe of the eye, giving rise to the affection called *trichiasis*. **E. muscula're,** e. of the eyelid from irritation of the cornea or conjunctiva, or affection of the ball producing contraction of the orbicularis muscle. **E. palpebra'le,** e. of the eyelid. **E. seni'le,** e. caused by shrinking of the eyeball in old persons. **E. spasmod'icum** or **spas'ticum,** e. musculare. **E. tarsa'le,** e. of the eyelid, the tarsus being mainly implicated from chronic conjunctivitis of the lids.

**Entro'pionize.** To roll the eyelid inward or invert it.

**Entypo'sis.** Glenoid cavity of the scapula.

**Enu'cleate.** To remove a part, as a tumor or the eyeball, entire.

**Enuclea'tion** (*enucleo*, to take out a kernel). Operation of removing tumors, eyeball, etc., by detaching them from their connections, without cutting into them.

**Enu'cleator.** Instrument for performing enucleation.

**En'ula.** Inula. **E. campa'na,** Inula helenium.

**Enu'lon** (*en*, in, *oulon*, the gum). Inner part of the gums.

**Enure'sis** (*en*, in, *oureo*, to void the urine). Involuntary discharge of urine; incontinence of urine. It is common in advanced life, and may depend on the irritability of the bladder, distention or injury of the fibres about its neck, or paralysis of the organ, the presence of a calculus, renal disease, pressure exerted on the bladder by a distended womb or a tumor, or injury caused by a difficult labor. It also occurs frequently in children; in boys an elongated or adherent prepuce is a common cause. **E. noctur'na,** nocturnal incontinence of urine. **E. spas'tica,** e. dependent upon spasm of the bladder.

**En'velope.** Any enclosing membrane or tissue. **Fe'tal e.,** chorion and amnion. **Nu'clear e.,** see *Nuclear*.

**Envi'ronment.** Influences or surroundings affecting the life of an individual.

**Enzo'ön.** Entozoon.

**Enzoöno'mia** (*enzoon* + *nomos*, law). Natural history of entozoa.

**Enzoöt'ic.** Endemic, in relation to animal diseases. **E. paraple'gia,** grass staggers of horses.

**En'zyme** (*en*, in, *zyme*, ferment). A chemical or unorganized ferment produced in animal or vegetable organisms. The chief enzymes, according to Brunton, are the following:

TABLE OF ENZYMES.

| | | |
|---|---|---|
| DIASTATIC OR AMYLOLYTIC FERMENTS. | Which convert starch and amyloids into maltose | Diastase from malt.<br>Ptyalin from saliva.<br>Amylopsin from pancreas.<br>Other ferments having a similar action from other parts of the body. |
| | Which convert maltose into glucose. | From small intestine. |
| INVERSIVE FERMENTS. | Which convert cane sugar into dextrose and levulose | Invertin from the intestinal juice.<br>" " mucus of the mouth.<br>" " tissue of the testis. |
| | Which decompose glucosides. | Emulsin from bitter almonds.<br>Myrosin from mustard. |
| | Decomposing sugar | Rennet. |
| | Decomposing fats | From stomach.<br>From pancreas (stearopsin). |
| PROTEOLYTIC FERMENTS. | Which decompose proteids and form peptones | Pepsin from stomach.<br>Trypsin from pancreas.<br>Others from saliva.<br>Histozyme. |

**Enzy'mic.** Enzymotic.

**Enzymol'ogy** (*enzyme*, ferment, *logos*, description). Description of ferments; science of fermentation.

**Enzymo'sis.** Fermentation caused by the presence of an enzyme.

**Enzymot′ic.** Relating to an enzyme. **E. ac′tion,** enzymosis.

**E′osin** (*eos,* dawn). $C_{20}H_8Br_4O_5$. Red dye from coal-tar, used for staining in histology.

**Eosin′ophile** (*eosin, phileo,* to love). Taking eosin stain promptly. **E. gran′ules,** granules in the white blood cells, staining with eosin or other anilin dyes.

**Eosinophil′ia.** See *Eosinophile.* Condition of taking eosin stains promptly. Increase in proportion of eosinophilic leucocytes, observed in many serious pathological conditions, as myxœdema, syphilis, diseases of the sympathetic nervous system, osteomalacia, leukæmia, and other diseases of the bones and their marrow, etc.

**Eosinophil′ic** or **Eosinoph′ilous.** Eosinophile. Staining easily with eosin.

**E′osote.** Creosote valerate or valerianate. Employed in tuberculosis.

**Ep-, Eph-,** or **Epi-** (upon, above). In composition, generally means augmentation, addition, reciprocal action, repetition, situation above.

**Epac′me** (*epi,* upon, *akme,* summit). Increased activity; exacerbation (of fever or other disease).

**Epac′tal** (*epaktos,* acquired). Adventitious. **E. bone,** interparietal or Wormian bone.

**Epagogii′tis** (*epagogion,* prepuce). Inflammation of the prepuce.

**Epago′giolith** (*epagogion,* prepuce, *lithos,* stone). Preputial calculus.

**Epago′gium.** Phimosis.

**Epanadiplo′sis** (*epi,* upon, *anadiplosis,* redoubling). Redoubling occurring in a paroxysm of an intermittent when its type is double.

**Epanalep′sis** (*epi,* upon, *analepsis,* convalescence). Convalescence.

**Epanas′tasis** (*epanistemi,* to cause to rise up). Formation of a tumor. Breaking out of an eruption. Pustule.

**Epanaste′ma.** Exanthem. Swelling. Pustule.

**Epane′sis** (*epaniemi,* to remit). Remission.

**Epanortho′sis** (*epi,* upon, *anorthoo,* to make straight). Restoration to health or to normal place or condition.

**Epanthe′ma** (*epi,* upon, *anthos,* flower). Exanthem.

**Epapil′late.** Devoid of papillæ.

**Epapoph′ysis.** The median process on the dorsal aspect of a vertebra in some animals; opposite to hypapophysis.

**Eparte′rial** (*epi+arteria*). Above an artery. **E. bron′chus,** portion of right bronchus given off above place of crossing of the pulmonary artery.

**Epax′ial** (*epi+axis*). Above the axis; episkeletal; opposed to hypaxial. **E. arch′es,** arches formed by pedicles, laminæ, and spine of vertebra. **E. car′tilages,** cartilages designed to become afterward vertebral arches. **E. mus′cles,** muscles formed above the spinal axis, as the internal portion of the erector spinæ and muscles continuous with it.

**Epechonto′cic** (*epecho,* to restrain, *tokos,* parturition). Restraining the contractile action of the uterus.

**Epen′cephal.** Epencephalon.

**Epencephal′ic** (*epi,* upon, *enkephalos,* brain). Above the brain; relating to the epencephalon. **E. arch,** neural arch of the occipital vertebra.

**Epenceph′alon.** One of two primary divisions of the posterior vesicle, consisting of cerebellum and pons Varolii, with upper portion of fourth ventricle.

**Epen′chyma** (*epi,* upon, *enchyma,* blastema). Tissue superimposed over another, as mucous membrane; fibrovascular tissue.

**Epen′dyma** or **Epen′dymus** (upper garment or cloak). Membrane. **E. ventriculo′rum,** lining membrane of the ventricles of the brain and spinal canal, formed by a prolongation of the pia mater.

**Ependymi′tis.** Inflammation of the ependyma.

**Ephebol′ic** (*ephebos,* a youth). Relating to puberty.

**Ephebol′ogy.** The science of puberty and of the morphological and pathological changes occurring at that period of life.

**Eph′edra.** A genus of shrubs growing in the desert regions of the western United States and northern Mexico. **E. andi′na,** Pingo-pingo; small roots are diuretic, and used in affections of the bladder. **E. antisyphilit′ica,** teamster's tea; canutillo; shrub of W. United States, used in venereal diseases. **E. distach′ya** shrubby horsetail; plant of Europe, berries of which are used in diarrhœa and excessive menstrual discharge. **E. equiseti′na,** species growing in Asia; used in syphilis. **E. fla′va,** species from Asia; diaphoretic and astringent. **E. frag′ilis,** species of S. Europe and Africa; astringent. **E. marit′ima,** E. distachya. **E. monostach′ya** or **polygonoi′des,** species of E. Europe and N. Asia; diaphoretic. **E. trifurca′ta,** shrub used in gonorrhœa, leucorrhœa, and diseases of the kidney. **E. vulga′ris** steppe raspberry of Russia; used in rheumatism and syphilis.

**Ephed′rana** (*epi,* upon, *hedra,* seat). Nates.

**Ephedrine′.** Alkaloid derived from Ephedra vulgaris; the hydrochloride is used to dilate the pupil. Also a cardiac depressant.

**Ephe′lis** pl. ephel′ides (*epi,* upon, *helios,* sun). Freckles; sun-spots; sunburn. Yellow lentigines appearing on persons of fair skin, and larger brown patches also arising from exposure to the direct rays of the sun. Similar dusky patches may occur on parts constantly covered. See *Chloasma, Lentigo,* and *Epichrosis.* **E. al′ba,** vitiligo; achroma. **E. gravida′rum,** chloasma gravidarum. **E. hepat′ica,** chloasma hepaticum. **E. lenticula′ris,** lentigo. **E. lu′tea,** icterus neonatorum. **E. sola′ris,** freckles; chloasma caloricum. **E. umbro′sa,** chloasma.

**Ephelko′sis** (*epi,* upon, *helko,* to draw). Operation of pulling or drawing upon an organ, as the uterus, thus utilizing it for closure of a fistula or ruptured septum. See *Hysteroephelkosis.*

**Ephem′era** (*epi,* upon, *hemera,* day). That which continues a day. Epithet given to diseases, particularly fevers, which last only a day or a very short time, as ephemeral or simple fever. The term prolonged ephemera is used for fevers which cease after two or three days' duration. **E. an′glica pes′tilens, britan′nica,** or **malig′na,** sudor anglicus. **E. mortif′era,** plague. **E. pestilentia′lis,** plague. **E. puerpera′lis,** weed; fever occurring a few days after delivery, generally accompanied by diminution of milk and of the lochia. **E. sudato′ria,** sudor anglicus.

**Ephem′eral.** Lasting for a day; transitory, as ephemeral fever or ephemeral mania.

**Ephem′eron.** Colchicum autumnale.

**Ephial′tes** (*epi,* upon, *allomai,* to leap). Nightmare; incubus.

**Ephidro′sis** (*epi,* upon, *hidroo,* to sweat). Sweating; critical sweat; copious sweat. **E. areno′sa,** perspiration which leaves, on drying, particles like sand. **E. cæru′lea,** blue-colored sweat, a form of chromidrosis. **E. cruen′ta,** sweating of blood; sudor anglicus. **E. dis′color,** colored sweat. **E. of the eye′lids,** hyperidrosis of the sweat-glands of the eyelids. **E. fla′va,** yellow sweat, form of chromidrosis. **E. idiopath′ica,** hyperidrosis. **E. lac′tea,** milky sweat; galactidrosis. **E. mel′lea** or **oleagino′sa,** sweat resembling honey; seborrhœa oleosa. **E. o′leus,** sweat having an unusual odor. **E. partia′lis,** local sweating. **E. profu′sa,** excessive or colliquative sweating, generally owing to debility, and requiring the use of tonics, especially of the mineral acids, opium, etc. **E. sacchara′ta,** discharge of saccharine matter by perspiration, as in diabetes mellitus. **E. spontan′ea,** hyperidrosis. **E. tinc′ta,** chromidrosis. **E. urino′sa,** urinous sweating. **E. vir′idis,** green sweat, as in the axillæ.

**Ephip′pial.** Relating to the ephippium or sella turcica. **E. an′gle,** sphenoidal angle.

**Ephip′pium** (*ephippios,* relating to a horse). Sella turcica.

**Epi′an.** Frambœsia.

**Ep′iblast** (*epi*, upon, *blastos*, germ). External germ layer, or upper layer of blastoderm, from which the nerve centres and epidermis are developed. Ectoderm. **Neu′ral e.**, portion of the epiblast from which the nervous system is developed.

**Epiblas′tic.** Relating to the epiblast. **E. sphere,** ectomere.

**Epibleph′aron.** Duplication or fold of the upper lid near the inner canthus of the eye; epicanthis.

**Epib′ole** (*epiballo*, to cast upon). Epiboly. Incubus.

**Epibol′ic.** Investing, as **E. mem′brane,** investing membrane.

**Epib′oly.** Development of gastrula when the outer germ layer grows over and encloses the yolk. Epibole.

**Epibul′bar.** Upon the eyeball. Epithet applied to tumors growing on the outer surface of the eye.

**Epican′this** or **Epican′thus** (*epi*, upon, *kanthos*, angle of the eye). Defective formation in which a fold of skin passes from the root of the nose over the inner canthus of the eye. In the plural, *epicanthides* —the angles of the eye.

**Epicar′dium** (*epi*, upon, *kardia*, the heart). Visceral layer of the pericardium.

**Ep′icele.** Epicœle.

**Epicen′tral.** Upon or attached to the centre of a vertebra.

**Epiceph′alus.** Epicomus.

**Epicer′ebral.** Above or over the brain, that is, below the pia mater.

**Epich′olous** (*epi*, upon, *chole*, bile). Bilious.

**Epichor′dal** (*epi*, upon, *chorde*, cord). Above the notochord.

**Epichor′dis** (*epi*, upon, *chorde*, gut). Mesentery.

**Epicho′rial.** Relating to the epichorion.

**Epicho′rion** or **Epicho′rium** (*epi*, upon, *chorion*, skin). Decidua reflexa; epidermis.

**Epichro′sis** (*epi*, upon, *chroma*, color). Simple discoloration of the skin. Ephelides. **E. alpho′sis,** albinism. **E. auri′go,** peculiar yellowish color of the skin of newborn children; jaundice of the newborn. **E. ephe′lis,** see *Chloasma*. **E. lentic′ula,** lentigo. **E. leucas′mus,** partial privation of color of the skin. **E. partia′lis,** liver spot; partial discoloration of the skin. **E. pescil′ia,** partial loss of the color of the skin. **E. spi′lus,** mote, see *Nævus*.

**Ep′icœle** or **Epicœ′lia** (*epi*, upon, *koilia*, cavity). Fourth ventricle.

**Epicol′ic** (*epi*, upon, *colon*). On the colon. *Epicolic regions* are those parts of the abdomen corresponding to the colon.

**Epico′ma** or **Epico′mus** (*epi*, upon, *kome*, hair). Double monstrosity in which the two individuals are united by the head. See *Cephalopagus parasiticus*. The monster is called an *ep′icome*.

**Epicondylal′gia.** Pain in the region of the epicondyle of the humerus.

**Epicon′dylar.** Relating to the epicondyle. **E. mus′cles,** muscles connected by a single tendon with the epicondyle.

**Epicon′dyle** (*epi*, upon, *kondylos*, condyle). Eminence at the outer part of the inferior extremity of the os humeri, so called because it is seated above the condyle. It gives attachment to the outer lateral ligament of the elbow-joint, and to a very strong tendon, to which several muscles of the posterior part of the forearm are attached.

**Epicondylo-cubita′lis.** Anconeus.

**Epicondylo-cu′bito-metacar′pal mus′cle.** Extensor carpi ulnaris.

**Epicondylo-inter′na.** Internal condyle of the humerus.

**Epicondylo-phalangettia′nus commu′nis.** Extensor communis digitorum.

**Epicondylo-præmetacarpe′us.** Extensor metacarpi magnus.

**Epicondylo-radia′lis.** Supinator radii brevis.

**Epicondylo-suprametacarpia′nus.** Extensor carpi radialis brevior.

**Epicondylo-supraphalangettia′nus.** Extensor communis digitorum. **E.-s. min′imi dig′iti,** extensor minimi digiti.

**Epicon′dylus.** Epicondyle. **E. extenso′rius** or **exter′nus,** external condyle of the humerus. **E. flexo′rius,** epitrochlea; internal condyle of the humerus. **E. inter′nus,** epitrochlea. **E. latera′lis,** external tuberosity of the humerus; see *Epicondyle*. Inner tuberosity of the thigh-bone. **E. media′lis,** epitrochlea.

**Epicor′acoid.** Upon the coracoid process. **E. bone,** coracoid bone of fishes, so placed as to obtain the name *postclavicle*.

**Epicos′tal** (*epi*, upon, *costa*, rib). Upon a rib or ribs.

**Epicra′nial.** Relating to the epicranium. Upon the skull. **E. aponeuro′sis,** membrane or aponeurosis covering almost the entire surface of the head. **E. mus′cle,** occipitofrontalis muscle.

**Epicra′nium** (*epi*, upon, *kranion*, cranium). Name given to different parts seated on the cranium, as skin aponeurosis between the occipital and frontal muscles, and the whole scalp. Some include under this name the occipitofrontalis muscle, pyramidalis nasi, and the superior and anterior auricular muscles. Pericranium.

**Epicra′nius.** Occipitofrontalis alone, or with the auricularis muscle. **E. fronta′lis,** frontalis; subcutaneous muscle of the frontal region. **E. occipita′lis,** occipitalis muscle. **E. tempora′lis,** attrahens aurem.

**Epic′risis.** Crisis occurring in disease subsequent to the main crisis.

**Epicru′sis** (*epi*, upon, *krouo*, to strike). Percussion; flagellation; massage by percussion.

**Epicye′ma** or **Epicye′sis** (*epi*, upon, *kyo*, to conceive). Superfœtation; mole.

**Epicys′tic** (*epi*, upon, *kystis*, bladder). Above or upon the bladder.

**Epicysti′tis.** Inflammation of the tissues over the bladder.

**Epicystot′omy** (*epi*, upon, *kystis*, bladder, *tome*, incision). Opening the bladder above the pubes; suprapubic cystotomy. See *Lithotomy*.

**Ep′icyte** (*epi*, upon, *kytos*, cell). Cell wall.

**Epidem′ic** (*epi*, upon, *demos*, people). Prevailing simultaneously, but not habitually, among a large number of persons in a locality. Also a disease which prevails epidemically, or the state of prevalence of such disease. **E. disease′,** a disease which attacks simultaneously or nearly so a large number of persons in a given locality. It differs from an endemic disease in that the latter prevails habitually in the place, whereas an epidemic disease is temporary in its visitation.

**Epidemic′ity.** The state of being epidemic.

**Epidemiog′raphy.** Description of epidemics.

**Epidemiolog′ical.** Relating to epidemiology.

**Epidemiol′ogy.** The science of epidemics.

**Ep′idemy.** Epidemic disease.

**Epiden′dron** or **Epiden′drum.** A genus of orchids. **E. auricula′tum,** species of orchid in Chile; anthelmintic and galactagogue. **E. bid′idum,** cathartic, diuretic, and anthelmintic. **E. cauda′tum,** of West Indies, is antispasmodic, as is **E. cochlea′tum. E. lu′teum,** grows in Chile; galactagogue. **E. obtusifo′lium,** anthelmintic. **E. spathula′tum,** East Indian orchid; astringent and expectorant; leaves are emollient. **E. tenuifo′lium,** externally, anodyne; internally, astringent. **E. vanil′la,** see *Vanilla*.

**Ep′iderm** or **Epider′ma** (*epi*, upon, *derma*, skin). Epidermis; epiblast.

**Epider′mal.** Relating to or composed of epidermis. See *Epidermatic*. **E. appen′dages,** parts originating from the epidermis, as hair, nails, horns, etc.

**Epider′mata** or **Epidermo′mata.** Class of outgrowths from the external integument, including warts, corns, corneous tumors, bunions, etc.

**Epidermat′ic, Epider′meous, Epider′mic, Epider′mal.** Belonging or relating to the epidermis. *Epidermic medication* is the administration of remedies through the skin without breaking its surface. **E. cells,** see *Cell.* **E. spheres,** conical collections of epithelial cells seen in certain forms of cancer.

**Epidermidaliza'tion.** Change of columnar into laminar epithelium.

**Epidermidol'ysis** (*epidermis* + *lysis*, a loosening). Epidermolysis. Detachment of the epidermis from the corion, as after application of a blister.

**Epidermidomyco'sis** (*epidermis* + *mykes*, fungus). Parasitic cutaneous disease in general.

**Epidermidoph'yton.** Epidermophyton.

**Epidermido'sis.** Disease of the epidermis.

**Epider'mis** (*epi*, upon, *derma*, the skin). Scarf skin; cuticle. Transparent, dry, thin membrane, devoid of nerves and vessels, covering the surface of the body, except parts corresponding to the nails. It is a stratified cellular structure, with a large number of cell strata, and adherent to the dermis, which it protects, and prevents immediate contact of bodies with the nervous papillæ, and consequently deadens tactile impressions which without its intervention might be painful. Four layers are distinguished, called from within outward stratum mucosum, stratum granulosum, stratum lucidum, and stratum corneum. **E. lin'guæ,** see *Tongue.*

**Epidermiza'tion.** Forming of epidermis.

**Epider'moid** (*epidermis* + *eidos*, resemblance). Resembling the epidermis.

**Epidermol'ysis.** Epidermidolysis. **E. bullo'sa,** acantholysis bullosa.

**Epider'mophyte** (*epidermis* + *phyton*, vegetable). Vegetable parasite of the skin.

**Epidermoph'yton.** Microsporon furfur. **E. galli'næ,** fungus like Achorion schœnleinii, producing favus in fowls.

**Epider'mose.** Substance procured from fibrin by the action of dilute muriatic acid.

**Epidermo'sis.** Morbid condition of the epidermis and its appendages.

**Epider'rhion** or **Epider'rhis** (*epi*, upon, *derrhis*, skin). Nymphæ; clitoris or its prepuce.

**Epiderrhi'tis.** Inflammation of the clitoris or nymphæ.

**Epidid'ymal.** Relating to the epididymis.

**Epididymec'tomy** (*ektome*, excision). Excision of the epididymis.

**Epidid'ymis** (*epi*, upon, *didymos*, testicle). Small, oblong, vermiform, grayish body lying along the superior margin of the testicle. The epididymis is a canal formed by the union of all the seminiferous vessels folded several times upon themselves, after having traversed the corpus highmorianum. Its lower portion or tail, *cauda* or *globus* or *caput minor*, is curved upward, and is continuous with the vas deferens; the opposite extremity is called the head, *globus* or *caput major*.

**Epididymi'tis.** Inflammation of the epididymis, usually consequent on gonorrhœa or chronic inflammation of the urethra.

**Epidu'ral.** Upon the dura mater. **E. space,** space between the dura mater of the spinal cord and the periosteal layer of the vertebral canal.

**Epienceph'alon.** Epencephalon.

**Epifa'gus america'nus.** Orobanche virginiana.

**Epifolliculi'tis.** Inflammation of the epidermis and hair follicles, especially of the scalp.

**Epigæ'a, Epige'a,** or **Epigi'a re'pens.** Trailing arbutus, ground laurel, Mayflower, gravel plant; small, trailing plant growing in North America. The leaves and stems are used like uva ursi.

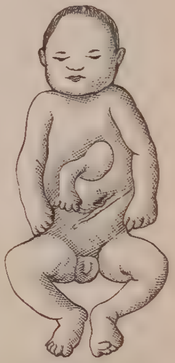
**Epigas'ter.** Embryonic intestine from which the colon is developed. The hind-gut.

**Epigastral'gia** (*epigastrium* + *algos*, pain). Pain at the epigastrium.

**Epigas'tric** (*epi*, upon, *gaster*, stomach). Relating to the epigastrium. **E. ar'tery** arises from the external iliac, on a level with the crural arch; sometimes by a trunk proper to it, at others by one common to it and the obturator artery. It ascends upward and inward behind the spermatic cord, follows the outer edge of the rectus abdominis muscle, and anastomoses toward the umbilicus with the internal mammary. It anastomoses, also, with the obturator, spermatic, lumbar, and intercostal vessels. **E. cen'tre,** solar plexus. **E. fold,** fold of peritoneum covering the epigastric vessels. **E. fos'sa,** see *Inguinal fossa.* **E. gland,** small lymphatic gland between the umbilicus and infrasternal fossa. **E. plex'us,** solar plexus. **E. re'flex,** contraction of muscular fibres produced by manipulating or rubbing over a part of the epigastric region. **E. re'gion,** superior region of the abdomen, comprised between the false ribs on each side, and extending from the lower surface of the diaphragm to two fingers' breadth above the umbilicus. It is divided into one middle region, the epigastrium, and two lateral regions, the hypochondria. **E. slip,** brachioabdominalis muscle, arising from the aponeurosis of the external oblique, part of the pectoralis major in man. **E. vein** follows nearly the same course as the artery.

**Epigas'triocele.** Epigastrocele.

**Epigas'trion** or **Epigas'trium.** The epigastric region or pit of the stomach.



Epigastrius parasiticus.

**Epigas'trius.** A monster having an ill-developed fœtus or part of a fœtus attached to the epigastric region.

**Epigas'trocele** (*epi*, upon, *gaster*, stomach, *kele*, tumor). Hernia formed by the stomach, *gastrocele;* especially hernia occurring toward the upper part of the linea alba or the epigastric region, whether formed or not by the stomach.

**Epigastrodid'ymus** (*epi*, upon, *gaster*, stomach, *didymos*, twin). Double monster attached at the thorax.

**Epigene'ma.** Symptom occurring late in a disease. Epigenesis.

**Epigen'esis** (*epi*, upon, *genesis*, generation). An accessory symptom. Also the theory of conception, according to which the new being is created entirely anew, and receives at once from each parent the materials necessary for its formation; the opposite of evolution. Those holding this view are called *epigen'esists.*

**Epiglos'sis.** Epiglottis.

**Epiglottiarytenoidæ'us.** Arytenoepiglottic muscle.

**Epiglot'tic.** Relating to the epiglottis. **E. car'tilage,** epiglottis. **E. glands,** a collection of small glandular granules situated in the adipose areolar texture at the base of the anterior surface of the epiglottis. They pour out an unctuous or mucous fluid, lubricating the epiglottis, keeping it supple and movable, and preventing the larynx from being irritated by the constant passage of air in respiration.

**Epiglotticopalati'nus.** Relating to the epiglottis and soft palate.

**Epiglottid'ean.** Relating to the epiglottis; epiglottic.

**Epiglottideo-arytenoide'us.** Arytenoepiglottic muscle.

**Epiglottidi'tis.** Inflammation of the epiglottis.

**Epiglot'tis** (*epi*, upon, *glossa*, tongue). Epiglottic cartilage; oval elastic fibrocartilage situated at the upper part of the larynx, behind the base of the tongue. By its smaller or lower extremity it is attached to the thyroid cartilage; its two surfaces are covered by the mucous membrane of the pharynx and larynx. The special use of the epiglottis is to cover the glottis accurately at the moment of deglutition, and thus oppose the passage of alimentary substances into the air-tubes.

**Epiglotti'tis.** Inflammation of the epiglottis.

**Epiglou'tis** or **Epiglu'tis** (*epi*, upon, *gloutos*, buttocks). Superior region of the nates.

**Epig′nathus** (*epi*, upon, *gnathos*, jaw). Double monster in which an incomplete fœtus is rooted, with its blood-vessels, to the jaw of one more complete.

**Epig′onal** (*epi*, upon, *gone*, seed). Upon the germ-gland; a term used in embryology.

**Epigon′atis** (*epi*, upon, *gony*, knee). Patella.

**Epig′one** (*epi*, upon, *gone*, seed). Progeny; superfœtation.

**Epigo′nion** or **Epigo′nium.** Fœtus.

**Epihy′al.** Above or upon the hyoid bone. **E. bone,** portion of the stylohyoid ligament sometimes converted into bone, but naturally osseous in some of the lower animals.

**Epihylo′ma.** A tumor derived from the primitive pulp tissue of epiblastic origin. See *Hyloma.*

**Epilaryn′geal.** Upon or above the larynx. Term applied to falsetto voice.

**Epila′tion** (*e*, from, *pilus*, hair). Extraction or removal of hair.

**Epilato′rium** or **Epil′atory.** Depilatory.

**Epilepido′ma.** Tumor originating in tissue derived from the epiblastic lining membrane, or true epiblast. See *Lepidoma.*

**Epilep′sia** or **Epilep′sis.** Epilepsy. **E. cursi′va,** epilepsy attended with a desire to run. **E. drom′ica,** epilepsy choreiform in character. **E. gra′vior,** grand mal, see *Epilepsy.* **E. jacksonia′na,** cortical epilepsy. **E. larva′ta,** masked epilepsy. **E. mit′ior,** petit mal, see *Epilepsy.* **E. noctur′na,** incubus. **E. nu′tans,** nodding spasm occurring in epilepsy in children and accompanied by transient loss of consciousness. **E. pueri′lis,** eclampsia infantum. **E. ret′inæ,** epileptoid amaurosis. **E. saltato′ria,** choreic form of epilepsy in which the patient's gait resembles dancing. **E. saturni′na,** epileptiform, hysteroepileptic, or cataleptic convulsions as a result of lead poisoning. **E. spina′lis,** spinal epilepsy. **E. vasomoto′ria,** e. attended with excessive arterial contraction. **E. vermino′sa,** convulsions due to presence of intestinal worms. **E. vertigino′sa,** epileptic vertigo.

**Ep′ilepsy** (*epilepsis*, seizure). Falling sickness. Cerebrospinal disease, idiopathic or symptomatic, spontaneous or accidental, occurring in paroxysms; characterized by loss of consciousness and convulsive motions of the muscles, with uncertain intervals between attacks. At times, before loss of consciousness occurs, a sensation as of a cold vapor is felt, hence called *aura epileptica.* It appears to rise in some part of the body, proceeds toward the head, and as soon as it has reached the brain the patient falls down. The ordinary duration of a fit is from five to twenty minutes, but it may be protracted for hours. In all cases there is a loss of sensation, sudden falling down, distortion of the eyes and face; red, purple, or violet countenance; grinding of the teeth; foaming at the mouth; convulsions of the limbs; difficult respiration, at times stertorous; with sometimes involuntary discharge of fæces and urine. After the fit the patient may remain for some time affected with headache, stupor, and lassitude. The disease is generally organic, but may be functional and symptomatic of irritation in other parts, as the stomach, bowels, etc. Prognosis as to ultimate recovery is unfavorable; the disease rarely destroys life, but may lead to mental imbecility. To attacks of epilepsy unaccompanied by convulsions the French give the name *petit mal;* they are preceded by vertigo, *cerebral epilepsy.* In the mildest cases the seizures are described as *blanks, faints, forgets, absences, darknesses,* etc., consciousness being, as it were, lost for a few seconds. Fully formed epilepsy is the *grand mal* of the French, *spinal epilepsy.* When furious mania succeeds a paroxysm it is termed mania epileptica and epileptic delirium. **Abor′tive e.,** petit mal, see *Epilepsy.* **Acute′ e.,** eclampsia. **Aud′itory e.,** vertigo or e. due to pressure in the internal ear. **Au′ral** or **Auric′ular e.,** auditory e. **Cen′tral e.,** e. caused by a lesion of the great nervous centres. **Cer′ebral e.,** petit mal, see *Epilepsy.* **Conges′tive e.,** e. caused by hyperæmia. **Cor′tical e.,** epileptiform convulsions in certain regions of the body only, as the muscles of the upper extremity, dependent upon localized lesions of the cortex of the brain; consciousness is retained during the attack. **Curs′ive e.,** e. preceded by a disposition to run. **Diur′nal e.,** form of epilepsy occurring always in day-time. **Eccen′tric e.,** reflex e. **Fo′cal e.,** cortical e. **Hemiple′gic e.,** cortical e. **Hyster′ical e.,** hysteroepilepsy. **Idiopath′ic e.,** e. caused by a morbid condition, such as an anæmic condition of the medulla oblongata and pons Varolii. **Intes′tinal e.,** e. having its origin in a disordered condition of the intestinal canal. **Jackso′nian e.,** cortical e. **Laryn′geal e.,** laryngeal vertigo. **Lead e.,** e. caused by lead poisoning. **Mani′acal e.,** e. with maniacal excitement or disturbed intellection. **Masked e.,** abortive form of epilepsy, or one with other symptoms of the disease than convulsions. **Matu′tinal e.,** form of diurnal epilepsy occurring in the early hours of the day. **Moto′rial e.,** cortical e. **Myoclo′nus e.,** see *Myoclonus.* **Noctur′nal e.,** form of epilepsy occurring always in the night-time. **Par′tial e.** cortical e. **Periph′eral e.,** e. due to reflex irritation. **Procur′sive e.,** cursive e. **Psy′chic e.,** maniacal e.; masked e. **Re′flex e.,** peripheral e. **Re′nal e.,** convulsions accompanying albuminuria. **Ret′inal e.,** epileptoid amaurosis. **Sat′urnine e.,** e. occurring as a symptom of lead poisoning. **Se′nile e.,** e. due to changes and degenerations in the arterial structures in old age. **Sen′sory e.,** e. seated in the sensory portions of the brain and symptomatized by disordered sensations of various kinds, generally without convulsions. **Sleep e.,** narcolepsy. **Spi′nal e.,** epileptiform movements of the lower extremities, dependent on lesions of the spinal cord. **Sympathet′ic e.,** peripheral e. **Symptomat′ic e.,** cortical e. **Syphilit′ic e.,** e. due to syphilis. **Thal′amic e.,** e. dependent on lesion of the thalamus opticus. **Toxæ′mic e.,** convulsions of hæmotoxic or septic origin. **U′terine e.,** hysteroepilepsy; convulsions supposed to be caused by disease of the uterus. **Vasomo′tor e.,** e. attended with excessive arterial contraction.

**Epilep′tic.** Relating to epilepsy; one affected with epilepsy. **E. au′ra,** see *Epilepsy.* **E. cry,** peculiar cry or sound in epilepsy, due to spasm of the larynx. **E. hemiple′gia,** paralysis that occurs after convulsions in some cases of epilepsy. **E. sta′tus,** see *Status.* **E. ver′tigo,** vertigo that occurs during a slight attack of epilepsy, just before an attack of *grand mal,* or substituted for it. **E. zone,** part of the skin of face and neck of guinea-pigs, which when irritated after section of the spinal cord produces epileptiform convulsions.

**Epilep′tiform** or **Epilep′toid.** Resembling epilepsy in symptoms or manner of occurrence.

**Epileptig′enous.** Epileptogenous. **E. zone,** epileptic zone.

**Epileptogen′ic** or **Epileptogenous,** ep-e-lep-toj′-en-us (*genesis*, generation). Producing epilepsy, as **E. re′gion,** a zone or region of the cutaneous surface, which when irritated gives rise to convulsions.

**Epilo′bium.** A genus of herbs of the order *Onagraceæ.* **E. angustifo′lium,** or **antonia′num;** rose willow or bay; great willow herb; indigenous plant; root is emollient and slightly astringent and tonic. **E. colora′tum,** purple-veined willow herb; has similar properties. **E. spica′tum,** E. angustifolium. **E. villo′sum,** S. African plant, used at the Cape of Good Hope as a domestic remedy for cleansing foul ulcers.

**Ep′ilose** (*e*, from, *pilus*, hair). Bald; without hair.

**Epimandib′ular.** Upon the lower jaw; a bone of certain vertebrates is so called.

**Epime′nia.** Catamenia.

**Epimenophaco′sis** (*epimenios*, monthly, *phakosis*, freckled condition). Chronic lentigo.

**Epimor′ios** (*epi*, upon, *meiro*, to divide). Unequal, as the pulse.

**Epim′ylis** (Gr.). Patella.

**Epimys′ium** (*epi*, upon, *mys*, muscle). The sheath of areolar tissue investing a muscle.

**Epinarthe′cia** (*epi*, upon, *narthex*, splint). Suspensive treatment of fracture by anterior splint.

**Epineme′sis** (*epinemo*, to divide). Dispensation; distribution.

**Epineph′elos** (*epi*, upon, *nephele*, cloud). Presenting a cloud; urine, for example.

**Epinephrin′.** A powder prepared from the adrenal gland; possesses marked vasoconstrictor powers.

**Epinephri′tis** (*epinephros*, adrenal body). Inflammation of suprarenal capsule.

**Epineu′ral** (*epi*, upon, *neuron*, nerve). Upon or attached to the neural arch or spine of a vertebra.

**Epineu′rial.** Relating to the epineurium.

**Epineu′rion** or **Epineu′rium** (*epi*, upon, *neuron*, nerve). Cellular sheath of a nerve.

**Epino′tion** (*epi*, upon, *notos*, back). Scapula.

**Epinyc′tides** (pl. of epinyctis) (*epi*, upon, *nyx*, night). Eruptions which appear on the skin in the night and disappear in the day. **E. prurigino′sa**, urticaria.

**Epionychium**, ep-e-o-nik′e-um (*epi*, upon, *onyx*, nail). Membrane seen upon the nails in early fetal life and disappearing before birth.

**Epiot′ic** (*epi*, upon, *ous*, ear). Over or above the ear. **E. cen′tre**, centre of ossification for the temporal bone.

**Epipac′tis.** A genus of orchids. **E. latifo′lia**, European orchid, the root of which is antiarthritic. **E. unilatera′lis**, orchid of Chile, used in dysuria.

**Epipar′oxysm.** Paroxysm superadded to ordinary paroxysm.

**Epipas′tic** (*epipasso*, to sprinkle). Relating to an *epipastus*, or dusting-powder.

**Epipedom′eter** (*epipedos*, plane, *metron*, measure). Instrument for measurement of angles in deformed limbs made by planes of the body and limbs.

**Epipharyn′geal** (*epi*, upon, *pharynx*). Above or upon the pharynx.

**Epiphe′gus.** A genus of plants of the order *Orobanchaceæ*. **E. america′na** or **virginia′na**, beech drops; Orobanche virginiana.

**Epiphenom′enon** (*epiphaino*, to appear). Adventitious symptom occurring during the progress of an affection, and not as intimately connected with it as the symptoms properly so called.

**Epiph′lebos** (*epi*, upon, *phleps*, vein). An epithet given to those whose veins are very apparent.

**Epiphle′gia** (*phlego*, to inflame). Inflammation.

**Epiph′logism.** Pustule; herpes; dermatitis.

**Epiphlogo′sis.** A high degree of inflammation.

**Epiph′ora** (Gr., a defluxion). Weeping, watery eye. Involuntary and constant flow of tears upon the cheek; usually symptomatic of disease of the lacrymal passages, and occurring when the tears cannot pass into the ductus ad nasum. Occasionally it is owing to the tears being secreted in too great quantity, as in ophthalmia. Morbid flux. **E. al′vi**, diarrhœa. **E. epid′rome**, ophthalmia. **E. lacryma′lis**, epiphora. **E. lac′tea**, galactorrhœa. **E. ptyalis′mus**, salivation.

**Epiphy′mata**, pl. of epiphyma (*epi*, upon, *phyo*, to grow). Cutaneous diseases.

**Epiph′ysal** or **Epiphys′ial.** Epiphyseal.

**Epiphys′eal.** Relating to a bony epiphysis or the epiphysis cerebri. **E. disjunc′tion** or **separa′tion**, a traumatic separation of the epiphysis of a bone before it is completely solidified. **E. disk**, flat epiphysis on the body of a vertebra. **E. line**, line of union of epiphysis and diaphysis. **E. nerves**, small nerves from the anterior crural distributed to the lower epiphysis of the thigh-bone.

**Epiphyseol′ysis** (*lysis*, separation). Epiphyseal separation.

**Epiph′ysis** (*epi*, upon, *phyo*, to grow). Portion of bone separated from the body of the bone by a cartilage, which later becomes converted into bone. Epiphysis of the fœtus becomes the apophysis of the adult. Also the pineal gland. **E. acetab′uli**, cotyloid bone. **E. cer′ebri**, pineal gland. **E. cru′ris longio′ris in′cudis**, orbicular bone. **E. il′ii ante′rior**, acetabular or cotyloid bone. **E. in′cudis**, orbicular bone. **E. pi′æ ma′tris**, choroid plexus.

**Epiphysi′tis.** Inflammation of the epiphyses.

**Ep′iphyte** (*epi*, upon, *phyton*, plant). Phytoparasite or parasite derived from the vegetable kingdom. A fungous parasite on the skin or mucous membrane. A plant growing on another plant, but not deriving its nourishment from it.

**Epiphyt′ic.** Relating to epiphytes. A disease prevailing among plants, analogous to epizoötic in animals; called also *epiph′yty*.

**Epiph′yty.** See *Epiphytic*.

**Epipi′al.** Upon the pia mater.

**Ep′iplasm** (*epi*, upon, *plasso*, to form). Cataplasm. Ectoplasm. Protoplasm in fungi containing glycogen; glycogen mass.

**Epiple′gia** (*epi*, upon, *plege*, stroke). Paralysis, particularly of the upper extremities. Hemiplegia.

**Epiplemphrax′is** (*epiploon*+*emphraxis*, engorgement). Congestion of the omentum.

**Epipleu′ral.** On the side of the chest; on or attached to the vertebral rib.

**Epiplo-.** In composition, epiploon.

**Epip′locele** (*epiploon*+*kele*, tumor). Epiploic or omental hernia. Omental hernia is recognized—at times with difficulty—by a soft, unequal, pasty tumor, in which no gurgling sound is heard on pressing or reducing it. It is less dangerous than hernia of the intestines.

**Epiplocystos′cheocele** (*epiploon*, omentum, *kystis*, bladder, *oscheon*, scrotum, *kele*, tumor). Scrotal hernia containing omentum and bladder.

**Epiploen′terocele** (*epiploon*, omentum, *enteron*, intestine, *kele*, tumor). Hernia formed by the epiploon and a portion of the intestine; commonly called *enteroepiplocele*.

**Epiploenteros′cheocele** (*epiploon*, omentum, *enteron*, intestine, *oscheon*, scrotum, *kele*, tumor). Hernia with omentum and intestine in the scrotum.

**Epiplo′ic.** Relating to the epiploon. **E. appen′dages**, prolongations of peritoneum beyond the surface of the great intestine. **E. ar′teries**, arterial branches to the epiploon, given off by the gastroepiploicæ. **E. cav′ity**, cavity of the peritoneum. **E. plex′us**, filaments from the gastroepiploic plexus distributed to the great omentum.

**Epiploïs′chiocele** (*epiploon*+*ischion*, ischium, *kele*, tumor). Hernia formed by the epiploon through the ischiatic notch.

**Epiploï′tis.** Inflammation of the omentum; a form of partial peritonitis.

**Epiplomer′ocele** (*meros*, thigh, *kele*, tumor). Femoral hernia formed by the epiploon.

**Epiplom′phalocele** (*omphalos*, navel, *kele*, hernia). Umbilical hernia formed by the epiploon.

**Epip′loon** (*epi*, upon, *pleo*, to swim or float). Omentum; caul. Prolongation of the peritoneum floating above a portion of the intestines and formed of two membranous layers, with vessels and fatty bands distributed through it. The chief use seems to be to retain the viscera in situ and to give passage to the vessels. **Col′ic e.**, colic omentum; third epiploon or omentum. Duplicature of the peritoneum, situated along the ascending portion of the colon, as far as its junction with the transverse portion. It is behind the great epiploon, and fills up the angle formed by the junction of the ascending with the transverse colon. **Cystocol′ic e.**, occasionally protuberant portion of omentum uniting the gall-bladder with the duodenum. **Gastrocol′ic e.**, great omentum; extensive duplicature, free and floating on the folds of the intestines. It is quadrilateral, and longer on the left side than the right, its base being fixed anteriorly to the great curvature of the stomach, and posteriorly to the arch of the colon. In this epiploon a number of vessels are distributed, and there is much fat. **Gastro-**

**hepat'ic e.,** lesser omentum. Duplicature of the peritoneum extending transversely from the right side of the cardia to the corresponding extremity of the fissure of the liver, and downward from this fissure to the lesser curvature of the stomach, the pylorus, and duodenum. Below it is the foramen or hiatus of Winslow, and between its laminæ are lodged the biliary and hepatic vessels. It contains but little fat. If air be blown in at the foramen of Winslow the cavity or sac of the omentum will be rendered perceptible. **Gastrosplen'ic e.,** reflection of the peritoneum, passing between the concave surface of the spleen and the stomach, from the cardiac orifice to near its great curvature, and lodging the vasa brevia and splenic vessels between its laminæ. **E. ma'jus,** gastrocolic e. **E. mi'nus,** gastrohepatic e.

**Epip'lopexy** (*epiploon* + *pexis*, fixation). Suture of the omentum to the abdominal wall. See *Talma's operation.*

**Epiplosarcom'phalocele** (*epiploon*, omentum, *sarx*, flesh, *omphalos*, navel, *kele*, tumor). Umbilical hernia containing thickened or indurated omentum.

**Epiplos'cheocele** or **Epiplos'chocele** (*oscheon*, scrotum, *kele*, tumor). Scrotal hernia containing omentum.

**Epipodial'ia** (*epi*, upon, *pous*, foot). Bones constituting the second division of a limb, as the radius and ulna in the arm, tibia and fibula in the leg.

**Epipol'asis** or **Epipolas'mus** (*epipoles*, surface). Fluctuation; plethora; fluorescence; sublimation.

**Epiporo'ma** or **Epiporo'sis** (*epi*, upon, *poroo*, to harden). Tophaceous concretion forming in the joint; callus of fracture.

**Epipter'ic** (*epi*, upon, *pteron*, wing). On a wing, as of the sphenoid bone. **E. bone,** Wormian bone, occasionally seen at the juncture of the parietal bone and greater wing of the sphenoid bone.

**Epipter'ygoid.** On or above the pterygoid bone. **E. bone,** small bony rod articulating with the pterygoid in some of the lower animals.

**Epipu'bic.** On or over the pubes. **E. bones,** marsupial bones, two curved bones found in marsupial animals, and probably a bony development from the external abdominal ring.

**Epip'ygus** (*epi*, upon, *pyge*, buttocks). Fœtus having another fœtus connected with its sacral region.

**Epis'chesis** (*epischo*, to restrain). Retention or suppression of excretions.

**Epis'chion** (*epi*, upon, *ischion*, ischium). Abdomen. Pubes; pubic bone.

**Epischome'nia** (*epischo*, to suppress, *meniaia*, menses). Suppression of menses; amenorrhœa.

**Episcle'ra.** Superficial layer of the sclera.

**Episcle'ral** (*epi*, upon, *skleros*, sclerotic). On the sclerotic coat. **E. mem'brane,** episclera. **E. veins,** branches from capillary plexus of veins around the cornea.

**Episcleri'tis.** Inflammation of the conjunctival connective tissue and the sclerotic; affection characterized by the appearance of a small dusky red elevation of the sclerotic, most frequently at the temporal portion near the insertion of the external rectus. It is accompanied with photophobia, redness, etc.

**Episclerot'ic.** Episcleral.

**Episcleroti'tis.** Episcleritis.

**Episeii'tis** (*episeion*, pubes). Inflammation of the pubic region or vulva.

**Episeio-** (*episeion*, pubes). For words so beginning, see *Episio.*

**Episei'on.** Pubic bone; vulva.

**Episio-.** In composition, labium pudendi.

**Epis'iocele.** Vulvar hernia; vulvar swelling.

**Episioclei'sis** or **Episioclis'ia** (*kleisis*, enclosure). Operation for vulvar swelling or tumor, or for closure of the vulva.

**Episiocolpoclei'sis.** Operation for closure of the vulva and vagina.

**Episiœde'ma.** Œdema of the vulva.

**Episio-elytror'rhaphy** (*episeion*, vulva, *elytron*, vagina, *rhaphe*, suture). Operation to narrow the vagina and vulva by suture in cases of prolapsus of the uterus.

**Episiohæmato'ma.** Hæmatoma of the vulva.

**Episioï'tis.** Inflammation of the labia pudendi.

**Episio-perineor'rhaphy.** Operation in prolapsus to suture the vulva and perineum.

**Episiophy'ma** (*phyma*, swelling). Tumor of the vulva.

**Epis'ioplasty.** Plastic operation for restoration of some defect of the vulva or pubic regions.

**Episiorrha'gia.** Hemorrhage from the vulva.

**Episior'rhaphy** (*episeion*, vulva, *rhaphe*, suture). Operation in cases of prolapsus uteri, consisting in paring the opposing surfaces of the labia pudendi, bringing them together, and uniting them by suture, so as to diminish the outlet of the vulva.

**Episiosteno'sis.** Narrowness of the vulvar opening. Operation for narrowing or closing the vulva.

**Episiot'omy.** Incision of the labia to relieve injurious pressure of the child on the perineum.

**Episkel'etal.** Epaxial; situated above the axial endoskeleton. **E. mus'cles,** muscles developed from rudimentary vertebræ above the endoskeleton.

**Epispa'dia, Epispa'dias,** or **Epispadi'asis** (*epi*, above, *spao*, to get out of place). Malformation in which the male urethra opens on the dorsum penis. **E. glan'dis,** in this form of epispadias the urethra opens on the dorsum of the glans penis. **E. pe'nis,** in this variety the urethra terminates back of the glans penis.

**Epispas'tic** (*epispao*, to draw tight). A term applied to agents which when applied to the skin excite pain, heat, and more or less redness, followed by separation of the epidermis; blistering.

**Episphæ'ria** (*epi*, upon, *sphaira*, sphere). Convolutions and sinuosities of the external surface of the brain.

**Epispi'nous.** Upon the spine or spinous process. **E. bones,** prominences or spinous processes of the vertebræ for muscular attachment.

**Epispleni'tis.** Inflammation of the capsule of the spleen.

**Epistaphyli'nus** (*epi*, upon, *staphyle*, the uvula). Azygos uvulæ muscle.

**Epis'tasis.** Suppression or retention of a secretion or excretion. Pellicle on the surface of urine. Opposed to hypostasis.

**Epistax'is** (*epistazo*, to flow drop by drop). Nosebleed; hemorrhage from the pituitary membrane. A common variety of hemorrhage, the organization of the Schneiderian membrane being favorable to it, the blood-vessels being but slightly supported. It is generally from one nostril, and is very apt to recur. It is most common at puberty, and is caused by anything inducing local congestion, as running, coughing, blowing the nose, etc.

**Epister'nal.** Epithet applied to two bones forming part of the sternum, and situated upon its superior and lateral part, *suprasternal bones.* They resemble the pisiform bones, but are larger. The interclavicle of lower animals, a bone between the præsternum and clavicle, is an episternal bone.

**Epister'num.** Manubrium sterni.

**Episthot'onos** or **Episthot'onus** (*episthen*, forward, *teino*, to extend). Spasm of the muscles, drawing the body forward; emprosthotonos.

**Epistro'pheobasila'ris.** Small occasional muscle between the axis vertebra and basilar process.

**Epistroph'eus, Epis'trophis,** or **Epis'trophus.** Axis.

**Epistroph'ico-atlan'ticus.** Atlantoaxial.

**Epistroph'ico-occip'ital.** Relating to the axis and occiput.

**Episyl'vian.** On or above the fissure of Sylvius.

**Epite'la** (*epi*, upon, *tela*, web). Thin, medullary lamina of the valve of Vieussens.

**Epithal'amic.** On or above the thalamus opticus.

**Epithe'lia.** Epithelial cells.

**Epithe'lial** (*epi*, upon, *thele*, nipple). Appertaining or relating to the epithelium. **E. can'cer,** cancroid of the skin; epithelioma. A morbid growth of epithelial cells forming an epithelial tumor, a variety of carcinoma. Epithelial cancer may be squamous or columnar-celled. The former always grows from a surface covered by squamous epithelium, either cutaneous or mucous. Columnar-celled epithelioma is sometimes called *adenoid cancer*, and grows from mucous membranes with columnar or cylindrical epithelium, that is of the stomach and intestines, the rectum and uterus especially. See *Cancroid* and *Epithelioma*. **E. cast**, urinary cast having an epithelial surface. **E. cell**, cell of the epidermis; see *Epithelium*. **E. globes, nests**, or **pearls**, concentrically arranged masses of cells seen in epithelioma. See also *Epstein's pearls*. **E. tu′mor**, epithelioma.

**Epitheliogenet′ic** or **Epitheliogen′ic.** Causing the formation of epithelium. Due to epithelial cell-genesis.

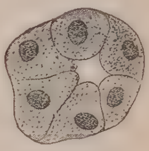
**Epithe′lioid.** Resembling epithelium; term applied to several membranes or coverings in embryonic life and in subsequent existence.

**Epithelio′ma.** See *Epithelial cancer*. **Adenocys′tic e.**, adenoma of the sweat glands. **Can′croid e.**, epithelial cancer. **Col′loid e.**, colloid cancer. **Colum′nar e.**, cylindrical epithelioma. **E. contagio′sum**, fowl-pox; form of molluscum contagiosum. **Cylin′drical** or **cylindrocel′lular e.**, form of epithelial cancer in which the cells are like columnar epithelia. **Gland′ular e.**, e. made up of gland cells, and usually attacking the throat and nose. **E. mollus′cum**, molluscum contagiosum. **Mul′tiple benign′ cys′tic e.**, adenoma of the sweat glands. **E. myxomato′des psammo′mum**, rare tumor having its seat in the third ventricle of the brain. **Pap′illary** or **papillo′matous e.**, e. with accompanying papillary tumors. **E. pearls**, epithelial pearls. **Tu′bular e.**, cylindroma. **Vil′lous e.**, e. having the appearance of villi, growing on the interior of the bladder.

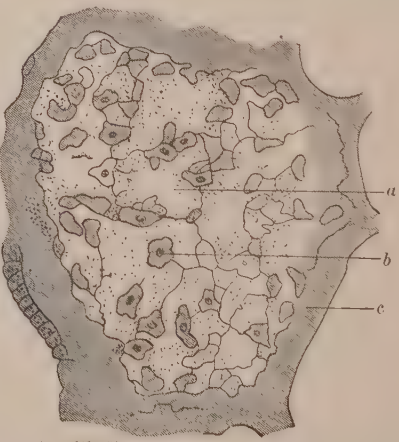
**Epitheliomato′sis of the nip′ple.** Paget's disease.

**Epithelio′matous.** Relating to epithelioma.

**Epithe′lium** (*epi*, on, *thele*, nipple). This term primarily denoted the thin layer of epidermis, covering parts deprived of derma properly so called, as the nipple, mucous membranes, lips, etc., but is now applied to the layer of cells covering all free mucous and cutaneous surfaces. It exists in different forms—pavement, cylinder, and vibratile or ciliated epithelium. *Pavement*, tessellated, squamous, scaly, lamellar, tubular, or flattened epithelium. e. polyhedricum or lamellosum, covers the serous and synovial membranes, the lining of blood-vessels, and the mucous membranes, except where cylinder epithelium exists. It is spread over the mouth, pharynx, and œsophagus, conjunctiva, vagina, and entrance of the female urethra. *Cylinder*, columnar, or prismatic epithelium, e. cylindricum, is found in the intestinal canal, beyond the cardiac orifice of the stomach; in the larger ducts of the salivary glands, ductus communis choledochus, prostate, Cowper's glands, vesiculæ seminales, vas deferens, tubuli uriniferi, and urethra of the male; and lines the urinary passages of the female, from the orifice of the urethra to the beginning of the tubuli uriniferi of the kidneys. In all these situations it is continuous with tessellated epithelium, which lines the more delicate ducts of the various glands. For the uses of the *ciliated* epithelium, e. vibrans, see *Ciliated e.* and *Cilia*. The term *spheroidal* has been applied to a variety of epithelium, the cells of which, for the most part, retain their primitive roundness; or, being flattened where they touch, acquire a polyhedral figure. At times these show a disposition to pass into the columnar, or the tessellated variety, and hence this form has been called the transitional. Spheroidal epithelium is found in the urinary passages, where it succeeds the columnar epithelium of the urethra at the internal orifice of that canal, and lines the whole of the bladder, ureters, and pelvis of the kidneys. It is found also in the excretory ducts of the mammary, perspiratory, and many mucous glands, and a modification of it lines the inmost secreting cavities or commencing ducts of glands generally. **Alve′olar e.**, e. of glandular or pulmonary alveoli. **Are′olar e.**, e. of areola of mammary gland. **Cil′iated e.**, e. in which the free extremities of the cells have a ciliary or ciliated appearance. This form of epithelium is observed in the respiratory passages, vasa efferentia, uterus, Fallopian tubes, part of the epididymis, convoluted tubes of the kidney, etc., and in portions of the digestive apparatus and larynx of the fœtus. **Colum′nar e.** see *Epithelium*. **Cu′bical e.**, sphenoidal e., the cells of which have become more or less distorted by mutual pressure. **Cyl′inder** or **cylin′drical e.**, see *Epithelium*. **E. decid′uum**, decidua. **Ectoder′mic e.**, e. derived from the ectoderm. **Enam′el e.**, cuticula dentis. **Entoder′mic e.**, e. derived from the entoderm. **False e.**, endothelium. **Fi′brillated e.**, e. with cells, like small fibres, seen in the small uriniferous tubes and salivary ducts. **Flat′tened e.**, pavement e.; see *Epithelium*. **Follic′ular e.**, e. lining the Graafian follicle. **Fu′siform e.**, vascular endothelium. **Ger′minal** or **germ′inative e.**, e. covering the pleuroperitoneal space in the embryo; e. covering a large portion of the ovary. **Gland′ular e.**, e. making up secreting surface of a gland. **E. of Graaf′ian fol′licle**, membrana granulosa; follicular e. **Intest′inal e.**, columnar e. **E. lamello′sum** or **lamel′lar e.**, pavement epithelium; see *Epithelium*. **Lam′inar** or **lam′inated e.**, layers of cells arranged one above another. **Malpigh′ian e.**, rete mucosum; greater portion of epidermis of embryo. **Mater′nal e.**, e. of maternal organs, not of embryo. **Mesoderm′ic e.**, e. of mesoderm, as of peritoneum, blood-vessels, etc. **E. mi′cans**, ciliated e. **Mu′cous e.**, Malpighian e. **Mus′cle e.**, combination of myoblast and processes which branch out in various directions and act as muscular fibres. **Nerve e.**, mingling of sensory and epithelial cells in ends of sensory nerves. **Olfac′tory e.**, e. of olfactory portion of nose. **Ova′rian e.**, germinal e. **Palisade′ e.**, columnar e. **Pave′ment e.**, see *Epithelium*. **Pig′mentary e.**, e., as in the retina, containing coloring-matter. **E. polyhe′dricum, polyhe′dral**, or **polyg′onal**, pavement epithelium; see *Epithelium*. **Pyram′idal e.**, columnar e. **Rod e.**, fibrillated e. **Secre′ting e.**, glandular e. **Spheroid′al e.**, glandular



Cubical epithelium from the sublingual gland. (Schiefferdecken.)



Pavement epithelium; surface view of the lining of a pulmonary alveolus. (Kölliker). *a*, membranous cell without a nucleus; *b*, nucleated granular cell; *c*, cut surface of the vertical wall of the alveolus, the structure of which is not represented.

e. **E. spu′rium,** endothelium. **Squam′ous e.,** pavement e. **Strat′ified e.,** laminar e. **Tab′ular e.,** pavement epithelium; see *Epithelium.* **Tegument′ary e.,** epidermis. **Tes′sellated e.,** pavement e. **Transi′tional e.,** a form of squamous epithelium lining the bladder, ureters, and pelvis of the kidney. **Vas′cular e.,** vascular endothelium; vascular perithelium. **E. vi′brans** or **vibrato′rium, vi′bratile** or **vibrat′ing e.,** ciliated e.

**Ep′ithem** or **Epithe′ma** (*epitithemi,* to place upon). Topical application not classed under ointments or plasters. Three sorts have been usually distinguished: liquid, dry, and soft, comprising fomentations, bags filled with dry substances, and cataplasms.

**Epith′esis.** Rectification of crooked limbs by instruments, splints, etc.

**Epith′ymon** or **Epith′ymum.** Cuscuta epithymum. **E. officina′rum,** Cuscuta europæa.

**Epiton′ic** (*epiteino,* to stretch out). Very tense; strained.

**Epitox′oid.** Toxon; a transformation product, non-toxic, of a toxin, which has a minor degree of affinity for antitoxin. See *Toxoid.*

**Epitrichial** (ep-e-trik′e-al) **lay′er** (*thrix, trichos,* hair). Layer of large cells, with large, round nuclei, covering the entire body of the human embryo, during the early months of its development.

**Epitrichium,** ep-e-trik′e-um. Membrane covering epidermis and hair of fœtus, and disappearing before birth.

**Epitrochante′rian.** On the trochanter or trochanters.

**Epitroch′lea.** Inner or lesser condyle of the humerus, above the trochlea, from which originate several muscles of the forearm.

**Epitroch′lear.** Relating to or connected with the epitrochlea.

**Epitroch′leoanco′neus.** Occasional muscle passing from the internal condyle to the olecranon.

**Epitroch′leocubita′lis.** Flexor carpi ulnaris.

**Epitroch′leometacar′pal mus′cle.** Flexor carpi radialis.

**Epitroch′leopalma′ris.** Palmaris longus.

**Epitroch′leophalange′us.** Flexor sublimis digitorum.

**Epitroch′leoradia′lis.** Pronator radii teres.

**Epitroch′leosupercarpe′us.** Muscle in lower animals corresponding to the flexor carpi radialis.

**Epitympan′ic.** On or above the tympanum. **E. bone,** the hyomandibular bone, tympanic bone of some animals, representing the incus of the higher animals. **E. space,** the epitympanum or attic.

**Epitym′panum.** The attic.

**Epityphli′tis** (*epi,* upon, *typhlon,* cæcum). Appendicitis.

**Epiver′tebral.** On or above a vertebra. **E. pro′cess,** spinous process.

**Epizo′a** (pl. of epizoon) (*epi,* upon, *zoon,* animal). Ectoparasites. Parasitic animals infesting the surface of the body.

**Epizoa′ria.** Epizoa.

**Epizo′ic.** Relating to epizoa.

**Epizo′icide** (*epizoon*+*cædo,* to kill). Any agent destructive of epizoa or external animal parasites.

**Epizo′on.** See *Epizon.*

**Epizoön′osus,** pl. epizoönosi (*epizoon*+*nosos,* disease). Diseases (of the skin) caused by epizoa.

**Epizoö′tic** (*epi,* upon, *zoon,* animal). General among the lower animals; corresponding to the word epidemic for man. Also an epizoötic disease, especially influenza, in horses. **E. aph′thæ,** foot-and-mouth disease, of animals especially; eczema epizoötica. **E. celluli′tis,** condition popularly known as pink-eye. **E. disease′,** an epidemic disease of animals; epizooty.

**Epizoötiol′ogy.** Science of epizoötic diseases.

**Epizo′öty.** Disease prevalent among animals; corresponding in the veterinary art to epidemy in medicine. Influenza of animals.

**Epod′ynous** (*odyne,* pain). Excessively painful.

**Epomphal′ion, Epomphal′ium,** or **Epom′phalum.** Part of the abdomen above the navel.

**Eponych′ium** (*epi,* upon, *onyx,* nail). Delicate epidermic layer on the base and sides of the nail. Corneous condition of the epidermis from the second to the eighth month of fetal life, locating the position of the future nail.

**Eponym′ic.** Called after the name of a person. **E. disease′,** disease called after the name of the person describing it, such as Bright's disease.

**Epoöph′oron** (*epi,* upon, *oon,* egg, *phero,* to bear). Traces of the genital part of the corpus Wolffianum.

**Eposto′ma** or **Eposto′sis** (*epi,* upon, *osteon,* bone). Exostosis.

**Ep′silon bacil′lus** (Miller). Bacillus occurring in carious teeth. Spirillum Finkleri. **E. gran′ules,** neutrophile granules of minute size found in health in polynuclear leucocytes, and also in certain disease states.

**Ep′som salts.** Magnesium sulphate.

**Ep′stein's pearls** or **E.'s epithe′lial pearls.** Anomalous, slightly elevated yellowish-white masses on either side of the median line of the hard palate in children; congenital.

**Epu′lis** (*epi,* upon, *oulon,* the gum). Excrescence not really connected with the gum, being a growth from the periosteum of the jaw. Two forms are described, simple or fibrous and malignant or myeloid, the latter being a vascular and fungating mass. **Sarco′matous e.,** see *Alveolar sarcoma.*

**Epulo′sis** (*epouloomai,* to cicatrize). Cicatrization.

**Epulot′ic.** Aiding cicatrization.

**E′qual.** Epithet applied particularly to the pulse and respiration, which are equal when the pulsations and inspirations succeeding each other are alike in every respect.

**Equa′tion.** An expression of equality between two things. Correction of an error in observation. **Chem′ical e.,** a graphic representation of a chemical reaction, the symbols of the bodies reacting on each other preceding the mark of equality, and those of the bodies formed by the reaction following it; thus, $Fe+H_2SO_4=Fe\ SO_4+2H$. **Per′sonal e.,** a tendency to error in observation or statement inherent in the individual and due to certain qualities peculiar to himself.

**Equa′tor.** A line encircling a sphere in such a way as to divide its surface into two equal parts. **E. of the eye,** the line of union of the two lids when closed over the ball; it is below the middle of the globe; also the largest circle that can be drawn over the eyeball in a plane transverse to the axis.

**Equato′rial.** Relating to an equator. **E. plate,** see *Plate.*

**Equifor′mal.** Having the same shape.

**Equil′ibrating opera′tion.** Division of the antagonistic tendon for paralysis of an ocular muscle.

**Equilibra′tion** (*æquus,* equal, *libro,* to balance). Condition in which an even balance of the body exists while in the act of walking or standing; believed to be influenced by impressions from the semicircular canals of the ear.

**Equilib′rium** (*æquus,* equal, *libro,* to weigh). A state in which there is harmony of action between the different parts of the system; a condition of even balance of opposing forces, resulting in rest.

**Equi′na.** See *Cauda equina.*

**Eq′uinated.** Inoculated with equinia.

**Equina′tion.** The condition of being inoculated with equinia. Inoculation of smallpox in the horse.

**Equin′ia** (*equinus,* belonging to a horse). Glanders. Dangerous contagious disorder accompanied by a pustular eruption, arising from inoculation with certain diseased fluids generated in the horse, the ass, and the mule. The disease is caused by a bacillus described by Schütz and Löffler, and called *Bacillus mallei.* Two forms of equinia are met with: *E. mitis,* contracted from horses affected with grease; and *E. glandulosa,* a dangerous and commonly fatal disease communicated to man, in the acute or chronic form, from the glandered horse. Veterinary surgeons make two varieties of the disease in the horse—glanders and farcy—the former affecting the pituitary membrane, with a profuse discharge from the nostrils, and pustular eruptions or small tumors, which soon suppurate and ulcerate, being attended by symptoms of malignant fever and by gangrene of various parts; the latter being the same disease, but appearing in the shape of small tumors, *farcy buds*, about the legs, lips, face, neck, etc., of the horse; sometimes very painful, suppurating, and degenerating into foul ulcers. They are often seen together.

**Equinin′.** The zymotic principle of glanders.

**Equi′noca′vus.** That condition of pes equinus in which there exists a marked hollowness of the sole of the foot.

**Equinova′rus.** Variety of clubfoot in which pes equinus and pes varus coexist.

**Equi′nus.** Pes or talipes equinus.

**Equise′tum arven′se, hyema′le,** or **mi′nus.** Hippuris vulgaris. **E. palus′tre** grows in Europe and the United States; diuretic, astringent, emmenagogue.

**Equiv′alence** or **Equiv′alency.** Condition of being equivalent. Saturating power of other elements compared with hydrogen as a standard.

**Equiv′alent.** The atomic weight of a substance, or a number expressing the proportion by weight in which it combines with other substances. See *Elements* for table of combining weights.

**Equiv′ocal** (*æquus*, equal, *vox*, voice). Term applied to symptoms which belong to several diseases. Generation is said to be equivocal when it seems to be spontaneous. See *Generation.*

**E′ra.** Hedera helix.

**Erad′icate.** To get rid of completely; a term applied to the removal of a disease or morbid tendency.

**Eradica′tion** (*e*, out, *radix*, root). Act of rooting out or completely removing a disease.

**Era′sion** (*e*, out, *rado*, to scrape). The act of scraping. Opening a joint and scraping out morbid structures.

**Eras′mus Wil′son's disease′.** See *Wilson.*

**Erb's disease′.** Myasthenia gravis pseudoparalytica. **E.'s paral′ysis,** birth palsy, a form of paralysis caused by meningeal hemorrhage at time of childbirth. Also paralysis of the upper portion of the superior extremity of the roots of the brachial plexus. **E.'s point,** a point above the clavicle and external to the posterior border of the sternocleidomastoid muscle, at the level of the transverse process of the sixth cervical vertebra, where stimulation produces contraction of several important muscles of the arm. **E.'s progres′sive mus′cular at′rophy,** scapulohumeral form met with in young people. **E.'s spas′tic paraple′gia,** spontaneous lateral sclerosis. **E.'s symp′tom,** a symptom of tetanus, consisting of augmented sensitiveness to electric stimulation. **E.'s waves,** wavy muscular movements caused by moderate constant current, with closed circuit; seen in myotonia congenita.

**Erb-Charcot's** (shar-cose′) **disease′.** Spasmodic tabes dorsalis.

**Erb-Gold′flam's symp′tom-com′plex.** Erb's disease.

**Erb-West′phal's symp′tom.** See *Westphal's sign.*

**Erb′en's phenom′enon.** Temporary retardation of the pulse on leaning forward or sitting down, noticed in nervous prostration.

**Erebin′thus.** Acer arietinum.

**Erechthi′tes hieracifo′lia.** Fireweed. Indigenous plant, ord. *Compositæ;* acrid tonic and astringent, and in large doses emetic.

**Erec′tile** (*erigo*, to erect). Capable of erection. **E. tis′sue,** tissue susceptible of turgescence and increase of size, and formed of a collection of arteries and veins intermixed with nervous filaments; the veins are varicose and contained in spaces formed by trabeculæ of fibrous tissue, being prolongations from the fibrous envelope. This tissue exists in the corpora cavernosa of the penis and clitoris, at the lower and inner surface of the vagina, in the spongy part of the urethra, the lips, nipples, iris, etc. Sometimes it is developed accidentally, constituting a kind of organic transformation. **E. tu′mor,** neoplasm formed of erectile tissue.

**Erec′tion.** State of a part, as the penis, in which, from having been soft, it becomes stiff, hard, and swollen, by the accumulation of blood in the areolæ of its tissue. **E. cen′tre,** reflex centre controlling erection; see *Centre.* **Persist′ent e.,** priapism.

**Erec′tor.** Producing erection; term applied to the muscles so concerned. **E. clitor′idis,** ischiocavernosus. **E. pe′nis,** ischiocavernosus. **E. pi′li** (*pilus*, hair), cutaneous muscular fibres arising in the outer part of the corium, and inserted in the inner sheath of the hair follicle. **E. spi′næ,** sacrospinalis. **E. trun′ci,** sacrospinalis.

**Eremacau′sis** (*erema*, slowly, *causis*, burning). Oxidation or decay of organic matters in the air.

**Ere′mia** (*eremia*, rest). Inertia; want of power or inclination to move.

**Eremocar′pus.** Gingerleaf, herb, native of California; used in decoction for applying externally in rhus poisoning, and the root is given internally in pulmonary diseases.

**Erethin′.** Toxic material in tuberculin.

**Er′ethism** (*erethizo*, to irritate). Irritation. Augmentation of the vital phenomena in any organ or tissue. Orgasm. Also greatly depressed but irritable state of the constitution produced by mercury as a poison, *mercurial erethism.* **Gas′tric e.** or **E. of the stom′ach,** a painful neurosis of the stomach.

**Erethis′mic.** Relating to erethism.

**Erethis′mus.** Erethism; irritation. **E. ebrioso′rum,** delirium tremens. **E. hydropho′bia,** hydrophobia. **E. oneirodyn′ia,** incubus; depraved, disturbed, or morbid dreaming. **E. sim′plex,** fidgets. **E. trop′icus,** sunstroke.

**Erethis′tic** or **Erethit′ic.** Relating to erethism.

**Ereuthop′athy** (*ereuthos*, blushing, *pathos*, suffering). Excessive emotional blushing.

**Ereuthopho′bia** (*ereuthos*, blushing, *phobos*, fear). A morbid dread of blushing, usually combined with excessive frequency and degree of that condition.

**Ereux′is.** Eructation; flatulence.

**Erg** (*ergon*, work). Unit of work effected in raising 1.981 grammes, or one dyne, to the height of one centimetre.

**Ergasioma′nia** (*ergazomai*, to operate). Morbid desire or mania to operate.

**Ergasiopho′bia** (*ergazomai*, to operate, *phobos*, fear). Nervous dread of performing a surgical operation.

**Er′gograph** (*ergon*, work, *grapho*, to write). Instrument to register the amount of work accomplished in the performance of muscular exertion.

**Ergom′eter** (*ergon*, work, *metron*, measure). An instrument for measuring the amount of muscular exercise.

**Er′gostat** (*ergon*, work). An instrument used in performing a definite and measured amount of muscular exercise for therapeutic purposes.

**Er′got.** Spurred or horned rye, spur, hornseed, cockspur rye, cockspur, ergot of rye. Ergot is the compact mycetum or spawn of a fungus, Claviceps purpurea, which replaces grain of common rye, *Secale cereale.* This parasitic fungus has been called *Spacelia segetum.* More recently it has been maintained that it is a diseased state of the grain occasioned by the growth of a fungus not previously detected, to which the names *Ergotætia abortans* or *abortifaciens, Oidium abortifaciens, ergot-mould,* have been given. It is found projecting from among the leaves of the spike or ear, and is a long, crooked excrescence, resembling a spur of a cock, pointed at its extremities, of a dark brown color externally, and white within. To the whole fungus giving rise to ergot has been given the name *Claviceps purpurea;* and the Pharmacopœias (U. S. and Br.), adopting this view, describe ergot as the sclerotium of Claviceps purpurea, replacing the grain of Secale cereale. Ergot is usually prescribed in the form of extract, fluid extract, or wine. See *Ergota.* Ergot has been long used, on account of its contractile effects on the uterus, to contract the womb after the birth of the child and to prevent post-partum hemorrhage. Ergot is also a valuable hæmostatic in hæmoptysis, epistaxis, etc. It has been prescribed in diabetes, uterine fibroids, purpura, and various other conditions; it also possesses, it is affirmed, narcotic virtues. The eating of bread made of spurred rye has been attended with the effects described under *Ergotism.* The name ergot has also been applied to the hippocampus minor or calcar of the brain.

**Er'gota.** (Ph. U. S. and Br.) The official name of ergot of rye. The official preparations (Ph. U. S.) are: *Extractum ergotæ* (extract of ergot); dose, gr. j–x (0.065–0.65). *Extractum ergotæ fluidum* (fluid extract of ergot); dose, ʒss-j (2.0–4.0). *Vinum ergotæ* (wine of ergot); dose, ʒj–iv (4.0–16.0).

**Er'gotate.** Salt of ergotic acid.

**Ergot'ic acid.** Acid derived from ergot.

**Ergotin'.** Name of various extracts of the active principle of ergot, which vary greatly in strength and efficacy.

**Ergotine'.** An alkaloid from ergot in which it is found combined with ergotic acid. *Bonjean's ergotine* is an aqueous extract used hypodermically.

**Ergotin'ic acid.** A narcotic constituent of ergot.

**Ergotinine'.** $C_{35}H_{40}N_4O_6$. Alkaloid from ergot.

**Er'gotism.** Poisoning by ergot; affection produced by the use of spurred rye. Symptoms are vertigo, spasms, and convulsions, or torpor with numbness and loss of sensation and motion, and dry gangrene of the hands and feet. **Spasmod'ic e.,** convulsive disorder said to be endemic in some parts of Germany, from the use of spoiled grain.

**Er'gotized.** Under the systemic effects of ergot. Also applied to grain invaded by the ergot disease.

**Er'got-mould.** See *Ergot.*

**Er'gotole.** Liquid preparation of Secale cornutum, which, it is claimed, will not produce irritation when used hypodermically.

**Eri'ca vulga'ris.** Common heath; diuretic and diaphoretic.

**Er'ichsen's disease'.** Morbid condition due to traumatism or to mental strain, known as railway brain and railway spine. **E.'s lig'ature,** double thread, one black, the other white, employed in the surgical treatment of nævi. **E.'s sign,** a symptom for the differential diagnosis of coxalgia and sacro-iliac disease; in the latter case compression of the iliac bones is painful, but not so in coxalgia.

**Ericolin'.** $C_{34}H_{56}O_{21}$. Glucoside from plants of the order *Ericaceæ.*

**Erigen'tes ner'vi** (*erigo,* to be stiff). Nerves concerned in erection, proceeding from the sacral nerves.

**Erig'eron.** E. canadense. **E. ambig'uum,** E. philadelphicum. **E. an'nuum,** E. canadense. **E. bellidifo'lium,** robin's plantain, Rosy's Betty; indigenous plant, ord. *Compositæ;* properties like those of E. philadelphicum. **E. canaden'se,** Canada fleabane, prideweed, horseweed, butterweed, allied in properties to E. philadelphicum. Same may be said of E. heterophyllum, E. annuum, sweet scabious or various-leaved fleabane. **E. heterophyl'lum,** see *E. canadense.* **E. integrifo'lium,** E. philadelphicum. **E. philadel'phicum,** scabious, Philadelphia, or narrow-leaved fleabane, daisy, cocash, frostweed, fieldweed, squawweed, is a plant used in decoction or infusion for gouty and gravelly complaints; diuretic and sudorific. The essential oil has been given in uterine hemorrhage; that of E. canadense, oil of Canada fleabane, has been given in gonorrhœa. **E. strigo'sum,** E. philadelphicum.

**Erig'erum.** Senecio. Erigeron.

**Erioceph'alus umbellula'tus.** Wild rosemary; African shrub, ord. *Compositæ;* diuretic.

**Erioden'dron anfractuo'sum.** Tropical plant, ord. *Sterculiaceæ,* exuding emollient gum. **E. occidenta'le** has the same virtues as Eriodendron anfractuosum.

**Eriodic'tyon.** A genus of evergreen shrubs of the order *Hydrophyllaceæ.* The official (Ph. U. S.) name of the leaves of E. glutinosum. **E. califor'nicum** or **glutino'sum,** consumptive's weed, bear's weed, yerba santa, mountain weed of California and Mexico. Leaves are used as a stimulant expectorant in bronchitis, phthisis, and catarrhal apnœa. The fluid extract (*extractum eriodictyi fluidum*) is official; dose, ♏xv–ʒj (1.0–4.0).

**Erioph'orum.** Cotton grass. **E. polystach'ium,** species of Europe; possesses laxative properties.

**Eriosper'mum latifo'lium.** South African plant, the tuber of which is muculent, and used externally in abrasions and superficial ulcers.

**Erithri'cium gnaphalioi'des.** Native of Chili; infusion is employed as a stomachic.

**Ero'dent.** Causing erosion.

**Ero'dium cicuta'rium.** Variety of storksbill of the geranium family, prescribed in dropsy, in decoction of the dried plant. **E. moscha'tum,** Geranium moschatum.

**Eroma'nia** (*eros,* love, *mania,* love). Erotomania.

**Ero'sion** (*erodo,* to eat away). Action of a corrosive substance, or the gradual destruction of a part by such substance or by friction. Ulceration is a form of so-called *spontaneous erosion.* Also a peculiar decalcification of enamel and dentine, distinct from dental caries. **Catar'rhal e.,** catarrh attacking the epithelium and followed by loss of epithelium. **Chan'crous e.,** destruction of the normal tissues occurring in the neighborhood of a chancre. **Cys'tic e. of the cer'vix u'teri,** inflamed condition of the mucous follicles of the vaginal part of the cervix and of the uterine cavity. **Gan'grenous e. of the cheek,** cancer aquaticus. **Herpet'ic e.,** ulceration of the vaginal portion of the cervix of the uterus, herpetiform in character, observed in catarrhal attacks of that organ. **Hemorrhag'ic e. of the stom'ach,** form of chronic ulcerative gastritis of habitual drinkers. **E. of the teeth,** condition of the teeth in children, in which they present a honeycombed appearance, due to stomatitis, especially the mercurial form.

**Ero'sive.** Relating to or giving rise to erosion.

**Erot'ic** (*eros,* love). Produced by love or sexual desire; also causing such desire.

**Erot'icism.** Excessive sexual excitement.

**Eroticoma'nia** or **Erotoma'nia** (*eros,* love, *mania*). Mental alienation caused by love or sexual desire. Nymphomania.

**Er'otism.** Abnormal sexual instinct.

**Erotogen'ic** (*eros,* love, *genesis,* production). Causing or producing erotic desires. **E. zones,** portions of the body which when stimulated produce erotic desires or sensations.

**Erotopath'ia** or **Erotop'athy** (*eros,* love, *pathos,* disease). Perverted sexual instinct.

**Errat'ic.** Wandering, irregular. Disappearing and recurring at irregular intervals, as intermittents which observe no type. Applied also to pains or to disease manifestations which move from one part to another, as in gout, rheumatism, erysipelas, etc.; also to worms which wander from one part, as the intestinal canal, to other parts, as the urinary passages.

**Er'rhine** (*en,* in, *rhis,* nose). Sternutatory. Remedy acting on the Schneiderian membrane, exciting sneezing and increased discharge.

**Er'ror.** Deviation or aberration. **E. of disper'sion,** aberration of refrangibility. **E. lo'ci,** error of place. Deviation of fluids when they enter vessels not destined for them.

**Ers'mert.** Polygonum hydropiper.

**Erubes'cence** (*embesco,* to grow red). Blushing; redness.

**Eru'ca.** Brassica eruca; sinapis. **E. arven'sis,** Sinapis arvensis. **E. barba'rea,** Erysimum barbarea. **E. fœ'tida,** Brassica eruca. **E. ni'gra,** Sinapis nigra. **E. sati'va,** Brassica eruca.

**Eru'cic acid.** $C_{22}H_{42}O_2$. Acid derived from oil of mustard.

**Erucin'.** Yellow powder obtained from Sinapis alba.

**Eructa'tion** (*eructo,* to belch). Belching. Sonorous emission by the mouth of flatus proceeding from the stomach. **Ner'vous e.,** eructation in which no gas is emitted from the stomach, or air simply enters the œsophagus and is expelled again with a loud, explosive noise.

**Eru'gatory** (*e,* out, *ruga,* wrinkle). Agent which removes wrinkles.

**Erup'tion** (*erumpo,* to break out). Sudden and copious evacuation of fluid, as serum, blood, pus, etc., from a canal or cavity. Breaking out of an exanthem; exanthem itself, as rash, pustules, vesicles, etc. Appearance of developing teeth through the gums. **Drug** or **Medic'inal e.,** cutaneous eruption due to internal administration of certain drugs.

**Erup'tive.** Accompanied by eruption. **E. fe'vers,** the following tabulated arrangement presents some interesting facts in regard to the diagnostic symptoms of this class of fevers, including typhus and typhoid fevers (Finlayson):

### Date of Appearance of the Febrile Rashes After the First Signs of Illness.

*Scarlatina rash* appears on the first or second day.

*Smallpox* appears on the third day.

*Measles* appears on the fourth day.

*Typhus fever* appears on the fifth day.

*Typhoid* or *enteric fever* appears on the seventh day or later.

*Chickenpox* usually shows itself within the first day after the constitutional disturbance, but this is often so slight as not to be clearly marked.

*German measles* (red measles, rötheln, roseola, rosalia, etc.) may appear on the second, third, or fourth day, or the rash may be among the very first symptoms recognized.

*Erysipelas* varies considerably as to the date of its appearance on the skin, but may usually be detected on the day after shiverings or other febrile disturbances have appeared. Occasionally, however, the rash is delayed or suppressed, or appears only as fugitive patches which readily escape notice, just as happens in certain cases of scarlatina.

### PERIOD OF INCUBATION.

This is not always uniform, and in many cases cannot be determined with accuracy, as the infection may linger in the clothing or other materials (fomites) for some time after the more obvious exposure of the person to the disease.

*Scarlatina:* incubation period varies from a few hours to eight or ten days; apparent prolongation for a longer period (which is not unusual) can often be explained more naturally on the supposition of infection through clothing and the like.

*Smallpox:* thirteen or fourteen days.

*Varicella* or *chickenpox:* ten to fourteen days.

*Measles:* usually about a fortnight; said to be seven days when inoculated from nasal mucus; variation in extreme from seven to twenty-one days.

*German measles:* (rötheln) varies from seven to fourteen days.

*Typhus fever:* varies from a single day to nearly three weeks; usually about seven to fourteen days.

*Typhoid* or *enteric fever:* about two or three weeks.

*Erysipelas:* period very uncertain; probably short, as a rule.

### LIABILITY TO SECOND ATTACKS.

*Scarlatina:* an indubitable second attack very rare, but not unknown; dubious illnesses erroneously called scarlet fever may account for most of the so-called second attacks.

*Varicella* or *chickenpox:* a second attack extremely rare.

*Typhus fever:* a second attack extremely rare, but not unknown.

*Smallpox:* a second attack by no means rare; errors in the diagnosis from other forms of pustular eruptions are, however, quite possible. Traces of former attacks are usually visible.

*Measles:* a second attack, as alleged, is very common; possibly this may arise from there being two forms of measles with distinct powers of infection.

*Typhoid fever:* one attack does not seem to afford much if any protection from a second (relapses are also very common).

*Erysipelas:* one attack seems rather to predispose to a second than to afford exemption.

**Er'vum** or **Ervil'ia.** A kind of lentil. Meal of the seeds has been used in poultices. **E. lens,** lentil; the seed is eaten like peas; it is flatulent and difficult of digestion. **E. plica'tum,** ervum.

**Eryn'gium.** A genus of herbs of the order *Umbelliferæ.* **E. aquat'icum,** water eryngo, button snakeroot; the root eryngium is nearly allied to the contrayerva, and is a sudorific and expectorant. **E. campes'tre,** of Europe, is diuretic and emmenagogue; is sometimes used for *E. maritimum.* **E. fœ'tidum,** feverweed, indigenous; is alterative, sedative, and antipyretic. **E. marit'imum** or **mari'num,** sea holly or eryngo; the root has a slightly aromatic odor and sweetish and warm taste; is diuretic and expectorant. **E. vulga're,** E. campestre. **E. yuccæfo'lium,** E. aquaticum.

**Eryn'go root.** Eryngium maritimum.

**Erys'imum.** Hedge mustard; expectorant and diuretic. Seeds resemble mustard. **E. allia'ria,** alliaria. **E. barbare'a,** antiscorbutic; see *Alliaria.* **E. cordifo'lium,** alliaria. **E. lyra'tum,** E. barbarea. **E. officina'le,** erysimum.

**Erysipela'cea.** Family of eruptive diseases comprising erysipelas, variola, rubeola, and scarlatina.

**Erysip'elas** (*erysos,* red, *pella,* skin). St. Anthony's fire, wildfire. A disease characterized by superficial inflammation of the skin, with general fever, tension, and swelling of the part; the surface is smooth and shining, as if oiled, *erysipelas glabrum;* pain and heat, redness diffuse, but more or less circumscribed, and disappearing when pressed upon by the finger, but returning as soon as the pressure is removed. Frequently small vesicles appear upon the inflamed part, which dry up and fall off as branny scales. This disease is contagious and inoculable, and is thought to be the result of the introduction of the Streptococcus erysipelatis or erysipelatos. Erysipelas is generally acute, its medium duration being from ten to fourteen days. When it reaches its acme and ceases to spread it receives the name *erysipelas fixum.* It yields, commonly, to general refrigerant remedies. Topical applications of bichloride of mercury and ichthyol in the form of an ointment are very serviceable. At times, when it approaches the phlegmonous character, copious bleeding and other evacuants may be required, as in many cases of erysipelas of the face. In most cases the general action seems deficient, and it becomes necessary to give tonics. When erysipelas is highly inflammatory and invades the parts beneath it is termed *erysipelas phlegmonodes;* when accompanied with phlyctenæ and the inflammation terminates in gangrene, *erysipelas gangrænosum;* and when associated with infiltration of serum, *erysipelas œdematosum;* when superficial and tending to spread indefinitely, *erysipelas erraticum.* At times the surface in erysipelas has a bronze rather than a red hue, *bronzed erysipelas.* **E. am'bulans,** e. occurring or recurring at different points, wandering e. **Bronzed e.,** see *Erysipelas.* **E. chron'icum,** erysipeloid. **E. errat'icum,** see *Erysipelas.* **E. fix'um,** see *Erysipelas.* **E. gangræno'sum,** see *Erysipelas.* **E. glab'rum,** see *Erysipelas.* **E. gra've inter'num,** a variety of e. occurring in the uterus, vagina, or peritoneum; really a form of puerperal fever. **Idiopath'ic e.,** e. occurring idiopathically; that is, without visible or apparent cause. **E. mi'grans,** erysipelas erraticum. **E. œdemato'sum,** see *Erysipelas.* **E. period'ica nervo'sa chron'ica,** pellagra. **E. per'stans,** clinically it resembles toxic erysipelas, and is remarkable for its persistence and liability to recur, and for its brawny, firm, often beefy-red pachydermia. **Phleg′monous e.**, e. with subcutaneous suppuration. **E. phlyctenoi′des**, herpes zoster. **Puer′peral e.**, erysipelas occurring in women who have been recently delivered. **E. pustulo′sa**, herpes zoster. **Sur′gical e.**, traumatic e. **Traumat′ic e.**, e. occurring in association with wounds. **E. toxin′**, toxin procured from cultures of Streptococcus erysipelatos, and employed in treating malignant tumors. **Wan′dering e.**, e. ambulans. **E. zos′ter**, herpes zoster.

**Erysipel′atoid.** Resembling erysipelas.

**Erysipelatoparoti′tis.** Parotitis accompanied with erysipelas.

**Erysipel′atous.** Relating to erysipelas. **E. inflamma′tion**, character of inflammation which distinguishes erysipelas.

**Erysipelococ′cus of Fehl′eisen.** Found chiefly in the more superficial parts of the corium in erysipelas.

**Erysip′eloid** (*erysipelas* + *eidos*, resemblance). Erythema migrans; erysipelas chronicum; a chronic dermatitis resembling somewhat erysipelas, but not due to streptococcus or staphylococcus infection; it occurs chiefly among those brought into close contact with wild animals or their skins, as hunters or taxidermists. It runs a course of three days to three weeks. Mercurial ointment and ichthyol are effective applications. Also resembling erysipelas.

**Erysip′elous.** Erysipelatous.

**Erythan′thema** (*erythros*, red, *anthos*, flower). Efflorescence of the skin. The erythanthemata constitute a class of diseases resembling erythema in origin, but different in their development. **E. syphilit′icum**, eruption of vesicopustules, afterward converted into an exuding, elevated, diphtheroid patch, occurring on a crimson or livid erythematous surface.

**Erythe′ma** (*erythros*, red, rose-colored). Inflammatory blush. Name sometimes given to erysipelas, especially when of a local character. It is also applied to the morbid redness on the cheeks of the hectic and on the skin covering bubo, phlegmon, etc. It is a nearly continuous redness of a certain portion of the skin. Many varieties are described by dermatologists. Local erythema, which is merely hyperæmia, without much, if any, appreciable effusion into the cutis and cellular tissue, is sometimes called *erythema hyperæmicum*. If there is more or less escape of serosity from the vessels, with prominence of the eruption, it is called *erythema exsudativum*. Sometimes erythema is used synonymously with erysipelas. **E. ab a′cribus**, hyperæmia produced by acrid or poisonous agents. **E. acrodyn′ica**, acrodynia. **E. ambus′tio**, burn. **E. annula′re**, form generally called e. marginatum. **E. an′thrax**, anthrax. **E. bullo′sum**, a form of e. multiforme in which bullæ are present. **E. bullo′sum veg′etans**, pemphigus vegetans. **E. calor′icum**, rash resulting from the action of heat on the skin. **E. centrif′ugum**, variety of erythema attacking the face, commencing as a small red spot, and spreading to affect the whole face. **E. circina′tum**, see *E. marginatum*. **E. congesti′vum**, e. hyperæmicum. **Desquam′ative scarlatin′ifor′me.**, e. scarlatiniforme. **E. eleva′tum diuti′num**, rare form of skin disease, having erythematous, raised, and persistent lesions on the palmar and dorsal surfaces of the fingers, elbows, and nates. **E. endem′icum**, pellagra. **Epidem′ic e.**, acrodynia. **E. exsudati′vum**, see *Erythema*. **E. exsudati′vum multiforme**, e. multiforme. **E. figura′tum**, erythema with patches running together to form a novel appearance of the surface. **E. a frig′ore**, chilblain. **E. fu′gax**, erythema appearing on the body in febrile diseases, in cases of teething, etc., and of brief duration. **E. gangræno′sum**, anthrax. **E. gyra′tum**, e. multiforme in which the lesions have serpentine shapes. **E. hyperæ′micum**, see *Erythema*. **E. ichoro′sum**, eczema mercuriale. **E. indura′tum scrofuloso′rum**, e. with firm, indurated nodes, suggestive of e. nodosum. **E. intertri′go**, chafing. **E. i′ris**, herpes iris. **E. læ′ve**, slight erythema affecting the skin, as in œdema. **E. margina′tum**, form in which the prominent patches of erythema are distinctly separated from the skin at their margins. When they can be distinctly measured or composed we have *e. circinatum*. **E. mercuria′le**, eczema mercuriale. **E. mi′grans**, erysipeloid. **E. multifor′me**, under this head are included various forms of symptomatic erythemata. **E. nodo′sum**, severe form of e. tuberculatum. **E. papula′tum**, papulated e., at first appearing on the face, neck, breast, etc., of females, young persons especially; the rash which breaks out in epidemic cholera, generally described as a roseola, *roseola cholerica*, is erythema papulatum. **E. paratrim′ma**, chafing. **E. pellagro′sum**, pellagra. **E. per′nio**, chilblain. **E. polymor′phum**, e. multiforme. **E. puncta′tum**, e. scarlatiniforme. **E. purif′luens**, e. intertrigo, producing by irritation a raw surface giving out a puriform fluid. **E. rose′ola**, e. of dull red color; may precede eruptive fevers. **E. scarlatinifor′me**, rubella; also an eruption simulating that of scarlet fever; generally a symptom of other disorders, probably not an independent disease. **E. sim′plex**, congestion produced by irritation from without. **E. sola′re**, pellagra, attended with eruption of small red spots or patches on the parts exposed to the sun. **Symptomat′ic e.**, hyperæmia of the skin symptomatic of other conditions. **E. tubercula′tum** or **tuberculo′sum**, erythema in which the patches are in small lumps. **E. ur′ticans, urtica′tum**, or **urtica′ria**, redness preceding urticaria. **E. vaccin′ium**, form of erythema occurring the first or second day after vaccination, or about the eighth or ninth day, when the vaccine vesicle commences to mature. **E. variolo′sum**, roseola variolosa, a redness preceding the smallpox eruption. **E. venena′tum**, e. ab acribus. **E. vesiculo′sum**, local erythema from the application of an irritant, characterized by vesicles on a red base. **E. volat′icum**, e. fugax.

**Erythem′atous** or **Erythemat′ic.** Appertaining or relating to erythema.

**Erythe′moid** (*erythema* + *eidos*, resemblance). Resembling erythema.

**Erythemomegalal′gia** (*erythema* + *megas*, great, *algos*, pain). Nervous condition in which there is intense burning pain in the sole, with erythematous flushing over the painful part; erythromelalgia.

**Erythemomelal′gia** (*erythema* + *melos*, limb, *algos*, pain). Erythromelalgia.

**Erythræ′a centau′rium.** Chironia centaurium. **E. chilen′sis**, Canchalagua, Chironia chilensis; febrifuge and cholagogue.

**Erythræ′mia** (*erythros*, red, *haima*, blood). Plethora.

**Erythras′ma.** Eczema marginatum; cutaneous affection, like erythema intertrigo, due to a microorganism in the epithelial layer called *Microsporon minutissimum*.

**Erythre′ma.** Erythema.

**Erythri′na coralloden′dron.** E. indica. **E. cristagal′li**, Brazilian tree, inner bark of which, *mulangee bark*, is narcotic and hypnotic. **E. in′dica**, coral tree; bark is sedative to the nervous system. **E. monosper′ma**, Butea frondosa.

**Erythrine′.** $C_{20}H_{22}O_{10}$. Alkaloid obtained from Erythrina corallodendron.

**Er′ythrite.** Erythrol.

**Erythro-** (*erythros*, red). In composition, red.

**Erythroagglutinin′.** An antibody causing agglutination of red blood cells.

**Er′ythroblasts** (*erythros*, red, *blastos*, germ). Protoplasmic (rudimentary) red blood globules.

**Erythrocentaurin′.** $C_{27}H_{24}OH$. Crystallizable derivative from Erythræa centaurium.

**Erythrochloro′pia** or **Erythrochlor′opy** (*erythros*, red, *chloros*, green, *ope*, vision). Color-blindness as to all colors except red and green.

**Erythroc′onus litora′lis.** See *Sarcina litoralis*.

**Erythrocruorin′** (*erythros*, red, *cruor*, blood). Hæmoglobin.

**Er′ythrocyte** (*erythros*, red, *kytos*, cell). Red blood corpuscle.

**Erythrocytol′ysis.** Dissolution or loss of the soluble materials of the red corpuscles.

**Erythrocytom′eter.** Instrument for estimating the number of the red corpuscles in the blood.

**Erythrocytorrhex′is** (*erythrocyte*, red corpuscle, *rhexis*, rupture). Rupture of a red corpuscle.

**Erythrocytos′chisis** (*erythrocyte*, red corpuscle, *schisis*, fission or splitting). Fission or splitting of a red corpuscle.

**Erythrocyto′sis.** The occurrence of nucleated red blood cells and erythroblasts in the lymph vessels.

**Erythrod′anum.** Rubia.

**Erythrodermati′tis.** An erysipeloid inflammation of the skin.

**Erythroder′mia** (*erythros*, red, *derma*, skin). Pathological reddening of the skin.

**Erythrodex′trin** (*erythros*, red, *dextrin*). $C_6H_{10}O_5$. Amylodextrin, a substance isomeric with dextrin. When saliva acts upon starch erythrodextrin is a product. The test for its presence in the stomach consists in adding iodine to the filtered gastric juice, when a purple color appears if erythrodextrin is present.

**Erythrogran′ulose.** Granular substance in the grains of starch colored red by iodine.

**Er′ythroid** (*erythros*, red, *eidos*, resemblance). Reddish. **E. coat**, vaginal coat of the testes. **E. ves′icle**, vesicle of the fœtus, pyriform and much longer than the umbilical vesicle, although of the same breadth.

**Er′ythrol.** $C_4H_6(OH)_4$. A substance derived from litmus. **E. ni′trate**, nitro-erythrol. **E. tet′ranitrate**, a white, crystalline, highly explosive substance, a vasomotor depressant; employed as a vasodilator in angina pectoris and other heart troubles in doses of gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03).

**Erythrol′ysis.** Erythrocytolysis.

**Erythroman′nite.** Erythrol.

**Erythromelal′gia** (*erythros*, red, *melos*, limb, *algos*, pain). A neurosis characterized by a more or less severe burning pain in the sole of the foot accompanied by redness of the skin over the painful area; one or both feet may be affected. The trouble may be constant, or it may come on only after a long walk, or may be irregular in its appearance and excited by no apparent cause. It is usually increased by walking and when the foot is pendent. The nature of the affection is as yet not definitely determined, but it is regarded generally as a vasomotor neurosis.

**Erythro′nium.** A genus of plants of the order *Liliaceæ*. **E. america′num, dens ca′nis, lanceola′tum,** or **longifo′lium,** common erythronium, yellow snakeleaf, yellow adder's tongue, adderleaf, dog violet, dog's tooth violet, rattlesnake violet, lamb's tongue, scrofula root, yellow snowdrop.

**Er′ythrophage** (*erythros*, red, *phago*, to eat). A phagocyte which attacks the red cells.

**Er′ythrophile** (*erythros*, red, *phileo*, to love). A cell which readily takes a red stain.

**Erythroph′ilous.** Easily staining red.

**Erythrophleïne′.** Erythrophlœine.

**Erythrophlœine′.** Poisonous alkaloid from erythrophlœum or sassy bark, resembling digitalin or picrotoxin. The hydrochloride is used; said to be a more potent cardiac agent than digitalin.

**Erythrophlœ′um.** A genus of tropical trees of the order *Leguminosæ*. **E. judicia′le**, casca or sassy-bark tree. Doom bark, from E. guineense or E. judiciale of Africa; used as an errhine, and also as a substitute for digitalis and as an ordeal poison.

**Erythrophlogo′sis** (*erythros*, red, *phlogosis*, burning). Inflammation accompanied with marked redness.

**Erythropho′bia** (*erythros*, red, *phobos*, fear). Morbid dread of red color.

**Erythrophthal′mia** (*erythros*, red, *ophthalmia*). Ophthalmia accompanied with marked redness.

**Erythro′pia** (*erythros*, red, *ops*, vision). Defective vision in which everything seen has a red shading.

**Erythropityri′asis.** Pityriasis rubra.

**Erythrop′sia.** Erythropia.

**Erythropsin′.** Red or purple seen on the retina.

**Erythrop′yra** (*erythros*, red, *pur*, fever). Erysipelas.

**Erythroretin′.** Resinous matter of rhubarb.

**Erythrorrhi′za rotundifo′lia.** Galax aphylla.

**Er′ythrose.** Red coloring-matter obtained from rhubarb by treating the latter with nitric acid.

**Erythro′sis.** Rubefaction; plethora.

**Erythrotoxin′.** A cytotoxin having a specific action upon the red blood cells.

**Erythroxyline′.** Cocaine.

**Erythrox′ylon.** A genus of trees of tropical America, most of which possess medicinal properties. **E. co′ca**, coca; a tree growing on the eastern slopes of the Andes; prized in Peru, Chile, and Bolivia as a nervous stimulant and an article of diet; serves as a substitute for the tea, coffee, betel, tobacco, hashish, and opium of other peoples. The leaves are the part used medicinally. The active alkaloid is *cocaine*, which see. **E. lu′cidum**, Lithia acuminata.

**Erythru′ria** (*erythros*, red, *ouron*, urine). Hæmaturia; hæmoglobinuria; emission of red urine.

**Escallo′nia myrtilloi′des.** Species of escalloniæ growing in Peru; the leaves are used for poultices on wounds and as a tonic. *E. resinosa* and *E. rubra* have both tonic properties.

**Es′chalot.** Species of allium.

**Es′char.** Slough, crust, or scab; disorganized portion arising from the mortification of a part, and distinguishable from the living parts by its color, consistence, and other physical properties. Inflammation excited in the contiguous parts occasions a secretion of pus between the living and dead parts, ultimately completely separating the latter. The process is called *sloughing*. **Neuropath′ic e.**, bedsore.

**Escharifica′tion.** Formation of an eschar.

**Escharo′sis.** Formation of an eschar.

**Escharot′ic.** Destroying living tissues, producing an eschar; substance which when applied upon a living part produces such an effect.

**Esch′erich's bacil′lus.** B. coli communis.

**Eschome′lia.** Variety of monstrosity in which defect of a limb exists.

**Eschrolal′ia** (*aischros*, indecent, *laleo*, to talk). Employment by the insane of obscene words or expressions.

**Eschscholt′zia califor′nica.** California plant, the alcoholic extract of which is sedative, resembling morphine in its effect and action; analgesic and soporific.

**Esco′ba ama′ya.** Parthenium hysteropharum.

**Escula′pian** (from *Æsculapius*). Medical.

**Es′culent** (*esca*, food). Edible; eatable; such plants, or such parts of plants or animals, as may be eaten for food.

**Esculin′.** A glucoside obtained from the bark of the horse-chestnut; antipyretic in doses of gr. x–xv (0.65–1.0).

**Esenbeck′ia febrif′uga.** Brazilian tree, order *Rutaceæ*, from which a variety of angostura is procured; febrifuge. An alkaloid called *esenbeckine* has been obtained from it.

**Eseridine′.** $C_{15}H_{23}N_3O_3$. Alkaloid from seeds or leaves of Physostigma venenosum or Calabar bean, in which is also found eserine or physostigmine. It is toxic to the heart, but only one-sixth as strong as eserine. Its hypodermic use has produced gangrene.

**Eserine′.** $C_{15}H_{21}N_3O_2$. Alkaloid from Physostigma venenosum, Calabar bean; called also *physostigmine* and *calabarine*. Used by ophthalmologists for various affections of the eye and as a mydriatic, usually in solutions of gr. ij–℥ij of distilled water. **E. hydrobro′mate**, prepared by neutralizing eserine with solution of hydrobromic acid. **E.-pilocarpine′**, combination employed in colic in horses and as a purgative medicine for herbivorous animals. **E. sal′icylate**, result of combining eserine with salicylic acid. **E. sul′phate,** produced by neutralizing ethereal solution of eserine with sulphuric acid.

**Es′march's appara′tus, ban′dage, or tour′niquet.** Arrangement for removing blood from a limb before amputation or other important operation, by application of a broad rubber bandage wrapped tightly from below. **E.'s tubes,** tubes containing a thin layer of gelatin, for the culture of bacteria.

**Esocoli′tis.** Dysentery.

**Esod′ic** (*eis,* into, *hodos,* away). Afferent.

**Esoenteri′tis.** Inflammation of the mucous coat of the intestines.

**Esoethmoidi′tis.** Inflammation of ethmoid cells.

**Esogastri′tis.** Inflammation of the lining membrane of the stomach.

**Esoph′agus.** For this and terms derived from it, see *Œsophagus,* etc.

**Esophor′ia** (*eis,* into, *phero,* to bear). Bending of visual lines inward.

**Esophor′ic.** Relating to esophoria.

**Esorrhi′nus.** Term applied to crania in which a line projected from the nasion to the alveolar point comes in front of a line drawn from nasion to rhinion.

**Esosmo′sis.** Endosmosis.

**Esosphenoidi′tis.** Inflammation of the lining membrane of the sphenoidal cells; osteomyelitis of the sphenoid bone.

**Esoter′ic** (*esoteros,* interior). Private, interior; as esoteric causes of disease, in contradistinction to exoteric, public or exterior.

**Esothyrope′xia** or **Esothy′ropexy** (*eso,* inward, *thyro,* for thyroid gland, *pexis,* fastening). A method of operative treatment of goitre by drawing the thyroid gland forward and fixing it; the gland soon atrophies.

**Esotro′pia** (*eso,* inward, *trepo,* to turn). Convergent strabismus.

**Es′sence.** By some used synonymously with volatile oil; by others with simple tincture or with alcoholic solution of volatile oil, as essence of peppermint. **E. of an′ise,** essentia anisi. **E. of Barda′na,** tinctura guaiaci ammoniata. **E. of bit′ter al′mond,** spiritus amygdalæ amaræ. **E. of car′away,** essentia carui. **E. of cin′namon,** essentia cinnamomi. **E. of fen′nel,** essentia fœniculi. **E. of gin′ger,** tinctura zingiberis fortior. **E. of lem′on,** spiritus limonis. **E. of mint,** spiritus menthæ piperitæ. **E. of musk,** tinctura moschi. **E. of nut′meg,** essentia myristicæ moschatæ. **E. of pennyroy′al,** essentia menthæ pulegii. **E. of pep′permint,** spiritus menthæ piperitæ. **E. of pimen′to,** essentia pimentæ. **E. of rose′mary,** essentia rosmarini. **E. of roses,** see *Rosa centifolia.* **E. of spear′mint,** spiritus menthæ viridis. **E. of spruce,** see *Pinus abies.*

**Essen′tia.** Essence; tincture. **E. abie′tes,** see *Pinus abies.* **E. absin′thii ama′ra,** or **E. absin′thii compos′ita,** tinctura absinthii composita. **E. al′oës,** tinctura aloes. **E. ani′si,** essence of anise (ol. anisi and spirit. rectif.); dose, ♏x–xx (0.65–1.3) as a carminative. **E. antimo′nii** or **stib′ii,** vinum antimonii tartarizati. **E. antisep′tica, Huxha′mi,** tinctura cinchonæ compositum. **E. aromat′ica,** tinctura cinnamomi composita. **E. car′ui,** essence of caraway (ol. carui and alcohol); dose, gtt. xx–ʒj (1.3–4.0) as a carminative. **E. casto′rei,** tinctura castorei. **E. de ce′dro,** oleum cedrinum. **E. chi′næ,** tinctura cinchonæ composita. **E. cinnamo′mi,** essence of cinnamon (ol. cinnam. and alcohol); dose, gtt. x–xx. **E. cor′ticis peruvia′na antisep′tica Huxha′mi,** tinctura cinchonæ composita. **E. c. p. compos′ita,** tinctura cinchonæ amara. **E. fœnic′uli,** essence of fennel (ol. fœnic. and alcohol); dose, gtt. x–ʒj (0.65–4.0). **E. men′thæ piperi′tæ,** spiritus menthæ piperitæ. **E. m. pule′gii,** essence of pennyroyal (ol. puleg. and alcohol); dose, gtt. xv–xxx (1.0–2.0). **E. m. vir′idis,** tinctura olei menthæ viridis. **E. myrist′icæ moscha′tæ,** essence of nutmeg (ol. myrist. and alcohol); dose, gtt. xx–xxx (1.3–2.0). **E. nero′li,** see *Citrus aurantium.* **E. pepsi′ni,** wine of pepsin. **E. pimen′tæ,** essence of pimento (ol. piment. and alcohol); dose, gtt. xxx–lx (2.0–2.6). **E. rosmari′ni,** essence of rosemary (ol. rosmarini and alcohol); dose, gtt. xxx–lx (2.0–2.6). **E. terebin′thinæ,** oleum terebinthinæ.

**Essen′tial.** Term applied to the active principles of vegetables believed to be endowed with the properties of the plants from which they are extracted. *Essential oil* was so called because regarded as the only immediate principle which was essential. *Essential salts* are true salts or extracts, existing ready formed in vegetables, obtained by distillation, incineration, or some other process. *Essential disease* is synonymous with a general disease; that is, one not depending on any local affection, not symptomatic. **E. resis′tance,** resistance to conduction in the interior of a battery. **E. paral′ysis,** paralysis without perceptible lesion. **E. ver′tigo,** vertigo without perceptible lesion.

**Essen′tialism.** Theory that every disease has its own individual features, requiring its own individual treatment.

**Essential′ity.** The quality of being essential, referring to the so-called essential diseases. See *Essential.*

**Es′ter.** A compound ether having an acid and an alcohol radical.

**Esthe′sia, Esthet′ic.** For these and similar terms, see *Æsthesia, Æsthetic,* etc.

**Es′thiomene** or **Esthiom′enus** (*esthio,* to eat). That which devours or eats away. Lupus. Certain ulcers and eruptions are so called, especially rodent ulcer of the vulvo-anal region.

**Es′tival** (*æstas,* summer). Happening in summer; belonging to summer. Epithet given to summer diseases.

**Es′tivo-autum′nal.** Relating to both summer and autumn; summer-autumn; a term applied to a grave form of malarial fever occurring during these months.

**Est′lander's opera′tion.** Operation of excision of a rib or ribs for empyema.

**Es′trual.** Œstrual.

**Estrua′tion.** Œstruation.

**Es′ula cyparis′sias.** Euphorbia cyparissias. **E ma′jor,** Euphorbia palustris. **E. mi′nor,** Euphorbia cyparissias.

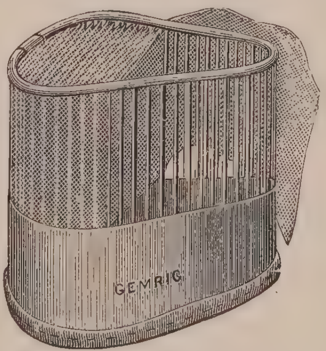
**Eter′nal flow′er.** Helichrysum orientale.

**E′thal.** Cetyl hydrate. See *Cetyl alcohol.*

**Eth′alyl.** Cetyl.

**Eth′ene.** Ethylene.

**E′ther.** See *Æther.* **Chlor′ic e.,** æther chloricus; see also *Chloroform.* Under the names *concentrated chloric ether* and *strong chloric ether* a compound of pure chloroform and nearly absolute alcohol, in the proportion of one-third of the former to two-thirds of the latter, has been used as an anæsthetic by inhalation in the same cases as sulphuric ether and chloroform. It is properly an alcoholic solution or tincture of chloroform. See *Spiritus chloroformi* and *Chloroform.* **Com′pound e.,** preparation consisting of



Allis's ether inhaler.

a solution of chloroform in sulphuric ether, used as an anæsthetic in the same cases as chloroform. **E.-cone,** an apparatus for giving ether by inhalation. **E. drunk′enness,** intoxication from the habitual or excessive use of ether as a drink. **Eth′yl meth′yl e.,** see under *Ethyl*. **For′mic e.,** see *Formic*. **Hydro-bro′mic e.,** $C_2H_5Br$, volatile liquid made by distilling powdered bromide of potassium with a mixture of strong sulphuric acid and alcohol; colorless liquid with the odor of chloroform, without its disagreeable after-effects; rapid anæsthetic. **E. inha′ler,** appliance used for the administration of ether by inhalation. **Marine′ e.,** æther muriaticus. **Meth′yl-ethyl′ic e.,** methylic ether, made by adding pure methylic alcohol and strong sulphuric acid, is an anæsthetic devoid of unpleasant symptoms; dissolved in ether, it is called methyl-ethylic ether, and may be employed as a rapid anæsthetic in short operations. **Methyl′ic e.,** methyl-ethylic e. **Ni′trous e.,** nitrite of ethyl; this liquid, the characteristic ingredient of *spiritus ætheris nitrosi,* is closely analogous in its action to nitrite of amyl; it is too powerful for anæsthetic purposes. **Ozo′nic** or **o′zon-ized e.,** peroxide of hydrogen in ether; used in the form of spray in the sick-room as a purifying agent; it does not irritate the respiratory organs, but cannot be safely employed near a light or fire.

**Ethe′real.** Relating to ether.

**Etherifica′tion** (*æther,* ether, *facio,* to make). Generation of an ether from an alcohol.

**Ethe′rion.** Supposititious gas in the atmosphere, said to have a power of conducting heat one hundred times greater than that of oxygen.

**E′therism.** Aggregate of phenomena induced by the inhalation of ether.

**Etheriza′tion.** Administration of ether by inhalation. Anæsthetic effect of ether.

**E′therize.** To place under the anæsthetic influence of ether.

**E′therol** (*æther + oleum,* oil). Oleum æthereum; also liquid resulting from acting upon oleum æthereum with water.

**Etheroma′nia.** Mania for or excessive indulgence in ether as an intoxicant.

**Eth′ics, med′ical** (*ethos,* moral conduct). The duties and rights of medical practitioners.

**Eth′idene.** Ethylidene.

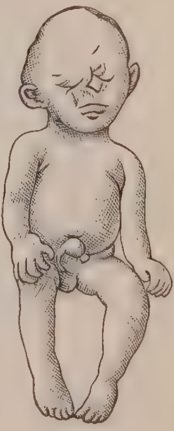
**Ethio′pian.** See *Man.*

**Ethiopifica′tion.** Darkening of the skin as in argyria.

**E′thiops.** See *Æthiops.* **E. mar′tial,** black deutoxide of iron.

**Ethmocardi′tis.** Inflammation of the cardiac cellular tissue.

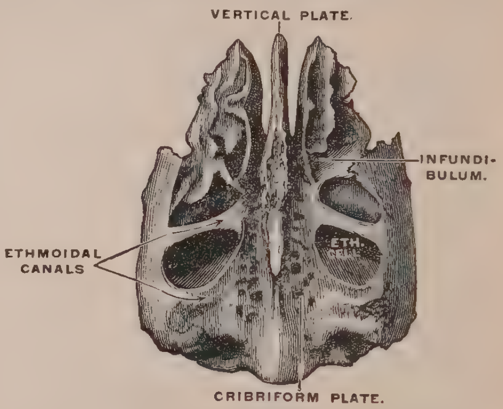
**Ethmoceph′alus.** Monstrosity in the form of a cyclocephalus, in which the eyes are close together, but distinct; the nasal apparatus atrophied and rudimental. Cyclops. Such a condition is called *ethmocephalia.*



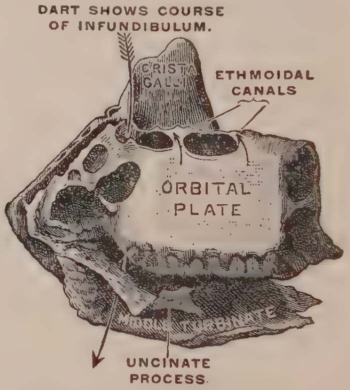
Ethmocephalus.

**Ethmocra′nial an′gle.** Angle formed between the cribriform plate of the ethmoid and the basicranial axis.

**Eth′moid** (*ethmos,* sieve, *eidos,* form). Resembling a sieve. **E. bone,** one of the eight bones comprising the cranium; so called because its upper plate is pierced by a considerable number of holes. The ethmoid bone is situated at the anterior, inferior, and middle part of the base of the cranium. It seems to be composed of a multitude of thin, fragile, semitransparent laminæ, forming more or less spacious cells, called the *ethmoidal labyrinth* or *cells,* distinguished into anterior and posterior. These communicate with the nose, and are lined by a prolongation of the pituitary membrane. The ethmoid bone is constituted of compact tissue, and is surrounded by the ethmoid suture. It is articulated with the frontal and sphenoidal bones, the cornua sphenoidalia, the superior maxillary bones, the palate bones, the ossa turbinata inferiora, the vomer, the proper bones of the nose, and the lacrymal bones.



Ethmoid bone, seen from above. (Gerrish.)



Ethmoid bone, left side. (Gerrish.)

**Ethmoi′dal.** Belonging or relating to the ethmoid bone. **E. an′trum,** ethmoidal cells. **E. apoph′ysis,** advanced part of the sphenoid bone, articulating with the ethmoid. **E. ar′teries** are two in number, branches of the ophthalmic artery. **E. cells,** cells in lateral masses of the ethmoid bones. **E. crest,** ridge on the superior surface of the ethmoid. **E. fis′sures,** fissures in the cribriform plate of the ethmoid. **E. foram′ina,** foramina on the inner part of the orbit between the ethmoid and frontal bones. **E. grooves,** deep depressions between the lateral masses of the ethmoid and the vertical plate. **E. lab′yrinth,** e. cells. **E. nerve,** branch from the nasal nerve, supplying the nose. **E. notch,** notch for reception of the cribriform plate of the ethmoid. **E. si′nuses,** e. cells. **E. spine,** spine of the sphenoid bone articulating with the cribriform plate of the ethmoid. **E. su′ture,** suture between the ethmoid and frontal bones. **E. veins,** these vessels correspond in distribution with the ethmoidal arteries.

**Ethmoidi′tis.** Inflammation of the ethmoid bone or cells.

**Ethmoi′dofron′tal su′ture.** Suture between the ethmoid and frontal bones.

**Ethmolac′rymal an′gle.** Part of the upper jawbone, the orbital portion of which fits in the space between the lacrymal bone and the orbital plate of the ethmoid.

**Eth′mosphenoi′dal.** Relating to the connection of the ethmoid and sphenoid bones.

**Ethmotur′binals.** Lateral masses of the ethmoid bone.

**Ethmovo′merine.** Relating to the ethmoid bone and vomer.

**Ethmyphi′tis** (*ethmos*, sieve, hyphe, web). Cellulitis. Inflammation of cellular tissue. When it extends in depth through the whole thickness of the subcutaneous cellular tissue it is called *dermatocellulitis*.

**Eth′nic** (*ethnos*, nation). Relating to race.

**Ethnog′raphy** (*ethnos*, nation, *graphe*, description). History of the races of man.

**Ethnolog′ical.** Relating to ethnology.

**Ethnol′ogy** (*ethnos*, nation, *logos*, discourse). Science of the races of man.

**Ethoxycaffeine′.** Substance prepared by boiling bromocaffeine with potassium hydrate and alcohol; narcotic and diuretic.

**Eth′ydene.** Ethylidene.

**Eth′yl.** $C_2H_5$. Hypothetical radical of ethyl alcohol. **E. ac′etate,** acetic ether. **E. al′cohol,** hydrate of ethyl; alcohol. **E. bichlo′ride,** olefiant gas. **E. bro′mide,** a clear, colorless liquid used by inhalation for the production of general anæsthesia; it should not be confounded with ethylene bromide, which is exceedingly poisonous. **E. carb′amate** or **carbam′inate,** urethane. **E. carban′ilide,** euphorine. **E. chlo′ride,** æther muriaticus. **E. cy′anide,** æther hydrocyanicus. **E. e′ther,** spiritus vini æthereus. **E. for′mate,** formic ether, $C_2H_5CHO_2$; antispasmodic and anæsthetic. **E. hy′drate,** alcohol. **E. hy′dride,** gas prepared by exposing, at a temperature of 300°, the iodide of ethyl to zinc in the presence of water in a closed tube; narcotic. **E. i′odide,** æther hydriodicus. **E. meth′yl e′ther,** anæsthetic; procured by acting on sodium methylate with ethyl iodide. **E. ni′trate,** liquid formed by distilling alcohol and pure nitric acid; not much employed as an anæsthetic, severe headache following its administration. **E. ni′trite,** nitrous ether. **E. phenacetin′,** homologous with methylphenacetin; a yellow, oily substance; employed as a mild hypnotic. **E. pyoktanin′,** combination of the two substances employed in general surgery and in eye affections. **E. u′rethane,** ethyl ether of carbamic acid, hypnotic; dose, gr. xv–xx (1.0–1.3).

**Ethylamin.′** $C_2H_5NH_2$. An ammoniacal constituent of coal-tar. Ptomain formed from putrefying yeast, wheat flour, etc.; a strong ammoniacal liquid. **E. u′rate,** a compound which has been recommended in the treatment of uric-acid calculi, gout, etc.

**Eth′ylate.** Combination of ethyl alcohol in which the hydrogen of the hydroxyl of the latter is substituted by a base.

**Ethylchloralure′thane.** Somnal.

**Eth′ylene.** $C_2H_4$. Olefiant gas. **E. bichlo′ride** or **dichlo′ride,** ethylidene chloride; Dutch liquid, ethene chloride; oily liquid used as an anæsthetic. **E. bro′mide,** $C_2H_4Br_2$, brown fluid, with odor of chloroform; very poisonous; narcotic; used in epilepsy; a powerful cardiac sedative. **E. lac′tic acid,** acid isomeric with lactic acid, derived from muscle. **E. peri′odate,** diiodoform. **E. phenylhy′drazin-succin′ic acid,** formed by adding succinic anhydride to boiling solution of ethylene-phenylhydrazin; antipyretic. **E. tetri′odide,** diiodoform.

**Ethylenediamin′.** Non-toxic alkaline base, $C_2H_8N_2$, isomeric with ethylidene-diamin. Used in diphtheria on account of its solvent effect on fibrin and albumin. **E. guai′acol,** guaiacol ethylenate. **E. tricre′sol,** a mixture of 19 parts each of the ethylenediamin and tricresol, dissolved in 500 parts of distilled water.

**Eth′ylene-i′mide** or **Eth′ylene-i′min.** Piperazin. Non-toxic base, $C_2H_5N$, found in cholera cultures; supposed to be identical with spermin.

**Ethyl′ic.** Relating to ethyl. **E. al′cohol,** alcohol.

**Ethyl′idene chlo′ride.** $C_2H_4Cl_2$. Ethylene bichloride; chloræthylene; ethylum chloratum; liquor hollandicus; Dutch liquid. Made by the action of chlorine on ethylene; a colorless liquid, having the odor of ether; sp. gr. 1.254; used locally in painful rheumatic or neuralgic affections. **E. dichlo′ride,** e. chloride. **E. dieth′ylate, dieth′yl-e′ther, dimeth′ylate,** or **eth′ylate,** acetal. **E. lac′tic acid,** see *Lactic acid.* **E. dimeth′yl-e′ther,** dimethyl acetal.

**Ethylidenediamin′.** $C_2H_8N_2$. Ptomain produced in the decomposition of fish. In frogs it causes dilatation of the pupils, projection of the eyeball, dyspnœa, and death.

**Ethyliza′tion.** Anæsthetization with ethyl bromide.

**Eth′ylize.** To use ethyl bromide as an anæsthetic.

**Eth′yl-phe′nyl-car′bamate** or **E.-p.-ure′thane.** Euphorine. Phenylurethane.

**Etiola′tion.** Paleness produced in persons who have been kept long without light, or similar paleness the result of chronic disease.

**Etiolog′ical.** Relating to the cause.

**Etiol′ogy** (*aitia*, cause, *logos*, discourse). Ætiology. Doctrine of causes, as of disease.

**Eti′ta.** Cutaneous affection in Africa, with rapidly formed blotches over the body, the parts looking as if they had been badly scalded, with intolerable itching.

**Et′ron.** Abdomen; hypogastrium.

**Etron′cus** (*etron*, abdomen, *onkos*, tumor). Tumor of the lower belly.

**Etrot′omy.** Low abdominal section.

**Euæ′mia** (*eu*, good, *haima*, blood). Good condition of the blood.

**Euæsthe′sia.** Vigorous perception.

**Euan′themon.** Anthemis nobilis.

**Eucaïne′.** Artificial alkaloid employed as a local anæsthetic. **Al′pha-eucaine′,** eucaine α., $C_{19}H_{27}NO_4HCl$, is a benzoyl-methyl-tetra-gamma-oxy-piperidin-carboxylic-methyl-ester. The hydrochloride, being more soluble, is generally employed. A local anæsthetic, resembling cocaine, but safer on account of not acting on the heart. Used also in diseases of the nose and throat, in dental operations, etc. **Be′ta-eucaine′,** eucaine β., $C_{17}H_{21}NO_2HCl$, is also used as a substitute for cocaine, in the form of hydrochloride. It is benzoyl-vinyl-diacetonal-karnin. It is non-irritant, and less poisonous than cocaine or alpha-eucaine. A 2 per cent. solution is the strength usually employed.

**Eucalyp′tene.** $C_{10}H_{16}$. Hydrocarbon from eucalyptus. Antiseptic. **E. hydrochlo′rate,** eucalypteol.

**Eucalyp′teol.** $C_{10}H_{16}2HCl$. Eucalyptene hydrochlorate; a white, scaly substance derived from the action of hydrochloric acid on oil of eucalyptus; administered in bronchitis and pulmonary diseases and as a gastro-intestinal disinfectant in affections of that vicinity. Daily dose is about gr. xx (1.3).

**Eucalyp′tol.** (Ph. U. S.) $C_{12}H_{20}O$. A substance derived from the essential oil of Eucalyptus globulus; it has the odor of camphor. Externally, antiseptic to ulcers, gangrene, etc.; local stimulant application in neuralgia and rheumatism. Internally, used in the treatment of phthisis pulmonalis, pneumonia, bronchitis, influenza, malaria, etc.

**Eucalyp′tolene.** Liquid hydrocarbon derived from eucalyptus.

**Eucalyp′toresorcin′.** A white, crystalline powder produced by treating eucalyptol and resorcin together; antiseptic, and used by inhalation in phthisis.

**Eucalyp′tus.** A genus of myrtaceous evergreens. The official (Ph. U. S.) name for the leaves of E. globulus; dose, gr. x–ʒj (0.65–4.0). The preparations are: *Eucalyptol,* which see. *Extractum eucalypti fluidum* (fluid extract); dose, ♏x–ʒj (0.65–4.0). *Oleum eucalypti* (oil of eucalyptus); dose, ♏v–xv (0.32–1.0). **E. amygdali′na,** peppermint tree. **E. corymbo′sa,** tree of Australia yielding Australian kino. **E. dumo′sa,** species of eucalyptus on whose leaves is obtained a kind of manna. **E. glob′ulus** or **globo′sus,** blue-gum tree, fever tree, growing in Australia. Supposed to exert a beneficial effect in malarial regions. Australian tree, ord. *Myrtaceæ*, infusion of whose leaves has been given with success as an antiperiodic; also prescribed in the form of powdered leaves, decoction, aqueous and alcoholic extracts, etc., and in its essential oil, *eucalyptol*. Eucalyptus (Ph. U. S.) is the leaves of E. globulus. **E. gum,** red, astringent gum exuding from the bark of E. rostrata; used as an astringent, especially in diseases of the throat, to allay cough. **E. ki′no,** Australian kino. **E. man′na,** Australian manna. **E. mannif′era,** from this Australian species, ord. *Myrtaceæ*, a manna-like substance exudes, having similar properties to manna. **E. resinif′era,** see *Kino*. **E. rostra′ta,** said to be of value in seasickness. **E. vimina′lis,** a source of Australian manna.

**Eucheu′ma gelat′inæ.** Form of East Indian algæ, used to make isinglass. **E. specio′sa,** July plant; plant of Western Australia, making an excellent stock for jelly for invalids.

**Euchinine′.** $C_{23}H_{28}N_2O_4$. An ethyl-carbonic ester of quinine; employed in whooping-cough, pneumonia, malarial diseases, etc., in doses of gr. xv–xxx (1.0–2.0); its action resembles that of quinine.

**Euchlorhyd′ria.** Secretion of normal amount of hydrochloric acid (0.1–0.2 per cent.) in the gastric juice.

**Euchlorine′.** Gas obtained by subjecting potassium chlorate to the action of hydrochloric acid; a good disinfectant.

**Euchres′ta horsfel′dii.** Native of India; seeds are employed by the natives in bites of venomous animals.

**Euchrœ′a** (*eu*, well, *chroia*, color). Good or healthy color of the skin.

**Euchromatop′sia** (*eu*, well, *chroma*, color, *opsis*, sight). Ability to recognize colors distinctly.

**Euchy′lia** (*eu*, well, *chylos*, chyle). Healthy state of the chyle.

**Euchy′mia** or **Euchy′my** (*eu*, well, *chymos*, juice). Good state of the humors.

**Euder′mol.** Nicotine salicylate, used in some forms of skin disease.

**Eudiom′eter** (*eudia*, fair weather, *metron*, measure). Apparatus for estimating the amount of oxygen contained in the air. Also an instrument used to explode gases with the aid of an electric spark.

**Eudiom′etry.** Estimation of the amount of oxygen contained in the air. Also analysis of air itself. See *Eudiometer*.

**Eudoxin′.** Tetraiodophenolphthalein bismuth. Bismuth salt of nosophen, more than 50 per cent. being iodine. Prescribed as an antiseptic and sedative, in the vomiting of pregnancy and in gastro-intestinal diseases, in doses of gr. iij–x (0.2–0.65); for children, gr. j–v (0.065–0.32), according to age; for infants, gr. ss–iss (0.032–0.1).

**Eugal′lol.** Pyrogallol acetate. Soluble syrupy mass; used in psoriasis instead of pyrogallol. A solution in acetone is employed as a varnish to the skin.

**Euge′nia ac′ris.** Myrcia acris. See *Spiritus myrciæ*. **E. aromat′ica** or **caryophylla′ta,** Indian tree, ord. *Myrtaceæ*, source of the clove, caryophyllus, which is the unexpanded bud. Its odor is strong, aromatic, and peculiar; taste pungent and acrid; it is stimulant and carminative; generally used as a corrigent to other remedies and when substances containing the essential oils are demanded. Caryophyllus (Ph. U. S.) is the unexpanded flowers of Eugenia caryophyllata; in the Ph. Br., the dried flower-bud of the same plant. The oil—*oleum caryophylli*, *oil of cloves*—has the properties of the cloves. **E. cauliflo′ra,** Myrtus cauliflora. **E. che′ken,** cheken, Myrtus chekan, plant of Chili; used in catarrhal affections, especially bronchitis. **E. jambola′na,** Syzygium jambolanum. **E. pimen′ta,** Myrtus pimenta.

**Euge′nic acid.** Eugenol.

**Eu′genol.** $C_{10}H_{12}O_2$. Chief constituent of oil of cloves, cinnamon, etc.; oily liquid; antiseptic; febrifuge. **E. acet′amide,** prepared by the action of monochloracetic acid on eugenol-sodium; local anæsthetic and antiseptic. **E. ben′zoate,** benzoyl-eugenol. **E. ben′zoyl,** see *Benzoyl-eugenol*. **E. cin′namate,** see *Cinnamyl*. **E. cin′namyl,** see *Cinnamyl*.

**Eukine′sia** (*eu*, well, *kinesis*, motion). Healthy exercise or power of movement.

**Eu′lachon oil.** Oil from the eulachon or candle-fish, Thaleichthys pacificus, of British Columbia; used as a substitute for cod-liver oil.

**Eu′le** (a worm). Worms, especially those bred in a wound or ulcer.

**Eulo′phia campes′tris.** A plant of the order *Orchidaceæ*, growing in the East Indies, source of salep. **E. herba′cea** grows in the same region; also a source of salep.

**Euna′trol.** Sodium oleate.

**Eu′nol.** A name given to two preparations, alpha-e. and beta-e., employed externally in the treatment of skin diseases and in surgical dressings; they are made from naphthol and eucalyptol.

**Eu′nuch** (*eune*, bed, *echo*, to keep). A male whose organs of generation have been removed, or so altered that he is rendered incapable of reproducing his species or of exercising the sexual act.

**Eu′nuchism.** Condition resulting from castration.

**Eunu′chium meco′nis.** Lactuca.

**Euonymin′.** Bitter, resinous principle derived from euonymus; brownish-yellow powder; cholagogue cathartic; dose, gr. j–iij (0.065–0.2).

**Euon′ymite.** Sweet substance like mannite, derived from euonymus.

**Euon′ymus** (*eu*, well, *onyma*, name). The official (Ph. U. S.) name for the bark of the root of *E. atropurpureus*, which see. **E. america′nus** or **atropurpu′reus,** wahoo, burning bush, spindle tree, Indian arrow-wood, growing in the United States and Canada; ord. *Celastaceæ*. The bark is official in the Ph. U. S.; hydragogue cathartic, diuretic, antiperiodic; used in dropsy, in infusion, in the proportion of an ounce to a pint of water. Dose of the powder, gr. iij–xx (0.2–1.3). The extract (*extractum euonymi*) is official; dose, gr. iij–x (0.2–0.65). **E. europæ′us,** spindle tree; emetocathartic. **E. tin′gens,** inner bark of this shrub of India is used in affections of the eye.

**Eupatorin′.** $C_{20}H_{25}O_{36}$. Bitter glucoside from Eupatorium perfoliatum. Also a resinous extract from the same plant. Stomachic tonic and diaphoretic.

**Eupato′rium** (after Mithridates Eupator). The official (Ph. U. S.) name for the leaves and flowering tops of *E. perfoliatum*, which see. **E. ageratoi′des,** white snakeroot, ord *Compositæ;* indigenous; antispasmodic, diaphoretic, diuretic. **E. aromat′icum,** aromatic eupatorium or hempweed, white snakeroot; indigenous; has similar properties. **E. aya-pa′na** grows in Brazil; aromatic tonic. **E. cannab′inum,** hemp agrimony, water hemp, herb of Saint Cunegonde; juice is emetic, purgative, and diuretic. **E. colli′num** grows in Mexico; decoction of leaves is used in diarrhœa and as a tonic and antiperiodic. **E. con′natum,** E. perfoliatum. **E. fœnicula′ceum,** dog fennel; indigenous. **E. gua′co,** guaco. **E. hyssopifo′lium,** employed in cases of snake-bite. **E. incarna′tum,** mata; indigenous in southern United States. **E. japon′icum,** E. cannabinum. **E. leucolep′sis,** justice's weed; used in cases of snake-bite. **E. mes′ues,** Achillea ageratum. **E. nervo′sum,** of Jamaica, cholagogue. **E. perfolia′tum,** boneset, thoroughwort, thoroughstem, thoroughwax, vegetable antimony, crosswort, ague-weed, feverwort, Indian sage, teazel, sweating plant; a plant growing in the United States; tops and leaves, gathered after flowering has commenced—*eupatorium* (Ph. U. S.)—are stimulating, tonic, emetic, purgative, diuretic, and sudorific; dose, ʒss–j (2.0–4.0), in infusion. The fluid extract (*extractum eupatorii fluidum*) is official; dose, ʒss–j (2.0–4.0). **E. pubes′cens,** E. teucrifolium. **E. purpu′reum,** Mohawk tassel, purple-stalked eupatorium, trumpetweed, Joepyeweed, gravel root, is used in similar cases, as well as **E. rotundifo′lium,** round-leaved hempweed, wild horehound, **E. sessilifo′lium,** upland boneset, and **E. teucrifo′lium,** wild horehound, germander-leaved horehound, rough boneset. **E. trifolia′tum,** E. cannabinum. **Triple nerved e.,** aya-pana. **E. urticifo′lium,** E. ageratoides. **E. verbenæfo′lium,** E. teucrifolium.

**Eupep′sia** (*eu*, well, *pepto*, to digest). Good digestion; anthithesis to dyspepsia.

**Eupep′tic.** Relating to a good digestion; one endowed with a good digestion.

**Euphor′bia.** A genus of plants of the order *Euphorbiaceæ.* **E. antiquo′rum** grows in India; said to possess the same properties as Euphorbia tirucalli. **E. canarien′sis** grows in the Canary islands and Western Africa, yielding gum-resin euphorbium. **E. capita′ta,** Brazilian plant, caacica, strongly astringent, and not poisonous; considered to be one of the best remedies for the bites of serpents. **E. ca′put Medu′sæ,** South African plant, used to poison arrows; Ethiopians use, for the same purpose, *Euphorbia heptagona, E. virosa,* and *E. cereiformis;* the savages in the most southern part of America, the sap of *E. cotinifolia.* **E. cereiform′is,** see *Euphorbia caput Medusæ.* **E. chilen′sis,** juice of this South American plant is a drastic purgative. **E. corolla′ta,** large flowering spurge, milkweed, snake's milk, purge root, emetic root, Bowman's root, apple root, Indian physic; indigenous; emetocathartic. **E. cotinifo′lia,** see *Euphorbia caput Medusæ.* **E. cyparis′sias** or **cypres′sina,** cypress spurge, welcome to our house; like most of the spurges, it is very acrimonious; it was formerly called poor man's rhubarb, being a laxative. **E. drummon′dii,** of Australia; alkaloid *drumine* resembles cocaine. **E. helioscop′ia,** sun spurge, wartwort spurge; indigenous; juice has been given in syphilis; is cathartic. **E. heptago′na,** see *Euphorbia caput Medusæ.* **E. heterodox′a,** of Brazil; milky juice, alveloz, arveloz, or aveloz; has been used externally in cancer. **E. hypericifo′lia,** large-spotted spurge, eyebright; native of the United States; astringent and tonic; used in infusion. **E. ipecacuan′ha,** ipecacuanha spurge, wild ipecac; common in the southern and middle parts of the United States; the root is a powerful emetic in the dose of five to fifteen grains; twenty grains act as a cathartic; in large doses it is narcotico-acrid. **E. lath′yris,** systematic name of the plant which affords the lesser cataputia seeds, caper spurge, lathyris, garden spurge, caper plant, mole plant; seeds possess cathartic properties; and expressed oil of the seeds, oleum euphorbiæ lathyridis, oil of euphorbia, is cathartic in the dose of six to twelve drops. **E. macula′ta,** spotted spurge; indigenous in United States and Mexico; juice is used in corneal opacity; a decoction in skin diseases. **E. myrtifo′lia,** Pedilanthus tithymaloides. **E. obtura′ta,** E. helioscopia. **E. officina′rum,** systematic name of the plant affording euphorbium in the greatest abundance; inodorous gum-resin which enters into the composition of some plasters and has been used as an errhine. **E. palus′tris,** greater spurge, marsh spurge, wretweed; juice is given in Russia as a common purge, and as an irritant in tinea, warts, etc.; locally, as a preventive of hydrophobia after the bite of rabid dogs, the bitten part being washed with a decoction, which is also taken internally. **E. panicula′ta,** E. palustris. **E. paral′ias,** sea spurge; violently cathartic and irritating, and seldom used. **E. pep′lus,** petty spurge; indigenous; powdered root is actively cathartic; given in dropsy. **E. pilo′sa,** properties and uses the same as E. palustris. **E. pilulif′era,** herb growing in India and other tropical countries; used in bronchitis and asthma; first accelerates and then retards the action of the heart. **E. prostra′ta,** used in Mexico as an antidote to the poison of serpents; in large doses emetocathartic. **E. resinif′era,** indigenous in Morocco, a source of gum-resin euphorbium. **E. tirucal′li,** of India, milk-hedge; juice, applied locally, is said to induce powerful uterine contractions. **E. tithymaloi′des,** Pedilanthus tithymaloides. **E. tort′ilis,** of India, is said to possess the same properties as E. tirucalli. **E. villo′sa,** properties and uses the same as E. palustris. **E. viro′sa,** see *Euphorbia caput Medusæ.* All the spurges are vesicant and rubefacient when applied externally.

**Euphor′bium.** A gum-resin from Euphorbia officinarum and other species of euphorbium; used in veterinary medicine.

**Euphor′bon.** $C_{13}H_{22}O$. Neutral principle in the root of Euphorbia ipecacuanha.

**Eupho′ria** (*eu*, well, *phero*, to carry). Good state of health. Sense of ease or of good health.

**Euphorin′.** Phenylurethane.

**Euphra′sia.** Eyebright; genus *Scrophularineæ;* used in diseases of the eye, catarrh, toothache, etc. **E. officina′lis,** euphrasia.

**Euphthalmine′.** Artificial alkaloid, $C_{17}H_{25}NO_3$, the hydrochloride of which—the mandelic acid derivative of beta-eucaine—is used as a temporary mydriatic and paralyzer of the iris, in 5 to 10 per cent. solution.

**Eupla′sia** (*eu*, well, *plasso*, to form). Healthy healing, resulting in a living structure conforming to the nature and habits of the tissue of the part.

**Euplas′tic.** Having the capacity of becoming organizable in a high degree.

**Eupleu′rum serrula′tum.** Diosma crenata.

**Eupnœ′a** (*eu*, well, *pneo*, to respire). Normal respiration.

**Eupnœ′ic.** Breathing naturally or gently.

**Eupurpurin′.** Diuretic oleoresin from Eupatorium purpureum.

**Euquinine′.** $C_{23}H_{28}N_2O_4$. Euchinine.

**Eu′resol.** Resorcin monoacetate. Used in solution in acetone, or in form of ointment, for skin diseases.

**Euriba′li.** Juribali.

**Eurobin′.** Chrysarobin triacetate. It resembles chrysarobin in its action, but is more powerful.

**Eurodon′tic** (*euros*, putrefaction, *odous*, tooth). Suffering from carious teeth.

**Euromesoceph′alus** (*eurys*, broad, *mesos*, the middle, *kephale*, head). Having a head with a long bitemporal diameter.

**Eu′rophen.** Yellow, amorphous powder, allied to aristol, produced by the action of iodine on isobutylorthocresol in the presence of an alkali; used as a substitute for iodoform in syphilitic and other ulcers, lupus, burns, etc., in powder, ointment, or subcutaneously in solution. It is also used internally in syphilis.

**Europroceph′alus** (*eurys*, broad, *pro*, in front, *kephale*, head). Possessing a skull which is broad in the frontal region.

**Euro′tium.** Fungus like aspergillus morphologically, but differing in development. **E. malig′num,** a form of fungus sometimes met with in the ear.

**Eurrhyth′mia** (*eu*, well, *rhythmos*, rhythm). Regularity of the pulse.

**Eurrhyth′mic.** Regular in rhythm or beat, as the pulse.

**Eury′ale fe′rox.** Species of euryale of India, where it is used as a tonic and for food.

**Euryan′gium sum′bul.** Ferula sumbul.

**Eurybin′.** Derivative of Olearia moschata.

**Euryceph′alous** (*eurys*, broad, *kephale*, head). Having a broad head.

**Eurychas′mus** (*eurys*, broad, *chasma*, cavity). Epithet applied to skulls having sector for pharyngonasal cavity of 153° to 154°.

**Eurygna′thous** (*eurys*, broad, *gnathos*, jaw). Having a broad jaw.

**Euryn′ter** (*euryno*, to dilate). Dilator.

**Eu′ryon.** A point at each end of the transverse diameter of the cranium, used as a guide in craniometry.

**Euryproc′tus** (*eurys*, broad, *proktos*, anus or rump). Having broad buttocks or a wide anus.

**Eusit′ia** (*eu*, well, *sitos*, food). Good appetite.

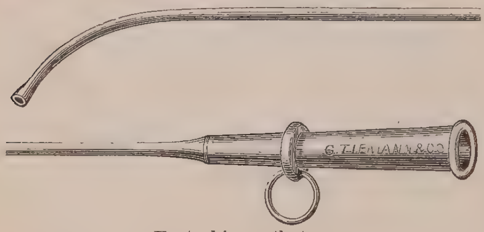
**Eusom'phalus** (*omphalos*, navel). Double monster in which each being has a separate navel, and is able to execute, independently, almost all the vital functions.

**Eusplanch'nia** (*eu*, well, *splanchnon*, viscus). Healthy state of the viscera.

**Euspon'gia.** A genus of sponges. **E. equi'na,** a firm, large, fibrous sponge. **E. officina'lis** furnishes the Levant sponge; this variety is regarded as the best.

**Eus'tace Smith's disease'.** Mucomembranous colitis in children.

**Eusta'chian** (called after Eustachius) **ar'tery,** a branch of the Vidian artery. **E. canal',** canal for Eustachian tube in the temporal bone. **E. cath'eter,** catheter to be applied through the nose into the Eustachian tube. **E. cush'ion,** a limited area on the posterior wall of the cartilaginous portion of the E. tube. **E. mus'cle,** laxator tympani muscle. **E. tube,** canal partly bony and partly cartilaginous, extending from the cavity of the tympanum to the upper part of the pharynx. Its length is about two inches; the bony portion, which belongs to the temporal bone, is about three-fourths of an inch long. It is lined internally by a prolongation of the lining membrane of the pharynx. It permits the renewal of air within the cavity of the tympanum. **E. valve,** valve of Eustachius; membranous, semilunar fold corresponding to the opening of the vena cava inferior into the right auricle of the heart.



Eustachian catheter.

**Eustron'gylus gi'gas.** Strongylus gigas.

**Eusystol'ic** (*eu*, well, *systole*, contraction). Relating to healthy contraction of the heart.

**Euthana'sia** (*eu*, well, *thanatos*, death). Easy death.

**Euthe'ria** (*eu*, well, *therion*, animal). Placental mammals (Huxley).

**Euther'mic.** Producing warmth.

**Euthycor'yphus** (*euthys*, straight, *koryphe*, vertex). Epithet applied to skulls which have the parietal angle of Lissauer (angle between lines projected in middle line of skull, between the most prominent part of the parietal bone, to bregma and lambda) from 142° to 151°.

**Euthymet'opus** (*euthys*, straight, *metopon*, forehead). Term used to designate skulls having angle formed by lines drawn from metopion to bregma and to nasion from 151.5° to 141°.

**Euthy'mia** (*eu*, well, *thymos*, mind). Tranquility of mind; good state of the mental faculties.

**Euthy'mol.** An antiseptic combination of eucalyptus, thymol, boric acid, menthol, oil of wintergreen, and Baptisia tinctoria.

**Euthyopisthocra'nius** (*euthys*, straight, *opisthe*, backward, *cranium*). Term to designate skulls in which the angle between lines drawn in the middle plane, from the most prominent point of the squama occipitis to the lambda and inion, is from 154° to 172°.

**Euthyp'nœa** (*euthys*, straight, *pnoe*, breath). Orthopnœa.

**Euthyu'ranus** (*euthys*, straight, *ouranos*, roof). Term to designate skulls in which the palatine angle is from 180° to 163.5°.

**Euto'cia** (*eu*, well, *tokos*, delivery). Easy or normal labor; fecundity.

**Eu'tocous.** Having easy or normal labor.

**Eutricho'sis** (*eu*, well, *thrix*, hair). Normal growth of the hair.

**Eutro'phia** or **Eu'trophy** (*eu*, well, *trophe*, nourishment). Good state of nutrition.

**Eutroph'ic.** Term introduced into medical terminology by Dunglison for an agent whose action is exerted on the system of nutrition, without necessarily occasioning manifest increase of the secretions; as mercurials, preparations of iodine, bromine, cod-liver oil, sulphur, sugar, etc.

**Euzoam'yly** (*eu*, well, *zoon*, animal, *amylum*, starch). The anatomical condition of the liver rich in glycogen.

**Evac'uants** (*evacuo*, to empty). Medicines which occasion a discharge by some emunctory, such as purgatives, emetics, etc.

**Evacua'tion.** Discharge by natural passages or artificial opening; dejection.

**Evac'uator.** Instrument or apparatus for emptying cavities. An evacuator is employed for cleaning out the bladder after lithotomy, for example.

**Ev'an root.** Geum virginianum.

**Evap'orate.** To transform a liquor into vapor by means of heat.

**Evapora'tion** (*evaporo*, to emit vapors). Transformation of a liquid into vapor. This is often done in order to obtain the fixed matters contained in it dry and separate from the liquid. When the vapor is received into a proper vessel and condensed the process is called distillation. Evaporation produces cold, and this is one of the processes by which the body is cooled through the evaporation of the perspiratory fluid.

**Eve'ning prim'rose.** Œnothera biennis.

**Eventra'tion** (*e*, out, *venter*, belly). Tumor formed by a general relaxation of the parietes of the abdomen, and containing a great part of the abdominal viscera. Ventral hernia, or that which occurs in any other way than through the natural openings of the abdominal parietes. Extensive wound of the abdominal parietes, with issue of the greater part of the intestines. Pendulous abdomen.

**Ev'eritt's salt.** Cyanide of iron and potassium.

**Ever'sion** (*e*, out, *verto*, to turn). Turning outward or inside out. **Alve'olar e.,** turning outward of the margins of a dental alveolus, due to disease. **E. of eye'lid,** turning outward of the lid, making the conjunctiva more visible. **E. of pulp,** forcible tearing away of the dental pulp.

**Evert'.** To turn out or inside out.

**Evidement'** (Fr.). Opening out a centre or centres of disease and curetting them.

**E'vil, the.** Scrofula. **Alep'po e.,** see *Aleppo*. **Hun'ger e.,** see *Hunger*. **King's e.,** scrofula. **E. leg,** purpura. **So'cial e.,** prostitution.

**Eviscera'tion** (*e*, out, *viscus*). Removal of the viscera, particularly those of the abdomen, as that done to facilitate the birth of the fœtus, called *obstetric e.* **E. of the eye,** removal of the contents of the eyeball, the sclera being left. **E. of the or'bit,** removal of the entire contents of the orbit; even the internal periosteum.

**Evo'dia febrif'uga.** Esenbeckia febrifuga. **E. fraxinofo'lia,** tree of E. Indies; volatile oil of seeds neutralizes odor of iodoform. **E. glau'ca,** bark is employed by Japanese physicians. **E. rutæcar'pa,** shrub of Japan, *go-sin-ju*, parts of which are used as purgative, emmenagogue, and sudorific.

**Evodine'.** Esenbeckine. Alkaloid from bark of Esenbeckia febrifuga.

**Evolu'tion.** Development, as of an organ or of the parts composing it; growth of the uterus during pregnancy. The doctrine of the descent or derivation of all forms of animal and vegetable life from one primitive form; see *Darwinian theory*. **E. of germs,** see *Generation*. **Sponta'neous e.,** spontaneous version, spontaneous expulsion, duplication of the fœtus; spontaneous turning of the fœtus in utero, in arm presentation, in consequence of powerful uterine contractions forcing out the breech and feet, while the arm recedes. Also the doubling of the fœtus, so that the arm changes its position but little, while the breech is forcibly expelled before the upper extremity; the case thus becoming similar to a breech presentation. **Ves′icle of e.**, vesicle of development.

**Evol′vulus alsinoi′des.** Native plant of India; used as a febrifuge and in disorders of the intestines.

**Evul′sion** (*evello*, to pluck out). Action of plucking out; forcible extraction of certain parts, as the teeth, polypi, etc.

**Ew′art's sign** or **symp′tom.** When there is a considerable amount of effusion in the pericardium the left clavicle becomes elevated, and the superior margin of the first rib can be felt on pressure with the finger as far as the sternum.

**Ex.** As a prefix, out of; an intensive prefix.

**Exacerba′tion** (*ex*, intensive, *acerbus*, harsh). Increase in the symptoms of a disorder. Paroxysm.

**Ex′acum spica′tum.** Coutoubea alba.

**Exæ′mia** (*ex*, out, *haima*, blood). Anæmia.

**Exæ′mous.** Exsanguinous.

**Exær′esis** (*exaireo*, to take away). Operation of removing anything from the human body.

**Exaggerated,** eks-aj′er-a-ted (*exaggero*, to heap up). Heightened; epithet for sounds heard on auscultation and percussion when much increased; and also for the symptoms of a disease when increased.

**Exalgin′** (*ex*, out, *algos*, pain). Obtained by treating sodium acetanilide with methyl iodide. Its physiological action resembles that of antipyrin. When given in large doses it is followed by cyanosis and convulsions. Used in neuralgia as an analgesic, and in chorea.

**Exalta′tion** (*exalto*, to raise). Increased action.

**Examina′tion.** The act of making a careful scrutiny into the condition of health of a person or of any of his organs. **Biman′ual** or **combined′ e.**, examination of an organ with both hands. **Dig′ital e.**, examination by a finger or fingers. **Post-mor′tem e.**, examination of a body after death for the purpose of establishing the cause of death.

**Exanima′tion** (*ex*, out, *anima*, life). Death; apparent death; fainting.

**Exan′them** (*exantheo*, to bloom). A rash; a more or less vivid, circumscribed, or diffuse redness of the skin, which diminishes or disappears transiently under the pressure of the finger. Usually restricted to eruptions accompanied by fever, including under *major exanthemata* the eruptive fevers which usually attack a person but once in his life and are communicated by specific contagion; and under *minor exanthemata* those not marked by these characteristics. Smallpox, measles, cowpox, chickenpox, etc., belong to the major exanthemata; herpes, lichen, etc., to the minor. **Anom′alous e.**, German measles.

**Exanthe′ma** (pl. exanthem′ata). Exanthem; a specific eruptive fever. **E. antivariolo′sum**, cowpox. **E. hæmorrhag′icum**, affection similar to purpura, with febrile symptoms, bleeding from the bowels and urinary organs and the mucous system generally, and a peculiar exanthematous eruption on the skin. **E. inter′num**, enanthem, eruption on a mucous membrane. **E. iod′icum**, eruption of dark red, definite spots, spreading over the body without the formation of scales, disappearing after a long time; produced occasionally by the use of iodine. **E. milia′ria**, miliary fever. **E. pes′tis**, plague. **E. sero′sum**, pemphigus. **E. stroph′ulus**, strophulus. **E. urtica′tum**, urticaria.

**Exanthemat′ic.** Eruptive; relating to the specific exanthemata. **E. fe′ver**, typhus fever.

**Exanthematol′ogy.** Doctrine or description of cutaneous eruptions.

**Exanthematos′chesis** (*exanthem*+*ischo*, to withhold). Suppression of a cutaneous eruption.

**Exanthem′atous.** Exanthematic or eruptive.

**Exan′thrope** (*ex*, out of, *anthropos*, man). A disease originating from some cause external to the body.

**Exarteri′tis** or **Exarterii′tis.** Inflammation of the outer coat of an artery.

**Exarthro′sis** (*ex*, out, *arthron*, joint). Luxation.

**Exartic′ulate** (*ex*, out, *articulus*, joint). To separate at a joint.

**Exarticula′tion.** Amputation at a joint. Luxation.

**Excæca′ria agal′locha.** Agallochum. **E. hiber′nica** possesses properties similar to those of E. agallocha. **E. lamet′tia**, tree, native of East Indies, which contains caoutchouc; leaves are used externally in infusion in syphilis and in ulcers. **E. sebif′era**, Stillingia sebifera. **E. sylvat′ica**, found in some of the Southern United States; the juice has sudorific properties; the root is used in syphilis.

**Excarna′tion** (*ex*, out, *karo*, flesh). Mode of making anatomical preparations, consisting in separating injected vessels from parts in which they are situated by corrosion or by putrefaction.

**Excastra′tio.** Castration.

**Excastra′tus.** Castrated.

**Excava′tio** (*ex*, out, *cavus*, hollow). Excavation, pouch, cavity, or hollow space. **E. Douglas′ii**, rectovaginal pouch. **E. is′chiorecta′lis**, ischiorectal fossa. **E. rec′to-ischiad′ica**, ischiorectal fossa. **E. rec′to-uteri′na**, rectovaginal pouch. **E. rec′to-vesica′lis**, rectovesical pouch. **E. u′terorecta′lis**, rectovaginal pouch. **E. ves′icorecta′lis**, rectovesical pouch. **E. ves′ico-uteri′na**, vesico-uterine pouch.

**Excava′tion.** A pouch or cavity. Preparation of a dental cavity for the reception of a filling, by first completely removing its contents. Act of hollowing out any part or cavity. **Glaucom′atous e.**, see *Optic papilla*. **E. of the op′tic disk** or **nerve**, cupping of the optic disk; see *Optic papilla*.

**Ex′cavator, den′tal.** Instrument for removing carious part of a tooth.

**Excen′tric.** Away from the centre. See *Eccentric*.

**Excerebra′tion** (*ex*, out, *cerebrum*, brain). Removal of the brain of the child, to facilitate delivery. Delirium.

**Excer′nent** (*excerno*, to sift). Secreting.

**Excip′ient** (*excipio*, to receive). Substance which, in a medicinal prescription, gives form and consistence to it, and serves as a vehicle or medium for the exhibition of the other ingredients.

**Excis′ion** (*excido*, to cut off). Operation by which parts are removed with a cutting instrument.

**Excitabil′ity** (*excito*, to excite). Irritability. Faculty possessed by living beings of being responsive to the action of excitants. Excitation.

**Exci′table.** Capable of or responding to stimulation. **E. a′rea**, motor area of the cerebral cortex.

**Exci′tant.** Stimulant. (For action of this class of remedies, see *Stimulants*.)

**Excita′tion.** Excitement. Act of exciting; state of increased activity in any organ or part.

**Exci′tatory.** Characterized by increased activity; tending to excite.

**Exci′ter.** A term applied to a morbidly affected eye which induces sympathetic inflammation or disease in the other eye.

**Exci′ting.** Stimulating; causing directly or immediately.

**Excitoglan′dular.** Stimulating glandular secretion.

**Excitometabol′ic.** Accelerating the processes of metabolism.

**Excitomo′tor** or **Excitomo′tory.** Exciting motor or muscular action. Epithet applied by Dr. Marshall Hall to a division of the nervous system comprising the gray matter of the spinal cord, with the afferent and efferent nerves connected with it—all of which are concerned in *reflex* actions, or those by which impressions are transmitted to a centre, and reflected so as to produce muscular contraction without sensation or volition. **E. a′rea**, excitable area in the cortex cerebri.

**Excitomus′cular.** Stimulating muscular action.

**Excitonu′trient** and **Excitosecre′tory.** Terms applied to reflex actions in which nutrition and secretion are modified by impressions made elsewhere and reflected to them, as when tumors disappear, or secretions, as of tears, milk, or saliva, are increased by impressions made on the cerebrospinal nervous centres.

**Excitovasomo′tor.** Stimulating vasomotor activity.

**Ex′clave** (*ex*, out, *clavis*, key). Part of an organ which lies detached from the main portion.

**Exclu′sion** (*excludo*, to shut out). Act of excluding or shutting out. **Diagno′sis by e.**, see *Diagnosis*. **E. of pu′pil,** condition in which the iris is attached to the lens.

**Exclu′sive.** That which excludes or shuts out.

**Excochlea′tion** (*ex*, out, *cochleare*, spoon). Act of curetting or scraping with a sharp spoon.

**Excoria′tion** (*ex*, out, *corium*, skin). Slight wound, removing only the skin; abrasion.

**Excrea′tion** (*exscreo*, to spit out). Act of spitting.

**Ex′crement** (*excerno*, to separate, to cleanse). Everything evacuated from the body of an animal by the natural emunctories as being superfluous, such as fecal matters, urine, perspiration, nasal mucus, etc. The term is usually restricted to fecal evacuations. The average amount of fæces discharged in twenty-four hours has been estimated at from four to six ounces when the amount of solid food taken may have been forty-five ounces. According to Simon, the fæces contain, approximately, water, 77.3; mucin, 2.3; proteids, 5.4; extractives, 1.8; fats, 1.5; salts, 1.8; resinous, biliary, and coloring-matters, 5.2; insoluble residue of food, 4.7. A non-nitrogenous, crystallizable matter, *excretin*, has been separated from the fæces, and also a crystallizable substance, *stercorin*, which is thought to be produced by transformation from cholesterin of the bile.

**Excrementi′tial** or **Excrementi′tious.** Fecal; relating to or resembling excrement. Excrementitial matters are those destined to be evacuated as incapable of administering to the nutrition of the body.

**Excremen′to-recrementi′tial** or **Excremen′to-recrementi′tious.** Animal fluids intended to be partly absorbed and partly rejected.

**Excres′cence** (*excresco*, to grow outward). Tumor which forms at the surface of organs, and especially on the skin, mucous membranes, or ulcerated surfaces. Warts, condylomata, polypi, and hemorrhoids belong under this head. **Caul′iflower e.,** see *Cauliflower*.

**Excre′ta.** Fæces; urine; perspiration. See *Excretion*.

**Excrete′.** To separate from the tissues or fluids of the body matter that is to be cast out.

**Excretin′.** See *Excrement*.

**Excre′tion** (*excerno, excretum*, to separate). Separation or throwing off of those matters, *excreta*, from the body of an animal which are supposed to be useless, as the urine, perspiration, and fæces.

**Excretol′ic acid.** A granular, fatty acid derived from fæces.

**Excre′tory.** Relating to or causing excretion. An excretory vessel or duct is one which transmits the fluid secreted by a gland, either externally or into the reservoirs in which it has to be deposited. The existence of an excretory duct was regarded as a distinctive character of the glands properly so called. **E. duct,** canal conveying secretion from a gland. **E. or′gan,** one charged with the office of excreting—the skin, for example. **E. tu′bule,** uriniferous tubule emptying into the pelvis of the kidney.

**Excre′tum.** Excrement.

**Excur′sion** (*ex*, out, *curro, cursum*, to run). Act of departure or wandering from the usual position.

**Excurva′tion.** Outward curvature.

**Ex′edens** (*ex*, out, *edo*, to eat). Eroding; eating away.

**Exencepha′lia** (*ex*, out, *enkephalos*, brain). Malformation and faulty development of the bones of the head, with displacement of the greater part of the brain to the outside of the skull, sometimes the entire brain lying on the back.

**Exenceph′alous.** Affected with exencephalia.

**Exenceph′alus.** A monster with the brain outside of the skull.

**Exentera′tion** or **Exen′terism.** Evisceration. Operation of taking out the bowel or of removing the contents of any cavity. **E. of the eye′ball,** removal, by operation, of the eyeball and its contents. Operation to supersede enucleation, the injured organ being removed without opening the capsule of Ténon and without involving the orbital cellular tissue, retaining the sclerotic coat with its muscles as a movable stump for the support of an artificial eye. **E. of the or′bit,** operation for the removal of the contents of the orbit.

**Exenteri′tis** (*ex*, out, *enteron*, intestine). Peritonitis.

**Ex′ercise** (*exerceo*, to work). Motion of the body from the contraction of voluntary muscles; action of any organ whatever. *Active exercise*, such as walking, running, dancing, hunting, fencing, playing at ball, cricket, quoits, swimming, etc., is an important prophylactic, particularly for those disposed to be plethoric. It improves digestion, augments the secretions, and, in moderation, gives strength to the body, but in excess produces debility and disease. *Passive exercise* is when a part of a limb is moved gently by another person, the patient resisting the movements made by the attendant or not, as may be directed. **E. bone,** drillbone.

**Exfœta′tion.** Extra-uterine pregnancy.

**Exfolia′tion** (*ex*, out, *folium*, leaf). Separation of the dead portions of a bone, tendon, aponeurosis, or cartilage, under the form of laminæ or small scales. The object is to detach the dead portion from parts subjacent, which are still alive. For this purpose the latter throw out granulation, and a more or less abundant suppuration occurs, which tends to separate the dead part, now an extraneous body. When the exfoliated part embraces all or almost all the substance of a bone it takes the name *sequestrum*.

**Exfo′liative.** Desquamatory. Causing or relating to exfoliation. Taking away by leaves or scales. The term is also applied to certain medicines regarded as proper to hasten exfoliation, as alcohol, oil of turpentine, tincture of myrrh, etc. **E. dermati′tis,** see *Dermatitis exfoliativa*. **E. trepan′,** raspatory, or an instrument for scraping exfoliating portions of bone.

**Exha′lant** or **Exha′lent** (*exhalo*, to breathe out). Having the quality of exhaling or evaporating.

**Exhala′tion** (*exhalo*, to exhale). Emission of fluid in the form of minute drops or vapor from the lungs (*pulmonary e.*) or the surface of the body (*cutaneous e.*). Also the vapor so exhaled or emitted. Effluvium.

**Exhaus′tion** (*exhaurio*, to draw out). Loss of strength occasioned by excessive evacuations, great fatigue, privation of food, or by disease. In pharmacy, separation of the potent ingredients of a drug. **Ner′vous e.,** see *Neurasthenia*. **So′lar e.,** see *Insolation*.

**Exhib′it.** To administer medicine.

**Exhibi′tion.** The administration of a certain medicine.

**Exhibi′tionism.** Impulse to exhibit the genitalia in the presence of others; the one so offending being called an *exhibitionist*.

**Exhil′arant** (*exhilaro*, to make merry). Agent that exhilarates or enlivens.

**Exhuma′tion** (*ex*, out, *humus*, the ground). Disinterment of a corpse.

**Exig′uous** (*exiguus*, small). Small in size or measure.

**Exischium,** eks-is′ke-um (*ex*, out, *ischion*, ischium). Prominence of the hips.

**Exischius** (eks-is′ke-us) or **Exischus** (eks-is′kus). Luxation of the os femoris. A person with large nates and prominent hips.

**Ex′itus.** Outer termination or exit of a canal; termination of a disease. **E. pel′vis,** outlet of the pelvis.

**Ex′ner's plex′us.** An almost superficial collection of nerve plexuses in the cerebral cortex.

**Exo-.** In composition, without, outward, out of median line.

**Exoärteri′tis.** Inflammation of the outer coat of an artery.

**Exocar′dia.** Exterior of the heart; displacement of the heart.

**Exocar′diac** or **Exocar′dial.** Relating to the exterior of the heart. *Exocardiac sounds* are those induced by conditions of the external surface of the heart.

**Exocardi′tis.** Pericarditis.

**Exocho′rion.** Outer layer of the chorion.

**Exocœla′rium.** The parietal layer of the endothelial lining of the body cavity or cœloma.

**Exocoli′tis.** Inflammation of the peritoneal coat of the colon.

**Exocula′tion** (*ex*, out, *oculus*, eye). Absence of eyes; deprivation of vision; removal of an eye.

**Exocys′tis** (*exo*, outward, *kystis*, bladder). Prolapsus of the bladder into the urethra.

**Ex′oderm.** Epidermis.

**Exod′ic** (*hodos*, way). Efferent; reflex motor.

**Exodonto′sis** (*odous*, tooth). Exostosis on a tooth.

**Exoënteri′tis.** Inflammation of the external coat of the intestines.

**Exogastri′tis** (*gaster*, stomach). Inflammation of the external coat of the stomach.

**Exogenet′ic** or **Exogen′ic** (*exo*, without, *genesis*, generation). Having origin from external causes; exogenous.

**Exogenous**, eks-oj′en-us. Increase by addition from without; exogenetic.

**Exogna′thion.** Alveolar process of the upper maxillary bone.

**Exogo′nium pur′ga.** Convolvulus jalapa.

**Exome′tra** (*metra*, uterus). Prolapse or inversion of the uterus.

**Exometri′tis.** Inflammation of the peritoneal surface of the uterus or of parts in immediate relation with it.

**Exompha′lia** or **Exom′phalos** (*omphalos*, navel). Protrusion of the navel.

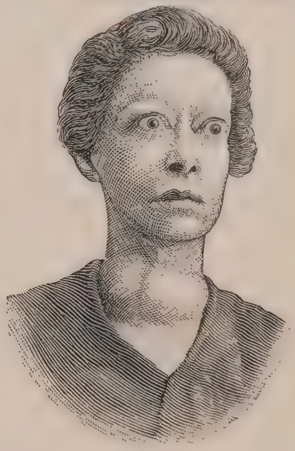
**Exom′phalocele** (*ex*, out, *omphalos*, navel, *kele*, rupture). Umbilical hernia. Hernia at the navel; more frequent in infants, and taking place by the umbilical ring. In adults it is more common in women than in men, and the sac passes in the vicinity of the umbilicus. The organs found in this kind of hernia are particularly the epiploon, jejunum, arch of the colon, and sometimes the stomach. It is commonly readily reducible, and not subject to strangulation. It must be reduced, and retained by an elastic bandage like a girdle, furnished with a pad at its middle part. In infants it is usually curable by this means. When strangulated the stricture may be divided upward and toward the left side.

**Exopath′ic** (*exo*, outside, *pathos*, disease). Relating to disease originating from causes outside the body.

**Exophor′ia** (*exo*, outward, *phero*, to carry). Tending of visual lines outward.

**Exophthal′mia** or **Exophthal′mos** (*ex*, out, *ophthalmos*, eye). Protrusion of the eye from its orbit, occasioned by abscess or tumor or congestion in the areolar texture of the orbit, by exostosis of the parietes of the orbit, etc. The eye is pressed forward; the eyelids are raised and separated, and no longer cover the eye and defend it from the action of extraneous bodies; it becomes inflamed, and the sight is disturbed or destroyed. Treatment, of course, depends upon the cause. **Anæ′mic e.**, exophthalmic goitre. **Cardiothy′roid e.**, exophthalmic goitre. **E. fungo′sa**, fleshy growth from the globe of the eye. **Pul′sating e.**, e. associated with or dependent upon an aneurysm pushing the eyeball forward. **E. sarcomat′ica**, e. fungosa.

**Exophthal′mic.** Appertaining or relating to exophthalmia. Having the eyes bulging or abnormally protrusive. **E. cachex′ia**, e. goitre. **E. goi′tre**, Basedow's disease, Graves's disease, Bigbie's disease, Stokes's disease, Parkinson's disease, Marsh's disease, Parry's disease, anæmic protrusion of the eyeballs, cardiothyroid or anæmic exophthalmia. An anæmic condition, accompanied by protrusion of the eyeballs, palpitation of the heart and arteries, and tumefaction of the thyroid gland; is more frequent among women than men. It was named by Trousseau, of Paris, after Dr. Graves, who first described it in 1835. Its etiology is still obscure; the disease is regarded as a sympathetic neurosis, possibly due to hypersecretion of the thyroid gland.



Exophthalmic goitre. (Meltzer.)

**Exophthalmom′eter** (*exophthalmos* + *metron*, measure). Instrument for measuring amount of exophthalmia.

**Exophthal′mos** or **Exophthal′mus.** Goggle-eyed. One whose eyes are very prominent; opposed to cœlophthalmus. See *Exophthalmia*.

**Ex′oplasm.** The outer portion of protoplasm in a cell, when any differentiation exists; opposed to endoplasm.

**Exoproso′pus** (*exo*, outward, *prosopon*, face). Epignathus.

**Exor′bitism** (*ex*, out, *orbita*, orbit). Exophthalmia.

**Exor′mia** (*exormao*, to excite). Papular skin eruption.

**Exorrhi′nus** (*exo*, outward, *rhis*, nose). Term to designate skulls in which line projected from nasion to alveolar point falls back of that from nasion to rhinion, the angle being from 1° to 20.5°.

**Exor′tus un′guium.** Lunula of the nail.

**Exosep′sis** (*exo*, outward, *sepsis*, putrefaction). Septic poisoning from external causes.

**Exoskel′etal.** Pertaining to the exoskeleton.

**Exoskel′eton.** Skeleton that is wholly external, as in crustacea and testacea.

**Exos′mic.** Exosmotic.

**Ex′osmose** or **Exosmo′sis** (*ex*, out, *osmos*, impulse). Transudation. Act by which substances transude from within to without an animal or other membrane. Opposite to endomose.

**Exosmot′ic** or **Exos′mic.** Belonging or relating to exosmose.

**Ex′ospore** or **Exospo′rium.** Outer layer of the cell envelope of a spore.

**Exostem′ma** or **Exoste′ma caribæ′um.** Cinchonæ caribææ cortex. **E. floribun′dum**, plant yielding false cinchona bark.

**Exosto′ma.** Exostosis.

**Exosto′sis** (*ex*, out, *osteon*, bone). Osteophyte. Osseous tumor forming at the surface of bones or in their cavities. Various kinds have been enumerated: *Ivory exostosis, exostosis eburnea*, having the appearance and consistence of ivory; *laminar exostosis*, formed of laminæ in superposition, or of distinct filaments; *spongy exostosis*, whose structure is analogous to the spongy tissue of bones. Exostoses are sometimes distinguished into the *true*, which seem to be a projection of the osseous substance, having the same organization and hardness as that substance, and the *false* or osteosarcoma. Exostosis may depend on syphilis, scrofula, rickets, gout, etc. In such cases it is important to get rid of the primary disease. Exostoses within the bones have by some been called *enostoses*. See *Spina ventosa*. **Den'tal e.**, or **E. den'tium**, exostosis of the teeth; see *Hypercementosis*. **E. ebur'nea**, see *Exostosis*. **I'vory e.**, see *Exostosis*. **Lam'inar e.**, see *Exostosis*. **Spon'gy e.**, see *Exostosis*. **Subun'guial e.**, see *Subunguial*.

**Exostot'ic.** Relating to or affected with exostosis. **E. pel'vis**, pelvis whose cavity is diminished in size by exostoses, so as to render labor difficult.

**Exoter'ic** (*exoteros*, outer). Developed exteriorly; opposite of esoteric.

**Exoterorrhi'nus** (*exoteros*, external, *rhis*, nose). Term to designate skulls in which a line projected from the nasion to the alveolar point falls behind a line from the nasion to the rhinion, the angle formed being from 22.5° to 45°.

**Exothy'reopexy** or **Exothy'ropexy** (*exo*, without, *thyroid*+*pexis*, suture). Operation for goitre, in which the thyroid gland is loosened as much as possible from its attachments and brought outside of the external incision, where it gradually undergoes a process of atrophy.

**Exot'ic** (*exo*, without). That which comes from abroad, as plants or drugs; opposed to indigenous.

**Exotrache'lus** (*trachelos*, neck). Epignathus.

**Exotro'pia** (*exo*, outward, *trepo*, to turn). Deviation of the eye outward, as in strabismus, from muscular contraction.

**Expansibil'ity.** The capacity of being expanded.

**Expan'sion** (*expando*, to spread out). Prolongation or spreading out of certain organs, as *aponeurotic expansion*, spreading out of aponeuroses, etc. **E. of arch**, increasing the width of a dental arch. **Cu'bical e.**, a spreading out in length, breadth, and thickness. **Lin'ear e.**, a spreading out in length. **Superfic'ial e.**, a spreading out in length and breadth.

**Expec'tant** (*exspecto*, to wait). That which waits. **E. treat'ment**, management of a case of disease by keeping the patient under constant observation, but withholding remedies until a clear indication for their exhibition presents itself.

**Expecta'tion.** Method of observing the progress of diseases and removing deranging influences, without prescribing active medicines unless imperatively required, thus leaving a disease almost wholly to the efforts of nature. **E. of life**, age to which it is probable that any one may live; such expectation is calculated from life-insurance tables of the duration of life.

**Expec'torant** (*ex*, out of, *pectus*, breast). Ptysmagogue. A medicine capable of facilitating or provoking expectoration and of aiding the removal of the expectorated matter from the air-passages. It may produce the latter effect by increasing the rapidity of the ciliary motion in the mucous membrane of the trachea, or the activity of the respiratory centre. Expectorants may also act through the system or by impressions made on parts at a distance, which, through the medium of general, continuous, or contiguous sympathy, excite the secretory vessels of the air-passages to action.

The chief agents of this class have been divided into *depressant* and *stimulating* expectorants, the former generally tending to depress the heart, lessen blood pressure, and increase secretion; the latter generally stimulating the heart, increasing blood pressure, and diminishing secretion. Examples of depressant expectorants are alkalies, ipecac, antimonial preparations, apomorphine, jaborandi, etc.; of the stimulant are ammonia, nux vomica, senega, the balsams, the terebinthinates, etc.

**Expectora'tion.** Act of expelling from the chest matters or secretions collected or existing there—spitting; also the expectorated matter. **Prune'; juice e.**, matter expectorated during grave cases of pneumonia, cancer of the lung, etc.; it contains altered blood. **Rus'ty e.**, the bloody sputum of acute lobar pneumonia.

**Expec'torative.** Expectorant.

**Expel'lent** (*expello*, to drive away). Expulsive.

**Expe'rience** (*experio*, to put to the test). Knowledge of things acquired by personal observation. Union of the knowledge resulting from accurate observation by the physician with that handed down by medical writers constitutes perfect experience, so far as it is attainable.

**Exper'iment.** Trial instituted with the intent of becoming better acquainted with anything. It may be made on the bodies of men or animals for the purpose of determining the effect of a remedy or of studying the animal structure, functions, or peculiarities. **E. of Mariotte'**, see *Mariotte*. **Valsal'vian e.**, see *Valsalvian*. **E. of Wep'fer**, experiment attributed to Wepfer, consisting in injecting air into the blood-vessels of animals, with the view of observing the effect on the economy.

**Experimen'tal.** Obtained from experiment or experience.

**Experimenta'tion** The carrying out of experiments.

**Experimen'tum mirab'ile.** Experiment illustrating the effect of hypnotism on animals; as, for instance, when the head of a hen is pressed on the ground the animal remains in the same position.

**Ex'pert** (*expertus*, skilled). Skilful or of good experience. The term as applied to witnesses—*expert witnesses*—should be restricted to those whose opinion in medico-legal cases is valuable from their accurate knowledge of the subject under consideration.

**Expira'tion** (*expiro*, to breathe out). Act of expelling from the chest the air received during inspiration. See *Vital capacity*. **Prolonged' e.**, a sound heard during expiration or auscultation, indicating a diseased condition of the lungs; the expiration may be prolonged, as in emphysema due to diminished elasticity of the alveolar walls, or the expiratory sound may be prolonged or jerking, as observed in incipient tuberculosis due to an obstruction to the exit of air.

**Expi'ratory.** Relating or appertaining to expiration. Expiratory muscles are all those which contribute to diminish the cavity of the chest for the purpose of expelling the air contained in the lungs or of producing expiration.

**Expire'** (*expiro*, to breathe out). To breathe out; to emit the last breath, or die.

**Ex'pletive fi'bres.** Association fibres. Fasciculi in the brain passing beneath the cortical layer, associating cortical areas of the same hemisphere.

**Explode'.** To decompose suddenly with violent chemical action and the liberation of expansive gases.

**Explora'tion.** Examination of parts or organs that are not superficial, and therefore not within direct reach. Act of observing and attentively investigating everything connected with a case of disease or injury, by every practicable method of diagnosis. **Noeg'gerath's meth'od of e.**, method of examining the uterine walls by gradually dilating the urethra with instruments, and introducing the index finger of one hand into the bladder and that of the other into the rectum and vagina.

**Explorato'rium.** Sound; probe.

**Explor'atory.** Serving to explore, as an exploratory incision.

**Explor'er.** Instrument used for the purpose of exploring cavities.

**Explo'ring nee'dle.** A flat grooved needle for insertion into a sac or cavity, allowing a small amount of the contained fluid to run out.

**Explo'sion.** Sudden decomposition accompanied with violent chemical action. Also a term used in pathology to denote the sudden onset of convulsions or of a violent attack of disease.

**Explo′sive.** Capable of or tending to undergo explosion. Some consonants are so called, as *b*, *p*, *t*, *d*, and *k*, which seem to issue explosively when uttered.

**Expo′sure of pulp.** Adventitious opening through dentine into the pulp of a tooth.

**Expressed′.** Pressed out. **E. oil,** a non-volatile oil obtained by pressure of the substance from which it is derived.

**Expres′sion** (*expremo*, to press out). Act of compressing a substance to separate from it the fluids which it contains. Manner in which impressions made upon us are depicted, especially in the traits of the countenance. **Credé's′ meth′od of e.,** method of delivering the placenta by grasping the uterus with the fundus in the hollow of the hand, and compressing the uterus so as to squeeze out the placenta. **E. of the fœ′tus,** method of accelerating the birth of the child, by rubbing and pressing upon the uterus; it is called **Kris′teller's meth′od of e. E. of sweat,** passive perspiration observable in very debilitated individuals.

**Expui′tion.** Rejection of matters accumulated in the pharynx and larynx; spitting.

**Expul′sion** (*expello*, to drive away). Driving out. **E. of the placen′ta,** expulsion of the placenta from the uterus, caused by the contractions of the uterus and of the abdominal muscles. **Sponta′neous e.,** extrusion of the fœtus or placenta by uterine contraction without external assistance.

**Expul′sive.** Driving out. **E. band′age,** one constructed with the view of compressing a part from which we are desirous of expelling pus, serum, etc. **E. med′icines,** those believed to have the power of driving the humors toward the skin, as diaphoretics and sudorifics. **E. pains,** pains attending expulsion of the fœtus in labor.

**Exsan′guinate** (*ex*, out, *sanguis*, blood). To remove blood from a part or organ. To cause to be anæmic.

**Exsanguina′tion.** The condition of being deprived of blood, such as occurs in tight bandaging.

**Exsan′guine.** Bloodless.

**Exsanguin′ity.** Anæmia.

**Exsan′guinous.** Bloodless. An old term meaning exhausted by venery.

**Exsarco′ma.** Sarcoma.

**Exsec′tion** (*ex*, out, *seco*, to cut). Excision.

**Exsec′tor.** An instrument employed in exsection.

**Ex′siccate.** To dry; to desiccate.

**Exsicca′tion** (*ex*, out, *sicco*, to dry). Desiccation or drying.

**Exsic′cative.** Desiccative or drying.

**Exspira′tion.** Expiration.

**Exspui′tion** (*exspuo*, to spit out). Rejection of the matters from the pharynx and larynx; spitting.

**Ex′stasis.** Ecstasy.

**Exstinc′tio.** Extinction.

**Exstirpa′tio.** Extirpation.

**Exstroph′ia** or **Ex′strophy** (*ex*, out, *strophe*, turning). Extroversion. Eversion or turning out of a part, as the eyelids; displacement of organs, especially the urinary bladder. **E. of the blad′der,** extroversion of the bladder, congenital hernia or hiatus of the bladder; faulty conformation in which the bladder opens above the pubes, so that in the hypogastric region there is a red, mucous surface, formed by the inner coat of the bladder, on which two prominences are distinguishable, corresponding to the opening of the ureters.

**Exsuda′tio** (*ex*, out, *sudo*, to sweat). Exudation.

**Exsuffla′tion** (*ex*, out, *sufflo*, to blow). Quick and forced expulsion of air from the lungs.

**Extempora′neous** (*ex*, *tempus*, time). Term applied to medical preparations which are made on the spot, and compounded according to the prescription of the physician.

**Extensibil′ity** (*extensio* + *habilis*, able). Capability of extension or elongation.

**Exten′sible.** Possessing the power of extension.

**Exten′sion** (*extendo*, to stretch out). Movement dorsad of the segment of a limb; opposed to flexion; exceptions to this definition exist in several cases: e. of the leg is movement ventrad or straightening of the limb; e. of the toes is a movement dorsad in relation to the foot, but ventrad in relation to the body. Protrusion of a part, as e. of the tongue. Operation in surgery, in which, either by the hands alone or by straps or weights, a fractured or luxated limb is pulled strongly to restore it to its natural position. In obstetrics, bending of the occiput of the fetal head toward the back. **Buck's e.,** see *Buck*.

**Extensom′eter.** An instrument for measuring minute differences in size undergone by metal under the influence of heat and cold, and also the differences in size and shape of objects under the microscope.

**Exten′sor.** Muscle whose office is to extend or straighten any part. **E. accesso′rius in′dicis,** accessory fasciculi of e. brevis digitorum manûs to index finger. **E. annula′ris,** occasional supernumerary muscle connecting with tendon of extensor communis to ring finger. **E. antibra′chii,** triceps brachii. **E. bre′viradia′lis,** e. carpi radialis brevior. **E. bre′vis digito′rum ma′nûs,** rare muscle passing from the lower part of radius or ulna, or from carpus or metacarpus, to one digit or more. **E. b. d. pe′dis,** short extensor of the toes; muscle on the dorsal region of the foot, arising from the external surface of the calcaneum and at the anterior edge of a ligament uniting that bone to the astragalus. Anteriorly, each of its divisions terminates by a small tendon fixed successively at the superior part of the posterior extremity of the first phalanx of the great toe, and to the second and last phalanges of the next three toes. It extends the first four toes, and directs them a little outward. **E. b. hallu′cis,** portion of e. brevis digitorum pedis, sending tendon to great toe. **E. b. in′dicis,** e. accessorius indicis. **E. b. pol′licis,** e. primi internodii pollicis. **E. b. pro′prius me′dii,** separate fasciculi from e. brevis digitorum manûs to middle finger. **E. car′pi interme′dius,** e. carpi radialis intermedius. **E. c. radia′lis accesso′rius,** occasional supernumerary muscle arising with extensor carpi radialis muscles and inserted with other muscles and tendons. **E. c. r. bre′vior,** radialis externus brevior. **E. c. r. interme′dius,** muscle formed by fusion of two extensor carpi radialis muscles. **E. c. r. lon′gior** or **lon′gus,** radialis externus longior. **E. c. ulna′ris,** see *Cubital muscles*. **E. coccy′gis,** muscular fasciculi from sacrum to coccyx, vestige of the tail muscle of lower animals. **E. commu′nis digito′rum,** e. digitorum communis. **E. c. d. pe′dis,** muscle situated at the anterior part of the leg; long, thin, flattened, simple, and fleshy above, and divided into four tendons below. It arises from the outer tuberosity of the tibia and the anterior surface of the fibula, and is inserted into the superior part of the posterior extremity of the second and third phalanges of the last four toes. It extends the phalanges of these toes. **E. c. in′dicis,** supernumerary fasciculi of e. indicis to middle and ring fingers. **E. c. pol′licis et in′dicis,** supernumerary fasciculus of e. indicis to thumb muscle, produced by combination of e. indicis and e. secundi internodii pollicis. **E. cru′ris,** quadriceps extensor cruris. **E. c. exter′nus,** see *Triceps cruris*. **E. cu′biti,** triceps extensor cubiti. **E. dig′iti min′imi pro′prius,** see *E. proprius minimi digiti*. **E. d. secun′di pe′dis lon′gus,** supernumerary muscle from separation of a portion of e. longus digitorum pedis inserted on the second toe. **E. digito′rum commu′nis,** common extensor of the fingers. Long, flattened muscle, simple above, and divided into four portions inferiorly, situated at the posterior part of the forearm; arising from the external tuberosity of the humerus, from the aponeurotic septa situated between it and the neighboring muscles, and inserted at the posterior surface of the second and third phalanges of the last four fingers. This muscle extends the phalanges of the last four fingers upon each other and upon the metacarpal bone; it can also extend the hand on the forearm. **E. d. c. bre′vis**, e. brevis digitorum pedis. **E. d. c. lon′gus**, e. communis digitorum pedis. **E. d. lon′gus**, e. communis digitorum pedis. **E. d. ma′nûs**, e. digitorum commnnis. **E. d. m. commu′nis**, e. digitorum communis. **E. d. pe′dis**, e. communis digitorum pedis. **E. d. p. bre′vis**, e. brevis digitorum pedis. **E. d. p. commu′nis**, e. communis digitorum pedis. **E. dor′si commu′nis**, sacrospinalis. **E. hallu′cis bre′vis**, e. primi internodii hallucis. **E. h. pro′prius**, e. longus hallucis. **E. humera′lis pol′licis**, anomalous muscle from e. digitorum communis, passing from epicondyle to ungual phalanx of the thumb. **E. in′dicis**, e. proprius indicis. **E. i. pro′prius**, e. proprius indicis. **E. interno′dii os′sis pol′licis**, e. pollicis longus. **E. latera′lis me′dii**, occasional fasciculi of e. brevis digitorum manûs to middle finger. **E. longiradia′lis**, radialis externus longior. **E. lon′gus digito′rum pe′dis**, e. communis digitorum pedis. **E. l. hallu′cis**, e. proprius pollicis pedis. **E. l. h. tricauda′tus**, long extensor with three tendons inserted on great toe. **E. l. pol′licis**, e. pollicis longus. **E. ma′nûs radia′lis bre′vis**, radialis externus brevior. **E. m. r. lon′gus**, radialis externus longior. **E. m. ulna′ris**, e. carpi ulnaris. **E. me′dii dig′iti**, portion of e. indicis inserted with e. digitorum communis on middle finger. **E. metapol′licis**, abductor pollicis longus. **E. min′imi dig′iti**, e. proprius minimi digiti. **E. mi′nor pol′licis ma′nûs**, e. pollicis brevis. **E. os′sis metacar′pi, E. o. m. pol′licis ma′nûs**, abductor pollicis longus. **E. o. metatar′si hallu′cis**, supernumerary muscle on anterior part of the leg, arising in connection with other muscles, and inserted on first metatarsal bone. **E. pe′dis**, see *Gastrocnemii*. **E. pol′licis bre′vis**, seated at the posterior and inferior part of the forearm; thin, long, and broader at its middle than at the extremities; arises from the posterior surface of the ulna and the interosseous ligament, and is inserted behind the superior extremity of the first phalanx of the thumb. It extends the thumb and aids in supination. **E. p. lon′gus**, long, flat, and fusiform muscle seated at the posterior part of the forearm. It arises from the posterior surface of the ulna and the interosseous ligament, and is inserted at the posterior part of the superior extremity of the first phalanx of the thumb. It extends the last phalanx of the thumb upon the first. See *Extensor proprius pollicis pedis*. **E. pol′licis ma′jor**, e. secundi internodii pollicis. **E. p. mi′nor**, e. primi internodii pollicis. **E. p. secun′dus**, e. pollicis longus. **E. pri′mi interno′dii**, abductor pollicis longus, e. pollicis brevis. **E. p. i. hallu′cis**, supernumerary muscle, associated in origin with e. longus hallucis and inserted on phalanx of great toe. **E. pri′mus pol′licis**, abductor pollicis longus. **E. pro′prius hallu′cis**, e. proprius pollicis pedis. **E. p. in′dicis**, long and thin muscle, broader in the middle than at the extremities, situated at the posterior part of the forearm. It arises from the posterior surface of the ulna, and is inserted at the posterior part of the upper extremity of the second and third phalanges of the index finger; it extends the phalanges of the index finger, and has, besides, the same uses as the other extensors of the fingers. **E. p. i. superficia′lis**, supernumerary muscle formed by separation of fasciculi of e. digitorum communis. **E. p. min′imi dig′iti**, situated on the inside of the e. communis digitorum; arises from the external condyle of the os humeri and the aponeurotic septa between it, the extensor communis digitorum, and the extensor carpi ulnaris, and is inserted into the last two phalanges of the little finger. It extends the little finger, and even the hand, on the forearm. **E. p. pol′licis pe′dis**, this muscle, situated at the anterior part of the leg, is fleshy, broad, flat above, small and tendinous below; arises from the anterior part of the middle third of the fibula, and is inserted into the posterior part of the superior extremity of the last phalanx of the great toe. It extends the last phalanx of the great toe upon the first, and the first upon the first metatarsal bone. **E. p. quin′ti dig′iti**, peroneus quinti digiti. **E. quad′riceps cru′ris**, quadriceps extensor cruris. **E. secun′di interno′dii**, e. pollicis brevis, e. pollicis longus. **E. s. i. in′dicis pro′prius**, e. proprius indicis. **E. s. i. pol′licis**, e. pollicis brevis, e. pollicis longus. **E. spi′næ**, erector spinæ. **E. tar′si**, tibialis posticus. **E. t. mag′nus**, name given to the gastrocnemius and soleus combined. **E. t. mi′nor**, plantar muscle. **E. t. sura′lis**, e. tarsi magnus. **E. ter′tii interno′dii**, e. pollicis longus. **E. t. i. in′dicis**, prior annularis. **E. t. i. min′imi dig′iti**, abductor minimi digiti. **E. tet′anus**, spasm of the extensor muscles. **E. tri′ceps**, triceps extensor cubiti. **E. ulna′ris**, e. carpi ulnaris.

**Extenua′tion** (*extenuo*, to make thin). Emaciation.

**Exte′rior.** External.

**Exteriora′tion.** Act of the brain by which an impression is referred to the remote extremity of the nerves through which it was conveyed, as when pain caused by compression of a nerve trunk in a stump is referred to the amputated extremity. Also externalization.

**Exte′riorize.** Externalize.

**Exter′nal.** Situated on the outside; opposed to internal. Remote from middle line or axis; on outer or superficial surface. (For numerous arteries, veins, nerves, etc., under this head, as external carotid artery, external jugular vein, etc., see *Carotid, Jugular*, etc., and *Arteries, Veins*, etc). **E diseas′es**, extrinsic diseases, surgical diseases; those which occupy the surface of the body and form the object of surgical pathology, requiring generally external applications or surgical operations. **E. pachymeningi′tis**, see *Pachymeningitis externa*. **E. resis′tance**, see *Resistance*. **E. urethrot′omy**, see *Urethrotomy*. **E. ver′sion**, see *Version*.

**Externaliza′tion.** The change of a subjective mental concept into an impression of actuality or a sense precept, as when the thought of a person calls up an apparent visual image of him; the mental operation of one who sees visions.

**Exter′nalize.** To give form to; to embody a mental concept; to see visions.

**Ex′terne.** See *House-surgeon*.

**Exter′nus.** External. **E. au′ris** or **mal′lei**, laxator tympani muscle.

**Ex′tima.** The outer of the three coats of an artery.

**Extinc′tion.** Putting out of the way; annihilation; death. **E. coeffi′cient**, see *Coefficient*. **E. of mer′cury**, trituration of mercury with lard or other substance until the metallic globules disappear. The mercury is then so divided that it forms a black powder, generally considered to be a protoxide of mercury. **E. of voice**, feeble sound, not complete suppression of voice; incomplete aphonia.

**Extirpa′tion** (*extirpo*, to root out). Ablation. Complete removal or destruction of any part, either by cutting instruments or the action of caustics. Enucleation.

**Extor′sion** (*ex*, out, *torqueo*, to twist). Rotation outward of the vertical meridian of the cornea.

**Extozo′a** (pl. of extozo′on) or **Extozoa′ria.** Ectozoa.

**Ex′tra** (Lat.). In composition, on the outside, without; as extrascapular, extracardial, outside the scapula, outside the heart. **E. cur′rent**, action of self-induction in electricity, or of an increasing or decreasing current on its own circuit.

**Ex′tra-amniot′ic.** Outside the amnion; that is, between the amnion and chorion.

**Ex′tra-artic′ular.** Outside of a joint. **E.-a. ankylo′sis**, restriction of movement from causes not involving the joint, as muscular spasm, etc.

**Extracap′sular.** Outside the capsule of a joint.

**Extracar′dial.** Exocardial, or outside the heart. **E. sounds**, sounds induced by conditions or changes on the outside of the heart.

**Extracil′iary.** Outside the ciliary body. **E. fi′bres**, nerve fibres passing from the ciliary body to the semicircular tract of the cerebellum.

**Extracorpus′cular.** Outside the corpuscles of the blood.

**Extracra′nial.** Outside the skull.

**Ex′tract** (*ex*, out, *traho*, *tractum*, to draw). A pharmaceutical preparation containing the active principles of a drug. It is prepared by evaporating vegetable solutions until a tenacious mass is obtained. Extracts contain all the principles of the vegetable that are soluble in the menstrua with which they are prepared; but the volatile parts are dissipated, and some of the fixed parts are decomposed. Extracts are solid and liquid; those which are official in the Pharmacopœia are prepared by displacement or percolation, especially the latter. Dry extracts are in powdered form, ordinary solid extracts being of pilular consistency; the dry extracts of the Ph. U. S. are those of aloes, colocynth, compound colocynth, hæmatoxylon, licorice, krameria, nux vomica, and opium. Gummy or mucous or mucilaginous extracts are those which are mainly composed of gum or mucilage. Gum tragacanth may be considered a pure gummy extract. Gelatinous extracts are those composed especially of gelatin; resinous extracts, those of a resinous character; extractoresinous, those composed of extractive or coloring-matter and resin; gum resinous, those containing gum and resin; and saponaceous or saponaceous saline, those containing a notable quantity of saline substances and a resinous matter so combined with other substances that they cannot be separated. Fluid extracts—*extracta fluida* (Ph. U. S.) or *liquida* (Ph. Br.)—present the concentration of the active ingredients of medicinal substances into a small bulk in the liquid form, a cubic centimetre of any one of them representing a gramme of the crude drug. The extraction is effected by percolation. For the official extracts, see *Extractum*. **Ace′tic, alcohol′ic, ammo′niated, a′queous,** or **ethe′real e.**, an extract made with acetic acid, alcohol, ammonia, water, or ether, respectively, as a menstruum. **Dry e.**, an e. in the form of a dry powder instead of having the pill-mass consistency of most of the solid extracts. **Flu′id e.**, an extract of a drug in fluid form of such a strength that one cubic centimetre of the extract is the equivalent of one gramme of the crude drug. **Pow′dered e.**, dry e. **Soft e.**, an ordinary solid extract of pilular consistency. **Sol′id e.**, see *Extractum*.

**Extrac′tion.** Act of removing an extraneous substance from any part of the body—a splinter, for example; also removal of certain parts. A cataract is said to be *extracted;* a tooth is *extracted*, etc.

**Extrac′tive.** Peculiar presumed principle, or combination of principles, extracted by alcohol or other solvents. Thus, *bitter extractive* is the immediate principle of bitter drugs, etc. Ill-defined matters met with on analysis are called *extractive matters*.

**Extrac′tor.** Instrument employed for extraction.

**Extrac′tum.** The pharmacopœial name of an extract. The following are the official (Ph. U. S. and Br.) extracts: **E. acal′phæ liq′uidum** (Br.), liquid extract of acalpha, expectorant resembling senega; dose, ♏v–xxx (0.32-2.0). **E. aconi′ti** (U. S.), extract of aconite; dose, gr. ⅙–¼ (0.01–0.016). **E. a. flu′idum** (U. S.), fluid extract of aconite; dose, ♏ss–ij (0.032–0.128). **E. adhato′dæ liq′uidum** (Br.), liquid extract of adhatoda; expectorant and antispasmodic; dose, ♏xx–ʒj (1.3–4.0). **E. agrophy′ri liq′uidum** (Br.), liquid extract of couch-grass, e. tritici fluidum (U. S.); dose, ʒj–ij (4.0–8.0). **E. al′oës**, extract of aloes in dry, powdered form; dose, gr. ss–v (0.032–0.32). **E. anthem′idis** (Br.), extract of chamomile; dose, gr. ij–viij (0.13–0.5). **E. apo′cyni flu′idum** (U. S.), fluid extract of Canada hemp or apocynum; dose, ♏v–xxx (0.3–2.0). **E. ar′nicæ rad′icis** (U. S.), extract of arnica root; dose, gr. iij–v (0.2–0.32). **E. a. r. flu′idum** (U. S.), fluid extract of arnica root; dose, ♏v–x (0.32–0.65). **E. aromat′icum flu′idum** (U. S.), aromatic fluid extract, made from aromatic powder (see *Pulvis aromaticus*); dose, ♏x–ʒj (0.65–4.0). **E. asclepi′adis flu′idum** (U. S.), fluid extract of pleurisy root; dose, ♏xx–ʒj (1.3–4.0). **E. aspidosper′matis flu′idum** (U. S.), fluid extract of quebracho; dose, ʒss–j (2.0–4.0). **E. auran′tii ama′ri flu′idum** (U. S.), fluid extract of bitter orange-peel; dose, ♏xv–ʒj (1.0–4.0). **E. be′læ liq′uidum** (Br.), liquid extract of bael fruit (Ægle marmelos); dose, ʒj–ij (4.0–8.0). **E. belladon′næ alcohol′icum** (Br.), alcoholic extract of belladonna, made by concentrating the fluid extract of the root; dose, gr. ¼–j (0.016–0.065). **E. b. folio′rum alcohol′icum** (U. S.), alcoholic extract of belladonna leaves; of pilular consistency; dose, gr. ⅙–¼ (0.01–0.016). **E. b. liq′uidum** (Br.), liquid extract of belladonna, made from the root; dose, ♏⅓–j (0.021–0.065). **E. b. rad′icis flu′idum** (U. S.), fluid extract of belladonna root; dose, ♏j–ij (0.065–0.13). **E. b. vir′ide** (Br.), green extract of belladonna, prepared from the expressed juice of the leaves and young branches; dose, gr. ¼–j (0.016–0.065). **E. bu′chu flu′idum** (U. S.), fluid extract of buchu; dose, ʒss–j (2.0–4.0). **E. cal′ami flu′idum** (U. S.), fluid extract of sweet flag; dose, ♏v–xxx (0.32–2.0). **E. calum′bæ flu′idum** (U. S.), fluid extract of columbo; dose, ♏xv–ʒj (1.0–4.0). **E. can′nabis in′dicæ**, extract of Indian hemp; dose, gr. ¼–½ (0.016–0.032). **E. c. i. flu′idum** (U. S.), fluid extract of Indian hemp; dose, ♏ij–xx (0.13–1.3). **E. cap′sici flu′idum** (U. S.), fluid extract of Cayenne pepper; dose, ♏j–ij (0.065–0.13). **E. cas′caræ sagra′dæ** (Br.), extract of cascara sagrada; dose, gr. ij–viij (0.13–0.5). **E. c. s. liq′uidum** (Br.), liquid extract of cascara sagrada; dose, ʒss–j (2.0–4.0). **E. casta′neæ flu′idum** (U. S.), fluid extract of chestnut leaves; dose, ʒj–ij (4.0–8.0). **E. chimaph′ilæ flu′idum** (U. S.), fluid extract of pipsissewa; dose, ʒss–j (2.0–4.0). **E. chira′tæ flu′idum** (U. S.), fluid extract of chirata (Swertia chirata); dose, ʒss–j (2.0–4.0). **E. cimicif′ugæ** (U. S.), extract of actæa racemosa or black snakeroot or cohosh; dose, gr. j–v (0.065–0.32). **E. cimicif′ugæ flu′idum (liq′uidum,** Br.), fluid extract of black snakeroot; dose, ♏v–xxx (0.32–2.0). **E. cincho′næ** (U. S.), extract of cinchona or Peruvian bark; dose, gr. v–x (0.32–0.65). **E. c. flu′idum (liq′uidum,** Br.), fluid extract of cinchona; dose, ♏v–xxx (0.32-2.0). **E. cissam′peli liq′uidum** (Br.), liquid extract of Cissampelos pareira; equivalent to e. pareiræ (U. S.); dose, ʒss–ij (2.0–8.0). **E. co′cæ flu′idum (liq′uidum,** Br.), fluid extract of coca; dose, ʒss–j (2.0–4.0). **E. col′chici rad′icis (E. col′chici,** Br.), extract of colchicum root; dose, gr. ss–ij (0.032–0.13). **E. c. r. flu′idum** (U. S.), fluid extract of colchicum root; dose, ♏ij–iv (0.13–0.25). **E. c. sem′inis flu′idum** (U. S.), fluid extract of colchicum seed; dose, ♏ij–v (0.12–0.32). **E. colocyn′thidis** (U. S.), extract of colocynth; dose, gr. ij–v (0.13–0.32). **E. c. compos′itum,** compound extract of colocynth; a dry extract containing extract of colocynth 0.103, purified aloes 0.324, cardamom 0.038, resin of scammony 0.09, and soap 0.09; dose, gr. v–xx (0.32–1.3). **E. coni′i** (U. S.), extract of hemlock; dose, gr. ss–j (0.032–0.065). **E. c. flu′idum** (U. S.), fluid extract of hemlock; dose, ♏ij–vj (0.13–0.4). **E. convalla′riæ flu′idum** (U. S.), fluid extract of convallaria, or lily of the valley; dose, ♏iv–viij (0.25–0.5). **E. cube′bæ flu′idum** (U. S.), fluid extract of cubeb; dose, ♏x–ʒj (0.65–4.0). **E. cus′so flu′idum** (U. S.), fluid extract of kousso or brayera; dose, ʒij–iv (8.0–16.0). **E. cypripe′dii flu′idum** (U. S.), fluid extract of ladies' slipper; dose, ♏v–xxx (0.32–2.0). **E. digita′lis** (U. S.), extract of digitalis; dose, gr. ⅙–¼ (0.01–0.016). **E. d. flu′idum** (U. S.), fluid extract of digitalis; dose, ♏j–ij (0.065–0.13). **E. dulcama′ræ flu′idum** (U. S.), fluid extract of bittersweet; dose, ʒss–j (2.0–4.0). **E. er′gotæ**, extract of ergot; dose, gr. j–xx (0.065–1.3). **E. e. flu′idum (li′quidum,** Br.), fluid extract of ergot; dose, ♏x–ʒj (0.65–4.0). **E. eriodic′tyi flu′idum** (U. S.), fluid extract of yerba santa; dose, ♏xv–ʒj (1.0–4.0). **E. eucalyp′ti flu′idum** (U. S.), fluid extract of eucalyptus; dose, ♏x–ʒj (0.65–4.0). **E.**

**euon'ymi** (U. S.), extract of wahoo; dose, gr. iij–x (0.2–0.65). **E. eupato'rii flu'idum** (U. S.), fluid extract of thoroughwort or boneset; dose, ʒss–j (2.0–4.0). **E. fil'icis liq'uidum** (Br.), liquid extract of male fern; dose, ʒss–iss (2.0–6.0). **E. fran'gulæ flu'idum** (U. S.), fluid extract of buckthorn; dose, ♏x–xxx (0.65–2.0). **E. gelsem'ii flu'idum** (U. S.), fluid extract of jasmine; dose, ♏ij–x (0.13–0.65). **E. gentian'æ,** extract of gentian; dose, gr. j–x (0.065–0.65). **E. g. flu'idum** (U. S.), fluid extract of gentian; dose, ʒss–j (2.0–4.0). **E. gera'nii flu'idum** (U. S.), fluid extract of geranium; dose, ʒss–j (2.0–4.0). **E. glycyrrhi'zæ,** extract of licorice, stick licorice; dose, gr. x–ʒiss (0.65–6.0). **E. g. flu'idum** (**liq'uidum,** Br.), fluid extract of licorice; dose, ʒj–ij (4.0–8.0). **E. g. pu'rum** (U. S.), pure extract of licorice, of pilular consistency; dose, gr. x–ʒiss (0.65–6.0). **E. g. spirituo'sum** (Br.), spirituous extract of licorice, the liquid extract fortified with alcohol; dose, ʒss–j (2.0–4.0). **E. gossyp'ii rad'icis flu'idum** (**E. g. r. cor'ticis liq'uidum,** Br.), fluid extract of cottonroot bark; dose, ʒss–j (2.0–4.0). **E. grinde'liæ flu'idum** (**liq'uidum,** Br.), fluid extract of grindelia; dose, ʒss–j (2.0–4.0). **E. guara'næ flu'idum** (U. S.), fluid extract of guarana; dose, ʒj–ij (4.0–8.0). **E. hæmatox'yli** (U. S.), extract of logwood; dose, gr. viij–xxx (0.5–2.0). **E. hamamel'idis flu'idum** (**liq'uidum,** Br.), fluid extract of witch hazel; dose, ʒss–j (2.0–4.0). **E. hydras'tis flu'idum** (**liq'uidum,** Br.), fluid extract of hydrastis or golden seal; dose, ʒss–j (2.0–4.0). **E. hyoscy'ami** (U. S.), extract of henbane; dose, gr. ss–ij (0.032–0.13). **E. h. flu'idum** (U. S.), fluid extract of henbane; dose, ♏v–xxx (0.32–2.0). **E. h. vir'ide** (Br.), green extract of henbane, made by evaporating the expressed juice of the fresh leaves and tops; dose, gr. ij–viij (0.13–0.5). **E. ipecacuan'hæ flu'idum** (**liq'uidum,** Br.), fluid extract of ipecac; dose, ♏j–ij (0.065–0.13) as an expectorant, ♏xv–xxx (1.0–2.0) as an emetic. **E. ir'idis** (U. S.), extract of blue flag; dose, gr. ij–iv (0.13–0.25). **E. i. flu'idum** (U. S.), fluid extract of blue flag; dose, ♏v–x (0.32–0.65). **E. jaboran'di liq'uidum** (Br.), liquid extract of jaborandi, fluid extract of pilocarpus (U. S.); dose, ♏v–xv (0.32–1.0). **E. jala'pæ,** extract of jalap; dose, gr. ij–x (0.13–0.65). **E. juglan'dis** (U. S.), extract of butternut; dose, gr. v–x (0.32–0.65). **E. ka'va liq'uidum** (Br.), liquid extract of kava-kava (Piper methysticum); dose, ʒss–j (2.0–4.0). **E. krame'riæ,** extract of rhatany; dose, gr. v–x (0.32–0.65). **E. k. flu'idum** (U. S.), fluid extract of rhatany; dose, ♏x–xxx (0.65–2.0). **E. lap'pæ flu'idum** (U. S.), fluid extract of burdock; dose, ʒss–j (2.0–4.0). **E. leptan'dræ** (U. S.), extract of leptandra or Culver's root; dose, gr. j–viij (0.06–0.5). **E. l. flu'idum** (U. S.), fluid extract of leptandra; dose, ♏v–xxx (0.32–2.0). **E. lobe'liæ flu'idum** (U. S.), fluid extract of lobelia or Indian tobacco; dose, ♏j–v (0.065–0.32) as an expectorant, ♏xv–ʒj (1.0–4.0) as an emetic. **E. lupuli'ni flu'idum** (U. S.), fluid extract of lupulin; dose, ♏x–xv (0.65–1.0). **E. mati'co flu'idum** (U. S.), fluid extract of matico (Piper angustifolium); dose, ʒss–j (2.0–4.0). **E. menisperm'i flu'idum** (U. S.), fluid extract of menispermum or Canadian moonseed; dose, ♏v–xxx (0.32–2.0). **E. meze'rei flu'idum** (U. S.), fluid extract of mezereum; for external use only. **E. nu'cis vom'icæ,** extract of nux vomica; dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.03). **E. n. v. flu'idum** (**liq'uidum,** Br.), dose, ♏j–v (0.06–0.32). **E. o'pii,** extract of opium; dose, gr. $\frac{1}{4}$–j (0.016–0.065). **E. o. liq'uidum** (Br.), liquid extract of opium; dose, ♏v–xxx (0.32–2.0). **E. pare'iræ flu'idum** (**liq'uidum,** Br.), fluid extract of pareira; dose, ʒss–j (2.0–4.0). **E. physostig'matis,** extract of Calabar bean; dose, gr. $\frac{1}{16}$–$\frac{1}{8}$ (0.004–0.008); the extract of the Ph. Br. is one-fourth the strength; dose, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.016–0.032). **E phytolac'cæ rad'icis flu'idum** (Br.), fluid extract of poke-root; dose, ♏ij–xv (0.13–1.0). **E. picrorhi'zæ liq'uidum** (Br.), liquid extract of picrorhiza (aperient, tonic, and antiperiodic); dose, ♏xx–ʒj (1.3–4.0). **E. pilocar'pi flu'idum** (U. S.), fluid extract of pilocarpus, liquid extract of jaborandi (Br.); dose, ʒss–j (2.0–4.0). **E. podophyl'li** (U. S.), extract of podophyllum or May apple; dose, gr. ss–v (0.032–0.32). **E. p. flu'idum** (U. S.), fluid extract of podophyllum; dose, ♏ij–xx (0.13–1.3). **E. pru'ni virginia'næ flu'idum** (U. S.), fluid extract of wild cherry; dose, ʒss–j (2.0–4.0). **E quas'siæ** (U. S.), extract of quassia; dose, gr. j–iij (0.065–0.2). **E. q. flu'idum** (U. S.), fluid extract of quassia; dose, ♏v–x (0.32–0.65). **E. rham'ni purshian'æ flu'idum** (**liq'uidum,** Br.), fluid extract of cascara sagrada; dose, ♏xv–xxx (1.0–2.0). **E. rhe'i,** extract of rhubarb; dose, gr. v–x (0.32–0.65). **E. r. flu'idum** (U. S.), fluid extract of rhubarb; dose, ♏x–xxx (0.65–2.0). **E. rho'is glab'ræ flu'idum** (U. S.), fluid extract of Rhus glabra; dose, ♏x–xxx (0.65–2.0). **E. ro'sæ flu'idum** (U. S.), fluid extract of rose; dose, ʒss–j (2.0–4.0). **E ru'bi flu'idum** (U. S.), fluid extract of blackberry; dose, ʒss–j (2.0–4.0). **E. ru'micis flu'idum** (U. S.), fluid extract of yellow dock; dose, ʒss–j (2.0–4.0). **E. sabi'næ flu'idum** (U. S.), fluid extract of savine; dose, ♏v–xv (0.32–1.0). **E. sanguina'riæ flu'idum** (U. S.), fluid extract of bloodroot; dose, ♏j–v (0.065–0.32). **E. sar'sæ liq'uidum** (Br.) or **E. sarsaparil'læ flu'idum** (U. S.), fluid extract of sarsaparilla; dose, ʒj–ij (4.0–8.0). **E. s. f. compos'itum** (U. S.), compound fluid extract of sarsaparilla; made from sarsaparilla 75, licorice 12, sassafras 10, mezereum 3; dose, ʒss–j (2.0–4.0). **E. scil'læ flu'idum** (U. S.), fluid extract of squill; dose, ♏j–v (0.065–0.32). **E. scopa'rii flu'idum** (U. S.), fluid extract of broom; dose, ♏v–xx (0.32–1.3). **E. scutella'riæ flu'idum** (U. S.), fluid extract of skull-cap; dose, ʒss–j (2.0–4.0). **E. sen'egæ flu'idum** (U. S.), fluid extract of senega; dose, ♏v–xx (0.32–1.3). **E. sen'næ flu'idum** (U. S.), fluid extract of senna; dose, ʒj–ij (4.0–8.0). **E. serpenta'riæ flu'idum** (U. S.), fluid extract of Virginia snakeroot; dose, ♏x–xxx (0.65–2.0). **E. spige'liæ flu'idum** (U. S.), fluid extract of pink root; dose, ʒj–ij (4.0–8.0). **E. stillin'giæ flu'idum** (U. S.), fluid extract of stillingia or queen's root; dose, ♏x–ʒj (0.65–4.0). **E. stramo'nii** (Br.), **E. s. sem'inis** (U. S.), extract of stramonium seed; dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.03). **E. s. s. flu'idum** (U. S.), fluid extract of stramonium seed; dose, ♏j–ij (0.065–0.13). **E. strophan'thi** (Br.), extract of strophanthus; dose, gr. $\frac{1}{4}$–j (0.016–0.065). **E. tarax'ici,** extract of dandelion; dose, gr. v–xxx (0.32–2.0). **E. t. flu'idum** (**liq'uidum,** Br.), fluid extract of dandelion; dose, ʒj–ij (4.0–8.0). **E. trit'ici flu'idum** (U. S.), fluid extract of couchgrass, e. agropyri liquidum (Ph. Br.); dose, ʒij–iv (8.0–16.0). **E. u'væ ur'si** (U. S.), extract of bearberry; dose, gr. j–v (0.06–0.32). **E. u. u. flu'idum** (U. S.), fluid extract of bearberry; dose, ʒj–iv (4.0–16.0). **E. valerian'æ flu'idum** (U. S.), fluid extract of valerian; dose, ʒss–j (2.0–4.0). **E. vera'tri vir'idis flu'idum** (U. S.), fluid extract of veratrum viride or American hellebore; dose, ♏j–iij (0.06–0.2). **E. vibur'ni op'uli flu'idum** (U. S.), fluid extract of cramp-bark; dose, ʒj–ij (4.0–8.0). **E. vibur'ni prunifo'lii flu'idum** (U. S.), fluid extract of black haw; dose, ʒj–ij (4.0–8.0). **E. xanthox'yli flu'idum** (U. S.), fluid extract of prickly ash; dose, ♏x–xxx (0.65–2.0). **E. zingib'eris flu'idum** (U. S.), fluid extract of ginger; dose, ♏x–xxx (0.65–2.0).

**Extradu'ral.** Outside the dura mater.

**Extraembryon'ic.** Outside the embryo; term used to designate portions of the ovum not embraced in the embryo itself.

**Extragen'ital.** Outside the genital organs, either as to origin or location.

**Extraligamen'tous.** Outside a ligament.

**Extralob'ular.** Outside a lobule, as of the lung.

**Extramastoidi'tis.** Inflammation of the tissues about the mastoid process.

**Extramed'ullary.** Outside the spinal cord, as lesions or hemorrhage occurring in such location.

**Extramu'ral** (*murus*, wall). Outside the wall, as of a vessel. **E. inter′ment** is burial outside the city walls or limits.

**Extra′neous.** Foreign or outside. **E. bod′y,** foreign body; any solid, liquid, or gaseous substance, inanimate or animate, proceeding from without or formed in the body, not constituting a part of it, but occupying in the substance of the tissues or in some of the cavities a place foreign to it.

**Extranu′clear.** Outside a cell nucleus or nerve nucleus.

**Extraoc′ular.** Outside of the eye.

**Extraor′bital.** Outside of the orbit.

**Extraorganis′mal.** Outside of the organism.

**Extrapel′vic.** Outside the pelvis.

**Extraperitone′al.** Outside the peritoneum.

**Extrapo′lar.** Outside of the poles, as the electrodes of a battery.

**Extrarec′tus.** External rectus muscle of the eye; also the pyramidalis abdominis.

**Extrare′nal.** Situated to the outside of the kidney.

**Extrascap′ular.** Situated outside of the scapula.

**Extraspi′nal.** Outside the spinal column, as *extraspinal veins.*

**Extrastape′dial.** Situated externally to the stapes.

**Extrastom′achal.** Occurring outside of the stomach; a term applied to digestion.

**Extrathorac′ic.** Outside the thorax.

**Extratra′cheal.** Outside the trachea.

**Extratri′ceps.** External head of the triceps muscle.

**Extra-u′terine.** Outside the uterus. **E. preg′nancy,** pregnancy in which the fœtus is developed outside the uterus.

**Extravasa′tion** (*vasa,* vessels). Escape of a fluid from the vessels containing it, and infiltration or effusion of the fluid into the surrounding textures. Such fluid is said to be *extravasated*—urine, for example. Exudation. Capillary hemorrhage. **E. cysts,** exudation cysts.

**Extravas′cular** (*vasculum,* vessel). Outside the vessels.

**Extrava′sion.** Extravasation.

**Extraventric′ular.** Outside the ventricle, as of the brain or heart. **E. gan′glion,** portion of corpus striatum outside the ventricle.

**Extravil′lous.** Situated outside of a villus.

**Extravis′ceral.** Outside of the visceral arch.

**Extrem′ital.** Situated at an extremity.

**Extrem′ity** (*extremus,* outermost). End or termination. The limbs, as the upper and lower extremities. Last moments of life, as when we say a patient is "in extremity." **Pel′vic e.,** one of the lower extremities. **Thorac′ic e.,** one of the upper extremities.

**Extrin′sic** (from without). That which comes from without. Muscles which surround certain organs and attach them to the neighboring parts, to distinguish them from the *intrinsic* muscles, which enter into the intimate composition of those organs. Thus, there are extrinsic and intrinsic muscles of the tongue, ear, etc.

**Extrobli′quus.** External oblique muscle of the abdomen.

**Extroduc′tion.** Extraction carried out gently.

**Ex′trophy.** Exstrophy; extroversion.

**Extror′sal.** To the outside.

**Extror′sion.** Projection or protrusion; growth or development of projections.

**Extrover′sion** (*verto,* to turn). Eversion; exstrophy.

**Extru′sion** (*extrudo,* to thrust out). Action of pushing or forcing out; expulsion.

**Extuba′tion.** Act of removing a laryngeal tube.

**Extu′berance** (*ex,* out, *tuber,* prominence). Protuberance.

**Extumefac′tion** or **Extumes′cence** (*ex,* out, *tumeo,* to swell, *facio,* to make). Swelling.

**Exu′berant.** Growing to excess or having a tendency to excessive growth.

**Ex′udate.** Material which has oozed out through the skin. Product of exudation. See *Exudation.*

**Exuda′tion** (*ex,* out, *sudo,* to sweat). Oozing of a material through the pores of a membrane. Also the material issuing in this manner. See *Diapedesis* and *Endosmose.* Cutaneous exudations are characterized by the presence, beneath the epidermis, of a fluid, as in vesicles, pustules, etc.; or by swelling of the skin, as in tubercles, papules, wheals, etc.; or by pigment-staining or desquamation of the cuticle. **E. cells** or **E. cor′puscles,** plastic corpuscles; organizable nuclei or cells contained in fibrinous fluids, which are the origin of the new tissues formed from that fluid. **E. cysts,** cysts containing extravasated blood or serum which has exuded from the blood-vessels.

**Ex′udative.** Relating to exudations.

**Exulcera′tion.** Ulceration.

**Exumbilica′tion** (*ex,* out, *umbilicus,* navel). Exomphalos; protrusion of the navel.

**Exus′tio** (*ex,* out, *uro,* to burn). Cauterization.

**Exu′viæ.** Parts shed or cast off.

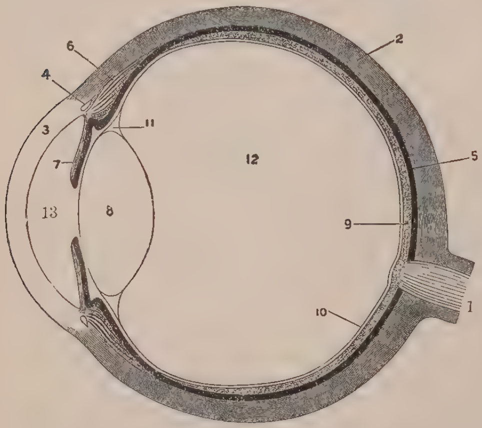
**Exuvia′tion** (*exuo,* to put off). Shedding or casting off of parts, as epidermis, deciduous teeth, the skins of serpents, etc., which are hence called *exuviæ.*

**Eye.** Immediate organ of vision, seated in the orbit; its dependencies, *tutamina oculi,* occupying the circumference of the cavity, include the eyebrows, the eyelids, cilia, glands of Meibomius, etc. The *ball, globe,* or *bulb* of the eye, *bulbus oculi,* is covered anteriorly by the tunica conjunctiva; is moved by six muscles, four straight, two oblique; it consists of various membranes, as the sclerotic, cornea, choroid, tunica Jacobi, retina, iris, hyaloid, and in the fœtus the membrana pupillaris; and of fluids, called humors or media, the aqueous, crystalline, and vitreous. The eyeball is invested with a membranous tunic separating it from the other structures of the orbit, and forming a smooth, hollow surface, by which its motions are facilitated. This investment has been called cellular capsule of the eye, ocular capsule, tunica vaginalis oculi, vaginal coat, and submuscular fascia of the eye. The vessels of the eye proceed from the ophthalmic artery. The nerves, except the optic, are chiefly furnished from the ophthalmic ganglion. The *fundus of the eye*—fundus oculi—is the part lying behind the lens and vitreous humor, and embracing the entrance for the optic nerve, the retina, choroid, sclerotic, and blood-vessels. The following are the dimensions, etc., of the organ, derived from the investigations of different authorities:

| | |
|---|---|
| Length of the anteroposterior diameter of the eye | 0.91 in., or 2.31 cm. |
| Vertical chord of the cornea | 0.45 in., or 1.14 cm. |
| Versed sine of the cornea . . | 0.11 in., or 2.82 mm. |
| Horizontal chord of the cornea. . . . . . . . . . . . . . . . | 0.47 in., or 1.19 cm. |
| Size of pupil seen through the cornea. . . . | 0.27 to 0.13 in., or 6.92 to 3.33 mm. |
| Size of pupil diminished by magnifying power of cornea, from. . . . . | 0.25 to 0.12 in., or 6.41 to 3.07 mm. |
| Radius of anterior surface of crystalline. . . . . . . . . . | 0.30 in., or 7.69 mm. |
| Radius of posterior surface | 0.22 in., or 5.64 mm. |
| Principal focal distance of lens . . . . . . . . . . . . . . . . . | 1.73 in., or 4.4 cm. |
| Distance of the centre of the optic nerve from the foramen centrale of Sömmering . . . . . . . . . . . . . . . | 0.11 in., or 2.82 mm. |
| Distance of the iris from the cornea. . . . . . . . . . . . | 0.10 in., or 2.56 mm. |
| Distance of the iris from the anterior surface of the crystalline. . . . . . . . . | 0.02 in., or 0.05 mm. |
| Field of vision above a horizontal line, 50°. . . . | 120° |
| Field of vision below a horizontal line, 70°. . . . . | |

| | |
|---|---|
| Field of vision in a horizontal plane........... | 150° |
| Diameter of the crystalline in a man above fifty years of age........... | 0.378 in., or 9.7 mm. |
| Diameter of the cornea... | 0.400 in., or 1.02 cm. |
| Thickness of the crystalline | 0.172 in., or 4.41 mm. |
| Thickness of the cornea.. | 0.042 in., or 1.06 mm. |

**Accommoda'tion of the e.,** power possessed by the eye of adjusting itself for different distances, according as the object is remote or near, probably due to the alteration in the form of the crystalline lens from some action of the ciliary muscle; see *Accommodation.* **Ap'ple of the e.,** the pupil. **Artific'ial e,** eye manufactured to replace the natural eye when extracted; generally made of glass. **E. balm,** Hydrastis canadensis. **Black e.,** see *Ecchymoma.* **E. bright,** Euphrasia officinalis, Lobelia veronica. **Cat's e.,** amaurotic e. **E.-cup,** glass, porcelain, or metallic vessel used for applying lotions to the eye. **Cylin'drical e.,** eye in which the rays of light entering the organ are refracted to a nearer focus in a vertical than in a horizontal plane. **Diagrammat'ic e.,** artificially constructed plan of the eye, showing the refracting surfaces, and used in illustrating the natural phenomena of the eye in its reception of light. **E.-glass,** see *Spectacles.* **E.-ground,** fundus oculi. **Gum of the e.,** sebaceous humor secreted mainly by the follicles of Meibomius, sometimes gluing the eyelids together. **E.-mem'ory** or **E.-mind,** remembrance of impressions received through sight. **E.-piece,** part of microscope next the eye. **Pin'eal** or **epiphys'eal e.,** rudimentary eye, situated in the median line of the head, existing in some lizards. **Pink e.,** acute epidemic conjunctivitis. **E. root,** Bignonia ophthalmica. **Schemat'ic e.,** diagrammatic e. **E.-spec'ulum,** instrument for separating the eyelids during operation. **E.-strain,** term used to include the various symptoms caused by the overuse of the eyes or by the effort to obtain distinct vision, unaided by glasses, in cases of ametropia or heterophoria; headache is one of the principal signs of this condition. **E. teeth,** canine teeth. **E. of ty'phon,** squill. **E. vine,** Bignonia ophthalmica. **E.-wash** or **E.-wa'ter,** collyrium. **Wa'tery e.,** epiphora. **White of the e.,** see *Sclerotic.* **E.-wink'er,** eyelash.



Horizontal section of right eyeball. 1, optic nerve; 2, sclerotic coat; 3, cornea; 4, canal of Schlemm; 5, choroid coat; 6, ciliary muscle; 7, iris; 8, crystalline lens; 9, retina; 10, hyaloid membrane; 11, canal of Petit; 12, vitreous body; 13, aqueous humor. (Dalton.)

**Eye'ball.** Globe of the eye. See *Eye.*

**Eye'brow.** The supercilium.

**Eye'lashes.** Cilia.

**Eye'lid.** See *Palpebra.*

**Eye'sight.** Vision.

**Eye'stone.** Shelly operculum of small turbinideæ, used to get a foreign body out of the eye, being put into the inner corner under the eyelid, and working its way out at the outer corner, bringing the foreign substances with it.

# F.

**F.** Abbreviation of *Fahrenheit,* and of *fac,* make, or *fiat,* let there be made; also the chemical symbol of fluorine.

**Fa′ba** (bean). Phaseolus, Vicia faba. **F. ægypti′aca,** Nymphæa nelumbo. **F. caca′o,** cacao. **F. calabar′ica,** physostigma. **F. cathar′tica,** Jatropha curcas. **F. cras′sa,** Sedum telephium. **F. febrif′uga,** Ignatia amara. **F. græ′ca,** Diospyros lotus. **F. ignatia′na,** Ignatia amara. **F. Igna′tii,** Ignatia amara. **F. in′dica,** Ignatia amara. **F. ma′jor,** Vicia faba. **F. pechu′rei,** pichurim beans. **F. physostig′matis,** physostigma. **F. pichu′rim,** pichurim beans. **F. purga′trix,** Ricinus communis. **F. Sanc′ti Igna′tii,** Ignatia amara. **F. suil′la,** hyoscyamus. **F. vulga′ris,** Vicia faba.

**Fa′bæ.** Beans. Hog lice, once used medicinally. **F. puchu′ry,** pichurim beans.

**Faba′ria cras′sula.** Sedum telephium.

**Fabel′la** (dim. of *faba,* bean). Sesamoid bone or fibrocartilage in the gastrocnemius muscle.

**Fabia′na imbrica′ta.** Pichi; Chilian shrub, genus *Solanaceæ;* branches are used in vesical and urinary diseases.

**Fabianine′.** Crystallizable alkaloid contained in Fabiana imbricata.

**Facaldi′na.** Disease allied to syphilis and resembling tabes, which prevailed in an epidemic form in Facalde, Austria, in the early part of the year 1800.

**Face** (*facies,* face or visage). Anterior part of the head, formed of fourteen bones—the two superior maxillary, the two malar, the two ossa nasi, the two ossa inguis, the vomer, the two ossa spongiosa inferiora, the two palate bones, and the inferior maxillary, without including the frontal portion of the os frontis and the thirty-two teeth, which may be considered to form part of the face. Its arteries proceed from the external carotid; its veins end in the jugular. The face experiences alterations in disease, being yellow in jaundice and pale and puffy in dropsy. Its expression varies according to the seat of irritation, so that in infants, by attention to medical physiognomy, we can often detect the seat of disease. Hippocrates depicted so well the changes which the face experiences in long sickness, great evacuations, excessive hunger, watchfulness, etc., threatening dissolution, that the state has been called *facies Hippocratica, f. cadaverica,* or *f. tortualis.* The nose is pinched; the eyes are sunken; the temples hollow; the ears cold and retracted; the skin of the forehead tense and dry; the complexion livid; the lips pendent, relaxed, and cold, etc. The face assumes a peculiar characteristic appearance in cholera, *facies cholerica;* in cancer, *cancerous facies;* in tuberculosis, *tuberculous facies.* The term *face* is likewise given to an aspect of an organ, as *superior face of the stomach.* **F.-ache,** facial neuralgia. **F.-a′gue,** facial neuralgia. **F. presenta′tion,** presentation of the face of the fœtus at the os uteri in parturition. **F. worms,** comedones.

**Fac′et** (dim. of face). Small, circumscribed plane of the surface of a bone or other solid body, as the articular facet of a bone.

**Fac′eted.** Having facets.

**Fa′cial** (*facies,* face). Belonging to or connected with the face. **F. an′gle,** or angle of Camper, is formed by the union of two lines, one drawn from the most prominent part of the forehead to the alveolar edge of the upper jaw opposite the incisor teeth, *facial line;* the other from the meatus auditorius externus to the same point of the jaw. According to the size of the angle it has been attempted to appreciate the respective proportions of the cranium and the face, and the degree of intelligence of individuals and of animals. In the white varieties of the species it is generally 80°; in the negro not more than 70°, sometimes only 65°. As we descend the scale of animals it becomes less and less, until, in fishes, it nearly or entirely disappears. Intelligence is ascribed to those in which the angle is largely developed, as the elephant and owl; but the large facial angle may be caused by the size of the frontal sinuses, and not by the size of the brain. Several other facial angles formed by lines from other points have been proposed. **F. ar′tery,** labial, angular, or external maxillary artery; branch of the external carotid, rising beneath the digastricus and distributed to almost every part of the face. It furnishes the inferior palatal, submental, superior labial, inferior labial, and dorsalis nasi. The external carotid artery has also been called facial artery. **F. ar′tery, deep,** internal maxillary artery. **F. ar′tery, exter′nal,** facial artery. **F. ar′tery, poste′rior,** transverse facial artery. **F. ax′is,** median line projected from the internal part of the sphenoethmoidal suture to the alveolar point. **F. canal′,** aqueduct of Fallopius. **F. cen′tres,** nervous centres in the first, second, and third frontal gyri and in both central gyri for movements of the face. **F. diam′eter,** distance in the fœtus between the frontal protuberance and the point of the chin; diameter of the face of a child or adult, taken from fixed points as standards. **F. diple′gia,** see *Diplegia facialis.* **F. hemiat′rophy,** rare nervous affection characterized by progressive atrophy of one side of the face. **F. hemiple′gia,** paralysis of motion limited to one side of the face. **F. in′dex,** craniometrical ratio of the breadth of the face to its length. **F. line,** line to determine the general direction of the face, taken from different fixed points. **F. loop,** bend made by the facial nerve within the medulla oblongata. **F. nerve,** portio dura of the seventh pair, respiratory or motor nerve of the face; arises from the inferior and lateral part of the tuber annulare, in the groove separating it from the medulla oblongata, external to the corpora olivaria, and by the side of the auditory nerve. It issues from the cranium by the meatus auditorius internus; enters the aqueduct of Fallopius; receives a branch of the Vidian nerve; forms a gangliform swelling—*intumescentia gangliformis;* sends off filaments to the internal muscles of the malleus and stapes; makes its exit at the foramen stylomastoideum, and divides into two branches, the temporofacial and cervicofacial. On the face it is termed *pes anserinus, plexus nervorum anserinus.* **F. nu′cleus,** nucleus in the medulla oblongata from which the facial nerve originates. **F. nu′cleus, acces′sory,** nucleus in funiculus teres, floor of the fourth ventricle. **F. nu′cleus, supe′rior,** portion of the nucleus of the abducent nerve transmitting fibres to the facial. **F. paral′ysis,** paralysis of the parts to which the facial nerve is distributed. **F. phenom′enon,** Chvostek's symptom. **F. sur′face,** part of the outer surface of the upper jawbone in front of the zygomatic process. **F. trophoneuro′sis,** f. hemiatrophy. **F. vein** arises between the skin and frontalis muscle, descends vertically toward the greater angle of the eye, afterward descends obliquely on the face, uniting with the temporomaxillary vein to form the *common facial vein.* The latter discharges into the internal jugular vein. A *deep facial vein* comes from the pterygoid plexus to join the facial vein.

**Facia′lis.** Facial.

**Faciec′ula** (dim. of facies). Facet. **F. rena′lis,** depression on the inferior surface of the liver made by the right kidney.

**Fa′cies.** Face; surface; appearance. **F. abdomina′lis,** anxious, pinched, deeply furrowed expression associated with abdominal disease or pain. **Ad′enoid f.,** dull, heavy expression of face observed in patients affected with nasopharyngeal obstruction. **F. angula′ris u′vulæ,** angular crest of the uvula of the cerebellum. **F. cadaver′ica,** see *Face.* **F. of can′cer,** see *Face.* **F. choler′ica,** see *Face.* **F. conca′va pe′dis,** sole. **F. extenso′ria,** surface for attachment of the extensor muscles. **F. flexo′ria,** surface for attachment of the flexor muscles. **F. hippocrat′ica,** see *Face* and *Agony.* **Hyster′ical f.,** facial expression, marked by depth and prominent fulness, with more or less thickness of the upper lip and peculiar drooping of the upper eyelids, supposed to be characteristic of hysteria. **F. infe′rior pe′dis,** sole. **F. leonti′na,** leprosy of the face. **Ova′rian f.,** or **F. ovari′na** or **ovar′ica,** peculiar facial expression diagnostic of ovarian disease, the face being shrivelled, pale, elongated, and careworn; the cheeks wrinkled, the lips thin and compressed, the mouth drooping, etc. **Parkinso′nian f.,** mask-like expression of face observed in Parkinson's disease or paralysis agitans. **Syphilit′ic f.,** appearance of the face of a child suffering from congenital syphilis, who has a prematurely aged expression. **F. tortua′lis,** see *Face.* **Tuber′culous f.,** see *Face.* **F. uteri′na,** altered appearance of the face from continued uterine suffering. **Wells's f.,** ovarian f.

**Faciobra′chial.** Relating to the face and the arm.

**Faciocer′vical.** Relating to the face and neck.

**Faciolin′gual.** Relating to or affecting the face and tongue, as *faciolingual paralysis.*

**Facti′tious** (*facio,* to make). Artificial; made by art, in opposition to what is natural or already existing in nature.

**Fac′ultative** (*facultas,* faculty). Possessing power, but not always using it; potential. **F. bacte′rium,** an aërobe which may on occasion develop without oxygen, or an anaërobe which may develop in the presence of oxygen. **F. hypermetro′pia** or **hypero′pia,** hyperopia masked by the accommodation; hyperopia which can be entirely corrected by the act of accommodation without the aid of glasses. **F. par′asite,** a microorganism, not normally parasitic, which may at times become so. **F. sap′rophyte,** a parasitic organism which is capable of existing outside of its host or as a saprophyte.

**Fac′ulty** (*facio,* to make). Potency, power, virtue; what can be made or done. Power of executing a function or act. The collection of intellectual faculties constitutes the understanding. Vital faculties are vital properties. Faculty also denotes the medical profession or a body of medical or other professors.

**Fæ′cal.** Stercoraceous. See *Fecal.*

**Fæ′ces** (pl. of fæx) or **Fe′ces.** Dregs; excremental matter to be discharged from the bowels. The fæces consist of that portion of the food which has not been taken into the system by absorption, and is discharged from the body mixed with some of the products of the biliary and intestinal secretions. The quantity passed depends on the nature and amount of the food taken and on the energy of the digestive powers. A grown person in normal condition discharges from seven to nine ounces daily. An approximate analysis of the fæces of a healthy adult, by Simon, shows:

| | | |
|---|---|---|
| Water | 77.3 | per cent. |
| Mucin | 2.3 | " |
| Proteids | 5.4 | " |
| Extractives | 1.8 | " |
| Fats | 1.5 | " |
| Salts | 1.8 | " |
| Resinous, biliary, and coloring-matters | 5.2 | " |
| Insoluble residue of food | 4.7 | " |

**F. indura′tæ,** hard, fecal matter, discharged in lumps.

**Fæc′ula.** Fecula.

**Fænugræ′cum.** Fenugreek.

**Fæx.** Feculence. See *Fæces.* **F. sac′chari,** treacle.

**Faga′ra octan′dra** (*fagus,* beech). Ord. *Rutaceæ.* Systematic name of a plant which affords tacamahaca, a resinous substance exuding from a tree of the same name, having a fragrant, delightful smell. It was formerly an ingredient in warm, stimulating plasters, and given internally like balsams generally. East India tacamahac is yielded by Calophyllum inophyllum, Balsamaria inophyllum. The name tacamahac is also given to resin from Populus balsamifera or tacamahaca, growing in northern parts of America and Siberia. **F. piperi′ta,** Japanese pepper, a native of Japan, possesses the qualities of pepper, and is used as such by the Japanese; also employed as a rubefacient cataplasm.

**Fagaras′trum capen′se.** S. African plant, ord. *Xanthoxyleæ,* fruit of which is known to the colonists as wild cardamom; prescribed in flatulency and paralysis.

**Fagin′.** A narcotic principle derived from the nut of Fagus sylvatica or beech.

**Fago′nia mysorien′sis.** Native plant of India; possesses tonic, astringent, and diuretic properties.

**Fagopy′rum.** Polygonum fagopyrum.

**Fagræ′a fra′grans.** The bark of this Chinese tree, ord. *Loganiaceæ,* is antipyretic.

**Fa′gus.** A genus of trees of the order *Cupuliferæ.* **F. casta′nia,** chestnut. **F. pu′mila,** F. castanea pumila; chincapin or dwarf chestnut. **F. purpu′rea,** F. sylvatica. **F. sylvat′ica,** systematic name of the beech. The nut affords, by expression, a palatable oil, which is eaten in some places instead of butter; it has been used as a vermifuge. **F. sylves′tris,** F. sylvatica.

**Fahr.** Abbreviation for Fahrenheit. See *Thermometer.*

**Faint.** Weak; having a tendency to swoon. A swoon; syncope.

**Faint′ing.** Syncope. **F. fe′ver,** epidemic choleriform fever which prevailed about fifty years ago in Asia. **F. fit,** syncope.

**Faint′ishness.** A slight faintness.

**Faint′ness.** Languor; syncope.

**Faints.** See *Epilepsy.*

**Fair-days** or **Fair-grass.** Potentilla anserina.

**Fai′ries' bath.** Peziza coccinea. **F. but′ter,** Tremella albida. **F. hair,** Cuscuta epithymum. **F. horse,** Senecio jacobæa. **F. pet′ticoats,** Digitalis purpurea. **F. ta′ble,** Agaricus campestris.

**Fair-maids-of-France.** Saxifraga; Achillea ptarmica.

**Falcadi′na.** See *Scherlievo.*

**Fal′cate** (*falx,* sickle). Shaped like a sickle; falciform. **F. car′tilages,** falciform cartilages.

**Fal′ces.** Plural of falx.

**Fal′cial.** Relating to a falx. **F. si′nus,** inferior longitudinal sinus.

**Falcic′ula.** Falx cerebelli.

**Fal′ciform** (*falx,* scythe, *forma,* shape). Having the shape of a scythe. **F. bor′der,** f. process. **F. car′tilages,** semilunar cartilages of the knee. **F. constric′tion,** sickle-shaped appearance of the uterus from irregular contraction. **F. expan′sion, lig′ament,** or **pro′cess of the fas′cia la′ta,** scythe-shaped reflection of the fascia lata, forming, outward and upward, the opening for the vena saphæna, and attached to the crural arch by its superior extremity, forming the anterior wall of the femoral ring. **F. lig′ament,** suspensory or broad ligament of the liver; falciform expansion of the fascia lata. **F. lobe,** central part of the cerebral hemispheres. **F. pro′cess,** part of great sacrosciatic ligament prolonged on ramus of ischium; falciform expansion of fascia lata; falx cerebri. **F. si′nus,** inferior longitudinal sinus; see *Sinuses.*

**Fal′cula** (dim. of falx). Falx cerebri.

**Fall fe′ver.** Autumnal fever. **F. poi′son,** Amianthium muscætoxicum.

**Fall'ing of the bow'el.** Prolapsus recti. **F. sick'ness,** epilepsy. **F. of the womb,** prolapsus uteri.

**Fallo'pian aq'ueduct.** Aquæductus Fallopii. **F. arch,** Poupart's ligament. **F. canal',** aqueduct of Fallopius. **F. gesta'tion,** tubal pregnancy. **F. hia'tus,** opening on the anterior surface of the petrous portion of the temporal bone for the petrosal branch of the Vidian nerve. **F. lig'ament,** round ligament of the uterus; Poupart's ligament. **F. mus'cle,** pyramidalis. **F. preg'nancy,** tubal pregnancy or pregnancy occurring in the Fallopian tube. **F. tube,** oviduct, see *Tube, Fallopian.* **F. valve,** ileocæcal valve.

**Falret's** (fal-rase') **type.** A variety of paranoia in which there is mania of persecution and of enmity to the supposed persecutor.

**False** (*fallo,* to deceive). Pseudo- (in composition), spurious, bastard. **F. aca'cia,** Robinia pseudacacia, indigenous to the U. S; bark is tonic and emetocathartic; flowers are narcotic. **F. al'oe,** Agave virginica; root is laxative. **F. an'eurysm,** see *Aneurysm.* **F. angustu'ra,** bark of Strychnos nux vomica. **F. ankylo'sis,** ankylosis without osseous union. **F. a'nus,** unnatural external outlet for the bowel. **F. bit'tersweet,** Celastrus scandens. **F. concep'tion,** mole. **F. deliv'ery,** false waters. **F. germ,** mole. **F. glot'tis,** cavity between the superior vocal cords. **F. im'age,** image formed by the deviating eye in diplopia. **F. ipecacuan'ha,** Ionidium ipecacuanha. **F. joint,** pseudarthrosis. **F. lig'aments,** peritoneal folds connecting the bladder and contiguous organs. **F. mea'sles,** roseola, rötheln. **F. mem'brane,** exudation of fibrin on the surface of an organ, as the lung, the pharynx, etc. **F. pains,** pains resembling labor-pains, but not caused by contractions of the uterus. **F. pas'sage,** accidental passage made in surgical operations, and particularly in introducing the catheter, the latter being passed alongside the urethra. **F. pel'vis,** see *Pelvis.* **F. quar'ter,** fissure in the hoof of the horse. **F. ribs,** ribs that are not attached to the breastbone. **F. saf'fron,** safflower. **F. sarsaparil'la,** Aralia nudicaulis. **F. spike'nard,** Smilacina racemosa. **F. su'ture,** joint formed by rough surfaces. **F. u'nicorn root,** Chamælirium luteum. **F. vale'rian,** Senecio aurelius. **F. ver'tebræ,** fused vertebræ which form the sacrum and coccyx. **F. vo'cal cords,** inferior vocal cords of the larynx. **F. wa'ters,** water which sometimes collects between the amnion and chorion or between the uterus and ovum, and is discharged before the rupture of the true bag of waters. **F. win'tergreen,** Pyrola rotundifolia.

**Falset'to voice** (I., dim. of *falso,* false). See *Voice.*

**Falsifica'tion** (*falsus,* false, *facio,* to make). Fraudulent imitation or alteration of an aliment or medicine. Adulteration; sophistication.

**Falx** (scythe). Anatomical name for several membranous reflections having the shape of a falx or scythe. **F. cerebel'li,** triangular process of the dura mater opposite the internal occipital protuberance. Its base is attached to the middle of the tentorium, and its top or apex bifurcates, to proceed to the sides of the foramen magnum. Its convex surface is toward the cranium; its concave surface, in the fissure or groove separating the two lobes of the cerebellum. **F. cer'ebri,** vertical superior longitudinal process; greatest process of the dura mater, extending from the fore to the hind part of the skull, on the median line; broad behind and narrow before, and lodged in the groove, separating the hemispheres from each other—*interlobular fissure.* At its superior part is situated the superior longitudinal sinus; at its lower, corresponding to the edge of the scythe, the inferior longitudinal sinus. Its anterior extremity is attached to the crista galli; its posterior is continuous with the tentorium cerebelli, and contains the straight sinus. **F. ligamento'sa,** falciform process. **F. ma'jor,** falx cerebri. **F. mi'nor,** falx cerebelli. **F. of the peritone'um,** there are two folds of the peritoneum which have received this name: the *great* falx, falx of the umbilical vein, suspensory ligament of the liver, is a reflection of the peritoneum, ascending from the umbilicus to the anterior and interior surface of the liver; the *small* falx, triangular ligament of the liver, falx of the umbilical artery, one of the lateral ligaments of the liver, reflections of the peritoneum raised up by the umbilical arteries. **F. of the umbil'ical vein,** great falx of the peritoneum.

**Fames** (fa'mees). Hunger. **F. bovi'na** (ox), **cani'na** (dog), or **lupi'na** (wolf), boulimia, or depravation of the digestive functions, in which the patient eats voraciously.

**Famil'ial.** Family (adj.), belonging to or characteristic of a family. **F. atax'ia,** Paramyoclonus multiplex. **F. diseas'es,** hereditary diseases.

**Fam'ily.** A group of individuals possessing blood or marriage relationship. In scientific classification, a group intermediate between a genus and an order. Used adjectively, familial.

**Fam'ine fe'ver** or **ty'phus.** Relapsing fever.

**Fan'cy mark.** Nævus.

**Fang.** Part of tooth contained in an alveolus; the larger teeth have several fangs. Grooved or tubular tooth of a venomous serpent for the transmission of poison.

**Fan'go.** Clay obtained from hot springs in Italy, and employed as a local application in gouty arthritis.

**Fan'tasm.** Phantasm.

**Fan'tom** (*phantasma,* spectre). Phantom.

**Farabeuf's' amputa'tion.** See *Amputation.*

**Fa'rad** (after Faraday). Unit of electrical capacity.

**Farada'ic.** Faradic.

**Farad'ic.** Relating or appertaining to faradization or electricity by induction; as f. battery, f. bath, f. current.

**Far'adism.** Faradization.

**Faradiza'tion.** Localized application, therapeutically, of induction currents.

**Far'adize.** To excite, as a muscle, by an induced electric current.

**Faradopunc'ture.** Acupuncturation by a faradized needle.

**Farci'men** (*farcio,* to stuff). Equinia.

**Farcino'ma.** Farcy bud.

**Far'cinous.** Relating to or affected with farcy.

**Far'cy.** Equinia; chronic glanders. **F. buds** or **but'tons,** small tumors on various parts of a horse affected with equinia or glanders. **Cat'tle f.,** a chronic disease of cattle due to the presence of Streptothrix farcinica.

**Far'del-bound.** Disorder of the locomotor apparatus in cattle—"staggers"—from overloading of the third stomach.

**Far'fara** or **F. be'chium.** Coltsfoot. See *Tussilago.*

**Fari'na.** Meal or flour; powder obtained by grinding the seeds of the gramineous, leguminous, and cucurbitaceous plants in particular.

**Farina'ceous.** Mealy; having the appearance or nature of farina or containing farina. The term *farinacea* includes all substances containing farina and employed as nutriment. In pathology the epithet *farinaceous* is applied to eruptions in which the epidermis exfoliates in small particles similar to farina.

**Far'kleberry.** Vaccinium arboreum.

**Farm'ery.** Hospital.

**Far-point.** Punctum remotum. Farthest point of accommodation to which the eye can adjust itself, denoted by symbol R; this varies in different conditions of the eye from infinity to a negative distance.

**Farre's tu'bercles.** Cancerous nodules occurring on the surface of the liver in secondary cancer of that organ. **F.'s white line,** line at the hilum of the ovary, indicating the attachment of the mesovarium.

**Farre-Wal'deyer line.** Farre's white line.

**Far-sight'edness.** See *Presbyopia* and *Hypermetropia.*

**Fas′cia** (band). A bandage, fillet, roller, or ligature. Aponeurotic expansion of muscles binding parts together. Sheaths of muscles, vessels, and nerves are made up of fascia. **Ab′ernethy's f.**, see *Abernethy*. **F. adipo′sa**, adipose capsule (of kidney). **A′nal f.**, ischiorectal f. **F. anoperinea′lis**, perineal fascia. **Antibra′chial f.**, antibrachial aponeurosis. **F. aponeurot′ica**, deep f. **F. a. fem′oris** f. lata aponeurosis. **Ax′illary f.**, axillary fascia. **Bicip′ital f.**, aponeurosis of the biceps muscle. **Bra′chial f.**, brachial aponeurosis. **Broad f.**, f. lata. **Buc′cal, buc′cinator,** or **buc′copharyn′geal f.**, thin fascia covering the buccinator muscle and pharynx. **Buck's f.**, the superficial perineal fascia continued on the penis. **F. bul′bi**, see *Capsule of Bonnet*. **Cam′per's f.**, see *Camper*. **F. capita′lis**, double-headed roller passing over the head and enveloping it like a cap; capelina. **F. cap′itis**, bandage for the head in case of headache. **Ceph′alopharyn′geal f.**, upper part of pharyngeal aponeurosis attached to the bones of the head. **Cer′vical f.**, sheath of the muscles of the neck. **Clavipec′toral f.**, costocoracoid membrane. **Cloquet's′ f.**, see *Cloquet*. **F. of Col′les**, see *Perineal fascia*. **F. col′li pro′pria**, deep cervical fascia. **Coop′er's f.**, transversalis f. **Cor′acoclavic′ular** or **cor′acopec′toral f.**, costocoracoid membrane. **F. corona′lis ante′rior**, muscular fibres of the anterior wall of the heart from the left to the right auricular appendage. **F. cos′tocoracoide′a**, costocoracoid membrane. **Cremaster′ic f.**, see *Cremaster*. **Crib′riform f.** or **cribro′sa f.**, sieve-like portion of the fascia lata, so called from its being pierced by numerous openings for the passage of lymphatic vessels. **F. cru′ris** or **cru′ral f.**, fascia of leg, superficial and deep. **Deep f.**, fibrous tissue, not superficial, in membranous expansions. **Dénonvillier's′ f.** see *Dénonvillier*. **F. denta′ta** or **denticula′ta**, band of gray matter seen beneath the tænia hippocampi on raising it up, which runs along the inner border of the cornu ammonis; crenated by transverse furrows. **F. digita′lis**, gantelet; finger bandage. **Diophthal′mic f.**, bandage applied over both eyes. **F. div′idens**, dividing bandage. **Dor′sal f.**, vertebral fascia; also fascia covering the dorsum of the fingers and toes. **F. endoabdomina′lis** or **endogas′trica**, transversalis fascia. **F. endopelvi′na**, subperitoneal fascia of pelvis. **F. endothorac′ica**, internal fascia of thoracic cavity. **F. epicra′nia**, epicranial aponeurosis. **Fibroare′olar f.**, superficial f. **God′man's f.**, see *Godman*. **F. gyp′sea**, plaster-of-Paris bandage. **F. heliodo′ri**, T-bandage. **F. hu′meri**, brachial aponeurosis. **F. hypogas′trica**, pelvic fascia. **F. ili′aca**, iliac aponeurosis or fascia; aponeurosis proceeding from the tendon of the psoas minor, or arising from the anterior surface of the psoas magnus when the former muscle does not exist. Attached externally to the inner edge of the crest of the ilium, below and anteriorly, on one side to the crural arch, sending expansion to the fascia transversalis, and on the other side continuous with the deep-seated lamina of the fascia lata, forming the posterior wall of the crural canal. Within and behind, the iliac fascia is attached to the brim of the pelvis, and is continuous with the pelvic aponeurosis. The iliac aponeurosis covers the iliac and psoas muscles, which it separates from the peritoneum. **F. infraspina′ta**, fascia investing infraspinatus muscle. **F. infundibulifor′mis**, internal spermatic fascia; funnel-shaped offset from the fascia transversalis, which is prolonged as a sheath upon the vas deferens and spermatic vessels as they pass out of the abdomen. **F. inguina′lis**, spica. **Intercolum′nar f.**, external spermatic fascia; thin membrane derived from the margin of the pillars of the external abdominal ring during the descent of the testis in the fœtus, being prolonged downward around the surface of the cord and testis. **F. ischioprostat′ica**, transverse ligament of the pelvis; deep perineal fascia. **Ischiorec′tal f.**, anal fascia; thin membrane covering the perineal aspect of the levator ani muscle, with which the obturator fascia is continuous. **F. la′ta aponeuro′sis**, crural or femoral aponeurosis; the most extensive fascia in the body, enveloping all the muscles of the thigh, attached above to the outer edge of the ilia; it arises from the crural arch by two distinct laminæ, separated by the femoral vessels, and becoming confounded a little below the part where the great vena saphæna opens into the crural vein. Of these laminæ, the one is more anterior and thicker than the other, and may be considered as a prolongation of the aponeurosis of the external oblique; it is intimately united to Poupart's ligament; the other, which is thinner, is behind and deeper seated, and, after its union with the former, proceeds to be inserted into the pubis. In attaching itself to the pectineal line under the name of *Hey's ligament*, or Hey's femoral ligament, it helps to form *Gimbernat's ligament*. Inferiorly, the fascia lata becomes confounded with the tendon of the triceps, and is attached to the external tuberosity of the tibia. The use of the fascia lata, like that of other aponeuroses, is to strengthen the action of muscles, etc. **F. la′ta mus′cle**, muscle situated at the upper and outer part of the thigh, arising, above, from the outer part of the anterior and superior spine of the ilium, and inserted, below, between the two laminæ of the fascia lata, which its stretches and raises when it contracts. **F. levato′ris a′ni**, anal fascia. **F. lin′guæ**, fascia covering the tongue. **F. lon′ga** or **longitudina′lis**, vertebral ligament (anterior and posterior). **F. lumba′lis, lumba′ris,** or **lumbo′rum**, lumbar fascia; fascia formed by the blending of the posterior layer of the vertebral aponeurosis of the transversalis with the aponeurosis of the serratus posticus inferior and latissimus dorsi muscles. **F. lumbodorsa′lis**, the whole fascia usually included under the two divisions—vertebral and lumbar fasciæ. **F. medulla′ris**, pyramid of the medulla oblongata. **F. mus′culi transver′si**, fascia transversalis. **F. nodo′sa**, knotted bandage. **F. nu′chæ**, portion of the cervical fascia in relation with the trapezius and rhomboidei muscles. **Ob′turator f.**, see *Pelvic aponeurosis*. **F. oc′uli** or **ocula′ris**, eye bandage; capsule of Tenon. **F. or′bitæ**, orbital fascia. **Pal′mar f.**, palmar aponeurosis. **F. parotide′omasseter′ica**, process of the cervical fascia covering the parotid gland and masseter muscle. **Pel′vic inter′nal f.**, see *Pelvic aponeurosis*. **Pel′vic lat′eral f.**, see *Pelvic aponeurosis*. **Pel′vic supe′rior f.**, see *Pelvic aponeurosis*. **F. pelvi′na**, see *Pelvic aponeurosis*. **F. pelviprostat′ica**, process of rectovesical fascia investing the prostate gland. **F. pel′vis exter′na**, perineal fascia. **F. pel′vis inter′na**, pelvic fascia. **F. pe′nis**, see *Perineal fascia*. **Perine′al f.**, see *Perineal fascia*. **F. perine′i**, perineal fascia. **F. p. profun′da** or **transver′sa**, triangular ligament of the urethra. **F. pharyn′gis**, pharyngeal aponeurosis. **F. pharyngobasila′ris**, f. cephalopharyngea. **F. prævertebra′lis**, prevertebral fascia; portion of the cervical fascia. **F. profun′da abdom′inis**, fascia transversalis. **F. p. col′li**, deep fascia of the neck. **F. p. cru′ris**, fascia lata. **F. p. fem′oris**, fascia lata. **F. pro′pria**, layer of areolar tissue derived from the sheath of the femoral vessels, or, according to some, from the cribriform fascia. One of the coverings of femoral hernia, and generally quite dense about the neck of the hernia, but thin or even wanting on its fundus. *F. propria of the cord* is the prolongation of the fascia propria on the spermatic cord. **F. puborecta′lis**, process of rectovesical fascia from pubis to rectum. **F. rec′ta**, fascia or sheath of the rectus muscle. **F. r. abdom′inis**, fascia or sheath of the rectus abdominis muscle. **Rectoves′ical f.**, visceral layer of the pelvic fascia, investing the prostate, bladder, and rectum. **F. re′num**, adipose capsule of the kidney. **F. re′pens**, spica. **Richer's′ f.**, see *Richer*. **F. salpingopharynge′a**, part of pharyngeal aponeurosis having origin at the Eustachian tube. **F. scapula′ris**, scapulary. **Scar′pa's f.**, deep layer of superficial fascia about the groin. **F. Sculte′ti**, bandage of separate strips. **F. semicircula′ris**, tænia semicircularis. **F. semiluna′ris**, aponeurosis of the biceps. **F. serra′ta,** dentate convolution. **Spermat′ic f.,** see *Fascia infundibuliformis* and *F., intercolumnar.* **F. spira′lis,** bandage in the shape of an axe or hatchet. **F. stella′ta,** X-shaped bandage for one or both shoulders. **F. subcuta′nea,** superficial fascia. **Submus′cular f.,** capsule of Ténon or Bonnet. **Subperitone′al f.,** subperitoneal aponeurosis; thin, tendinous layer on the outer surface of the peritoneum. **F. subpu′bica,** triangular ligament of the urethra. **F. subscapula′ris,** fascia investing the subscapularis muscle. **Superfic′ial f.,** fibro-areolar fascia; fascia immediately beneath the integument over almost the entire surface of the body, facilitating the movement of the skin, connecting it with the parts beneath, etc. **F. superficia′lis abdom′inis,** superficial aponeurosis of the abdomen and thigh; very thin aponeurosis covering the muscles and aponeuroses of the abdomen; passing before the crural arch, to which it adheres with some degree of force; sending a membranous sheath, which surrounds the spermatic cord; and continuous with the dartos, which it assists in forming. The fascia superficialis presents, beneath the crural arch, very distinct fibres, whose direction is parallel to the fold of the thigh. It is applied over the fascia lata aponeurosis, and is attached, internally, to the ascending ramus of the ischium, near the root of the corpus cavernosum. Before the descent of the testicle from the abdomen the fascia superficialis is very manifestly continuous with the gubernaculum testis. **F. supraspina′ta,** fascia investing supraspinatus muscle. **Tari′ni's f.,** dentate convolution. **Tem′poral f.,** temporal aponeurosis. **F. of Tén′on,** the tunica vaginalis bulbi or capsule of Bonnet, is blended with the sheaths and expansion of the straight muscles of the eye, and closely adherent to the sclerotica as far forward as the corneal edge. The latter portion of this membrane has been called the *fascia* or *membrane of Ténon.* Between this fascia and the sclerotica is the *space of Ténon.* See *Capsule of Bonnet.* **F. t-formis,** T-bandage. **F. thoracico-inter′na,** f. endothoracica. **F. tor′tilis,** tourniquet. **F. transver′sa** or **transversa′lis,** aponeurosis separating the transversalis muscle from the peritoneum in the inguinal region. It arises above the posterior edge of the crural arch, where it seems to be continuous with the aponeurosis of the greater oblique muscle. Above, it is lost in the areolar tissue at the internal surface of the transversalis abdominis; within, it is continuous with the outer edge of the tendon of the rectus muscle and Gimbernat's ligament; below, with the aponeurosis of the greater oblique, receiving an expansion from the fascia iliaca. Toward its middle, and a little above the crural arch, the fascia transversalis has the wide orifice of a canal, which is occupied, in the female, by the round ligament of the uterus, and in the male furnishes an expansion, serving as a sheath to the spermatic vessels. Where the fascia is thickened across the inner surface of the umbilicus it is called *fascia transversalis umbilicalis* or *f. umbilicalis.* **F. triangula′ris,** triangular ligament. **Tyr′rell's f.,** rectovesical f. **F. umbilica′lis,** see *F. transversalis.* **F. vagina′lis bul′bi,** capsule of Ténon. **F. vertebra′lis,** vertebral fascia. **F. vola′ris,** palmar fascia.

**Fas′ciæ** (pl. of fascia). See *Fascia.* **F. co′li,** see *Colon.* **F. muscula′res oc′uli,** fibres of the capsule of Ténon connected with the tendons of the ocular muscles.

**Fas′cial.** Relating to a fascia or fasciæ.

**Fascia′lis.** Fascia lata muscle; sartorius. **F. lon′gus** or **sarto′rius,** sartorius.

**Fas′cians** (*fascia,* a swathe). Dividing into layers, as in neuritis fascians.

**Fas′ciated.** Having a fibrous or rod-like arrangement.

**Fascia′tion.** Deligation. Binding up a wounded part.

**Fas′cicle.** Fasciculus; small collection of fibres. **Cu′neate** or **cu′neiform f.,** fasciculus cuneatus. **Fundamen′tal f.,** part of the anterior column connecting with the medulla oblongata. **Ol′ivary f.** fasciculus of nervous matter surrounding the olivary body. **Pos′terolongitu′dinal f.,** nervous matter connecting the quadrigeminal bodies and the nuclei of the fourth and sixth nerves with the parts below.

**Fascic′ular.** Arranged in bundles or fasciculi. **F. kerati′tis,** inflammation of the cornea, attended with peculiar arrangement of bands of vessels. **F. neuro′ma,** neuroma in which nerve fibres are fascicular or in bands.

**Fascic′ulate** or **Fascic′ulated.** Fascicular, or arranged in bands or bundles. **F. blad′der,** sacculated condition of the bladder. **F. por′tion of pe′duncle,** basal portion of crura cerebri. See *Peduncles.*

**Fascicula′tion.** Arrangement or distribution in fasciculi or bundles. Hypertrophy of the muscular coat, as of the bladder, the muscular fibres being prominent and interlacing.

**Fas′cicule.** Fascicle; fasciculus.

**Fascic′uli** (pl. of fasciculus). See *Fascicle* and *Fasciculus.*

**Fascic′ulus** (dim. of *fascia,* band). Fascicle, a small bundle. In anatomy, a small collection of fibres; in pharmacy, a handful. **F. acous′ticus,** one of the transverse white lines on the floor of the fourth ventricle. **F. arcifor′mis,** collection of white fibres on surface of the medulla oblongata. **F. arcifor′mis pe′dis,** fibres of pes pedunculi passing under pons Varolii. **F. arcua′tus,** bundle of fibres passing from frontal to occipital lobe. **F. bas′ilis inter′nus,** bundle of fibres situated in the axis of the superior or middle occipitotemporal convolution. **F. bigem′inogenicula′ris,** fibres connecting corpora geniculata externa and superior corpora quadrigemina. **Cerebel′lar f.,** cerebellar lateral tract. **F. cerebello′sus,** posterior column of spinal cord. **F. cerebra′lis,** anterior column of spinal cord. **F. cortical′is,** pyramid of Ferrein. **F. cor′ticobulba′ris,** bundle of nerve fibres along middle border of pes pedunculi. **F. cunea′tus** or **Cu′neiform f.,** lateral column of the spinal cord. **F. decus′sans pyram′idum,** bundle or tract of motor fibres associating central convolutions of the brain and spinal cord. **F. ex′ilis,** slip of insertion of flexor longus pollicis on coronoid process of ulna. **F. genicula′tus,** fibres of pes pedunculi passing to genu of internal capsule, or collection of fibres passing from crusta to cortex. **F. of Goll,** fibres passing along the posterior median fissure of the spinal cord and medulla oblongata from the middle of the back to the cerebellum. **F. grac′ilis,** corpus restiforme. **Gratiolet's′ f.,** bundle of nerve fibres between cerebellum and occipital lobe. **Habe′nal f.,** bundle of nerve fibres between ganglion of habenula and interpeduncular ganglia. **Infe′rior longitu′dinal f.,** bundle of fibres connecting occipital and temporal lobes. **F. innomina′tus,** one of two large bundles of fibres in the interior of the medulla oblongata, behind the corpora olivaria, and more or less apparent between those bodies and the corpora restiformia; they ascend, and become apparent in the fourth ventricle, under the name *fasciculi* or *processus teretes.* **F. latera′lis,** fibres of tractus opticus distributed along the side of the optic chiasm to the eye of the same side. **F. longitudina′lis,** inferior longitudinal f.; bundle of white fibres in middle raphe of medulla oblongata, pons Varolii, and crura cerebri; bundle of fibres passing from frontal to occipital lobe. **F. l. co′li,** one of the ligaments of the colon. **F. margina′lis aquæduc′ti,** one of the collections of nerve fibres arising from the nucleus of the fifth nerve and interlacing along the aqueduct of Sylvius. **Me′dian poste′rior f. of the medul′la oblonga′ta,** funiculus gracilis. **F. medul′læ spina′lis,** one of the columns of the spinal cord. **F. muscula′ris co′li,** one of the ligaments of the colon. **F. nu′clei oli′væ,** prolongation of lateral column of spinal cord in medulla. **F. obli′quus pon′tis,** bundle of fibres directed obliquely on surface of pons. **F. occipita′lis perpendicula′ris,** bundle of fibres directed perpendicularly from parietal lobe to occipitotemporal convolution. **Ol′ivary f.**, nuclei olivæ; olivary peduncle. **Prim′itive f.**, muscular fibre. **F. pyramida′lis**, part of pes pedunculi having fibres from pyramidal tracts of the cord; also pyramid of Ferrein. **F. pyram′idis**, column of medulla oblongata, continuation of anterior column of the cord. **F. of reinforce′ment**, lateral column of spinal cord. **Respi′ratory f.**, solitary f. **F. restifor′mis**, lateral column of spinal cord. **F. retroflex′us**, bundle of white fibres passing through thalamus opticus from ganglion habenulæ to ganglion interpedunculare. **F. rotun′dus**, solitary bundle of fibres in upper part of spinal cord and medulla oblongata from nucleus of vagus. **Sol′itary f.**, bundle of nerve fibres in posterior part of internal capsule of lens, extending to occipital lobe. **Sphenoid′al f.**, bundle of nerve fibres corresponding to part of corona radiata entering the temporosphenoidal lobe. **F. subcallo′sus**, tract of nerve fibres beneath the corpus callosum. **Supe′rior longitu′dinal f.**, bundle of fibres passing from frontal to occipital lobe. **F. tegmen′ti**, bundle of longitudinal nerve fibres in tegmentum of brain of dog. **F. te′res cor′dis**, one of the columnæ carneæ. **F. te′res pon′tis**, band of white fibres in floor of fourth ventricle; see *F. innominatus*. **Trineu′ral f.**, solitary f. **F. of Türck**, continuation downward in anterior column of spinal cord of motor fibres connecting central convolutions of brain and spinal cord. **F. uncina′tus** or **uncifor′mis**, white bundle, seen on the lateral aspect of the cerebral hemispheres, passing across the bottom of the fissure of Sylvius, and connecting the anterior with the middle and posterior lobes. Fibres of this fasciculus expand at each extremity, and the superficial portions curve or *hook* sharply between the contiguous parts of the anterior and middle lobes, whence the epithet *uncinatus*, "hooked."

**Fascina′tion.** Exercise of will-power by one person over the actions of another, as in first stage of hypnotism.

**Fasci′ola** (dim. of *fascia*, band). Small bandage. Fascia dentata. Distoma. **F. cine′rea**, tuberculum cinereum. **F. denta′ta**, dentate convolution. **F. hepat′ica, F. huma′na**, or **F. lanceola′ta**, Distoma hepaticum.

**Fasciot′omy** (*fascia* + *tome*, incision). Operation on or division of a fascia.

**Fas′cis.** Fasciculus.

**Fasci′tis.** Inflammation of fascia.

**Fast.** To abstain from food. Abstinence from food.

**Fastid′ium.** Fastidiousness, squeamishness; condition of a stomach affected with nausea. **F. ci′bi** or **cibo′rum**, disgust for food; want of appetite. **F. po′tûs**, loathing of drink.

**Fastiga′tum.** Oval mass of gray nervous matter on each side of the inferior vermis of the cerebellum. Nucleus fastigii.

**Fastigium**, fas-tij′e-um (*fastus*, elevation). Acme; the stage of a fever in which the temperature has ceased to rise, but has not yet begun to decline. Point of projection of the roof of the fourth ventricle in the medullary centre of the cerebellum.

**Fat.** Soft, white, animal substance; inodorous, insipid, oily, inflammable, easy to melt, and becoming rancid by union with oxygen; almost insoluble in alcohol, insoluble in water, soluble in fixed oils. Fat is formed of stearin, margarin, and olein, all of which are regarded as salts composed of stearic, margaric, and oleic acids, and a common base, called, from its sweetish taste, glycerin. To these are almost always joined an odorous and a coloring principle. Fat is found in a number of animal tissues, especially the subcutaneous connective tissue, and is very abundant in the neighborhood of the kidneys and in the epiploon. It is generally fluid in the cetacea; soft and of strong smell in the carnivora; solid and inodorous in the ruminating animal; white and abundant in young animals; and yellowish in old. It forms about a twentieth part of the weight of the human body. Fat, considered physiologically, has, for its function, to protect the organs, maintain their temperature, and to serve for nutrition in case of need. Also, employed adjectively, containing fat, fatty; corpulent. **F. canals′** or **col′umns**, vertical columnar-shaped spaces or clefts extending obliquely from the bases of the hair follicles to the cellular membrane. **F. cells**, fatty vesicles. **F. em′bolism**, embolism caused by choking of capillary vessels with globules of oil or fat. **Mackaw′ f.**, see *Cocos bucyracea*. **F. necro′sis**, formation of small, firm, opaque areas in fat, usually in subperitoneal fat; probably due to some affection of the abdominal sympathetic; it often accompanies acute pancreatitis. **F. thrill**, a thrill felt on palpation of the abdomen in the corpulent.

**Fatiga′tio** (*fatigo*, to fatigue). Lassitude or fatigue.

**Fatigue′.** State of the body, following over-exertion, in which the animal functions are executed with less promptitude and vigor than usual. **F. disease′** or **fe′ver**, fever resulting from exhaustion, as from overwork, probably due to toxins generated in consequence of excessive tissue decomposition or *fatigue-stuffs*.

**Fat′ty.** Adipose, adipous, pinguid, pinguedinous. Relating to, resembling, or containing fat. Connective tissue has been called fatty or adipous from the belief that the fat is deposited in its areola. The areolar tissue, however, merely lodges between its lamellæ and filaments the vesicles in which the fat is contained. **F. acids**, acids formed by oxidation of the primary alcohols, acetic acid for example; some of the fatty acids occur in the body, partly free and partly in combination with glycerin, forming fat. **F. casts**, tube-casts. **F. degenera′tion**, degenerative and disintegrating change in a tissue by conversion into fat, as in muscular fibres of the heart, or deposit of fat in and between the elements, as in the secreting cells of the liver; it is caused by chemical alteration in the protoplasm of a cell acting at the expense of the histological elements of the cell; see *Degeneration* and *Lardaceous*. **F. heart**, unusual deposition of fat on the heart; adipose degeneration of the heart. **F. infiltra′tion**, infiltration of the tissues with fat deposited in them from the blood; it is only a deposit, not a degeneration, but if it persists it becomes a morbid process; the fat is not formed out of the cells of an organ, but is brought there in the circulation. **F. kid′ney**, Bright's disease. **F. lig′ament**, adipous ligament; reflection of the synovial membrane of the knee-joint, passing from the ligamentum patellæ toward the cavity separating the condyles of the femur. **F. liv′er**, f. degeneration of the liver, consisting in an accumulation of fat in the secreting cells. **F. mem′brane**, adipose membrane, adipose tissue; subcutaneous areolar tissue, or that containing the fatty or adipose vesicles. **F. metamor′phosis**, f. degeneration; see *Degeneration*. **F. se′ries**, methane or marsh gas and its derivatives. **F. tu′mors**, several forms of adipose or fatty tumors are described, as lipoma, steatoma, etc.; see *Tumors*. **F. ves′icles**, adipose vesicles, fat cells; small bursæ or membranous vesicles enclosing the fat situated in the areolæ of the connective tissue. Generally they are round and globular, and in certain subjects receive vessels which are very apparent. They form so many small sacs without apertures, in the interior of which are filaments arranged like septa. In fatty subjects the adipose vesicles are very perceptible, being attached to the areolar tissue and neighboring parts by a vascular pedicle.

**Fatu′itas** (*fatuus*, foolish). Mental imbecility; idiotism; dementia. One so affected is said to be *fatuous*. **F. alpicola′rum** or **convalli′nus**, cretinism.

**Fatu′ity.** Fatuitas.

**Fat′uous.** See *Fatuitas*.

**Fau′ces.** The cavity leading from the mouth to the pharynx; also called *isthmus of the fauces*.

**Faucette′ voice** (dim. of *faux*, false). See *Voice*.

**Fauchard's** (fo-shars') **disease'.** Pyorrhœa alveolaris; alveodental periostitis.

**Fau'cial.** Relating to the fauces; pharyngeal.

**Fauci'tis.** Inflammation of the fauces; isthmitis.

**Fau'na.** Collection of animals peculiar to any one country or locality.

**Fav'eolate** (*faveolus,* small cavity). Having small cavities like a honeycomb; alveolar.

**Favifor'mis** (*favus,* honeycomb, *forma,* shape). Honeycombed. See *Favosus.*

**Fa'vose.** Faveolate; favous; honeycombed.

**Fa'vous.** Relating to favus.

**Fav'uli** (dim. of *favus,* honeycomb). Honeycomb-like depressions in the lining membrane of the stomach. Alveoli.

**Fa'vus** (honeycomb). Porrigo; porrigo lupinosa or favosa; a disease of the skin due to the presence of the Achorion Schoenleinii. **F. achati'nus** (*achates,* agate), favus with agate-like crusts. **F. confer'tus,** porrigo scutulata. **F. crusto'sus,** favus attended with crusts. **F. cups,** cup-like depressions in the crusts on the hair follicles, forming the characteristic lesion of favus. **F. disper'sus,** porrigo lupinosa. **F. eczemato'des,** vesicular form of favus. **F. fun'gus,** Achorion Schoenleinii. **F. lupino'sus,** porrigo lupinosa. **F. scutifor'mis,** ringworm of the scalp. **F. sparro'sus,** f. crustosus. **F. spar'sus,** porrigo lupinosa. **F. suberi'nus** (cork-like), f. with cork-like crusts. **Un'gual f.** or **F. un'guium,** see *Onychomycosis favosa.*

**Fax'wax.** Ligamentum nuchæ.

**Fea'berry.** Gooseberry.

**Feath'erfew.** Matricaria.

**Feath'er gera'nium.** Chenopodium botrya.

**Febricitans,** feb-ris'it-ans (*febricito,* to have fever). Feverish; one attacked with fever.

**Febricity,** feb-ris'it-e. Feverishness.

**Febric'ula** (dim. of febris). Slight degree of fever; ephemera.

**Febric'ulose.** Slightly feverish.

**Febriculos'ity.** Feverishness.

**Febrifa'cient** or **Febrif'ic** (*febris,* fever, *facio,* to make). Causing fever.

**Febrif'erous** (*febris,* fever, *fero,* to carry). Fever-bearing or fever-producing.

**Febrif'ic.** Febrifacient.

**Febrif'ugal.** Febrifuge.

**Feb'rifuge.** Antipyretic, reducing fever; also an agent possessing this property. Some febrifuges have a general applicability in various fevers, while others—as quinine—have a specific action in malarial fevers.

**Feb'rile.** Pyretic; relating to fever; feverish. **F. an'guish,** pain of head sometimes preceding fever.

**Febril'ity.** Condition of fever.

**Fe'bris.** Fever. **F. acmas'tica,** continued fever. **F. a. contin'ua,** continued fever. **F. adenomeninge'a,** adenomeningeal fever. **F. adenonervo'sa,** plague. **F. adynam'ica,** typhus fever. **F. æsta'tis,** thermic fever. **F. æstiva'lis,** summer intermittent fever. **F. æs'tivo-autumna'lis,** summer-autumn fever, a grave form of malaria. **F. africa'na,** pernicious malarial fever. **F. agrypno'des,** fever characterized especially by insomnia. **F. al'ba,** chlorosis. **F. a. milia'ris,** miliary fever. **F. al'gida,** fever with coldness of the surface, an old term for the algid stage of cholera. **F. amato'ria,** chlorosis; hectic fever. **F. america'na,** yellow fever. **F. amphim'era** or **amphimer'ina,** quotidian. **F. amphimer'ina hec'tica,** hectic fever. **F. a. la'tica,** latent form of quotidian remittent fever. **F. ampullo'sa,** pemphigus. **F. anabat'ica,** continued fever. **F. angino'sa,** angina. **F. angioton'ica,** continued fever. **F. an'nua,** a malarial fever recurring annually. **F. anom'ala,** anomalous fever. **F. apho'nica,** aphonic fever. **F. aphtho'sa,** aphtha. **F. ar'dens,** synocha. **F. arthrit'ica,** gout. **F. aso'des,** bilious fever. **F. assid'ua,** continued fever. **F. asthen'ica,** asthenic fever; typhus fever. **F. asthmat'ica,** asthma. **F. atac'ta,** ataxic fever. **F. atax'o-adynam'ica,** ataxo-adynamic fever. **F. aurigino'sa,** jaundice. **F. bilio'sa,** bilious fever. **F. bullo'sa,** pemphigus. **F. cacato'ria,** fever with diarrhœa. **F. cacoe'thes,** typhus fever. **F. cal'ida,** ardent fever; meningitis. **F. à calo're,** thermic fever. **F. campes'tris,** paludal or miasmatic fever. **F. carbuncula'ris** or **carbunculo'sa,** splenic fever; contagious anthrax. **F. carcera'ria** or **car'ceris,** jail fever. **F. cardial'gia,** acute endocarditis or pericarditis. **F. car'nis,** slight attack of fever following the ingestion of meat, occurring in convalescence from typhoid fever. **F. castren'sis,** camp fever; typhus fever; recurrent fever. **F. catarc'tica,** f. cacatoria. **F. catarrha'lis,** catarrh. **F. c. epidem'ica,** influenza. **F. cathemer'inus,** quotidian fever. **F. caumato'des** or **causo'des,** synocha. **F. cephalal'gica,** fever with severe headache. **F. cephal'ica,** meningitis; brow ague. **F. cerebrospina'lis,** cerebrospinal meningitis. **F. cholepyret'ica,** bilious fever. **F. choler'ica,** bilious fever; cholera. **F. chron'ica,** chronic fever. **F. coalter'na,** double intermittent fever. **F. coccin'ea,** scarlatina. **F. colliquati'va,** sweating sickness. **F. comita'ta,** pernicious intermittent fever. **F. commu'nicans,** subintrant fever. **F. complica'ta,** Malta fever. **F. compos'ita,** intermittent fever. **F. contagio'sa,** typhus fever. **F. contin'ua,** a continued fever, one without intermissions. **F. c. inflammato'ria,** internal inflammation. **F. c. non-pu'trida,** continued fever. **F. c. putri'da,** typhus fever. **F. c. p. ictero'des carolinien'sis,** yellow fever. **F. c. sanguin'ea,** synocha. **F. c. sim'plex,** synocha. **F. convulsi'va,** convulsive fever. **F. crit'ica,** remittent fever, ephemeral fever, intermittent fever, typhus fever. **F. crymo'des,** f. algida. **F. culicula'ris,** miliary fever. **F. depurato'ria,** fever attended with increased excretions. **F. deu'rens,** synocha. **F. diaphoret'ica,** sweating sickness. **F. dia'ria,** ephemera; febricula. **F. dysenter'ica,** dysentery. **F. ectymat'ica,** scarlatina. **F. elo'des,** sweating sickness; malaria. **F. e. ictero'des,** yellow fever. **F. endorsa'lis,** Malta fever. **F. enter'ica,** typhoid fever. **F. en'teromesenter'ica,** typhoid fever. **F. epacmas'tica,** fever increasing steadily to a crisis. **F. ephem'era,** ephemera; febricula. **F. epidem'ica cum angi'na,** cynanche maligna. **F. epidem'ica contagio'sa,** pemphigus acutus. **F. errat'ica,** anomalous fever. **F. erro'nea,** irregular intermittent fever. **F. erysipela'cea** or **erysipelato'sa,** erysipelas. **F. erythemato'sa,** roseola febrilis. **F. essero'sa,** miliary fever. **F. exanthemat'ica articula'ris,** dengue. **F. famel'ica,** fever accompanied with bulimia. **F. fix'a,** continued fever. **F. fla'va** or **fla'va Americano'rum,** yellow fever. **F. gas'trica,** bilious fever; gastric fever. **F. gas'trico-inflammato'ria,** gastritis. **F. gas'triconervo'sa,** typhoid fever. **F. gas'tro-adynam'ica,** typhoid fever with bilious and adynamic symptoms. **F. glutino'sa gas'trica,** typhoid fever. **F. hebdomada'na,** fever with paroxysms recurring every week. **F. hec'tica,** hectic fever. **F. hec'tica infan'tum,** tabes mesenterica. **F. hec'tica malig'na nervo'sa,** typhus fever. **F. helo'des ictero'des,** yellow fever. **F. hemere'sia,** quotidian. **F. hemitritæ'a,** mixed tertian and quotidian fever. **F. hepat'ica,** bilious fever. **F. hepat'ica inflammato'ria,** hepatitis. **F. herpet'ica,** fever preceding or attending eruption of herpes. **F. hor'rida** or **horrif'ica,** f. algida. **F. hungar'ica,** Hungarian fever; typhoid fever. **F. hydrocephal'ica,** hydrocephalus internus. **F. hydropho'bica,** rabies. **F. hysteret'ica,** a postponing intermittent. **F. hyster'ica,** hysteria accompanied with fever; intermittent fever in which the paroxysms are accompanied with hysteria. **F. icter'ica,** icteric fever. **F. ictero'des,** yellow fever. **F. ili'aca inflammato'ria,** enteritis; typhoid fever. **F. infan'tum remit'tens,** infantile remittent fever. **F. inflammato'ria,** synocha. **F. inten'sio,** period of violence of a fever or paroxysm. **F. intermit'tens,** intermittent fever. **F. intermit'tens cephal'ica larva'ta,** periodical headache, probably neuralgic. **F. intestina'lis,** typhoid fever. **F. intestina'lis ulcero'sa,** typhoid fever. **F. intestino'-**

**rum**, enteritis. **F. irregula′ris**, anomalous fever. **F. ital′ica**, plague. **F. lac′tea** or **lactan′tium**, milk fever. **F. larva′ta**, masked fever; masked intermittent. **F. len′ta**, infantile remittent fever; hectic fever. **F. len′ta nervo′sa**, typhoid fever. **F. lenticula′ris**, miliary fever. **F. lethar′gica**, sleeping sickness. **F. le′vis**, febricula. **F. lochia′lis**, lochial fever. **F. maculo′sa**, typhus fever. **F. malig′na**, malignant fever. **F. malig′na bilio′sa Amer′icæ**, yellow fever. **F. malig′na fla′va In′diæ occidenta′lis**, yellow fever. **F. malig′na cum so′pore**, typhus. **F. marasmo′des**, hectic fever; fever of emaciation. **F. mediterra′nica**, Malta fever. **F. meliten′sis**, Malta fever. **F. meningogas′tricus**, gastric fever. **F. mesara′ica** or **mesenter′ica**, typhoid fever; tabes mesenterica. **F. milia′ris**, miliary fever. **F. milita′ris**, typhus fever. **F. morbillo′sa**, rubeola. **F. muco′sa**, typhoid fever. **F. m. vermino′sa**, infantile remittent fever. **F. nau′tica**, typhus fever. **F. nephrit′ica**, nephritic fever. **F. nervo′sa**, nervous fever. **F. n. enter′ica**, typhoid fever. **F. n. epidem′ica**, or **F. n. exanthemat′ica**, typhus fever. **F. n. gas′trica**, typhoid fever. **F. n. mesenter′ica**, typhoid fever. **F. n. petechia′lis**, typhus fever. **F. neuro′des**, nervous fever. **F. ni′gra**, cerebrospinal meningitis. **F. nosocomia′lis** or **nosocomio′rum**, typhus fever. **F. os′citans**, oscitant fever. **F. paludo′sa** or **palu′dum**, malaria. **F. panno′nica**, Hungarian fever. **F. pemphigo′des** or **pemphingo′des**, pemphigus. **F. pemp′ta**, quintan fever. **F. period′ica**, periodic fever. **F. pernicio′sa**, pernicious fever. **F. pes′tilens**, plague. **F. p. malig′na**, typhus fever. **F. pestilentia′lis**, plague. **F. p. Euro′pæ**, typhus fever. **F. petechia′lis**, typhus fever. **F. phlegmat′ica**, quotidian fever. **F. phthis′ica**, hectic fever. **F. plane′tes**, irregular intermittent fever. **F. pleurit′ica**, pleuritis. **F. pneumon′ica**, pneumonia. **F. podag′rica**, gout. **F. polychol′ica**, bilious fever. **F. puerpera′lis**, puerperal fever. **F. puncticula′ris**, miliary fever; typhus fever. **F. purpura′ta**, typhus fever; cerebrospinal fever. **F. purpu′rea pestif′era**, cerebrospinal meningitis. **F. purulen′ta**, septicæmia. **F. pu′trida**, typhus fever. **F. p. nervo′sa**, typhoid fever. **F. quarta′na**, quartan fever. **F. quin′ta** or **quinta′na**, quintan fever. **F. quotidia′na**, quotidian fever. **F. recidi′va**, relapsing fever. **F. recur′rens**, relapsing fever. **F. remit′tens**, remittent fever. **F. rheumat′ica inflammato′ria**, acute rheumatism. **F. ru′bra**, scarlatina. **F. r. prurigino′sa**, urticaria. **F. sanguin′ea**, synocha. **F. sapop′yra**, typhus fever. **F. scarlatino′sa**, scarlatina. **F. scorbu′tica**, scorbutic fever. **F. semitertia′na**, semitertian fever. **F. septa′na**, septan fever. **F. sesquial′tera**, semitertian fever. **F. sexta′na**, sextan fever. **F. siamen′sis**, yellow fever. **F. sim′plex**, ephemera; simple fever. **F. stercora′lis**, typhoid fever. **F. sthen′ica**, synocha. **F. stigmat′ica**, typhus fever. **F. stomach′ica inflammato′ria**, gastritis. **F. subcontin′ua**, a fever, usually malarial, with slight intermissions barely more than remissions. **F. subin′trans**, subintrant fever. **F. sudato′ria**, sudor anglicus or sweating sickness. **F. synocha′lis**, synocha. **F. syphilit′ica**, syphilitic fever. **F. tab′ida**, hectic fever. **F. tertia′na**, tertian fever. **F. ton′ica**, synocha. **F. top′ica**, facial neuralgia. **F. tor′pida**, typhoid fever. **F. tox′ica**, yellow fever. **F. tritæ′us**, intermittent fever. **F. trop′ica** or **tropica′lis**, yellow fever. **F. tympan′ica**, enteric fever. **F. typho′des**, typhus or typhoid fever. **F. urethra′lis**, urethral fever. **F. urino′sa**, uræmia. **F. urtica′ta**, urticaria. **F. uteri′na**, inflammation of the uterus. **F. va′ga**, anomalous fever. **F. variolo′sa**, variola. **F. vermino′sa**, verminous fever. **F. verna′lis**, vernal fever. **F. vesicato′ria**, pemphigus. **F. vesicula′ris**, miliary fever; pemphigus acutus. **F. vesiculo′sa**, erysipelas. **F. virgin′ea** or **vir′ginum**, chlorosis. **F. vulnera′ria**, traumatic fever.

**Fe′cal.** Stercoraceous. **F. fis′tula**, fistula of the intestines. **F. mat′ter**, fæces. **F. reten′tion**, constipation; obstipation. **F. toxæ′mia**, condition occurring in puerperal women, accompanied with fever, rapid pulse, sweating, and general malaise, due to fecal accumulation in the intestines.

**Fe′caloid.** Resembling fæces.

**Fe′ces.** See *Fæces.*

**Fech′ner's law.** That sensation caused by a stimulus varies as the logarithm of the latter.

**Fec′ula** or **Fæc′ula** (dim. of fæx). Starch.

**Fec′ulence.** Deposit; dregs. Fæces. In pharmacy, feculent, albuminous, or other substances deposited from turbid fluids.

**Fec′ulent.** Foul, dreggy, excrementitious; as feculent fluid, feculent evacuations, etc.

**Fec′und.** Fruitful; prolific.

**Fec′undate.** To impregnate. See *Fecundation.*

**Fecunda′tion.** Impregnation; procreation; act by which in organized beings the material furnished by the generative organs of the female unites with that prepared by those of the male, so that a new being results. **Artific′ial f.**, impregnation by introduction of semen into the uterus by means of a syringe, the semen being taken from the vagina immediately after coitus.

**Fecun′dity.** Faculty of reproduction possessed by organized bodies; capability of bearing children.

**Fee′ble.** Infirm.

**Feeblemind′edness.** Weak mental conditions in which are included dementia, idiocy, and imbecility.

**Feed′ing.** Alimentation. **Forced f.**, introduction of food through a stomach tube in cases in which the taking of food is refused by the person. **Rec′tal f.**, feeding by enema or by suppository.

**Feel′ing.** Exercise of sensations, general or special, and emotions.

**Feet** (pl. of foot). **Burn′ing of the f.**, singular disease in India, the prominent symptom of which is a sense of burning in the feet; see *Causalgia.* **F.-sweat bacil′lus**, B. fœtidus; B. graveolens; B. saprogenes.

**Fehl′eisen's coc′cus.** Erysipelococcus.

**Feh′ling's solu′tion** or **test.** Two solutions (to be freshly prepared) are employed for estimation of glucose in urine, one being a solution of 34.639 grammes of crystallized cupric sulphate in 200 c.c. of water, the other a solution of 173 grammes of Rochelle salt in 350 centigrammes of distilled water, heated to the boiling point; on cooling, add 600 centigrammes of a previously boiled solution of caustic soda (sp. gr. 1.12), and make up to a litre with distilled water. To ten minims of each of these solutions in a test-tube add a fluidrachm of distilled water, and boil for a few seconds. If the solution remains clear, drop the urine gradually into it, and heat the tube. If there should be a large quantity of sugar, a reddish deposit results. In the absence of a precipitate, add urine to an equal volume, cool the mixture, and if there is no precipitate there is no sugar present.

**Feigned** (faned) **diseas′es.** Simulated or pretended diseases. These are generally assumed by beggars to obtain alms, by criminals to escape punishment, by soldiers to be exempt from duty, and by the hysterical. See *Malingering.*

**Fel.** Bile. **F. bovi′num purifica′tum** (Ph. Br.), see *F. bovis purificatum.* **F. bo′vis** (Ph. U. S.), ox-gall, the fresh bile of *Bos taurus.* **F. b. purifica′tum** (Ph. U. S.), purified ox-gall, the form employed therapeutically; the official name in the Ph. Br. is *Fel bovinum purificatum;* dose, gr. v–x (0.32–0.65). **F. bo′vis inspissa′tum** (formerly in the Ph. U. S.), inspissated ox-bile. **F. natu′ræ**, aloes. **F. tau′ri**, f. bovis. **F. ter′ræ**, Erythræa centaurium, Ludus helmontii. **F. vit′ri**, see *Vitrum.*

**Feld′wood.** Verbascum thapsus, species of gentiana.

**Fel′leous.** Biliary; bilious.

**Fel′lic acid.** $C_{23}H_{40}O_4$. An acid derived from bile.

**Fellid′ucous** (*fel*, bile, *duco*, to lead) or **Fellif′luous** (*fel*, bile, *fluo*, to flow). Cholagogue.

**Fellin′eus.** Bilious.

**Fellin′ic acid.** Acid derived from digesting bilin with muriatic acid.

**Fell′wort.** Gentiana lutea.

**Fe′lo de se.** Suicide.

**Fel′on.** Paronychia; whitlow; inflammation of cellular tissue around the finger; periphalangeal cellulitis.

**Fel′onwort.** Solanum dulcamara.

**Felt foil.** Shredded tin-foil, pressed into mats; employed in dentistry.

**Felt′ing.** Tangling. Term applied to the hair when inextricably interlaced, as occurs occasionally in women from inattention.

**Felt′work.** A dense mass of nerve fibres, more compact than a network.

**Fel′wort.** Gentiana lutea.

**Fe′male.** In animals, one that engenders and bears young; also used adjectively, as female sex, etc. **F. blade,** blade of an instrument made for reception of the male blade. **F. cath′eter,** short catheter for the female urethra. **F. fern,** Asplenium filix fœmina; anthelmintic. **F. pronu′cleus,** nucleus derived from the germinal vesicle of the ovum.

**Feminin′ity** or **Femin′ity.** Aggregation of characteristics of the female.

**Fem′inism** (*fœmina,* female). Defective or abnormal sexual development of the male, leading to assumption of female characteristics and tastes.

**Feminonu′cleus.** Female pronucleus. See *Female.*

**Femoræ′us.** Cruræus.

**Fem′oral** (*femur,* thigh). Belonging or relating to the thigh. **F. arch,** crural arch; Poupart's ligament. **F. ar′tery,** the *superficial femoral* is a continuation of the external iliac; becomes afterward popliteal; the *deep* or *profunda femoris* is a branch of it; the *common femoral artery* is part of the superficial femoral above the point at which the deep artery is given off. **F. bone,** os femoris or thigh-bone. **F. canal′,** crural canal. **F. crest,** linea aspera. **F. her′nia,** see *Merocele.* **F. lig′ament,** falciform process. **F. ring,** crural canal. **F. sheath,** investment of fascia around the femoral artery, made up of a continuation of the transversalis fascia in front and pelvic fascia behind. **F. vein,** chief venous trunk of the lower extremity, accompanying the artery; the *deep femoral* or *profunda femoris vein* is distributed with the deep femoral artery.

**Femoral′is.** Femoral; triceps extensor cruris.

**Femore′us.** See *Triceps cruris* or *Cruræus.*

**Femorocalca′nean.** Relating to the femur and heel.

**Femorocalca′neus.** Plantaris muscle.

**Femorocaud′al.** Relating to the femur and tail.

**Fem′orocele** (*femur + kele,* hernia). Femoral hernia.

**Femorococcyge′us.** Relating to femur and coccyx.

**Femorocuta′neous.** Relating to skin of thigh. **F. nerve,** external cutaneous nerve of thigh.

**Femorogen′ital.** Relating to thigh and genital organs. **F. nerve,** genitocrural nerve.

**Femorophalange′us.** Muscle in lower animals corresponding to plantaris and flexor digitorum brevis in man.

**Femoropoplite′al.** Relating to the thigh and popliteal space or to the popliteal region of the thigh. **F. ar′teries,** perforating arteries. **F. vein,** branch of femoral vein emptying into short saphenous vein.

**Fem′oropoplite′otib′ial mus′cle.** Popliteus.

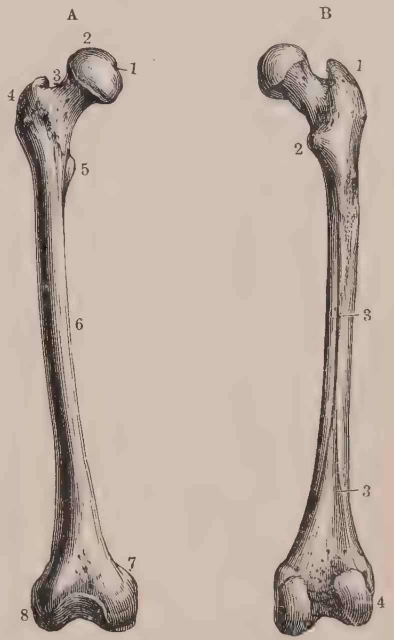
**Femoroprephalangæ′us.** Muscle in lower animals corresponding with extensor longus digitorum pedis in man.

**Femoropretib′ial.** Relating to thigh and front part of leg. **F. nerves,** branches of long saphenous nerve to inner side of leg.

**Femorotib′ial.** Belonging to femur and tibia, as *femorotibial articulation,* knee-joint.

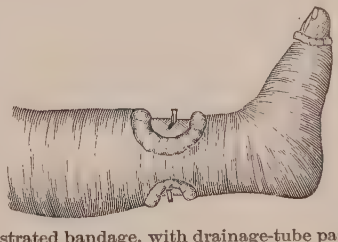
**Femorovas′cular.** Relating to the femoral canal.

**Fe′mur.** The thigh; thigh-bone; strongest and longest of all the bones of the body, extending from the pelvis to the tibia, and forming solid part of thigh. It is cylindrical, slightly curved anteriorly, unsymmetrical, and oblique downward and inward. The body of the bone is prismatic, and has behind a prominent ridge, linea aspera. The processes on the femur are: at the upper or pelvic extremity, the head supported on a column or neck, the great trochanter, the lesser trochanter; at the inferior or tibial extremity, the external condyle, internal condyle, external tuberosity, and internal tuberosity. The femur ossifies from five points: one on each process of the pelvic extremity; one in the body of the bone; and two on the condyles. It is articulated with the pelvis, tibia, and patella. See *Thigh.*



The right femur. A, anterior aspect; 1, depression from round ligament; 2, head; 3, neck; 4, trochanter major; 5, trochanter minor; 6, shaft; 7, internal condyle; 8, external condyle. B, posterior aspect; 1, trochanter major; 2, trochanter minor; 3, 3, linea aspera; 4, external condyle.

**Fenes′tra** (window). Anatomists have given this name to two apertures situated in the inner paries of the cavity of the tympanum. One of these, fenestra ovalis or vestibuli or vestibularis, foramen ovale, is oval-shaped, situated at the base of the stapes, and corresponds with the cavity of the vestibule. The other, the fenestra rotunda or cochlearis or triquetra, foramen rotundum, is closed by a fine, transparent membrane, membrana tympani secundaria, tympanum minus or secundarium, membrana fenestræ rotundæ, and corresponds to inner scala of cochlea. Also an opening cut in an immovable bandage, to allow of inspection of, or application of dressings to a part. An opening in one of the blades of a forceps. **F. coch′leæ,** see *Fenestra.* **F.**



Fenestrated bandage, with drainage-tube passing through the wound.

cochlea′ris, see *Fenestra*. **F. larynge′a,** space covered by cricothyroid membrane. **F. oc′uli,** pupil. **F. ova′lis,** see *Fenestra*. **F. rotun′da,** see *Fenestra*. **F. semiova′lis,** f. ovalis. **F. trique′tra,** see *Fenestra*. **F. vestib′uli** or **vestibula′ris,** see *Fenestra*.

**Fenes′tral** or **Fenes′trated.** Having a fenestra; term applied to surgical dressings or instruments. **F. lay′er,** see *Retina*. **F. mem′brane,** see *Artery*.

**Fenestra′tion.** Providing with a *fenestra*, which see.

**Fen′nel.** Anethum. **Dogs′ f.,** Anthemis cotula. **F. flow′er,** nigella. **F. fruit,** fruit of Fœniculum vulgare; has stimulant and carminative properties. **Hogs′ f.,** peucedanum. **F. seed,** fennel. **Sweet f.,** anethum. **F. water,** aqua fœniculi.

**Fen′ugreek.** Trigonella fœnum.

**Fen′wick's disease′.** Primary atrophy of the stomach.

**Feraconitine′.** Pseudaconitine; alkaloid obtained from Nepal aconite.

**Fe′ral.** Fatal; ferine.

**Feral′doid.** Peptonized albuminate of iron.

**Fera′lis pedic′ulus.** Crab-louse or Pediculus pubis.

**Fer′cremol.** A combination of hæmoglobin and iron.

**Féréol's′ nodos′ities.** Nodes occasionally met with under the skin in acute rheumatic arthritis.

**Féréol-Graux's oc′ular pal′sy.** Palsy or paralysis of internal rectus muscle of one eye and of external rectus of the other eye, having a central origin.

**Fer′gusson's amputa′tion.** A modified Pirogoff's amputation whereby the malleoli are preserved. **F.'s incis′ion,** an incision made in the operation of removal of the superior maxillary bone, which involves the nose and cheek at their junction, passes around the ala nasi, and divides the upper lip in the median line. **F.'s spec′ulum,** silvered glass vaginal speculum.

**Fe′rine** (*fera*, wild beast). Term formerly applied to any malignant or noxious disease.

**Fer′ment** (*ferveo*, to be hot). Leaven. Substance having property of modifying the nature of organic or other substances under influence of heat and moisture. Ferments split up carbon compounds at moderate temperatures, leading to formation of other carbon compounds. Certain forms of schizomycetes, capable of producing fermentation, are called *organic ferments*. Ferments such as diastase, ptyalin, and pepsin contain carbon, and are therefore called organic; but, as they have no definite structure, are called *unorganized ferments* or *enzymes*. **Amylolyt′ic f.,** f. causing transformation of starch into glucose by decomposition of the former. **Butyr′ic f.,** f. producing butyric acid. **Ca′seous f.,** f. producing the change of milk into cheese. **Coag′ulating** or **Curd′ling f.,** one that precipitates the casein of milk. **Diastat′ic f.,** producing change of starch into glucose, as in the saliva through the agency of ptyalin. **Diges′tive f.,** one of the agents in various parts of the alimentary canal which exert a special action on the food as it passes along. The following table, by Roberts, presents the different digestive ferments and their action on food materials in various parts of the alimentary canal:

TABLE OF FERMENTS CONTAINED IN THE DIGESTIVE JUICES.

| *Digestive juices.* | *Ferments contained in them.* | *Action as food materials.* |
|---|---|---|
| Saliva. | Salivary diastase or ptyalin. | Changes starch into dextrin and sugar. |
| Gastric juice | Pepsin. | Changes proteids into peptones in an acid medium. |
| | Curdling ferment. | Curdles the casein of milk. |
| Pancreatic juice. | Trypsin. | Changes proteids into peptones in alkaline and neutral media. |
| | Curdling ferment. | Curdles the casein of milk. |
| | Pancreatic diastase. | Changes starch into dextrin and sugar. |
| | Emulsive ferment. | Emulsifies and partially saponifies fats. |
| Bile. | | Assists in emulsifying fats. |
| Intestinal juice. | Invertin. | Changes cane sugar into invert sugar. |
| | Curdling ferment. | Curdles the casein of milk. |

**Fi′brin f.,** f. converting fibrinogen into fibrin. **Glycolyt′ic f.,** decomposing glycogen. **Hydrolyt′ic f.,** one which acts only in the presence of water, such as most of the digestive ferments. **Inver′sive f.,** f. that converts cane sugar into glucose. **Or′ganized f.,** a living ferment, such as a microorganism. **Proteolyt′ic f.,** one which converts an albumin into a peptone or albumose. **Steatolyt′ic f.,** f. that causes fatty matter to break up into fatty acids and glycerin. **Vis′cous f.,** f. causing the production of viscous or gummy substances.

**Fermentæ′mia.** Presence of a ferment in the blood.

**Fermenta′tion.** Decomposition of a body by action of a ferment, as by that of microorganisms. See *Ferment*. **Ace′tic f.,** change taking place under influence of Bacillus aceti in alcoholic solutions, by which they are converted into vinegar. **Albu′minoid f.,** change effected in liquids by conversion into albuminous matter. **Alcohol′ic f.,** process by which saccharine and other matters are changed into alcohol by decomposition of glucose. **Ammoni′acal f.,** change produced in the urine under the influence of the Micrococcus ureæ. **Butyr′ic f.,** butyric acid or butyrous f., development of butyric acid from starch, dextrin, glucose, glycerin, etc., under the influence of the Bacillus butyricus and other microbes. **F. fe′ver,** septicæmia. **Lac′tic f.,** conversion of sweet milk into sour milk under the influence of the Bacillus lacticus. **Putrefac′tive f.,** putrefaction. **F. test,** test for glucose in urine by generation of carbonic-acid gas from multiplication of yeast-fungus, Saccharomyces cerevisiæ, at a temperature of 75° to 80° F.; upon adding to three ounces of urine a fluidrachm of ordinary yeast, if sugar is present, fermentation occurs. **F. the′ory of disease′,** zymotic theory; theory that poison in the atmosphere or derived from an affected person acts as a ferment to the waste-products lingering in the body of a healthy but predisposed person. **Vi′nous f.,** alcoholic f.

**Ferment′ative.** Caused by or attended with fermentation.

**Fermen′tum.** Ferment; yeast. **F. cerevis′iæ,** yeast. **F. mor′bi,** ferment. **F. ventric′uli,** ferment of stomach; gastric juice.

**Fern.** Filix. **F. bush,** Comptonia asplenifolia. **Cin′namon f.,** Osmunda cinnamomea. **Ea′gle f.,** Pteris aquilina. **Fe′male f.,** Asplenium filix fœmina, Pteris aquilina. **Flow′ering f.,** Osmunda regalis. **F. gale,** Comptonia asplenifolia. **Male f.,** Polypodium filix mas. **Mead′ow f.,** Comptonia asplenifolia. **F. rock,** Adiantum pedatum. **F. root,** Polypodium vulgare. **Sweet f.,** Adiantum pedatum, Comptonia asplenifolia. **Sweet shrub′by f.,** Comptonia asplenifolia.

**Fernambu′co wood.** Cæsalpinia echinata.

**Fern′freckle** or **Fern′tickle.** Freckle, ephelis.

**Fero′lia guianen′sis** or **variega′ta.** Atlas-wood; inner bark is used in baths, etc.

**Fero′nia elephan′tum.** Wood-apple tree; elephant wood or apple; tree of India yielding gum resembling gum arabic; leaves, aromatic and of an odor resembling anise, are carminative; unripe fruit is astringent. **F. pellu′cida,** Ægle marmelos; covolam.

**Ferral′bumose.** Preparation of meat, chloride of iron, and artificial gastric juice.

**Ferra′lia.** Preparations of iron.

**Ferra′ria.** Scrophularia aquatica.

**Fer′rate.** Salt of ferric acid.

**Fer′rated.** Containing iron; chalybeate.

**Ferratin′.** A chemical combination of iron and an albumin derivative extracted from the liver of the hog and of other animals; a reddish-brown powder without taste or smell; it contains 6 per cent. of iron; a hæmatinic in daily doses of gr. xx (1.3).

**Ferrein's′ canal′.** Triangular channel which Ferrein (French physician of 18th century) supposed to result from the approximation of the free edges of the eyelids applied to the globe of the eye; he considered it adapted for directing the tears toward the puncta lacrymalia during sleep. One of the cortical canals, the first portions of the uriniferous ducts while still in the cortical substance of the kidney. **F.'s cords,** inferior vocal cords. **F.'s fora′men,** hiatus Fallopii. **F.'s pyr′amids,** each papilla of the kidney, according to Ferrein, consists of at least 700 subordinate pyramids, or cone-shaped extensions of the medullary substance of the kidney into the cortical portion. **F.'s tubes, F.'s canals,** cortical portion of uriniferous tubes.

**Fer′ret's disease′.** Swine plague.

**Fer′ri ace′tas.** Acetate of iron, ferric acetate, iron liquor; made from carbonate of iron and acetic acid; dose of the tincture, ♏xv–xxx (1.0–2.0). **F. æru′go,** f. subcarbonas. **F. albu′minas,** albuminate of iron, occurs in transparent, yellow scales; dose, gr. ij–x (0.13–0.65). **F. et ammo′nii cit′ras** (Ph. U. S. and Br.), ammoniocitrate of iron, citrate of ammonium and iron; occurs in garnet-red, transparent scales; it is more soluble than the citrate; dose, gr. ij–v (0.13–0.32). **F. et ammo′nii sul′phas** (Ph. U. S.), sulphate of iron and ammonium, ammonioferric alum; used in atonic uterine leucorrhœa, chronic diarrhœa, and dysentery; externally, in relaxation of the uvula, uterus, etc; dose, gr. ij–v (0.13–0.32). **F. et ammo′nii tar′tras** (Ph. U. S.), tartrate of ammonium and iron; dose, gr. v–x (0.32–0.65). **F. ar′senas** (Ph. Br.), arsenate of iron; a bluish-green powder; dose, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006). **F. ben′zoas,** unofficial preparation of iron; dose, gr. j–v (0.065–0.32). **F. borus′sias,** Prussian blue. **F. bro′midum,** bromide of iron, ferrous bromide; tonic and alterative, with the peculiar therapeutical qualities of the bromides; dose, gr. j–v (0.065–0.32). **F. carbo′nas,** f. subcarbonas; the dose of the syrup of the bromide is ♏xv–lx (1.0–4.0). **F. carbo′nas efferves′cens,** effervescing carbonate of iron, carbonate of iron prepared with tartaric acid, bicarbonate of sodium, sulphate of iron, powdered sugar, and citric acid. **F. carbo′nas sacchara′tus** (Ph. U. S. and Br.), saccharated carbonate of iron; chalybeate tonic; dose, gr. v–xv (0.32–1.0); see *F. protocarbonas.* **F. carbona′tum,** graphites. **F. carbure′tum,** graphites. **F. chlo′ridum** (Ph. U. S.), $Fe_2Cl_612H_2O$, ferric chloride, chloride, sesquichloride, or perchloride of iron, is obtained by the action of hydrochloric acid and nitric acid on iron wire; dose, gr. j–iij (0.065–0.2); it is generally prescribed in the form of *tinctura ferri chloridi;* dose, ♏x–xxx (0.65–2.0). A concentrated solution of the perchloride has been employed wherever a powerful styptic has been needed; it forms the *liquor ferri chloridi* (Ph. U. S. and Br.). **F. cit′ras** (Ph. U. S.), citrate of iron, $Fe_2(C_6H_5O_7)_2,6H_2O$; the citrate resembles in medical properties the tartrate and the lactate of iron; dose, gr. ij–v (0.13–0.32). **F. cyanure′tum,** see *Prussian blue.* **F. deutocarbo′nas fus′cus,** f. subcarbonas. **F. deutox′idum ni′grum,** æthiops martialis. **F. ferrocy′anas,** Prussian blue. **F. ferrocyan′idum,** Prussian blue. **F. ferrocyanure′tum,** Prussian blue. **F. fi′lum,** iron wire. **F. hydri′odas,** f. iodidum. **F. hydrocy′anas,** Prussian blue. **F. hypercarbure′tum,** graphites. **F. hypophos′phis** (Ph. U. S.), hypophosphite of iron, ferric hypophosphite, a grayish or white powder; it has the tonic properties of the iron with the other therapeutic qualities of the hypophosphites; dose, gr. v–x (0.32–0.65), three times a day, and in syrup in the dose of a fluidrachm (4.0); see *Hypophosphites.* **F. io′didum** or **iodure′tum,** iodide of iron, ferrous iodide, hydriodate of iron, ferri hydriodas; the iodide is official in the form of the pill and syrup; see *Pilulæ ferri iodidi* and *Syrupus ferri iodidi;* dose, gr. j–v (0.065–0.32), and in the syrup of the iodide, ♏x–xxx (0.65–2.0). **F. io′didum sacchara′tum** (Ph. U. S.), saccharated ferrous iodide, identical with saccharated iodide of iron of the German Pharmacopœia; the ferrous iodide is preserved by contact with sugar of milk; dose, gr. ij–v (0.13–0.32). **F. lac′tas** (Ph. U. S.), lactate of iron, $Fe(C_3H_5O_3)_2,3H_2O$; employed in the same cases as the precipitated subcarbonate of iron, and especially in chlorosis; dose gr. j–v (0.065–0.32), three times a day, in lozenges. **F. limatu′ra purifica′ta,** purified iron filings—purified by means of the magnet for internal use; the filings were also formerly called f. ramenta, f. fila, ferri or martis limatura, speculum indicum, ferri in pulverem resolutio; they are considered to possess the general properties of iron—the iron becoming oxidized. **F. et magne′siæ cit′ras,** citrate of iron and magnesia; soluble in water and does not constipate; dose, gr. v–xv (0.32–1.0). **F. ma′las,** malate or pomate of iron; agreeable, mild tonic; dose, gr. v–xv (0.32–1.0). **F. ni′tras,** see *Liquor ferri nitratis.* **F. ox′alas,** oxalate of iron; tonic without being astringent; dose, gr. ij–iij (0.13–0.2). **F. ox′idum fu′sum,** f. subcarbonas. **F. ox′idum hydra′tum** (Ph. U. S. and Br.), hydrated oxide of iron, ferric hydrate; a reddish-brown magma; employed as an antidote to arsenic in doses of ʒiv (16.0) in water, frequently repeated. **F. ox′idum hydra′tum cum magne′sia** (Ph. U. S.), hydrated oxide of iron with magnesia; a brownish-red solution of tersulphide of iron, magnesia, and water, and used as an antidote to arsenic, being administered freely in tablespoonful doses. **F. ox′idum ru′brum,** colcothar; ferri subcarbonas. **F. ox′idum sacchara′tum,** saccharated oxide of iron; dark brown powder, made by dissolving iron in nitric acid, filtering, evaporating, adding an excess of sugar in water of ammonia, and precipitating with alcohol. **F. perchlo′ridum,** see *Ferri chloridum.* **F. percyan′idum,** Prussian blue. **F. persul′phas,** see *Ferri sulphas.* **F. phos′phas** (Ph. U. S. and Br.), phosphate of iron, ferric phosphate; made by double decomposition between sulphate of iron and sodium phosphate; dose, gr. j–v (0.065–0.32), as a chalybeate; the British Pharmacopœia has a *syrupus ferri phosphatis,* syrup of phosphate of iron (gr. j of the phosphate to ʒj of syrup), the dose of which is ʒss–j (2.0–4.0); a compound syrup of phosphate of iron was formerly much used in the United States under the name of "chemical food." **F. p. solu′bilis** (Ph. U. S.), soluble ferric phosphate, occurs in thin, green, transparent scales; is made of ferric citrate, 50; sodium phosphate, 55; distilled water, 100; dose, gr. ij–v (0.13–0.32). **F. po′mas,** pomate of iron; ferri malas. **F. et potas′sii tar′tras** (Ph. U. S.), tartrate of iron and potassium, occurs in red or reddish-brown, transparent scales; a very mild preparation; dose, gr. v–x (0.32–0.65). **F. protocarbo′nas,** protocarbonate of iron, ferrous carbonate; the protocarbonate of iron, thrown down from a solution of the sulphate of iron by the carbonate of sodium, readily attracts oxygen and becomes converted into the sesquioxide; to prevent this it may be associated with honey and sugar, and the mixture be reduced by evaporation to a pilular consistence. The mass constitutes the ferruginous pills of Vallet, Vallet's pills; see *Pilulæ ferri carbonatis*. The *ferri carbonas saccharatum* (ferri carbonas cum saccharo, saccharine carbonate of iron) is prepared in this manner; also called the *ferrum carbonicum saccharatum* and *ferri carbonas saccharata, saccharated carbonate of iron* of the Ph. U. S. and Br. The protocarbonate is given in the same diseases as the lactate of iron; ten or fifteen grains in the course of twenty-four hours. **F. protosul'phas vir'idis**, f. sulphas. **F. prus'sias**, Prussian blue. **F. pul'vis**, see *Ferrum redactum*. **F. pyrophos'phas solu'bilis** (Ph. U. S.), soluble ferric pyrophosphate, occurs in green, transparent scales, becoming dark on exposure to the light; it is made by a reaction between citrate of iron and pyrophosphate of sodium; on account of its solubility it is a favorite ingredient in the preparation of elixirs of iron, etc.; dose, gr. ij–v (0.13–0.32). **F. et quini'næ cit'ras** (Ph. U. S. and Br.), citrate of iron and quinine (ferri citras, 88; quinine, dried, 12; aqua destill., q. s. ad 100, mixed and evaporated); astringent and stimulant to the digestive tract, and prescribed in cases in which a combination of these tonics is indicated; dose, gr. v–x (0.32–0.65), containing one or two grains of quinine. **F. et quini'næ cit'ras solu'bilis** (Ph. U. S.) is composed of ferric citrate, 85; quinine, dried at 100° C. to a constant weight, 12; citric acid, 3; ammonia-water and distilled water, each q. s. to make 100. **F. ramen'ta**, iron filings. **F. rubi'go**, f. subcarbonas. **F. sal'icylas**, iron salicylate, ferric salicylate; a light powder; dose, gr. v–x (0.32–0.65). **F. scobs**, iron filings. **F. sesquichlo'ridum**, f. chloridum. **F. sesquini'tras**, see *Liquor ferri nitratis*. **F. sesquiox'idum**, f. subcarbonas præcipitatus. **F. et strychni'næ cit'ras** (Ph. U. S.), citrate of iron and strychnine; separate solutions of citrate of iron and ammonium and of strychnine with citric acid are made in distilled water, which are mixed and evaporated and the residue is dried in scales; dose, gr. j–iij (0.065–0.2). **F. subcarbo'nas**, subcarbonate of iron, a protoxide of iron oxidized by the decomposition of water, carbonic acid being attracted from the air; dose, gr. v–xxx (0.32–2.0); it may be precipitated from sulphate of iron by carbonate of sodium; it has also been called *sesquioxide* or *peroxide of iron*. **F. subsul'phas**, ferric subsulphate, Monsel's salt; a brownish-red powder, powerfully styptic in solution, the *liquor ferri subsulphatis* of the Ph. U. S., or Monsel's solution. **F. suc'cinas**, iron succinate; this salt has been recommended for the relief of catarrhal jaundice and for those who have a redundancy of fatty tissue. **F. sul'phas** (Ph. U. S. and Br.), vitriol, sulphate of iron, ferrous sulphate, green vitriol, copperas; the United States Pharmacopœia directs it to be made by the action of sulphuric acid on iron wire in water—evaporating, crystallizing, and drying the crystals on bibulous paper; this salt is inodorous and of a strong, styptic taste; the crystals are light green, transparent, and soluble in two parts of water; it is tonic and anthelmintic; dose, gr. j–iij (0.065–0.2); used also as a disinfectant and deodorizer. **F. s. calcina'tus**, colcothar. **F. s. exsicca'tus** (Ph. U. S. and Br.), dried sulphate of iron; sulphate of iron exposed to a moderate heat until it is capable of being reduced to powder; in this form it can be made into pills; dose, gr. ss–ij (0.032–0.13). **F. s. granula'tus** (Ph. U. S.), granulated sulphate of iron, formerly official as precipitated sulphate of iron; a greenish-blue powder; dose, gr. j–v (0.065–0.32). **F. s. præcipita'tus**, precipitated sulphate of iron; see *F. s. granulatus*. **F. sulphure'tum**, sulphuret of iron, ferrous sulphide, iron pyrites (by heating sublimed sulphur over iron filings), a ready means for obtaining hydrosulphuric-acid gas by the addition of sulphuric or chlorohydric acid. **F. tan'nas**, tannate of iron (by adding a solution of a salt of sesquioxide of iron, as the persulphate, to a decoction of nutgalls); tonic and astringent, and extolled in chlorosis. **F. tar'tarum**, ferrum tartaratum. **F. tritox'idum**, colcothar. **F. valeria'nas** (Ph. U. S.), valerianate of iron (formed by the action of valerianic acid on oxide of iron), dark brick-red powder, insoluble in water; given in hysteria complicating chlorosis; dose, gr. j–iij (0.065–0.2).

**Fer'ric.** A term applied to a compound of iron in its quadrivalent condition or highest valency; a sesqui-salt of iron.

**Ferripyrin'.** See *Ferropyrin*.

**Ferrisalipyrin'.** Antipyrin ferrous salicylate; antiseptic, tonic, and antipyretic.

**Ferrocyan'ogen.** A compound of iron with cyanogen in the proportion of six atoms of the latter to one atom of the former.

**Ferromangan'ic.** Composed of iron and manganese.

**Ferrom'eter** (*ferrum*, iron, *metron*, measure). An apparatus for estimating the amount of iron in the blood; siderometer is a preferable word.

**Ferroprus'sic.** Ferrocyanic.

**Ferropyrin'.** $(C_{11}H_{12}N_2O)_3Fe_2Cl_6$. A compound of antipyrin and ferric chloride; employed in anæmia, chlorosis, gastralgia, neuralgia, etc.; externally hæmostatic and astringent; dose, gr. vij–xv (0.5–1.0).

**Fer'rosal** or **ferrosal'ol.** Saccharate of ferrous oxide and sodium chloride; used in anæmia, chlorosis, etc.

**Ferroso'dium-cit'ro-albu'minate.** An iron blood tonic in which there is 30 per cent. of oxide of iron.

**Fer'rosol.** Double saccharate of ferrous oxide and chloride of sodium; tonic.

**Ferroso'matose.** A mixture of somatose and iron, employed in chlorosis and anæmia.

**Ferrostyptin'.** Combination of iron and formaldehyde.

**Fer'rous.** A term applied to a compound of iron in its bivalent condition or lowest valency.

**Ferru'ginous.** Chalybeate.

**Ferru'go** (*ferrum* + *rubigo*, rust). Subcarbonate of iron.

**Fer'rule crown.** An artificial tooth crown, having a ring of metal encircling the supporting tooth.

**Fer'rum** (symbol Fe). Metal of a bluish-gray color and fibrous texture, with a brilliant and fine-grained fracture; sp. gr., 7.8; hard, ductile, malleable, and magnetic. The medicinal virtures of iron are tonic; producing fetid eructations, when it takes effect, owing to its meeting with acid in the stomach, which oxidizes it and causes the evolution of hydrogen gas. The oxides and salts are most commonly employed in medicine. For the official and other more important preparations of iron, not given below, see *Ferri*. **F. borus'sicum**, Prussian blue. **F. caseina'tum**, iron nucleo-albuminate; made by chemical action of solution of calcium caseinate on solution of iron lactate; used as a substitute for albuminate of iron. **F. dialysa'tum**, a solution of the oxychloride of iron prepared by dialysis; a clear, reddish-brown liquid; dose, ♏x–xxx (0.65–2.0) as a tonic, ℥j–ij (32.0–64.0) repeated as an antidote to arsenic. **F. oxyda'tum sacchara'tum solu'bile**, saccharated oxide of iron; a brownish-red powder, a pleasant preparation for the stomach. **F. peptona'tum**, iron peptonate; a brownish-red powder, a compound of ferric chloride and peptone; a tonic well borne by the stomach. **F. redac'tum** (Ph. Br.) or **F. reduc'tum** (Ph. U. S.), reduced iron, Quevenne's iron, iron by hydrogen; a fine dark gray powder; dose, gr. ½–v (0.032–0.32). **F. tartara'tum** (Ph. Br.), ferri et potasii tartras. **F. valerian'icum**, ferri valerianas. **F. vitriola'tum**, ferri sulphas. **F. vitriola'tum us'tum**, colcothar. **F. zoot'icum**, Prussian blue.

**Fer'tile.** Prolific; fruitful.

**Fertil'ity** (*fero*, to bear). Fruitfulness as regards number of births rather than procreative power.

**Fertiliza'tion.** Action of rendering fruitful; vitalizing action of the male element on the ovum.

**Fer'ula** (staff). Splint. A genus of plants, ord. *Umbelliferæ.* **F. africa'na,** Bubon galbanum. **F. allia'cea,** Indian asafœtida; same medicinal properties as asafœtida. **F. ammonif'era,** Dorema ammoniacum. **F. asafœt'ida,** see *Asafœtida.* **F. erubes'cens,** Ferula rubricaulis. **F. galbanif'lua,** Persian plant, source of galbanum. **F. grave'olens,** Anethum graveolens. **F. nar'thex,** plant of S. Asia, source of asafœtida. **F. opop'onax,** Pastinaca opoponax. **F. per'sica,** see *Sagapenum.* **F. rubricau'lis,** a source of galbanum. **F. scorodos'ma,** a source of asafœtida. **F. sum'bul,** plant of Asia; root, sumbul, is used as a nervous stimulant; see *Sumbul.* **F. tingita'na,** see *Ammoniac, gum.*

**Fer'ulyl.** $C_6H_{11}$. Compound radical from oil of asafœtida.

**Fer'vor.** Intense heat.

**Fese.** Form of elephantiasis met with in the S. Pacific.

**Fes'ter.** To suppurate or discharge a thin fluid as evidence of irritation.

**Festina'tion** (*festino,* to hasten). A tendency to hasten the step or gait in walking, as observed in advanced stage of paralysis agitans, the steps increasing in rapidity.

**Festooned'.** Arranged like a festoon, as *festooned gum,* the curved gum lines and surfaces which overlie the alveolar processes about the necks of the teeth; *festooned line* at cardiac end of stomach, produced by transition from one form of epithelium to another or *festooned rings* at various openings of the heart.

**Festuca'ria.** Distoma. **F. len'tis,** Distoma ophthalmobium.

**Fe'tal.** Fœtal; relating to the fœtus or to parts connected with it. **F. car'tilage,** temporary cartilage. **F. circula'tion** differs from that of the adult in several respects. Commencing with the placenta, where it probably undergoes a change analogous to what occurs in the lungs in extra-uterine existence, the blood proceeds by the umbilical vein as far as the liver, where a part of it is poured into the vena porta, the other part proceeding into the vena cava inferior; the latter, having received the suprahepatic veins, pours its blood into the right auricle. From the right auricle a part of the blood is sent into the right ventricle; the rest passes directly through into the left auricle by the foramen ovale. When the right ventricle contracts the blood is sent into the pulmonary artery, but as the function of respiration is not going on, little blood passes to the lungs; the rest goes through the ductus arteriosus into the aorta. The blood received by the left auricle from the lungs, as well as that which passed through the foramen ovale, is transmitted into the left ventricle, by the contraction of which it is sent into the aorta, and by the umbilical arteries, which arise from the hypogastric, it is returned to the placenta. **F. cotyle'dons,** villous tufts of placenta. **F. diam'eters,** see *Fetal head.* **F. en'velopes,** envelopes surrounding the fœtus, as decidua reflexa, chorion, and amnion. **F. expres'sion,** application of force over the womb to expedite extrusion of the fœtus. **F. head,** the following round measurements of the fetal head for obstetrical purposes have been given by Tarnier and Chantreuil (the measurements noted in the illustration are those of Farabeuf and Varnier):

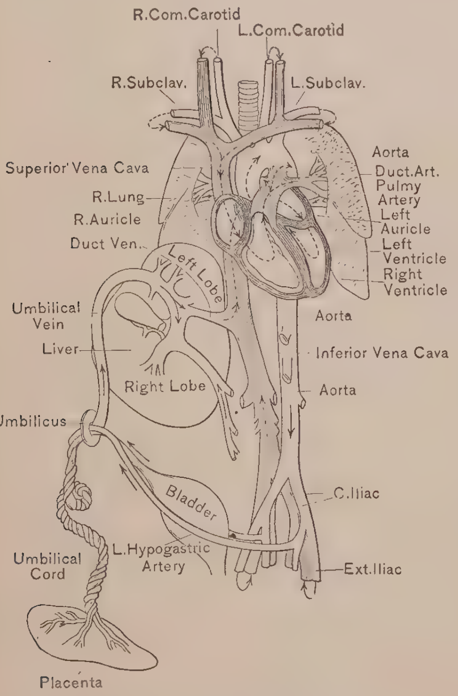


Diagram of the fetal circulation.

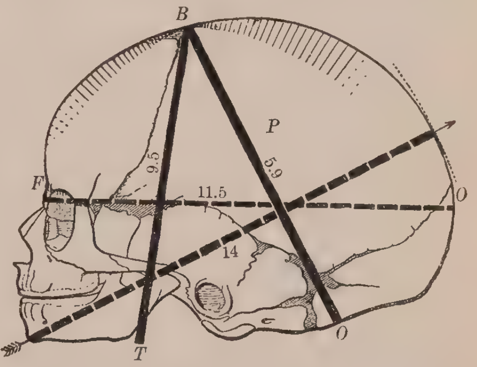


Diameter of the fetal head, marked in centimetres. *O F,* occipitofrontal; *O B,* suboccipitobregmatic; *T B,* trachelobregmatic; the maximum diameter, occipitomental, is indicated by the long dotted arrow.

| | | | | |
|---|---|---|---|---|
| Maximum diameter | 5.31 | in., or | 13.5 | cm. |
| Occipitomental “ | 5.11 | “ | 13 | “ |
| Occipitofrontal “ | 4.72 | “ | 12 | “ |
| Suboccipitobregmatic diameter | 3.75 | “ | 9.5 | “ |
| Biparietal diameter | 3.75 | “ | 9.5 | “ |
| Bimastoid “ | 2.75 | “ | 7.5 | “ |
| Frontomental diameter | 3.15 | “ | 8 | “ |
| Bitemporal diameter | 3.15 | “ | 8 | “ |
| Trachelobregmatic diameter | 3.75 | “ | 9.5 | “ |
| Great circumference | 14.57 | “ | 37 | “ |
| Small “ | 12.80 | “ | 32.5 | “ |

**F. inclu'sion,** fœtus included in a fœtus. **F. mem'branes,** membranes covering the fœtus, as allantois, amnion, chorion. **F. mur'mur,** sound heard in listening over the abdomen of a pregnant woman. **F. nutri'tion,** supply of nutritive material to fœtus in utero. **F. preg'nancy,** f. inclusion. **F. shock,** movement of the fœtus recognized in auscultating a pregnant abdomen.

**Feta'tion.** Pregnancy.

**Fetich,** fet'ish. Charm.

**Fe'tichism.** Belief in the efficacy of a fetich or charm; form of religion in which fetiches are worshipped

**Fetici'dal.** Relating to feticide.

**Fe'ticide.** Fœticide.

**Fet'id** (*fœteo,* to stink). Having a bad smell. **F. aloes,** Aloes caballina. **F. bronchi'tis,** chronic catarrhal bronchitis with a foul-smelling secretion.

**F. buck′eye,** Æsculus glabra. **F. na′sal catarrh′,** ozæna.

**Fet′lock.** Part of leg of horse where tuft of hair grows behind pastern-joint. **F.-joint,** joint between great metacarpal bone and first phalanx of horse.

**Fe′tor.** Fœtor; offensive odor. **F. ala′rum,** disagreeable odor from the axillæ. **F. o′ris,** offensive breath.

**Fet′terwort.** Helleborus fœtidus.

**Fe′tus.** Fœtus.

**Feuil′lea** or **Fevil′lea cordifo′lia.** W. Indian plant; seeds and expressed oil are emetocathartic. Bitter principle is called *feuillin.*

**Fe′ver.** Frequent and often dangerous affection indicated by rigors, increased heat of skin, quick pulse, languor, and lassitude, with delirium in some instances. Fevers were formerly divided into the idiopathic or essential and the symptomatic. Idiopathic fevers were those arising without obvious local cause, now called infectious, infective, or specific fevers; the symptomatic were dependent upon local irritation. Idiopathic fevers were divided into: 1. Those attended with distinct paroxysms —intermittents. 2. Remittent and continued fevers. 3. Fevers complicated with eruptions—the exanthematous. When of very brief duration fevers are said to be *ephemeral;* when continuing without any break or intermission, *continued;* when intermitting in degree or paroxysms, *intermittent;* when attended with more or less distinct remissions, *subcontinuous* or *remittent;* when characterized by great prostration of vital powers, *adynamic;* when caused by some recognized contagium, *specific.* When the clinical thermometer indicates 104° F. or over, the fever is said to be "high." Great diversity has prevailed regarding the theory of fever. When fever is devoid of inflammatory complication the quantity of fibrin in the blood is not augmented. It frequently remains in the healthy proportion, and at times diminishes to an extent not met with in any other acute disease. Alteration of the blood in fevers, consisting generally in a diminution of the fibrinous element, is the reverse of what occurs in inflammation.

In the treatment of fevers it is important to bear in mind their tendency, particularly the exanthemata, to run a definite course and terminate in restoration to health. Symptoms must be attentively studied to deduce, as far as possible, indications of cure. It should also be borne in mind that the elevation of temperature *per se* is not often dangerous unless it is very great or long continued. Attention must be paid to the prevalent epidemic; in some seasons fevers are very malignant, in others they are mild.

**Fe′ver, abdom′inal, absorp′tion, accli′mating,** etc., see the qualifying word.

**Fe′ver-bush.** Laurus benzoin; prinos.

**Fe′ver-drops, War′burg's.** See *Warburg.*

**Fe′verfew.** Matricaria.

**Fe′ver-grass.** Chrysopis graminifolia; used as a cataplasm in the Southern States.

**Fe′ver-gum tree.** Eucalyptus globulus.

**Fe′verish.** That which causes fever, febrifacient or febrific. State of one laboring under a fever.

**Fe′verishness.** State of having slight fever.

**Fe′ver-plant.** Ocymuna viride; Datura arborea.

**Fe′ver-root.** Pterospara andromedea; Triosteum perfoliatum.

**Fe′ver-tree.** Pinckneya pubens; Eucalyptus globulus. **Austra′lian f.,** Alstonia constricta. **Geor′gia f.,** Pinckneya pubens.

**Fe′ver-twig.** Celastrus scandens.

**Fe′verweed.** Eryngium fœtidum; Gerardia pedicularia.

**Fe′verwood.** Laurus benzoin.

**Fe′verwort.** Eupatorium perfoliatum; triosteum.

**Fevil′lea cordifo′lia.** The seed of the fruit of this plant of the West Indies and Brazil is emetocathartic and vermifuge, and an antidote for snake-bites. **F. monosper′ma,** species of cucurbitaceous plant from Brazil; seeds are cathartic. **F. triloba′ta,** the oil of the seeds of this Brazilian species is used externally in gout and rheumatism.

**Fews.** Sempervivum tectorum.

**Fex′ism.** Appearance characteristic of tribe of Styrian cretins, called Fexi.

**Fi′ber.** Castor fiber.

**Fi′bra.** Fibre. **F. au′rea,** coptis. **F. auric′ulæ,** lobe of ear. **F. muscula′ris,** muscular fibre. **F. ner′vea,** nerve fibre. **F. primiti′va,** axis cylinder. **F. san′guinis,** fibrin.

**Fi′bræ** (pl. of fibra) **accesso′riæ.** Accessory fibres. **F. adamanti′næ,** enamel fibres. **F. arcifor′mes** or **arcua′tæ,** fibres connecting contiguous cerebral convolutions; fibres passing from one optic tract to the other, connecting internal geniculate bodies; thin bundles of fibres crossing from posterior columns of the medulla oblongata to the opposite side. **F. circula′res,** middle layer of muscular fibres in the wall of the stomach; muscular fibres near the ciliary border of the iris; sphincter pupillæ. **F. collatera′les,** transverse fibres passing between the pillars of the external abdominal ring; intercolumnar fibres. **F. denta′les,** denticulated fibres. **F. elas′ticæ,** elastic fibres. **F. heterodesmot′icæ,** fibres connecting the great nervous centres with other regions or organs. **F. homodesmot′icæ,** nerve fibres connecting similar nerve centres or ganglia. **F. horizonta′les,** raphe of the medulla oblongata. **F. intercolumna′res,** f. collaterales. **F. len′tis,** fibres of the crystalline lens. **F. longitudina′les,** radiating muscular fibres of the iris; outer layer of muscular fibres of the wall of the stomach. **F. medulla′res,** striæ acusticæ. **F. na′si,** pinnæ of the nose. **F. ner′veæ** or **nervo′sæ,** nerve fibres. **F. obliq′uæ,** inner layer of muscular fibres of the wall of the stomach. **F. pal′lidæ,** ciliary processes. **F. pro′priæ,** fibres connecting contiguous cerebral convolutions; bundles of nerve fibres in the cortex of the cerebellum passing from one convolution to another. **F. pulmo′num,** lobes of lungs. **F. rec′tæ,** fibres in the median septum of the medulla oblongata, continuation of middle superficial fibræ arcuatæ. **F. semicircula′res,** semicircular fibres, as of cerebellum. **F. sensiti′væ,** sensory nerve fibres. **F. tendin′eæ,** white fibres of which tendons are made up. **F. transilien′tes,** fibres connecting cerebral convolutions that are not in contact. **F. transver′sæ,** transverse white lines on the floor of the fourth ventricle.

**Fi′bre-cells.** Plastic cells or corpuscular elements of the lymph of plastic inflammation; cells supporting hair cells of the crusta acustica of the internal ear.

**Fi′bres.** See also *Fibra* and *Fibræ.* Organic filaments, of solid consistence and more or less extensible, entering into the composition of animal and vegetable textures. Three elementary fibres or tissues are described: 1. Cellular or areolar, formed chiefly of thin plates, of a whitish color and extensible, which seem to consist of concrete gelatin. 2. Nervous, pulpy, or medullary, formed of a soft substance contained in a cellular sheath and consisting of albumin united to a fatty matter. 3. Muscular, composed of round filaments, of a grayish or reddish color, and formed of fibrin. A very small or ultimate fibre is called a *fibril* or *fibrilla.* **Achromat′ic f.,** cell-threads passing from pole to pole in dividing nucleus. **Albugin′eous f.,** see *Albuginea.* **Anastomo′sing f.,** fibres of any kind that anastomose. **Ar′ciform** or **ar′cuate f.,** see *Fibræ arciformes.* **Ar′nold's spi′ral f.,** spiral f. **Associa′tion f.,** white nerve fibres between contiguous cerebral convolutions. **Augmen′tor f.,** nerve fibres which quicken the action of the heart and increase its force. **Ax′ial f.,** axis cylinder. **Beale's f.,** see *Beale.* **Bern′heimer's f.,** see *Bernheimer.* **Bo′groff's f.,** see *Bogroff.* **Bone f.,** bundles of connective-tissue fibres in bone, binding together the osseous lamellæ. **Buehl′mann's f.,** see *Buehlmann.* **Cardioinhib′itory f.,** inhibitory nerve fibres passing from par vagum to the heart. **Car′neous f.,** muscular fibres. **Centrip′etal f.**, afferent nerve fibres. **Chromat′ic f.**, nuclear fibres. **Coiled f.**, spiral fibres. **Collat′eral f.**, association f.; longitudinal f. **Conver′ging f.**, nervous fibres which associate different portions of the nervous centres with each other; they form the commissures. **F. of Cor′ti**, rods or pillars of Corti; see *Corti*. **Crys′talline f.**, lens f. **Dark′schewitz's f.**, see *Darkschewitz*. **Decus′sating f.**, bundles of white fibrous tissue constituting a great part of the lamellæ of bone. **Den′tal** or **den′tine f.**, delicate processes passing into the dentinal canals from odontoblasts. **Depress′or f.**, fibres of the depressor nerve producing an inhibitory influence on the vasomotor nervous centre. **Diverg′ing f.**, fibres composing the columns of the medulla oblongata, which separate in their progress to the periphery of the cerebrum and cerebellum. **Ed′inger's f.**, see *Edinger*. **Enam′el f.**, hexagonal rods making up the dental enamel. **Ganglion′ic, gelat′iniform**, or **gelat′inous f.**, non-medullated fibres, as of the sympathetic system. **F. of Ger′dy**, superficial transverse ligament of the fingers. **Gott′stein's f.**, see *Gottstein's basal process*. **Hen′le's f.**, see *Henle's fibrous layer*. **Inhib′itory f.**, nerve fibres transmitting inhibitory influences to important organs or nerve centres. **Intercolum′nar f.**, fibræ collaterales. **Lamel′lar** or **lam′inar f.**, fibres of white fibrous tissue. **Lens f.**, hexagonal fibres, called also crystalline fibres, constituting the chief part of the crystalline lens. **Longitu′dinal f.**, associated nerve fibres passing from the front to the back part of the brain. **Med′ullated f.**, form of nerve fibres consisting of two constituents, a sheath of medullary nerve substance and an axis cylinder; see *Nerve fibre*. **Mey′nert's f.**, see *Meynert*. **Mon′akoff's f.**, see *Monakoff*. **F. of Mül′ler**, delicate nerve fibres constituting internal limiting membrane of the retina; see *Tunica Jacobi*. **Neuromus′cular f.**, epithelium of muscle. **Nu′clear** or **nucleoplas′mic f.**, delicate filiform fibres making up the network of a nucleus of a cell. **Osteogen′ic f.**, Sharpey's f. **Pedunc′ular f.**, nerve fibres connecting the cerebrum with the medulla oblongata and pons Varolii. **Per′forating f.**, bone f. **Per′lia's f.**, see *Perlia*. **Pul′monary f.**, nerve fibres going to the lungs, particularly from par vagum. **Pruss′sack's f.**, see *Prussack*. **F. of Remak′**, fibres peculiar to the sympathetic nerve, but believed by some to be neurilemma and to consist of fibrocellular bundles. **F. of Ret′zius**, see *Retzius*. **Secre′tory f.**, sympathetic nerve fibres distributed to secreting glands. **Semicir′cular f.**, semicircular fibres constituting a portion of the anterior peduncles. **Sharp′ey's f.**, fibres extending from the periosteum into the bone substance; see cut under *Haversian*. **Soft f.**, non-medullated nerve fibres. **Spi′ral f.**, delicate processes of nervous matter in the cell of a sympathetic ganglion. **F. of Tomes**, minute dentinal fibres; processes of odontoblasts of pulp which fill the dentinal tubules.

**Fi′bril.** A very small or terminal fibre. **Nu′clear** or **nucleoplas′mic f.**, see *Fibres, nuclear*. **Prim′itive** or **ul′timate f.**, elementary fibre; also one of those composing axis cylinder.

**Fibril′la** (dim. of fibra). Fibril. **Ax′is** or **elemen′tary f.**, primitive fibril. **F. muscula′ris**, muscular fibre. **Prim′itive** or **ul′timate f.**, elementary fibre; also a fibre of the axis cylinder.

**Fibril′lar** or **Fi′brillary.** Relating or appertaining to fibrils. **F. chore′a**, paramyoclonus. **F. contrac′tion**, contraction of separate muscular fibrils.

**Fi′brillated.** Formed of fibrils.

**Fibrilla′tion.** Formation of fibrils; also twitching of the muscles observed in progressive muscular atrophy.

**Fi′brin.** An animal principle—a solid, white, and inodorous proteid; insipid; heavier than water; without action on the vegetable blues; elastic when moist, hard and brittle when dry. It enters into the composition of the chyle and the blood; it is the self-coagulable material in them, and is produced in the retrograde metamorphosis of the tissues. It is in small proportion in the blood, but the amount increases in inflammation, while in continued fever it is diminished. It is believed not to exist as such in the blood, but to be formed under certain conditions by the action of fibrin ferment upon fibrinogen. Muscular fibrin, syntonin, apparently an acid albumin, is different from the fibrin of the blood; in its chemical character it is peculiar, and has been called muscular substance. In certain morbid conditions fibrin is separated from the blood, and is found in considerable quantity on the surfaces of membranes and in the cavities of the body. See *Fibrinogen*. **F. fer′ment**, supposed agent in the production of fibrin by spontaneous coagulation; paraglobulin; thrombin.

**Fibrina′tion.** Increase of fibrin in the blood.

**Fibrin′ogen** (*fibrin* + *gennao*, to engender). A globulin in the blood plasma which, under certain circumstances, and by the action of fibrin-ferment, yields fibrin. See *Fibrinoplastin*. **Tis′sue f.**, a substance derived from the thymus gland, testis, etc., composed chiefly of a nucleoproteid with lecithin.

**Fibrinogen′ic** or **Fibrinogenous**, fi-brin-oj′en-us. Producing fibrin. **F. sub′stance**, fibrinogen.

**Fibrinoglobulin′.** A form of globulin constituting a part of fibrinogen.

**Fibrinoplas′tic bod′ies.** Modified cells of connective tissue seen in inflammation. **F. mat′ter**, paraglobulin. **F. sub′stance** or **Fibrinoplas′tin**, paraglobulin or serum globulin; supposed by some that when united with fibrinogen, under action of ferment, fibrin results. See *Protagon*.

**Fibrinoplas′tin** (*fibrin* + *plasso*, to form). See *Fibrinoplastic substance*.

**Fibrino′ses.** Albumoses of fibrin.

**Fibrino′sis.** A disease in which an excess of fibrin is the chief characteristic.

**Fi′brinous.** Composed of fibrin or having the appearance of fibrin. **F. bronchi′tis**, variety of bronchitis, in the acute or chronic stage, in which fibrinous casts of some of the bronchial tubes are formed. **F. cal′culus**, see *Calculus*. **F. degenera′tion**, necrosis with coagulation. **F. pneumo′nia**, croupous pneumonia; see *Pneumonia*.

**Fibrinpep′tone.** Condition of fibrin after stomachal digestion.

**Fibrinu′ria** (*fibrin* + *ouron*, urine). Rare condition of urine in which, owing to presence of fibrin, that fluid spontaneously coagulates after being voided.

**Fibro-.** In composition, appertaining or relating to fibrous tissue.

**Fibroadeno′ma.** Adenoma containing fibrous tissue.

**Fibroad′ipose.** Both fibrous and fatty.

**Fibroare′olar tis′sue.** Connective tissue composed of fibrous and areolar tissue.

**Fi′broblast** (*blastos*, bud). Cell developing into fibrous or connective tissue.

**Fibroblas′tic.** Relating to a fibroblast.

**Fibrobronchi′tis.** Fibrous or rheumatic inflammation of the bronchial tubes; croupous bronchitis.

**Fibrocalca′reous.** Term applied to fibrous tumors accompanied with a deposit or coating of calcareous matter.

**Fibrocarcino′ma.** Cancerous formation with granular degeneration.

**Fibrocar′tilage.** Organic tissue partaking of the nature of the fibrous tissue and of cartilage; dense, resisting, elastic, firm, supple, and flexible. Fibrocartilages are distinguished into *membraniform*, serving as moulds to certain parts, as the alæ nasi and eyelids; *vaginiform*, forming sheaths for the sliding tendons; *interarticular*, met with in the movable articulations; *uniting*, forming junction between two bones, as the symphysis pubis. Circumferential fibrocartilages consist of a rim of fibrocartilage surrounding the margin of an articular cavity, as the glenoid cavity of the shoulder; they deepen the articular surface and protect the bones. **Acromioclavic′ular f.**, cartilage of Weitbrecht.

**Circumferen'tial f.**, see *Fibrocartilage.* **Connect'ing f.**, interosseous f. **Fal'ciform f.**, semilunar f. **Interartic'ular f.**, see *Fibrocartilage.* **Interme'diary** or **interme'diate f.**, f. between radius and ulna at the wrist. **Interos'seous f.**, f. between bones. **Interpu'bic f.**, f. constituting the symphysis pubis. **Interver'tebral f.**, one of the cartilaginous disks between the bodies of the vertebræ. **Mar'ginal f.**, circumferential f. **Pu'bic f.**, f. between surfaces of pubic bone. **Scapuloclavic'ular f.**, f. of Weitbrecht. **Semilu'nar f.**, one of the cartilages between head of tibia and condyles of femur. **Ses'amoid f.**, sesamoid cartilage. **Spon'gy f.**, connecting f. **Strat'iform f.**, f. entering into the formation of certain tendon sheaths. **Tar'sal f.**, tarsal cartilage; see *Tarsus.* **Trian'gular f.**, f. of wrist, between radius and ulna. **White f.**, cartilage containing white fibrous tissue. **F. of Wris'berg**, one of the cuneiform cartilages of the larynx. **F. of wrist**, triangular fibrocartilage between ulna and bones of wrist.

**Fibrocartilag'inous.** Relating to or consisting of fibrocartilage.

**Fibrocartila'go.** Fibrocartilage. **F. trique'tra**, triangular fibrocartilage.

**Fibroca'seous.** Both fibrous and cheesy.

**Fibrocel'lular.** Fibroareolar; partaking of the fibrous and of the cellular or areolar tissue, as the fascia transversalis. **F. tu'mor**, fibroma.

**Fibrochondri'tis** (*chondros*, cartilage). Inflammation of fibrocartilage.

**Fibrochondros'teal** (*chondros*, cartilage, *osteon*, bone). Consisting of fibrocartilage and bone.

**Fi'brocyst.** Cystic fibroma.

**Fibrocys'tic.** Possessing the nature of fibroid growths and cysts. **F. tu'mor**, form of cystic degeneration of a fibroid tumor.

**Fibrocysto'ma.** Cystic fibroma.

**Fibroelas'tic.** Containing white and elastic tissue.

**Fibroenchondro'ma.** Enchondroma having some fibrous issue in its composition.

**Fibrofat'ty degenera'tion.** Fatty condition of the placenta with fibrous degeneration of the villi of the chorion and part of the decidua.

**Fibrofi'brous.** Referring to fibres in relation with fibres.

**Fi'brogen.** Fibrinogen.

**Fibroglio'ma.** Tumor composed of fibroma and glioma.

**Fi'broid** (*eidos*, resemblance). Fibrous; fibrous tumor, fibroma. **F. degenera'tion**, gradual transformation, occurring chiefly in membranous tissues, into a material having a fibre-like character; it may result from pressure or follow upon chronic inflammation accompanied with exudation; fibrosis. This form of degeneration of the lung is called cirrhosis of the lung. **F. heart**, fibroid degeneration of the heart. **F. indura'tion**, cirrhosis. **F. infiltra'tion**, see *Infiltration.* **F. phthi'sis**, see *Phthisis.* **F. substitu'tion**, cirrhosis. **F. tu'mor**, fibroma.

**Fibroin'.** $C_{15}H_{23}N_5O_6$. An albuminoid substance in cobweb, silk, and sponges.

**Fibrolipo'ma** (*lipos*, fat). Fibroma with neoplasm of adipose tissue. Lipoma well supplied with connective tissue.

**Fibro'ma.** Tumor of fibrous connective tissue; it may be hard, dense, and firm, or soft like adipose matter; fibrous or fibroid tumor. The fibres constituting the chief part of the growth are loosely or densely packed according to the variety, and are arranged either without definite plan or in intercrossing bundles of various sizes or in whorls around the blood-vessels. The cells, like those of normal fibrous tissue, are generally few in number, and are usually most abundant around the vessels. They are minute, spindle-shaped, fusiform, or stellate bodies, the latter having processes of varying length which communicate with similar processes from neighboring cells. These cells in size and number vary with the rapidity and age of growth—the slower and older the growth, the denser the tissue, the flatter and less numerous the cells. (Green.) **Are'olar f.**, f. molluscum. **F. cheloi'des**, cheloid. **Concen'tric f.**, a fibroid tumor of the uterus surrounding its cavity. **F. congen'itum**, nævus verrucosus. **Cor'neal** or **cor'neous f.**, lamellar f. **F. cu'tis**, fibroma of skin; f. molluscum, neuroma cutis, or cheloid. **Cys'tic f.**, f. in which cystic degeneration has occurred. **Diffuse' f.**, elephantiasis. **F. dissemina'tum**, molluscum. **F. doloro'sum**, fibroneuroma. **F. fungoi'des**, chronic infectious cutaneous disease with reddish or livid spots, afterward becoming crusts or tumors; granuloma fungoides. **Hard f.**, one in which the fibrous elements predominate, few cells being present. **F. of the heart**, circumscribed tumor occurring very rarely in the cardiac walls or under the endocardium or pericardium. **Intracanalic'ular f.**, a fibroid adenoma. **F. of the kid'neys**, small, white, fibrous nodules which sometimes are present in the renal pyramids. **Lacu'nar f.**, cystic fibroma of the mamma. **F. lipomato'des**, xanthoma. **F. mollus'cum**, soft, insensitive neoplasm of connective tissue from the cutis vera, characterized by tumors of various sizes; it is frequently congenital. **Mu'coid** or **mu'cous f.**, f. having a large amount of intercellular substance, and transformed by mucoid degeneration. **F. ossif'icum**, fibroma in which calcareous transformation has occurred. **F. of the o'vary**, see *Ovary, tumors of the.* **Pap'illary f.**, fibrous hypertrophy of papillæ of skin. **F. pen'dulum**, form of f. molluscum having a pedicle. **Soft f.**, f. molluscum; wen. **F. teleangeiectat'icum**, f. having extensive dilatation of blood-vessels on its surface; molluscum fibrosum.

**Fibromato'sis.** Growth or development of fibroma. **F. tuberculo'sa cu'tis**, papillomatous, often sclerotic, growth at the mucous outlets of the body, with vegetations, ulcers, etc.

**Fibromem'branous.** Composed of fibre and membrane.

**Fibromu'cous.** Possessing the nature of fibrous and of mucous membranes; term applied to fibrous membranes intimately united with other membranes of a mucous nature, as the pituitary membrane, the membrane of the urethra, etc.

**Fibromus'cular.** Composed of fibrous and muscular tissues. **F. tu'mor**, a tumor in which the fibrous tissue is largely intermingled with muscular fibres; fibromyoma.

**Fibromyi'tis.** Inflammation of muscular tissue with fibrous degeneration.

**Fibromyo'ma** (*mys*, muscle). Myoma having fibrous tissue blended with it; fibroma, fibroid myoma. **F. lipomato'des**, fibromyoma with neoplasm of adipose tissue.

**Fibromyomi'tis.** Inflammation of fibromyoma.

**Fibromyomot'omy** (*mys*, muscle, *tome*, incision). Operation for excision of a fibromyoma.

**Fibromyxo'ma** (*myxa*, mucus). Tumor made up of fibrous and mucous tissue. Fibroid tumor complicated with myxoma.

**Fibromyxosarco'ma.** Sarcoma and myxoid tissue combined. Sarcoma transformed by mucous degeneration.

**Fibroneuro'ma.** Tumor consisting of connective tissue occurring upon a nerve or distributed among the nerve filaments.

**Fibronu'clear** or **Fibronu'cleated.** Term applied to tumors whose texture consists of filaments infiltrated with oval nuclei.

**Fibropericardi'tis.** Fibrinous inflammation of the pericardium.

**Fibroplas'tic** (*plasso*, to form). Epithet for a morbid formation containing the elements of areolar tissue, transformed in part into fibre; fibrosarcomatous. **F. cells**, see *Fibre cells.* **F. tu'mor**, fibrosarcoma; small spindle-celled sarcoma.

**Fibrosarco'ma.** Sarcoma having a fibrous structure. A sarcomatous fibroid tumor.

**Fibrose'rous.** Possessing the nature of fibrous and serous membranes. **F. mem'brane**, a membrane composed of a fibrous and a serous sheet intimately united; for example, the dura mater, pericardium, tunica albuginea testis, etc.

**Fibro′sis.** Constitutional fibroid degeneration, often associated with degeneration of arteries. **Arteriocap′illary f.,** a condition met with in contracted kidney and hypertrophy of the heart, being an increase of fibrous and muscular tissue in the arterial walls.

**Fi′brous.** Fibroid. Composed of fibres. The fibrous system comprises particularly the periosteum and perichondrium, articular capsules and ligaments, tendons, dura mater, pericardium, tunica sclerotica, tunica albuginea testis, outer membrane of the spleen, etc. Under simple fibrous tissues are classed the white and yellow fibrous tissues and areolar tissue. Both the yellow and the white may be detected in the areolar tissue. The white exists alone in ligaments, tendons, fibrous membranes, aponeuroses, etc. The yellow exists separately in the middle coat of the arteries, the chordæ vocales, ligamentum nuchæ of quadrupeds, etc., and differs from the white in possessing a high degree of elasticity. **F. cone,** corona radians. **F. epu′lis,** see *Epulis.* **F. growth,** fibrous tumor. **F. lay′er,** layer of nerve fibres of retina. **F. mat′ter of the brain,** see *Cerebrum.* **F. mem′branes,** see *Membranes, fibrous.* **F. phthi′sis,** see *Phthisis pulmonalis.* **F. plates,** fibrocartilages of metatarsophalangeal articulation. **F. pneumo′nia,** interstitial pneumonia, see *Pneumonia.* **F. pol′ypus,** a fibroid tumor with a slender peduncle. **F. rings,** fibrocartilaginous rings with which the mitral and tricuspid valves of the heart are connected. **F. sys′tem,** see *Fibrous.* **F. tis′sue,** see *Fibrous.* **F. tu′mor,** fibroma.

**Fibrovas′cular.** Relating to structures that are fibrous and abundantly supplied with vessels.

**Fib′ula** (a clasp or brace). Spell-bone, splint-bone, or splinter-bone of the leg. Long, small bone, situated at the outer part of the leg; the superior or tibial extremity is rounded, and forms the caput or head, and is articulated with the tibia. The inferior or tarsal extremity is articulated with the tibia and astragalus, and forms the malleolus externus or outer ankle by means of its coronoid process. The body of the bone is separated from the tibia by the interosseous space.

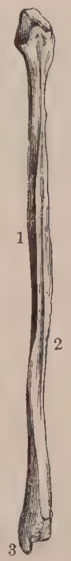
**Fib′ulad.** Toward the fibular aspect.

**Fibulæ′us.** Peroneus muscle.

**Fib′ular.** Relating to the fibula; peroneal. **F. ar′tery,** peroneal artery; the *superior f. a.* is a branch from any one of the important arteries of the leg passing across the fibula. **F. as′pect,** aspect toward the side on which the fibula is situated. *Fibulad* is used adverbially to signify toward the fibular aspect. **F. commu′nicating nerve,** peroneal communicating nerve. **F. nerve,** peroneal nerve. **F. notch,** groove on the tibia for articulation with the fibula.

**Fibula′re.** Name for embryonic tarsal bone, afterward os calcis.

**Fibula′ris.** Relating to the fibula. **F. bre′vis,** peroneus brevis. **F. lon′gus** or **pri′mus,** peroneus longus. **F. secun′dus,** peroneus brevis.



Anterior view of fibula of right side. 1, shaft; 2, interosseous ridge; 3, malleolus externus.

**Fibula′tion** (*fibula*, clasp). Infibulation.

**Fica′ria** (*ficus*, fig) **aquat′ica.** Scrophularia aquatica. **F. commu′nis, ranunculoi′des,** or **ver′na,** Ranunculus ficaria.

**Ficarin′.** Neutral principle from Ficaria communis, used for hemorrhoids.

**Fica′tio.** Ficus; sycosis.

**Fick's an′gle.** Angle formed by lines projected between lines drawn from front of foramen magnum along surface of base of skull and to point of chin. **F.'s bacil′lus,** Proteus vulgaris, found on the conjunctiva. **F.'s ky′mograph,** apparatus for ascertaining the blood pressure; it consists of a metal tube containing alcohol, which is connected with the artery by a tube filled with carbonate of sodium in solution; increase of pressure causes the tube to straighten, and diminished pressure causes it to bend; a lever records these changes on a cylinder.

**Fi′coid** (*ficus*, fig, *eidos*, resemblance). Resembling a fig in form or character.

**Ficoin′.** Form of papayin obtained from ficus.

**Fico′sis.** Ficus; sycosis.

**Fi′cous.** Relating to ficus.

**Fi′cus.** Fig-wart; fleshy excrescence, often soft and reddish, sometimes hard and scirrhous, hanging by a peduncle or formed like a fig on the eyelids, chin, tongue, anus, or organs of generation, in which last it is generally syphilitic; condyloma. Hemorrhoids. A genus of trees, ord. *Urticaceæ.* **F. ægypti′aca,** Ceratonia siliqua. **F. amboinen′sis,** plant of Molucca; sap is expectorant; bark antipyretic and astringent. **F. anthelmin′tica,** the juice of this Peruvian tree is anthelmintic. **F. arbutifo′lia,** Mexican tree, used externally for poisoned wounds. **F. bengalen′sis,** F. indica. **F. benjami′na,** amate, Mexican fig tree. **F. car′ica,** fig tree; the fig is a pleasant fruit when ripe, as well as when dried, as it is found in the shops; it is laxative and used at times as a cataplasm, especially in gum boils. **F. citrifo′lia,** tree of E. and W. Indies and Mexico; root is expectorant and emetocathartic; infusion is employed in aphthæ and lepra. **F. commu′nis,** F. carica. **F. complica′ta,** samatito; Mexican fig tree. **F. conglomera′ta** or **cu′nia,** fruit of E. Indian tree, used in aphthæ, and externally as a bath in elephantiasis. **F. dolia′ria,** fig tree of Brazil; juice is drastic and vermifuge; properties are due to *doliarin,* vegetable pepsin. **F. elas′tica,** E. Indian tree; a source of caoutchouc. **F. excel′sa,** plant of E. Indies, root of which is used in aphthæ, affections of the liver, fevers, and diarrhœa. **F. gamella′ria,** F. doliaria. **F. glomera′ta,** cluster fig of E. Indies; root is expectorant and antidysenteric; bark is used externally for ulcers. **F. go′nia,** bark of this E. Indian tree is used in aphthæ and odontalgia, and in affections of the kidney and bladder. **F. heterophyl′la,** E. Indian tree; juice of the root is used in colic and dysentery; bark of the root in asthma and respiratory affections. **F. in′diæ gra′na,** Coccus cacti. **F. in′dica,** banyan tree; **F. nit′ida,** fruit of this E. Indian tree is used in aphthæ. **F. oppositifo′lia,** E. Indian tree; various parts are emetic, tonic, and antiperiodic. **F. pas′sa,** dried fig. **F. racemo′sa,** country fig tree of E. Indies; used as a tonic, and in hæmaturia and menorrhagia, diabetes, and sluggish conditions of the liver. **F. religio′sa,** sacred fig of E. Indies; alterative; bark of root used externally for ulcers; see *Lacca.* **F. rumph′ii,** various parts of this plant of Asia are expectorant, and used also in cutaneous diseases. **F. sep′tica,** the various parts of this plant of Molucca are diuretic, cathartic, expectorant, and anthelmintic. **F. undula′ta,** E. Indian tree; used in aphthæ. **F. un′guium,** condition of the nails in which the posterior wall is swollen, everted, and more or less inflamed. **F. vene′rea,** venereal wart; condyloma. **F. vulga′ris,** F. carica.

**Fid′dles.** Scrophularia aquatica.

**Fid′gets.** General restlessness and troublesome uneasiness of the nerves and muscles, with increased sensibility and inability to fix the attention, with a perpetual desire for changing the position; dysphoria.

**Fidicina′les** (*fidicen*, a harper). Lumbricales manûs.

**Fidispina′lis.** Multifidus spinæ muscle.

**Field.** An open space or area. **Au′ditory f.,** hearing distance. **Cohn′heim's f.,** see *Cohnheim.*

**F. of fixa'tion,** surface over which the point of sight or of clearest vision on the retina can be moved by motion of the eye. **F. hos'pital,** hospital on the battle-field, or one which is portable and carried on the march. **Magnet'ic f.,** the area about a magnet throughout which its influence is active. **Microscop'ic f.,** or **F. of a mi'croscope,** the circular space, all parts of which are visible at one time to the eye looking through a microscope. **F. of regard',** f. of fixation. **F. of view,** whatever is embraced in a view from any point, whether near or distant. **F. of vis'ion,** external space from which appreciable rays of light strike upon the retina; space on the retina capable of appreciating impressions; this field is contracted in some affections of the retina or of the cerebrum. **Vis'ual f.,** field of vision.

**Field'weed.** Anthemis cotula, Erigeron philadelphicum.

**Field'wort.** Gentiana amarella.

**Fifteen-day fe'ver.** Relapsing fever.

**Fifth nerve.** Trifacial nerve. See *Trigemini.* **F. ven'tricle,** see *Ventricles of the brain.*

**Fig.** Fruit of Ficus carica. **In'dian f.,** Cactus opuntia; Ficus indica; Opuntia vulgaris. **Sa'cred f.,** Ficus religiosa. **F. sen'na,** see *Cassia senna.*

**Figu'ra.** Figure. **F. veno'sa** (venous figure), venous circle in the embryo which bounds the vascular area.

**Figura'tion** (*figuro,* to fashion). Imagination.

**Fig'ure.** Contour of any part. **Achromat'ic** or **achro'mative f.,** spindle shape assumed by achromatic fibrils in a dividing cell. **Chromat'ic** or **chro'mative f.,** shape produced by chromatic fibrils in a dividing cell. **Coiled' f.,** convolution. **Divis'ion** or **nu'clear f.,** figure formed by nucleus during karyokinesis; intermediate stage in the course of direct nuclear division. **Po'lar f.,** poles in dividing cell, subsequently the location of daughter nuclei.

**Fig'ure-of-8.** Bandage with turns arranged to resemble somewhat a figure of 8. Twisted suture.

**Fig-wart.** Ficus condyloma.

**Fig'wort.** Scrophularia nodosa; Ranunculus ficaria. **Wa'ter f.,** Scrophularia aquatica.

**Fi'la** (pl. of *filum,* thread) **interme'dia ner'vi acus'tici.** Nervous filaments passing between the facial and auditory nerves. **F. ner'vea,** nerve-fibres. **F. olfacto'ria,** olfactory filaments. **F. parotide'a,** filaments of auricularis magnus nerve to parotid gland. **F. spermat'ica,** spermatozoa.

**Fila'ceous.** Filamentous.

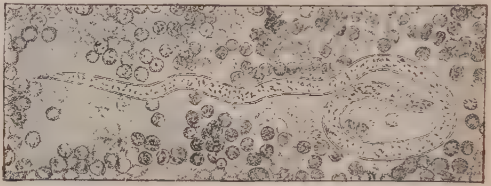
**Fil'ament** (dim. of *filum,* a thread). Small thread or fibril; glairy, thread-like substance forming in the urine in some diseases, and depending on a particular secretion from the mucous membrane of the urinary passages. **Achromat'ic f.,** achromatic fibril. **Chromat'ic f.,** chromatic fibril. **F. of Mül'ler,** one of the connective-tissue fibres between the limiting membranes of the retina. **F. of Need'ham,** spermatophore. **Nu'clear f.,** nuclear fibril. **Nucleoplas'mic f.,** nuclear fibril. **Olfac'tory f.,** olfactory hairs. **Sem'inal** or **spermat'ic f.,** spermatozoid. **Ter'minal f.,** thread-like inferior termination of the spinal cord.

**Filamen'ta ner'vea Wrisber'gii.** Nerve of Wrisberg.

**Filamen'tary** or **filamen'tous.** Filaceous; thread-like; filiform; containing thread-like substances, as filamentous tunic or decidua.

**Filamen'tum.** Filament. Frænum.

**Fila'ria** (*filum,* a thread). Genus of nematode parasitic worms found in various organs and the blood of man. **F. bancrof'ti,** Filaria medinensis. **F. bronchia'lis,** filaria found in the bronchial tubes. **F. conjuncti'væ,** species found under the conjunctiva, especially of negroes. **F. demar'quayi,** a parasite in the blood, less than half the size of F. nocturna. **F. dermathem'ica,** filaria causing papulopustular disease of the skin, as in craw-craw of Africa. **F. diur'na,** a form of F. sanguinis hominis found in the superficial vessels solely and chiefly during the day. **F. dracun'culus,** F. medinensis. **F. guineen'sis,** dracunculus. **F. hom'inis,** F. bronchialis; F. sanguinis. **F. hom'inis o'ris,** f. found in the mouth of a child. **F. immi'tis,** f. found in the portal vein in a case of hæmaturia; ova were also discovered in the wall of the bladder and in the uterus. **F. labia'lis,** occurring in a pustule in the upper lip. **F. lacrima'lis,** F. conjunctivæ. **F. len'tis,** species found in the crystalline lens. **F. lo'a,** probably adult form of F. diurna. **F. manso'ni,** F. sanguinis. **F. medinen'sis,** dracunculus or Guinea worm of Egypt, India, and the West Indies, producing abscesses in the skin. **F. noctur'na,** a form of f. found solely or chiefly during the night. **F. oc'uli,** F. conjunctivæ; F. lentis. **F. per'stans,** a form of f. constantly present in the capillaries of the integument, and considered to be the cause of the fatal sleeping sickness of Congo. **F. san'guinis,** filaria seen in blood-vessels and lymphatics, producing chyluria, elephantiasis, etc.; the pathological condition is called *filariasis* or *filariosis.* **F. san'guinis hom'inis,** F. sanguinis. **F. wuchere'ri,** F. sanguinis.



Filaria alive in the blood. Instantaneous photomicrograph. x 400. (Henry.)

**Fila'rial.** Relating to filaria.

**Filari'asis** or **Filario'sis.** See *Filaria sanguinis.*

**Fil'atow's disease'.** Acute febrile cervical adenitis in children.

**Fil'bert.** Corylus avellana.

**File'-cutters' disease'.** In the manufacture of files they are laid on a lead bed, and the fine particles of lead are raised in a cloud whenever the file is struck by the chisel, and may be inhaled, giving rise to lead poisoning or to a form of pneumonokoniosis.

**File'tum** (*filum,* a thread). Frænum of the tongue.

**Filic'ic acid.** $C_{14}H_{18}O_5$. Crystallizable acid from male fern.

**Filicin'.** Active principle of root of male fern; dose, gr. ij (0.13). Also an inert anhydride of filicic acid.

**Filic'ula** (dim. of *filix,* fern). Polypodium filix mas. **F. dul'cis,** Polypodium vulgare.

**Fil'iform** (*filum,* a thread, *forma,* form). Thread-like, as the filiform papillæ of the tongue, filiform or thready pulse, filiform bougie, etc.

**Filipen'dula** (*filum,* a thread, *pendo,* to hang). Spiræa filipendula.

**Filip'owicz's sign.** Yellowness of the palms of the hands and soles of the feet in typhoid fever.

**Filipunc'ture.** Operation for aneurysm by introduction of fine wire or catgut into the sac, leaving it there to produce coagulation.

**Filitan'nic acid.** Tannic acid obtained from Filix mas.

**Fi'lix.** Fern. **F. aquat'ica,** Spiræa filipendula. **F. flor'ida,** Osmunda regalis. **F. fœmin'ea,** Pteris aquilina. **F. mas,** Aspidium filix mas; Polypodium filix mas. **F. non-ramo'sa denta'ta,** Polypodium filix mas. **F. nymphæ'a,** Pteris aquilina. **F. pinna'ta,** Polypodium filix mas. **F. ven'eris,** Adiantum pedatum.

**Fillæ'a suave'olens.** Erythrophlæum guineense.

**Fil'let** (*filum,* a thread). Fascia. Bandage like a noose. Lemniscus. **F. of cor'pus callo'sum,** gyrus fornicatus. **F. lemnis'cus,** lemniscus. **Ol'ivary f.,** fasciculus of nerve-fibres surrounding the olivary body of the medulla oblongata.

**Fill'ing.** In dentistry, operation of stuffing the cavity of a carious tooth with some indestructible substance to prevent the access of extraneous matters; the materials employed are gold foil, sponge or crystalline gold, amalgam, gutta percha, etc.

**Filobacte'ria.** Thread-like bacteria, desmobacteria, for example.

**Fi'lopressure** (*filum*, wire, *premo*, *pressum*, to press). Pressure with wire, as over an artery.

**Filovarico'sis.** Varicose swelling on the axis-cylinder of a nerve.

**Fil'ter.** Filtrum; any porous material through which fluid is passed to separate it from the matters suspended in it. **Respi'ratory f.**, respirator.

**Filth disease'.** A disease dependent upon, or encouraged in its development by, filthy atmospheric or other surroundings.

**Fil'trate.** Filtered liquid.

**Filtra'tion** (*filtrum*, filter). Pharmaceutical operation, consisting in passing fluid through a filter or strainer, to clarify it. In ancient physiology, a term used to express the action by which different humors were supposed to be separated from the mass of the blood.

**Fil'trum.** A filter. **F. ventric'uli laryn'gis,** furrow or groove between the cartilages of Santorini and of Wrisberg in the larynx.

**Fi'lum** (thread). Filament. **F. car'neum,** muscular fibre. **F. corona'rium,** thread-like process along the sides of the auriculoventricular opening. **F. du'ræ ma'tris,** process of the dura mater around the filum terminale of the spinal cord. **F. muscula're,** muscular fibre. **F. spermat'icum,** spermatozoid. **F. tæniafor'me,** tæniola. **F. termina'le,** slender prolongation of the spinal cord covered by the pia, which descends through the centre of the cauda equina, and is attached to the dura mater lining the canal of the coccyx. In structure it is essentially the same as that of the spinal cord proper, except that nerve-roots are not connected with it. (See cut under *Cauda*.)

**Fim'bria.** Band or fringe, as the fimbria or fimbriated or fringed extremity of the Fallopian tube. Fibre. **F. cor'nu ammo'nis,** a white band extending along the hippocampus, and reflected outwardly from its interior border. **F. ova'rica,** a long fimbria of Fallopian tube directed toward the ovary.

**Fim'briæ** (pl. of fimbria) **carno'sæ co'li,** appendiculæ pinguedinosæ. **F. of Fallo'pian tube,** the fringed open extremity of the oviduct. **F. lin'guæ,** wavy fold of sublingual mucous membrane. **F. oviduc'tûs,** fimbriæ of Fallopian tube. **F. synovia'les,** connective-tissue filaments projecting into the interior of joints.

**Fim'briate** or **fim'briated.** Having fimbriæ. **F. body,** fimbria cornu ammonis. **F. extrem'ity,** see *Fimbria*.

**Fim'briocele** (*fimbria*+*kele*, tumor). Hernia involving the fimbriated extremity of the Fallopian tube.

**Fimbrioden'tate fis'sure.** Fissure between the corpus fimbriatum and dentate fascia.

**Fi'mus.** Excrement; fæces.

**Fin'ger.** See *Digitus*. **An'nular f.,** see *Digitus*. **Dead f.,** see *Dead fingers*. **Ear f.,** see *Digitus*. **Club f.,** see *Kyllosis*. **F.-clo'nus,** see *Reflex, palmar*. **Contract'ed f.,** Dupuytren's contraction. **Fai'ry f.,** Digitalis purpurea. **F.-erysip'eloid,** erysipeloid. **Hippocrat'ic f.,** fusiform tumefaction of the terminal phalanges of the fingers, with curving of the nails, mentioned by Hippocrates as characteristic of phthisis, but present in many cases of disturbed hæmatosis. **In'dex f.,** see *Digitus*. **Insane' f.,** obstinate paronychia occurring in the insane. **Lit'tle f.,** see *Digitus*. **Lock f.,** arrest of flexion of the finger at a certain point. **Mal'let f.,** deformity characterized by abnormal flexion of the terminal phalanx. **Mid'dle f.,** medius digitus. **Morse f.,** a professional neurosis consisting in a spasmodic affection of the finger resulting from a continuous use of the Morse telegraphic key. **Ring f.,** annular finger. **Spring f.,** trigger f. **F.-stall,** covering for injured or sore fingers; see *Digitale*. **Supernu'merary f.,** a form of monstrosity in which there are more fingers than usual. **Trig'ger f.,** occasional interference with flexion and extension of finger, the movement, after arrest for a moment, ending in a jerk. **Webbed f.,** syndactylism.

**Fink'ler-Pri'or bacil'lus.** Spirillum Finkleri, an organism found in cholera nostras, resembling the comma bacillus of cholera.

**Fin'ney's opera'tion.** Removal of the gall-bladder, leaving a flap, composed of the seromuscular coat, on either side of the liver attachment of the bladder, the two being sufficient, when approximated, to cover the abraded surface. The stump is treated like an appendix stump, in order to prevent the possibility of a leak.

**Fin'sen light treat'ment.** Treatment of lupus and other cutaneous affections by exposure to the violet and ultraviolet rays of the spectrum. Sunlight or the electric arc light may be used. The sun's rays are passed through a hollow lens filled with an ammoniacal solution of copper sulphate, which arrests all but the blue and violet rays.

**Fir.** Abies. **F. bal'sam,** Pinus balsamea. **F. moss,** Lycopodium selago. **F. oil,** see *Pinus sylvestris*. **Scotch f.,** Pinus sylvestris. **Nor'way f.,** Pinus abies. **Europe'an sil'ver f.,** Pinus picea. **Yew-leaved f.,** Pinus abies.

**Fire.** Visible combustion. **F.-damp,** a gas given off from coal, consisting largely of carbureted hydrogen. **F. mea'sles,** see *Rubeola*. **Per'sian f.,** see *Anthrax*. **Pink f.,** Silena virginica. **F. root,** Acorus calamus. **St. An'thony's f.,** erysipelas. **F. weed,** Erechthites hieracifolia; senecio. **Wild f.,** erysipelas.

**Fi'ring.** Cauterization; application of a moxa.

**First breech presenta'tion.** See *Presentation*. **F. face presenta'tion,** see *Presentation*. **F. inten'tion,** see *Intention*. **F. nerve,** olfactory nerve.

**Fir-wool.** Wool made by beating pine leaves, and applied over rheumatic or other painful regions. **F.-w. oil,** distilled oil from fresh leaves of Pinus sylvestris; pine-needle oil.

**Fish'berries.** Menispermum cocculus.

**Fish'er's brain-mur'mur.** Systolic murmur distinguished in very young rachitic children over the anterior fontanelle or the temporal region. **F.'s sign,** presystolic murmur in cases of heart disease, in which the pericardium is adherent, but valvular disease is absent.

**Fish-glue.** Isinglass.

**Fish-hook displace'ment.** A turning of the stomach in such a way that the pylorus points upward and the duodenum downward, the latter making a sharp turn on itself soon after its junction with the stomach.

**Fish'-poison.** Berries of Cocculus indicus. Poison of fish from presence of ptomains.

**Fish'-skin disease'.** Ichthyosis.

**Fish'tongue.** Instrument—so called from its shape—used for the removal of the wisdom teeth.

**Fiske-Bry'son's symp'tom.** See *Bryson*.

**Fissicula'tion** (*fissiculo*, to open or make incisions). Opening made with a scalpel.

**Fis'sile.** Inclined or able to split.

**Fis'sion.** Reproduction by splitting; see *Generation*. Segmentation of a cell.

**Fissipar'ity.** Generation by fission or splitting.

**Fissip'arous** (*findo*, to split, *pario*, to bring forth). Generating by splitting. See *Generation*.

**Fissu'ra.** See *Fissure*. **F. a'ni,** fissure of the anus; painful superficial breach of surface in the anal region, frequently attended with anal spasm and with ulcer on the verge of or within the sphincter. **F. ante'rior,** sulcus or furrow between frontal and parietal lobes. **F. antit'ragohelici'na,** furrow in cartilage of ear between processus helicis caudatus and antitragus. **F. Bichat'ii,** transverse cerebral fissure. **F. calcari'na,** calcarine fissure. **F. callosomargina'lis,** callosomarginal sulcus. **F. cana'lis Fallo'pii,** hiatus Fallopii. **F. centra'lis,** central fissure; fissure of Sylvius; median f. **F. cerebel'li longitudina'lis,** valley of cerebellum. **F. cerebe'lli transver'sa,** great horizontal fissure between upper and lower surfaces of cerebellum. **F. cer′ebri centra′lis,** furrow separating frontal and parietal lobes of brain. **F. cer′ebri collatera′lis,** deep groove on upper surface of occipital and temporosphenoidal lobes of the brain. **F. cer′ebri horizonta′lis,** calcarine fissure. **F. cer′ebri infe′rior,** horizontal portion of fissure of Sylvius. **F. cer′ebri latera′lis,** fissure of Sylvius. **F. cer′ebri latera′lis ante′rior,** ascending portion of fissure of Sylvius. **F. cer′ebri latera′lis poste′rior,** f. cerebri inferior. **F. cer′ebri longitudina′lis,** longitudinal fissure of the brain. **F. cer′ebri mag′na,** anterior transverse fissure of the brain. **F. cer′ebri pari′eto-occipita′lis,** parieto-occipital fissure. **F. cer′ebri poste′rior,** calcarine fissure. **F. cer′ebri supe′rior,** ascending portion of fissure of Sylvius. **F. cer′ebri transver′sa ante′rior** or **transver′sa mag′na,** anterior transverse fissure of the brain. **F. cer′ebri transver′sa par′va poste′rior,** posterior transverse fissure of the brain. **F. choroide′a,** opening to interior of eye through which middle germ-layer passes to form vitreous humor; anterior transverse fissure of the brain. **F. collatera′lis,** f. cerebri collateralis. **F. contraja′cens,** contrafissura. **F. dor′si latera′lis,** furrow on the cervical spinal cord, near the posterior median fissure. **F. dor′si mesa′lis,** posterior fissure of the spinal cord. **F. endomesognath′ica,** middle incisive fissure separating the premaxillary bones from the superior maxillary bone. **F. ethmoida′lis,** fissure in cribriform plate of ethmoid. **F. fos′sæ Syl′vii ante′rior** or **ascen′dens,** ascending portion of fissure of Sylvius. **F. fos′sæ Syl′vii poste′rior** or **horizonta′lis,** f. cerebri inferior. **F. fo′veæ rhomboida′lis longitudina′lis** or **me′dia,** median groove in floor of fourth ventricle of brain. **F. Gla′seri,** fissure at bottom of glenoid fossa of temporal bone. **F. hippocam′pi,** hippocampal fissure; calcarine fissure. **F. horizonta′lis,** calcarine fissure. **F. incisi′va,** fissure separating the premaxillary bone from the superior maxillary. **F. interlobula′ris,** interlobular fissure. **F. intermesognath′ica,** fissure between two premaxillary bones (mesognathion) of each side. **F. interparieta′lis,** fissure between parietal bones. **F. i′ridis,** coloboma. **F. larynge′a pharyn′gis,** see *Larynx*. **F. latera′lis,** fissure of Sylvius; furrow on the cervical spinal cord, near the posterior median fissure. **F. latera′lis ante′rior,** ascending portion of fissure of Sylvius. **F. latera′lis poste′rior,** f. cerebri inferior. **F. longitudina′lis ante′rior,** fissure dividing the spinal cord and medulla oblongata longitudinally into two halves. **F. longitudina′lis cerebel′li,** valley of the cerebellum. **F. longitudina′lis cer′ebri,** fissure dividing cerebral hemispheres on median line. **F. longitudina′lis poste′rior,** posterior median fissure of the spinal cord. **F. mag′na Syl′vii,** fissure of Sylvius. **F. mag′na vul′væ,** opening of the vulva. **F. mastoide′a squamo′sa,** fissure that occasionally takes the place of the squamomastoid suture. **F. media′na ante′rior,** anterior median fissure of the spinal cord. **F. media′na poste′rior,** posterior median fissure of the spinal cord. **F. me′so-exognath′ica,** lateral incisive fissure. **F. occipita′lis, occipita′lis inter′na,** or **occipita′lis perpendicula′ris inter′na,** parieto-occipital fissure. **F. occipita′lis exter′na** or **occipita′lis perpendicula′ris exter′na,** transverse occipital sulcus. **F. occipita′lis horizonta′lis** or **poste′rior,** calcarine fissure. **F. olfacto′ria,** narrow top of each nasal fossa. **F. orbita′lis infe′rior,** fissure between the body of the upper jaw and the greater ala of the sphenoid groove on orbital surface of the upper jaw. **F. orbita′lis supe′rior,** sphenoidal fissure. **F. o′ris,** aperture of mouth. **F. palati′na,** vertical fissure between pterygoid process and superior maxillary bone, transmitting internal maxillary artery. **F. palpebra′rum,** see *Palpebra*. **F. paralle′la,** upper and largest furrow of temporal lobe. **F. pari′eto-occipita′lis** or **perpendicula′ris,** parieto-occipital fissure. **F. pe′trobasila′ris** or **petro′sobasila′ris,** petrobasilar fissure. **F. pe′tromastoide′a** or **petro′somastoide′a,** fissure behind tympanic division of temporal bone. **F. petro′sa superficia′lis,** hiatus Fallopii. **F. petro′soangula′ris,** space at base of skull between petrous bone and greater ala of sphenoid. **F. petro′sosquamo′sa,** line or seam separating, in the fœtus, squamous and petrous portions of temporal bone. **F. pe′trotympan′ica,** fissure at bottom of glenoid fossa of temporal bone. **F. pila′ris,** capillary fracture, fissure, or crack. **F. poste′rior,** calcarine fissure; parieto-occipital fissure. **F. præoccipita′lis,** notch on lower border of outer surface of hemisphere, indicating division of occipital and temporal lobes. **F. pterygoide′a,** space between pterygoid plates of sphenoid. **F. pter′ygopalati′na,** f. palatina. **F. puden′di,** opening of the vulva. **F. Rolan′di,** central groove on surface of hemisphere. **F. sphenoida′lis** or **sphenoida′lis supe′rior,** sphenoidal fissure. **F. sphe′nopalati′na,** f. palatina. **F. sphenopetro′sa,** fissure at base of the skull between spine of sphenoid and petrous bone. **F. spina′lis,** spina bifida. **F. ster′ni,** congenital fissure of sternum from imperfect union of its cartilages. **F. subic′uli inter′na,** deep fissure between the eminentia collateralis and the hippocampus major. **F. Syl′vii,** fissure of Sylvius. **F. tegumen′ti-tym′pani,** shallow furrow on petrous portion of temporal bone in young people, indicating osseous union. **F. tempora′lis infe′rior,** collateral fissure. **F. transver′sa ante′rior,** f. cerebri centralis. **F. transver′sa cer′ebri,** transverse cerebral fissure. **F. tym′panosquamo′sa,** f. Glaseri. **F. ventra′lis,** anterior median fissure of spinal cord. **F. ventrilatera′lis,** furrow on spinal cord of cervical region, occasionally found near anterior median fissure. **F. ventrimesa′lis,** anterior median fissure of spinal cord. **F. vesicogenita′lis,** median fissure of lower abdominal wall, with separation of symphysis pubis. **F. vestib′uli,** fissure by which the fenestra rotunda opens into the vestibule. **F. vul′væ,** cleft of vulva. **F. vul′væ mag′na,** opening of the vulva. **F. zygomat′icosphenoida′lis,** space occasionally found in place of sphenozygomatic suture.

**Fissu′ral.** Relating to or occurring at a fissure.

**Fissura′tion.** Formation or production of fissure.

**Fis′sure** (*findo,* to cleave). A cleft or opening. A lesion in which the bone is cracked, not separated as in complete fracture. Narrow, long, superficial solution of continuity around the external openings of the mucous membranes. Chap observed, particularly on the callous hands of workmen in certain mechanical employments. Small, chapped ulceration in young children, due to contact of the fæces and urine with the delicate skin of the thighs, nates, and genital organs. Cleft on the genital organs in the vicinity of the anus in those laboring under syphilis; usually called rhagades. Small cleft or chapped sore, especially on the lips or hands. A line marking the imperfect union of two tooth sections. Cerebral fissures are furrows in the structure of the brain. Congenital fissures frequently exist in the cranial bones, the result of incomplete ossification. **Abdom′inal f.,** extensive abdominal hernia. **Adoccip′ital f.,** fissure of the cerebrum across the caudal portion of the præcuneus. **Amyg′daline f.,** cerebral fissure on mesal aspect of tip of temporal lobe. **Ante′rior me′dian f.,** fissura mediana anterior. **A′nal f.** or **F. of the a′nus,** fissura ani. **Ape f.,** a name given to any of the fissures in the human brain corresponding to those in the brain of the ape. **Auric′ular f.,** aperture on the lower surface of the petrous portion of the temporal bone, for auricular branch of pneumogastric nerve. **Basirrhi′nal f.,** small fissure near the tip of the temporal lobe. **Basisyl′vian f.,** basal portion of f. of Sylvius. **F. of Bichat′,** transverse fissure of the brain. **F. of the blad′der,** congenital fissure in the wall of the bladder. **F. of bone,** see *Fissure*. **Bro′ca's f.,** see *Broca*. **Bur′dach's f.,** see *Burdach*. **Cal′carine f.,** see *Calcarine*. **Callo′sal f.,** space between the dorsal portion of the corpus callosum and the cortex. **Callo′somar′ginal f.,** f. on the nasal surface of the hemisphere of the brain between the corpus callosum and margin. **Cen'tral f.**, aggregate of the cavities or ventricles of the brain. **Choroi'dal f.**, transverse cerebral fissure. **Circumin'sular f.**, f. around the base of the insula. **F. of Clev'enger**, see *Clevenger*. **Collat'eral f.**, f. on the mesal part of the cerebrum; eminentia collateralis. **Den'tal f.**, a line marking the imperfect union of two tooth-sections. **Den'tate f.**, hippocampal fissure. **Dorsolat'eral f.**, a fissure or cleft separating the olive and lateral column from the dorsal structure of the medulla oblongata. **F. of duc'tus veno'sus**, see *Liver*. **Eck'er's f.**, see *Ecker's sulcus*. **Ec'to-occip'ital f.**, transverse f. near the tip of the occipital lobe. **Ectorrhi'nal f.**, f. at side of base of the olfactory crus. **Ethmoid'al f.**, superior meatus of the nares. **Fau'cial f.**, f. on the middle surface of the fourth lobe. **F. for gall'-bladder**, see *Gall-bladder*. **F. of Gla'ser** or **Glase'rius**, glenoid fissure. **Gle'noid f.**, this divides the glenoid cavity of the temporal bone into two parts, and gives passage to the chorda tympani, etc. **Great horizon'tal f.**, fissure between the upper and lower parts of the cerebellum. **F. of the he'lix**, a small vertical fissure of the helix of the ear, a little above the tubercle, for the attachment of the attrahens aurem muscle. **Hippocam'pal f.**, cerebral fissure from the splenium to near the tip of the temporal lobe. **Horizon'tal f.**, calcarine fissure; peduncular sulcus. **Inci'sor f.**, incisive suture; f. between the intermaxillary part of the upper maxillary bone and the rest of that bone. **Infraor'bital f.**, suborbital fissure. **In'sular f.**, any fissure crossing the insula. **Intercer'ebral f.**, longitudinal fissure. **Intergy'ral f.**, fissure between two cerebral convolutions. **Interhemispher'ic f.**, longitudinal fissure. **Interlamel'lar f.**, f. between lamellæ of the cerebellum. **Interlo'bar f.**, fissure between any two cerebral lobes. **Interlob'ular f.**, longitudinal fissure; great longitudinal fissure of the brain. **Interme'diate f.**, paramedian sulcus. **Interpal'pebral f.**, see *Palpebra*. **Interpari'etal f.**, parietal f. **Interpedunc'ular f.**, f. between the crura cerebri. **Intragy'ral f.**, small fissure between larger ones. **Intrapari'etal f.**, parietal f. **F. of i'ris**, coloboma. **Jen'sen's f.**, see *Jensen*. **Lambdoid'al f.**, occipital fissure. **Lat'eral f.**, anterolateral groove of the spinal cord. **F. of lip.**, harelip. **Longitu'dinal f.**, great longitudinal f. of the brain, separating the two hemispheres; groove on the inferior surface of the liver. **Mar'ginal f.**, fissure at right angles to corpus callosum. **Max'illary f.**, f. on the inner surface of the superior maxillary bone. **F. of the nip'ple**, formation of fissures in the female breast during lactation. **Occal'carine f.**, f. of which the calcarine and occipital fissures are divisions. **Occip'ital f.**, **occip'itopari'etal f.**, deep interlobar f. between the occipital and parietal lobes of the cerebrum. **Occip'itotem'poral f.**, collateral f. **Olfac'tory f.**, f. in olfactory lobe for the olfactory bulb and crus. **Or'bital f.**, there are two fissures in the orbit, the *inferior*, or sphenomaxillary fissure, and the *superior*, or sphenoidal fissure. **F. of pal'ate**, cleft of palate. **Pal'pebral f.**, f. between the upper and lower eyelids. **Paracen'tral f.**, f. passing nearly around the paracentral lobe. **Par'allel f.**, supertemporal f. **Pari'etal f.**, interparietal or intraparietal f., beginning near the end of the central f., and connected with the occipital lobe. **Perpendic'ular f.**, occipital f. **Por'tal f.**, transverse f. of the liver, see *Liver*. **Postcal'carine f.**, f. in the occipital cerebral region, connected, with the calcarine fissure. **Postcen'tral f.**, f. situated behind the central lobe of the vermis. **Postcli'val f.**, fissure situated behind the clivus of the vermis. **Postfront'al f.**, frontal fissure. **Postgrac'ile f.**, f. separating the inferior semilunar from the slender lobe of the cerebellum. **Posthippocam'pal f.**, calcarine f. **Postnod'ular f.**, f. behind the nodule of the vermis. **Postoccip'ital f.**, fissure constituting the front margin of the superior occipital convolution. **Postpyram'idal f.**, f. behind the pyramid of the vermis. **Postsep'tal f.**, f. at the back part of the occipital lobe. **Precen'tral f.**, f. in front of the central lobe of the vermis. **Precli'val f.**, f. in front of the clivus of the vermis. **Prepyram'idal f.**, f. in front of the pyramid of the vermis. **Presyl'vian f.**, anterior portion of the fissure of Sylvius. **F. of rec'tum**, anal f. **F. of Rolan'do**, transverse fissure between two superior cerebral convolutions, met with above the fissure of Sylvius; it is slightly posterior to the coronal suture, and corresponds very nearly with the line of suture between the frontal and parietal bones. **Sagit'tal f.**, intercerebral fissure. **F. of Santori'ni**, one of the irregular fissures in the cartilage of the external auditory meatus and the tragus. **Schwal'be's f.**, see *Schwalbe*. **Semilu'nar f.**, notch at the anterior edge of the cerebellum, where it receives fibres connecting it to the cerebellum and mesocephalon. **Small cer'ebral f.**, inferior transverse fissure. **Sphenoi'dal f.**, triangular fissure on the sphenoid bone, transmitting branches of the fifth pair of nerves and ophthalmic vein. **Sphenomax'illary f.**, fissure between the superior maxillary and sphenoid bones. **Spi'nal f.**, spina bifida. **F. of spleen**, hilus of spleen. **Subfront'al f.**, fissure between the frontal convolutions. **Supersep'tal f.**, a f. parallel with the occipital, in the cuneus. **Supertem'poral f.**, a f. anterior and parallel to the f. of Sylvius. **F. of Syl'vius**, deep, narrow sulcus, ascending obliquely backward from the temporal ala of the sphenoid bone, to near the middle of the parietal bone, and parting the anterior and middle lobes of the cerebrum on each side. **F. of the tra'gus**, fissure on the anterior surface of the tragus of the ear. **Transverse' f. of the brain**, great transverse fissure, fissure of Bichat; a fissure passing beneath and behind the edge of the middle lobe of the brain, and extending beneath the hemisphere of one side to the same point of the opposite side. **Umbil'ical f.**, front part of the longitudinal fissure of the liver. **F. of ure'thra**, epispadias; hypospadias. **F. of ve'na ca'va**, see *Liver*. **Ventrolat'eral f.**, cleft at the outer side of each pyramid of the medulla oblongata. **Ventrome'dian f.**, longitudinal cleft on the ventral surface of the pyramid. **F. of ver'tebra**, spina bifida. **F. of the ves'tibule**, fissura vestibuli. **Wer'nicke's f.**, see *Wernicke*.

**Fist.** The clenched hand.

**Fis'tula** (pipe or reed). Fistule. A tube-like, winding solution of continuity, showing little disposition to heal. It may be cutaneous or deep-seated; incomplete or blind, when it has but one opening; complete, when there are two openings, the one communicating with an internal cavity, the other externally. Incomplete fistulæ may be internal or external; the former open internally, the latter open externally. External incomplete fistulæ are kept up by caries or necrosis of bones, by extraneous bodies in any of the living textures, or by purulent cavities, the walls of which have not become united. Internal incomplete fistulæ generally soon become complete. Fistulæ have received different names, according to the secretion escaping through them and the organs in which they are seated, as lacrymal, biliary, salivary, synovial, and urinary. Those dependent on diseased bone, cartilage, tendon, etc., do not heal until after the exfoliation of the morbid part. Fistulæ of the excretory ducts are produced either by an injury of the duct itself or by the retention and accumulation of the fluids to which they normally give passage; thus, fistula lacrymalis, dropsy of the lacrymal sac, commonly proceeds from the obliteration of the nasal ducts or from atony of the lacrymal sac, preventing the tears from passing into the nostrils. The principal indication in the treatment of fistulæ of the excretory canals being to put a stop to the constant discharge of the secretions, etc., through the preternatural channel, the fistulous passage is at times laid open, and a communication established with the natural excretory canal; at others strong pressure is employed to procure its obliteration. See also *Cassia fistula*. **Abdom'inal f.**, fistula of the wall of the abdomen. **Aë'rial f.**, opening resulting from injury to the larynx and trachea, allowing the air of respiration to pass through. **A'nal f.** generally occurs from mechanical pressure or impediment. **F. au'ris congen'ita,** congenital fissure or fistula in the outer ear, a remnant of fetal life. **F. bellinia'na,** uriniferous tube. **Bil'iary f.**, form of fistula usually met with in the right hypochondriac region, generally caused by ulceration of the gall-bladder. **Blind f.**, incomplete fistula, see *Fistula*. **Branch'ial f.**, fistula in the cervical region communicating with the pharynx. **Bronch'ial f.**, see *Fistula, parietal*. **Cer'vical f.**, f. opening on the neck or into the cervix uteri. **F. ciba'lis,** œsophagus. **Coccyg'eal f.**, suppurating sinus in the vicinity of the anus caused by the inclusion of hairs in a dermoid cyst. **F. col'li congen'ita,** fistulous canal in the cervical region from non-closure of a branchial cleft. **Complete' f.**, see *Fistula*. **F. cor'neæ,** fistula of the cornea; this results from a penetrating wound of the cornea continuing unhealed, but becoming closed over by the conjunctiva; the aqueous humor escapes from the anterior chamber and raises the conjunctiva in the form of a vesicle, which should be removed with scissors and the opening in the cornea touched with nitrate of silver. **F. cru'ris,** fibula. **Den'tal f.**, alveolar f. **F. du'ræ ma'tris,** sinus of the dura mater. **En'terovag'inal f.**, fistula leading from the intestinal canal above the rectum to the vagina. **Enteroves'ical f.**, fistula leading from the bladder to the intestines. **Fe'cal f.**, fistula of the intestines due to injury or gunshot wound; see *Anus, artificial*. **Follic'ulovestib'ular f.**, periurethral f. in the female. **Fron'tal f.**, abscess communicating with the frontal sinus. **Gas'tric f.**, f. of the stomach, a form of fistula in the epigastric region from traumatic causes, as gunshot wounds of the stomach, discharging gastric juice, mucus, or other contents of that organ. **Gastrocol'ic f.**, fistulous communication between the stomach and the colon. *Gastroduodenal f.* is a similar condition between the stomach and the duodenum. **Gastrocuta'neous f.**, fistulous communication between the stomach and the external surface of the body. **Gastroduode'nal f.**, see *Gastrocolic f.* **Gas'tro-intes'tinal f.**, fistula leading from the stomach to the intestine. **Gastropul'monary f.**, fistula leading from the stomach into the lung. **Gastrovag'inal f.**, rare form of fistula from the stomach and abdomen into the vagina. **Gen'ito-u'rinary f.**, fistula between the urinary and genital apparatus. **F. gingiva'lis,** alveolar f. **Hepat'ic f.**, biliary f. **Horse'shoe f.**, a f. having approximately this shape around the anus. **Hypogas'tric f.**, f. in the hypogastric region. **Incomplete' f.**, blind fistula; see *Fistula*. **In'guinal f.**, f. in the inguinal region. **Inter'nal f.**, fistula that has no outlet externally. **Intes'tinal f.**, fistula communicating with the intestine, variously called intestinotubal, intestino-uterine, intestinovaginal, intestinovesical, as it may connect with the Fallopian tube, uterus, vagina, or bladder. **F. lacryma'lis,** f. of the lacrymal apparatus; see *Fistula*. **Lac'teal f.**, milk fistula; mastosyrinx. **F. lympha'lis,** lymphatic or lymph fistula, a form of fistula in the cervical region, usually congenital, discharging a thin fluid, and dependent on imperfect closure of a lymphatic of the neck. **F. mam'mæ** or **mam'mary f.**, milk fistula; mastosyrinx. **Metroperitone'al f.**, f. between the uterus and the cavity of the peritoneum. **Mus'cular f.**, f. after abscess of muscular tissue. **F. nervo'rum,** neurilemma. **Pari'etal f.**, channel of communication formed by ulceration through the external walls, as of the chest or abdomen; if the pulmonary pleura be perforated, and an opening takes place into the bronchial tubes, a bronchial or pulmonary fistula may be formed. **Pe'nile f.**, abscess of the urethra opening externally on the penis. **Perine'al f.**, f. produced by abscess of the perineum communicating with organs in the vicinity. **Perineovag'inal f.**, fistula resulting from the partial closure of a ruptured perineum, leaving a small orifice near the sphincter ani. **Pharyng'eal f.**, f. opening into the pharynx. **Pleuro-pul'monary f.**, fistula of the pleura communicating with the lung, as from empyema. **F. pulmona'lis** or **pul'monary f.**, see *Fistula, parietal*. **Pu'rulent f.**, f. attended with suppuration. **Rec'tal f.**, fistula in ano. **Rectola'bial, recto-ure'thral,** and **rectovag'inal f.**, see *Rectovesical f.* **Rectoves'ical f.**, term applied to fistulous communication between the rectum and the bladder; the term *recto-urethral fistula* or *rectovaginal fistula* is applied to a similar communication between the rectum and the urethra or vagina; and *vesico-uterine, rectolabial, vesicovaginal, urethrovaginal,* or *vesico-uterovaginal fistula* to a similar relation of the bladder and uterus, rectum and labia, bladder and vagina, urethra and vagina, or bladder, uterus, and vagina, respectively. **Rectovul'var f.**, rectal fistula having its outlet at the vulva. **Re'nal f.**, fistula affecting the pelvis of the kidney. **F. sac'ci lacryma'lis,** opening on the face leading into the lacrymal sac, resulting from abscess in the latter. **F. sa'cra,** medulla spinalis; vertebral column; aqueduct of Sylvius. **Sa'cral f.**, fistula situated in the sacral or lumbosacral region. **Sal'ivary f.**, see *Salivary*. **Scro'tal f.**, fistula of urethra opening externally on the scrotum. **Spermat'ic f.**, fistula resulting from inflammation of the testicle, in which spermatic fluid and pus are commingled. **F. spiritua'lis,** trachea. **F. stercora'lis** or **stercoro'sa, stercora'ceous** or **ster'coral f.**, fecal fistula; artificial anus. **Syno'vial f.**, fistula connecting with synovial membrane. **Thi'ry's f.**, artificial fistula of the intestine for collecting the intestinal juice. **Thorac'ic f.**, fistula through the chest wall into the pleural cavity or lung. **Tra'cheal f.**, f. between the trachea and the external surface of the body. **Umbil'ical f.**, f. opening at the umbilicus, congenital or acquired; when there is communication with the ovary, it is called *umbilico-ovarian fistula*. **U'rachal f.**, f. connected with the urachus; when it communicates with the rectum, uterus, or vagina, it is called *ureterorectal, uretero-uterine,* or *ureterovaginal* fistula. **F. ure'terum re'num,** see *Calix*. **Ure'thral f.**, f. connected with the urethra; when there is communication with the penis, perineum, rectum, or scrotum, it is termed *urethropenal, urethroperineal, urethrorectal,* or *urethroscrotal*. **F. uri'næ, f. urina'lis,** or **u'rinary f.**, f. of any part of the urinary apparatus; see *Fistula*. **F. urina'ria,** urethra. **Urogen'ital f.**, genito-urinary f. **Vel'la's f.**, artificial fistula resembling Thiry's fistula. **F. ventric'uli,** gastric f.; œsophagus. **Ves'ical f.**, f. of the urinary bladder; if communicating with the abdomen, cervix uteri, ovary, rectum, urethra and vagina, uterus, uterus and vagina, or vagina alone, it is called *vesico-abdominal, vesicocervical* or *vesicocervico-uterine, vesico-ovarian, vesicorectal* or *vesico-intestinal, vesico-urethrovaginal, vesico-uterine, vesico-uterovaginal,* or *vesicovaginal* fistula, respectively.

**Fis'tulatome.** Instrument for incising a fistula.

**Fis'tule.** Fistula.

**Fistuliza'tion.** The act of becoming fistulous.

**Fis'tulose** or **Fis'tulous.** Relating to or resembling a fistula.

**Fit.** Paroxysm; convulsion.

**Fit-plant** or **Fit-root.** Monotropa uniflora.

**Fits, nine-day.** Trismus nascentium.

**Five-day fe'ver.** Relapsing fever, so called from period of its relapse.

**Five-fin'gers.** Panax quinquefolium; Potentilla canadensis; Ampelopsis quinquefolia.

**Five-leaf.** Potentilla reptans.

**Five-leaves.** Ampelopsis quinquefolia.

**Fixa'tion.** Holding in a determined position. Fixed or steady attention of the eye to a special point. Suturing of a displaced organ, as in hysteropexy, etc. Means of retention of prosthetic appliances in dentistry. **Field of f.**, surface over which the point of sight or of clearest vision on the retina can be moved by motion of the eye. **F. for′ceps,** instrument for holding the eye during operation. **F. line,** line projected through the point of vision and rotary centre of the eye. **F. point,** point of sight of which the image on the retina is in the central part of most distinct vision.

**Fix′ative.** A mordant used to render stable any stain used in histological or pathological work.

**Fixa′tor.** A muscle whose action is to keep parts or organs in place or comparatively immovable. **F. ba′seos sta′pedis,** collection of elastic fibres attached to the base of the stapes and the wall of the tympanum. **F. la′bii superio′ris,** depressor alæ nasi.

**Fixed** (*figo, fixum,* to fasten). Stable, firm, immovable. Term applied to a body not readily volatilized by heat, as fixed oils, in contradistinction to volatile oils. **F. air,** carbonic-acid gas. **F. oil,** expressed oil, compound of glycerin with one or more fatty acids; see *Fixed.* **F. ver′tebræ,** those not separately movable, as sacrum and coccyx.

**Fix′ing.** Making permanent or unchangeable. **F. a′gent,** fixative.

**Fl.** Symbol for fluorine.

**Flabella′tion** (*flabello,* to agitate the air). Operation recommended by Paré, consisting in keeping fractured limbs and their dressings cool by the renewal of the air around them by a fan.

**Flabel′liform** (*flabellum,* fan, *forma,* form). Fan-shaped.

**Flabel′lum** (fan). Fibres radiating like a fan from the stria terminalis.

**Flac′cid.** Soft, non-resisting, relaxed. **F. paral′ysis,** paralysis in which the muscles involved are flabby; opposed to spastic paralysis.

**Flaccid′ity** (*flaccidus,* flabby). Softness of a part, offering little resistance on pressure.

**Flacour′tia cataphrac′ta.** Shrub of East Indies; fruit is used in diarrhœa; leaves are used for hoarseness. **F. sepia′ria,** same habitat; bark is used externally in rheumatism and gout; leaves and root are given internally in snake-bites.

**Flag.** An endogenous plant with sword-shaped leaves. **Blue f.,** Iris versicolor. **Slen′der b. f.,** Iris virginica. **Dwarf f.,** Iris lacustris. **Myr′tle f.,** Acorus calamus. **F. root** or **Sweet f.,** Acorus calamus. **Yel′low f.,** Iris pseudacorus.

**Flagel′la** (pl. of *flagellum,* a small twig or branch). Delicate motile or vibratile filaments or processes connected with some cells.

**Flag′ellate.** Provided with flagella.

**Flagella′tion** (*flagellum,* a scourge). Treatment of disease by whipping or striking as a stimulant to the part scourged; its effect on the hypogastric region has also been utilized in checking post-partum hemorrhage. **F. ma′nia,** form of scourging mania, or theomania, which prevailed in Europe in the thirteenth and fourteenth centuries.

**Flagel′liform.** Long and slender like a whip.

**Flagel′lum.** Long, delicate cilium. Cord-like process of protoplasm connected with various cells.

**Flail-joint.** A joint with abnormal mobility especially in extension.

**Fla′jan's** or **Flajan′ni's disease′.** Exophthalmic goitre.

**Flamed.** Inflamed. Term applied to knives and instruments which have been disinfected by passing through a flame.

**Flam′mon.** Lachesis rhombeata.

**Flam′mula** (dim. of flamma). Fleam; Ranunculus ficaria. **F. cor′dis,** vital or animal heat. **F. jo′vis,** Clematis recta. **F. ma′jor,** Ranunculus lingua. **F. mi′nor,** Ranunculus flammula. **F. vita′lis,** animal or vital heat.

**Flanks.** Regions of the body extending on the sides from the inferior margin of the chest to the crista ilii.

**Flap.** Portion of the soft parts of the body separated from those beneath by operation, such as amputation, but still attached by the base. Hence there may be flap wounds and flap operations. When the flap is taken from one part and applied to another in plastic operations, the operation is said to be by migration of the flap. At times the flap is made to slide over the part to which it has to adhere; the operation is then said to be by the sliding of the flap. The flap is also, at times, rolled, inverted, etc. **F. amputa′tion,** see *Amputation.* **F. dock,** digitalis. **F. extrac′tion,** operation for cataract, employed in cases in which the substance of the lens will flow through the small corneal opening made by the surgeon. **F. opera′tion,** see the prime. **Skin** or **tegumen′tary f.,** flap including skin and fascia.

**Flap-split′ting opera′tion.** Operation for lacerated perineum; consisting in splitting with scissors the rectovaginal septum from side to side, commencing in the middle line. The operator then draws the vaginal flap upward with the forceps, and the inferior flap downward, and the sutures are passed from left to right.

**Flare.** Saliva. **Pigs′ f.,** adeps suillus.

**Flask.** An apparatus to contain matrices formed in sand or plaster, used in dentistry.

**Flat.** Lying on one level without elevations or depressions. Low and without resonance, a term applied to a sound elicited on percussion. **F. ear,** a large, prominent ear, smoother than normal, because of the usual elevations and grooves being partly obliterated. **F. foot,** pes planus. **F. top,** Vernonia noveboracensis.

**Flat′ness.** Absence of resonance on percussion of a solid part.

**Flat′ulence.** Formation or accumulation of gas in the digestive tube.

**Flat′ulent.** Affected with or producing flatulence, as certain kinds of food.

**Fla′tus** (*flo,* to blow). Crepitation. Intestinal gas. **F. spi′næ,** spina ventosa. **F. u′teri** or **vagi′næ,** expulsion of gas from the vagina.

**Flave′do** (*flavus,* yellow). Yellowness. **F. cu′tis,** see *Xanthopathia.* **F. icterit′ia,** yellow color of jaundice.

**Flavic′omous** (*flavus,* yellow, *kome,* hair). Having yellow or yellowish hair.

**Fla′vor.** Quality of a sapid body, appreciated by the taste and smell combined, and more especially by the latter.

**Fla′vus.** Yellow.

**Flaw-flow′er.** Anemone pulsatilla.

**Flax.** A plant of the genus *Linum.* **Com′mon f.,** Linum usitatissimum. **Purg′ing f.,** Linum catharticum. **F. toad,** Antirhinum linearia.

**Flax′dressers′ phthis′is.** Disease of the lung induced by inhalation of fine particles of flax; see *Pneumonokoniosis.*

**Flax′seed.** Linseed, seed of Linum usitatissimum. **Ground f.,** Lini farina. **F. meal,** see *Linum usitatissimum.* **F. oil,** oleum lini. **F. poul′tice,** cataplasma lini. **F. tea,** infusum lini compositum.

**Flea.** An insect of the genus *Pulex.* **Com′mon f.,** Pulex irritans.

**Flea′bane, Can′ada.** Erigeron canadense. **Great f.,** Conyza squarrosa. **Nar′row-leaved f.,** Erigeron philadelphicum. **Philadel′phia f.,** Erigeron philadelphicum. **Skevish′ f.,** Erigeron philadelphicum. **Va′rious-leaved f.,** Erigeron heterophyllum.

**Fleam.** Surgical instrument for phlebotomy, consisting of a small metallic box containing a spear-pointed cutting instrument, which, by means of a spring, can be forced into the vein. Lancet.

**Flea′seed.** Mucilaginous seed of Plantago psyllium.

**Flea′wort.** Plantago psyllium.

**Flech′sig's col′umn** or **tract.** Cerebellar tract of the spinal cord.

**Flec′tens** (*flecto,* to bend). Producing flexion; flexor, as a muscle. **F. par lumbo′rum,** quadratus lumborum.

**Flec′tor.** Flexor.

**Fleece of Stil′ling.** White woolly fibres described by that histologist as surrounding the corpus dentatum of the cerebellum.

**Fleg′men** or **Fle′men.** Tumor about the ankles. Congestion of the lower extremities. Chap on the feet or hands.

**Fleischl's law.** That excitability of a motor nerve varies uniformly at different points. **F.'s hæmom′eter,** see *Hæmometer.*

**Fleisch′mann's bur′sa.** Bursa between the tongue and mucous membrane, to the outer side of the genioglossus muscle.

**Flem′ing's tinc′ture.** A tincture of aconite about twelve times the strength of the official tincture.

**Flesh.** Soft parts of an animal, particularly the muscles. **F. germ,** bioplast. **F. juice,** meat juice. **Proud f.,** fungosity, exuberant granulations.

**Flesh-col′ored ascle′pias.** Asclepias incarnata. **F.-c. bacil′lus** (Tils), a non-pathogenic bacillus found in water.

**Flesh′-formers.** See *Aliment.*

**Flesh′worm.** Trichina. **F. disease′,** trichiniasis.

**Flesh′y.** Corpulent; resembling flesh; purely muscular. **F. col′umns,** columnæ carneæ. **F. pons,** projection of the cardiac wall between the right auriculoventricular opening and the pulmonary artery.

**Flex.** To put in a state of flexion.

**Flexibil′itas.** Flexibility. **F. ce′rea,** cataleptic condition of cramp, with very flexible extremities.

**Flexibil′ity** (*flecto,* to bend). Capability of being bent.

**Flex′ible.** Readily bent; capable of being bent without breaking or cracking, as a flexible catheter. **F. collo′dion,** collodium flexile.

**Flexicos′tate** (*flecto,* to bend, *costa,* rib). Having bent ribs.

**Flex′ile.** Readily bent; flexible.

**Flex′ion.** State of being bent; opposite condition to extension; action of a flexor muscle. Bending of the child's head forward on the chest in labor. Surgical procedure in maintaining a limb or part in a flexed position. **Forced** or **for′cible f.,** flexion practised to the fullest possible degree, to check hemorrhage, to stretch a nerve, or break up an ankylosed joint.

**Flex′or.** Muscle whose office it is to bend certain parts. **F. accesso′rius,** f. longus digitorum pedis. **F. accesso′rius plan′tæ,** plantar head of the flexor longus pollicis. **F. antibra′chii radia′lis,** biceps flexor cubiti. **F. antibra′chii ulna′ris,** brachialis anticus. **F. bi′ceps bra′chii** or **cu′biti,** biceps flexor cubiti. **F. bi′ceps cru′ris,** see *Biceps flexor cruris.* **F. bra′chii,** coracoradialis. **F. bre′vis cap′itis,** rectus capitis anticus minor; atloidosuboccipitalis. **F. bre′vis dig′iti quin′ti,** f. parvus minimi digiti. **F. bre′vis digito′rum, F. bre′vis digito′rum pe′dis, F. bre′vis digito′rum pe′dis perfora′tus,** muscle placed at the middle of the sole of the foot; narrower and thicker behind than before, where it is divided into four portions; it arises from the posterior part of the inferior surface of the second phalanx of the last four toes; it bends the second phalanges of the toes on the first, and the first on the metatarsal bones, thus augmenting the concavity of the vault of the foot. **F. bre′vis hallu′cis,** f. brevis pollicis pedis. **F. bre′vis min′imi dig′iti,** f. parvus minimi digiti. **F. bre′vis min′imi dig′iti accesso′rius,** occasional accessory slip of the flexor brevis minimi digiti. **F. bre′vis min′imi dig′iti pe′dis,** muscle situated at the anterior and outer part of the sole of the foot, arising from the posterior extremity of the fifth metatarsal bone, and inserted into the posterior part of the first phalanx of the little toe, which it bends. **F. bre′vis pol′licis ma′nûs,** muscle situated at the outer part of the palm of the hand, divided into two portions by the tendon of the flexor longus pollicis; it arises from the os magnum, the anterior annular ligament of the carpus, and the third metacarpal bone, and is inserted into the superior part of the first phalanx of the thumb, and into the two ossa sesamoidea at the articulation of the first phalanx with the first metacarpal bone; it bends the first phalanx of the thumb on the first metacarpal bone, and the latter upon the trapezium. **F. bre′vis pol′licis pe′dis,** situated at the anterior and inner part of the sole of the foot; is thin and narrow behind, thick and divided into two portions before; arises from the inferior part of the os calcis and the last two cuneiform bones, and is inserted at the inferior part of the base of the first phalanx of the great toe, and into the two sesamoid bones of the corresponding metatarsophalangean articulation; it bends the first phalanx of the great toe on the first metacarpal bone. **F. cap′itis,** rectus capitis anticus major. **F. cap′itis bre′vis,** atloidosuboccipitalis. **F. cap′itis par′vus,** atloidostyloideus. **F. car′pi exte′rior,** f. carpi radialis; palmaris magnus. **F. car′pi inte′rior,** f. carpi ulnaris. **F. car′pi radia′lis,** palmaris magnus. **F. car′pi radia′lis bre′vis,** occasional supernumerary muscle passing from the shaft of the radius to its insertion on the trapezium and second metacarpal bone. **F. car′pi radia′lis profun′dus,** f. carpi radialis brevis. **F. car′pi ulna′ris,** see *Cubital* (muscles). **F. car′pi ulna′ris bre′vis,** supernumerary flexor carpi muscle inserted on the unciform bone. **F. commu′nis subcuta′neus,** palmaris longus muscle. **F. cru′ris,** large flexor muscle, made up at the origin of the iliacus and psoas magnus muscles, and inserted on the lesser trochanter of the femur. **F. cru′ris bi′ceps exter′nus** or **fibula′ris,** biceps flexor cruris. **F. cu′biti,** biceps flexor cubiti. **F. dig′iti min′imi pe′dis accesso′rius,** accessory slip of flexor longus digitorum pedis to the little toe. **F. dig′iti par′vi min′imi,** abductor minimi digiti. **F. dig′iti secun′di pe′dis,** rare supernumerary muscle from posterior tibial region to the second toe. **F. digito′rum commu′nis bre′vis,** f. brevis digitorum pedis. **F. digito′rum commu′nis lon′gus pe′dis,** f. longus digitorum pedis. **F. digito′rum fibula′ris,** f. longus pollicis pedis. **F. digito′rum ma′nûs commu′nis profun′dus,** f. profundus perforans. **F. digito′rum ma′nûs per′forans,** f. profundus perforans. **F. digito′rum ma′nûs perfora′tus,** f. sublimis perforatus. **F. digito′rum ma′nûs subli′mis** or **superficia′lis,** f. sublimis perforatus. **F. digito′rum pe′dis lon′gus accesso′rius,** see *F. longus digitorum pedis profundus perforans.* **F. digito′rum per′forans,** thick, flat, long muscle, seated beneath the f. sublimis perforatus; its upper extremity is simple, and arises from the anterior surface of the ulna and from the interosseous ligament; its inferior extremity terminates by four tendons, which, after having passed through slits in the sublimis, are inserted into the anterior surface of the last phalanges of the four fingers; it bends the third phalanges on the second, and in other respects has the same use as the flexor sublimis perforatus. **F. digito′rum per′forans pe′dis,** f. longus digitorum pedis profundus perforans. **F. digito′rum perfora′tus pe′dis,** f. brevis digitorum pedis perforatus. **F. digito′rum profun′dus pe′dis,** f. longus digitorum pedis profundus perforans. **F. digito′rum subli′mis pe′dis,** f. brevis digitorum pedis perforatus. **F. digito′rum superficia′lis,** f. sublimis perforatus. **F. digito′rum tibia′lis,** f. longus digitorum pedis profundus perforans. **F. fem′oris,** iliopsoas. **F. fibula′ris,** f. longus pollicis pedis. **F. hallu′cis bre′vis,** f. brevis pollicis pedis. **F. hallu′cis lon′gus,** f. longus pollicis pedis. **F. lon′gus digito′rum pe′dis profun′dus per′forans,** muscle situated at the posterior and deep-seated part of the leg; broader at the middle than at the extremities, the inferior of which is divided into four portions; it arises from the posterior surface of the tibia, and its tendons are attached to the posterior part of the lower surface of the three phalanges of the last four toes; it bends the three phalanges on each other, and the toes on the metatarsus, and extends the foot on the leg. The *accessorius flexoris longi digitorum pedis* is a small muscle of the sole of the foot, passing obliquely from the os calcis to the outer edge of the flexor longus, whose force it augments and whose obliquity it corrects. **F. lon′gus hallu′cis,** f. longus pollicis pedis. **F. lon′gus pol′licis,** f. longus pollicis manûs. **F. lon′gus pol′licis ma′nûs,** situated at the anterior and deeper part of the forearm; it arises from the upper three-quarters of the anterior surface of the radius and interosseous ligament, and is inserted, by a tendon, into the anterior surface of the last phalanx of the thumb; it bends the second phalanx of the thumb on the first, the first on the corresponding metacarpal bone, and this upon the radius; it also bends the hand on the forearm. **F. lon′gus pol′licis pe′dis**, situated at the posterior and deeper part of the leg; it arises from the posterior surface of the fibula and the interosseous ligament, and is inserted, by a long tendon, into the inferior part of the first phalanx of the great toe; it bends the third phalanx on the first, and this upon the corresponding metatarsal bone, augments the concavity of the sole of the foot, and extends the foot on the leg. **F. ma′nûs me′dius**, palmaris longus. **F. ma′nûs radia′lis**, f. carpi radialis. **F. ma′nûs ulna′ris**, f. carpi ulnaris. **F. metatar′si**, peroneus tertius; see *Peroneal muscles*. **F. min′imi dig′iti par′vus**, f. brevis minimi digiti pedis. **F. os′sis metacar′pi min′imi dig′iti**, opponens minimi digiti. **F. os′sis metacar′pi pol′licis**, opponens pollicis. **F. palma′ris**, palmaris longus; see *Palmar muscles*. **F. par′vus min′imi dig′iti** arises from the anterior annular ligament of the carpus and the process of the os unciforme, and is inserted at the inner side of the superior extremity of the first phalanx of the little finger; it bends the first phalanx of the little finger. **F. per′forans**, f. profundus perforans. **F. per′forans pe′dis**, f. longus digitorum pedis. **F. perfora′tus**, f. sublimis perforatus. **F. perfora′tus pe′dis**, f. brevis digitorum pedis. **F. pol′licis pro′prius lon′gus**, f. longus pollicis. **F. pri′mi interno′dii**, opponens pollicis. **F. pri′mi interno′dii digito′rum ma′nûs**, lumbricalis manûs. **F. pri′mi et secun′di os′sis pol′licis**, f. brevis pollicis manûs. **F. profun′dus accesso′rius**, supernumerary slip of the flexor profundus digitorum. **F. pro′prius dig′iti secun′di pe′dis**, muscle from the posterior portion of the tibia to the second toe. **F. radia′lis**, f. carpi radialis. **F. ra′dii**, biceps flexor cubiti. **F. secun′di interno′dii digito′rum pe′dis**, f. brevis digitorum pedis. **F. s. i. pol′licis**, f. brevis pollicis manûs. **F. subli′mis**, f. brevis digitorum pedis. **F. s. digito′rum**, f. sublimis perforatus. **F. s. perfora′tus**, thick, flat muscle seated at the anterior part of the forearm; its upper extremity arises from the internal condyle of the humerus, from the coronoid process of the ulna, and from the anterior edge of the radius; the lower extremity divides into four tendons, which slide under the anterior annular ligament of the carpus and are inserted into the second phalanges of the last four fingers, after having been slit to allow the tendons of the flexor profundus to pass through; it bends the second phalanges on the first, these on the carpal bones, and the hand on the forearm. **F. sur′face**, flexor face for the origin of the flexor muscles, as the posterior portion of the tibia or the anterior portion of the radius. **F. ter′tii interno′dii**, f. longus pollicis manûs. **F. t. i. digito′rum ma′nûs**, f. profundus perforans. **F. t. i. pe′dis**, f. longus digitorum pedis profundus perforans. **F. t. i. pol′licis**, f. longus pollicis manûs. **F. tibia′lis**, f. longus digitorum pedis.

**Flexu′ra.** Curvature, flexure. The radiocarpal joint in the horse. **F. cephal′ica**, cranial flexure of the embryo. **F. co′li dex′tra** or **hepat′ica**, hepatic flexure. **F. c. ili′aca** or **infe′rior**, sigmoid flexure. **F. c. liena′lis**, splenic flexure. **F. c. pri′ma**, hepatic flexure. **F. c. secun′da** or **sinis′tra**, splenic flexure. **F. duode′ni infe′rior**, bend or flexure between the descending and transverse duodenum. **F. d. supe′rior**, flexure between the horizontal and descending duodenum. **F. duode′nojejuna′lis**, bend at the junction of the duodenum and jejunum. **F. ili′aca**, sigmoid flexure. **F. os′sis**, greenstick fracture. **F. sigmoide′a**, sigmoid flexure. **F. transver′sa**, one of the transverse flexures or arches made by the papillæ of the finger-tips.

**Flex′ure.** Bend or joint; flexura; curve. **Ante′rior f. of cor′pus callo′sum**, genu of corpus callosum. **Basicra′nial f.**, anterior flexure of the embryo at the base of the brain. **Caud′al f.**, anterior flexure of the embryo at the caudal part. **Cephal′ic** or **cra′nial f.**, name given to several flexures of the cranial extremity of the embryo at an early stage of its existence. **Cer′vical f.**, neck f. **Encephal′ic f.**, cephalic f. **Hæ′mal f.**, see *Hæmal arch*. **Hepat′ic f.**, bend between the ascending and transverse colon at the inferior surface of the liver. **Neck f.**, curve or angle formed between the spinal cord and medulla oblongata. **Sig′moid f.**, see *Sigmoid*. **Splen′ic f.**, bend between the transverse and descending colon in the vicinity of the spleen.

**Flindt-Kop′lik's sign.** See *Koplik's sign*.

**Flint disease′.** Chalicosis.

**Flint's arcade′.** Arch of arterial and venous vessels surrounding the base of the pyramids of the kidneys. **F.'s mur′mur**, additional systolic murmur over apex in ventricular dilatation due to insufficiency of aortic valves.

**Flix′weed.** Sisymbrium sophia.

**Float′ing.** Lying loosely attached. **F. albu′min**, see *Albumin*. **F. kid′ney, liver, or spleen**, a kidney, liver, or spleen which has become loosened from its attachments and is freely movable in the abdominal cavity. **F. pro′teid**, an unattached proteid which is carried about by the circulating fluid and is finally excreted. **F. ribs**, two lower ribs, so named because they are less fixed or more freely movable than the others.

**Floc′ci** (pl. of *floccus*, flock of wool). See *Floccus*. **F. volitan′tes**, see *Metamorphopsia*.

**Floccila′tion, Floccile′gium**, or **Floccita′tion** (*floccus*, flock of wool). Carphology.

**Floc′cular.** Flocculent, fleecy. Relating to the flocculus of the cerebellum. **F. fos′sa**, depression on posterior surface of temporal bone for lodgment of flocculus of cerebellum. **F. pro′cess**, flocculus.

**Floc′culence.** Flakiness; fleeciness.

**Floc′culent.** Containing small, wool-like cloudy flakes.

**Floc′culus** (dim. of *floccus*, flock of wool). Pneumogastric lobule; long and slender prominence extending from the side of the vallecula around the corpus restiforme to the crus cerebelli, lying behind the filaments of the pneumogastric nerves. Floccus. **F. accesso′rius secunda′rius** or **succenturia′tus**, accessory lobule of cerebellum near flocculus. **F. cerebel′li**, see the prime.

**Floc′cus** (a tuft of wool). One of the minute elevations on the surface of a villous membrane. A collection of the hyphæ of a fungus. Flock. Flocculus.

**Flock.** Collection of flocculent matter; floccus.

**Floe′gel's lay′er.** Granular layer in hyaloid disk of fibril of muscular tissue.

**Flog′ging.** Flagellation.

**Flood′ing.** Metrorrhagia; excessive uterine hemorrhage.

**Flood's lig′ament.** Glenohumeral ligament.

**Floor.** The base or bottom of any cavity, as of the fourth ventricle. **F. cells**, nucleated cells investing the floor of Corti's arch. **F. plate**, plate constituting the floor of the primitive embryonic neural plate.

**Flo′ra med′ica.** Botany of medicinal plants.

**Flor′ence's crys′tals.** Crystals formed by action on semen and on secretions of the prostate, vagina, etc., of strong solution of iodine and iodide of potassium. **F.'s reac′tion**, chemical action resulting in the formation of F.'s crystals.

**Flor′entine i′ris.** See *Iris*.

**Flo′res** (pl. of flos). Flowers. **F. aca′ciæ**, flowers of acacia. **F. æ′ris**, acetate of copper. **F. antimo′nii**, flowers of antimony. **F. ar′nicæ**, flowers of arnica. **F. auran′tii**, orange flowers. **F. ben′zoës**, flowers of benjamin. **F. bora′cis**, boric acid. **F. calcatrip′pæ**, larkspur flowers. **F. car′thami**, safflower. **F. caryophyl′li**, cloves. **F. cas′siæ**, flowers of cassia. **F. chamomil′læ**, matricaria; German chamomile. **F. c. roma′næ**, chamomile flowers, see

*Anthemis.* **F. ci′næ,** santonica. **F. consol′idæ** or **rega′les,** larkspur flowers. **F. cos′so** or **ko′so,** see *Hygienia abyssinica.* **F. fer′ri,** calcium carbonate present in iron ore. **F. lavand′ulæ,** lavender flowers. **F. ma′cidis,** see *Myristica moschata.* **F. ma′cis,** mace. **F. Mal′væ vulga′ris,** flowers of Malva sylvestris. **F. martia′les,** ferrum ammoniatum. **F. na′phæ,** orange flowers. **F. rhœ′ados,** flowers of red poppy. **F. ro′sæ,** rose flowers. **F. sa′lis ammoni′aci,** ammonii carbonas. **F. s. a. martia′les,** ferrum ammoniatum. **F. sambu′ci,** flowers of sambucus. **F. sul′phuris,** flowers of sulphur or sublimed sulphur. **F. s. lo′ti,** washed sulphur. **F. un′guium,** small, opaque, white, round spots on the nails. **F. verbas′ci,** flowers of mullein. **F. zin′ci,** zinc oxide.

**Flor′ida all′spice.** Calycanthus floridus. **F. an′ise tree,** Illicium floridanum. **F. ar′rowroot,** arrowroot from zamia. **F. fe′ver,** variety of fever occurring in Florida and other of the Southern United States, and in the tropics, considered to be due to the continued high temperature. **F. rhat′any,** Krameria lanceolata.

**Flos.** Flower. Virginity. **F. jo′vis,** crocus. **F. lac′tis,** cream. **F. sa′lis,** subcarbonate of soda. **F. sanguin′eus monar′di,** Tropæolum majus. **F. sul′phuris,** sublimed sulphur. **F. trinita′tis,** Viola tricolor. **F. virginita′tis,** hymen.

**Flos′culi.** Small flowers. **F. ci′næ,** santonica.

**Flour.** Farina.

**Flouren′sia thurif′era.** Species of Chilian plants root is expectorant.

**Flou′rens's doc′trine.** Doctrine according to which the entire cerebrum takes part in every psychical process.

**Flow.** Flux; discharge. **Men′strual f.,** menstrual discharge.

**Flow′er's an′gle.** Angle formed by lines projected from nasion to top of frontal process of malar bone.

**Flow′er de luce.** Iris germanica.

**Flow′ers.** The blossoms of a plant. Solid and volatile substances obtained by sublimation, as flowers of benjamin, flowers of sulphur, etc. Menses. **F. of ar′senic,** arsenic trioxe. **F. of an′timony,** antimonial oxide. **F. of ben′zoin,** flowers of benjamin. **F. of cam′phor,** sublimed camphor. **Col′linson's f.,** Collinsonia canadensis. **F. of sul′phur,** sublimed sulphur. **F. of vin′egar,** mould forming on a liquid undergoing acetous fermentation. **White f.,** leucorrhœa. **F. of wine,** mould forming upon a liquid undergoing vinous fermentation; see *Saccharomycės mycoderma.* **F. of zinc,** crude oxide of zinc formed by burning zinc in the air.

**Fluctua′tio** (*fluctuo,* to undulate). Fluctuation. Looseness of exfoliated bone or carious tooth. **F. au′rium,** tinnitus aurium.

**Fluctua′tion.** Undulation of a fluid in a natural or artificial cavity, felt by pressure or percussion—peripheral fluctuation. In ascites fluctuation is felt by one hand applied to one side of the abdomen, while the other side is struck with the other hand. In abscesses fluctuation is perceived by pressing on the tumor with one finger, while another finger rests on another part of the surface of the swelling. **Peripher′ic** or **periph′eral f.,** see *Fluctuation.* **Pleu′ral f.,** thoracic f. **Rhon′chal f.,** see *Rhonchal.* **F. by succus′sion,** see *Succussion.* **Thorac′ic f.,** undulation felt on palpating over an intercostal space.

**Fluel′len** or **Fluel′lin.** Antirhinum elatine; veronica.

**Flu′id** (*fluo,* to flow). Liquid or gaseous; flowing. Body whose particles move easily on each other, and have not sufficient cohesion to remain united when subjected to pressure. The human body is largely composed of fluids, about 6,667 parts in 10,000. **Allanto′ic f.,** fluid contained in the allantois. **Amniot′ic f.,** liquor amnii. **A′queous f.,** aqueous humor. **Bur′nett's disinfect′ing f.,** see *Burnett.* **Cephalorrhachid′ian f.,** cephalospinal fluid. **Cephalospi′nal f.,** see *Cephalospinal.* **Cerebrospi′nal f.,** cephalospinal fluid. **Cœl′ian f.,** cerebrospinal fluid in central canal of the spinal cord and ventricles. **Con′dy's disinfect′ing f.,** see *Condy's disinfecting fluid.* **F. of Cotun′nius,** perilymph. **Elec′tric f.,** see *Electricity.* **Enter′ic f.,** succus entericus. **F. ex′tract,** see *Extract.* **Exuda′tion f.,** coagulable lymph. **Form′ative f.,** cytoblastema. **Galvan′ic f.,** see *Electricity.* **Intes′tinal f.,** intestinal juice. **F. of lab′yrinth,** perilymph. **Lac′teal f.,** milk; any fluid resembling milk. **Ledoyen's′ disinfect′ing f.,** see *Ledoyen.* **Lymphat′ic f.,** lymph. **Ner′vous f.,** supposed fluid contents of nerves. **Nu′clear f.,** achromatin. **Nu′tritive f.,** chyle, blood, lymph. **Periax′ial f.,** fluid around axis cylinder. **F. of Scar′pa,** vitreous fluid in membranous labyrinth of ear. **Sem′inal** or **Spermat′ic f.,** semen or sperm. **Subarach′noid f.,** cerebrospinal fluid.

**Fluidam′ber.** Liquidamber.

**Fluidounce′.** A fluid ounce, eight fluidrachms; approximately two tablespoonfuls.

**Fluidrachm′.** A fluid drachm, a measure containing 56.96 grains of distilled water; approximately a teaspoonful.

**Fluke.** Distoma hepaticum. **Bron′chial f.,** see *Distoma ringeri.* **F. disease′,** rot of sheep. **Liv′er f.,** Distoma hepaticum. **F. worm,** Distoma hepaticum.

**Flu′mina** (pl. of *flumen,* river). Subarachnoid canals made by the arachnoid membrane crossing fissures and furrows.

**Flu′or** (*fluo,* to flow). Flux; flow. Fluorine. **F. al′bus,** leucorrhœa. **F. a. intestino′rum,** mucous or mucomembranous diarrhœa. **F. a. malig′nus,** gonorrhœa. **F. a. poste′rior,** discharge of mucus and pus from the rectum. **F. metrica′lis,** uterine leucorrhœa. **F. mulie′bris,** leucorrhœa. **F. san′guinis,** hemorrhage. **F. uteri′nus,** uterine leucorrhœa.

**Flu′oral.** Fluoride of sodium; antiseptic application to mucous membranes, in strength of solution 1 to 200, preventing bacterial fermentation.

**Fluoresceïn′.** $C_{20}H_{12}O_5,H_2O$. Resorcin-phthalein; product of the fusion of anhydrous phthalic acid with resorcin; used for diagnosing lesions of the cornea and detecting foreign bodies in it.

**Fluores′cence.** Property by which some transparent media exert a peculiar influence in dispersing light of certain color and refrangibility, becoming thus self-luminous, under the direct action of the rays of light; dilute solution of quinine, for example, changes dark blue and violet to sky-blue. **F. of the eye,** all the media of the eye possess slight fluorescence.

**Fluores′cent.** Possessing fluorescence. **F. bacil′li,** B. erythrosporus, B. fluorescens.

**Fluorescin′.** Fluorescein.

**Fluor′ic acid.** Solution of hydrofluoric acid in water.

**Flu′oride.** Compound of fluorine and a base.

**Flu′orine** (symbol, Fl). Non-metallic element, not isolated, but forming fluorides, and with hydrogen, hydrofluoric acid. Its salts are corrosive poisons unless well diluted.

**Flu′orograph.** Skiagraph.

**Fluorograph′ic.** Skiagraphic.

**Fluorog′raphy.** Skiagraphy.

**Fluorom′eter.** Part of skiagraphic apparatus which adjusts the shadow.

**Flu′oroscope.** Instrument by which quinine may be detected in urine by its fluorescence. An apparatus for observing the picture of opaque objects formed by the passage of the Röntgen rays; it consists of a tube closed at one end by a screen coated with tungstate of sodium or other fluorescent material, called the *fluorescent screen.*

**Fluoroscop′ic.** Relating to a fluoroscope, as the picture seen through it.

**Fluoros′copy.** Examination of the deeper structures of the body by means of the fluoroscope.

**Flush.** A blush; a temporary redness of the face or other part, accompanied by a sensation of heat; it occurs in various pathological states, and not infrequently at the time of the menopause or after removal of the ovaries. **Hec'tic f.**, a flush occurring during the paroxysm of *hectic fever*, which see. **Mahog'any f.**, see *Mahogany*. To become flushed. To wash out suddenly and forcibly.

**Flush'ing.** Blushing. Washing out a part with a copious supply of fluid. **F. of the peritone'um**, process of washing out the cavity of the peritoneum with warm water after operation of abdominal section. See *Irrigation*.

**Flux** (*fluo*, to flow). Flow; excessive discharge of fluid; diarrhœa. **A'lvine f.**, diarrhœa. **Bil'ious f.**, discharge of bile either by vomiting or by stool, or by both, as in cholera; bilious diarrhœa. **Blood'y f.**, dysentery. **Bron'chial f.**, bronchorrhœa. **Catame'nial f.**, menstrual flow. **Cœ'liac f.**, chronic dysentery, chylous diarrhœa, chylorrhœa. **Gas'tric f.**, gastrorrhœa. **Hepat'ic f.**, bilious f. **Men'strual f.**, menses. **Mu'cous f.**, mucous diarrhœa. **Pas'sive f.**, watery diarrhœa not connected with organic change. **Sal'ivary f.**, ptyalism. **Seba'ceous f.**, seborrhœa; stearrhœa. **Se'rous f.**, see *Ephidrosis*. **White f.**, psilosis.

**Flux'ion.** Flow of blood or other humor toward an organ with greater force than natural; determination; congestion.

**Flux'ionary.** Relating to fluxion. **F. hyperæ'mia**, active congestion.

**Flux'root.** Asclepias decumbens; A. tuberosa.

**Flux'us.** Discharge, flux.

**Flux'weed.** Sisymbrium sophia; Galium pilosum.

**Fly.** Any flying insect; specifically, a dipterous insect of the family *Muscidæ*. **F. ag'aric**, Agaricus muscarius, from which an alkaloid, *muscarine*, is obtained; used in phthisis for night-sweats, in epilepsy, cutaneous affections, etc. **F. blis'ter**, a cantharidal blister. **F. fun'gus**, f. agaric. **F. gold'ing**, Coccinella septempunctata. **House f.**, Musca domestica. **F. poi'son**, Amianthium muscætoxicum. **F. sick'ness**, Australian disease characterized by nausea and vomiting. **Span'ish f.**, cantharides. **F. trap**, Apocynum androsæmifolium, Sarracenia purpurea.

**Fly'ing.** Moving about rapidly. **F. blis'ter**, a blistering application that is moved about from one part to another without being allowed to exert its complete action in any one place.

**Foal'foot.** Colt's-foot. See *Tussilago*.

**Fo'cal.** Relating to a focus. **F. disease'**, disease of the nervous system centrally localized. **F. depth**, the range through which a lens will give clear outlines of objects, or the penetrating power of a lens. **F. dis'tance**, distance from the centre of a lens to the principal focus. **F. hem'orrhage**, hemorrhage that is localized, and not general or diffused. **F. in'terval**, interval between the focus of the meridian of greatest curvature and that of the meridian of least curvature of a refracting surface, as the cornea. **F. length**, focal distance. **F. le'sion**, a definite circumscribed lesion, as of the brain or cord. **F. myeli'tis**, minutely localized inflammation of the spinal cord. **F. point**, see *Focus*. **F. planes**, planes passing through the foci perpendicular to the principal axis. **F. sclero'sis**, chronic indurated sclerosis, not diffused or disseminated.

**Fo'calize.** To bring to a focus. To restrict to a limited area or a central point.

**Fo'calized ep'ilepsy.** Jacksonian epilepsy.

**Fo'cil.** Name formerly given to the bones of the leg, as well as those of the forearm. **Great'er f.**, tibia or ulna. **Infe'rior f.**, ulna. **Les'ser f.**, fibula or radius. **Supe'rior f.**, radius.

**Fo'cus.** Point of meeting of rays of heat or of light when reflected or refracted. Centre of greatest force of any morbid process. *Conjugate foci* are so situated that a ray of light from one focus will be reflected to the other. Parallel rays, after being reflected or refracted, meet at the *principal focus*. **F. apoplec'ticus**, cavity remaining in encephalon after effusion of blood and its subsequent absorption.

**Fœnic'ulum** (dim. of *fœnum*, hay). Anethum. **F. aquat'icum**, Phellandrium aquaticum. **F. capilla'ceum**, F. vulgare. **F. dul'ce**, sweet fennel, variety of F. vulgare. **F. errat'icum**, Peucedanum silaus. **F. mari'num**, Crithmum maritimum. **F. officina'le**, anethum. **F. porci'num**, peucedanum. **F. vulga're**, anethum.

**Fœn'ugreek.** Trigonella fœnum.

**Fœ'num camelo'rum** (hay of camels). Juncus odoratus; Andropogon schœnanthus. **F. græ'cum**, Trigonella fœnum; fenugreek.

**Foers'ter's method.** Friction on the lens by pressing the cornea against it, to hasten maturation of a cataract. **F.'s opera'tion**, iridectomy made to facilitate artificial maturation of a cataract by F.'s method. **F.'s shift'ing type**, variations in the field of vision noted in neurotic states of traumatic origin, when a disk is moved in different directions before the eye.

**Fœ'tal.** Fetal.

**Fœta'tion.** Pregnancy; gestation.

**Fœ'ticide** (*fœtus*+*cædo*, to kill). Destruction of life of fœtus; criminal abortion. One who commits this crime.

**Fœt'id.** Fetid.

**Fœ'tor.** Offensive odor. **F. ala'rum**, disagreeable odor from the axillæ. **F. o'ris**, offensive breath.

**Fœ'tus.** Unborn young of any creature. Anatomists generally apply to the germ the name *embryo*, which it retains until the third month of gestation, and with some until the period of quickening, while *fœtus* is applied to it in its latter stages. The terms are often used indiscriminately. When the ovule has been fecundated in the ovarium it proceeds slowly toward, and enters the uterus, with which it becomes ultimately connected by means of the placenta. Generally there is but one fœtus; sometimes there are two; rarely three.

The following chronological table by Beaunis and Bouchard exhibits the progress of development of the fœtus (Gray):

*First week.* During this period the ovum is in the Fallopian tube. Having been fertilized in its upper part, it slowly passes down, undergoing segmentation, and reaches the uterus probably about the end of the first week. During this time it does not undergo much increase in size.

*Second Week.* The ovum rapidly increases in size, and becomes imbedded in the decidua, so that it is completely enclosed in the decidua reflexa by the end of this period. An ovum believed to be of the thirteenth day after conception is described by Reichert. There was no appearance of any embryonic structure. The equatorial margins of the ovum were beset with villi, but the surface in contact with the uterine wall and the one opposite to it were bare. In another ovum, described by His, believed to be of about the fourteenth day, there was a distinct indication of an embryo. There was a medullary groove bounded by folds; in front of this a slightly prominent ridge, the rudimentary heart. The amnion was formed, and the embryo was attached by a stalk, the allantois, to the inner surface of the chorion. It may be said, therefore, that these parts, the amnion and the allantois, and the first rudiments of the embryo, the medullary groove and the heart, are formed at the end of the second week.

*Third Week.* By the end of the third week the flexures of the embryo have taken place, so that it is strongly curved. The protovertebral disks, which begin to be formed early in the third week, present their full complement. In the nervous system the primary divisions of the brain are visible, and the primitive ocular and auditory vesicles are already formed. The primary circulation is established. The alimentary canal presents a straight tube communicating with the yolk-sac. The pharyngeal arches are formed. The limbs have appeared as short buds. The Wolffian bodies are visible.

*Fourth Week.* The umbilical vesicle has attained its full development. Projection of the caudal extremity. Projection of the upper and lower limbs. Cloacal aperture. The heart separates into a right and left heart. Spinal ganglia and anterior roots. Olfactory fossæ. Lungs. Pancreas.

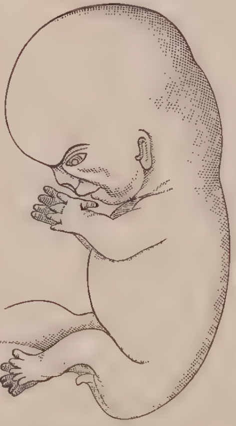
*Fifth Week.* Vascularity of the allantois in its whole extent. First trace of hands and feet. The primitive aorta divides into primitive aorta and pulmonary artery. Conduit of Müller and genital gland. Ossification of clavicle and lower jaw. Cartilage of Meckel.

*Sixth Week.* The activity of the umbilical vesicle ceases. The pharyngeal clefts disappear. The vertebral column, primitive cranium, and ribs assume the cartilaginous condition. Posterior roots of the nerves. Membranes of the nervous centres. Bladder. Kidneys. Tongue. Larynx. Thyroid gland. Germs of teeth. Genital tubercle and folds.

*Seventh Week.* The muscles begin to be perceptible. Points of ossification of the ribs, scapula, shafts of humerus, femur, tibia, intermaxillary bone, palate, upper jaw (its four points).

*Eighth Week.* Distinction of arm and forearm and of thigh and leg. Appearance of the interdigital clefts. Capsule of the lens and pupillary membrane. Completion of the interventricular and commencement of the interauricular septum. Salivary glands. Spleen. Suprarenal capsules. The larynx begins to become cartilaginous. All the vertebral bodies are cartilaginous. Points of ossification for the ulna, radius, fibula, and ilium. The two halves of the bony palate unite. Sympathetic nerve.

*Ninth Week.* Corpus striatum. Pericardium. Distinction between ovary and testicle. Formation of the genital furrow. Osseous nuclei of vertebral bodies and arches, frontal, vomer, malar bone, shafts of metacarpal bones, metatarsal bones, and phalanges. The union of the hard palate is completed. Gall-bladder.



Nine weeks' embryo. (His).

*Third Month.* Formation of the fetal placenta. The projection of the caudal extremity disappears. It is possible to distinguish the male and female organs at the commencement of the third month. The cloacal aperture is divided into two parts. The cartilaginous arches on the dorsal region of the spine close. Points of ossification for the occipital, sphenoid, os unguis, nasal bones, squamous portion of temporal and ischium. Orbital centre of superior maxillary bone. Commencement of formation of maxillary sinus. Pons Varolii. Fissure of Sylvius. Formation of eyelids and of hair and nails. Mammary gland. Epiglottis. Union of the testicle with the canals of the Wolffian body. Prostate.

*Fourth Month.* The closure of the cartilaginous arches of the spine is complete. Osseous points for the first sacral vertebræ and pubes. Ossification of the malleus and incus. Corpus callosum. Membranous lamina spiralis; cartilage of the Eustachian tube. Tympanic ring. Fat in subcutaneous cellular tissue. Tonsils. Closure of genital furrow and formation of scrotum and prepuce.

*Fifth Month.* The two layers of decidua begin to coalesce. Osseous nuclei of axis and odontoid process. Lateral points of first sacral vertebra; median points of second. Osseous points of lateral masses of ethmoid. Ossification of stapes and petrous bone. Ossification of germs of teeth. Appearance of germs of permanent teeth. Organ of Corti. Eruption of hair on head. Sudoriparous glands. Glands of Brunner. Follicles of tonsils and base of tongue. Lymphatic glands. Commencement of limitation of uterus and vagina.

*Sixth Month.* Points of ossification for the anterior root of the transverse process of the seventh cervical vertebra. Lateral points of second sacral vertebra; median points of third. The sacrovertebral angle forms. Osseous points of the manubrium sterni and of the os calcis. The cerebral hemisphere covers the cerebellum. Papillæ of the skin. Sebaceous glands. The free border of the nail projects from the corium of the dermis. Peyer's patches. The walls of the uterus thicken.

*Seventh Month.* Additional points of first sacral vertebra; lateral points of third; median point of fourth. First osseous point of body of sternum. Osseous point for astragalus. Disappearance of Meckel's cartilage. Cerebral convolutions. Insula of Reil. Separation of tubercula quadrigemina. Disappearance of pupillary membrane. The testicle passes into the vaginal process of the peritoneum.

*Eighth Month.* Additional points for the second sacral vertebra; lateral points for the fourth; median points for the fifth.

*Ninth Month.* Additional points for the third sacral vertebra; lateral points for the fifth. Osseous point for the middle turbinated bone; for the body and great cornu of the hyoid; for the second and third pieces of the body of the sternum; for the lower end of the femur. Ossification of the bony lamina spiralis and axis of the cochlea. Opening of the eyelids. The testicles are in the scrotum.

The following is a formula for determining the age of a fœtus by its length (Schmaus and Ewing): For the first five lunar months of pregnancy the length in centimetres is the square of the number of months; thus, the first month the length is 1 cm.; the second month, 4 cm.; the third month, 9 cm.; the fourth month, 16 cm.; the fifth month, 25 cm. For the last five months the length of the fœtus is the number of the month multiplied by five; thus, the sixth month the length is 30 cm.; the seventh month, 35 cm.; the tenth month, 50 cm.

**Fœ'tus, abdom'inal.** Ventral f. **Acephal'ic f.,** fetal monstrosity devoid of a head. **Al'ligator f.,** one affected with general keratosis. **Anencephal'ic f.,** fœtus in which the brain is not developed. **Circula'tion in the f.,** fetal circulation. **Compressed f.,** mummified fœtus flattened by the pressure of a second fœtus or pressed into a parchment-like mass against the walls of the uterus. **Exencephal'ic f.,** fœtus in which there is protrusion of the brain. **F. in fœ'tu,** monstrosity in which one fœtus is found contained in another; cryptodidymus. **Har'lequin f.,** alligator f. **Inclu'ded f.** or **f. inclu'sus,** f. in fœtu. **Mum'mified f.,** compressed or papyraceous f. **Ova'rian f.,** fœtus produced during ovarian pregnancy. **Papyra'ceous f.,** mummified fœtus, compressed f. **Pseudencephal'ic f.,** see *Pseudencephalus.* **Retained f.,** retention of the fœtus in the abdominal cavity in tubal pregnancy. **F. sanguinolen'tus,** dead fœtus with effusions of blood externally and internally. **Sec'ondary f.,** compressed f. **F. septimes'tris,** seven months' fœtus. **F. syrenifor'mis** (*syren,* mermaid), one with lower extremities conjoined. **Tu'bal f.,** f. developing in the Fallopian tube. **Ven'tral f.,** fœtus produced during abdominal pregnancy. **Vi'able f.** or **f. vita'lis,** fœtus that is viable or capable of independent life. **F. zephyr'ius,** mole.

**Fold** or **Folds.** Duplication of mucous or serous membranes between various structures, as aryteno-epiglottidean, recto-uterine, rectovesical, and vesicouterine folds. **Ar'nold's f.,** see *Arnold.* **Aryoepiglot'tic f.,** a duplicature of mucous membrane extending from the tip of the arytenoid cartilage to the side of the epiglottis. **Doug'las's f.,** recto-uterine folds. **D.'s semilu'nar f.,** see *Semilunar.* **Dun'can's f.,** see *Duncan.* **Gen'ital f.,** see *Genital.* **Glos'so-epiglot'tic** or **G.-epiglottid'ean f.,** f. of the mucous membrane of the tongue passing from its base to the epiglottis. **Hen′sing′s f.**, see *Hensing.* **Hippocam′pal f.**, hippocampal gyrus. **Hypoblas′tic f.**, duplication in the hypoblast, finally giving rise to the notochord. **Intes′tinal f. of blas′toderm,** splanchnopleure. **Kohl′rausch′s f.**, see *Kohlrausch.* **Lusch′ka′s f.**, see *Luschka.* **Mar′shall′s f.**, see *Marshall.* **Nélaton′s′ f.**, see *Nélaton.* **Occip′ital f.**, superior occipital convolution. **Paw′lik′s f.**, see *Pawlik.* **Posthippocam′pal f.**, subcalcarine gyrus. **Postmar′ginal f.**, præcuneus. **Postoccip′ital f.**, inferior occipital convolution. **Rath′ke′s f.**, see *Rathke.* **Recto-u′terine f.**, uterosacral ligament; folds of Douglas; duplications of peritoneum passing from the cervix uteri to the vicinity of the second sacral vertebra and enclosing the rectum. **Rectovag′inal f.**, Douglas′s pouch. **Rectoves′ical f.**, duplication of peritoneum passing from the rectum to the bladder. **F. of rec′tum,** semilunar folds in the upper part of the rectum. **Vesico-u′terine f.**, fibres from the muscular coat of the uterus passing to the bladder. **Vestig′ial f.**, see *Marshall.*

**Fo′lia** (pl. of folium). Leaves.

**Folia′ceous** (*folium,* leaf). Resembling a leaf.

**Fo′lian mus′cle.** Laxator tympani. **F. pro′cess,** processus gracilis of the malleus.

**Fo′liate.** Leaf-like. **F. papil′læ,** fungiform papillæ at the tip of the tongue.

**Fo′liated.** Composed of leaves; having a leaf-like appearance or shape.

**Fo′lioles.** Small leaves. **F. of cerebel′lum,** cerebellar convolutions. **F. of di′aphragm,** divisions of the central tendon of the diaphragm.

**Fo′lium.** Leaf; anterior fontanelle; lamina of the cerebellum. **F. cacu′minis** (*cacumen,* top), lobule at the back part of the upper surface of the vermiform process of the cerebellum. **F. centra′le,** central lobe of the cerebellum. **F. supraluna′re,** anterior crescentic lobe of the cerebellum.

**Fo′lius, mus′cle of, pro′cess of.** See *Folian.*

**Fol′licle** or **fol′licles** (dim. of *follis,* bag). Small, secreting bag-like cavity, crypt, or gland, formed by depression of the skin or mucous membranes. Follicular secretions keep parts on which they are poured supple and moist, and preserve them from the action of irritating bodies with which they habitually come in contact. See *Crypta.* **Ag′gregate f.**, aggregated glands. **Ag′minate** or **ag′minated f.**, agminated glands. **Air-f.**, see *Folliculus aëris.* **Cil′iary f.**, Meibomian glands. **Closed f.**, solitary and agminated glands of the intestines. **Den′tal f.**, sac of a tooth in the process of development. **Graaf′ian f.**, follicles or vesicles of De Graaf; Graafian or ovarian vesicles; small spherical vesicles in the stroma of the ovary, having at least two coats, the outer termed *ovicapsule* and *tunic of the ovisac,* the inner *ovisac* and *membrana propria;* see *Membrana granulosa.* They exist in the fœtus. The ovum or ovule is contained in and formed by them. The follicles themselves are ovisacs. The interior of the follicles contains a clear, light yellowish fluid (liquor folliculi), of the density of the serum of the blood, in which are almost always isolated granules, nuclei, and cells, which appear to be detached portions of the membrana granulosa. **Hair f.**, see *Hair.* **F. of intes′tines,** see *Intestine.* **F. of Lie′berkühn,** see *Intestine.* **F. of Littré′,** glands of Littré. **Lymphat′ic f.**, lymphatic glands. **Malpigh′ian f.**, Malpighian corpuscles. **Naboth′ian f.**, vesicles in the mucous membrane in the canal of the cervix uteri formed from obstructed follicles. **Nail f.**, see *Nail.* **Ova′rian f.**, Graafian f. **Pal′pebral f.**, glands of Meibomius. **F. of Pey′er,** Peyeri glandulæ. **Seba′ceous f.**, sebaceous glands. **Sol′itary f.**, solitary glands, Brunner′s glands. **Splen′ic f.**, Malpighian corpuscles. **Sudorip′arous f.**, sudoriparous glands. **Syno′vial f.**, bursæ mucosæ. **F. of tooth,** see *Groove, dental.*

**Fol′liclis.** A rare dermatosis of strumous subjects; the eruption is at first macular and then nodular and pustular, sometimes resembling lupus erythematosus.

**Follic′ular, follic′ulous,** or **follic′ulose.** Relating or appertaining to follicles. **F. bod′y,** gland of Bartholin. **F. coli′tis,** inflammation of the lymph follicles of the ileum and colon, existing in children who are fed artificially. **F. degenera′tion of the cer′vix,** see *Cystic degeneration.* **F. eleva′tions,** pearly tubercles. **F. enteri′tis,** inflammation of the lining membrane of the intestines, and particularly of solitary glands. **F. inflamma′tion,** inflammation affecting crypts or follicles, folliculitis. **F. mange,** a skin disease of the dog caused by the presence of Acarus folliculorum. **F. ophthal′mia,** see *Ophthalmia.* **F. tonsilli′tis,** see *Tonsillitis.* **F. tu′mor,** sebaceous cyst.

**Follic′uli** (pl. of folliculus). Follicles.

**Folliculi′tis.** Follicular inflammation. **F. absce′dens infan′tum,** furuncle in children, with successive development of boils. **Ag′minate f.**, inflammation of a group of intestinal follicles. **F. bar′bæ,** f. of the beard; sycosis. **F. blennorrhag′ica,** gonorrhœa complicated with involvement of the follicles of Morgagni. **F. decal′vans** or **epilato′ria,** inflammation of the hair follicles, with loss of hairs and atrophied condition of the skin. **F. dissemina′ta,** necrotic granuloma. **F. exul′cerans,** hydradenitis destruens suppurativa. **F. nu′chæ scleroti′zans,** sycosis nuchæ. **F. pilo′rum,** sycosis. **F. seba′cea,** acne. **Ureth′ral f.**, inflammation of the follicles of Morgagni. **F. variolifor′mis,** acne varioliformis; see *Granuloma, necrotic.* **Vul′var f.**, inflammation of the sebaceous follicles of the vulva.

**Follic′ulose.** Of a follicular character. **F. gland,** follicle.

**Folliculo′sis.** Disease of the follicles.

**Follic′ulus.** Follicle. **F. a′ëris,** air chamber; space at the larger end of the bird′s egg, formed by the separation of two layers of the shell membrane. **F. den′tis,** dental follicle. **F. fel′lis** or **fel′leus,** gall-bladder. **F. genita′lis,** scrotum. **F. Graaf′ii,** Graafian follicle. **F. muco′sus,** see *Follicle.* **F. ova′rius,** Graafian follicle. **F. pi′li,** see *Hair.*

**Foltz′s valve.** Fold of mucous membrane at the lacrymal duct.

**Foment′** (*foveo,* to keep warm). To apply a fomentation to a part.

**Fomenta′tion.** Application of cloths previously dipped in hot water or some medicated decoction, acting chiefly by virtue of the warmth and moisture, except in the case of narcotic fomentations, when some additional effect of a specific character is obtained. A dry fomentation is a warm, dry application, as a hot brick wrapped in flannel, a bag half filled with chamomile flowers made hot, etc.

**Fo′mes,** pl. *fo′mites* (fuel). Substance supposed to retain contagious effluvia—as woollen goods, feathers, cotton, etc.—and thus to act as disease-producers.

**Fons** (fountain). A fontanelle. **F. lacryma′rum,** see *Canthus.* **F. pul′sans** or **pulsat′ilis,** anterior fontanelle. **F. sote′rius,** mineral water. **F. vita′lis,** respiratory centre.

**Fontai′nea panche′ri.** Tree of New Caledonia; oil of the seeds is used externally as an epispastic, and internally as a drastic.

**Fonta′na′s bands** (Felix Fontana, Italian physiologist of the eighteenth century). Bands or wavy bundles of nerve fibres in locations where great motility is necessary. **F.′s canal′,** triangular canal at the inner side of the ciliary circle; partly formed by the groove at the inner edge of the cornea and sclerotica. **F.′s mark′ings,** minute transverse markings or lines on nerves that have been divided. **F.′s spa′ces,** spaces between the prolongations of the ligamentum pectinatum or suspensory ligament of the iris.

**Fontanel′** or **Fontanel′la.** Fontanelle.

**Fontanelle′** (dim. of *fons,* fountain). Name given to a space occupied by a cartilaginous membrane in the fœtus and newborn child, situated at the union of the angles of the bones of the canium. There are six fontanelles: *great* or *sincipital* or *anterior,* situated at the junction of the sagittal and coronal sutures; *small* or *bregmatic, occipital* or *posterior,* situated at the part where the posterior and superior angles of the parietal bones unite with the upper part of the os occipitis; two *sphenoidal,* in the temporal fossæ; two *mastoid* or *of Casserius,* at the union of the parietal, occipital, and temporal bones. Occasionally there is another, the *sagittal* or *Gerdy's,* which is rather a limited defect in the sagittal suture than an actual fontanelle.

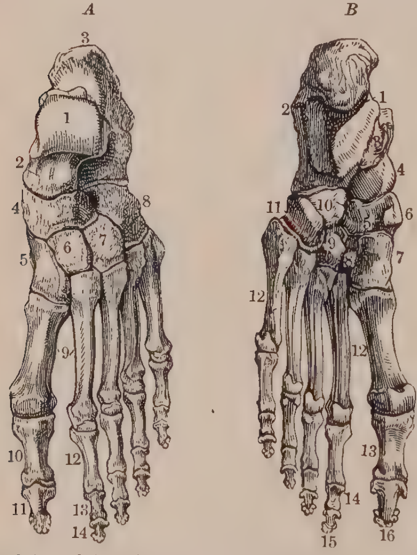
**Fontic′ulus** (dim. of *fons,* fountain). Fontanelle. Also an issue or a small ulcer produced by art, either by caustics or cutting instruments, the discharge from which is kept up, with a view to fulfil certain therapeutical indications, by means of a pea or a pea-shaped piece of wax or other substance placed in it—a pea-issue.

**Food.** An article of diet composed of one or more foodstuffs. Aliment. **Chem′ical f.,** see *Ferri phosphas.* **Farina′ceous f.,** see *Farinaceous.* **F. of the gods,** asafœtida. **Isodynam′ic f.,** one of two or more foods that produce equal amounts of heat. **Plas′tic f.,** according to Liebig's teaching the nitrogenous metabolism of the body depends on the function of the proteids to make tissue; therefore these have received the name plastic foods. **Respi′ratory f.,** according to Liebig's teaching one of the fats or carbohydrates. **F. yolk,** substance in cells of the ovum for after-nutrition of the embryo.

**Food′stuff.** Generic term to include all chemical compounds employed for nourishment, growth, and repair of the organism, such as starch, sugar, fat, and albumin. See *Aliment.*

**Fool's parsley.** Æthusa cynapium.

**Foot.** Pes. **F. bath,** bath for the feet; pediluvium. **F. clo′nus,** spasmodic contraction of the ankle-joint upon extension of the knee and rapidly executed pressure against the front of the sole of the foot. **Dan′gle f.,** foot-drop. **F.-drop,** dropping of the foot through paralysis of the flexor muscles in the leg. **Flat f.,** pes planus. **Fried′reich's f.,** see *Freidreich.* **Fun′gous f. of In′dia,** mycetoma; Madura foot. **Morand's′ f.,** see *Morand.* **Mor′ton's f.,** metatarsalgia. **F. phenom′enon,** f. clonus. **F.-plate,** the base of the stapes. **F.-pound,** a measure of energy; the force required to raise a pound weight one foot high. **F. presenta′tion,** footling case; descent of the fœtus feet first. **F. re′flex,** f. clonus. **F.-rot,** paronychia of sheep. **Splay f.,** talipes valgus. **Tabet′ic f.,** hypertrophy of the bones of the foot in tabes.



Skeleton of the left foot. *A.* Upper surface or dorsum: 1, astragalus on its upper face; 2, anterior face articulating with the naviculare; 3, os calcis; 4, naviculare os scaphoides; 5, internal cuneiform; 6, middle cuneiform; 7, external cuneiform; 8, cuboid bone; 9, metatarsal bones; 10, first phalanx, and 11, second phalanx of big toe; 12, 13, 14, first, second, and third phalanges of other toes.

*B.* Under side, or sole: 1, lesser apophysis of os calcis; 2, outer side of calcis; 3, groove for flexor longus pollicis pedis tendon; 4, anterior face of astragalus; 5, naviculare; 6, its tuberosity on inner side; 7, internal cuneiform; 8, middle cuneiform; 9, external cuneiform; 10, cuboid bone; 11, groove for peroneus longus tendon; 12, 12, metatarsal bones; 13, first phalanges of toes; 14, second phalanges of toes; 15, third phalanges of toes; 16, last phalanx of great toe.

**Foot-and-mouth disease′.** Eczema epizoöticum; a disease of animals, communicable also to man, characterized by an eruption of vesicles in the mouth and about the feet, febrile disturbance, loss of appetite, and lameness.

**Foot′ball ear.** Fibrous thickening and deformity of the pinna of the ear following hæmatoma from contusions received in football. **F. knee,** inflammation of the periosteum about the knee from excessive use of the extensors of the thigh.

**Foot′ling case** or **presenta′tion.** Presentation of the foot or feet in parturition.

**Fora′men** (*foro,* to pierce). A hole in a bone, giving passage usually to a nerve or blood-vessel. See also *Foramina.* **F. acus′ticum,** meatus auditorius internus. **F. alveola′re ante′rius,** see *Palatine canals.* **F. a. infe′rius,** inferior dental foramen. **F. a. poste′rius,** see *Palatine canals.* **F. am′plum pel′vis,** obturator foramen. **F. anon′ymum Ferrei′ni,** opening into the aquæductus Fallopii. **F. aor′ticum,** aortic opening of the diaphragm. **Ap′ical f.,** opening at the end of the root of a tooth for entrance of the nervous supply of the pulp. **F. aquæduc′tus Fallo′pii,** stylomastoid foramen. **Arach′noid f.,** f. of Magendie. **F. atlanta′le,** foramen in the atlas formed by partial conversion of a groove on the upper surface into a foramen. **F. audito′rium exter′num,** see *Auditory canal, external.* **F. a. inter′num,** see *Auditory canal, internal.* **F. of Bar′tholin,** obturator foramen. **F. of Bichat′,** arachnoid canal. **F. of Botal′,** fetal opening between the auricles of the heart. **F. of Boz′zi,** depression near the centre of the yellow spot of the eye in the line of vision. **F. cæ′cum ante′rius,** deep depression at the base of the brain in front of the pons. **F. c. of fron′tal bone,** small cavity at the inferior extremity of the internal coronal crest. **F. c. of medul′la oblonga′ta,** tolerably deep fossa at the point where the median furrow at the anterior surface of the medulla oblongata meets the pons. **F. c. Morga′gni,** f. cæcum of the tongue. **F. c. os′sis maxilla′ris superio′ris,** see *Palatine canals.* **F. c. of phar′ynx,** slight pit seen occasionally taking the place of the pharyngeal bursa. **F. c. poste′rius,** f. cæcum of the medulla oblongata. **F. c. ret′inæ,** f. of Bozzi. **F. c. retro-ana′le,** slight pit seen occasionally in the newborn behind the anus. **F. c. of tongue,** small cavity in the middle of the upper surface of the tongue near its base; opening of the duct of the thyroid gland continued from fetal life. **F. c. of Vicq d'Azyr′,** f. cæcum of the medulla oblongata. **F. carot′icoclinoide′um,** foramen formed occasionally by conversion of the carotid groove, a spiculum of bone bridging it over. **F. carot′icum exter′num,** carotid foramen. **F. c. inter′num,** internal opening of the carotid canal. **Carot′id f.,** see *Carotid canal.* **F. centra′le,** central foramen, surrounded by limbus luteus and the yellow spot of the retina, discovered by Sömmering, situated about two lines to the outside of the optic nerve, and in the direction of the axis of the eye; not strictly a foramen. **F. c. coch′leæ,** the opening in the depression at the bottom of the internal auditory meatus. **F. c. ret′inæ,** f. centrale. **F. clinoide′ocarot′icum,** f. caroticoclinoideum. **F. commu′ne ante′rius,** passage between the third and lateral ventricle; vulva. **F. c. poste′rius,** anus. **Con′dyloid f.,** the *anterior* is a foramen in the occipital bone for the passage of the hypoglossal nerve; the *posterior* is an opening behind the condyles of the same bone. **F. cor′neæ,** opening made by the anterior border of the sclerotic on removal of the cornea. **F. cos′totransversa′rium,** opening between the rib and articulating transverse process of the vertebra. **Cot′yloid f.,** see *Cotyloid.* **Den′tal f.,** the *inferior* is a f. on the internal surface of the ramus of the lower jaw for the passage of the inferior dental nerve and vessels; the *superior* is the same as Scarpa's f. **F. dex′trum diaphrag′matis,** opening for the ascending vena cava in the central tendon of the diaphragm. **F. epiplo′icum,** f. of Winslow. **F. ethmoide′um,** internal orbital foramen. **F. of Ferrein′,** hiatus Fallopii. **F. fronta′le,** frontal notch on the supraorbital ridge converted into a foramen. **F. of Ga′len,** see *Galen.* **F. of Har′tigan,** see *Hartigan.* **F. of Husch′ke,** see *Huschke.* **F. incisi′vum,** see *Palatine canal.* **F. infraorbita′le,** see *Suborbital canal.* **F. infrapubia′num,** obturator foramen. **F. infrapyrifor′me,** opening in the great sciatic notch below the pyriformis muscle. **F. interclinoide′um commu′ne,** opening or canal formed by the osseous union of the anterior and posterior clinoid processes. **Interver′tebral f.,** see *Vertebræ.* **F. irregula′re,** jugular foramen. **F. ischiad′icum,** foramen formed by the sacrosciatic ligament passing over the ischiatic notch. **F. is′chiopu′bicum,** obturator foramen. **F. jugula′re,** f. lacerum posterius. **F. jugula′re spu′rium,** foramen occasionally seen in the temporal bone, between the glenoid fossa and the tympanic portion. **F. of Key and Ret′zius,** see *Key and Retzius.* **F. labia′le,** f. mentale. **F. lac′erum ante′rius,** see *Lacerum.* **F. l. in ba′si cra′nii,** f. lacerum posterius. **F. l. infe′rius,** sphenomaxillary fissure. **F. l. me′dium,** opening between the petrous portion of the temporal bone and the great wing of the sphenoid. **F. l. orbita′le,** sphenoidal fissure. **F. l. poste′rius,** jugular foramen; see *Lacerum.* **F. l. supe′rius,** sphenoidal fissure. **F. of Lusch′ka,** see *Luschka.* **F. of Magen′die,** opening in pia mater covering the fourth ventricle. **F. mag′num,** large opening in the occipital bone for the passage of the spinal cord and medulla oblongata, vertebral arteries, the spinal roots of the spinal accessory nerves, communicating veins from the sinuses of the brain, and membranes common to the brain and spinal cord. **F. mandibula′re poste′rius,** inferior dental foramen. **Mas′toid f.,** foramen behind the mastoid process of the temporal bone, giving passage to a small artery and vein. **F. maxilla′re ante′rius,** f. mentale. **F. maxilla′re infe′rius, inter′num,** or **poste′rius,** inferior dental foramen. **F. medul′læ spina′lis,** vertebral foramen. **Med′ullary f.,** opening through which a nutrient vessel passes to the medullary structure of bone. **Meibo′mian f.,** see *Meibomian.* **F. meninge′um,** small foramen on the outer wall of the orbit, at the upper portion of the great wing of the sphenoid or in the suture between it and the frontal bone. **F. menta′le,** mental foramen, external opening of the inferior dental canal on the lower jaw. **F. menta′le ante′rius,** an additional mental foramen occasionally met with. **F. menta′le infe′rius,** inferior dental foramen. **F. of Monro′,** opening behind the anterior pillar of the fornix, somewhat above the anterior commissure, by which the third ventricle communicates with the lateral ventricle. **F. Morgagn′ii,** f. cæcum of the tongue. **F. nasa′le** or **na′soethmoida′le,** small opening in the nasal bone. **Nu′trient f.** or **F. nutrit′ium,** foramen in a bone for the passage of the medullary artery. **Obtura′tor f.,** see *Obturator.* **F. occipita′le mag′num,** foramen magnum. **F. o. supe′rius,** large elliptical opening formed by extension of the tentorium, and occupied by the crura cerebri. **F. oc′uli,** pupil. **F. œsophage′um,** œsophageal or cardiac orifice of the stomach; elliptical opening in the diaphragm for transmission of the œsophagus and vagus nerves. **Olfac′tory f.,** one of numerous foramina in the cribriform plate of the ethmoid bone **F. oö′des,** foramen ovale. **F. opercula′re,** the orifice in the dura mater by which the infundibulum reaches the pituitary fossa. **F. op′ticum,** a round opening near the base of the lesser wing of the sphenoid for passage of the optic nerve. **F. o. choroide′æ,** passage for the optic nerve through the choroid; see *Optic nerves.* **F. o. sclerot′icæ,** passage for the optic nerve through the sclerotic coat. **F. orbita′le inter′num,** see *Orbital.* **F. o. supe′rius,** see *Orbital.* **F. ova′le,** obturator foramen, foramen in the inner wall of the middle ear, opening into the vestibule; foramen in the sphenoid bone, *f. ovale of sphenoid bone,* through which the branch of the fifth pair issues from the cranium; aperture in the fœtus between the auricles of the heart, *f. of Botal, f. ovale of heart;* also fenestra ovalis and the foramen of Monro. **F. of Pacchio′ni,** f. occipitale superius. **F. palati′num ante′rius,** see *Palatine canals.* **F. p. latera′le,** passage from the posterior palatine canal to the middle meatus of the nose. **F. p. ma′jus,** posterior palatine foramen. **F. p. poste′rius,** posterior palatine foramen; inferior opening of the accessory palatine canals. **F. palatomaxilla′re,** see *Palatine canals.* **Pari′etal f.,** occasional foramen near the upper edge of the parietal bones for the passage of artery and vein. **F. profun′dum,** sternal infundibulum. **F. pter′ygopalati′num,** posterior palatine foramen; see *Sphenoid bone.* **F. quadra′tum** or **quadrilat′erum,** venæ cavæ. **F. reces′sus latera′lis,** opening through the pia mater in the lateral recess of the fourth ventricle. **F. Rivi′ni** or **rivinia′num,** opening or slit in the bony ring of attachment of the membrana tympani. **F. rotun′dum,** opening at the anterior part of the base of the greater wing of the sphenoid, for passage of the superior maxillary division of the fifth pair; fenestra rotunda. **Sa′cral f.,** one of four openings on each side, on the anterior and posterior surfaces of the sacrum, communicating with the sacral canal. **Sacrosciat′ic f.,** the *great* is an opening between the lesser sacrosciatic ligament and the innominate bone; the *smaller* or *lesser* is an opening between the greater and lesser sacrosciatic ligaments and the portion of the innominate bone lying between the spine of the ischium and the tuberosity. **F. saphe′næ,** saphenous opening. **F. scapula′re,** suprascapular foramen. **F. of Scar′pa,** see *Scarpa.* **F. sclerot′icæ anti′cum,** f. corneæ. **F. sclerot′icæ posti′cum,** f. opticum scleroticæ. **F. singula′re,** foramen in the small fossa at the bottom of the internal auditory meatus, transmitting a branch of the auditory nerve. **F. sinis′trum infe′rius diaphrag′matis,** opening for the passage of the aorta, back of the diaphragm. **F. sinis′trum supe′rius diaphrag′matis,** f. œsophageum. **F. pro si′nu petro′so inferio′ri,** occasional opening in the petrobasilar fissure, at the base of the skull, for the discharge of the inferior petrosal sinus. **F. of Söm′mering,** f. centrale of the retina. **Sphenopal′atine f.,** see *Palate bone.* **F. sphenospino′sum,** f. spinosum. **F. spina′le,** vertebral foramen; f. spinosum. **F. spino′sum,** small foramen in front of the spinous process of the sphenoid bone, through which the middle artery of the dura mater enters the cranium. **F. Steno′nis** or **F. Stenso′ni,** see *Foramina of Stenson.* **Ster′nal f.,** orifice occasionally found between the third and fourth pieces of the second bone of the sternum from arrest of development. **F. stylomastoide′um,** foramen at the inferior surface of the petrous portion of the temporal bone, terminating the aqueduct of Fallopius, and giving passage to the facial nerve. **F. subarcua′tum,** aperture on the posterior surface of the petrous bone of the fœtus. **F. supe′rius et ma′jus,** helicotrema. **Supraor′bital f.,** an opening in the upper wall of the orbit for the passage of the supraorbital vessels and nerve. **F. suprapyrifor′me,** opening in the great sciatic notch, above the pyramidalis muscle, for passage of the gluteal vessels and the superior gluteal nerve from the pelvis. **F. sutu′ræ petro-**

**basila′ris anom′alum** f. pro sinu petroso inferiori. **F. of Tari′ni** or **Tari′nus,** hiatus Fallopii. **F. of Thebe′sius,** see *Foramina thebesii*. **F. thyroide′um,** obturator foramen; aperture in the thyroid cartilage for the passage of the superior laryngeal artery. **F. transversa′le** aperture in the transverse process of a cervical vertebra for the passage of the vertebral artery and vein. **F. ve′næ ca′væ,** foramen in the diaphragm through which the vena cava passes. **F. ve′næ saphe′næ,** saphenous opening. **F. veno′sum,** f. venæ cavæ. **F. vertebra′le,** see *Vertebræ*. **Vertebrarte′rial f.,** f. in the transverse process of a cervical vertebra. **F. of Vesa′lius,** a small aperture in the sphenoid bone at the inner side of the foramen ovale. **F. vo′meris,** posterior opening of the canal between the sphenoid bone and the vomer; canalis vomeris. **F. of Wins′low,** hiatus of Winslow. **F. zygomat′icofacia′le,** opening on the face of the temporomalar canal. **F. zygomat′ico-orbita′le,** opening in the orbit of the temporomalar canal. **F. zygomat′icum ante′rius** or **exter′num** or **facia′le,** f. zygomaticofaciale. **F. zygomat′icum inter′num** or **orbita′le** or **supe′rius,** f. zygomatico-orbitale.

**Foram′ina** (pl. of foramen) **carot′icotympan′ica.** Minute openings on the external surface of the carotid canal communicating with the tympanum. **Con′dyloid f.,** four foramina in the occipital bone. **F. conjuga′ta** or **conjugatio′nis,** intervertebral foramina. **F. cribro′sa,** apertures in the horizontal plate of the ethmoid for the olfactory nerve. **F. of di′aphragm,** see *Diaphragm*. **F. diplo′ica,** foramina of the diploic canals. **F. intersacra′lia,** apertures between the sacral canal and the intersacral canals. **F. ischiad′ica,** foramina formed by the sacrosciatic ligaments passing across the sciatic notches. **F. of Morgagn′i,** see *Urethra*. **F. nervi′na,** apertures in the labium tympanicum through which the auditory nerve passes to the organ of Corti. **F. nutri′tia os′sium,** nutrient foramina of bones. **F. orbita′ria,** ethmoidal foramina. **F. palati′na mino′ra,** accessory palatine foramina. **F. papilla′ria,** minute openings of the excretory tubes on the papillæ of the kidney. **F. of Scar′pa,** openings in the line of the articulation of the palatal processes of the upper jawbones. **F. of Sten′son,** two lateral foramina which assist in making the anterior palatine canal. **F. Thebe′sii,** openings resembling vascular orifices, found below the orifice of the vena cava superior in the right auricle, and supposed to be the openings of veins, venæ minimæ cordis. **F. transversa′ria accesso′ria,** occasional accessory foramina in the transverse processes of the cervical vertebræ.

**Foramin′ula** (small foramina) **carot′icotympan′ica.** Foramina caroticotympanica.

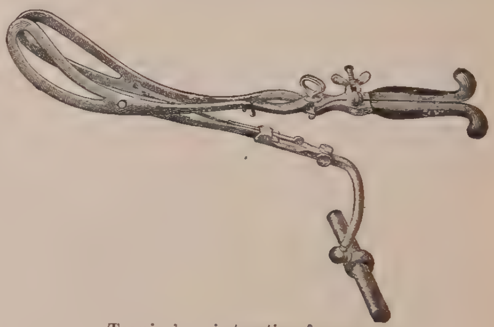
**Forbes's amputa′tion.** Modification of Chopart's amputation, in which the scaphoid bone and part of the cuboid are retained. **F.'s micrococ′cus,** a micrococcus found in diseased larvæ of the cabbage butterfly.

**Force** (*fortis*, strong). Power producing action. Powers inherent in the organization are called vital forces. Organic force and muscular force designate that of the organs in general, or of the muscles in particular; to the latter the word *dynamic* corresponds, and the absence of this force is termed *adynamia*. **F. of assimila′tion,** plastic force. **Cap′illary f.,** capillary attraction. **Catalyt′ic f.,** see *Catalysis*. **Cell f.,** see *Cell force*. **F. of forma′tion,** plastic force. **Germ f.,** plastic force. **Metabol′ic f.,** see *Metabolic force*. **F. of nutri′tion,** plastic force. **Osmo′tic f.,** see *Osmotic force*. **F. of vegeta′tion,** plastic force. **Vi′tal f.,** quality of vital power that distinguishes living matter from the dead.

**Forced feed′ing.** Feeding by means of the stomach-tube required in certain cases of insanity and of attempted suicide. **F. move′ments,** compulsory movements caused by lesion of the cerebellum.

**For′ceps.** Pincers. Instrument for removing bodies which it would be inconvenient or impracticable to seize with the fingers. Various kinds of forceps are employed by the surgeon, obstetrician, or dentist. Term also applied to fibres which curve backward into the posterior lobes from the posterior border of the corpus callosum. **Alve′olar f.,** f. for removing portions of the alveolar process. **Ante′rior** or **mi′nor f.,** prolongation of the fibres from the corpus callosum to the frontal lobe. **Ax′is-trac′tion f.,** obstetrical forceps provided with a device for exerting downward and backward traction. **Bone f.,** an instrument used for cutting bone. **Dress′ing f.,** a f. with handles like those of a pair of scissors, used in removing soiled dressings from a wound. **Ep′ilating f.,** f. for pulling out hairs. **Hæmostat′ic f. f.,** for compressing a bleeding artery. **Obstet′rical f.,** f. with large rounded blades, of a shape to grasp the head of the fœtus, employed to expedite the birth of the child. **Poste′rior** or **ma′jor f.** is a collection of fibres passing backward and outward from the corpus callosum.

Jewett's obstetrical forceps.



Tarnier's axis-traction forceps.

**For′cipate.** Having the shape of a forceps.

**For′cipressure.** Compression of a bleeding vessel by spring forceps.

**Fore.** Before or anterior, as forebrain, forearm, etc.

**Fore′arm.** Part of the upper extremity comprised between the arm and the hand, composed of two bones (radius and ulna) and twenty muscles.

**Fore′brain.** Expansion in the fœtus at the anterior extremity of the medullary tube; prosencephalon.

**Fore′finger.** The index finger.

**Fore′front.** Forehead.

**Fore′gut.** Anterior portion of the alimentary embryonic canal, including the pharynx, œsophagus, stomach, and duodenum.

**Fore′head.** The brow; front part of the head.

**For′eign bod′y.** Extraneous body present in canals, organs, or viscera, in which it may cause irritation or inflammation.

**Forel's′ decussa′tion.** Ventral interlacing of the tegmentum or upper portion of the main body of the peduncular fibres of the cerebrum.

**Fore′limb.** Upper extremity of man; anterior extremity of animals.

**Fore′milk.** Colostrum.

**Fore′neck.** Front of the neck; throat.

**Foren′sic** (*forum*, court of justice). Relating to law. **F. anat′omy,** see *Anatomy*. **F. med′icine,** legal medicine; medical jurisprudence.

**Fore′skin.** Prepuce.

**Fore′top.** Front.

**Fore′waters.** The discharge in hydrorrhœa gravidarum.

**For′fex.** Scissors; forceps. **F. denta′ria,** dental forceps.

**Forfic′ula auricula′ris** (dim. of *forfex*, scissors). Earwig; insect of the order *Orthoptera*, which occasionally enters the meatus auditorius externus and excites intense pain. It may be destroyed by tobacco smoke or by oil placed in the meatus.

**Forget′-me-not.** Myosotis arvensis; expectorant properties. Ajuga chamæpitys; Veronica chamædrys.

**For′macoll.** Formaldehyde gelatin.

**For′mad's kid′neys.** Hypertrophy and elongation of these organs caused by chronic alcoholism.

**For′magen.** Dental cement.

**For′mal.** Methylal; methylene dimethylate.

**Formalbu′min.** Combination of formaldehyde and casein, employed externally as an antiseptic dressing for wounds.

**Formal′dehyde.** $CH_2O$. A gaseous body prepared by subjecting methyl-alcohol to oxidation. A powerful germicide, used either in aqueous solution (formalin) or as a vapor. See *Formalin*. **F. casein′,** compound of the two ingredients, externally antiseptic in surgery. **F. gelatin′,** glutol. **F. tan′nin-albu′minate,** astringent and antiseptic to the stomach and bowels, when taken internally.

**Formalin′.** Formic aldehyde; formol. A 40 per cent. solution of chemically pure formaldehyde in water; germicide, deodorant, and antizymotic; employed for arresting development of bacterial cultures and for hardening microscopic specimens. **F. gelatin′,** glutol.

**Form′alith.** A porous block saturated with formalin for local disinfection.

**For′mamide.** Amide of formyl, $NH_2$,CHO.

**Forman′ilide.** $C_6H_5NH$,COH. Produced by digestion of anilin with formic acid, or by heating it with oxalic acid; antipyretic and analgesic; dose, gr. ij–v (0.13–0.32). Externally, applied in powder, or by hypodermatic injection, it is a local anæsthetic.

**For′mate.** A salt of formic acid.

**Forma′tio.** Formation; membrane. **F. granulo′sa,** membrana granulosa. **F. claustra′lis,** the fifth layer in the cortex of the cerebrum. **F. reticula′ris,** two tracts of nervous substance—one gray, the other white—in the medulla oblongata are so called.

**Forma′tion.** Act of forming or growing; body or substance so formed. **New f.,** neoplasm. **Retic′ular f.,** formatio reticularis.

**Form′ative** (*formo*, to form). Plastic. **F. cells,** large round cells beneath the hypoblast. **F. yolk,** that portion of the ovum from which the embryo is developed.

**Formed mate′rial.** Every cell is, according to Beale, composed of matter in two conditions: living and formative germinal matter, and lifeless formed material; the former selects nutrient matter, which permeates the latter in its passage toward the germinal matter.

**For′mic acid.** $HCHO_2$. Acid originally procured from red ants; an oxidation product of methylic acid; exists in stings of insects. Diluted with water, it has been used externally on paralyzed limbs. **F. al′dehyde,** formaldehyde. **F. e′ther,** $C_2H_5CHO_2$, colorless, soluble liquid with peach-kernel odor, procured by distillation of a mixture of formate of sodium, alcohol, and sulphuric acid.

**Formi′ca.** A genus of the family *Formicidæ*. Ant. The insect contains an acid juice and an oil, formerly extolled as aphrodisiacs. The chrysalides of the animal are said to be diuretic and carminative, and have been used in dropsy. A black wart, verruca formicaria, is so called because the pain attending it resembles the biting of an ant. Varicose tumor on the anus and glans penis; miliary herpes. Abscess. **F. ambulato′ria,** herpes circinatus. **F. corrosi′va,** herpes exedens, herpes esthiomenus, herpes phlyctænodes; lupus erythematodes. **F. ru′fa,** wood ant, red ant; formerly source of formic acid.

**For′micant** (*formica*, ant). Epithet given to the pulse, *pulsus formicans*, when extremely small, scarcely perceptible, unequal, and communicating a sensation like that of the motion of an ant felt through a thin texture.

**Formica′tion** (*formica*, ant). Itching or irritating sensation, as if ants were creeping on the skin.

**Formin′.** Urotropin. **F. sal′icylate,** saliformin.

**For′mix** (*formica*, ant). Herpes esthiomenus; lupus.

**Formochlo′ral.** A substance used for disinfecting purposes, being an aqueous solution of formaldehyde combined with 30 per cent. of calcium chloride. When heated to 135° C., formaldehyde is given off.

**Formoforin′.** A mixture of formaldehyde, thymol, zinc oxide, and starch, employed externally in excessive perspiration of the feet.

**Form′oform.** Formoforin.

**Form′ol.** See *Formalin*.

**Formopyrin′.** Obtained from the action of a solution of formaldehyde on a solution of antipyrin.

**Form′ose.** A combination of saccharine principles having the composition $C_6H_{12}O_6$, produced by isomeric modifications taking place in formaldehyde.

**For′mula** (dim. of *forma*, form or manner). Prescription or detailed statement of the ingredients of a prescription. A mathematical equation. A collection of symbols expressing the chemical constitution of a body.

**For′mulary.** Collection of medical formulæ.

**For′myl.** Radical of formic acid, CHO. **F. bro′mide,** bromoform. **F. chlo′ride** or **perchlo′ride,** chloroform. **F. phenacetin′,** antiseptic. **F. para-am′idophen′yl-ether,** an antidote to strychnine. **F. phenetidin′,** f. phenacetin. **F. piperidin′,** an oily, soluble liquid obtained by the action of formamide on piperidin. **F. terbro′mide,** bromoform. **F. teri′odide,** iodoform. **F. tribro′mide,** bromoform. **F. trichlo′ride,** chloroform, **F. trii′odide,** iodoform.

**Formyl′ic acid.** Formic acid.

**Form′ylum.** Formyl. **F. chlora′tum,** chloroform. **F. ioda′tum,** iodoform. **F. perchlora′tum** or **trichlora′tum,** chloroform.

**For′nical.** Relating to the fornix.

**For′nicate** (fornix). Arched or vaulted. **F. convolu′tion** or **gy′rus,** gyrus fornicatus.

**For′nices** (pl. of fornix) **arteria′rum.** Arches of branches of the renal artery passing from one part of the kidney to another. **F. vasculo′si re′num,** f. arteriarum.

**For′niciform.** Arched.

**For′nix** (arch or vault). Medullary body in the brain, *f. cerebri*, below the corpus callosum and above the middle ventricle, on the median line. This body, curved upon itself, terminates anteriorly by a prolongation, constituting its anterior pillar, crus or columna fornicis, and posteriorly by two similar prolongations called posterior pillars or crura. Also any anatomical structure resembling an arch. **Ante′rior f.,** the part of the f. vaginæ lying anterior to the cervix uteri. **F. centra′lis,** f. cerebri. **F. cer′ebri,** fornix. **F. conjuncti′væ,** point of reflection of the conjunctiva upon the globe of the eye. **F. cra′nii,** vault of the skull. **F. humera′lis,** vault of the shoulder, made up of the acromion and coracoid processes and the coracoacromial ligament. **F. na′si,** roof of the nose. **F. peripher′icus,** convolution of the corpus callosum; gyrus fornicatus. **F. pharyn′gis,** roof of the pharynx. **Poste′rior f.,** the part of the f. vaginæ behind the cervix uteri. **F. tricuspida′lis,** f. cerebri. **F. vagi′næ,** upper part of the vagina, in which the cervix uteri terminates. **F. ve′rus,** corpus callosum.

**Forskah′lea angustifo′lia.** Plant of the Canary Islands; diaphoretic.

**Forstero′nia diffor′mis** (after T. F. Forster, English botanist). Indigenous plant; used as a wash, with milk, to remove freckles; juice destroys warts.

**Forsyth′ia suspen′sa.** Plant of China and Japan; fruit is antispasmodic and sedative. A glucoside having antipyretic properties is obtained from it.

**Fortifica′tion spec′trum.** A subjective visual sensation noticed in migraine, in which the edge has a luminous, zigzag appearance like the walls of a fortification.

**For′tune-tell′er.** Leontodon taraxacum.

**For′ty-knot.** Achyranthes repens.

**Fos′sa** (*fodio*, to dig). Cavity of greater or less depth, the entrance to which is always larger than the base. Fossæ of bones are simple when they belong to one bone only, as the parietal fossæ; and compound when several concur in their formation, as the orbital fossæ, temporal fossæ, the fossæ of the skull, etc. See also *Fossula* and *Fovea*. **F. acetab′uli,** acetabular fossa. **Amyg′daloid f.,** amygdaloid excavation; space between the anterior and posterior pillars of the fauces occupied by the tonsils. **Anco′neal f.,** olecranon fossa. **F. anon′yma,** navicular fossa. **F. ante′rior,** see *Fossa cerebralis*. **F. a. ma′jor,** coronoid fossa. **F. a. mi′nor,** slight depression on the humerus for reception of the head of the radius when the arm is thoroughly flexed. **F. antihel′icis,** depression on the ear opposite the antihelix; navicular fossa. **F. arcua′ta,** foramen subarcuatum. **F. articula′ris maxil′læ inferio′ris,** glenoid fossa. **F. axilla′ris,** axillary space. **F. basila′ris,** basilar fossa or groove of the occipital bone. **Biesiadec′ki's f.,** see *Biesiadecki*. **Broes′ike's f.,** see *Broesike*. **F. bul′bi ure′thræ,** part of the urethra in the bulb of the corpus spongiosum. **F. cæru′lea,** dark spot on the floor of the fourth ventricle. **F. cani′na,** depression on the external surface of the superior maxillary bone. **F. capitel′li,** fossa for the head of the malleus. **F. cap′itis fem′oris,** depression on the head of the femur to which the round ligament is attached. **F. capit′uli ra′dii,** anterior minor f. **F. carotide′a,** superior carotid triangle of the neck. **F. cerebel′li,** inferior occipital fossa, lodging the corresponding portion of the cerebellum. **F. cerebel′li supe′rior,** groove between the lobes of the upper surface of the cerebellum. **F. cerebra′lis,** one of the nine depressions at the base of the cranium, three in the middle line, and three on either side; they are called, in groups of three, the *anterior*, *posterior*, and *middle;* they lodge the lobes of the brain. **Clau′dius's f.,** see *Claudius*. **F. coch′leæ,** depression at the bottom of the internal auditory meatus for the entrance of the cochlear nerve to the internal ear. **F. con′chæ,** concha. **Con′dyloid f.,** one of the cavities posterior to the condyles of the occipital bone. **F. corona′lis,** depression on the orbital plate of the frontal or coronal bone, supporting the anterior lobe of the brain. **F. coronoide′a,** coronoid fossa; cavity before the inferior extremity of the humerus, in which the coronoid process of the ulna is engaged during flexion of the forearm. **F. costa′lis,** one of the depressions on the bodies of the dorsal vertebræ where these articulate with the ribs. **F. cotyloide′a,** cotyloid cavity or acetabulum; cotyloid notch. **F. cra′nii,** f. cerebralis. **F. cru′ris hel′icis,** sulcus cruris helicis. **F. cubita′lis** or **cu′biti,** coronoid fossa; depression at the end of the elbow. **F. cyst′idis fel′leæ,** depression on the surface of the liver in which lies the gall-bladder. **Digas′tric f.,** deep groove on the mastoid portion of the temporal bone, giving origin to the digastric muscle. **Dig′ital f.,** mastoid f., trochanteric f. **Doug′las's f.,** Douglas's pouch. **F. duc′tus veno′si,** fissure for the ductus venosus; see *Liver*. **F. duodena′lis** or **duode′nojejuna′lis,** one of three depressions in the peritoneum from folds made by the duodenum and jejunum. **F. ellip′tica,** depression for the reception of the utricle on the wall of the vestibule of the internal ear. **F. ethmoida′lis,** ethmoid fossa; shallow gutter on the upper surface of the cribriform plate of the ethmoid bone, in which is lodged the olfactory bulb. **F. ge′nu,** popliteal space. **F. glan′dis,** see *Glans*. **F. glan′dulæ lacryma′lis,** lacrymal fossa. **F. glandula′ris,** lacrymal fossa. **Glen′oid f.,** glenoid cavity, also fossa of the scapula. **F. guttura′lis,** guttural fossa; depression forming the guttural region of the base of the cranium, between the foramen magnum and posterior nares. **Hart′mann's f.,** see *Hartmann*. **F. of he′lix,** groove between the helix and antihelix. **F. hemiellip′tica,** f. in the upper part of the cavity of the vestibule of the ear. **F. hemispher′ica,** see *Crista vestibuli*. **F. hyaloide′a,** see *Hyaloid*. **F. hypophys′eos,** depression on the upper surface of the body of the sphenoid bone for the reception of the pituitary body. **Ileocæ′cal f.,** called also the inferior ileocæcal, the postcæcal, or the subcæcal f., is situated between the ileum and the cæcum. **Ileocol′ic f.,** called also the superior ileocolic f., lies between the end of the ileum and the ascending colon. **Il′iac f.,** see *Iliac fossæ*. **Ili′acosubfascia′lis f.,** a depression in the peritoneal fascia at the insertion of the psoas minor muscle, which receives part of the descending colon. **F. il′iopectine′a,** Scarpa's triangle. **F. incisi′va,** f. myrtiformis. **F. incu′dis,** fossa on the posterior wall of the tympanum for the short process of the incus. **Infraclavic′ular f.,** see *Infraclavicular*. **Infraor′bital f.,** canine fossa. **Infraspi′nous f.,** see *Infraspinous fossa*. **F. infratempora′lis,** zygomatic fossa. **In′guinal f.,** urachal f. **F. innomina′ta,** navicular fossa. **F. intercondyl′ica,** fossa on the trochlea of the thigh-bone to receive the patella. **F. intercondyloide′a,** fossa between the condyles of the femur. **F. interpeduncula′ris,** space between the crura cerebri and the mammillary tubercles. **Intersig′moid f.,** a depression in the left leaf of the sigmoid mesocolon. **Ischiorec′tal f.,** perineal fossa. **Jobert's′ f.,** see *Jobert*. **F. jugula′ris,** jugular fossa; see *Suprasternal*. **F. lacryma′lis,** lacrymal fossa. **Land′zert's f.,** see *Landzert*. **F. laryn′gopharynge′a,** depression of the mucous membrane at the entrance to the larynx. **F. lenticula′ris,** see *Hyaloid membrane*. **F. ligamen′ti veno′si,** fissure of the ductus venosus. **F. longitudina′lis dex′tra ante′rior,** depression for the gall-bladder on the under surface of the liver. **F. longitudina′lis dex′tra poste′rior,** fissure for the vena cava. **F. longitudina′lis sinis′tra ante′rior,** umbilical fissure; see *Liver*. **F. longitudina′lis sinis′tra poste′rior,** fissure for the ductus venosus. **F. mag′na mulie′bris,** vulva. **F. mag′na Syl′vii,** fissure of Sylvius. **F. Malgaign′ii,** superior carotid triangle of the neck. **F. mandibula′ris,** glenoid fossa. **Mas′toid f.,** see *Mastoid*. **F. maxilla′ris,** canine fossa. **Men′tal f.,** small depression on each side of the symphysis on the anterior surface of the body of the inferior maxilla for the attachment of muscles. **Mohr′enheim's f.,** see *Mohrenheim*. **F. Morgagn′ii,** f. navicularis urethræ. **F. myrtifor′mis,** depression in the superior maxillary bone just above the incisor teeth; see *Myrtiform*. **Na′sal f.,** see *Nasal*. **F. navicula′ris auric′ulæ,** f. of the helix. **F. navicula′ris larynge′i,** f. laryngopharyngea. **F. navicula′ris ure′thræ,** perceptible dilatation of the urethra near the base of the glans penis. **F. navicula′ris vul′væ,** small depression between the entrance of the vagina and the posterior commissure of the labia majora or fourchette. **Occip′ital f.,** see *Occipital*. **F. olec′rani,** see *Olecranon*. **F. orbicula′ris,** see *Crista vestibuli*. **F. ova′lis,** navicular fossa; see also *Crista vestibuli* and *Oval fossa*. **F. ova′rii,** depression on the back wall of the pelvis on which the ovary rests. **F. palati′na,** palate. **F. pararecta′lis,** peritoneal depression at the side of the rectum. **F. paravesica′lis,** peritoneal pouch on each side of the bladder. **F. patella′ris,** see *Hyaloid membrane*. **F. peduncula′ris,** horizontal fissure of the cerebellum. **F. perinæ′i,** perineal fossa. **F. pituita′ria,** sella turcica. **F. poplitæ′a,** popliteal fossa; hollow of ham; popliteal region. **Por′tal f.,** see *Liver*. **Postcæ′cal f.,** ileocæcal f. **F. poste′rior hu′meri,** olecranon fossa. **F. process′ûs coronoi′dei,** coronoid fossa. **Pter′ygoid f.,** see *Pterygoid*. **F. pter′ygomaxilla′ris** or **F. palati′na,** sphenomaxillary fossa. **F. pu′bovesica′lis,** abdominovesical pouch. **F. rec′to-uteri′na,** rectovaginal pouch. **F. rhomboide′a** or **rhomboida′lis,** fourth ventricle. **F. Rolan′di,** furrow on the upper surface of the cerebral hemispheres separating the parietal and frontal lobes. **F. of Ro′senmüller,** depression or fossa in the pharyngeal wall, back of the aperture of the Eustachian tube. **F. rotun′da**, see *Crista vestibuli*. **F. sac′ci lacryma′lis**, lacrymal fossa. **F. sagitta′lis**, longitudinal fissure of the liver. **F. scaphoi′des**, navicular fossa between the helix and antihelix. **F. sel′læ**, pituitary fossa. **F. semiluna′ris**, sigmoid fossa or cavity. **F. semiova′lis**, see *Crista vestibuli*. **F. sigmoide′a**, broad, deep groove on the inner process of the mastoid portion of the temporal bone, supporting part of the lateral sinus. **F. sphe′nomaxilla′ris**, see *Sphenomaxillary*. **F. subarcua′ta**, depression on the posterior surface of the temporal bone to lodge the flocculus of the cerebellum. **Subcæ′cal f.**, ileocæcal f. **F. subinguina′lis**, Scarpa's triangle. **Sublin′gual f.**, oval depression in the inferior maxillary bone for lodging of the sublingual gland. **Submax′illary f.**, oblong depression on the inferior maxillary bone for lodging the submaxillary gland. **Subor′bital f.**, canine fossa. **Subpyram′idal f.**, deep fossa under the pyramid and behind the fenestra rotunda in the middle ear. **F. subrotun′da**, see *Navicula*, *Crista vestibuli*. **F. subscapula′ris**, see *Scapula*. **Subsig′moid f.**, intersigmoid f. **F. sulcifor′mis**, see *Crista vestibuli*. **F. supraclavicula′ris**, supraclavicular space between the trapezius and sternocleidomastoid muscles; fossa between the sternal and clavicular portions of the sternomastoid muscle. **F. supracondyloide′a**, fossa separating the internal supracondylar tubercle from the internal tuberosity of the femur. **F. suprapatella′ris**, depression on the anterior surface of the femur above the trochlea. **F. suprasphenoida′lis**, pituitary fossa. **F. supraspina′ta**, supraspinous fossa. **F. suprasterna′lis**, see *Suprasternal*. **F. supratrochlea′ris ante′rior**, coronoid fossa. **F. s. poste′rior**, olecranon fossa. **F. of Syl′vius**, fissure of Sylvius. **F. tempora′lis**, temporal fossa. **F. tonsilla′ris**, interval between the pillars of the fauces occupied by the tonsil. **F. trag′ica of con′cha**, excavation or fossa in front of the meatus auditorius externus, concealed by the tragus, and forming, as it were, the vestibule of the meatus. **F. transver′sa**, see *Liver*. **F. transversa′lis**, one of the depressions on the transverse processes of the dorsal vertebræ where these articulate with the ribs. **F. of Treitz**, duodenojejunalis f. **F. triangula′ris**, depression on the front surface of the arytenoid cartilage; fossa between the crura of the antihelix. **F. trique′tra**, navicular fossa. **Trochanter′ic f.**, deep depression in the great trochanter of the femur for the attachment of the tendon of the obturator externus muscle. **F. trochlea′ris**, small depression in the frontal bone for the attachment of the pulley of the trochlearis. **F. tu′bæ Eusta′chii**, groove in the petrous portion of the temporal bone for the cartilaginous portion of the Eustachian tube. **F. umbilica′lis**, see *Liver*. **U′rachal f.**, see *Urachal*. **F. u′terorecta′lis**, recto-uterine pouch. **F. u′terovesica′lis**, vesico-uterine pouch. **F. of ve′na ca′va**, fissure of the vena cava. **F. vesi′cæ fel′leæ** or **vesica′lis**, f. cystidis felleæ. **F. ves′icorecta′lis**, rectovesical pouch. **Zygomat′ic f.**, see *Zygomatic*.

**Fossette′**. A small fossa. A deep ulcer of the cornea.

**Fos′sil wax.** Ozokerite.

**Fosso′rium** (*fossor*, a digger). Fleam.

**Fos′sula** (dim. of *fossa*, a ditch). Fovea, fossa. White spot or ulceration of the eye. **F. coch′leæ** or **cochlea′ris**, fovea cochleæ. **F. cor′neæ**, corneal ulcer. **F. costa′lis**, fossa costalis. **F. fenes′træ ova′lis**, small fossa in inner tympanic wall, in which the oval window, fenestra ovalis, is situated. **F. f. rotun′dæ**, depression in promontory of tympanum containing fenestra rotunda. **Infe′rior f.**, depression at lower part of internal auditory meatus. **F. menta′lis**, mental fossa. **F. olfacto′ria**, one of the foramina cribrosa. **F. petro′sa**, depression on base of temporal bone for petrosal ganglia of glossopharyngeal nerve. **F. sulcifor′mis**, depression leading to aqueduct of vestibule. **Supe′rior f.**, depression at lower part of internal auditory meatus, having entrance to aqueduct of Fallopius. **F. trochlea′ris**, depression for attachment of pulley of superior oblique muscle of the eye on orbital surface of frontal bone. **F. ulna′ris**, sigmoid cavity of radius. **F. vestibula′ris infe′rior**, posterior part of fossula inferior. **F. v. supe′rior**, one of the small openings at bottom of internal auditory meatus for passage of vestibular nerve.

**Foth′ergill's disease′.** Facial neuralgia. **F.'s face′ache**, facial neuralgia. **F.'s pills**, see *Pilulæ aloes et colocynthidis*. **F.'s sore throat**, see *Scarlatina*.

**Fouchard's′ disease′.** Alveolodental periostitis.

**Foudroy′ant** (Fr.). Lightning-like or fulminating; coming on very suddenly.

**Foul claw** or **F. in the foot.** Foot rot; suppurative inflammation of certain portions of the hoofs of cattle.

**Fou′lis's cells.** Large cells with an even contour or showing one or several projecting buds, containing one or more nuclei, found in the fluid of a malignant cyst of the ovary.

**Foun′der.** Inflammation of sensitive laminæ or layers of foot of the horse.

**Foun′tain decussa′tion.** Crossing of fibres of basal portion of crura cerebri under posterior longitudinal fasciculus. **F. syr′inge**, a bag or receptacle of any kind for fluid, with a rubber tube issuing from its most dependent part; used chiefly for vaginal, urethral, and rectal injections.

**Four o'clock.** Mirabilis jalapa.

**Fourchette′** (dim. of *fourche*, a fork). Surgical instrument for raising and supporting the tongue during the operation of dividing the frænum. In anatomy, the posterior commissure of the labia majora. Ensiform cartilage, which is sometimes cleft like a fork. Semilunar notch at the superior or clavicular extremity of the sternum; interclavicular notch. Frog of horse's foot.

**Fournier's** (foor-ne-aze′) **meth′od.** Administration of mercury for periods of two months, separated by intervals of a month in which the drug is withheld, in the treatment of syphilis.

**Fourth disease′.** An eruptive disease having some of the characteristics of measles, scarlet fever, and rötheln, yet distinct from all three; its existence is still questioned. **F. nerve**, trochlear nerve. **F. ven′tricle**, cavity situated at back of medulla oblongata and pons, in front of central portion of cerebellum; the superior angle of the ventricle communicates with the third ventricle; the lower angle with central canal of medulla oblongata and spinal cord.

**Fo′vea** (*fodio*, to dig). Slight depression; fossa or fossula. **F. ante′rior**, depression at the upper part of fourth ventricle. **F. ante′rior ma′jor**, coronoid fossa. **F. ante′rior mi′nor**, depression on humerus for reception of radius. **F. articula′ris latera′lis**, part of cervical vertebra articulating with prominence of vertebra beneath it. **F. articula′ris transversa′lis**, facet for articulation of rib on the transverse process of dorsal vertebra. **F. as′pera**, depression on the body of the sphenoid bone, between the internal pterygoid and the vaginal processes. **F. axilla′ris**, axilla. **F. bur′sæ pharynge′æ**, occasional depression in front of pharyngeal tubercle on the basilar process of the occipital bone. **F. cani′na**, canine fossa. **F. cap′itis fem′oris**, depression on the head of the femur for insertion of the round ligament. **F. capit′uli ra′dii**, depression on the head of the radius for articulation with humerus. **F. cardi′aca**, hollow above ensiform process, opening over the septum transversum into the front part of alimentary canal of embryo. **F. carot′ica**, superficial depression near greater cornu of the hyoid. **F. carotide′a**, superior carotid triangle of the neck. **F. centra′lis laryn′gis**, depression on front wall of larynx in middle line. **F. centra′lis ret′inæ**, foramen centrale retinæ; a depression in the macula lutea. **F. coccyge′a**, foveola coccygea. **F. coch′leæ**, depression at lower part of internal auditory meatus. **F. coronoide′a**, coronoid fossa. **F. cribro′sa infe′-**

**rior** and **poste′rior,** small openings at bottom of internal auditory meatus for passage of branches of auditory nerve. **F. crura′lis,** peritoneal depression over crural ring. **F. cu′biti,** triangular depression at bend of elbow. **F. digita′ta,** posterior cornu of lateral ventricle. **F. ellip′tica,** depression for reception of utricle on inner wall of vestibule. **F. exter′na,** depression in the external limiting membrane over the fovea centralis retinæ. **F. glan′dulæ lacryma′lis,** depression on orbital plate of frontal bone for lacrymal gland. **F. glandula′ris,** one of the depressions on the interior of the skull, corresponding to the glandulæ Pacchioni. **F. glenoide′a,** glenoid cavity. **F. hemiellip′tica,** f. elliptica. **F. hemisphæ′rica,** depression for saccule on inner wall of vestibule. **F. hyaloide′a,** fossa patellaris. **F. ili′aca,** the anterior portion of the inner surface of the ilium, where lies the iliacus muscle. **F. infe′rior,** triangular depression at lower part of fourth ventricle. **F. inguina′lis,** f. interligamentosa. **F. interclavicula′ris,** concave surface of upper border of sternum, between points of attachment of clavicles. **F. interligamento′sa,** peritoneal depression or pouches formed by urachal folds; inguinal fossa. **F. jugula′ris,** space above sternum between origins of sternomastoid muscle. **F. lacryma′lis,** f. glandulæ lacrymalis. **F. lam′inæ cartilag′inis cricoide′æ,** depression for the cricoarytenoidei postici muscles on posterior surface of cricoid cartilage. **F. malle′oli latera′lis,** depression above the internal malleolus for attachment of the deltoid ligament. **F. maxilla′ris,** canine fossa. **F. navicula′ris,** dilatation of urethra within the glans. **F. nu′chæ,** triangular depression at back of neck, below the occipital bone. **F. oblon′ga,** the depression on the anterior surface of the arytenoid cartilages for insertion of the thyroarytenoid muscle. **F. occip′itocervica′lis,** f. nuchæ. **F. oc′uli,** orbit. **F. olec′rani,** olecranon fossa. **F. orbita′lis poste′rior,** depression on the body of the sphenoid below the optic foramen. **F. ova′lis cor′dis,** depression on the septum auricularum of the heart, at situation of the foramen ovale of the fœtus. **F. ova′lis fas′ciæ la′tæ,** saphenous opening. **F. ova′lis vestib′uli,** f. elliptica. **F. palati′na,** depression on the back part of the hard palate, containing palatine glands. **F. patella′ris oc′uli,** fossa patellaris. **F. pharyn′gis,** depression in wall of pharynx; fossa of Rosenmüller. **F. poste′rior,** olecranon fossa. **F. radia′lis,** foveola radialis. **F. retromaxilla′ris,** fossa for parotid gland. **F. rotun′da** or **rotun′da vestib′uli,** f. hemisphærica. **F. semiellip′tica,** f. elliptica. **F. sulcifor′mis,** fossula sulciformis. **Supe′rior f.,** anterior f. **F. supratrochlea′ris ante′rior,** coronoid fossa. **F. supratrochlea′ris poste′rior,** olecranon fossa. **F. triangula′ris,** ventricle of Arantius. **F. trique′tra auric′ulæ,** fossa triangularis. **F. trochlea′ris,** depression on orbital surface of frontal bone for attachment of pulley of superior oblique muscle. **F. tym′pani,** tympanum; in embryonic life, a depression in the petrous bone. **F. vestib′uli infe′rior,** posterior part of fossula inferior.

**Fo′veal.** Relating to a fovea, especially the f. centralis retinæ.

**Fo′veate.** Pitted or depressed.

**Fove′ola** (dim. of fovea). A small fovea or fossa. **F. cap′itis,** a dark red spot in the centre of the fovea capitis. **F. coccyge′a,** small fistula-like pit just back of the anus. **F. radia′lis,** depression between extensors of thumb, in which is the radial artery. **F. ret′inæ,** fovea centralis retinæ. **F. retroana′lis,** foramen cæcum retroanale; foveola coccygea. **F. triangula′ris,** triangular space or depression between columns of fornix.

**Fove′olæ** (pl. of foveola) **of bone, F. howshipia′næ.** Small depressions made by osteoclasts of Kölliker. **F. ethmoida′les,** ethmoid cells. **F. of kid′ney, F. papilla′rum rena′lium,** pits at the extremity of the renal papillæ into which the tubuli uriniferi empty.

**Fo′veolate.** Having foveolæ.

**Fowl chol′era.** Affection of fowls caused by a microorganism, and attended with debility and choleraic symptoms.

**Fow′ler′s solu′tion.** Liquor potassii arsenitis.

**Fox′berry.** Arbutus uva ursi.

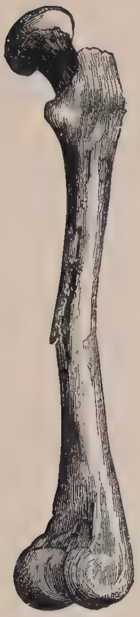
**Fox′glove.** Digitalis.

**Fox′tail.** Lycopodium clavatum; emetocathartic.

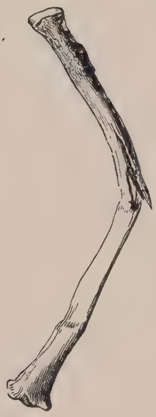
**Foyer,** foi-ya′ (Fr.). Focus; chief seat of disease.

**Frac′tional.** Constituting part of a whole. Made in successive steps or in divided quantities, as *f. cultivation* or *f. sterilization.* **F. do′ses,** divided doses; doses smaller in size, but more frequently given than the usual doses.

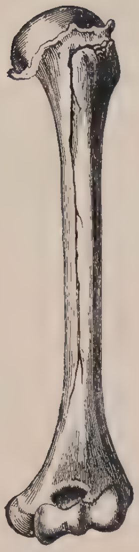
**Frac′ture.** Solution of continuity in a bone. *Simple* fracture is when the bone only is divided; *compound* fracture is a division of the bone with a wound of the integuments communicating with it, the bone, indeed, generally protruding. In *comminuted* fracture the bone is broken into several pieces; and in *complicated* fracture there is, in addition to the injury of the bone, a lesion of some considerable vessel, nerve-trunk, etc. In *impacted* fracture one end of the bone is driven into another. Fractures are termed transverse, oblique, etc., according to their direction. The treatment of fractures consists in general in reducing the fragments when displaced, maintaining them when reduced, preventing the symptoms which may be likely to arise, and combating them when they occur. Reduction of fractures must be effected by extension, counterextension, and coaptation. The parts are kept in apposition by position, rest, and an appropriate apparatus. **Bar′ton′s′ f.,** fracture of the lower extremity of the radius, commencing at the articular surface and extending upward for an inch or more, to terminate on the dorsal aspect. Owing to the extensor muscles drawing up the separated portion of the bone, and with it the carpus, a deformity results often confounded with dislocation. It was first well described by Dr. John Rhea Barton, of Philadelphia. **Ben′net′s f.,** see *Bennet.* **Bent f.,** green-stick f. **But′tonhole f.,** perforating fracture, incomplete fracture from a sabre blow or gunshot wound, in which a piece is fairly punched out from a bone. **Cam′erated f.,** camarosis. **Cap′illary f.,** linear f. **Col′les′s f.,** f. of the lower end of the radius, transverse or oblique, with displacement of lower fragment backward. **Com′minuted f.,** see *Fracture.* **Com′plicated f.,** see *Fracture.* **Compos′ite f.,** multiple f. **Com′pound f.,** see *Fracture.* **Conchoid′al f.,** f. in which the broken surface has the appearance of a shell. **F. by contre-coup,′** see *Contrafissura.* **Cu′neated** or **cu′neiform f.,** V-shaped or wedge-shaped fracture at the articular extremity of the bone. **Depressed′ f.,** f. in which a fragment is depressed below the natural surface. **Direct′ f.,** f. occurring directly at the point of injury. **Doub′le f.,** two fractures occurring simultaneously. **Dupuytren′s′ f.,** f. of inferior extremity of fibula, the foot being dislocated outward and backward. **Epiphys′eal f.,** diastasis. **Extracap′sular f.,** f. of the neck of the humerus or femur outside the capsular ligament. **Fis′sured f.,** linear fracture. **Gos′selin′s f.,** wedge-shaped fracture of the inferior extremity of the tibia extending into the ankle-joint. **Green-stick f.,** incomplete fracture of long bone in childhood, in which the central earthy part may be broken, while the surrounding membranous part retains its continuity; the bone being only bent, not separated. **Gut′ter f.,** f. of the skull with an oblong, gutter-shaped depression. **Hair f.,** linear fracture. **Hick′ory-stick f.,** green-stick fracture. **Impact′ed f.,** f. in which the one extremity of the fractured bone is driven tightly into the other. **Incomplete′ f.,** form of fracture in which the bone is not broken completely across. **Indirect′ f.,** f. occurring at a distance more or less remote from the application of force producing the injury. **Intra-artic′ular f.,** f. involving a



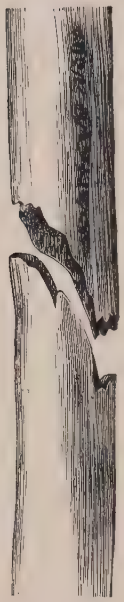
Incomplete fracture of femur.



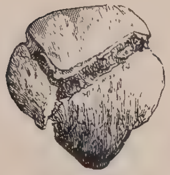
Partial or green-stick fracture of radius.



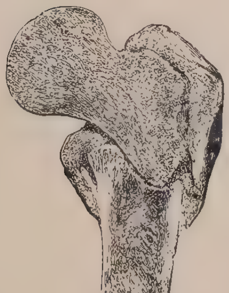
Fissured fracture of humerus. (Gurlt.)



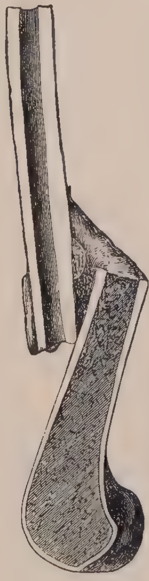
Oblique fracture of humerus. (Stimson.)



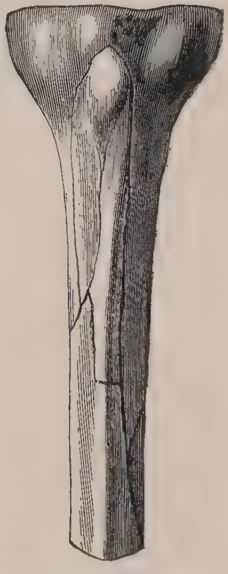
Comminuted fracture of patella.



Impacted fracture.



Transverse fracture of femur. (Gurlt.)

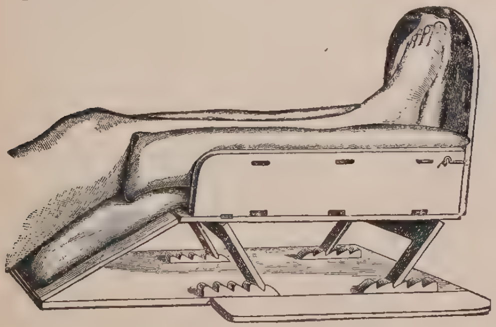


Longitudinal fracture of tibia. (Stimson.)

Varieties of Fractures.

joint. **Intracap′sular f.**, f. of the neck of the humerus or femur within the capsular ligament. **Intraperios′teal f.**, green-stick fracture. **Intra-u′terine f.**, fracture of some part of the fœtus. **Lin′ear f.**, fracture in a direct line, without apparent displacement of the fragments of the bone. **Longitu′dinal f.**, f. on the long axis of a bone. **Moore's f.**, see *Moore*. **Mul′tiple f.**, f. of a bone in different places, or of several bones in one place or more. **Oblique′ f.**, see *Fracture*. **O′pen f.**, compound fracture. **Par′tial f.**, incomplete fracture. **Pen′etrating** or **per′forated f.**, f. with perforation, as by a bullet or other missile; buttonhole fracture. **Per′forating f.**, buttonhole fracture. **Pond f.**, f. of the skull with a circular depression. **Pott's f.**, f. of the fibula with displacement of the tibia, or fracture of the tip of the inner malleolus, allowing an outward turning of the foot. **Sal′iswitch f.**, longitudinal fracture or splitting of the bone of the arm. **Sec′ondary f.**, f. following some other lesion of the bone. **Shep′herd's f.**, see *Shepherd*. **Sil′ver-fork f.**, Colles's fracture. **Sim′ple f.**, see *Fracture*. **Smith's f.**, see *Smith*. **Spi′ral f.**, twisted fracture of long bone. **Splint′ered f.**, comminuted fracture; splintering of a bone without complete fracture of its body. **Sponta′neous f.**, f. from slight injury, the bone being already diseased. **Stel′late f.**, star-like fracture of a bone. **Subcuta′neous f.**, simple fracture that has no communication with the exterior of the body. **Troph′ic f.**, f. due to impaired nutrition of the bone. **Tor′sion f.**, spiral fracture. **Transverse′ f.**, see *Fracture*. **Ununi′ted f.**, f. in which bony union has failed to take place. **V-shaped** or **wedge-shaped f.**, a fracture, usually at the articular extremity of the long bone, having shape implied in its name, but not necessarily involving the joint. **Wag′staffe's f.**, see *Wagstaffe*. **Wil′low f.**, green-stick f.

**Frac′ture-box.** Box for retaining a fractured limb in position.



Fracture-box.

**Fracture-fe′ver**, a fever, usually slight, which comes on within twenty-four hours after the fracture, attended with little or no constitutional disturbance.

**Fræ′na** (pl. of frænum). Name given by Morgagni to the projecting lines formed by the junction of the extremities of the two lips of the ileocæcal valve, *fræna* or *retinacula Morgagnii*.

**Fraen′kel's glands.** Small glands having their outlet below the border of the vocal cords. **F.'s leukæ′mia**, acute form of leukæmia, in which the lymph cells are large and have a single nucleus. **F.'s pneumobacil′lus** or **pneumococ′cus**, Bacillus septicus sputigenus. **F.'s sign**, the appearance of pus in the previously cleansed middle nasal fossa, when the head is inclined downward and forward for a few minutes; indicates suppuration in the antrum of Highmore.

**Fræ′nulum** (dim. of frænum). See *Frænum* and *Bridle*. **F. aryepiglot′ticum**, arytenoepiglottic fold. **F. cer′ebri**, f. veli medullaris anterioris. **F. clitor′idis**, frænum clitoridis. **F. epiglot′tidis**, glossoepiglottic ligament. **F. glan′dis**, frænum penis. **F. glossoepiglot′ticum**, glossoepiglottic fold. **F. labio′rum**, frænum labiorum. **F. lin′guæ**, frænum linguæ. **F. lin′guæ posterio′ris** or **poste′rius**, glossoepiglottic ligament. **F. lin′gulæ**, f. veli medullaris anterioris; process associating the lingula of the cerebellum and the lateral hemispheres. **F. no′vum**, tænia semicircularis. **F. præpu′tii**, frænum penis. **F. puden′di**, fourchette. **F. of the valve of Bauhin′**, frænum of Morgagni. **F. of valve of Vieus′sens**, f. veli medullaris anterioris. **F. val′vulæ co′li**, frænum of Morgagni. **F. ve′li medulla′ris anterio′ris**, narrow slip given off by the commissure of the encephalic testes, which strengthens the junction of the testes with the valve of Vieussens. **F. vul′væ**, fourchette.

**Fræ′num.** A bridle; membranous fold which bridles and retains various organs. **F. clitor′idis**, slight duplicature formed by the union of the internal portions of the upper extremity of the nymphæ. **F. epiglot′tidis**, glossoepiglottic ligament. **F. glan′dis**, f. penis. **F. labio′rum**, there are two of these, one for the upper, the other for the lower lip, uniting these parts to the maxillary bone; they are formed by the mucous membrane of the mouth; also fourchette. **F. lin′guæ**, triangular reflection formed by the mucous membrane of the mouth, and situated between the floor of that cavity and the under surface of the tongue; when the frænum extends as far as the extremity of the tongue, it cramps its movements, interferes with sucking, etc. —an inconvenience remedied by carefully snipping it with scissors. **F. of Macdow′ell**, see *Macdowell*. **F. of Morgagn′i**, one of the fræna of the valve of Bauhin, or projecting lines formed by the junction of the extremities of the two lips of the ileocæcal valve. **F. pe′nis**, membranous reflection which fixes the prepuce to the lower part of the glans. **F. præpu′tii**, f. penis. **F. puden′di**, fourchette.

**Fraga′ria.** Strawberry, ord. *Rosaceæ;* the fruit is agreeable and wholesome, and the roots have been esteemed tonic and slightly diuretic. **F. anseri′na**, Potentilla anserina. **F. in′dica**, indigenous plant, root and leaves of which are astringent and diuretic. **F. pentaphyl′lum**, Potentilla reptans. **F. tormentil′la officina′lis**, tormentilla. **F. ves′ca** or **vulga′ris**, wood or English strawberry; rhizome is diuretic. **F. virginia′na**, wild strawberry; indigenous plant with astringent leaves.

**Fragil′itas** (*fragilis*, brittle). Fragility, brittleness, state of being easily broken or torn. **F. crin′ium**, brittleness of the hair. **F. os′sium**, brittleness of the bones, friability of the bones; extreme facility with which bones break in certain diseases, owing to a deficiency of the animal matter.

**Fragil′ity.** See *Fragilitas*.

**Frag′ment** (*frango*, to break). Any part broken off from the whole, as a piece of a fractured bone.

**Fragmenta′tion.** Division into fragments; referring to cell or nuclear division or disintegration.

**Frambœ′sia** (*framboise*, raspberry). Yaws, epian, pian; disease of a contagious character of the Antilles and of Africa, characterized by tumors resembling strawberries or raspberries, on hands, feet, genitals, and face; ulcerating and accompanied by emaciation. **F. america′na** or **guineen′sis**, yaws; see *Frambœsia*. **F. illyr′ica**, scherlievo. **F. non-syphilit′ica**, variety of frambœsia on the back of the head and neck, met with in some parts of Europe. **F. sco′tica**, sibbens. **F. syphilit′ica**, pemphigus foliaceus vegetans. **F. trop′ica**, endemic form of frambœsia occurring in tropical regions.

**Frames, ter′minal.** See *Deiters*.

**Framo′si.** Frambœsia.

**Francis′cea** or **Francis′cia uniflo′ra.** Manaca, of Brazil; bark is diuretic, purgative, emmenagogue, antisyphilitic; employed also in chronic rheumatism. A powerful alkaloid derived from its root is called *franciscеine*.

**Franco′a appendicula′ta.** Plant of Chile, the juice of which is astringent, and applied to hemorrhoids, as is also the juice of **F. sonchifo′lia,** which has the same habitat.

**Fran′gula** (*frango*, to break). Official (Ph. U. S.) name for the bark of Rhamnus frangula or buckthorn; laxative. The fluid extract (*extractum frangulæ fluidum*) is official; dose, ♏x–xxx (0.65–2.0). **F. al′nus,** Rhamnus frangula. **F. califor′nica,** Rhamnus californica. **F. carolinia′na,** Rhamnus caroliniana. **F. purshia′na,** Rhamnus purshiana. **F. vulga′ris,** Rhamnus frangula.

**Frangu′lic acid.** A yellow, crystalline acid obtained by boiling frangulin with diluted acids; laxative.

**Frangulin′.** $C_{20}H_{20}O_{10}$. Glucoside from the bark of Rhamnus frangula, purgative.

**Fran′kenhaeser's gan′glion.** Cervical ganglion of the uterus.

**Franke′nia grandiflo′ra.** Yerba rheuma; California herb, astringent and aromatic; used by injection in catarrhal and other conditions of the genital organs.

**Frank′fort agree′ment.** General understanding as to the methods of measuring skulls made at Frankfort Congress of Anthropology, in 1882. **F. green,** arsenite of copper. **F. plane,** cranial plane formed by lines projected from the upper border of the external opening of the external auditory meatus to the lower border of the orbit. **F. pro′file line,** line drawn through the intersuperciliary point (point where the line drawn between the middle of the superciliary arches crosses the median line) and the alveolar point (centre of the anterior border of the upper alveolar arch).

**Frank′incense.** An aromatic resin. **Af′rican** or **Ara′bian f.,** Daniellia thurifera. **Com′mon f.,** see *Pinus abies*. **F. tree,** Daniellia thurifera. **True f.,** Juniperus lycia; olibanum.

**Frank′lin glas′ses.** Bifocal glasses for near and far sight.

**Franklin′ic.** Relating to frictional or static electricity. **F. reac′tion,** a form of reaction of degeneration elicited by the static electric current. **F. taste,** sour taste noticed when static electricity is applied to the tongue.

**Frank′linism.** Static electricity.

**Frankliniza′tion.** Therapeutic employment of Franklinism or static electricity.

**Frase′ra** (after John Fraser, a botanical collector). American calumbo.

**Fraserine′.** Alkaloid from Frasera, or American calumbo.

**Fra′ter uteri′nus** (uterine brother). Twin brother.

**Fraun′hofer's lines.** Dark lines traversing the solar spectrum, when light is admitted through a narrow opening before passing through the prism.

**Fraxetin′.** $C_{10}H_8O_5$. A derivative of fraxin.

**Fraxin′.** Glucoside from Fraxinus excelsior and Æsculus; bitter.

**Fraxinel′la** (dim. of fraxinus) **al′ba, F. dictam′nus, F. pu′mila, White f.** Dictamnus albus.

**Fraxinin′.** $C_{42}H_{23}O_{27}$. Bitter principle from the bark of Fraxinus excelsior.

**Frax′inite.** Extract from the leaves of Fraxinus excelsior; purgative.

**Frax′inus.** A genus of trees of the order *Oleaceæ*. **F. acumina′ta** or **F. america′na,** white ash; bitter and astringent bark has been used as antiperiodic and in dysmenorrhœa. **F. apet′ala, F. au′rea, F. cris′pa, F. europæ′a, F. excel′sa,** or **F. excel′sior,** systematic name of the European ash tree. The fresh bark has a moderately strong, bitterish taste, and has been said to be a resolvent, diuretic, and antiperiodic. It has been given in intermittents and in gout and rheumatism, and as an antidote to serpent-bites. The seeds, called bird's tongue, are diuretic. The acid of the wood is diaphoretic. **F. florif′era,** F. ornus. **F. juglandifo′lia,** green ash of N. America; bark and fruit are diuretic and antisyphilitic. **F. macedo′nica,** F. excelsior. **F. or′nus,** flowering or manna ash. Systematic name of the trees whence manna flows. In Sicily F. rotundifolia and F. excelsior are also regularly cultivated for the purpose of procuring manna, their condensed juice. Manna is inodorous, sweetish, and very slightly bitter; in friable, whitish, or pale yellow flakes, soluble in water and alcohol. It is laxative, and a purgative for children, who take it readily on account of its sweetness. The dose is ℥ss–ij(16.0–64.0). Its immediate principle is mannite or mannin; used as a substitute for manna. **F. panicula′ta,** F. ornus. **F. quadrangula′ta,** blue ash, indigenous. **F. rotundifo′lia,** F. ornus. **F. sambucifo′lia,** black or water ash, of U. States and Canada; tonic and astringent. **F. vir′idis,** F. juglandifolia.

**Freck′le.** Ephelis; lentigo. **F. moth,** chloasma.

**Frederi′ci's sign** or **symp′tom.** Presence of heart sounds over the whole abdomen in perforative peritonitis when the intestinal gas finds an outlet into the cavity of the peritoneum.

**Fre′jarol.** Ethereal oil having odor of pepper, procured from the Frejar tree of the East Indies; employed in skin diseases.

**Fremissement′** (Fr.). Fremitus, purr, vibration.

**Frem′itus** (*fremo*, to murmur). Vibration; thrill, as that conveyed by voice, friction, etc., to one auscultating or palpating the chest. **Bron′chial f.,** sound of bronchial râle heard through the wall of the chest. **Cav′ernous f.,** sound of vibration of fluid in cavity of lungs heard upon auscultation of chest. **Endocar′dial f.,** thrill of interior of heart heard on auscultation. **F. feli′nus,** purring thrill or tremor felt by hand placed over the precordial region in cases of ossification or contraction of auriculoventricular openings. **Fric′tion f.,** thrill perceptible to the hands in many cases of pleurisy, when the surfaces have become roughened from deposition, as well as in rare cases of pericarditis; in the former case it is called the pleural, in the latter the pericardial friction fremitus. **Hydat′id f.,** thrill noticed in percussion over hydatid tumors. **Pec′toral f.,** pectoral or tactile vibration; obscure diffused resonance of the voice felt when the hand is applied to the chest. **Pericar′dial f.,** friction f. **Pleu′ral f.,** friction sound of the pleura heard on auscultation. **Respi′ratory f.,** sound heard on auscultation of the air passages, caused by contraction of calibre or other causes. **Rhon′chal** or **rhon′chial f.,** thrill caused by the vibration of the bronchial tubes, associated with sibilant, sonorous, and mucous rhonchi. **Tac′tile f.,** vibration felt when the hand is applied over the chest when a person speaks. **Tus′sive f.,** vibration felt when the hand is applied over the chest of a person coughing. **Vo′cal f.,** thrill felt by the hand placed over the chest, modified by the greater or less elasticity of the air cells and tissue of the lungs, and other causes; the fremitus being lessened after pleurisy, and augmented when the pulmonary tissue is thickened, as in pneumonia.

**Frena′tor mus′cle.** Muscle moving the head on the atlas and axis. **F. nerve,** inhibitory nerve.

**French ber′ries.** Fruit of Rhamnus infectorius, of S. Europe. **F. chalk,** talc. **F. crust,** syphilis. **F. distem′per,** syphilis. **F. lactuca′rium,** thridace. **F. lav′ender,** Lavandula stœchas. **F. let′ter,** condom. **F. mar′igold,** Tagetes erecta, T. patula. **F. nut,** Juglans regia. **F. pox,** syphilis. **F. rhu′barb,** root of Rheum rhaponticum; used as a laxative in veterinary medicine.

**Fren′ga.** See *Scherlievo*.

**Frenk′el's sign.** Diminution of tone of the muscles of the inferior extremities in tabes dorsalis.

**Fren′ulum, Fre′num.** Frænulum, frænum.

**Fren′zy.** Mania; wild excitement.

**Fret.** Chafing; intertrigo; tetter; herpes.

**Fret′ting.** Chafing. Tormina.

**Fre′tum.** A constriction. **F. Hal′leri,** constricted portion of the heart of fœtus between ventricle and bulb of aorta. **F. o′ris,** isthmus of fauces.

**Freund's law.** Ovarian tumors in their development have a tendency to pass downward back of the uterus; or if they rise above the pelvis, to fall over toward the anterior wall of the abdomen. **F.'s**

**opera′tion,** operation devised for total extirpation of the uterus through the abdominal walls.

**Frey′er's opera′tion.** Complete extirpation of the prostate gland.

**Frezie′ra theoi′des.** W. Indian plant, leaves of which are astringent.

**Fri′able.** Easily crushed or broken.

**Fri′ar's bal′sam.** Tinctura benzoini composita. **F.'s caps,** Aconitum napellus. **F.'s el′bow,** Thevetia iccotli.

**Frica′tio** (*frico,* to rub). Friction.

**Frica′tor** (*frico,* to rub). Masturbator.

**Fricato′rium.** Liniment.

**Frica′trix.** Female masturbator. One who acts as a male with another female.

**Fricke's episior′rhaphy.** Denudation of both labia majora and union by sutures for cure of prolapse of the vagina and uterus, and for the restoration of the vaginal sphincter apparatus.

**Fric′tion.** Action of rubbing a part of the surface of the body more or less forcibly with the hands, a brush, flannel, etc., *dry friction* or rubbing; or with ointments, liniments, tinctures, etc., *moist friction* or rubbing. **F. frem′itus,** see *Fremitus.* **F. mur′mur** or **sound,** rubbing sound of inflamed serous membranes against one another.

**Fric′tional electric′ity.** Static electricity.

**Fric′trix.** Fricatrix.

**Fried′länder's bacil′lus.** B. pneumoniæ Friedländeri. **F.'s decid′ual cells,** large cells of connective tissue of mucous lining of the uterus, forming compact layer of the decidua uterina. **F.'s disease′,** arteritis or endarteritis obliterans.

**Fried′mann's vasomo′tor symp′tom-com′plex.** Condition supervening on traumatism of the head, including numerous head-symptoms, often attended with paralysis of the ocular muscles and abnormal dilatation of the pupil. These symptoms may become intensified and lead to other conditions of serious character, such as paralysis of the cranial nerves, coma, and death. Encephalitis is probably the original cause.

**Fried′reich's atax′ia.** F.'s disease. **F.'s change of pitch,** in the act of deep inspiration the clear sound of air over the cavities of the lungs assumes a higher pitch. **F.'s disease′,** hereditary ataxia, a chronic degenerative disease affecting the posterior and lateral columns of the spinal cord; it begins in childhood and usually affects several members of the same family. **F.'s foot,** form of pes cavus seen in hereditary ataxia. **F.'s sign,** symptom occurring in adhesive pericarditis, characterized by collapse of the cervical veins during diastole.

**Frigefa′cient** (*frigus,* cold, *facio,* to make). Refrigerant.

**Fright.** Sudden terror. **Precor′dial f.,** intense feeling of anxiety over the precordial region, dependent on disorder of pneumogastric nerve and sympathetic system.

**Frigid,** frij′id (*frigeo,* to be cold). Cold. Not easily moved to sexual desire; impotent.

**Frigid′ity.** Sensation of cold. Absence of sexual desire.

**Frigorif′ic** (*frigus,* cold, *fio,* to become). That which has the power of producing cold. The effects of frigorific mixtures are owing to the rapid absorption of heat when solids pass into the liquid or liquids into the gaseous state. **F. nerve,** vasoconstrictor nerve.

**Frigother′apy** (*frigus,* cold, *therapeuo,* to cure). Crymotherapy; treatment of disease by application of intense cold.

**Fri′gus.** Cold; chill. **F. feb′rium,** chill of fever. **F. ten′ue,** slight chill.

**Fringe flow′er** or **tree.** Chionanthus virginica; indigenous; bark is cathartic and diuretic. **Haver′sian** or **syno′vial f.,** vascular fringe passing from synovial membranes into an articular cavity.

**Fringed.** Fimbriated.

**Frisch's sclero′ma.** Rhinoscleroma.

**Fritch's disease′.** Colporrhaphy of the posterior wall of the vagina.

**Fritilla′ria corona′ria** or **imperia′lis.** Crown imperial of Persia; nectar of the flower is emetic; alkaloid obtained from it is called *imperialine.* **F. melea′gris,** checkered daffodil; has same properties as F. coronaria.

**Frog.** Triangular mass of elastic horn in the heel and sole of the horse's hoof. **Cohn′heim's f.** or **salt f.,** see *Cohnheim.*

**Frog bel′ly.** Tympanitic abdomen of a child.

**Frog′face.** Appearance of nose and face resembling that of a frog, a result of some forms of nasal polypus.

**Frog′flower.** Ranunculus.

**Frog′leaf.** Brasenia hydropeltis.

**Frog′lily.** Nuphar advena.

**Frog-spawn bacte′rium** or **F.-s. fun′gus.** Leuconostoc mesenteroides. **F.-s. fermenta′tion,** dextran fermentation.

**Frog′tongue.** Ranula.

**Frog′wart.** Orchis mascula and other species of orchis; Ranunculus hederaceus.

**From′mann's lines.** Dark lines made by silver nitrate across the axis-cylinder of nerve near the annular constriction.

**Fron's rea′gent.** Double iodide of bismuth and potassium; employed as a test for alkaloids and for sugar.

**Frons.** Front; forehead.

**Front.** Anterior part of a body or organ. Forehead, brow; part of the visage extending from one temple to the other, and comprised in a vertical direction between the roots of the hair and the superciliary ridges.

**Fron′tad.** Toward the frontal aspect.

**Fron′tal.** Relating or belonging to the front, forehead, or frontal bone. **F. an′gle,** angle formed between horizontal plane and plane of direction of forehead; angle formed by lines projected from middle point of upper edge of external auditory meatus to glabella and bregma; angle formed by lines projected from metopion to bregma and nasion; anterosuperior angle of parietal bone. **F. arc,** arc on exterior of cranium between bregma and nasion. **F. a′rea,** region in cranium extending from supraorbital arch to coronal suture. **F. ar′tery,** this is given off by the ophthalmic, itself a branch of the internal carotid; it makes its exit from the skull at the upper part of the base of the orbit, and ascends the forehead between the bone and the orbicularis palpebrarum, dividing into three or four branches distributed to neighboring muscles; branches of the cerebral arteries to supply the frontal lobe are also called *frontal arteries.* **F. ar′tery, exter′nal,** supraorbital artery. **F. bone,** double bone in the fœtus, single in the adult, situated at the base of the cranium and at the superior part of the face. It forms the vault of the orbit; it lodges the ethmoid bone in a notch at its middle part, and is articulated, besides, with the sphenoid, parietal, nasal, lacrymal, superior maxillary, and malar bones. **F. cells,** ethmoidal cells one wall of which is a portion of the frontal bone. **F. convolu′tions,** convolutions of frontal lobe of cerebral hemispheres; they are the superior, middle, and inferior, or first, second, and third frontal convolutions. **F. crest,** ridge on internal surface of os frontis for attachment of falx cerebri. **F. diam′eters,** diameters of frontal region. **F. em′inence,** prominent part of forehead, indicating seat of embryonic formation of os frontis; f. protuberance. **F. flex′ure,** bend between metencephalon and myencephalon in embryonic life. **F. fontanelle′,** anterior fontanelle. **F. fur′row,** groove extending upward from the frontal spine, and becoming gradually larger in its course, to lodge the upper part of the superior longitudinal sinus and to give attachment to the falx cerebri. **F. gy′ri,** f. convolutions. **F. in′dex,** proportion between maximum and minimum frontal diameters, taking the maximum at 100; or between maximum transverse diameter and minimum frontal, taking the former at 100. **F. lobe,** anterior and superior part of the cerebral hemispheres. **F. mus'cle,** anterior portion of occipitofrontalis muscle. **F. nerve,** this is the greatest of the three branches of the ophthalmic nerve—the first division of the fifth pair; it proceeds along the superior wall of the orbit, and divides into two branches; the one, *internal* (supratrochlear nerve), making its exit from the orbital fossa, passing over the pulley of the superior oblique muscle; the other, *external* (supraorbital nerve), issuing from the same cavity by the foramen orbitale superius. **F. plane,** plane coinciding with or parallel to the frontal bone. **F. pro'cess,** superior angle of malar bone. Occasional prolongation of temporal to frontal bone. **F. protu'berance,** protuberance of the frontal bone above the superciliary arch; f. eminence. **F. sec'tion,** section made through the ascending frontal convolution parallel to the central fissure. **F. semicir'cular canal',** superior semicircular canal of labyrinth. **F. si'nuses,** two deep cavities in the substance of the frontal bone, separated from each other by a median septum, and opening below into the anterior cells of the ethmoid bone. **F. spine,** situated in the middle of the under part of the bone, and formed by the coalescence of the inner tables for the attachment of the falx cerebri. **F. sul'ci,** furrows or sulci on the superior surface of the frontal cerebral lobe; see *Frontal furrow*. **F. su'ture,** vertical suture between the two halves of the frontal bone in fetal life. **F. tract,** fibres from the frontal lobe on the middle part of the crusta. **F. tri'angle,** triangle having its apex at the metopion and its base at the superior facial diameter. **F. tuberos'ity,** frontal protuberance. **F. vein,** vein from the cranial plexus terminating in the angular vein. **F. ver'tebra,** in embryonic life, combination of presphenoid bone, orbitosphenoid bones, and frontal bone.

**Fronta'lis.** Frontal muscle. **F. et occipita'lis,** occipitofrontalis muscle.

**Frontoalve'olar in'dex.** Relation of extreme width of alveolar arch of superior maxillary bone to smallest frontal diameter, which is taken at 100.

**Frontoante'rior.** Occipitoposterior; position of fetal head during labor in which the forehead presents at entrance to pelvis.

**Frontocen'tral.** Relating to or connecting the frontal and the anterior and posterior central convolutions of the brain.

**Frontocerebel'lar fi'bres.** Frontal tract of anteroinferior portion of crura cerebri.

**Frontocot'yloid.** Relating to the forehead and acetabulum. **F. presenta'tion,** position of the fœtus during childbirth with its forehead pointing to one or other acetabulum of the mother.

**Frontodym'ia.** See *Cephalodymia* and *Cephalopagus*.

**Frontoethmoid'al fora'men.** Cæcum foramen (of frontal bone).

**Frontoglabel'lar.** Relating to the prominence of the frontal protuberance and the glabella.

**Frontogo'nial in'dex.** Relation of inferior facial and smallest frontal diameters, the latter being taken at 100.

**Frontolac'rymal.** Relating to forehead and lacrymal bone.

**Frontolat'eral sul'cus.** Oblique sulcus passing in front of the anterior extremity of the inferior frontal furrow.

**Frontoma'lar.** Relating to the frontal and malar bones. **F. diam'eter, or'bital,** space between opposite external orbital points. **F. in'dex,** relation of smallest frontal diameter to diameter between malar points, latter being taken at 100. **F. su'ture,** suture between frontal and malar bones.

**Frontomar'ginal sul'cus.** Furrow on superior surface of cerebral hemispheres, being apparently the prolongation obliquely of the superior frontal furrow.

**Frontomax'illary.** Relating to the frontal and superior maxillary bones. **F. in'dex,** ratio of middle anterior facial diameter to smallest frontal diameter, taking the latter at 100.

**Frontomen'tal diam'eter.** Space between frontal tuberosity and mental point.

**Frontona'sal mus'cle.** Pyramidalis nasi. **F. nerve,** supratrochlear nerve.

**Frontona'somax'illary.** Relating to frontal, nasal, and maxillary bones.

**Frontonu'chal.** Relating to forehead and nucha.

**Fronto-or'bital.** Relating to forehead and orbit.

**Frontopari'etal.** Relating to the frontal and parietal bones. **F. in'dex,** frontal index. **F. su'ture,** coronal suture.

**Frontoposte'rior.** Having the forehead of the child in parturition directed toward the back of the mother.

**Frontosphenoid'al.** Relating to the frontal and sphenoid bones.

**Frontotem'poral.** Relating to the frontal and temporal bones.

**Frontozygomat'ic in'dex.** Ratio of superior frontal diameter to the maximum width between the zygomatic arches.

**Front-tap contrac'tion.** Contraction of the muscles of the calf when they are made tense by raising the foot, and the muscles on the front of the leg are tapped.

**Fro'riep's gan'glion.** Ganglion of the fourth occipital embryonic segment. **F.'s indura'tion,** inflammation of muscular fibrous tissue.

**Frost'bite.** Effect of extreme cold on the skin or other part of the body, such as dermatitis and gangrene. See *Congelation*.

**Frost'grapes.** Vitis cordifolia.

**Frost-itch.** Pruritus hiemalis.

**Frost'plant.** Helianthemum canadense.

**Frost'weed.** Erigeron philadelphicum, Helianthemum canadense.

**Frost'wort.** Helianthemum canadense.

**Froth'y.** Epithet given to the fæces or sputa when mixed with air.

**Fructifica'tion** (*fructus*, fruit, *facio*, to make). Fecundation or reproduction in the animal.

**Fruc'tose.** $C_6H_{12}O_6$. Levulose, fruit sugar; a sugar found in honey and sweet juices, and obtained by boiling saccharose.

**Fruc'toside.** Principle which yields fructose when subjected to certain actions, just as a glucoside yields glucose. See *Glucoside*.

**Fructosu'ria.** Presence of fructose or fruit sugar in the urine.

**Fruc'tus.** Fruit.

**Frugiv'orous** (*fruges*, fruits, *voro*, to eat). Eating or feeding on fruits.

**Fruit** (*fruor*, to enjoy). In botany, the seed with its enclosing pericarp. In the ordinary acceptation, eatable seed-cases generally, such as require no preparation to render them fit for food. Also the fœtus while contained in the womb of the mother.

**Fruitilla'ria thunber'gii.** Bai-mo. Corm of this plant is employed in China for rheumatism and painful joint affections, and in Japan for the cure of ulcers.

**Fruit sugar.** Levulose, fructose.

**Fru'men.** Pharynx; œsophagus.

**Frumen'ti spir'itus.** Whiskey.

**Frumen'tum.** Any kind of grain from which bread is made, especially wheat; triticum. **F. cornicula'tum,** ergot; Triticum durum. **F. cornu'tum,** ergot. **F. in'dicum,** Zea mays. **F. luxu'rians,** ergot. **F. saracen'icum,** buckwheat. **F. temulen'tum,** ergot. **F. tur'cicum,** Zea mays. **F. tur'gidum,** ergot.

**Fuchs's colobo'ma.** Crescentic fissure of the choroid at the inferior edge of the optic disk. **F.'s op'tic at'rophy,** atrophy of the external collection of fibres which go to make up the optic nerve.

**Fuchsin'.** Roseïn, anilin red, eosin, magenta. Monohydrochlorate of rosanilin, a green, crystalline salt which becomes an intense red in solution; reputed to be of value in the treatment of albuminuria in doses of gr. ½ (0.032); it must be given with caution, as it sometimes contains arsenic; in large doses it is emetocathartic. Employed in solution as a stain for microscopic sections. **F. bod′ies,** hyaline globules, possessing an affinity for acid fuchsin, which have been found in cancer and have been supposed by some to be blastomycetes, by others to be merely the result of a hyaline degeneration of cell protoplasm.

**Fuchsin′ophile.** Readily taking fuchsin stains. Also a cell or other element having this property.

**Fu′cus.** A genus of seaweeds, ord. *Fucaceæ.* **F. amyla′ceus,** edible or Ceylon moss, marine moss; it was introduced into England from India; is white, filiform, and fibrous, and has the usual odor of seaweeds; medical properties are similar to those of Irish moss. **Blad′der f.,** F. vesiculosus. **F. carageen′,** Chondrus crispus. **F. crisp′us,** chondrus (Ph. U. S.), Irish pearl, carrageen, carragheen, or corrigeen moss. This fucus is found on the coasts of England, Ireland, Western France, Spain, and Portugal, and as far as the tropics; is also a native of the United States. In Ireland it is used by the poor as an article of diet. As met with in America, it is light yellow, and resembles plates of horn, crisped and translucent. An agreeable jelly is obtained from it by boiling it in water or milk, which forms a good article of diet for consumptives. Its properties are exactly like those of Iceland moss. **F. digita′tus,** Laminaria digitata. **F. edu′lis,** F. amylaceus. **F. helminthocor′ton,** Corallina corsicana. **F. hiber′nicus,** F. crispus. **F. infla′tus,** F. vesiculosus. **F. irlan′dicus,** F. crispus. **F. lichenoi′des,** F. amylaceus. **F. mari′nus,** F. vesiculosus. **F. na′tans,** gulf-weed. **F. palma′tus,** Halymenia palmatus. **Sac′charine f.,** Rhodomela palmata. **F. serra′tus,** serrated wrack; cut-leaf; crabby ore; it contains iodine, and is therefore used for scrofulous swellings. **F. spira′lis,** F. vesiculosus. **F. vesicula′ris,** F. vesiculosus. **F. vesiculo′sus,** bladder fucus, sea-oak, sea-wrack, yellow bladder-wrack, kelpware, black tang, cut weed, of Europe and America; useful in the treatment of disorders of the glands, and has been said to be efficacious in obesity. When the wrack, in fruit, is dried, cleaned, exposed to a red heat in a crucible with a perforated lid, and reduced to powder, it forms æthiops vegetabilis, pulvis quercus marinæ, used like burnt sponge in bronchocele and other scrofulous swellings; its efficacy depends on the iodine it contains.

**Fucusal′dehyde** or **Fu′cusol.** $C_5H_4O_2$. An oily substance derived from fucus.

**Fuer′bringer's sign.** An abscess situated below the diaphragm may be diagnosed from one above the diaphragm by introducing a needle into the abscess; the movements of respiration are communicated to the needle if the abscess lies below the diaphragm.

**Fuga′cious** (*fugio,* to fly). Epithet for symptoms, as redness, swelling, etc., which appear and disappear almost immediately afterward; ephemeral.

**-fuge** (*fugo,* to expel). "An expeller," common suffix having such a signification; hence febrifuge, vermifuge, etc., agents that drive away fever, expel worms, etc.

**Fu′gitive** (*fugio,* to flee). Wandering or rapidly disappearing, as f. pains.

**Ful′gurant** or **Ful′gurating.** Resembling lightning in suddenness, as the pains of tabes dorsalis.

**Fulgura′tion** (*fulgur,* lightning). Effect of lightning, either direct or indirect. Condition in which fulgurating pains occur, as in locomotor ataxia.

**Fuliginos′ity.** See *Fuliginous.*

**Fulig′inous** (*fuligo,* soot). Having the color of soot, as the lips, teeth, or tongue when they assume a brownish color, or rather are covered with a coat of that color. The condition is called *fuliginosity.*

**Fuli′go.** Soot. Wood-soot consists of volatile alkaline salt, empyreumatic oil, fixed alkali, etc. A tincture prepared from it has been used as an antispasmodic in hysterical cases; an ointment in some cutaneous affections. **F. al′ba philosopho′rum,** ammonii chloridum.

**Fuligok′ali** (*fuligo,* soot, *kali,* potassa). Analogous preparation to anthrakokali, soot being used in the place of coal, and employed in the same diseases.

**Full′ers′ earth.** Cimolia purpurescens.

**Full′ing.** Massage of the muscles against the bones under them.

**Ful′mar oil.** Reddish oil obtained from fulmar petrel, off the northern coast of Great Britain; analogous to cod-liver oil.

**Ful′minant** or **ful′minating** (*fulmen,* lightning). Fondroyant; a term applied to a disease occurring suddenly, and proceeding rapidly to a fatal termination.

**Ful′minate.** A salt of fulminic acid; violently explosive.

**Fulmin′ic acid.** $CH_2(NO_2)CN$. Nitro-aceto-nitrite.

**Ful′ness.** Plenitude, plethora, repletion; state of being filled. A feeling of weight or distention in the stomach or other part of the system.

**Ful′vous.** Dark, dull, yellow color.

**Ful′wa but′ter.** Fixed oil from seeds of Bassia butyracea, used in rheumatism.

**Fuma′ria** (*fumus,* smoke). Fumitory, common fumitory. The plant is sedative, tonic and alterative, laxative, and diuretic. The leaves are extremely succulent, and have a bitter, somewhat saline taste. The infusion of the dried leaves and the expressed juice of the fresh plant are said to clear the skin of leprous disorders. **F. bulbo′sa,** the root of this plant is a variety of corydalis; emmenagogue and anthelmintic. **F. ca′va,** F. bulbosa. **F. ma′jor,** F. bulbosa. **F. me′dia,** fumaria. **F. officina′lis,** fumaria. **F. parviflo′ra,** plant of Southern and Western Europe, resembling Fumaria officinalis. It is antiperiodic and anthelmintic, and used in some forms of skin disease. **F. tenuifo′lia,** F. parviflora.

**Fuma′ric acid.** $C_4H_4O_4$. Obtained from Fumaria officinalis, Cetraria islandica, and various fungi.

**Fume.** Smoke or vapor. **F. of the earth,** Fumaria officinalis.

**Fumiga′tion.** Operation of filling a circumscribed space with gas or vapor, in order to effect deodorization or disinfection, or to act upon the surface of the human body. Hence fumigations have been distinguished into aqueous, aromatic, sulphurous, mercurial, disinfecting, etc. Benzoin generally constitutes the chief ingredient in the fumigating pastilles, to which any variety of odoriferous substances may be added.

**Fu′migator.** Apparatus for fumigation.

**Fu′ming** (*fumus,* smoke). Emitting a visible vapor. **F. ni′tric acid,** nitric acid containing nitrogen tetroxide; a reddish-brown liquid which gives off fumes of the same color.

**Fu′mus al′bus.** Hydrargyrum. **F. cit′rinus,** sulphur. **F. ter′ræ,** fumaria.

**Func′tion** (*fungor,* to act). Action of an organ or set of organs; any act necessary for accomplishing vital phenomena. Function is a special office in the animal economy, having as its instrument an organ or apparatus of organs; thus, respiration is a function. Vital functions are those essential to life, as innervation, circulation, respiration; animal functions, those belonging to the encephalon—viz., the functions of the intellect, the affections, the voluntary motions; and vegetative functions, those relating to assimilation, such as the actions of the abdominal viscera, of the absorbent and exhalant vessels, etc.

**Func′tional.** Relating or belonging to the function of an organ or to the functions in general. **F. diseas′es,** diseases that concern the function of an organ, not its structure. **F. phenom′ena,** those produced by modification in the action of an organ or organs, in contradistinction to those of a material or physical character.

**Func′tionating.** Performing its functions normally.

**Fun′da** (a sling). Four-tailed bandage, composed of a fillet or long compress cleft at its extremities to within about two inches of its middle; used in diseases of the nose and chin and in fracture of the lower jaw. **F. Gale′næ, maxil′læ,** or **maxilla′ria,** funda. **F. Retz′ii,** loop-like process of the lower band of the anterior annular ligament of the ankle, passing from the forepart of the os calcis, and binding down tendons of long extensors of the toes. **F. superficia′lis vesi′cæ,** sling-like muscular masses near the attachment of the urachus to the bladder.

**Fun′dal.** Relating to the fundus uteri. **F. placen′ta,** placenta having a normal attachment at the fundus of the uterus.

**Fun′dament** (*fundus,* the bottom). Anus.

**Fundamen′tal.** Pertaining to the foundation. The sacrum has been called the fundamental bone, because it serves as a base to the vertebral column; the sphenoid bone is so denominated, from its being situated at the base of the cranium. **F. fascic′ulus,** bundle of fibres remaining in the anterior column of the spinal cord and medulla oblongata after exclusion of the pyramidal tracts.

**Fundamen′tum.** Foundation. Anus. **F. cellula′re,** stroma.

**Fun′dus** (bottom). Base of any organ ending in a neck or having an external aperture, as the bladder or uterus. **F. glands,** tubular glands of the cardiac extremity of the stomach. **F. oc′uli,** bottom of the cavity of the eyeball, seen ophthalmoscopically. **F. sac′ci lacryma′lis,** upper end of the lacrymal sac. **F. of stom′ach,** greater curvature of the stomach. **F. u′teri,** upper extremity or expanded portion of the uterus. **F. vagi′næ,** upper extremity of the vagina; see *Vagina.* **F. ventric′uli,** cardiac extremity of the stomach. **F. vesi′cæ,** broad part or base of the bladder. **F. vesi′cæ fel′leæ,** upper expanded part of the gall-bladder.

**Fun′gating tu′mor.** Tumor composed of exuberant granulations from a neglected sebaceous cyst whose contents have been discharged by ulceration.

**Fun′gi** (pl. of fungus). A group of cellular cryptogams; see *Fungus.*

**Fun′giform** (*fungus,* mushroom, *forma,* shape). Having the shape of a mushroom. **F. papil′læ,** see *Papillæ of the tongue.*

**Fun′goid** (*fungus+eidos,* resemblance). Fungiform; having the shape of or growing like a mushroom, as the fungoid or fungiform papillæ of the tongue. Mycetoid. **F. degenera′tion of the endome′trium,** fungous projecting masses from the lining membrane of the uterus. **F. disease′,** encephaloid. **F. ne′oplasm, inflam′matory,** mycosis fungoides.

**Fungos′ity.** Quality of that which is fungous. Fungous excrescence. Fungosities or excessive granulations which arise in wounds or ulcers—proud flesh—are easily repressed by gentle compression, dry lint, cupri sulphas, or other gentle caustics. At times the more powerful agents are necessary, and sometimes excision is required. **Ure′thral f.,** urethral papilloma. **U′terine f.,** fungoid degeneration of the endometrium.

**Fun′gous.** Having the exuberant characters of a fungosity or fungus. **F. foot of In′dia,** mycetoma. **F. granula′tions,** see *Fungosity.* **F. pulp,** hypertrophic condition of the dental pulp.

**Fun′gus** (pl. fungi). Mushroom order of plants, class *Cryptogamia* in the Linnæan system. Some of the fungi, ord. *Mucoraceæ,* found as parasites in man and the mammalia are the following: Trichophyton tonsurans, on the hairy scalp; T. sporuloides, on ulcers; Microporon Audouini, in the hair follicles; M. mentagrophytes, at the roots of the hair; M. furfur, in the skin; Mucor mucedo, in a cavity of gangrene of the lung; Achorion Schönleini, in the hairy scalp and hair follicles; Aspergilli species, in the meatus auditorius externus; Puccinia favi, in favus; Oidium albicans, in aphthæ. The term is applied to all vegetable organisms of a low order of development, especially the microorganisms. In pathology, fungus is commonly used synonymously with fungosity. See *Mycosis.* **F. al′bus salig′neus,** Dædalea suaveolens. **F. artic′uli,** spina ventosa; fungous arthritis. **Bleed′ing f.,** medullary sarcoma. **F. bovis′ta,** lycoperdon. **F. cancro′sus hæmato′des** or **F. cancro′sus medulla′ris,** medullary sarcoma; see *Encephaloid.* **F. cerebra′lis,** medullary sarcoma. **F. cer′ebri,** fungous excrescence of the brain through an aperture in the cranium; hernia cerebri; see *Encephaloid.* **F. chirurgo′rum,** lycoperdon. **F. cra′nii,** fungous excrescence of the cranial bones. **F. cynosba′ti,** bedeguar. **F. disease′ of In′dia,** see *Mycetoma.* **F. of du′ra ma′ter,** fungous tumor arising from the dura mater. **F. fagino′sus,** Morchella esculenta. **Fis′sion f.,** see *Schizomycetes.* **Fly f.,** Agaricus muscarius. **F. foot,** mycetoma. **Frog-spawn f.,** Leuconostoc mesenteroides. **F. germs,** blastomycetes. **F. hæmato′des,** medullary sarcoma; cavernous angioma. **F. ignia′rius,** Boletus igniarius. **F. lar′icis,** Boletus laricis. **F. of Mal′ta,** Cynomorion coccineum. **F. mam′mæ,** cancer of the breast. **F. medulla′ris,** medullary sarcoma; see *Encephaloid.* **F. melano′des,** melanotic cancer. **F. meliten′sis,** Cynomorion coccineum. **F. musca′rius,** fly agaric. **Parasit′ic f.,** any fungus on the living body. **F. petræ′us mari′nus,** Umbilicus marinus. **F. porrig′inis,** see *Porrigo favosa.* **F. querci′nus,** Boletus igniarius. **Ray f.,** actinomyces. **F. rosa′rum,** bedeguar. **F. sal′icis,** Dædalea suaveolens. **F. sambu′ci** or **sambuci′nus,** Peziza auricula. **F. seca′lis,** ergot. **Split f.,** schizomyces. **Su′gar f.,** Saccharomyces cerevisiæ. **F. test for su′gar,** see *Sugar.* **F. tes′tis,** fungus of the testicle; may be benign or malignant; hernia testis. **F. of thrush,** Oidium albicans. **F. umbilica′lis,** fungus of the stump of the umbilical cord in newborn children. **F. vasculo′sus,** nævus vasculosus.

**Fu′nic.** Relating to the funis.

**Fu′nicle** (dim. of funis). Funiculus; a cord or bundle of fibres.

**Funic′ular** (*funis,* a cord). Relating to the funis umbilicalis or umbilical cord, as the funicular process of the peritoneum; or to a funiculus. **F. ar′tery,** cremasteric artery. **F. bel′lows sound, mur′mur,** or **souf′fle,** see *Bellows sound, funic.* **F. hy′drocele,** a form of hydrocele in which the tunica vaginalis is closed at the end toward the testis, but open above. **F. pro′cess,** process of the peritoneum passing down with the spermatic cord in the descent of the testicle.

**Funic′uli.** Plural of funiculus.

**Funiculi′tis.** Inflammation of the umbilical cord or of the spermatic cord.

**Funic′ulus** (dim. of funis). Cord; bundle of fibres. Column of the spinal cord. Umbilical cord. **F. ante′rior,** anterior column of the spinal cord. **F. anterolatera′lis,** lateral column of the spinal cord. **F. bra′chii,** median vein of the arm. **Bur′dach's f.,** f. cuneatus. **F. cerebra′lis,** anterior column of the spinal cord **F. cine′reus,** gray column of the spinal cord. **F. cunea′tus** or **cuneifor′mis,** collection of fibres on the outer side of the funiculus gracilis, continuous below with the lateral posterior column of the spinal cord, and above with the restiform body. Bundles of white fibres of the funiculi graciles and cuneati making up the posterior column of the medulla oblongata are prolonged below, as those of the posterior column of the cord. The *lateral cuneate funiculus* is also called f. of Rolando. **F. dorsa′lis,** spinal cord. **F. exter′nus,** see *Funiculus siliquæ.* **F. furca′lis,** form of divergent or forked insertion of the umbilical cord, the vessels passing into the placenta at different points. **F. grac′ilis,** one of the posterior median columns or fasciculi of the medulla oblongata. Along the posterior border of each corpus restiforme, and separated from it by a groove, is a narrow white cord, separated from its fellow by the fissura longitudinalis posterior; the pair of cords are the funiculi graciles. Each funiculus forms an enlargement—processus clavatus—at its upper end, and is then lost in the corpus restiforme. **F. gris′eus,** gray column of the spinal cord. **F.**

**Hippoc'ratis,** tendo Achillis. **F. innomina'tus,** fasciculus teres. **F. inter'nus,** see *Funiculus siliquæ.* **F. latera'lis,** lateral column of the spinal cord. **F. ligamento'sus,** ligament between the styloid process of the ulna and the cuneiform and pisiform bones. **F. longitudina'lis,** fasciculus teres. **F. me'dius,** lateral column of the spinal cord. **F. ner'veus,** habena. **F. oliva'ris,** lateral column of the spinal cord prolonged upward into the medulla oblongata. **F. ova'lis,** f. olivaris. **F. poste'rior,** posterior column of the spinal cord. **F. pyramida'lis,** pyramid of the spinal cord. **F. restifor'mis,** restiform body. **F. Rolan'di,** f. cuneatus. **F. sacra'lis,** portion of the sympathetic nerve distributed to the pelvis. **F. scle'ræ** or **sclerot'icæ,** bundle of connective-tissue fibres following the course of the short ciliary arteries. **F. sil'iquæ,** bundle of longitudinal fibres in the groove separating the corpus olivare from the corpus pyramidale and corpus restiforme. The fibres enclose the base of the corpus olivare, those lying on its inner side forming the *funiculus internus,* and those on its outer side the *funiculus externus.* **F. solita'rius,** solitary bundle; respiratory fasciculus. **F. spermat'icus,** spermatic cord. **F. spina'lis,** spinal cord. **F. te'res,** fasciculus teres. **F. transver'sus,** anterior cerebral commissure. **F. tu'beris,** infundibulum. **F. tym'pani,** chorda tympani. **F. umbilica'lis** or **umbilica'ris,** umbilical cord; navel-string; cord-like substance extending from the placenta to the umbilicus of the fœtus; composed of the amnion, an albuminous secretion called the jelly of the cord, cellular substance, an umbilical vein, and two umbilical arteries. The former conveys the blood from the placenta to the fœtus; the latter return it. All these parts are surrounded by a sheath—investitura or vagina funiculi umbilicalis. The usual length of the cord is from sixteen to twenty-two inches. **F. u'teri,** round ligament of the uterus. **F. varico'sus,** cirsocele.

**Fu'nis.** Cord; umbilical cord. **F. argen'teus,** medulla spinalis. **F. Hippoc'ratis,** tendo Achillis. **F. umbilica'lis,** funiculus umbilicalis.

**Fun'nel.** Infundibulum; siphon. **F. breast** or **F. chest,** funnel-shaped breast. **F. drain'age,** drainage effected by the introduction of funnels into the fluid containing cavity. **F. pel'vis,** infantile pelvis; see *Pelvis.*

**Fun'nel-shaped breast** or **chest.** Term applied by Ebstein to a peculiar deformity of the anterior thoracic wall, being a depression of the middle region of this wall and the adjacent abdominal wall, the bottom of the depression being formed by the lower end of the sternum, and apparently almost resting on the vertebral column; usually congenital. **F.-s. pel'vis,** infantile pelvis, resembling in shape the male pelvis, having long and narrow diameters.

**Fun'ny-bone.** Crazy-bone. When the ulnar nerve is suddenly and forcibly pressed upon above the elbow, it gives occasion to a tingling in the fingers to which it is distributed; in familiar language this is said to be produced by pressing on the funny-bone.

**Fur.** Coat or covering; term often applied to a layer of greater or less thickness which covers the surface of certain organs, and particularly of the tongue and the interior of the mouth. It is designated variously, according to its appearance, bilious, yellow, white, etc. It is at times due to the evaporation of the watery portions of the secretions; at others, to a morbid condition of the secretions; generally, to both causes combined. The tongue in such condition is said to be coated or furred.

**Fur'ca** (fork). Structure or part having a fork-like appearance. **F. orbita'lis,** small, fork-like portion of bone supporting the optic nerve in the embryo, and constituting the earliest formation of the orbit.

**Furcel'la** (dim. of *furca,* fork). Upper part of the sternum. The clavicle. Rudiment of embryonic epiglottis. Fourchette. **F. infe'rior,** xiphoid cartilage.

**Fur'cula** (dim. of *furca,* fork). Furcella or furculum.

**Fur'cular.** Resembling a small fork; relating to the clavicle or to the fourchette.

**Fur'culum.** The united clavicles in birds, "wishbone."

**Fur'fur** or **fur'fura.** Bran, decoction of which is sometimes employed as an emollient. Scarf or scurf, dandruff.

**Furfura'ceous.** Scurfy; canicaceous; resembling bran; name given to eruptions in which the epidermis is detached in small bran-like scales, also to bran-like sediment observed at times in the urine.

**Furfural'dehyde.** $C_5H_4O_2$. A liquid obtained from bran, saccharine substances, etc.

**Furfuram'ide.** See *Furfurin.*

**Furfura'tion.** Branny or furfuraceous desquamation; porrigo; pityriasis.

**Furfurin'.** By the action of dilute sulphuric acid on corn meal or bran an oil is obtained—furfurol or furfurole; by the action of ammonia on this, furfuramide or furfurolamide results; and by the action of dilute potassa on this, furfurin is obtained. This is said to have tonic and antiperiodic properties. Nitrate of furfurin has been used as an antineuralgic in doses of gr. ij–iij (0.13–0.2).

**Furfuris'ca.** Pityriasis.

**Fur'furol.** See *Furfurin.*

**Furfurolam'ide.** See *Furfurin.*

**Fur'furous.** Furfuraceous.

**Fu'ria.** Madness; mania. **F. inferna'lis,** vermiform insect in Sweden said to convey the germs of malignant anthrax. **F. medinen'sis,** Filaria medinensis.

**Fu'rious** (*furor,* madness). Violently insane; one laboring under mania.

**Furneaux'-Jor'dan meth'od.** Perineal lithotomy.

**Fu'ror.** Fury; mania. **F. amato'rius,** erotomania. **F. bre'vis,** transitory mania; rage. **F. genita'lis,** erotomania. **F. ma'nia,** mania. **F. melanchol'icus,** a form of melancholy. **F. transito'rius,** transitory mental derangement. **F. uteri'nus,** nymphomania.

**Furred.** See *Fur.*

**Fur'row.** Sulcus; groove. **Auric'uloventric'ular f.,** auriculoventricular groove. **Dig'ital f.,** one of the transverse lines on the palmar surface of the fingers. **Dor'sal f.,** groove in the median line of the back in which are prominences caused by the spinal processes of the vertebræ; primitive groove. **Ge'nal f.,** mentolabial f. **Gen'ital f.,** groove on the inferior surface of the genital tubercle in the embryo, which by its closure or patency determines the sex of the fœtus; see *Genital.* **Glu'teal f.,** the furrow between the nates. **In'guinal f.,** fold of the groin. **Interventric'ular f.,** name given to two longitudinal grooves extending from the base to the apex of the heart. **Jadelot's' f.,** see *Jadelot.* **F.-kerati'tis,** see *Keratitis dendritica, K. ulcerans,* and *K. mycotica.* **Lie'bermeister's f.,** see *Liebermeister.* **Mentola'bial f.,** see *Mentolabial.* **Merid'ian f.,** groove passing through the germinal and nutritive poles in segmentation of the ovum. **Na'sal f.,** Jadelot's f. **Oculozygomat'ic f.,** Jadelot's f. **Ra'dial f.,** meridian f. **F. of Rolan'do,** fissure of Rolando. **Sib'son's f.,** see *Sibson's groove.* **Spi'nal f.,** dorsal f. **Ver'tical f.,** meridian f. **Vitel'line** or **yolk f.,** furrow on the ovum denoting segmentation.

**Fur'rowed band.** Indented ridge of gray matter between the amygdalæ and the uvulæ of the cerebellum.

**Fu'runcle.** Furunculus. **An'thracoid f.,** small carbuncle. **Wasp's-nest f.,** furunculus vespajus.

**Furun'cular** or **furun'culous.** Relating to a boil or furuncle. **F. diath'esis,** tendency to suffer from boils. **F. skin diseas'es,** phlogoses.

**Furun'culoid** (*furunculus* + *eidos,* resemblance). Resembling a furunculus.

**Furunculo'sis.** Growth or production of boils.

**Furun'culus.** Boil; furuncle. Small phlegmon appearing under the form of a conical, hard, circumscribed tumor, having its seat in the dermal texture. After an uncertain period it becomes pointed, white or yellow, and gives exit to pus mixed with blood. When it breaks, a small, grayish, fibrous mass sometimes appears, consisting of dead areolar tissue; this is called the core, ventriculus, or nucleus furunculi.

The abscess does not heal until after its separation. The indications of treatment are to discuss by the application of leeches and warm fomentations, or to encourage suppuration by warm, emollient cataplasms. When suppuration is entirely established the part may be opened or suffered to break, according to circumstances. *A blind boil* is an indolent, imperfectly suppurating, phlegmonous tumor, of the kind described above, often seated in a sebaceous follicle, as in acne indurata. **F. anthracoi'des,** small carbuncle. **F. aton'icus,** ecthyma. **F. benig'nus,** furuncle. **F. delhi'nus,** Delhi boil. **F. follicula'ris,** furuncle involving a sebaceous gland. **F. gangrænes'cens** or **gangræno'sus,** anthrax. **F. lochia'lis,** a boil on the hand of an obstetric nurse, supposed to be due to irritation by the lochia. **F. malig'nus,** anthrax. **F. neurit'icus,** form of erythanthema neuriticum. **F. orienta'lis,** disease variously called Aleppo or Delhi boil, Biskra button, etc. **F. panula'tus,** slowly forming chronic tubercle, opening at last like a weaver's shuttle. **F. parasit'icus,** boil caused by parasites. **Post-mor'tem f.,** a boil on the hand of one who has much dissecting or autopsy work to do, supposed to be due to infection from the cadaver. **F. suppurato'rius,** boil. **F. termin'thus,** berry or fungous carbuncle; see *Terminthus*. **F. vespa'jus,** carbuncle, a large, slowly forming suppurating phlegmon, at last opening in numerous places, like a wasp's nest. **F. vulga'ris,** carbuncle; boil.

**Furze.** Ulex europæus.

**Fusa'nus lanceola'tus, persica'rius,** or **spica'tus.** Species of sandalwort of Australia, from which oil of sandalwood is procured.

**Fusa'ria** (*fusus,* spindle) **lumbricoi'des.** Ascaris lumbricoides. **F. margina'ta,** Ascaris marginata. **F. mys'tax,** Ascaris mystax. **F. rena'lis,** Eustrongylus gigas. **F. vermicula'ris,** Ascaris oxyuris or vermicularis. **F. viscera'lis,** Strongylus gigas. **F. wer'neri,** Ascaris marginata.

**Fusce'do** (*fuscus,* dusky). Darkness or duskiness, as of the skin. **F. cu'tis,** melasma cutis. **F. sola'ris,** see *Chloasma* and *Melanopathy*.

**Fus'cin** (*fuscus,* brown). Brown coloring-matter in the pigment epithelium of the retina.

**Fu'sel oil.** Amylic alcohol.

**Fusibil'ity.** Property of being fusible. See *Fusion*.

**Fu'sible.** See *Fusion*. **F. cal'culi,** urinary calculi made up of calcium phosphate and triple phosphates.

**Fu'siform** (*fusus,* spindle). Spindle-shaped. **F. lob'ule,** inferior temporo-occipital convolution.

**Fu'sion** (*fundo,* to melt). Melting; liquefaction. Transition of a solid body into a liquid by the aid of heat. Substances capable of such transition are said to be fusible, or to be possessed of fusibility.

**Fusocel'lular.** Spindle-celled.

**Fus'ti.** Stalks of caryophyllus or cloves.

**Fus'tic.** Chlorophora tinctoria; Cuba wood or yellow wood; used for making green and yellow dyes. **Old f.,** chlorophora tinctoria. **Young f.,** Rhus cotinus, smoke-tree, Venetian sumach; used for making a yellow dye. **Zan'te f.,** young f.

**Fustiga'tion.** Flagellation. **Elec'tric f.,** application of the faradic current by tapping the surface.

**Fus'tin.** Yellow coloring-matter from Rhus cotinus or young fustic.

# G.

**G.** An abbreviation of gramme. Formerly the chemical symbol of glucinum, now Gl.

**Gad′fly.** Generic term including a number of insects whose larvæ have a habitat in domestic animals, as the horse and sheep. **Com′mon g.**, Hypoderma bovis; the warble or wormil, found in backs of horses and cattle. **Horse g.**, Gastrophilus equi. See also *Bots*. **Sheep g.**, Œstrus ovis; found in the nostrils of sheep.

**Ga′dic** or **Gadin′ic acid.** $C_{28}H_{58}O_4$. Fatty acid derived from cod-liver oil.

**Gadinin′.** $C_7H_{17}NO_2$. Ptomain in putrefying codfish, etc., and in bacteria of human excrement.

**Gaduin′.** $C_{35}H_{46}O_9$. Dark brown principle obtained from oleum morrhuæ.

**Gad′uol.** Alcoholic extract of cod-liver oil. Morrhuol.

**Ga′dus.** The cod-fish. **G. merlan′gius**, whiting fish. **G. mor′rhua**, the source of cod-liver oil; see *Oleum morrhuæ*.

**Gaert′ner's canal′**, etc. See *Gärtner*.

**Gaff′kya tetrag′enes** (Saccardo). Micrococcus tetragenus.

**Gaf′sa but′ton.** Delhi boil.

**Gag.** Plug, wedge, or other instrument to separate the jaws and keep the mouth open. To retch.

**Ga′gea arven′sis.** Tuber of this European liliaceous herb is emetic and antispasmodic, and is externally applied to ulcers. **G. lu′tea**, our Lady's cowslip, and **G. praten′sis** have similar properties.

**Gai′acyl.** Guaiacyl.

**Gaieth′ol.** See *Guæthol*.

**Gait.** Characteristic mode of walking or running, modified in a number of diseases of the nervous system. **Atax′ic g.**, slow, irregular, jerking gait, characteristic of progressive locomotor ataxia. **Cerebel′lar g.**, gait characteristic of disease of the cerebellum, the nervous centre of coordination of movements, consisting in want of steadiness or regularity. **Charcot's′ g.**, see *Charcot*. **Cow g.**, peculiar movement like that of the cow; met with in knock-knee. **E′quine g.**, gait observed in those having paralysis of the peroneal muscles. **Fes′tinating g.**, see *Festination*. **Frog g.**, hopping gait of diplegia of children. **Paralyt′ic g.**, gait in which the feet are dragged along the floor or lifted unnaturally high when the thigh is flexed; the latter is also called *stepping* or *steppage gait*. **Spas′tic g.**, short, restricted gait with little elevation of the feet; seen in some forms of paralysis. **Stamp′ing g.**, ataxic g. **Step′ping g.**, paralytic g. **Sway′ing g.**, cerebellar g.

**Galactacra′sia** (*gala*, milk, *a*, priv., *krasis*, mixture). Defective constitution of milk.

**Galactæ′mia** (*gala*, milk, *haima*, blood). Condition of the blood in which it contains milk.

**Galac′tagogue** (*gala*, milk, *ago*, to drive). Agent that promotes the secretion or flow of milk.

**Galactaposte′ma** (*apostema*, abscess). Milk abscess.

**Gal′actase.** Proteolytic ferment of milk.

**Galac′tia.** Redundant flow of milk, which may occur without being provoked by suckling; when excessive, it sometimes causes wasting. Disordered lactation.

**Galac′tic.** Lactic.

**Galactidro′sis.** Sweating of milk-like fluid.

**Galac′tifer** or **Galactif′erous** (*gala*, milk, *fero*, to carry). Galactophorous.

**Galactin′.** Gummy substance from seeds of Medicago sativa. Also a basic substance, $C_{54}H_{78}N_4O_{45}$, derived from milk.

**Galactinomy′ces.** Galactomyces.

**Galac′tinous.** Lactic; milky; containing milk.

**Galacto-** (*gala*, milk). In composition, milk.

**Galac′toblasts** (*gala*, milk, *blastos*, bud). Bodies containing fat-globules in acini of mammary gland.

**Galactocatarac′ta.** Milky cataract.

**Galac′tocele** (*gala*, milk, *kele*, tumor). Milk tumor; distention of one or more of the galactophorous sinuses by milk; lactiferous engorgement. Tumor produced by retention of milk, galactoma. Tumor produced by effusion into the tunica vaginalis of a fluid having a milky or whitish appearance; chylocele.

**Galactochlo′ral.** Mixture of chloral and galactose; hypnotic.

**Galactoch′rous** (*chroa*, color). Having the color of milk; milky.

**Galactoden′dron u′tile.** Cow-tree of South America. When incision is made into the trunk an agreeable and nutritious milky fluid flows out.

**Galactodiarrhœ′a.** Cœliac flux. Diarrhœa with milk-colored stools.

**Galactœde′ma.** Œdematous galactocele.

**Galactogan′glion** (*ganglion*, knot). Milk knot or tumor of breast from distention of milk duct.

**Galactogenous**, gal-ak-toj′en-us (*gala*, milk, *gennao*, to produce). Producing milk.

**Galactoglycosu′ria.** Presence of sugar of milk in the urine.

**Galac′togogue.** Galactagogue.

**Galac′toid** (*gala*, milk, *eidos*, resemblance). Resembling milk.

**Galacto′ma.** Tumor produced by the retention of milk; galactocele.

**Galactometas′tasis.** Metastasis of milk, the secretion occurring in some other part than the breast.

**Galactom′eter** (*metron*, measure). Graduated instrument for appreciating the quantity of cream in milk.

**Galactomy′ces** (*gala*, milk, *mykes*, fungus). Medullary sarcoma or carcinoma; encephaloid.

**Galactop′athy.** Milk cure.

**Galactoph′agist** (*phago*, to eat). One who lives on milk.

**Galactoph′agous.** Feeding on milk.

**Galactophlebi′tis.** Phlebitis of suckling children.

**Galactoph′lysis** (*gala*, milk, *phlysis*, vesicular eruption). Crusta lactea. Eruption of milky vesicles occurring during suppressed lactation.

**Galac′tophore.** Lactiferous; galactophorous.

**Galactophori′tis.** Inflammation of the galactophorous ducts.

**Galactoph′orous** (*gala*, milk, *phero*, to bear). Lactiferous; producing or conveying milk; galactagogue. **G. ducts**, lactiferous ducts. **G. recep′tacle**, see *Lactiferous vessels*. **G. sac**, see *Lactiferous vessels*. **G. si′nuses**, see *Lactiferous vessels*.

**Galactophthi′sis** (*phthisis*, wasting). Wasting away or debility from excessive lactation.

**Galactoph′ygous** (*phyge*, flight). Arresting the secretion of milk.

**Galactopla′nia** (*plane*, wandering). Extravasation of milk into the areolar tissues. Secretion of milk elsewhere than from the breasts. Galactidrosis; galactophlysis.

**Galactoplero′sis** (*plerosis*, repletion). Redundance of milk; galactorrhœa.

**Galactopoie′sis** (*poieo*, to make). Secretion of milk.

**Galactopoiet′ic.** Producing milk; galactagogue.

**Galactopo′sia** (*posis*, drink). Milk cure.

**Galactop′yra** (*pyr*, fire, fever). Milk fever.

**Galactopyret′ic.** Relating to milk fever.

**Galactorrhœ′a** (*rheo*, to flow). Excessive or abnormal excretion or flow of milk, especially after weaning; often confounded with polygalactia. **G. erro′nea**, galactoplania. **G. sacchara′ta**, saccharorrhœa lactea.

**Galactosac′charum.** Sugar of milk.

**Galac′toscope** (*skopeo*, to see). Instrument for determining the quality of milk; lactometer.

**Gal′actose.** $C_6H_{12}O_6$. Carbohydrate resulting from treating lactose with dilute acids or from fermentation.

**Galacto′sis.** Secretion or formation of milk.

**Galactospon′gus** (*spongos*, sponge, fungus). Medullary carcinoma; medullary sarcoma.

**Galactos′tasis** (*stasis*, fixed state). Stagnation or check to flow of milk.

**Galactosyr′inx** (*syrinx*, tube). Milk fistula; lacteal fistula.

**Galactother′apy** (*gala*, milk, *therapeuo*, to cure). Treatment of disease by exclusive diet of milk. Administration of drugs to act on the mother's or nurse's milk.

**Galactot′rophy** (*trophe*, nourishment). Nourishment by means of milk.

**Galac′tozyme** (*zyme*, ferment). Milk fermented by means of yeast; used as a remedy for phthisis.

**Galactu′ria** (*ouron*, urine). Chyluria.

**Galam′ but′ter.** Bambuk or shea butter; expressed oil from seeds of Bassia parkii.

**Galan′ga** or **Galan′gal.** Maranta galanga. **G. ma′jor**, rhizome of Alpinia galanga, as **G. mi′nor** and **G. sinen′sis** are of Alpinia officinarum; all are stimulant and aromatic.

**Galangin′.** Derivative of Alpinia galanga.

**Galan′gol.** A principle derived from galangal.

**Galan′thus niva′lis.** Snowdrop of Europe; juice is used internally as emetic and antipyretic; the herb externally for cataplasms.

**Galarrhœ′us lath′yris.** Euphorbia lathyris. **G. palus′tris**, Euphorbia palustris.

**Gal′ax aphyl′la.** Carpenter's leaf, beetleweed; indigenous. The root is astringent, and the leaves, in domestic practice, are applied to cuts and wounds.

**Galax′ia.** Thoracic duct.

**Gal′azyme** (*zyme*, ferment). Galactozyme.

**Gal′banum.** (Ph. Br.) A gum resin derived from several species of ferula or Bubon galbanum; stimulant expectorant and is employed in diseases of the mucous tracts; dose, gr. v–xv (0.32–1.0). The compound pills (*pilulæ galbani compositæ*) are official in the Ph. Br.; they contain galbanum, asafœtida, and myrrh.

**Gal′bulus.** An old term for a yellow hue of the skin persisting through life, supposed to be congenital jaundice.

**Gale.** Dutch myrtle. See *Myrica gale*.

**Gal′ea.** Amnion. Bandage of Galen. Headache affecting the whole head. A tendinous expansion uniting the frontal and occipital portions of the occipitofrontalis muscle; called also G. aponeurotica, G. capitis, and G. tendinosa Santorini.

**Galeamauro′sis** (*galee*, weasel). Amaurotic cat's eye.

**Galean′thropy** (*galee*, weasel, *anthropos*, man). Insanity in which the patient believes himself changed into a weasel or a cat; affection similar to lycanthropy and cynanthropy.

**Galea′ti's glands.** Lieberkühn's crypts.

**Gale′ga.** Goat's rue; slightly aromatic, and sudorific; it is also said to improve the secretion of milk. **G. apolline′a**, Tephrosia apollinea. **G. litora′lis**, poisonous W. Indian plant; anthelmintic; juice of leaves is cathartic. **G. officina′lis**, galega; antipyretic, antispasmodic, and diuretic; the leaves are galactagogue. **G. per′sica**, galega. **G. purpu′rea**, Tephrosia apollinea. **G. toxica′ria**, Tephrosia toxicaria. **G. virginia′na**, Turkey pea, hoary pea, devil's shoe-strings, Virginia goat's rue, or catgut; used in some parts of the United States as anthelmintic in decoction of the root; it is also galactagogue. **G. vulga′ris**, galega.

**Ga′len's ampul′la.** Enlargement of the vena magna Galeni in the middle portion of Bichat's fissure. **G.'s anastomo′sis**, intralaryngeal anastomosis of the inferior and superior laryngeal nerves. **G.'s band′age**, a kind of hood divided into three parts on each side, used for retaining poultices and other applications on the head. **G.'s can′cer**, an eight-tailed bandage similar to the six-tailed one just defined. **G.'s chan′cre**, soft chancre. **G.'s duct**, ductus arteriosus of the fœtus. **G.'s fora′men**, foramen by which the anterior cardiac vein opens into the right auricle. **G.'s nerve**, branch of the superior laryngeal nerve, anastomosing with the ascending branch of the inferior laryngeal nerve. **G.'s veins**, one of the anterior cardiac veins running along the right border of the heart; also choroidal veins emptying into the fourth sinus. **G.'s ven′tricle**, sacculus laryngis.

**Galen′ic** or **Galen′ical.** Relating to the doctrine of Galen. **G. reme′dies**, infusions or decoctions of herbs, or other drugs that are not chemical.

**Ga′lenism.** Medical system taught by Galen (a Greek physician of the second century), who was an advocate of experimentation, a student of anatomy, and opposed to the use of mineral drugs.

**Ga′lenist.** Follower of the doctrine of Galen.

**Galeop′sis.** Hedge-nettle; plant formerly used as vulnerary and anodyne. Lamium album. **G. grandiflo′ra**, plant is regarded in Germany as a bitter resolvent and pectoral. **G. tet′rahit**, hemp-nettle of Europe. **G. versic′olor**, possessed of the same virtues as G. grandiflora.

**Galerop′ia** or **Galerop′sia** (*galeros*, bright, *opsis*, vision). Oxyopia; form of exaggerated vision in which everything appears brighter and more distinct than in natural vision.

**Ga′lex aphyl′la.** Carpenter's leaf, whose root is used in the Southern United States as an astringent.

**Gal′ingale.** Galangal; Kæmpferia galanga; cyperus.

**Galinso′ga parviflo′ra.** Plant of S. America, with antiscorbutic properties.

**Galipe′a cuspa′ria.** Cusparia febrifuga. **G. officina′lis**, see *Cusparia febrifuga*.

**Galipeine′.** White, crystallized alkaloid, $C_{20}H_{21}NO_3$, from cusparia bark.

**Ga′lium.** A plant of the genus *Galium*, ord. *Rubiaceæ*. **G. africa′num**, leaves and flowers are used in diarrhœa. **G. al′bum**, G. mollugo. **G. aparanoi′des** or **apari′ne**, goose-grass, cleaver's bees, cleavers, goose-share, robin-run-the-hedge, hayriff; the expressed juice is an aperient diuretic in incipent dropsies, and antiscorbutic; the plant is used in decoction in leprosy and psoriasis. **G. asprel′lum**, rough bedstraw, rough ladies' bedstraw; indigenous; has the diuretic properties of most of its genus. **G. brachycar′pon**, G. aparine. **G. cauca′sicum**, G. verum. **G. circæ′zans**, wild licorice, master of the woods; indigenous plant, demulcent, expectorant, and diuretic. **G. crucia′tum**, this herb of Europe and Asia is an astringent and stomachic tonic, and externally styptic. **G. græ′cum**, herb of Greece employed as an astringent in dysentery and hemorrhages. **G. infes′te**, G. aparine. **G. lu′teum**, G. verum. **G. mollu′go**, wild madder, stickygrass, greater ladies' bedstraw, whip-tongue; herb and flowers have been used in epilepsy. **G. odora′tum**, Asperula odorata. **G. palus′tre**, European plant employed in epilepsy. **G. pilo′sum**, hairy bedstraw, fluxweed; used for poisonous bites. **G. rig′idum**, French herb employed as antispasmodic and diaphoretic. **G. scaber′rimum**, G. aparine. **G. tincto′rum**, American species, closely allied in properties to G. verum. **G. trif′idum**, small bedstraw, dyer's cleavers; indigenous; has properties of its class; used in skin diseases. **G. triflo′rum**, sweet-scented bedstraw; indigenous; crystalline, odorous principle, called *coumarin*, is derived from it. **G. tubercula′tum**, G. verum. **G. tyrolen′se**, G. mollugo. **G. ve′rum**, ladies' or yellow ladies' bedstraw, cheese-rennet, bedstraw, cleavewort, goose-grass, savoyan, clabber-grass, milksweet, poor robin, gravel-grass, hundred-fold. Tops have been used in epilepsy and hysteria; leaves and flowers possess the property of curdling milk; flowers are antispasmodic.

**Gall.** Bile. An excoriation caused by chafing of the skin. An excrescence on the bark or leaves of a plant, resulting from the irritation produced by the deposit of eggs by an insect; see *Galla*. **G.-blad′der,** a membranous, pyriform reservoir, lodged in a superficial depression at the inferior surface of the right lobe of the liver, called fossa of the gall-bladder or fissure of the gall-bladder. It receives, by the hepatic and cystic ducts, a portion of the bile secreted by the liver when the stomach is empty, which becomes in it more acrid, bitter, and thick. It receives an artery called the *cystic*. Its veins empty into the vena porta. Its nerves come from the hepatic plexus, and its lymphatic vessels join those of the liver. Its duct, the cystic or gall-duct, unites with the hepatic duct to form the common choledoch duct. In the interior of the cystic duct the mucous membrane is arranged in a series of crescentic folds in a spiral manner, constituting the valve of Amussat. The following measurements have been made of this organ:

| | |
|---|---|
| Length | 80–110 mm. |
| Width at fundus | 34 " |
| Width in the middle | 23 " |
| Capacity | 33–35 c.cm. (Krause) (corresponding to 33.5–37.5 g. of bile). |
| Wall | 1–2 mm. thick. |
| Glands | 1 mm. in diameter. |

**G.-cyst,** gall-bladder. **G.-duct,** see *Gall-bladder*. **G.-fe′ver,** intermittent fever. **Ox-g.,** fel bovis. **G.-sick′ness,** Walcheren fever. **G.-stone,** see *Gallstone*. **G.-weed,** Gentiana quinqueflora, root of which is tonic. **G.-wort,** Linaria vulgaris.

**Gal′la.** (Ph. U. S. and Br.) Nutgall, gallnut, oak-apple; a gall on an oak of Asia Minor, Quercus infectoria or Q. lusitanica, produced by the deposition of the eggs of an insect of the genus *Cynips*. Astringent and tonic; dose, gr. v–xv (0.32–1.0). The official preparations are the tincture, *tinctura gallæ*, dose, ʒi–ij (4.0–8.0), and the ointment, *unguentum gallæ*. See *Quercus infectoria*. **G. chinen′sis,** Chinese galls. **G. halepen′sis,** Quercus infectoria. **G. japon′ica,** excrescences containing a large percentage of tannic acid, on Rhus semialata. **G. levant′ica,** Quercus infectoria. **G. max′ima orbicula′ta,** Quercus infectoria. **G. quer′cûs,** Quercus infectoria. **G. tincto′ria,** Quercus infectoria. **G. tur′cica,** Quercus infectoria.

**Gallabro′mol.** Gallobromol.

**Gallacetophe′none** or **Gallactophe′none.** Derivative of pyrogallol; yellow powder, used as a substitute for pyrogallol in psoriasis.

**Gal′lal.** Aluminum gallate. Employed in solution as a local astringent.

**Gallan′ilide.** Gallanol.

**Ga′llanol.** Gallic acid anilide; gallinol. A substitute for pyrogallol, made by boiling tannic acid and anilin oil together; used in eczema, psoriasis, etc.

**Gal′late.** A salt of gallic acid. **Alu′minum g.,** gallal. **Ba′sic bis′muth g.,** dermatol. **Meth′yl g.,** gallicin.

**Gal′lic acid.** $C_7H_6O_5$. See *Acidum gallicum*. **G.-a. an′ilide,** gallanol.

**Gallicin′.** Methyl gallate. The methyl-ether of gallic acid; produced by heating a methyl-alcoholic solution of gallic or tannic acid with hydrochloric-acid gas or concentrated sulphuric acid. Employed as a powder dusted upon the eye in keratitis, conjunctivitis, and other inflammatory affections of the eye.

**Gallinag′inis cap′ut** (*gallinago*, woodcock, *caput*, head). Oblong, rounded projection, formed by the mucous membrane in the prostatic portion of the urethra, on the sides of which the ejaculatory ducts open.

**Gallin′.** Pyroligneous acid.

**Gallit′richum.** Salvia sclarea.

**Gal′lium.** A metal, symbol Ga, discovered in 1875; poisoning by its salts has been noted.

**Gallobro′mol.** $C_6Br_2(OH)_3COOH$. Dibromogallic acid. Product of the action of bromine on gallic acid; in white needles. Employed in nervous prostration as a sedative, in doses of gr. xv–ʒj (1.0–4.0).

**Galloformin′.** Combination of formaldehyde and gallic acid; astringent and antiseptic.

**Gal′lop rhythm.** Heart sounds heard on auscultating a heart in rapid action, which have been compared to the canter of a horse.

**Gal′loping consump′tion.** Acute pulmonary tuberculosis, rapidly progressing to an unfavorable issue.

**Gallotan′nic acid.** Tannic acid derived from galls.

**Galls.** Quercus infectoria. **Busso′rah g.,** Quercus infectoria. **Chinese′ g.,** see *Rhus semialata*. **Mec′ca g.,** Quercus infectoria.

**Gall′stone.** A concretion of cholesterin or inspissated bile formed in the gall-bladder or one of the bile-ducts; sea *Calculi, biliary*. **G. col′ic,** severe abdominal pain caused by the passage of a gallstone through the cystic or choledoch duct; see *Colica hepatica*.

**Gal′lus** (one of the priests of Cybele, who castrated themselves). Eunuch.

**Gal′ton's whis′tle.** Instrument for testing the audibility of shrill notes, consisting of a whistle made of brass tubing; a plug is adjusted to the lower end, by means of which the tube can be shortened or lengthened, thus altering the pitch of the note.

**Galvan′ic.** Relating to galvanism. **G. appara′tus,** apparatus for generating and supplying the galvanic current. **G. bat′tery,** term applied to the apparatus producing galvanic electricity, or to the cells. The best forms of cell have a high electromotive force, an abundant quantity of current, and constancy without loss of force from polarization. The latter point is very important, and many of the improvements in batteries have been made with the view of reducing this to a minimum. To prevent polarization, effort must be made to check or prevent accumulation of hydrogen on the positive pole, as the condensation of hydrogen on the inactive plate sets up a reverse electromotive force, and so reduces the available electromotive force of the cell, and, of course, the available area of the plates. Nearly all batteries lose electromotive force rapidly when a large current is taken from them (Steavenson and Jones). The table on page 468 gives a concise statement of the characteristics of some well-known batteries. **G. cau′tery,** see *Galvanocautery*. **G. cir′cle,** a single galvanic cell in action, or a series of cells forming a compound circle. **G. cur′rent,** voltaic current, current generated from the cells; called faradic current when it passes through a coil of wire. **G. disks,** disks of two different metals placed alternately one above the other, separated by some moistened material. **G. el′ements,** the metals employed in galvanic batteries.

**Gal′vanism.** Voltaism, voltaic or chemical or contact electricity (after Galvani). Continuous current electricity.

**Galvaniza′tion.** Medical application of the current of galvanic electricity; act of affecting with galvanism. **Cen′tral g.,** the negative pole is applied over the epigastric region, while the positive pole is carried over the forehead and top of the head, over the neck, and over the whole spine. **Gen′eral g.,** galvanization applied to the body generally.

**Gal′vanize.** To place under the influence of the galvanic current.

**Galvanocaus′tic.** Relating to galvanocautery; employed for galvanocauterization.

**Galvanocauteriza′tion.** Cauterization by means of galvanic electricity.

**Galvanocau′tery.** Wire heated by the galvanic current for cauterization. (See cut under *Cautery*.)

**Galvanocontractil′ity.** Muscular contractility under the influence of the galvanic current.

**Galvanocontrac′tion.** Galvanotonus.

Galvanic Batteries.

| Name. | Active plate. | Excitant. | Depolarizer. | Passive plate. | Approximate electromotive force (volts). |
|---|---|---|---|---|---|
| Smee | Zinc. | Dilute sulphuric acid 1-8 | None. | Platinized silver. | 0.8 |
| Bichromate | " | " " " 1-8 | Chromic acid. | Carbon. | 1.9 |
| Latimer Clark's standard cell | " | Zinc sulphate. | Mercurous sulphate. | Mercury. | 1.438 (legal).<br>1.434 (true). |
| Daniell | " | Zinc sulphate or dilute sulphuric acid 1-12. | Copper sulphate in porous pot. | Copper. | 1.079 |
| Grove | " | Dilute sulphuric acid. | Strong nitric acid in porous pot. | Platinum. | 1.9 |
| Bunsen | " | " " " |  | Carbon. | 1.9 |
| De la Rue | " | Ammonium chloride, saturated solution. | Silver chloride. | Silver. | 1.0 |
| Skrivanoff | " | Sodium or potassium hydrate, 75 per cent. | " " | " | 1.5 |
| Leclanché | " | Ammonium chloride, saturated solution. | Manganese dioxide, with or without porous pot. | Carbon. | 1.48 |

**Galvanofarada′ic** or **Galvanofarad′ic.** Relating to galvanism and faradism.

**Galvanofaradiza′tion.** Application of continued and interrupted current in combination.

**Galvanol′ysis.** Electrolysis.

**Galvanomag′netism.** Electromagnetism.

**Galvanom′eter.** Instrument to measure and indicate intensity, direction, and other properties of the galvanic current by deflection of the magnetic needle.

**Galvanopunc′ture.** Electropuncture.

**Gal′vanoscope.** Instrument for determining the existence and direction of a galvanic current.

**Galvanos′copy.** Medical examination by the aid of galvanism.

**Galvanosur′gery.** Surgical application of galvanism to the treatment of disease.

**Galvanotherapeu′tics** or **Galvanother′apy.** Employment of galvanism as a therapeutic agent.

**Galvanother′my.** Production of heat by galvanism.

**Galvanoton′ic.** Relating to galvanotonus. **G. contrac′tion,** tonic contraction of a muscle under the stimulus of a continuous electric current.

**Galvanot′onus.** Electrotonus. Persistent contraction of a muscle after the current to the motor nerve is closed.

**Galvanot′ropism** (*trope,* turning). The movements of turning noticed when the galvanic current is applied to the growing organs of plants.

**Galve′sia puncta′ta.** Scrophularious Peruvian plant; aromatic and carminative.

**Gam′ba.** Patella, leg, hoof.

**Gam′beer, Gam′bier,** or **Gam′bir.** See *Catechu* and *Nauclea gambir.*

**Gambo′dic acid.** $C_{65}H_{35}O_{12}$. Acid resin from gamboge, resembling gambogic acid.

**Gamboge′.** Cambogia.

**Gambo′gia.** Cambogia.

**Gambo′gic acid.** Cambogic acid.

**Gamenoma′nia** (*gamos,* marriage). An insane impulse to enter upon the married state in spite of obvious impediments.

**Gam′etal.** Relating to a gamete or to sexual reproduction of cells; conjugating, generative.

**Gam′ete.** A cell or mass of protoplasm which unites with another to form a spore, or zygote. Sexual form of the malarial parasite, a gametocyte.

**Gam′etocyte.** The crescent or sexual form of the malarial parasite.

**Gam′ic** (*gamos,* marriage). Relating to fecundation; sexual.

**Gam′ma-gran′ules.** Coarse basophile granules found in mast cells in certain disease states.

**Gam′macism** (*gamma,* Greek letter $\gamma$). Difficulty or imperfection in the articulation of the guttural consonants; stuttering over the emission of such sounds as *g* and *k.*

**Gam′mism.** Psammism.

**Gamogen′esis** (*gamos,* sexual union, *genesis,* production). Sexual generation or reproduction.

**Gamoma′nia** (*gamos,* marriage). Gamenomania.

**Gamomor′phism** (*gamos,* marriage, *morphe,* form). Puberty; full sexual development.

**Gam′phe** or **Gamphe′le.** Gena; maxillary bone.

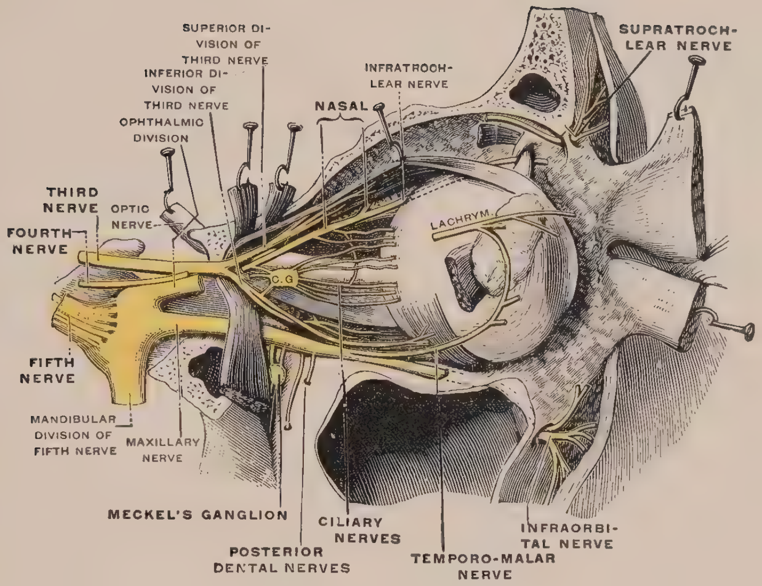
**Gan′glia** (pl. of ganglion) **aberran′tia.** Small, abnormally located masses of gray matter on the posterior roots of the spinal nerves. **G. accesso′ria trun′ci cervica′lis,** small ganglionic masses connected with the cervical sympathetic system. **G. carot′ica,** carotid ganglia. **G. caverno′sa,** carotid ganglion. **G. cer′ebri posti′ca,** thalami nervorum opticorum. **G. cervica′lia** or **cervi′cis,** cervical ganglia. **G. cilia′ria accesso′ria,** accessory or unusual ganglia on ciliary nerves. **G. cœli′aca,** semilunar ganglia. **G. of crus,** corpora striata; cortical part of cerebrum. **G. of crus′ta,** caudate and lenticular nuclei and substantia nigra. **G. cubita′lia,** lymphatic glands along the brachial artery. **G. dorsa′lia,** lymphatic glands on the posterior thoracic wall. **Form′ative g.,** see *Ganglion.* **G. genita′lia,** ganglionic masses in the aortic and spermatic plexuses. **Glossopharyn′geal g.,** two ganglia on the glossopharyngeal nerve, called the jugular and the petrous ganglion. **Hemispher′ical g.,** hemispheres of the brain. **G. hordeifor′mia,** g. dorsalia. **G. of in′crease,** see *Ganglion.* **G. intercala′ria,** g. aberrantia. **G. interme′dia trun′ci cervica′lis,** g. accessoria trunci cervicalis. **Lum′bar g.,** lymphatic glands of the lumbar region. **G. me′dia,** thalami optici. **G. mesenter′ica,** mesenteric glands. **G. nervo′rum,** nervous ganglions; see *Ganglion.* **G. prostat′ica,** small ganglia in prostatic plexus. **G. puden′da,** g. prostatica. **G. retifor′mia,** plexuses of nerves with accompanying ganglia in organs which have unstriated muscular fibres. **G. segrega′ta,** ganglia of the sympathetic system. **Sen′sory g.,** see *Sensory ganglia.* **G. sola′ris,** semilunar ganglia. **G. spermat′ica,** spermatic ganglia. **G. splanch′nica,** semilunar ganglia. **Sympathet′ic g. of head,** ophthalmic, otic, sphenopalatine, and submaxillary ganglia. **G. of tegmen′tum,** corpora quadrigemina and thalami optici. **G. thyroide′a inferio′ra,** sympathetic ganglia in course of inferior thyroid artery.

**Gan′gliac, Gan′gliar,** or **Gan′gliated.** Ganglionic; having ganglia or formed of them.

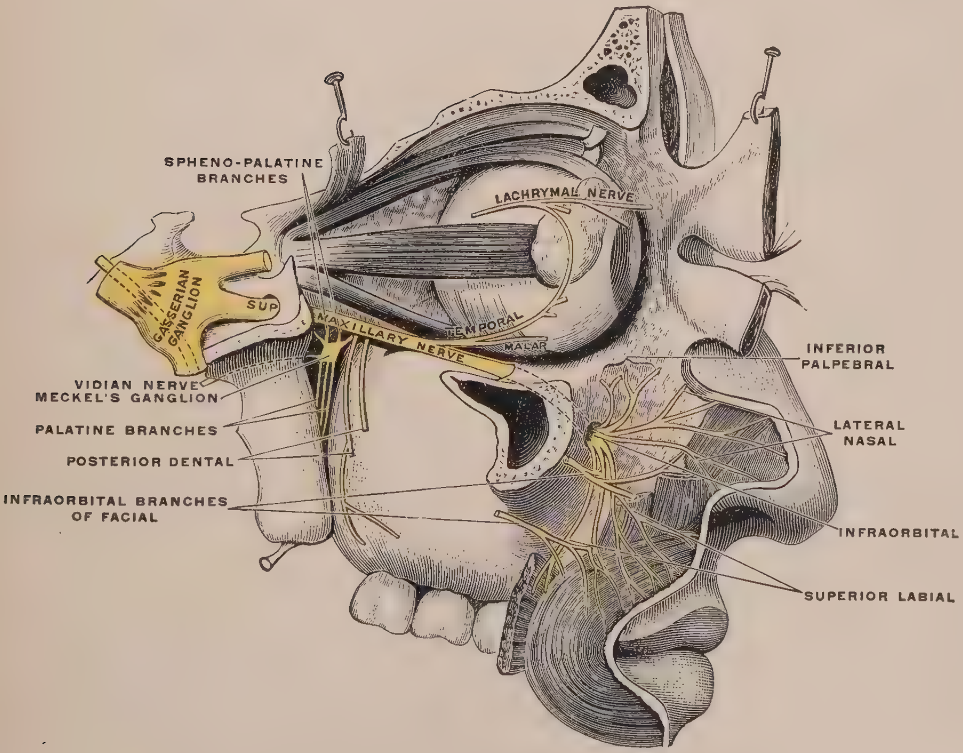
**Gangliasthe′nia.** Neurasthenia; gangliopathy.

**Gan′gliform** or **Gan′glioform** (*ganglion + forma,* form). Having the shape of a ganglion.

**Ganglii′tis.** Ganglionitis. **G. centra′lis** or **medulla′ris,** cholera. **G. peripher′ica,** mild form of cholera.



The ciliary ganglion. (Gerrish, after Testut.)



The Gasserian ganglion and Meckel's ganglion. (Gerrish, after Testut.)

**Gan′glioblast.** Ganglionic cell in the embryo.

**Gangliocytin′.** Nuclein.

**Ganglio′lum** (dim. of ganglion). Small ganglion. **G. tympan′icum,** glandula tympanica.

**Ganglio′ma.** Tumor, especially epithelioma, of the lymphatic glands. Adenoma.

**Gan′glion** (knot). In anatomy, a name generally given to a knot-like enlargement in the course of a nerve. It is applied, however, to structures differing considerably from each other in size, color, texture, functions, etc. They are divided into glandiform, lymphatic, and nervous ganglia. 1. *Glandiform ganglions,* called also adenoid, vascular, and sanguineous ganglions. Blind, ductless, blood, and vascular glands are organs formed of agglomerated globules, pervaded by blood-vessels surrounded by areolar membrane, and containing a milky or yellowish fluid. To this class belong the spleen, thymus, thyroid, and suprarenal glands. 2. *Lymphatic ganglions,* see *Lymphatic.* 3. *Nervous ganglions,* ganglia of increase, formative ganglia. Enlargements or knots in the course of a nerve, belonging in general to the system of the great sympathetic. One exists on the posterior root of every spinal nerve, and on one cerebral—the fifth. They have been regarded as small brains, or centres of nervous action, independent of the encephalon, and intended exclusively for organic life. Being formed by the union of the cerebral and spinal nerves, they may send out the influence of both these nervous centres to the parts to which the nerves proceeding from them are distributed. Ganglia are chiefly composed of vesicular neurine, and appear to be concerned in the formation and dispensation of nerve-power. Also a globular, hard, indolent tumor, situated in the course of a tendon, especially at the wrist, and formed of a viscid, albuminous fluid, contained in a cyst. The cyst is sometimes loose, but usually communicates, by a narrow footstalk, with the sheath of a tendon, or even with the synovial capsule of a neighboring articulation. Treatment consists in compression, percussion, the use of discutients, extirpation, or incision. Also enlarged bursa mucosa. Lymphatic nodule. See also *Ganglia.* **G. abdomina′le,** semilunar g. **G. a. centra′le,** cœliac plexus. **G. a. max′imum,** semilunar ganglion. **G. acus′ticum,** combination of g. nervi vestibuli and g. spinale. **Ad′enoid g.,** glandiform g. **G. of An′dersch,** petrous ganglion. **An′nular g.,** annulus gangliformis, see *Ciliary ligament.* **Ante′rior cer′ebral g.,** corpus striatum alone, or with corpus lenticulare. **Ante′rior g. of op′tic thal′amus,** anterior tubercle of optic thalamus. **G. of Ar′nold,** otic ganglion. **Aud′itory g.,** accessory ganglion of the auditory nerve, between vestibular root and restiform body; tuberculum acusticum. **G. of Au′erbach,** layer of nodular ganglionic nervous masses in the intestines between the circular and longitudinal muscular fibre layers. **Auric′ular g.,** otic ganglion. **Az′ygous g.,** g. opposite coccyx; see *Trisplanchnic nerve.* **Ba′sal g.,** ganglia at the base of the brain, including the corpus striatum, optic thalamus, and corpora quadrigemina. **Ba′sal op′tic g.,** mass of cells below the third ventricle in the tuber cinereum, near the optic tract. **G. of Bid′der,** two ganglia observed in the heart of the frog, situated in the auricular groove. **G. of Boch′dalek,** small thickening formed by a branch of the anterior dental nerve uniting with a branch of the posterior nasal nerve from Meckel's ganglion; supramaxillary plexus. **G. of Bock,** carotid ganglion. **Car′diac g.,** see under *Cardiac.* **G. cardi′acum infe′rius** or **mag′num** or **Wrisber′gii,** cardiac ganglion. **Carot′ic** or **carot′id g.,** see *Carotic* or *Carotid nerve.* **Casse′rian g.,** Gasserian g., see *G. of Gasser.* **Cav′ernous g.,** see *Carotic* or *Carotid nerve.* **G. cell-layer,** layer of cortical substance of the brain having nerve-cells resembling motor cells of the spinal cord. **G. cells,** nerve-cells imbedded in gray matter of cerebrospinal axis and ganglia, and in some of the sympathetic nerves. **G. cerebel′li,** corpus dentatum. **Cer′ebral g.,** great cerebral nervous centres. **Cer′ebral ante′rior g.,** corpora striata. **Cer′ebral poste′rior g.,** thalami nervorum opticorum. **G. cer′ebri ante′rius,** corpora striata. **G. cervica′le,** ganglion in the uterovaginal plexus; also masses of gray matter connected with the sympathetic system in the neck; there are three of these, the *superior,* variously called *first ganglion, g. fusiforme, g. magnum, g. olivare,* and *g. supremum;* the *middle,* variously called *second ganglion* and *g. thyroideum;* and the *inferior,* variously called *third ganglion, g. tertium, g. infimum.* **G. cervica′le u′teri,** g. in the uterovaginal plexus. **G. cervica′le va′gi,** ganglia of the trunk of the vagus or pneumogastric nerve. **G. cilia′re,** corpus dentatum. **G. c. accesso′rium,** detached nervous masses associated with the orbital nerves. **Cil′iary g.,** ophthalmic ganglion. **G. of cir′cumflex nerve,** ganglionic enlargement on a branch of that nerve. **Cloquet's′ g.,** ganglion on branches of the nasopalatine nerves; nasopalatine plexus. **G. coccyge′um,** small ganglion in front of the coccyx. **Coch′lear g.,** g. spirale; g. Cortii. **Cœ′liac g.,** cœliac plexus; semilunar ganglion. **G. cor′puscles,** see *Neurine.* **G. Cor′tii, G. of Cor′ti** (after Corti, Italian anatomist), plexus of dark bordered nerve-fibres formed by nerves of the cochlea in the cavities of the osseous zone, which contain an aggregation of bipolar, oval, minute ganglionic cells that probably intercept all the fibres of the cochlear nerves in their course. **G. craniocervica′le,** ganglion cervicale (superior). **G. cro′chu,** hippocampal convolution. **G. diaphragmat′icum,** small ganglion connected with the phrenic plexus at its junction with the phrenic nerve; phrenic g. **G. of Ehr′enritter,** jugular ganglion; reddish-gray mass on the glossopharyngeal nerve in foramen lacerum, above the ganglion of Andersch. **Extraventric′ular g.,** lenticular nucleus. **G. of fa′cial nerve,** enlargement on that nerve in the Fallopian canal. **First cer′vical g.,** superior cervical ganglion. **G. of fifth nerve,** g. of Gasser. **G. of Frank′enhaeser,** see *Frankenhaeser.* **G. of Fro′riep,** see *Froriep.* **Fu′siform g.,** superior cervical ganglion. **G. of Gas′ser,** ganglion of fifth nerve; semicircular knot on the fifth pair, before its division into three branches, on the apex of the petrous portion of the temporal bone; resembles ganglia on posterior roots of spinal nerves. **G. genicula′tum,** g. of facial nerve; see also *Corpora geniculata.* **Glan′diform g.,** see *Ganglion.* **G. glob′ules,** see *Neurine.* **G. of Gud′den,** see *Gudden.* **G. haben′ulæ,** small ganglion near the point of entrance of the posterior commissure into the thalamus opticus. **Hepat′ic g.,** a g. about the hepatic artery. **G. im′par,** see *Trisplanchnic nerve;* g. coccygeum. **G. incisi′vum** or **incisu′rum,** Cloquet's g. **G. infe′rius,** a g. situated on the pneumogastric nerve. **Inframax′illary g.,** one of two ganglia, *anterior* and *posterior,* near the incisor and the last molar teeth. **Inhib′itory g.,** a nerve centre modifying or restraining function. **Intercarot′id g.** or **G. intercarot′icum,** anterior branches of the superior cervical ganglion ramify upon the external carotid artery and its branches, forming around each a delicate plexus, on the nerves composing which small ganglia are occasionally found, named, according to position, intercarotid, lingual, temporal, and pharyngeal; the intercarotid ganglion is made up of arterial glomeruli gathered into masses and surrounded by dense plexuses of nerves. **Interme′diate g.,** basal g. **Interos′seous g.,** ganglion of this nerve at the wrist. **Interpedun′cular g.,** small mass of gray fibres between the peduncles of the brain. **Interver′tebral g.,** see *Vertebral nerves.* **G. intervertebra′le cap′itis,** g. of Gasser; in fetal life, a ganglionic mass afterward developed into superior ganglia of pneumogastric and glossopharyngeal. **G. jugula′re glossopharynge′i** or **supe′rius,** g. of Ehrenritter. **G. jugula′re va′gi,** g. of root of vagus nerve. **G. of Laumonier′,** see *Carotid* or *Carotic nerve.* **Lentic′ular g.,** ophthalmic g. **Lin′gual g.,** see *Ganglion, intercarotid;* submaxillary ganglion. **G. lingua′le mol′le,** lingual ganglion. **G.**

of **Lob′stein**, see *Lobstein.* **G. of Loe′wit**, see *Loewit.* **G. of Lud′wig**, see *Ludwig.* **Lum′bar g.**, one of several pairs of ganglia behind the abdominal aorta. **Lymphat′ic g.**, see *Lymphatic.* **G. maxilla′re**, submaxillary ganglion. **G. of Meckel′**, sphenopalatine ganglion; inferior submaxillary ganglion. **G. of Meiss′ner**, see *Meissner.* **G. mesenter′icum supe′rius**, ganglion in the solar plexus, near the point of origin of the artery of that name. **G. of Mey′nert**, see *Meynert.* **Mo′tor g.**, nerve centre controlling motion. **G. Mül′leri**, g. of Ehrenritter. **G. nasa′le**, sphenopalatine g. **Nasopal′atine g.**, g. Cloqueti; see *Nasopalatine ganglion.* **G. ner′vi glossopharynge′i supe′rius**, g. of Ehrenritter; jugular g.; petrous g. **G. ner′vi op′tici**, ganglionic layer of retina. **G. ner′vi vestib′uli**, small masses on vestibular nerve of the ear. **Ner′vous g.**, neuroma. **G. oliva′re**, inferior cervical ganglion; g. of trunk of pneumogastric nerve. **Ophthal′mic g.**, see *Ophthalmic ganglion.* **Op′tic g.**, quadrigemina tubercula. **Or′bital g.**, ophthalmic g. **G. o′ticum**, see *Otic.* **Petro′sal g.**, see *Petrous ganglion.* **Pe′trous g.**, see *Petrous ganglion.* **Pharyn′geal g.**, see *G., intercarotid.* **G. pharynge′um mol′le**, pharyngeal g.; see *G., intercarotid.* **Phren′ic g.**, a g. beneath the diaphragm, where the right phrenic nerve joins the phrenic plexus. **G. plexifor′me**, g. of Gasser. **G. of pneumogas′tric**, ganglionic structure in the pneumogastric as it passes through the foramen lacerum posterius. **G. postpyramida′le**, nucleus clavatus. **G. pterygopalati′num**, sphenopalatine g. **G. of Remak′**, see *Remak.* **G. rena′le**, mass of cells in solar plexus, near the point of origin of the renal artery. **G. ret′inæ**, delicate layer of large ganglion cells, with processes branching to optic nerve-fibres of the internal molecular layer. **G. rhin′icum**, sphenopalatine ganglion. **G. of Ri′bes**, nervous ganglion upon the anterior communicating artery of the brain at the point of junction of the right and left trunks of the sympathetic. **Sa′cral g.**, one of several g. lying anterior to the sacrum. **Sanguin′eous g.**, glandiform g. **Scar′pa's g.**, see *Scarpa.* **Schach′er's g.**, see *Schacher.* **G. semiluna′re**, g. of Gasser; ophthalmic ganglion. **Sen′sory g.**, see *Sensory ganglia.* **G. of Soem′mering**, see *Soemmering.* **G. sola′re**, semilunar ganglion. **Sphenoi′dal g.**, sphenopalatine ganglion. **Sphenopal′atine g.**, see *Sphenopalatine.* **Spi′nal g.**, one of the ganglia on the posterior root of each spinal nerve. **G. spina′le in′fimum**, g. impar; see *Trisplanchnic nerve.* **G. spira′le**, ganglion Cortii. **G. splanch′nicosuprarena′le**, ganglion on small splanchnic nerve. **G. splanch′nicum**, ganglion on great splanchnic nerve; semilunar ganglion. **G. stella′tum**, first dorsal ganglion of the sympathetic nerve. **G. sublingua′le**, submaxillary ganglion. **Submax′illary g.**, see *Submaxillary.* **G. of the supe′rior laryn′geal branch**, see *Pneumogastric nerves.* **G. supe′rius va′gi**, ganglion of the root of the vagus nerve. **G. supramaxilla′re poste′rius**, occasional plexus on the superior dental nerves. **Suprare′nal g.**, a g. situated at the point of union of the great splanchnic nerves. **G. supre′mum sympath′ici**, ganglion cervicale (superior). **G. tec′ti**, nucleus of gray matter in cerebellum, over roof of fourth ventricle. **Tem′poral g.**, see *G., intercarotid.* **Thorac′ic g.**, one of the ganglia situated near the head of each rib. **G. thyroide′um**, ganglion cervicale (medium); see *Trisplanchnic nerve.* **G. thyroide′um supe′rius**, occasional ganglion situated above the middle cervical ganglion. **G. transver′sum**, g. semilunare. **G. of Troisier′**, see *Troisier.* **G. trun′ci va′gum**, g. of the trunk of vagus. **Tympan′ic g.**, a g. in the canal between the inferior surface of the petrous portion of the temporal bone and the tympanum. **G. of Valen′tin**, see *Valentin.* **Vas′cular g.**, glandiform g. **Ver′tebral g.**, g. cervicale inferius; see *Trisplanchnic nerve.* **Vestib′ular g.**, a g. in the aqueduct of Fallopius. **G. of Wal′ter**, g. impar. **G. of Wris′berg**, cardiac ganglion.

**Gan′glionary.** Ganglionic.

**Ganglionemphrax′is** (*ganglion + emphraxis*, obstruction). Obstruction of the lymphatic glands.

**Ganglioneure′.** A ganglionic nerve cell.

**Ganglion′ic.** Ganglionary, gangliar, gangliated. Relating to ganglia; nerves are so called in the course of which ganglions are met with, as the greater part of the branches of the great sympathetic or trisplanchnic nerve, the posterior roots of the spinal nerves, etc. *Ganglionics* are agents affecting the ganglionic or great sympathetic system of nerves, as stimulants and sedatives. **G. ar′teries**, branches from trunks forming the circle of Willis, which furnish blood to the basal ganglia. **G. canal′**, a canal surrounding spirally the modiolus of the cochlea and containing the ganglion spirale. **G. cells**, nerve cells of large size found in the spinal ganglia; ganglioneures. **G. cel′lular lay′er**, layer of bulbous olfactorius, having nerve cells resembling pyramidal cells of the cortex cerebri. **G. col′umns of spi′nal cord**, see *Columns of spinal cord.* **G. lay′er**, a layer of the retina of which the outer stratum is made up of large, vertically oval nuclei, which are contained in bipolar spindle-shaped cell, which are prolonged into fibres; the inner stratum consists of large nerve cells, mostly spheroidal, each of which is connected below with nerve-fibres from the adjacent layer; also a layer of the cerebral cortex. **G. nerve**, trisplanchnic nerve. **G. ner′vous sys′tem**, see *Trisplanchnic nerve.* **G. sali′va**, saliva excited by irritation of the submaxillary ganglion.

**Ganglioni′tis** or **ganglii′tis.** Inflammation of a nervous ganglion or of a lymphatic ganglion; adenitis. **Mesenter′ic g.**, inflammation of the mesenteric glands; adenitis mesenterica. **G. peripher′ica et medulla′ris**, cholera.

**Gangliop′athy** (*ganglion + pathos*, affection). Disease of the ganglionic nervous system; condition in which debility is associated with paralysis, hyperæsthesia, or dysæsthesia of the solar plexus and the central ganglia of the sympathetic system.

**Gan′golphe's sign.** Effusion of bloody serum into the abdominal cavity in cases of strangulated hernia.

**Gangræ′na** (*graino*, to gnaw or eat). Gangrene. **G. idiopath′ica**, senile gangrene. **G. neurot′ica**, gangrene following Raynaud's disease. **G. nosocomia′lis** or **nosocomio′rum**, hospital gangrene. **G. o′ris**, noma. **G. os′sis**, spina ventosa. **G. ustilagin′ea**, ergotism.

**Gangræno′ma.** Gangrenous neoplasm.

**Gangræno′sis.** State of being gangrenous or of becoming gangrenous.

**Gan′grene.** Local death; privation of life or partial death of an organ. It is attended with a sudden diminution of feeling in the part affected; livid discoloration, detachment of the cuticle, under which a turbid fluid is effused; and with crepitation, owing to the disengagement of air into the areolar texture. When the part has become quite black, and incapable of all feeling, circulation, and life, it constitutes the second stage, or mortification, and is called sphacelus. Gangrene is frequently used synonymously with mortification, local asphyxia being the term employed for the condition in which the parts are in a state of suspended animation, and consequently susceptible of resuscitation. When the part is filled with fluid entering into putrefaction, the affection is called humid or moist gangrene; when it is dry and shrivelled, it constitutes dry gangrene, mummification. To this class belongs senile gangrene or spontaneous gangrene of old people, which rarely admits of cure. Gangrene of any kind may be caused by violent inflammation, external injury (traumatic gangrene), contusion, a burn, congelation, the ligature of a large arterial trunk, mechanical obstruction to the return of blood (static gangrene), or by some inappreciable internal cause. **Ca′seous g.**, caseation. **Cir′cumscribed pul′monary g.**, localized gangrene generally involving the lower lobes of the lung at the periphery, due to traumatism or plugging up of blood-vessels. **Decu′bital g.**, bedsore. **Diabet′ic g.**, sphaceloderma. **Dry g.**, see *Gangrene*. **Embol′ic g.**, gangrene caused by an embolus or clot that interferes with the circulation of the blood. **Ful′minant g.**, acute inflammatory gangrene. **Gla′cier g.**, see *Glacier*. **Hos′pital g.**, see *Hospital gangrene*. **Hu′mid g.**, see *Gangrene*. **Moist g.**, see *Gangrene*. **Mul′tiple dissem′inated g.**, rupia escharotica. **Nosoco′mial g.**, hospital g. **Pri′mary g.**, g. occurring without any prior inflammatory changes. **Pulp′y g.**, hospital gangrene. **Sec′ondary g.**, g. supervening upon severe inflammation. **Se′nile g.**, see *Gangrene*. **Sponta′neous g.**, see *Gangrene*. **Stat′ic g.**, see *Gangrene*. **Symmet′rical g.**, Raynaud's disease. **Traumat′ic g.**, see *Gangrene*. **White g.**, a form of moist gangrene caused by anæmia and a sluggish condition or impediment in the lymphatic system.

**Gan′grenous.** Affected with or relating to gangrene.

**Gan′nal's solu′tion.** Solution for preserving animal substances, made by dissolving ℥j of acetate of aluminum in ℥xx of water. It has been employed externally in parasitic skin diseases and as an antiseptic.

**Gant's line.** Hypothetical line below the trochanter major, used to guide the operator in section of the thigh-bone. **G.'s opera′tion**, operation for the relief of ankylosis of the hip, consisting in section of the thigh-bone below the trochanter.

**Gaol cachex′ia.** See *Cachexia*. **G. fever**, typhus.

**Gap.** A breach or solution of continuity. **Boch′dalek's g.**, see *Bochdalek*. **Cra′nial g.**, congenital fissure of the skull.

**Gapes.** Respiratory disease of fowls from the presence of a parasite, *Sclerostoma syngamus*.

**Ga′ping.** Yawning.

**Garci′nia cambo′gia** (after Dr. L. Garcin, an English traveller, who described it). Ord. *Guttiferæ*. Tree of Ceylon and East India, affording concrete juice similar to gamboge. **G. celeb′ica**, species of East and West Indies; fruit is febrifuge. **G. flor′ida**, sangshihsee; grows in Asia; fruit is demulcent and refrigerant; leaves are emetic, stimulant, and diuretic. **G. gambo′gia**, G. cambogia. **G. grandiflo′ra**, similar in general and therapeutic properties to G. florida. **G. gummif′era** grows in India; exudes resin; said to have antispasmodic properties. **G. gut′ta**, G. cambogia, G. morella. **G. hanbur′ii** or **hanbur′yi**, Siamese and Cochin Chinese tree, the official source of gamboge in some pharmacopœias. **G. in′dica**, G. purpurea. **G. ko′la**, African tree; seeds are bitter, astringent, and stimulant. **G. malabar′ica**, resin of this tree of Malabar is cathartic. **G. mangosta′na**, systematic name of the mangostan, mangoustan, mangostine, or mangosteen tree, mangostana; growing in abundance in Java and the Molucca Islands. The fruit, about the size of an orange, is eaten in almost every disorder. The dried bark is used medicinally in chronic diarrhœa, dysentery, and tenesmus, and a strong decoction in ulcerated sore throat. **G. morel′la**, this tree of the East Indies and Ceylon is a source of an excellent quality of gambogia. **G. papil′la**, G. cambogia. **G. pedicella′ta**, G. hanburii. **G. picto′ria**, Mysore gamboge tree; Indian tree from which gamboge is derived. **G. purpu′rea**, from this species concrete oil of mangosteen is obtained, called in India kokum butter. The oil is extracted from the fruit by boiling. It is used in India in cases of chaps. **G. zeylan′ica**, G. cambogia.

**Gar′den angel′ica.** Angelica archangelica. **G. ar′tichoke**, Cynara scolymus. **G. cress**, peppergrass, leaves of Lepidium sativum; diuretic, expectorant, antiscorbutic. **G. en′dive**, Cichorium endivia. **G. mar′igold**, Calendula officinalis. **G. nastur′tium**, Tropœolum majus. **G. night′shade**, Solanum nigrum. **G. rad′ish**, Raphanus sativus. **G. sage**, Salvia officinalis. **G. sor′rel**, Rumex acetosa. **G. spurge**, Euphorbium lathyris. **G. thyme**, Thymus vulgaris.

**Garde′nia campanula′ta** (after Dr. Alex. Garden). Indian bush; berries are anthelmintic and purgative. **G. dumeto′rum**, Randia dumetorum. **G. flor′ida**, Japanese and Chinese plant, the fruit of which is employed in phthisis, cutaneous affections, fevers, etc. The fruit of **G. grandiflo′ra**, which has the same habitat, has similar properties. **G. lu′cida**, the source of gardenin. **G. medicina′lis**, plant of Guinea; its fruit has the same effects as other fruits of this genus. **G. radi′cans**, fruit has the same properties as G. florida. **G. spino′sa**, Randia dumetorum. **G. suave′olens**, Brazilian plant; leaves and internal part of husk of the fruit are tonic.

**Garden′ic acid.** $C_{14}H_{10}O_6$. See *Gardenin*.

**Gardenin′.** Yellow, crystallized compound derived from Gardenia lucida by dissolving its resin in alcohol. When gardenin is treated with nitric acid a red, crystallized acid is obtained, *gardenic acid*.

**Gard′iner-Brown's test.** When a tuning-fork is placed on the vertex of the head in disease of the labyrinth of the ear, the sound heard by the patient is lost to him several seconds before the sensation of the vibrations is lost to the practitioner.

**Garel's′ sign.** When an electric light is introduced into the cavity of the mouth, the illumination is perceived on the healthy side only, should the other side be affected with empyema.

**Garel′-Bur′ger's sign.** Garel's sign.

**Gar′garism** or **Gargaris′ma** (*gargarizo*, to gargle). Gargle; liquid medicine intended to be retained in the mouth for a certain time, and to be thrown in contact with the uvula, velum pendulum, tonsils, etc., the liquid being agitated by the air issuing from the larynx as the head is thrown back. Gargles are employed in various diseases of the mouth and throat, and are made of stimulants, sedatives, astringents, refrigerants, etc., according to circumstances. The process is termed gargling.

**Gargariza′tion.** Gargling.

**Gar′get.** Phytolacca decandra. Inflammation of the udder of cows. Form of distemper in hogs.

**Gargi′na balsam.** See *Dipterocarpus*.

**Gar′gle, Garg′ling.** See *Gargarism*.

**Gar′land's s-curve.** Ellis's line.

**Gar′lic.** Allium.

**Gar′lock.** Sinapis arvensis.

**Garos′mus.** Chenopodium vulvaria.

**Garou′ bark.** Daphne gnidium.

**Gar′rick fe′ver.** See *Siddons fever*.

**Gar′rod's test.** Five to six minims of acetic acid are added to ʒij of blood serum in a glass dish. When the fluids are thoroughly mixed a thread is introduced; if uric acid is present, crystallization will occur along the thread after a few hours.

**Gar′rot** or **garrotte′** (*garrotter*, to tie fast). Compressing bandage, tightened by twisting a small cylinder of wood passed beneath it, by which the arteries of a limb are compressed, for the purpose of suspending the flow of blood in cases of hemorrhage, aneurysm, amputation, etc.

**Garrul′itas** (*garrio*, to chatter). Loquacity. **G. cun′ni** or **vul′væ**, audible discharge of flatus from the vagina.

**Gar′rya fremont′ii.** California shrub, skunkbush, fever-bush or quinine bush; reputed to possess antiperiodic properties. Astringent, bitter, soluble alkaloid, called *garryine*, has been derived from it.

**Garryine′.** See *Garrya fremontii*.

**Gärt′ner's canals′** or **ducts.** Excretory ducts of the Wolffian bodies extending from the parovarium to the vagina, through the broad ligament; they disappear in the further development of the child, but in some of the lower animals, as the pig, they persist and receive this name. **G.'s cyst**, a cystic tumor formed from G.'s canal in the fœtus. **G.'s tonom′eter**, see *Tonometer*.

**Garu′ga** or **garu′ja pinna′ta.** Malabar plant, of genus *Burseraceæ*, leaves of which are used in diseases of the liver.

**Garu′leum bipinna′tum.** South African plant, snakeroot, used as an antidote to the bites of venomous serpents. It is also used in chest diseases, as asthma, and in affections in which free secretion from the mucous membrane of the bronchial tubes is indicated; it is also diaphoretic and diuretic.

**Gas.** Air. Name once given to carbonic acid developed in the vinous fermentation; afterward it was appropriated to every fluid which was believed to preserve its aëriform state at all temperatures. Ultimately it was extended to all aëriform bodies. Non-permanent gases are generally termed vapors; they return spontaneously to the liquid state when a portion of their caloric is abstracted. Gases which can be forced into the liquid state only by compression and extreme cold are called permanent gases; they are all capable of combining with solids or liquids. **Clay′ton g.**, see *Clayton*. **Illu′minating g.**, a mixture of many gases obtained by the destructive distillation of coal or wood; it consists chiefly of hydrogen, marsh gas, and olefiant gas. **Irrespi′rable g.**, a g. whose entrance into the larynx gives rise to reflex spasm of the glottis; its presence in the trachea causes inflammation and death. **Laugh′ing g.**, $N_2O$, nitrous oxide, obtained by heating ammonium nitrate to 350° F.; employed for the induction of general anæsthesia. **Marsh g.**, $CH_4$, carbureted hydrogen, methane; an odorless, inflammable gas, formed by the decomposition of organic matter; it is the chief ingredient of the fire-damp of mines. **O′lefiant g.**, $C_2H_4$, ethylene or ethene; an inflammable gas, a prominent ingredient of illuminating gas. **Sew′er g.**, a mixture of numerous deleterious and other gases arising from sewers, in which disease-producing microorganisms may exist and be disseminated.

**Gas′eous.** Relating or appertaining to or having the form of gas. **G. pulse,** a soft, full pulse.

**Gas′-forming bacil′lus.** Bacillus aërogenes.

**Gas′kell's clamp.** Clamp for compressing the heart, used in experiments on that organ in animals intended to hinder impulses from being conveyed from one part of the heart to the other, so that the pulsations of the auricles and ventricles may be separately registered.

**Gasomet′ric.** Relating to gasometry. **G. anal′ysis,** see *Analysis*.

**Gasom′etry.** The measurement or determination of the amount of gas in any given compound.

**Gasp′ing.** Labored respiration; a series of short spasmodic inspirations.

**Gasse′rian ar′tery.** Branch of the internal carotid distributed to the Gasserian ganglion; also branch to the same ganglion from the middle meningeal artery. **G. gan′glion,** ganglion of the fifth nerve; see *Ganglion of Gasser*.

**Gas-sphyg′moscope.** Apparatus by which arterial movement of the pulse is indicated on the flame of a lamp.

**Gas′ter** (belly). Uterus, abdomen, stomach. **G. mus′culi,** belly of muscle; see *Muscle*.

**Gasteral′gia.** Gastralgia.

**Gasterasthe′nia** (*gaster*, stomach, *asthenia*, debility). Debility of the stomach.

**Gasteratax′ia** (*ataxia*, irregularity). Gastric disorder, impediment, or weakness.

**Gasteremphrax′is** (*emphraxis*, obstruction). Obstruction of the pyloric opening of the stomach.

**Gasterhysterot′omy** (*gaster*, abdomen, *hystera*, uterus, *tome*, section). Operation for opening the womb by section of the abdomen. Cæsarean section. Laparohysterotomy.

**Gaste′ria.** Aloe.

**Gasterohysterot′omy.** Gasterhysterotomy.

**Gastradeni′tis.** Gastroadenitis.

**Gastræ′mia.** Hyperæmia of the stomach.

**Gas′tral.** Gastric.

**Gastral′gia** (*algos*, pain). Cardialgia; pain in the stomach or in the gastric region; gastrodynia.

**Gastranab′ole** (*gaster*, stomach, *anabole*, throwing up). Bringing up of the contents of the stomach by vomiting or at pleasure, as in rumination.

**Gastraneu′ria** (*gaster*, stomach, *a*, priv., *neuron*, nerve). Want of nervous tone of the stomach.

**Gastraneurys′ma** (*aneurysma*, dilatation). Dilatation of the stomach.

**Gastrangemphrax′is.** Gasteremphraxis.

**Gastratax′ia.** Gasterataxia.

**Gastratroph′ia** (*atrophia*, wasting). Atrophy of the stomach.

**Gastrec′tasis** or **gastrecta′sia** (*ektasis*, dilatation). Dilatation of the stomach.

**Gastrec′tomy** (*gaster*, stomach, *ektome*, excision). Excision of a portion of the stomach.

**Gastrelco′sis** (*helkosis*, ulceration). Ulceration of the stomach. See *Ulcus perforans*.

**Gastrelytroto′mia.** Laparoelytrotomy. See *Cæsarean section*.

**Gastremphrax′is.** Gasteremphraxis.

**Gastrencephalo′ma.** Encephaloid of the stomach.

**Gastrenteral′gia** (*gaster*, stomach, *enteron*, intestine, *algos*, pain). Pain in the stomach and bowels.

**Gastrenter′ic.** Gastroenteric.

**Gastrenteri′tis.** Gastroenteritis.

**Gastrenteromala′cia** (*malakia*, softening). Softening of the stomach and intestines.

**Gastrepati′tis** (*hepatitis*, inflammation of the liver). Inflammation of the stomach and liver.

**Gastrepiplo′ic.** Gastroepiploic.

**Gastrer′ethism** (*erethizo*, to irritate). Irritability of the stomach.

**Gas′tric.** Belonging or relating to the stomach. **G. acids,** see *Gastric juice*. **G. ar′teries,** these are three in number: arteria gastroepiploica dextra, a. gastroepiploica sinistra, and a. coronaria ventriculi. **G. catarrh′,** catarrhal gastritis. **G. cri′ses,** see *Crisis*. **G. fe′ver,** fever associated with disorders of the stomach; typhoid fever. **G. fis′tula,** abnormal communication between stomach and external surface of body, through the abdominal walls. **G. flux′,** gastrorrhœa. **G. fol′licles** or **G. glands,** tubular glands having outlet on lining membrane of stomach. **G. im′pulse,** see *Heart*. **G. influen′za,** see *Influenza*. **G. insuffic′iency,** inability of the stomach, through muscular weakness, to pass its contents normally into the duodenum. **G. juice,** fluid secreted from the mucous membrane of the stomach. As met with it is a mixture of the fluids secreted by that organ with those of the supradiaphragmatic portion of the alimentary canal. Owing to such admixture the most contrary properties have been assigned to it. It was found by the author to contain, in man, chlorohydric and acetic acids, associated with a ferment, pepsin. Gastric juice contains in every 1000 parts, water, 992.60; pepsin, 3.04; free hydrochloric acid, 2.20; alkaline chlorides, 2.0; phosphates of calcium, magnesium, and iron, 0.16. **G. lymphat′ic glands,** glands along curvatures of stomach. **G. nerves,** two cords or branches by which the pneumogastric nerves terminate, and which descend on the anterior and posterior surfaces of the stomach. Filaments of the great sympathetic, accompanying the gastric vessels. **G. omen′tum,** gastrocolic epiploön. **G. plex′us,** nervous network formed by the solar plexus, accompanying coronary artery of the stomach, and passing along the lesser curvature of the stomach, to which it gives branches. **G. si′phon,** see *Siphon, gastric*. **G. tet′any,** see *Tetany*. **G. veins** follow the same distribution as the arteries, and open into the vena porta abdominis.

**Gas′tricism.** Gastritis; indigestion.

**Gastric′olous** (*gaster*, stomach, *colo*, to inhabit). Having a habitat in the stomach; a parasite, for example.

**Gastrimar′gia** or **Gastrim′argism** (*gaster*, stomach, *margos*, greedy). Gluttony.

**Gastris′mus.** Gluttony. See *Saburra*.

**Gastrit′ic.** Relating to gastritis.

**Gastri′tis.** Inflammation of the stomach; gastric catarrh; disease characterized by pyrexia, great anxiety, heat and pain in the epigastrium, increased by taking anything into the stomach, vomiting, and hiccough. The inflammation may be seated either in the peritoneal or in the mucous coat, most frequently in the latter—*esogastritis, endogastritis, gastromy-*

*coderitis, gastritis mucosa*—being often excited directly by acrid ingesta. Various forms of dyspepsia are nothing more than chronic gastritis or endogastritis. Gastric catarrh is a common form of gastritis, marked by active congestion and perhaps hypertrophy of the mucous coat, with excessive secretion of mucus; it is often produced by excess in eating or drinking. The symptoms are those mentioned above. **Arthrit′ic g.**, rheumatism or gout of the stomach. **Atroph′ic g.**, chronic g. characterized by atrophy of the mucous coat of the stomach, mucoid degeneration of the cylindrical cells of the mucous membrane and of the vestibular alveoli, and granular and fatty degeneration of the cells lining the gastric tubules. **G. bacilla′ris**, g. caused by bacilli. **Catar′rhal g.**, see *Gastritis*. **Croup′ous** or **diphtherit′ic g.**, gastritis with formation of false membrane; may occur sometimes as an extension of pharyngeal diphtheria. **Follic′ular** or **gland′ular g.**, inflammation of glands of stomach, especially a form met with in marasmus of old persons, yellow spots of adipose matter appearing on the lining membrane of the stomach. **Gland′ular g.**, see *Gastroadenitis*. **G. glandular′is atroph′ica**, atrophic g. **G. g. prolif′era**, hypertrophic g. or g. prolifera. **Hypertroph′ic g.**, chronic g. characterized by congestion and hypertrophy of the mucous coat of the stomach. **Mam′millated g.**, chronic form of gastritis in which the lining membrane of the stomach is mammilated, some of the glands being dilated and degenerated, while others are atrophied. **G. membrana′cea**, diphtheritic g. **G. mucip′ara**, chronic g. with mucoid degeneration of the tubular cells. **G. mycot′ica**, gastritis caused or accompanied by fungi in the stomach. **G. parasita′ria** or **parasit′ica**, gastritis caused by parasites in the stomach, as worms, etc. **G. parenchymato′sa**, glandular g. **Phleg′monous g.**, acute inflammation of the submucous connective tissue of the stomach, usually accompanied with fibrinous exudation and ulceration and abscess, and gradually invading the muscular and peritoneal coats; it sometimes occurs in typhus fever, blood poisoning, etc. **G. polypo′sa**, an exaggerated form of g. prolifera in which the prominences of the mucous membrane have a nipple-shape or polypoid appearance. **G. prolif′era**, gastritis with localized patches of hypertrophied mucous membrane; usually a sequence of prolonged alcoholism; sometimes these patches appear to be warty prominences, and the condition is then called *g. verrucosa*. **Pseudomem′branous g.**, g. accompanied by the presence of patches of false membrane on the mucous coat. **G. purulen′ta** or **submuco′sa**, phlegmonous g. **Sup′purative g.**, phlegmonous g. **Tox′ic g.**, gastritis from the local or systemic action of poison that has been swallowed. **G. venena′ta**, toxic g. **G. verruco′sa**, see *G. prolifera*.

**Gastro-** (*gaster*, belly or stomach). In composition, the stomach or belly.

**Gastroadeni′tis.** Condition of the stomach, especially after acute poisoning by phosphorus or arsenic, in which the gastric glands are inflamed and enlarged, and the epithelial cells filled with a finely granular mass, or at a later stage fatty granules.

**Gastroanastomo′sis.** Establishment, by operation, of communication between the two pouches formed in the stomach in cases of hour-glass contraction.

**Gastroarc′tia** (*arcto*, to constrict). Narrowness or constriction of the stomach.

**Gastroarthrit′ic.** Relating to gout of the stomach.

**Gastroarthri′tis.** Gout of the stomach.

**Gastroatax′ia.** Debility or disorder of the stomach; dyspepsia.

**Gastroaton′ia.** Atonic dyspepsia; condition of want of tone in the stomach.

**Gastrobro′sis** (*brosis*, act of gnawing). Corrosion and perforation of the stomach.

**Gastrocathar′sis.** Clearing out of the stomach by bringing up its contents by vomiting or at pleasure, as in rumination.

**Gas′trocele** (*kele*, tumor). Hernia of the stomach; hernia formed by the stomach through the upper part of the linea alba; see *Epigastrocele*.

**Gastrocephali′tis** (*kephale*, head). Inflammation of the stomach and brain, a concomitant of certain malignant fevers.

**Gastrocholecysti′tis** (*chole*, bile, *cystitis*, inflammation of the bladder). Gastritis with inflammation of the gall-bladder.

**Gastrocho′lia** or **Gastrocholo′sis** (*chole*, bile). Gastric or bilious fever.

**Gastrocne′me** or **Gastrocne′mia** (*gaster*, belly, *kneme*, leg). Calf of the leg.

**Gastrocne′mium.** Calf of the leg.

**Gastrocne′mius.** Name of the muscles composed of two fleshy masses occupying the posterior and superficial part of the leg, gemelli or gemini, and constituting the gastrocnemius externus of English anatomists. They are distinguished into internal and external, distinct above, but united at their inferior extremity. They are long, flat, and thick, and arise—the former from the posterior part of the outer condyle of the femur; the latter, from the posterior part of the inner condyle of the same bone. The aponeurosis, uniting these muscles below, joins with that of the solaris, and forms with it a large tendon, *tendo Achillis*, which is inserted at the posterior part of the calcaneum. These muscles extend the foot and can also flex the knee. The gastrocnemius and soleus constitute, together, the triceps suræ, triceps suralis, or triceps extensor pedis.

**Gastrocœ′liac** or **Gastrocœ′lic.** Cœliac.

**Gastrocol′ic.** Belonging to the stomach and colon. **G. epip′loon** or **omen′tum**, see *Epiploon*.

**Gastrocol′ica.** Cardialgia; gastric colic.

**Gastrocoli′tis.** Inflammation of the stomach and colon; dysentery.

**Gastrocolos′tomy** (*gaster*, stomach, *kolon*, colon, *stoma*, mouth). Operation for establishing artificial fistulous communication between the stomach and colon.

**Gastrocolot′omy** (*gaster*, stomach, *kolon*, colon, *tome*, incision). Operation for the relief of obstruction, tumor, or other affection of the stomach and colon conjointly.

**Gastrocolpot′omy** (*gaster*, belly, *kolpos*, vagina, *tome*, section). Form of cæsarean section in which an opening is made through the vagina into the uterus; laparoelytrotomy. See *Cæsarean section*.

**Gastrocys′tis** (*kystis*, bladder). Blastosphere.

**Gastrocysti′tis.** Inflammation of the stomach and bladder.

**Gastrodermati′tis** or **Gastrodermi′tis** (*derma*, skin). Inflammation of the skin caused by or associated with disease of the stomach.

**Gastroder′mis** (*gaster*, belly, *derma*, skin). Epithelium of the alimentary canal from the throat to the anus.

**Gastrodiabro′sis.** Corrosion and perforation of the stomach.

**Gastrodial′ysis** (*dialysis*, dissolution). Solution of continuity of the coats of the stomach.

**Gastrodi′aphane.** See *Gastrodiaphany*.

**Gastrodiaphanos′copy.** Gastrodiaphany.

**Gastrodiaph′any** (*gaster*, stomach, *dia*, through, *phaino*, to show). Examination of the stomach with a gastrodiaphane, a flexible stomach tube having an electric light at the inner extremity, which in a dark room may portray the outlines of the stomach through the wall of the abdomen, if the patient be not too obese or muscularly developed.

**Gastrodiatre′ma** or **Gastrodiatre′sis** (*dia*, through, *trema*, perforation). Perforation of the coats of the stomach.

**Gastrodid′ymus** (*didymos*, twin). Double monster in which union occurs at the abdomen.

**Gas′trodisc.** Disk-like appearance of the innermost germ-layer of the embryo on the inner surface of the external germ-layer.

**Gastroduod′enal.** Relating to the stomach and duodenum. **G. ar′tery**, branch of hepatic artery to the duodenum and greater curvature of the stomach.

**Gastroduodeni′tis.** Inflammation of the stomach and duodenum. See *Gastroenteritis*.

**Gastroduodenocholecysti′tis.** Inflammation of the stomach, duodenum, and gall-bladder.

**Gastroduodenos′tomy.** Operation for establishing an artificial opening between the stomach and the duodenum.

**Gastroduodenoty′phus.** Typhoid fever.

**Gas′trodyme.** Gastrodidymus.

**Gastrodyn′ia.** Gastralgia. **G. flatulen′ta,** wind colic.

**Gastrodysneu′ria** (*dys*, with difficulty, *neuron*, nerve). Disorder of the nervous apparatus of the stomach.

**Gastroectas′ia** or **Gastroec′tasis** (*ektasis*, dilatation). Dilatation of the stomach.

**Gastroelytrot′omy** (*gaster*, belly, *elytron*, vagina, *tome*, section). Laparoelytrotomy. See *Cæsarean section*.

**Gastroencephali′tis.** Inflammation of the stomach accompanied with cerebral symptoms.

**Gastroencephalo′ma.** Encephaloma of the stomach.

**Gastroenteral′gia** (*gaster*, stomach, *enteron*, intestine, *algos*, pain). Pain in the stomach and intestine.

**Gastroenter′ic.** Relating to stomach and intestine.

**Gastroenterit′ic.** Relating to gastroenteritis.

**Gastroenteri′tis.** Inflammation of the stomach and small intestine. Membranous inflammation of the bowels in veterinary medicine. **G. follicula′ris,** typhoid fever. **G. muco′sa,** inflammation of the mucous membrane of the stomach and intestines. **G. nervo′sa,** typhoid fever.

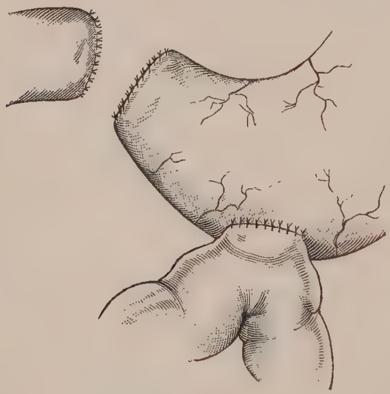
**Gastroenteroanastomo′sis.** The practice of intestinal anastomosis extended to include the stomach also; gastroenterostomy.

**Gastroenterocoli′tis.** Inflammation of the stomach, small intestine, and colon.

**Gastroenteromeningi′tis** (*meninx*, membrane). Gastroenteritis complicated with meningitis, and perhaps phlebitis and carditis.

**Gastroenterop′athy.** Gastroenteric disease.

**Gastroenteros′tomy** (*gaster*, stomach, *enteron*, intestine, *stoma*, mouth). Operation for creating fistulous communication between the stomach and intestine. **McGraw's meth′od of g.,** see *McGraw*.



Pylorectomy and gastroenterostomy. (Richardson.)

**Gastroenterot′omy** (*gaster*, stomach, *enteron*, intestine, *tome*, incision). Operation of opening the stomach and bowel through the abdominal wall.

**Gastroepiplo′ic.** Relating to the stomach and epiploön. **G. ar′teries,** gastrica inferior arteries, are two in number, right and left. The right, also called gastrohepatic, gastrica inferior dextra, gastroepiploica dextra, is furnished by the hepatic artery, descends behind the pylorus, and passes from right to left along the great curvature of the stomach. It gives branches to the pancreas, duodenum, stomach, omentum majus, and terminates by anastomosing with the gastroepiploica sinistra, gastrica sinistra, or inferior sinistra. This—the left—arises from the splenic artery, and passes from left to right along the great curvature of the stomach, distributing branches more particularly to the stomach and omentum majus. It terminates by joining the right gastroepiploic. **G. gan′glions** or **glands** are the lymphatic ganglions or glands, situated toward the great curvature of the stomach, between the two anterior laminæ of the omentum majus. **G. plex′us,** branches of the hepatic plexus distributed to the left gastroepiploic artery. **G. veins** are distinguished; like the arteries, into the right and left. They empty themselves, the former into the superior mesenteric, the latter into the splenic vein.

**Gastroepiplo′ica dex′tra.** Right gastroepiploic artery. **G. sinis′tra,** left gastroepiploic artery.

**Gastrogastros′tomy** (*gaster*, stomach, *stoma*, mouth). See *Gastroanastomosis*.

**Gastrogen′ital.** Relating to the stomach and genital organs.

**Gas′trograph** (*gaster*, stomach, *graphe*, description). Instrument for studying movements of the stomach by an electric current and indicator.

**Gastrohæmorrha′gia.** Hemorrhage from the stomach; vomiting of blood.

**Gastrohelco′sis** (*gaster*, stomach, *helkos*, ulcer). Ulceration of the stomach.

**Gastrohepat′ic** (*hepar*, the liver). Relating to the stomach and liver. **G. ar′tery,** occasional artery, being the common trunk of the gastric and hepatic arteries. **G. omen′tum,** gastrohepatic epiploon.

**Gastrohepati′tis.** Simultaneous inflammation of the stomach and liver.

**Gastrohyperner′via** or **Gastrohyperneu′ria.** Morbidly increased activity of the nerves of the stomach.

**Gastrohyponer′via** or **Gastrohyponeu′ria.** Want of tone or nervous force of the stomach.

**Gastrohysterec′tomy** (*gaster*, belly, *hystera*, womb, *ektome*, excision). Removal of the uterus by means of abdominal section.

**Gastrohys′teropexy.** Operation for attaching the uterus by suture to the abdominal wall for relief of displacements of that organ.

**Gastrohysterot′omy** (*gaster*, belly, *hystera*, uterus, *tome*, section). Laparohysterotomy; cæsarean section.

**Gastrointes′tinal.** Gastroenteric.

**Gastrojejunos′tomy.** Operation for making fistulous communication between the stomach and jejunum.

**Gastrokynes′ograph** (*gaster*, stomach, *kinesis*, movement, *grapho*, to write). An instrument for representing graphically the movements of the stomach.

**Gastroli′enal** (*lien*, spleen). Gastrosplenic.

**Gas′trolith** (*lithos*, stone). Calculus in the stomach.

**Gastrolithi′asis.** Formation of gastroliths.

**Gastrol′ogist.** A specialist dealing with gastric disorders.

**Gastrol′ogy** (*gaster*, stomach, *logos*, description). The specialty of gastric disorders.

**Gastrol′ysis** (*lysis*, solution). Breaking up of morbid adhesions of the stomach with other organs or parts.

**Gastromala′cia, Gastromalax′ia,** or **Gastromalaco′sis** (*malakia*, softening). Softening of the mucous membrane of the stomach; may be produced also after death by the action of gastric secretions.

**Gastrom′eles** or **Gastrom′elus** (*gaster*, belly, *melos*, limb). Monster with one or more supernumerary limbs on the abdomen.

**Gastrome′lia.** Condition of gastromelus.

**Gastrome′nia** (*men*, month). Vicarious menstruation from the stomach.

**Gastromeningi′tis.** Gastric fever.

**Gastrometri′tis.** Simultaneous inflammation of the stomach and uterus.

**Gastrometrot′omy** (*gaster*, belly, *metra*, uterus, *tome*, section). Laparohysterotomy; cæsarean section.

**Gastromyce'tes.** Gasteromycetes.

**Gastromyco'sis** (*mykes*, fungus). Disease of the stomach caused by fungi. **G. o'vis,** endemic affection of sheep in Northern Europe, attended with hemorrhagic inflammation of the stomach and bowels.

**Gastromyelo'ma** (*myelos*, marrow). Gastroencephaloma.

**Gastronephri'tis.** Gastritis with nephritis.

**Gastronesteos'tomy** (*gaster*, stomach, *nestis*, jejunum, *stoma*, mouth). Gastrojejunostomy.

**Gastroneu'ria** or **Gastroner'via.** Nervous action of the stomach.

**Gastro-œsophag'eal.** Relating to the stomach and œsophagus.

**Gastro-œsophagi'tis.** Inflammation of the stomach and œsophagus.

**Gastro-omen'tal.** Gastroepiploic.

**Gastropancreat'ic.** Relating to the stomach and pancreas. **G. lig'ament,** peritoneal fold from pyloric orifice of stomach to anterior part of pancreas.

**Gastropancreati'tis.** Gastritis with pancreatitis.

**Gastroparal'ysis.** Paralysis of the stomach.

**Gastropari'etal** (*paries*, wall). Relating to the wall of the stomach or of the abdomen covering that organ.

**Gastrop'athy** (*pathos*, disease). Disease of the stomach.

**Gastropericardi'tis.** Gastritis associated with pericarditis.

**Gastroperiodyn'ia** (*gaster*, stomach, *periodos*, period, *odyne*, pain). Violent periodical neuralgic pain at the pit of the stomach; *sool* of India.

**Gastroperitoni'tis.** Simultaneous inflammation of the stomach and peritoneum.

**Gas'tropexy** (*pexis*, fixation). Operation for attaching the stomach to the abdominal wall.

**Gastropharyngi'tis.** Gastritis associated with pharyngitis.

**Gastrophren'ic** (*phren*, diaphragm). Relating to the stomach and diaphragm. **G. lig'ament,** reflection of the peritoneum descending from the inferior surface of the diaphragm to the cardia.

**Gastrophthi'sis.** Emaciation or wasting away from disease of the stomach or abdomen.

**Gas'troplasty** (*plasso*, to form). Plastic operation on the stomach.

**Gastrople'gia** (*plege*, stroke). Paralysis of the stomach.

**Gastropleth'ora.** Congestion of the stomach.

**Gastropleuri'tis.** Gastritis associated with pleurisy.

**Gastroplica'tion** (*plico*, to fold). An operation suggested for reducing the size of a dilated stomach by taking a tuck in its walls. Also a method of suture of a gastric wound.

**Gastropneumo'nia.** Pneumonia with gastric complications; gastritis associated with pulmonary symptoms.

**Gastropneumon'ic** or **gastropul'monary.** Relating to the stomach and lung; pneumogastric.

**Gastropto'sis** (*ptosis*, falling). Downward displacement or sagging of the stomach.

**Gastropul'monary.** Relating to the stomach and lungs; pneumogastric.

**Gastropylorec'tomy.** Pylorectomy.

**Gastropylor'ic.** Relating to the entire stomach and to the pylorus.

**Gastrop'yra** (*pyr*, fever). Gastric fever.

**Gastrorrha'gia.** Hemorrhage from the stomach.

**Gastror'rhaphy** (*rhaphe*, suture). Suture of a penetrating wound of the stomach or abdomen, or gastric fistula, when the edges are too extensive or too ragged to be kept in contact by position, adhesive plaster, or appropriate bandages; interrupted and quilled sutures are those chiefly employed. Gastroplication.

**Gastrorrhex'is** (*rhexis*, rupture). Rupture of the stomach.

**Gastrorrhœ'a** (*rheo*, to flow). Gastric catarrh or flux. Excessive secretion of gastric juice or mucus from the lining membrane of the stomach. Cœliac flux.

**Gastros'chisis** (*schisis*, fissure). Fissure of the wall of the abdomen.

**Gastroscir'rhus.** Scirrhous induration or cancer of the stomach.

**Gas'troscope** (*skopeo*, to examine). Instrument for viewing, by reflected light, the interior of the stomach.

**Gastros'copy.** Examination of the interior of the stomach by means of a gastroscope.

**Gastro'sis.** Generic name for a disease of the stomach.

**Gastrospas'mus.** Spasm or cramp of the stomach.

**Gastrosplen'ic.** Relating to the stomach and spleen. **G. ar'teries,** arteriæ gastricæ breves. **G. lig'ament** or **omen'tum,** peritoneal fold between the fundus of the stomach and the covering spleen. **G. vein,** splenic vein.

**Gastrospleni'tis.** Inflammation of the stomach and spleen.

**Gastrospongio'ma.** Fungosity of the stomach.

**Gastrosteno'sis** (*stenos*, contracted). Stricture of the stomach.

**Gastros'tomy.** Operation for making a fistulous opening into the stomach through the wall of the abdomen.

**Gastrosuccorrhœ'a** (*gaster*, stomach, *succus*, juice, *rheo*, to flow). Excessive secretion of gastric juice. **G. muco'sa,** secretion of large amounts of mucus by a non-digesting stomach, in the absence of symptoms of gastritis.

**Gastrothoracic,** gas-tro-tho-ras'ik. Relating to the stomach and thorax.

**Gastrothoracodid'ymus** (*didymos*, twin). Double monster united at the thorax and abdomen.

**Gastrot'omy** (*tome*, section). Several different operations have been so called, as cæsarean section, incision into the abdomen for the relief of internal strangulation or to remove tumors, herniotomy, or an opening made in the stomach to remove a foreign body from it. Sometimes synonymous with gastrostomy.

**Gastrotrachelot'omy** (*gaster*, belly, *trachelos*, neck, *tome*, incision). Opening of the uterus through the abdomen for the delivery of the fœtus by incision through the cervix uteri.

**Gastrotubot'omy** (*gaster*, belly, *tuba*, tube, *tome*, section). Operation of opening the Fallopian tube through an abdominal incision; laparosalpingotomy.

**Gastrotympani'tes.** Distention of the stomach with gas.

**Gastrovas'cular.** Relating to the functions of digestion and circulation, as the body cavity of certain of the inferior forms of animal life.

**Gastrox'ia** or **gastroxyn'sis** (*oxys*, acid). Dyspepsia attended with excessive acidity, nausea or vomiting, and pain.

**Gastroxytes,** gas-trox'it-ees. Gastroxia. Larval form of animals in the scale higher than protozoa.

**Gas'trula** (small stomach). Gastrule. Period in animal development in which it is composed of a small sac made up of two layers of cells, this sac or cavity being the primitive alimentary canal.

**Gastrula'tion.** Formation and development of gastrula.

**Ga'su-ba'su.** A plant of India from which is derived an alkaloid, *nervocidine*, which possesses marked local anæsthetic action.

**Gath'ered.** In condition of abscess. **G. breast,** see *Mastitis*.

**Gath'ering.** Abscess, suppuration.

**Gaucher's** (go-shays') **disease'.** Primary epithelioma of the spleen.

**Gaul'therase.** A ferment having a direct action on the glocosides of some plants.

**Gaulthe'ria** (after Dr. Gaulther, of Quebec). Mountain tea, partridge berry, berried tea, grouseberry, deerberry, spiceberry, teaberry, redberry, wintergreen, redberry tea, ground berry, ground ivy, ground holly, hill berry, box berry, chequer or checker berry.

American plant, the leaves of which in infusion are stimulant and anodyne. The oil, *oleum gaultheriæ* (Ph. U. S.), oil of wintergreen, consisting chiefly of salicylate of methyl, is used, on account of its pleasant flavor, to cover the taste of other medicines. It is also used in rheumatism; dose, ♏x–xxx (0.65–2.0). Another official (Ph. U. S.) preparation is the spirit or essence (*spiritus gaultheriæ*); dose, ♏xv–ʒj (1.0–4.0). **G. fra′grans** or **fragrantis′sima**, Indian wintergreen, growing in East Indies and Japan; the oil is stimulant and antispasmodic. **G. hu′milis**, gaultheria. **G. procum′bens**, gaultheria.

**Gaultherin′.** Neutral principle from Betula lenta, convertible into oil resembling oil of gaultheria.

**Gautier's′ pseudoxanthin′.** Base, $C_4H_5N_5O$, resembling xanthin, obtained from fresh muscle of beef.

**Gauze.** Exceedingly thin sheer material. **Absorb′ent g.**, gauze from which all dressing and oily matters have been removed. **Antisep′tic g.**, unirritating antiseptic covering for wounds and surgical dressing, made by adding antiseptic materials, as carbolic acid, iodoform, corrosive sublimate, etc. See *Antiseptic.* Boracic acid, salicylic acid, thymol, and other substances are similarly used.

**Gavage**, gav-azh′ (Fr.). Forced feeding, as by passage of food into the stomach through an œsophageal tube.

**Gavard's′ mus′cle.** Oblique fibres of muscular coat of the stomach.

**Gawalowski's** (gav-al-ov′skis) **test.** Urine heated to the boiling point with a solution of ammonium molybdate will turn blue if it contains sugar.

**Gay feath′er.** Liatris spicata and other species of liatris.

**Gay-Lussac's′ law.** That the tension of a gas of constant volume varies directly as the temperature.

**Gaylussa′cia** (after Gay-Lussac). Black huckleberry. Indigenous plant whose leaves and root, as well as those of Gaylussacia dumosa, dwarf huckleberry, and of G. frondosa, blue tangle, indigenous, are used in decoction as astringents in diarrhœa, sore throat, etc.

**Gaz′eol.** Mixture of impure ammonia, 20°, acetone, benzol, impure naphthalin, and fresh tar, which when evaporated in a water-bath has been used for inhalation in whooping-cough and bronchial and pulmonary affections.

**Gehr′ung's pes′sary.** Instrument to be used in cystocele, intended to act as a support to the anterior wall of the vagina.

**Gei′gel's re′flex.** Inguinal reflex in the female.

**Geiso′ma, Gei′son** (*geison*, eaves of a house), or **Gei′sum.** Part of frontal bone directly over the eyes.

**Geissine′** or **Geissospermine′.** $C_{19}H_{24}N_2O_2+H_2O$. Alkaloid from bark of Geissospermum læve; cardiac sedative; in large doses poisonous.

**Geiss′ler's tubes.** Tubes employed in spectrum analysis, containing a very tenuous gas and supplied with platinum electrodes to pass sparks through them. They are also called *Crookes's tubes.* Vacuum tubes of the same construction are employed in the production of *x*-rays.

**Geissospermine′.** Geissine.

**Geissosper′mum læ′ve.** Tree of Brazil, from which pao-pareira bark is obtained; tonic, antipyretic, and astringent. **G. vello′sii**, tree of Brazil, the bark of which is used in intermittent fever as antipyretic and antiperiodic. Leaves, coroba leaves, are sometimes used medicinally; poisonous.

**Gelan′te.** Gelanthum.

**Gelan′thum.** Combination of gelatin and tragacanth; a vehicle for application of local remedies to the skin.

**Gela′pium** or **Gelap′pium.** Convolvulus jalapa; Ipomœa jalapa.

**Gelasi′ni** (*gelao*, to laugh). Dimples. **G. incisi′vi**, incisor teeth.

**Gelas′ma** or **Gelas′mus** (*gelao*, to laugh). Canine laugh; convulsive laughter.

**Gelatifica′tion.** Transformation into gelatin.

**Gelatigenous**, gel-at-ij′en-us (*gelatin*+*gennao*, to engender). Forming gelatin or gelatinous structure.

**Gelatin′** (*gelo*, to congeal). Immediate animal principle, semitransparent, insipid, inodorous, insoluble in cold water, very soluble in hot, which it thickens and transforms into jelly on cooling; it is obtained pure from fresh calves' feet; it is a nutritious substance, and when dissolved in a considerable quantity of water forms an emollient fluid. Two forms of gelatin are glutin, or gelatin proper, and chondrin. Gelatin is used, in the form of a suppository, to induce rectal evacuations. It is also employed internally or by hypodermic injection in the treatment of aneurysm and in the control of chronic hemorrhage. **G. bougie′**, a medicated cylinder of gelatin for introduction in the urethra. **G. cul′ture**, culture of microorganisms prepared on gelatin. **G. disk**, a medicated lamella of gelatin for introduction into the conjunctival sac. **G. formal′dehyde**, glutol. **Japanese′ g.**, agar. **Med′icated g.**, g. with which some drug has been incorporated. **Nu′trient g.**, g. prepared for use as a culture medium. **G.-pep′tone**, a substance formed from gelatin by digestive action upon it of pepsin or hydrochloric acid. **Su′gar of g.**, glycocin. **G. suppos′itory**, laxative suppository containing gelatin. **G. of Whar′ton**, jelly of the cord; soft, dense, fluid, gelatinous substance enveloping the umbilical cord.

**Gelati′na.** Gelatin, jelly.

**Gelat′inate.** Gelatinize.

**Gelatinif′erous.** Producing gelatin.

**Gelatin′iform.** Resembling gelatin. **G. mat′ter of intes′tine**, albuminose.

**Gelat′inize.** To make or to become gelatinous.

**Gelat′inoid** (*gelatin*+*eidos*, resemblance). Resembling gelatin. Colloid gelatinoids include gelatin, chondrin, collagen, elastin, keratin, and mucin.

**Gelatino′sa.** Substantia gelatinosa.

**Gelat′inous.** Relating to or having the character or appearance of gelatin or jelly. Viscid. **G. lay′er**, layer in the olfactory bulb resembling the molecular layer of the cortex of the brain. **G. nerve′-fibres**, see *Nerve-fibres.* **G. tis′sue**, mucoid tissue.

**Gela′tion** (*gelo*, to congeal). Congelation; frostbite.

**Gel′atol.** A base for ointments, made of glycerin, gelatin, oil, and water.

**Gel′atose.** A substance resulting from the digestion of collagen.

**Gela′tum petro′leum.** Petrolatum.

**Gel′ding** (Ger., *gelten*, to castrate). Castration. Eunuch.

**Gelid**, jel′id. Cold as ice.

**Gelifica′tion.** Gelatinization.

**Gelin′.** Cellulose; collagen.

**Gell.** To assume a gelatinous form.

**Gellé's′ test.** A test for determination of disease of the ossicles of the ear, by the use of a rubber tube and tuning-fork, the vibrations not being appreciated by the ear if these bones are affected.

**Gel′ly** (*gelo*, to congeal). Jelly.

**Gel′ose.** Substance resembling gelatin found in Japanese isinglass; agar-agar. Parabin.

**Gelosin′.** Jelly-like substance from Gelidium corneum, used for making suppositories, bougies, etc., and as a culture medium for bacteria.

**Gelother′apy** (*gelao*, to laugh, *therapeia*, treatment). The induction of laughter for therapeutic purposes.

**Gelse′mia.** See *Gelseminum.*

**Gelsem′ic acid.** Crystallizable acid glucoside found in Gelsemium sempervirens.

**Gelsemine′.** White, bitter alkaloid from Gelsemium sempervirens; dose, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002). See *Gelsemium.*

**Gelsemin′ic acid.** Gelsemic acid.

**Gelseminine′.** A brownish alkaloid obtained from Gelsemium sempervirens.

**Gelsem′inum.** Gelsemium.

**Gelsem′ium.** Jasmine; a genus of plants of the order *Loganiaceæ*. The official name (Ph. U. S.) of the rhizome and roots of G. sempervirens; in the Ph. Br. the name is gelsemii radix, gelsemium root. Gelsemium is a nervous and arterial sedative, and in overdoses a poison. The antidotes to gelsemium poisoning are atropine, stimulants, and artificial respiration. An alkaloid, *gelsemine*, has been obtained from the bark of the root; it is excessively bitter and poisonous. The official preparations are: *Extractum gelsemii fluidum* (Ph. U. S.), fluid extract; dose, ♏ij–x (0.12–0.65). *Tinctura gelsemii* (Ph. U. S. and Br.), tincture; dose, ♏v–xx (0.32–1.3). There is an unofficial tincture which is of greater strength. **G. el′egans,** Chinese plant, rhizome of which contains an alkaloid having tetanic effects. **G. lu′cidum, nit′idum,** or **sempervi′rens,** yellow jasmine or jessamine, the source of the official drug.

**Gély's** (zha-leez′) **su′ture.** See *Suture*.

**Gemel′lar.** Twin-bearing or producing.

**Gemellip′arous** (*gemellus*, twin, *pario*, to bring forth). Producing twins.

**Gemel′lus.** One of two children, twins, born at the same accouchement or gestation. Relating to twins, as twin conception. **G. infe′rior,** one of the bellies of the ischiotrochanterianus muscle, arising from the tuberosity of the ischium. **G. mus′culus,** long portion of the triceps brachialis, united to the inner portion; one of the bellies of the gastrocnemius muscle; also one of the bellies of the ischiotrochanterianus muscle. **G. supe′rior,** the belly of the ischiotrochanterianus muscle which arises from the spine of the ischium; marsupialis.

**Gem′inal.** Geminate. **G. fi′bres,** division into pairs of the pyramidal fibres of the spinal cord, one fibre of each crossing to the opposite side, the other passing down the same side.

**Gem′inate** (*geminus*, twin). Like twins; two together. **G. teeth,** two teeth, united together, developed in one follicle.

**Gemina′tion.** Production of twins; duplication.

**Geminifor′mis.** Gemellus inferior muscle.

**Gem′inous.** Geminate.

**Gem′inum.** Optic lobes. **G. cen′trum semicircula′re,** tænia semicircularis.

**Gem′inus.** Gemellus.

**Gemipo′ma.** Mamma.

**Gem′ma** (bud). Granulation. **G. oc′uli,** crystalline lens.

**Gemma′tion.** Generation by buds, which grow and become distinct from one another.

**Gemmifica′tion.** Gemmation.

**Gemmipar′ity** (*gemma*, bud, *pario*, to bring forth). Gemmation; generation by budding.

**Gemmip′arous** (bud-bearing). See *Generation*.

**Gem′mule.** Small bud; ovule.

**Ge′na.** Cheek, forming the lateral part of the mouth. Externally, the cheeks have no precise limits; they are continuous, above, with the lower eyelid; below, they descend as far as the base of the jaw; before, they terminate at the alæ nasi and at the commissures of the lips; and behind, at the ear. They are formed of three layers, dermoid, muscular, and mucous.

**Ge′nal.** Relating to the cheeks. **G. fur′rows,** see *Jadelot's furrows*. **G. glands,** molar glands. **G. lines,** see *Jadelot's lines*.

**Gendarus′sa ro′sea** or **vulga′ris.** Indian plant, ord. *Acanthaceæ*, leaves of which are emetic and diaphoretic; the root is astringent.

**Geneagen′esis** (*genea*, generation + *genesis*). Alternate generation. See *Generation*.

**Genean′thropy** (*genea*, generation, *anthropos*, man). Anthropogeny.

**Gen′era.** Plural of genus.

**Gen′eral anat′omy.** See *Anatomy*. **G. paral′ysis,** general paresis; paralytic dementia; cerebral affection characterized by paralysis of motion and speech and of sensation, and finally dementia. **G. par′esis,** g. paralysis. **G. practi′tioner,** one who practises in all departments of medicine, surgery, or obstetrics, and does not limit his attention to any one department, as a specialist does. A surgeon-apothecary.

**Generaliza′tion.** Extension of disease through the general system or over a large surface of the body. Deduction of laws and principles from minor facts.

**Gen′eralize.** To make general. To produce a change in a local disease whereby it becomes transformed into a general disease.

**Gen′erate.** To beget.

**Genera′tion** (*genero*, to beget). Procreating; breeding; act of reproducing the species; aggregate of functions concurring, in organized beings, toward the production of their kind. The act of generation means the union of the sexes; see *Coïtion*. The writers of antiquity believed that all organized bodies are produced either by what is termed *univocal* or *regular generation*—homogenesis, generatio homogenea, propagatio—which applies to the upper classes of animals and vegetables; or by *spontaneous generation*—heterogenesis, heterogenia, generatio heterogenea, æquivoca, primitiva, primigena, originaria, or spontanea—which they considered applicable to the very lowest classes only. *Spontaneous generation* and *equivocal generation* have been regarded by many as synonymous; by others spontaneous generation is regarded as the production of a new being from the mere combination of inorganic elements; while by equivocal generation they understand the evolution of a new being from organized beings dissimilar to itself, through some irregularity in functions or the incipient decay or degeneration of tissues.

The simplest kind of reproduction does not require sexual organs. The animal separates into several fragments, forming so many new individuals. This is *fissiparous generation, fissiparism, generation from fission*. Another form—*gemmation, gemmiparous generation*—consists in the formation of buds, sporules, or germs on some part of the body, which at a particular period drop off and form as many new individuals, requiring but one parent—*monogenesis* or *monogeny*.

In *oviparous generation* the egg is hatched out of the body. In *ovoviviparous generation* the new being is hatched in the excretory passages. In *viviparous generation* the new individual is born under its appropriate form. In *marsupial* or *marsupiate generation* the young, being born at a very early stage of development, is received and nourished in a marsupium or pouch. In *alternate generation, geneagenesis*, the young do not resemble the parent at birth, and remain dissimilar during their whole life, so that their relationship is not apparent until a succeeding generation; thus the cercaria undergoes a change into the distoma; see *Metagenesis* and *Parthenogenesis*. All the kinds of reproduction which require the union of sexes are called *digenesis* or *digeny*.

All the acts comprising the function of generation in man may be referred to five great heads: copulation; conception or fecundation; gestation or pregnancy; delivery or accouchement; and lactation.

**Genera′tion, alter′nate.** See *Generation* and *Metagenesis*. **Asex′ual g.,** reproduction without the union of the sexes, see *Agamogenesis*. **Change′able g.,** metagenesis; alternate generation; see *Generation*. **Equiv′ocal g.,** see *Generation*. **Fissip′arous g.,** see *Generation*. **Gemmip′arous g.,** see *Generation*. **Interstit′ial g.,** accrementation. **Marsu′pial g.,** see *Generation*. **Non-sex′ual g.,** asexual g., see *Agamogenesis*. **Or′gans of g.,** see *Genital organs*. **Ovip′arous g.,** see *Generation*. **Ovovivip′arous g.,** see *Generation*. **Reg′ular g.,** see *Generation*. **Sex′ual g.,** reproduction by the union of the sexes, see *Gamogenesis*. **Sponta′neous g.,** abiogenesis, see *Generation*. **Univ′ocal g.,** see *Generation*. **Vir′ginal g.,** parthenogenesis. **Vivip′arous g.,** see *Generation*.

**Gen′erative.** Relating to or assisting in generation; genital. **G. or′gans,** see *Genital organs*.

**Gener′ic.** Pertaining to a genus or to the same genus. **G. atax′ia,** paramyoclonus multiplex.

**Gene′siac** or **Gene′sial.** Genital; generative. **G. cy′cles,** periods in woman's sexual life, from puberty to conception, thence to parturition, and through the period of lactation.

**Gene′sic.** Genetic.

**Genesiol′ogy** (*genesis,* generation, *logos,* discourse). Doctrine of generation.

**Gen′esis.** Generation; origin or first formation; act or process of reproduction.

**Genet′ic.** Genital; relating to generation; inherited. Agent or drug affecting the generative organs. **G. diseas′es,** diseases of the sexual functions.

**Gen′etous.** Congenital.

**Ge′nial** or **Ge′nian** (*geneion,* chin). Relating to the chin. **G. apoph′ysis** or **pro′cess,** prominence at the posterior part of the symphysis menti, formed of four small tubercles. **G. tu′bercles,** see *Genian apophysis.*

**Genic′ular.** Relating to the geniculum.

**Genic′ulate** (*geniculum,* small knee or joint). Bent in shape like a knee. **G. bod′ies,** corpora geniculata. **G. gan′glion,** enlargement or ganglion on facial nerve in Fallopian canal. **G. tract,** portion of pyramidal tract of crus cerebri.

**Genic′ulum.** Geniculate body.

**Genio-** (*geneion,* chin). In composition, chin.

**Genioepiglot′ticus.** Fibres of genioglossus muscle occasionally connected with the epiglottis.

**Genioglos′sus** (*geneion,* chin, *glossa,* tongue). Flat, triangular muscle extending from the genian apophysis to the inferior surface of the os hyoides and tongue, which last it carries forward. An *accessory genioglossus muscle,* having the same origin, is inserted into the root of the tongue.

**Geniohyoglos′sus.** Muscle having same origin as genioglossus, and inserted into the length of the tongue, pharynx, and hyoid bone, regulating the various movements of the tongue. Genioglossus.

**Geniohy′oid mus′cle.** Geniohyoideus. **G. nerve,** offshoot from hypoglossal nerve to geniohyoideus muscle.

**Geniohyoide′us.** Muscle arising from the genian apophysis and inserted at the anterior part of the body of the os hyoides; it raises the os hyoides and carries it forward. It may also contribute to depress the lower jaw, in contracting toward the os hyoides.

**Geni′on.** Apical point of the inferior genial tubercle.

**Geniopharynge′us** (*geneion,* chin, *pharynx,* pharynx). Bundle of fibres passing from the lower jaw to the sides of the pharynx and forming part of the constrictor pharyngis superior muscle.

**Geni′oplasty** (*plasso,* to form). Plastic operation in the region of the chin; operation for restoring the chin.

**Ge′nipi.** Achillea moschata. **G. al′bum,** Achillea moschata, Artemisia rupestris. **G. ve′rum,** Achillea atrata.

**Genis′ta.** Spartium scoparium. **G. canarien′sis,** see *Rhodium lignum.* **G. hirsu′ta,** Spartium scoparium. **G. pur′gans** grows in south of France; cathartic. **G. scopa′ria,** Spartium scoparium. **G. spino′sa in′dica,** Bahel schulli; Oriental tree, a decoction of the roots of which is diuretic; the leaves boiled in vinegar have the same effect. **G. tincto′ria,** dyer's broom or weed, dye weed, base broom, kendall green, wood waxer, green weed, woodwex; a shrub cultivated in this country and in Europe. Flowering tops and seeds are cathartic and diuretic.

**Gen′ital** (Lat., *genitalis*). Genesial. Relating to generation or to the organs of generation. **G. cord,** a cord formed in the fetal development of the generative organs by the union of the two ducts of Müller with the lower parts of the Wolffian ducts. **G. cor′puscles,** simple corpuscles of touch in the genital organs. **G. duct,** duct of Müller. **G. em′inence,** g. protuberance. **G. fis′sure,** furrow extending from the genital protuberance in the embyro to the cloaca. **G. folds,** see *Genital organs.* **G. fur′row,** see *Genital organs.* **G. glands,** see *Genital organs.* **G. nerve,** external spermatic nerve. **G. or′gans,** sexual organs; organs of generation; the parts inservient to the reproduction of the species. In man they are numerous; some secreting the sperm, as the testicles and their appendages; others retaining it, as the vesiculæ seminales; and another for carrying it into the organs of the female—the penis. In the female the parts of generation form an apparatus perhaps more complicated than that of the male. Some are inservient to copulation, as the vulva, vagina, etc.; others to conception and the preservation of the product for a determinate time—as the uterus and appendages; while others concur in the alimentation of the infant after birth, as the mammæ. About the sixth week of fetal development, when there is no distinction of sex, a genital tubercle appears, soon surrounded by two folds of skin, the genital folds (which become labia minora or corpora cavernosa, according to sex), and on the lower aspect a groove, genital furrow, soon after appears (which at a later date becomes the cavernous portion of the urethra or rima pudendi, according to sex). External distinction of sexes is made by transitions from these primitive forms. The internal generative organs are developed from the Wolffian body, the genital glands—masses of cells lying on the inside of that body—and the genital duct, anterior to the duct of the Wolffian body.

The following weights and measurements have been made of the organs of generation in the two sexes (Vierordt):

### MALE ORGANS OF GENERATION.

Testicle:
  Weight (testicle with epididymis) (right) 23 g., (left) 26 g. (Duroq).
  Volume . . . . . . . . . . . . 14–24 c.c. (Krause).
Corpus Highmori, from above below . . 18–27 mm. long.
  posteriorly . . . 7 broad.
  anteriorly . . . 2 "
Spermatic canals . . . . . . . . . . . 0.2 in diameter.
Number of lobules of testicle formed by spermatic canals . . . . . . . . . . . . . . . . 100–200
Entire length of spermatic canals . . . . . . 276–341 m.
Internal surface of spermatic canals, 167–2142 cm. (Henle, 1867 cm.).
Coni vasculosi . . . . . . . . . . 9–14 mm. long.
Vasa efferentia:
  At apex of conus . . . . . . . . . 0.4–0.6 mm. thick.
  At base . . . . . . . . . . . 0.2 mm.
Spermatozoa (Krause), 0.052–0.062 mm. long.
  Head, 0.0045 long, 0.002–0.003 broad, 0.001–0.002 thick.
  Body, 0.006 long, 0.0007–0.001 thick.
  Tail, 0.041–0.052 long, finer than the body.
Epididymis (stretched) . . . . . . . . 68–81 mm. long.
  Head . . . . . . . . . . . . . . 10 broad, 6–8 high.
  Body and tail . . . . . . . . . . . . 5.6–6.8 broad.
  Thickness (anteroposterior) . . . . . . 2.3–3.4
Canal of epididymis, 6.5–10 m. long, 0.2–0.4 mm. thick.
  Vas deferens, about 300 mm. long (stretched, 400–450).
  Middle piece, 2.5–3 in diameter; lumen, 0.6–0.8.
Male urethra, 150–170 long—viz., pars prostatica 23–27
  " membranacea 18–23
  " cavernosa 110–120
Seminal vesicles, 41–45 long, 16–18 broad, 9 thick.
Ejaculatory ducts, 20 long; over 2 in breadth at commencement, and 0.8 in breadth at the end.
Colliculus seminalis, 9–11 long, 2–3 in height and breadth at upper end.
Prostate: Weight, 20.5 g. (Bischoff), 19 g. (Krause).
  Volume, 15 c.cm.
  On an average, 27 mm. long (23–34).
  45 broad (32–47).
  20 thick (14–23), measured in a sagittal line.
Cowper's glands . . . . . . . . . 5–9 mm. in diameter.
Main duct, 4.5–6.8 long; at origin, 1.5; at mouth, 0.5 broad.

The following are some of the measurements of the various parts of the genito-urinary apparatus:

Penis: Weight {Bladder, Urethra, Penis,} . . . . . . 193 g. (Bischoff).

*Penis in erection.*
  Volume, 60 c.cm. (Krause) . . . . 278 c.cm. (Krause).
  Length, 90–110 cm. . . . . . . . . . 210 mm.
  Breadth and thickness, 27 . . . . . 40–45
  Preputial glands, 0.3–0.7.

### Female Organs of Generation.

Ovary: Aver. weight (according to Puech), 7.0 (5¼–10) gm.

| | *Length* (mm.). | *Breadth* (mm.). | *Thickness* (mm.). | *Volume* (c.cm). |
|---|---|---|---|---|
| In virgins (Krause) | 41–52 | 20–27 | 10–11 | 4–5 |
| In women from 35–40 years of age who have borne children | 27–41 | 14–16 | 7–9 | 2–5 |

| | |
|---|---|
| Tunica albuginea | 0.1–0.5 mm. thick. |
| Number of follicles: | |
| In a child 3 years of age | 400,000 (Sappey). |
| In a girl aged 18 | 36,000 (Henle). |
| Graafian follicles up to | 10–12 |
| Ripe (human) ovum | 0.1–0.3 mm. in diameter. |

### *Dimensions of the Ovaries (mm.).*

(Middle average, according to Puech.)

| *Right.* | | | | *Left.* | | |
|---|---|---|---|---|---|---|
| Newborn children, 19.8 mm. | | | | Newborn children, 18.2 mm. | | |
| | *Length* | *Height* | *Thick.* | *Length* | *Height* | *Thickness* |
| 6–11 yr., | 26.7 | 9 | 4.4 | 24 | 8.4 | 4.5 |
| 13–15 " | 29.6 | 15 | 10 | 25 | 14 | 9.3 |
| 19–35 " | 36.5 | 18 | 13.7 | 35 | 16.7 | 13.1 |

Middle average of both ovaries (Raciborski), 35.7 length; 17.3 height; 13.4 thickness.

### *Uterus.*

Weight, 33–41; after-births, 102–117 g. Volume, 35–50 c.cm.; after-births, 86–102.

| | *Virgins.* | *After-births.* |
|---|---|---|
| Length of uterus from fundus to external mouth | 74–81 mm. | 87–94 mm. |
| Cervix: Length | 29–34 | |
| Breadth | 25 | 27–32 |
| Thickness | 16–20 | 18–25 |

| | |
|---|---|
| End of pregnancy, weight | 700 g. |
| Volume | 5960–6160 c.cm. |
| Height | 320 mm. |
| Breadth | 270 mm. |
| Thickness | 140 mm. |

**G. protu′berance**, prominence in front of genital embryonic opening, becoming afterward clitoris or penis, according to sex. **G. re′flex**, contraction of the muscles of the abdomen following compression of the testicles. **G. ridge**, longitudinal eminence in embryo, in which is genital gland. **G. tu′bercle**, see *Genital organs*.

**Genita′lia.** Genital organs.

**Genital′ity.** Power of performing generative functions.

**Gen′itals.** Genital organs.

**Genito-.** In composition, genital, or relating to the genital organs.

**Genitocru′ral nerve.** Subpubial or internal inguinal nerve; branch of the second lumbar nerve, which, passing through the psoas muscle and approaching the femoral arch, divides into two branches —internal, scrotal, or genital, and external or femoral cutaneous branch.

**Genitoenter′ic fold.** Peritoneal fold for spermatic or ovarian artery.

**Genitospi′nal cen′tre.** Space of a few lines in the spinal cord corresponding with the fourth lumbar vertebra, which when excited produces contraction of the bowels; affecting also the bladder, uterus, etc.; and, in the dog, causes erection of the penis and ejaculation of semen.

**Genito-u′rinary.** Relating to the genital and urinary functions. **G.-u. appara′tus** or **or′gans**, a collection of organs for the functions of reproduction and urination. **G.-u. tract**, canals or passages connected with the genito-urinary apparatus; see *Urogenital*.

**Genna′ri's lay′er.** Baillarger's layer.

**Ge′noblast** (*genos*, race, *blastos*, germ). Ovum; spermatozoid; product of sexual union. Cell of the sexual system.

**Genometab′ole** (*genos*, sex, *metabole*, change). Sexual change formerly imagined to take place after the change of life in woman.

**Gen′sáng** or **Gen′seng.** Panax quinquefolium.

**Gen′tian** (after Gentius, king of Illyria, who used some species medicinally). A plant of the genus *Gentiana*. **Bit′ter g.**, gentiopicrin. **Blue** or **Cates′bian g.**, Gentiana catesbæi. **Com′mon g.**, Gentiana lutea. **Cross′worts g.**, Gentiana cruciata. **Fel′wort g.**, Gentiana amarella. **Horse g.**, triosteum. **G. root**, see *Gentiana lutea;* in several European countries root of G. purpurea, G. punctata, G. catesbæi, G. maurophylla, and G. pannonica. **South′ern g.**, Gentiana catesbæi. **G.-vi′olet stain**, an analin dye of a violet color, used for staining pathological and histological specimens and micro-organisms. **White g.**, Laserpitium latifolium, triosteum, Gentiana alba. **Yel′low g.**, Gentiana lutea; see *Calumba*.

**Gentia′na.** Gentian. The official (Ph. U. S.) name for the root of G. lutea. It is extremely bitter, and yields its virtues to ether, alcohol, and water; is tonic and stomachic; in large doses, aperient. The official preparations are: *Extractum gentianæ*, extract; dose, gr. j–x (0.065–0.65). *Extractum gentianæ fluidum*, fluid extract; dose, ʒss–j (2.0–4.0). *Tinctura gentianæ composita*, compound tincture; dose, ʒss–j (2.0–4.0). The *infusum gentianæ compositum*, compound infusion, is not official; dose, ʒj–℥j (4.0–32.0). **G. acau′lis** or **G. al′ba**, Laserpitium latifolium. **G. amarel′la**, felwort or autumn gentian of America and Europe; tonic and antipyretic. **G. amarylloi′des**, G. quinqueflora. **G. asclepiad′ea**, milkweed or willow gentian of Central Europe; root is tonic. **G. auricula′ta** grows in Northern Asia; tonic and antiscorbutic. **G. cachenla′guen**, Chironia chilensis. **G. catesbæ′i** or **catesbia′na**, blue gentian, Catesbian or southern gentian, bluebells, bitter-root; pure and simple bitter; root may be used wherever that of the G. lutea is proper. **G. centau′rium**, Erythræa centaurium. **G. chiray′ta**, **chirayi′ta**, or **chira′ta**, chirata (Ph. U. S. and Br.), a native of India; the herb and root have been much employed in that country in dyspepsia and as an antiperiodic in intermittents and atonic leucorrhœa; it yields its virtues to alcohol and water; see *Chirata*. **G. crini′ta**, see *G. quinqueflora*. **G. crucia′ta**, European species of gentian; very bitter in all its parts; has been used in hydrophobia for some fancied curative effect. **G. erythræ′a**, species growing in China; antiarthritic and aperient, and used also for diseases of the eye. **G. fimbria′ta**, G. crinata. **G. gerar′di**, chironia or Erythræa centaurium. **G. lu′tea**, the systematic name of official gentian, yellow gentian, felwort; plant common in the mountains of Europe. **G. macrophyl′la**, Siberian species used in delirium, convulsions, etc. **G. ma′jor.** G. lutea. **G. mi′nor**, G. cruciata. **G. ochroleu′ca**, see *G. saponaria*. **G. pannon′ica**, root is used as a substitute for G. lutea, as are also G. punctata and G. purpurea, the latter growing in Alpine regions. **G. peruvia′na**, Chironia chilensis. **G. pneumonan′the**, marsh gentian; all parts are bitter. **G. praten′sis**, G. amarella. **G. puncta′ta**, see *G. pannonica*. **G. purpu′rea**, root is bitter tonic; see *G. pannonica*. **G. quinqueflo′ra**, gall-weed, five-flowered gentian, and **G. crini′ta**, fringed gentian, indigenous, are possessed of virtues similar to Gentiana lutea. **G. ru′bra**, G. lutea. **G. sapona′ria**, soapwort gentian, and **G. ochroleu′ca**, Sampson's snakeroot, indigenous, have tonic properties of Gentiana lutea, and are tonic diaphoretics. **G. scan′dens**, Chinese plant, root and leaves of which are bitter tonic. **G. serra′ta** grows in Northern America and Europe; bitter tonic. **G. spathula′ta**, variety of asclepiadea, antiphlogistic; used in hæmaturia. **G. vet′erum**, G. lutea. **G. villo′sa**, G. ochroleuca.

**Gentian′ic acid.** $C_4H_{10}O_5$. Yellow acid crystallized principle obtained from gentian.

**Gentianin′.** Neutral substance obtained from gentian.

**Gen′tianite** or **Gen′tianose.** Crystalline substance, $C_{16}O_{66}H_{33}$ obtained from the roots of various species of gentian.

**Gen′tianophile** or **Gentianoph′ilous.** Taking gentian-violet stains readily; a term applied to cells and other histological elements.

**Gentili′tious.** Hereditary.

**Gentiopicrin′** (*pikros*, bitter). $C_{20}H_{30}O_{12}$. Bitter principle of gentian.

**Gentiotan′nin, gentiotan′nic acid.** Tannic acid contained in gentian.

**Gentis′ic** or **gentisin′ic acid.** Gentianic acid.

**Gentisin′.** Gentianic acid.

**Ge′nu** (pl. gen′ua). Articulation of the leg with the thigh; femorotibial or knee-joint; the knee; formed by the inferior extremity of the femur, the superior extremity of the tibia, and the patella. The articular surfaces of the bones are covered by layers of cartilage and by the synovial membrane of the articulation. The soft parts of this joint are the ligamentum patellæ, two lateral ligaments distinguished as internal and external; a posterior ligament, ligamentum posticum Winslowii; two crucial ligaments, one anterior, the other posterior; two interarticular fibrocartilages; some albugineous fibres which form an imperfect capsule, etc. The knee receives its arteries from the femoral and popliteal; they bear the name of articular. Its veins have the same distribution as the arteries, and discharge their blood into the saphena and crural. Its nerves are furnished by the sciatic, popliteal, and crural. The joint is protected by the tendons and muscles surrounding it. Also a name given to many anatomical structures resembling in outline a partly flexed knee. **G. aquæduc′tus Fallo′pii,** flexure in the Fallopian aqueduct. **G. arcua′tum,** g. varum. **G. cap′sulæ inter′næ,** bend dividing the internal capsule of the brain into two parts. **G. cor′poris callo′si,** see *Corpus callosum.* **G. ever′sum, G. excurva′tum, G. extror′sum,** g. varum. **G. facia′lis,** bend of the facial nerve-fibres around the eminence in the bottom of the fourth ventricle or in the Fallopian aqueduct. **G. intror′sum flex′um, G. inver′sum,** g. valgum. **G. recurva′tum,** curving backward of the knee-joint, from muscular paralysis and weakness of the ligaments of this articulation. **G. trac′tûs op′tici,** flexure in the tractus opticus. **G. ure′thræ prostat′icum,** bend in the prostatic urethra. **G. val′gum,** knock-knee, the legs being bent outward from the knee. **G. va′rum,** bowleg, bandyleg; opposite of g. valgum.

**Gen′ual.** Relating to the knee or to the genu of the corpus callosum.

**Gen′uclast** (*genu*, knee, *klao*, to break). Apparatus for forcibly breaking up adhesions at the knee-joint.

**Genucu′bital.** Relating to knees and elbows or resting on those parts, as in the so-called knee-elbow position.

**Gen′uflex.** Bent at the knee.

**Genuflex′ion** (*genu*, knee, *flexus*, bent). Bending or flexion of the knee.

**Genupec′toral** (*genu*, knee, *pectus*, breast). Relating to knee and chest. **G. posi′tion** or **post′ure,** knee-chest position in which the person lies prone with the knees approximating the chest; method employed in the treatment of retroflexion of the uterus, and also to facilitate vaginal examinations and operations, catheterization of the ureters in women, etc.

**Ge′nus** (*genos*, race). Collection or group of species analogous to each other, and which can be united by common characters. When a species cannot be referred to a known genus it constitutes a distinct genus.

**Genyantral′gia** (*genys*, jaw, *antron*, antrum, *algos*, pain). Pain in the antrum of Highmore.

**Genyantri′tis.** Inflammation of the antrum of Highmore.

**Genyan′tron** or **genyan′trum** (*genys*, jaw, *antron*, cave). Antrum of Highmore.

**Genyocynan′che.** Mumps; cynanche parotidæa.

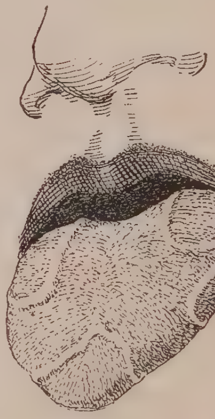
**Gen′yoplasty** or **Gen′yplasty** (*genys*, jaw, *plasso*, to form). Plastic operation on the cheek. Genioplasty.

**Gen′ys.** Jaw; chin; beard.

**Geoffræ′a** or **Geoffroy′a iner′mis** (after Dr. E. F. Geoffroy, a French naturalist). Cabbage tree, cabbage-bark tree, wormbark tree; ord. *Leguminosæ.* Odor of the bark is very pleasant; it is anthelmintic and cathartic. **G. jamaicen′sis,** G. inermis. **G. piso′nis** or **racemo′sa,** G. inermis. **G. retu′sa,** Andira retusa. **G. spinulo′sa,** Brazilian tree, the seed of which, angelim seed, is anthelmintic. **G. surinamen′sis** has similar properties. The alkaloid active principles of G. jamaicensis and G. surinamensis, *jamaicine* and *surinamine,* have been separated from them. **G. vermif′uga,** South American plant having fruit, the almond of which, called angeline, is vermifuge.

**Ge′oform.** Combination of guaiacol and formaldehyde.

**Geograph′ical tongue.** Disease of the tongue, in which it assumes a mapped appearance, on account of the successive involvement of different parts of the organ with red patches and a desquamative affection of the epithelium.



Geographical tongue.

**Geog′raphy, med′ical** (*ge*, earth, *grapho*, to describe). Nosogeography; description of the surface of the globe as regards the influence of situation on the health, vital functions, and diseases of its inhabitants, vegetable and animal, but principally on those of man.

**Geoph′agism** or **Geoph′agy** (*ge*, earth, *phago*, to eat). Earth-eating, clay-eating.

**Geoph′agist.** Earth-eater, clay-eater.

**Geoph′ila diversifo′lia.** Plant of Malabar; used in diarrhœa and externally as an application to diseases of the eye. **G. renifor′mis,** plant of West Indies and South America; emetic.

**Georget's** (zhor-zhays′) **stupid′ity.** Confusion of ideas or mental insufficiency without hallucination.

**Geor′gia bark.** Tonic and antipyretic bark of Pinckneya pubens. **G. pink,** Phlox carolina.

**Georgopath′ia** (*georgos*, farmer, *pathos*, disease). Pellagra.

**Ge′osote.** Guaiacol valerate or valerianate. Employed in gastroenteric disease, rheumatism, tuberculosis, etc.; dose, gr. xv–xxx (1.0–2.0).

**Ger′aflour.** Dianthus caryophyllus.

**Geraniin′.** Astringent derivative from geranium.

**Gera′niol.** $C_{10}H_{18}O$. A substance derived from geranium oil, contained in pelargonium and andropogon.

**Ger′anis** (a crane). Bandage used by the ancients in fractured clavicle, dislocation of the shoulder, etc.

**Gera′nium.** A genus of plants of the order *Geraniaceæ.* Crane's bill. The official (Ph. U. S.) name of the rhizome of *G. maculatum.* The official preparation is the *extractum geranii fluidum,* fluid extract; dose, ʒss–j (2.0–4.0). **G. carolinia′num,** see *G. robertianum.* **G. cicuta′rium,** Erodium cicutarium. **G. dissec′tum,** Australian or cut-leaved geranium; jagged-leaved dove's foot of Australia and Europe. **G. fœt′idum,** G. robertianum. **Fox g.,** G. robertianum. **G. macula′tum,** in northwestern parts of the United States; the rhizome of this plant, geranium (Ph. U. S.), spotted crane's bill, crowfoot, alum root, tormentil, storkbill, is employed as an antisyphilitic. **G. mexica′num** grows in Mexico; its root is used in diarrhœa and dysentery. **G. mol′le,** dove's foot g.; therapeutic action is like that of G. robertianum. **G. moscha′tum,** European plant, used as excitant and diaphoretic. **G. noveboracen′se,** G. maculatum. **G. purpu′reum,** G. robertianum. **G. robertia′num,** stinking crane's bill, herb Robert; this plant is antiperiodic, astringent, diuretic, antispasmodic, and slightly stimulant, and externally applied in painful sores and inflammations. G. carolinianum has similar properties. **G. sanguin′eum**, astringent and styptic, contains a large amount of tannin. **G. silvat′icum**, crowflower, wood geranium; root and flowers are astringent. **G. stria′tum**, roots are tonic and astringent. **Wild g.**, G. pratense, G. robertianum, Erodium cicutarium. **Wood g.**, G. silvaticum. Most of the species of geranium have been used as astringents.

**Gerar′dia pedicula′ria.** Fever-weed, lousewort; indigenous; sedative and diaphoretic. **G. quercifo′lia**, golden oat of the West and South; root is used as antidote for snake-bites. **G. tubero′sa**, flowers of this plant of Martinique are expectorant.

**Ger′as.** Old age.

**Gerat′ic** (*geras*, old age). Relating to old people. **G. diseas′es**, developmental diseases of old persons.

**Geratol′ogy** (*geras*, old age, *logos*, description). The study of old age and of the structural changes and diseases incident to that period of life.

**Ger′dy's fi′bres.** Superficial transverse digital ligaments. **G.'s fontanelle′**, supernumerary interparietal fontanelle occasionally found. **G.'s lig′ament**, deep layer of axillary fascia attached to the clavicle. **G.'s opera′tion for her′nia**, invagination of the scrotum into the inguinal canal. **G.'s tu′bercle**, an osseous prominence in front, and to the outside, of the tubercle of the tibia.

**Ger′hardt's change of pitch.** Change of pitch and in the character of the clear air-sound elicited on percussion, when the patient lies down after sitting or standing up. This indicates the presence of a large cavity in the lungs containing fluid. **G.'s disease′**, erythromelalgia. **G.'s sign**, several of these are described, such as extra dulness on percussion over the præcordium, in cases of persistent ductus arteriosus; systolic murmur heard in aneurysm of the vertebral artery; unfilled condition of external jugular vein in thrombosis of transverse sinus; want of motility in the larynx in dyspnœa caused by aortic aneurysm.

**Ger′hardt-Se′mon's law.** That in certain lesions of the recurrent laryngeal nerve the vocal cord takes a position between abduction and adduction (cadaveric position).

**Ger′lach's net′work** or **plex′us.** Delicate network of minute fibrils of nerves in gray matter of cord. **G.'s the′ory**, theory as to relation of nerve-fibres and ganglionic cells of spinal cord. **G.'s tu′bal ton′sil**, a collection of adenoid tissue situated in the lower portion of the Eustachian tube. **G.'s valve**, valve occasionally found at the opening of the appendix vermiformis into the cæcum.

**Gerlier's′ disease′.** Peculiar endemic neurosis of the Swiss, attended with vertigo, paralysis, ptosis, and pain in the back of the head and neck.

**Germ.** Rudiment of new being, not yet developed or still adherent to the mother. Spore or living particle which has been detached from already existing living matter. A microorganism. **G.-cell**, germinal cell. **Den′tal g.**, dental follicle; earliest development of a tooth. **G. disease′**, disease caused by a microorganism. **G. disk**, proligerous disk; area germinativa. **G. enam′el**, see *Groove, dental*. **G. epithe′lium**, germinal epithelium; the remains of the germ epithelium afford a cover superficially to the ovaries. **G. flesh**, see *Sarcophyte*. **G. force**, plastic force. **G. hill**, proligerous disk. **G. lay′ers**, laminæ making up the embryo, as ectoderm, mesoderm, and entoderm; outer, middle, and inner covering of embryo. **G. plas′ma**, part of protoplasm of germ-cell in which a new individual is to be afterwards developed. **G. ridge**, ridge on middle surface of the mesonephros. **G. spot**, see *Molecule*. **G. the′ory**, theory of the origin of the specific infectious diseases from microorganisms. **G. ves′icle**, see *Molecule*.

**Ger′man cham′omile.** Matricaria. **G. leech**, hirudo medicinalis. **G. mea′sles**, rötheln; see *Rubeola*. **G. pel′litory**, root of Anacyclus officinarum. **G. rhu′barb**, Rheum rhaponticum and other species of rheum. **G. san′darac**, resin from bark of Juniperus communis. **G. sarsaparil′la**, Carex arenaria.

**German′der, com′mon.** Teucrium chamædrys. **Creep′ing g.**, Teucrium chamædrys. **G. ma′rum**, Teucrium marum. **Small g.**, Teucrium chamædrys. **Wa′ter g.**, Teucrium scordium.

**Germa′nium.** A metallic element, symbol Ge, of a lustrous, grayish-white color, discovered in 1885.

**Germar′ium.** Part of the generative apparatus, ovary, of the female of some of the lower orders of life.

**Ger′men** (*gero*, to produce). Germ. **G. denta′le**, dental pulp. **G. fal′sum**, mole. **G. fœmin′eum**, germinal vesicle. **G. spu′rium**, mole.

**Germici′dal.** Destroying germs.

**Germ′icide** (*cædo*, to kill). Any agent that will destroy germs or microorganisms, or their spores on which contagious and infectious disease may depend; as mercuric chloride and iodide, aluminum acetate, sulphurous acid, heat (at a continuous temperature of 212° and over), formaldehyde, etc.

**Ger′mifuge** (*fugo*, to drive away). Expelling or driving away germs.

**Ger′minal, Ger′minative.** Relating or belonging to a germ or to germination; having power of germination. **G. a′rea**, localized accumulation of cells on surface of blastodermic membrane, indicating position of future embryo. **G. cell**, see *Cytoblast*. **G. cen′tre**, a limited area in lymphoid tissue in which the greater number of leucocytes or white blood corpuscles are developed. **G. disk**, proligerous disk. **G. epithe′lium**, layer of epithelial cells on middle of genital ridge of embryo. **G. lay′ers**, see *Germ layers*. **G. mat′ter**, see *Cytoblast, Bioplasm*. **G. mem′brane**, blastoderm. **G. nu′cleus**, see *Molecule*. **G. pole**, pole of ovum at which is the germinal spot. **G. spot**, nucleolus of the ovule. **G. streak**, primitive streak; nucleus of ovum. **G. tis′sue**, tissue made up chiefly of cells and blood-vessels. **G. ves′icle**, nucleus of the ovule. **G. wall**, thickened border of blastoderm in ova that have only partially undergone segmentation.

**Ger′minating.** Undergoing process of germination. **G. cells**, cells forming a boundary to stomata, where the lymphatics originate.

**Germina′tion.** Beginning of vegetation in seed or plant; first development of germs.

**Ger′minative.** Germinating or having power of germinating.

**Ger′minous teeth.** Two joined teeth formed in one dental follicle.

**Germitox′ic.** Poisonous to a germ or germs.

**Ger′mogen.** Nucleated protoplasmic mass, separating ultimately into ova.

**Ger′mule.** Diminutive germ.

**Gero-, Geronto-** (*geron*, aged person). In composition, old or aged.

**Geroco′meum.** Home for the aged.

**Geromaras′mus** or **Gerontat′rophy.** Debility and emaciation of old persons; marasmus senilis.

**Geromor′phism** (*geron*, aged person, *morphe*, form). Appearance or characteristics of premature old age in a young person.

**Geron′tic** (*geron*, old man). Relating to old age.

**Gerontin′.** $C_5H_{14}N_2$. Leucomain resembling cadaverin found in cell-nuclei in the liver, especially of old dogs. Paralyzant of nerve centres.

**Gerontoco′meum.** Home for the aged.

**Gerontophthal′mia.** Ophthalmia of old persons.

**Geronto′pia.** Weakness of sight of the aged. Presbyopia.

**Gerontopityri′asis.** Pityriasis senilis.

**Gerontotox′on, Gerontox′on,** or **Gerotox′on** (*geron*, old man, *toxon*, bow). Bow-shaped obscurity at the under margin of the cornea, *arcus senilis*, common to old people, and supposed by some to indicate the existence of fatty degeneration of the heart. It is due to fatty degeneration of the corneal tissue.

**Gerotroph′ia** (*geron,* old man, *trophe,* nourishment). Nourishment or maintenance proper for the aged.

**Gersu′ny's meth′od.** The subcutaneous injection of paraffin for æsthetic purposes, to fill up the defect resulting from falling in of the bridge of the nose, etc. **G.'s symp′tom,** a sense of adhesion of the mucous lining of the bowel to the mass of fecal matter when pressure is made in cases of such accumulation.

**Gerydroceph′alus.** Hydrocephalus senilis.

**Gesta′tion** (*gesto,* to carry). The time during which a female who has conceived carries the embryo in her uterus; the period from conception to delivery. **Ectop′ic g.,** extra-uterine pregnancy; pregnancy in which the fœtus is carried elsewhere than in the interior of the uterus.

**Gesticula′tion** (*gestus,* gesture). Act of making gestures; a symptom in disease indicating great encephalic erethism.

**Gethyl′lis spira′lis.** S. African plant, the orange-colored fruit of which is used in spirit or tincture in flatulence and colic.

**Ge′um.** A genus of plants of the order *Rosaceæ.* **G. al′bum** or **alep′picum,** water avens of Canada and U. S., used for headache and gastric affections. **G. aquat′icum,** G. rivale. **G. canaden′se,** G. album. **G. caryophylla′tum,** G. urbanum. **G. chiloen′se** or **coccin′eum,** Chilean species, used in amenorrhœa. **G. hy′bridum,** G. rivale. **G. monta′num,** root of this Alpine plant is tonic, astringent, and antipyretic. **G. nu′tans** or **palus′tre,** G. rivale. **G. plin′ii,** G. urbanum. **G. riva′le,** water or purple avens, chocolate root; tonic and astringent, and has been used in intermittents, dyspepsia, diarrhœa, hemorrhage, etc. **G. urba′num,** common avens, herb bennet, yellow avens, star of the north, blessed herb; the root of this plant has been used in intermittents, dysentery, chronic diarrhœa, debility, etc. **G. ver′num,** Western early avens, has the same properties as **G. virginia′num,** white avens, evan root, chocolate root, bennet, throat-root, cureall; common from Maine to Carolina and Kentucky; has the same medical properties as G. rivale; used in dysentery.

**Geu′sis.** Taste or exercise of that sense.

**Ghat′ti.** East Indian gum, like gum arabic.

**Ghee.** Boiled butter, clarified; used as basis for ointments, salves, etc., in India.

**Gher′kin.** Fruit of Cucumis sativus.

**Ghilarducci's** (ghil-ar-doot′chis) **reac′tion.** Reaction of degeneration at a distance; the electrode is not placed over the affected muscle, but the indifferent one is applied to the upper dorsal region, the active one at a point peripherad to the affected muscle; the contraction is almost exclusively a cathodal closing one; it persists after other reactions have failed, and its presence indicates that the muscle is not destroyed completely.

**Ghost** or **G. cor′puscle.** Phantom corpuscle; a red blood corpuscle that has lost its color.

**Giacomi′ni's band.** Band of grayish nervous matter connected with the gyrus dentatus.

**Giannuzzi's** (jan-noot′tsis) **cells** or **cres′cents.** Crescentic masses of cells in the sublingual salivary gland; Heidenhain's demilunes.

**Gi′ant.** One much above ordinary stature or of excessive growth. **G. cells,** any very large cells, such as the myeloplaxes. **G. ring′worm,** form of trichophyton as it occurs in luxuriant vegetation upon smooth portions of the body in tropical countries. **G. teeth,** teeth of great size, but normal form. **G. swell′ing,** angioneurotic œdema.

**Gi′antism.** Growth or development much above ordinary stature or dimensions.

**Gib′ba** or **Gib′ber.** Hump; gibbosity. **G. ul′næ,** olecranon.

**Gibberos′itas** or **Gibbos′itas** (*gibbus,* arched or vaulted). Gibbosity.

**Gib′bon's hy′drocele.** Hydrocele complicated with large hernia.

**Gibbos′ity** or **Gib′bousness.** Gibbositas, kyphosis; angular deformity or curvature of the spine. Phenomenon occurring in different diseases, particularly in rickets and caries of the vertebræ.

**Gib′bous.** Having a prominence like a hump; humpbacked.

**Gib′bus.** Hump. **G. of kid′ney,** external convex border of the kidney. **G. Pot′tii,** vertebral caries. **G. of the ul′na,** olecranon.

**Gibert's′ pityri′asis.** Pityriasis rosea.

**Gibral′tar fe′ver.** Yellow fever. Malta fever.

**Gib′son's ban′dage.** A supporting bandage for fracture of the jaw.

**Gid.** Disease of sheep, due to the presence of a hydatid, cœnurus, in the brain.

**Gid′diness.** Vertigo.

**Gid′dy.** Dizzy; having a feeling of vertigo.

**Gier′ke's cor′puscles.** Round corpuscles occasionally met with in the central nervous system. Probably the same as *Hassall's corpuscles.*

**Gif′ford's re′flex.** Pupillary contraction when an attempt is made to close the eyes; noticed in iridoplegia, diseases of the retina and optic nerve, dementia, etc.

**Gigante′a.** Helianthus annuus; laminaria.

**Gigan′tic.** Much above the ordinary size.

**Gigant′ism.** Giantism.

**Gigan′toblast.** Large nucleated erythrocyte.

**Gigant′ocyte.** Large non-nucleated erythrocyte.

**Gigarti′na helminthocor′ton.** Corallina corsicana. **G. lichenoi′des,** Fucus amylaceus. **G. mamillo′sa,** species found on the eastern coast of the United States, resembling Chondrus crispus. **G. murica′ta,** Fucus lichenoides.

**Gig′arum.** Arum maculatum. **G. serpenta′ria,** Arum dracunculus.

**Gi′gas.** Giant.

**Gi′gathism.** A disease due to poisoning by cockle seeds (*Agrostemma gigatho*), which contain a sapotoxin-like substance.

**Gi′la mon′ster.** A large, poisonous lizard, *Heloderma suspectum,* found in Arizona. Its bite is said to produce dangerous symptoms or even to cause death.

**Gilar′um.** Thymus serpyllum.

**Gill** or **Gill-over-the-ground.** Glechoma hederacea. **G. co′ver** or **flap,** operculum; see *Branchiæ.*

**Gille′nia stipula′cea.** Small-flowered Indian physic; has the same properties as **G. trifolia′ta,** common gillenia, Indian physic, western dropwort, Indian hippo, ipecac, Bowman's root, meadow sweet, Beaumont root; ord. *Rosaceæ.* The root of this shrub and of G. stipulacea, which grows plentifully in the United States, is a safe and efficacious emetic in the dose of ʒss (2.0); it resembles ipecacuanha in properties.

**Gillenin′.** White, bitter principle of gillenia.

**Gilles de la Tourette's′ disease′** and **sign.** See *Tourette.*

**Gil′liflower.** Dianthus caryophyllus. **Wall, win′ter,** or **yel′low g.,** Cheiranthus cheiri.

**Gills.** Branchiæ. **Tra′cheal g.,** see *Branchiæ tracheales.*

**Gim′bernat's lig′ament** (after Gimbernat, a Spanish surgeon). Fibrous triangular expansion detached from the posterior and inner part of the crural arch and inserted into the crest of the pubis. This ligament forms the inner part of the superior aperture of the crural canal. It is one of the most frequent causes of strangulation in crural hernia. See *Fascia lata.*

**Gin.** Spirit distilled from corn and juniper berries, or from some substitute for them, and possessing the properties of other spirituous liquors; it is diuretic and carminative, and in popular medicine is more used than other varieties, in colic or intestinal pain. See *Spirit.*

**Gin′-drinker's liv′er** or **Gin liv′er.** Cirrhosis of the liver; nutmeg liver.

**Gingel′ly oil.** Oil of Sesamum orientale.

**Gin′ger.** Amomum zingiber; Sedum acre. **Barba′does g.,** Amomum zingiber. **Black g.,** Amomum zingiber. **Com′mon g.,** Zingiber officinale; black ginger. **Gar′den g.,** capsicum. **In′dian g.,** Asarum canadense. **Jamai′ca g.,** Amomum zingiber. **G. plant,** Tanacetum vulgare. **White g.,** Amomum zingiber. **Wild g.,** Asarum canadense.

**Gingerin′.** Oleoresin derived from ginger.

**Gin′gerol.** Pungent liquid obtained from ginger, isomeric with capsicum.

**Gingibra′chium** (*gingivæ*, gums, *brachium*, arm). Scurvy, so called because the gums and arms are chiefly affected by it; also called gingipedium, because the lower limbs are in many cases the seat of scorbutic spots.

**Gingil′ly** or **Gingil′i oil.** Oil of sesamum.

**Gingipe′dium** (*gingivæ*, gums, *pes*, foot). See *Gingibrachium*.

**Gingi′va.** Gum (of the mouth). **G. cæru′lea,** blue gingival line; see *Gingival*.

**Gingi′væ** (pl. of gingiva). The gums; portion of mucous membrane of the mouth covering the maxillary bones to the level of the alveolar arches; the gums are formed of a red tissue, more or less solid and of a fibromucous nature, adhering strongly to the necks of the teeth, and transmitting between the roots and their alveoli a very thin expansion—the alveolodental periosteum. The gums fix the teeth and contribute greatly to their stability.

**Gin′gival.** Relating to the gums. **G. glands,** little collections of epithelium in the gum of the infant at the edge where the g. margin will be when the teeth are formed. **G. line,** reddish streak or margin at the reflected edge of the gums, seen in phthisis and chronic blood diseases, and also in pregnant and puerperal women; in lead poisoning the line is blue. **G. mar′gin,** the line where the gums meet the teeth.

**Gingival′gia** (*gingiva*, gum, *algos*, pain). Pain or neuralgia of the gums.

**Gingivi′tis** (*gingivæ*, gums). Inflammation of the gums. **Expul′sive g.,** pyorrhœa alveolaris.

**Gin′glymo-arthro′dia.** See *Ginglymoid*.

**Gin′glymoid** (*ginglymos*, hinge, *eidos*, resemblance). Resembling a ginglymus or hinge; epithet applied to joints resembling a hinge, *ginglymoarthrodia* or *ginglymoid joint*, as the metatarsophalangeal articulation.

**Gin′glymus.** Species of diarthrodial articulation, admitting of motion in only two directions, like a hinge, as knee-joint or elbow-joint. **Lat′eral g.,** diarthrosis rotatorius. **G. joint,** see *Ginglymoid*. **Tro′choid g.,** articulation in which one bone turns upon another, as the atloidoaxoid articulation.

**Gino′ra america′na** or **syphilit′ica.** Juice is diuretic and diaphoretic.

**Gin′seng.** Panax quinquefolium. **Asiat′ic g.,** Panax schinseng. **Blue g.,** Caulophyllum thalictroides. **Chinese′ g.,** ginseng. **Dwarf g.,** Aralia triphylla. **Horse g.,** triosteum. **White g.,** triosteum. **Yel′low g.,** Caulophyllum thalictroides.

**Giovanni′ni′s disease′.** Fungous granulations and nodal excrescences on the hair.

**Giraldès′, or′gan of.** See *Organ of Giraldès* and *Paradidymus*.

**Gir′dle.** Belt. See *Cingulum*. **G. anæsthe′sia,** anæsthetic ring or girdle encircling the body, in which there is a sensation like constriction by a band. **G. bone,** sphenethmoid bone. **Mercu′rial g.,** cingulum mercuriale. **Nep′tune′s g.,** a support for applying a local wet pack to the abdomen. **G. pain,** a sensation of constriction about the body, like a belt, accompanied by pain of the same distribution. **Pel′vic g.,** pelvic arch. **Sea g.,** Laminaria digitata. **G. sensa′tions,** subjective perception causing impression that a girdle or band is tied about the trunk or limbs. **Shoul′der** or **thorac′ic g.,** pectoral arch.

**Giuffri′da-Rugier′a′s stig′ma.** A sign of degeneration, there being absence or insufficiency of the glenoid fossa.

**Giz′zard.** See *Ventriculus callosus*.

**Glabel′la** (*glaber*, smooth). Part of the face between the eyebrows. **G. coccyge′a,** smooth cutaneous surface over hiatus at the lower extremity of the sacral canal, foveola coccygea.

**Glabel′lad.** Toward the glabella.

**Glabel′lar.** Relating to or toward the glabella. **G. length,** anteroposterior diameter of the skull.

**Glabel′lo-obe′liac diameter.** Measurement from glabella to obelion.

**Glabel′lo-occip′ital plane.** Plane vertical to the median plane of the skull.

**Glabel′lum.** Glabella.

**Glabrifica′tion.** Process of becoming smooth and shiny.

**Glabrificin′** (*glabrus*, smooth, *facio*, to make). An antibody in the blood and fluids of immune animals which gives a glairy smoothness to the bacteria upon which it exerts its specific action.

**Glabri′ties** (*glaber*, smooth). Baldness.

**Glab′rous.** Smooth; bald.

**Gla′cial** (*glacies*, ice). Icy; having the appearance of ice, as glacial phosphoric acid.

**Glacialin′.** A mixture of boric acid, sodium borate, and sugar.

**Glaci′alis.** Glacial. **Hu′mor g.,** crystalline lens.

**Glacia′tion.** Having the appearance of ice.

**Gla′cier bacil′lus.** Bacillus fluorescens nivalis. **G. gan′grene,** dry necrotic dermatitis of the face and other parts exposed constantly to the action of sunlight reflected from snow and glacier ice in high latitudes and in the Alps and other elevated regions.

**Gladiolin′.** Alkaloidal substance found in the tissue of the brain.

**Gladi′olus** (dim. of *gladius*, sword). A genus of plants, ord. *Irideæ;* the sword-lily. The body of the sternum between the manubrium and the ensiform cartilage. **G. cæru′leus,** Iris germanica. **G. commu′nis,** corn-flag; the root has been used as an aphrodisiac, and applied in cataplasms to scrofulous tumors. **G. lu′teus,** Iris pseudacorus. **G. sage′tum,** corn-flag, European corn-flag of Southern Europe; used as an aphrodisiac and in amenorrhœa. **G. ster′ni,** body of the sternum. **G. vulga′ris,** G. communis.

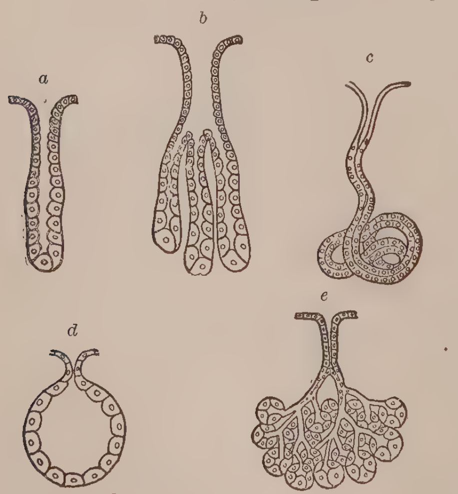
**Glair.** White of egg.

**Glairin′.** Glairy organic substance produced by a genus of *Schizomycetes*, called Beggiatoa.

**Glam′a.** Sebaceous humor, secreted mainly by the follicles of Meibomius, which sometimes glues the eyelids together.

**Gland** (*glans*, acorn). Glands are organs which separate from the blood any fluid whatever. When composed of several lobules, united by common vessels, they have been called *conglomerate glands*, as the parotid, pancreas, etc. Reddish and spongy, knot-like bodies, met with in the course of the lymphatics, are called *conglobate glands;* see *Ganglion* (lymphatic). By some the word is restricted to soft, granular, lobated organs, composed of vessels and a particular tissue, of which there are in the human body the testicles, the liver, pancreas, and kidneys. These *permanent glands*, or glands with permanent ducts, are destined to draw from the blood the materials necessary for the formation of new fluids, and to convey these fluids externally by means of excretory ducts. Several glands, besides their excretory ducts, have special reservoirs in which the fluids secreted by them collect, remain for a greater or less space of time, and undergo slight modifications before being evacuated, such as the gall-bladder for the liver, the urinary bladder for the kidneys, etc. The *ductless glands* are those which have no ducts to carry off their secretion, the latter being taken directly into the circulation by the blood-vessels. The term gland is also applied to a little kernel of tissue or to a knot of blood-vessels (*arterial gland*), such as the so-called coccygeal gland, which is not known to possess any real glandular tissue. Also acorn, see *Quercus alba*. See also *Glandula* and *Glandulæ*.

**Gland** or **glands, abdom′inal sal′ivary,** pancreas. **Absorb′ent g.,** lymphatic glands. **Acces′sory g.,** glands accessory to other glands; Cowper's g. **Acces′sory lac′rymal g.,** g. of Krause. **Acces′sory lactif′erous g.,** Montgomery's g. **Acces′sory g. of pan′creas,** Brunner's glands. **Acces′sory g. of parot′id,** see *Parotid.* **Acces′sory suprare′nal g.,** small bodies connected with the suprarenal capsules. **Acces′sory thy′reoid** or **thy′roid g.,** small glandular bodies lying in various positions around the thyreoid gland. **Acid g.,** oxyntic g., the acid-secreting g. of the stomach. **Acinotu′bular g.,** a g. combining the characteristics of the acinous and the tubular glands. **Ac′inous g.,** racemose g.; see *Acinus.* **Ag′gregate** or **ag′gregated g.,** Méry's g, Peyer's g., trachoma glands of Henle; lymph follicles of the conjunctiva; see *Bruch.* **Ag′minated g.,** Peyer's glands. **Albu′minous g.,** gland, secretion from which contains albumin. **Amyg′dalous g.,** tonsil. **A′nal g.,** lymphatic and odoriferous glands of the region of the anus. **Anom′alous g.,** ductless glands. **Anteprostat′ic g.,** see *Cowper's glands.* **Ante′rior lin′gual g.,** g. of the neck. **Apor′ic g.,** glandiform ganglions. **Arte′rial g.,** see *Gland.* **Aryt′enoid g.,** acinous glands of the larynx, near the arytenoid cartilages. **Asso′ciate parot′id g.,** ascessory parotid g.; see *Parotid.* **Auric′ular g.,** glands of the external ear. **Ax′illary g.,** lymphatic glands of the axillary region. **G. of Bartholi′nus,** Cowper's glands (in female); Méry's glands; vulvovaginal glands; sublingual glands. **G. of Bauhin′,** see *Lingual glands.* **G. of bil′iary ducts,** hepatic glands. **G. of Blan′din,** anterior lingual glands. **Blind g.,** glandiform ganglions; ductless glands. **Blood g.,** see *Ganglion.* **Boer′haave's g.,** sweat g. **Bow′man's g.,** see *Bowman.* **Bra′chial g.,** lymphatic g. in the arm. **Bron′chial g.,** thyreoid g.; lymphatic glands of the bronchi and trachea adjacent. **G. of Bruch,** see *Bruch.* **Brun′ner's g.,** see *Brunner's glands.* **Buc′cal g.,** see *Buccal glands.* **Bulbocav′ernous** or **bulbo-ure′thral g.,** Cowper's glands; Méry's glands. **Car′diac g.,** acinous glands at inferior extremity of œsophagus; superior mediastinal lymphatic glands. **Carot′ic** or **carot′id g.,** a ductless gland, formerly called the intercarotic ganglion of the great sympathetic, situated at the bifurcation of the common carotid artery. **Ceru′minous g.,** see *Ceruminous.* **Cer′vical g.,** lymphatic glands of the neck. **G. of cheeks,** buccal glands. **Circuma′nal g.,** anal g. **Closed g.,** ductless g. **Coccyg′eal g.,** Luschka's g., see *Coccygeal.* **Cœl′iac g.,** lymphatic glands in front of the abdominal aorta. **Coil g.,** a tubular g. twisted upon itself (see cut); the sweat glands are coil glands. **Com′pound g.,** a g. composed of several distinct sacs. **Conglo′bate g.,** see *Gland.* **Conglom′erate g.,** racemose g., see *Gland.* **Con′voluted g.,** tubular gland with convoluted extremity. **Cow′per's g.,** Méry's glands; vulvovaginal glands; see *Cowper's glands.* **Cuta′neous g.,** glands of the skin connected with the hair, sweat, and sebaceous secretion. **Den′tal g. of Serres,** see *Tooth.* **Diapnog′enous g.,** see *Perspiration.* **Dor′sal g.,** lymphatic glands near the posterior margin of the axilla. **Duct′less g.,** see *Glandiform ganglion.* **Duod′enal g.,** Brunner's glands; lymphatic glands of mesentery connected with the duodenum. **G. of Duver′ney,** Cowper's glands (in the female); vulvovaginal glands. **G. of Eb′ner,** serous glands. **Ex′cretory g.,** glands secreting excrementitious fluids, as urine. **Exter′nal sal′ivary g.,** parotid g. **Extraparot′id g.,** lymphatic glands superficial to the parotid. **Follic′ular g.,** follicle. **Fraenk′el's g.,** see *Fraenkel.* **G. of Galea′ti,** follicles of Lieberkühn. **Ga′len's g.,** the upper portion of the lacrymal gland next to the orbit. **Gas′tric g.,** see *Stomach.* **Ge′nal g.,** buccal g. **Gen′ital g.,** testicles and ovaries. **Gin′gival g.,** an infolding of the epithelium at the edge of the gum of the infant. **Gley's g.,** parathyroid g. **Glo′bate g.,** conglobate glands. **Glom′erate g.,** racemose g. **Gut′tural g.,** pharyngeal g. **Hæmatopoiet′ic g.,** ductless or vascular glands, as the spleen, suprarenal capsules, thymus, etc., whose functions are supposed to be the elaboration of certain fluids necessary for the performance of certain vital actions in the economy. **Harder′ian g.,** or **G. of Har′der,** small gland existing in certain mammals at the inner canthus of the eye. **Haver′sian g.,** or **G. of Hav′ers,** synovial glands; synovial fringes. **Hon′eycomb g.,** Peyer's glands. **Hu′guier's g.,** see *Huguier.* **Infundib′ular g.,** infundibulum of the brain. **In′guinal g.,** lymphatic glands of the groin. **G. of the integ′ument,** hair, sweat, and sebaceous glands. **Intercarot′id g.,** small ganglion at or near the division of the common carotid artery. **Intes′tinal g.,** glands in the large and small intestines, as Lieberkühn's crypts or follicles, Peyer's, Brunner's, and solitary glands. **Ju′gular g.,** cervical g. **G. of Krause,** acinous glands in the conjunctiva. **Lac′rymal g.,** see *Lacrymal.* **Lactif′erous g.,** mammary g.; Montgomery's g. **Lentic′ular g.,** lenticulares glandulæ, conglobate glands of the stomach. **Lie′berkühn's g.,** crypts of Lieberkühn; see *Intestine.* **G. of Littré′,** see *Urethra.* **G. of Lusch′ka,** coccygeal gland. **Lymphat′ic g.,** see *Conglobate* and *Lymph* or *Lymphatic.* **Mam′mary g.,** see *Mammary.* **Manz's g.,** see *Manz.* **Meibo′mian g.,** see *Meibomius.* **G. of Méry′,** Cowper's glands. **Mesera′ic** or **mesenter′ic g.,** see *Mesenteric.* **Mesocol′ic g.,** lymphatic glands in the mesocolon. **Mil′iary g.,** sebaceous glands; sweat glands. **Mixed g.,** mucosalivary glands; the alveoli of these glands are partly mucous and partly serous; the latter, however, predominate. **Mo′lar g.,** buccal glands. **Moll's g.,** glands which open into the hair follicles of the eyelashes; they are modifications of sweat glands. **Monro's′ g.,** the lower portion of the lacrymal gland. **Montgom′ery's g.,** very minute g. in the areola of the mamma, having milky or fatty secretion. **G. of Morgagn′i,** g. of Littré; lateral arytenoid glands. **Mucilag′inous g. of Hav′ers,** synovial glands or fringes. **Mucip′arous** or **mu′cous g.,** glands concerned in the secretion of mucus; those belonging to mucous membranes. **G. of Nab′oth,** see *Nabothi glandulæ.* **Nerve g.,** suprarenal capsules. **Ner′vous g. of pel′vis,** coccygeal gland. **G. of Nuck** or **of Nuhn,** anterior lingual glands. **Odorif′erous g.,** glands the secretion of which is odorous, as g. of Tyson. **Oil g.,** sebaceous gland. **Oxyn′tic g.,** g. of the stomach, presumably concerned in acid secretion. **G. of Pacchio′ni,** glandulæ Pacchioni. **Pal′atine g.,** lymphatic glands in the mucous membrane covering the roof of the mouth. **Pal′pebral g.,** Meibomian g. **Pancreat′ic g.,** see *Pancreas.* **Pancreat′icosplen′ic g.,** see *Pancreaticosplenic.* **Parathy′reoid** or **parathy′roid g.,**



Glands. *a* and *b*, simple and compound tubular glands; *c*, coil gland; *d* and *e*, simple and compound (racemose) saccular glands.

small lymphatic glands near the thyroid, but not accessory thyroids. **Parot'ic** or **parot'id g.**, see *Parotid*. **Pec'toral g.**, see *Pectoral*. **G. of Peck'lin,** Peyer's glands. **Pep'tic** or **pep'sin g.**, see *Peptic*. **Per'manent g.**, see *Gland*. **Perspi'ratory g.**, sudoriparous g. **G. of Pey'er,** glandulæ Peyeri. **Pi'lous g.**, sebaceous g. connected with a hair follicle. **Pin'eal g.**, see *Pineal*. **Pitu'itary g.**, hypophysis cerebri. **Plex'iform g.**, Peyer's glands. **Prehy'oid g.**, parathyroid g. **Prepu'tial g.**, odoriferous sebaceous glands on the glans penis and prepuce. **Pros'tate g.**, prostate gland. **Pylo'ric g.**, numerous gastric glands in that region of the stomach. **Rac'emose g.**, g. arranged in clusters, like a bunch of grapes; see *Racemose*. **Re'nal g.**, renal capsules. **Rivi'ni's g.**, sublingual g. **Ros'enmüller's g.**, see *Rosenmüller*. **Sac'cular g.**, a *simple* s. g. is one of a bag-like shape; a *compound* s. g. is a racemose g. (see cut). **Sali'val** or **sal'ivary g.**, salivary glands. **Sal'ivary abdom'inal g.**, pancreas. **Sand'stroem's g.**, parathyroid g. **Seba'ceous** or **sebif'erous g.**, sebaceous glands. **Sem'inal g.**, testes. **Se'rous g.**, albuminous g. **Serre's g.**, gingival g. **Sex'ual g.**, testes and ovaries, or their embryonic forms. **Skene's g.**, two tubular glands on each side of the floor of the female urethra. **G. of the skin,** cutaneous g. **G. of small intes'tine,** Peyer's glands, Brunner's glands, follicles of Lieberkühn. **Sol'itary g.**, Brunner's glands, small, white projections on the lining membrane of the entire intestine. **Staph'yline g.**, palatine g. **G. of stom'ach,** gastric glands; peptic glands. **Subconjuncti'val g.**, glands of Meibomius. **Sublin'gual g.**, see *Sublingual*. **Submax'illary g.**, see *Submaxillary*. **Sudorif'erous** or **sudorip'arous g.**, sweat glands, see *Perspiration*. **Suprare'nal g.**, see *Capsules, renal*. **Suzanne's' g.**, see *Suzanne*. **Sweat g.**, see *Perspiration*. **Syno'vial g.**, synovial fringes. **Tar'sal g.**, **tarsoconjuncti'val g.**, glands of Meibomius. **Tem'porary g.**, glands consisting of a single primary vesicle or sacculus, which, having elaborated secretion in its interior, bursts, discharges it, and disappears; the Graafian vesicles and the gland-cells are examples. **Thy'mus g.**, see *Thymus*. **Thy'reoid** or **thy'roid g.**, see *Thyroid*. **Tie'demann's g.**, Bartholin's g. **Tracho'ma g.**, see *G., aggregated* and *Bruch*. **Tu'bular g.**, g. of tubular shape, either simple or compound (see cut). **Tympan'ic g.**, vascular fusiform ganglion on the tympanic nerve. **G. of Ty'son,** preputial g., sebaceous glands of Tyson. **Ure'thral g.**, g, of Littré. **U'terine g.**, tubular glands contained in the mucous membrane of the body of the uterus. **Vag'inal g.**, glands in the mucous membrane of the vagina. **Vas'cular g.**, hæmatopoietic g., glandiform ganglion or ganglia. **G. of Vesa'lius,** pulmonary g.; bronchial g. **Vestib'ular g.**, Cowper's g. in the female. **Vitel'line g.**, vitellarium. **Vulvovag'inal g.**, g. of Bartholin; g. of Cowper (in the female); muciparous glands on both sides of the outlet of the vagina. **Wal'deyer's g.**, see *Waldeyer*. **Web'er's g.**, mucous glands of the tongue. **G. of Wil'lis,** albicantia corpora; mammillary tubercles. **Yolk g.**, vitellarium. **Zeiss's g.**, sebaceous glands opening into the follicles of the eyelashes.

**Glandeb'alæ.** Hair in the axillary space.

**Glan'derous.** Relating to glanders.

**Glan'ders.** Equinia.

**Glan'diform.** Adenoid; resembling a gland. **G. cor'puscle,** acinus. **G. gan'glion,** see *Ganglion*.

**Glan'dium.** Thymus.

**Glan'dula** (dim. of glans). A small gland; glandule. **G. angula'ris,** submaxillary gland. **G. atrabilia'ris,** renal capsule.. **G. Avicen'næ,** encysted tumor. **G. basila'ris,** pituitary gland. **G. col'li,** tonsil. **G. concre'ta Monro'i,** part of the lacrymal gland next to the eyebrow. **G. foram'inis obturato'rii,** lymphatic gland at the inner extremity of the foramen thyroideum. **G. innomina'ta,** caruncula lacrymalis. **G. innomina'ta Gale'ni,** portion of the lacrymal gland next to the orbit. **G. intercarot'ica,** carotid gland. **G. lacryma'lis,** lacrymal gland. **G. lacryma'lis accesso'ria** or **infe'rior** or **palpebra'lis,** inferior palpebral portion of the lacrymal gland. **G. lacryma'lis supe'rior,** upper or orbital portion of the lacrymal gland. **G. lactif'era,** mammary gland. **G. lingua'lis,** sublingual gland. **G. maxilla'ris,** submaxillary gland. **G. muco'sa,** conglobate gland. **G. orbita'ria,** lacrymal gland. **G. præhyoide'a,** relic of the ductus thyreoglossus of fetal life. **G. pros'tata ante'rior,** occasional accessory gland in front of the prostate. **G. pros'tata mulie'bris,** spongy tissue around the meatus urinarius in the female. **G. saliva'lis abdom'inis,** pancreas. **G. saliva'lis exter'na,** parotid. **G. saliva'lis inter'na,** submaxillary and sublingual glands, viewed collectively. **G. so'cia parot'idis,** accessory parotid. **G. suprahyoide'a,** g. præhyoidea. **G. tympan'ica,** vascular mass surrounding the tympanic nerve as it enters the small canal in the petrous portion of the temporal bone.

**Glan'dulæ** (pl. of glandula). Glands. **G. acino'sæ,** see *Acinus*. **G. acino'sæ subconjunctiva'les,** acini under the conjunctival fold. **G. antibra'chii,** deep lymphatic glands of the forearm. **G. a'picis lin'guæ,** Blandin's glands; racemose glands near the tip of the tongue. **G. articula'res,** synovial glands. **G. assisten'tes,** prostate gland. **G. aureola'res,** see *Mamma*. **G. auricula'res,** lymphatic glands of the parotid region. **G. cardia'les,** glands of the cardiac portion of the stomach. **G. cervi'cis u'teri,** Nabothi glandulæ. **G. concatena'tæ,** deep cervical glands. **G. congrega'tæ Monro'i,** inferior part of the lacrymal gland. **G. coro'næ pe'nis,** preputial glands, see *Sebaceous glands*. **G. cubita'les,** brachial glands. **G. cu'tis spira'lis,** sudoriparous glands. **G. digesti'væ,** glands of the cardiac portion of the stomach. **G. du'ræ ma'tris,** glands of Pacchioni. **G. facia'les profun'dæ,** internal maxillary glands. **G. facia'les superficia'les,** g. auriculares. **G. follicula'res lin'guæ,** lingual glands. **G. follic'uli cilia'res,** glands of Meibomius. **G. fun'di,** peptic glands. **G. gastroepiplo'icæ,** lymphatic glands of the stomach. **G. gena'les,** buccal glands; salivary glands of the cheek. **G. glomifor'mes,** sudoriparous glands. **G. humera'riæ,** lymphatic glands of the arm. **G. interarytenoide'æ,** arytenoid glands. **G. intercartilagin'eæ,** mucous glands between the cartilages of the trachea at the posterior part. **G. interio'res rena'les** or **inter'næ re'ni,** corpora Malpighiana. **G. kama'la,** glands from the capsules of Mallotus philippinensis, a remedy for tapeworm. **G. lactif'eræ,** see *Mammary gland*. **G. lactif'eræ aberran'tes** or **accesso'riæ,** sebaceous glands of the areola of the nipple. **G. laryn'gis posterio'res,** arytenoid glands. **G. lenticula'res,** solitary glands, see *Lenticular*. **G. lu'puli,** lupulin. **G. mesera'icæ,** mesenteric glands. **G. min'imæ,** Lieberkühn's glands. **G. mola'res,** molar glands; buccal glands. **G. mucip'aræ,** mucous glands; glands of the pyloric end of the stomach. **G. myrtifor'mes,** carunculæ myrtiformes. **G. odorif'eræ,** preputial glands, see *Sebaceous glands*. **G. palpebra'les seba'ceæ,** glands of Meibomius. **G. pelvi'næ,** internal iliac glands. **G. plexifor'mes,** Peyer's glands. **G. pros'tatæ mulie'rum,** vascular spongy eminence surrounding the orifice of the female urethra. **G. rena'les inter'næ,** corpora Malpighiana. **G. Rottle'ræ,** kamala. **G. so'ciæ,** Peyer's glands. **G. solita'riæ,** Brunner's glands. **G. spu'riæ,** Peyer's glands; gangliform ganglions. **G. subauricula'res,** mastoid glands. **G. tubulo'sæ,** see *Tubular*. **G. vascula'res** or **vasculo'sæ,** blood glands, see *Ganglion*. **G. Vesallia'næ,** bronchial glands. **G. vestibula'res,** Cowper's glands (in the female). **G. vulvovagina'les,** Cowper's glands (in the female).

**Gland'ular.** Having the appearance, form, or texture of glands. **G. carcino'ma,** see *Carcinoma*. **G. fe'ver,** an acute infectious disease, attacking young people, the symptoms of which are pain in the neck and abdomen, stiff neck, fever, swelling of the lymphatic glands of the neck and sometimes other regions, hypertrophy of the liver, constipation, prostration, etc. **G. gran'ules,** corpora Malpighiana. **G. sub'stance of the kid'ney,** see *Kidney*. **G.**

**vagini'tis**, condition of the vagina in which the papillæ of the vaginal mucous membrane are inflamed or in a congested, hypertrophied state; glassy swelling; see *Swelling*.

**Glan'dule.** Small gland.

**Glan'dulene** or **Glan'dulin.** An organic extract prepared from the bronchial glands of sheep; employed in tuberculosis.

**Gland'uliform.** Gland-shaped.

**Gland'ulose, Gland'ulous.** Glandular.

**Glandulos'ity.** The condition of being glandulous. A collection of glands.

**Glans** (acorn). Gland. Acorn. Extremity of the penis and of the clitoris. The *glans penis* is conical, slightly flattened, and continuous with the urethra, which opens at its apex; is circumscribed by a projecting edge called corona glandis, behind which is a depression, collum or sulcus retroglandularis, fossa glandis. It is covered by a thin mucous membrane, is furnished at its base with sebaceous follicles, called glandulæ odoriferæ Tysoni, the secretion from which is termed smegma præputii; and it can almost always be covered by the reflection of the skin, called the prepuce. It is formed of a spongy texture, susceptible of being thrown into erection. The *glans clitoridis* is smaller, imperforate, and covered with a sort of prepuce formed by the mucous membrane of the vulva. **G. Jo'vi Theophras'ti**, Fagus castanea. **G. phal'li**, g. penis, see *Glans*. **G. ul'næ**, olecranon. **G. unguenta'ria**, ben nut; see *Guilandina moringa Myrobalanus*.

**Gla'rea.** Gravel or sand in the urinary canals or passages.

**Gla'ser's ar'tery.** Tympanic artery. **G.'s fis'sure**, fissure dividing the glenoid fossa of the temporal bone.

**Glas'gow's sign.** Systolic sound in the brachial artery, in some forms of aneurysm of the aorta.

**Glass.** Vitrium. **Crown g.**, a fine kind of glass, containing no lead. **Crys'tal g.**, a hard glass, containing lead, used for optical purposes. **G. eye**, artificial eye; amaurosis of the horse. **Flint g.**, crystal g. **Liq'uid** or **sol'uble** or **wa'ter g.**, potassium silicate.

**Glass'blowers' cramp.** A professional neurosis; a contraction of the third and fourth fingers of glass-blowers.

**Glass'es.** Spectacles; eye-glasses; optical lenses.

**Glass'pox.** Coniform varicella or chickenpox, in which the vesicles are generally acuminated.

**Glass'wort.** Salicornia herbacea; antiscorbutic.

**Glas'sy.** Like glass, as the expression of the eyes of a corpse. **G. swell'ing**, see *Swelling*.

**Glau'ber's salts** (after R. Glauber, a German chemist). Sodium sulphate.

**Glauce'do.** Glaucoma.

**Glauci'na** (from its color, *glaukos*, bluish-green). Natural cowpox.

**Glaucine'.** Alkaloid in Glaucium luteum; glaucina.

**Glau'cium** or **Glau'cum lu'teum.** Horn poppy, European plant; narcotic; juice applied externally is anodyne.

**Glauco'ma** (*glaukos*, bluish-green). Among the older pathologists the synonym of cataract; now applied to opacity of the vitreous humor or of the tunica hyaloidea, manifested by a grayish or greenish spot, apparent through the pupil; the ordinary form is characterized by rapidly increasing presbyopia, dimness of sight, diminution of the field of vision, increased tension of the globe, excavation of the optic disk, dilated pupil, halos around a bright light, corneal anæsthesia, pain, etc., all of these symptoms not being constant, but terminating in blindness. In *glaucoma fulminans* the impairment of vision occurs very rapidly, perhaps in a few hours. The disease was almost incurable until von Graafe employed iridectomy; see *Optic papilla*. **Ab'solute g.**, glaucoma with destruction of vision. **Apoplec'tic g.**, hemorrhagic g. **Auric'ular g.**, g. associated with a similar condition of intraorganic pressure in the inner ear. **Don'ders's g.**, simple atrophy of the optic papilla. **G. ful'minans**, see *Glaucoma*. **Hemorrhag'ic g.**, glaucoma with intraocular hemorrhage. **G. im'minens**, initial stage approaching glaucoma, when a few or many of the symptoms of the disease are present in a minor degree. **Inflam'matory g.**, glaucoma with symptoms of inflammation. **Re'nal g.**, congestion of the kidney causing extreme tension of the organ, by reason of the unyielding nature of its capsule. **G. ring**, glaucomatous cup. **Sec'ondary g.**, glaucoma as a sequel of disease or injury. **G. sim'plex**, g. without any symptoms of inflammation.

**Glauco'matous.** Relating to or affected with glaucoma. **G. cup**, see *Optic papilla*.

**Glaucopicrine'.** Bitter alkaloid obtained from Glaucium luteum and Chelidonium majus.

**Glauco'sis.** Glaucoma.

**Glecho'ma hed'era, hedera'cea,** or **hirsu'ta.** This plant, ord. *Labiatæ*, has a strong smell and a bitterish, somewhat aromatic taste; expectorant and tonic.

**Gleditsch'ia chinen'sis.** Chinese plant; expectorant, cathartic, anthelmintic. **G. spino'sa** or **triacan'thos**, ord. *Leguminosæ;* honey locust, indigenous in North America; pulp is expectorant; poisonous alkaloid is derived from the unripe fruit, to which the name *gleditchine* is given.

**Gleet.** Chronic gonorrhœa; chronic discharge from any mucous membrane, usually applied to mucopurulent discharges from the urethra.

**Gleet'y.** Resembling or relating to gleet.

**Gleichenia** (gli-ken'e-ah) **herman'ni.** Fern of Asia and Australia, used in diarrhœa, aphthæ, etc.

**Gleme.** Glama.

**Glénard's' disease'.** See *Enteroptosis*.

**Gle'ne.** Pupil; eyeball; crystalline lens. A socket, such as the glenoid cavity.

**Gleni'tis.** Inflammation of the crystalline lens.

**Glenobra'chial lig'ament.** Glenohumeral ligament. **G. mus'cle**, an occasional muscle passing from the surgical neck of the humerus to be inserted with the biceps.

**Glenohu'meral lig'ament.** Ligamentous fibres passing from the glenoid fossa to the lower tuberosity of the humerus.

**Gle'noid** (*glene*, socket, *eidos*, resemblance). Any shallow articular cavity which receives the head of a bone, such as the glenoid cavity or fossa of the scapula articulated with the head of the humerus; also the glenoid cavity or fossa of the temporal bone receiving the condyle of the lower jaw. Relating to the socket of the eye. **G. cav'ity**, see *Glenoid*. **G. crest**, ridge separating the articular surface of the patella into two parts. **G. fis'sure**, Glaserian fissure. **G. fos'sa**, see *Glenoid*. **G. lig'ament**, fibrocartilaginous ring which seems to be formed by the expansion of the tendon of the long head of the biceps brachialis, and surrounds the glenoid cavity of the scapula, the depth of which it increases; also fibrocartilages of the finger-joints.

**Glenoid'al.** Glenoid.

**Glenoradia'lis.** Long head of biceps flexor cubiti muscle.

**Gleno-ulna'ris.** Fibres of long head of biceps flexor cubiti distributed to bicipital fascia of forearm.

**Gley's glands.** Parathyroid glands.

**Gli'a** (glue). Neuroglia. **G. cells**, cells of Dieters on basilar membrane and cochlea.

**Gliabacte'ria.** Microorganisms occurring in zoöglœa masses.

**Gliacoc'cus.** Micrococcus having glutinous envelope.

**Gliadin'.** Organic principle in gluten.

**Gli'ding.** Movement of surfaces on each other, backward and forward, without displacement; lateral movement of flap in plastic surgery. **G. joint**, arthrodia. **G. move'ment**, sliding movement of articular surfaces upon each other.

**Glio′ma** (glue). A variety of round-celled sarcoma originating in the neuroglia, or connective tissue of nerves, occurring in the brain, auditory nerve, and retina, and containing no nerve elements. **G. fibro′sum ret′inæ**, g. retinæ. **G. medul′læ**, syringomyelia. **G. myxomato′des**, gliomyxoma. **G. ret′inæ**, tumor originating in the neuroglia of the retina, and in its structure resembling cerebral glioma; sometimes it resembles both glioma and sarcoma, and is then called *gliosarcoma*. **G. sarcomato′des**, gliosarcoma. **G. teleangeiectat′icum**, g. with excessive vascular distribution.

**Gliomato′sis.** Abnormal increase or development of glioma, as in syringomyelia. **Med′ullary g.**, syringomyelia.

**Glio′matous.** Relating to or having characters of glioma.

**Gliomy′oma.** Glioma combined with myoma.

**Gliomyxo′ma** (*glioma* + *myxa*, mucus). Glioma characterized by partial conversion into mucous tissue.

**Glioneuro′ma.** Glioma having some of the features of neuroma.

**Gliosarco′ma.** Lymphosarcoma, tumor having characteristics of glioma and sarcoma. **G. of ret′ina**, glioma retinæ.

**Glio′sis.** Indurated and excavated places in gray matter of brain, giving rise to atrophy of optic nerves and bulbs of olfactory nerves, with degeneration of posterior column of spinal cord; occasionally confounded with general paralysis.

**Glischrin′.** A form of mucin.

**Glischrinu′ria.** Mucinuria.

**Glischrobacte′rium** (*glischros*, viscid). Bacterium glischrogenes, producing mucinuria.

**Glis′chrous.** Glutinous; viscid.

**Glischru′ria.** Mucinuria.

**Glis′son's cap′sule.** Dense areolar membrane surrounding the vena porta and its ramifications in the liver. **G.'s cirrho′sis**, inflammation of the serous coat of the liver.

**Glis′ter.** Enema.

**Glo′bate.** Conglobate.

**Glob′ba nu′tans** or **silves′tris.** Plant of tropical Asia, root of which is astringent. **G. unifor′mis**, root of this species is used in colic and diarrhœa.

**Globe.** A ball or sphere. **G. of the eye**, eyeball. **G. flow′er**, Cephalanthus occidentalis, Trollius laxus. **U′terine g.**, globular appearance of womb after birth of child. **Vitel′line g.**, segmentation cell.

**Globin′.** Proteid residue from decomposition of hæmoglobin.

**Globinom′eter.** An apparatus for determining the amount of hæmoglobin in the blood.

**Globularetin′.** See *Globularin.*

**Globula′ria al′ypum.** Wild senna of Europe, Montpellier turbith. The bitter leaves of this plant have been used in intermittents and in constipation. The resin of the root is cathartic like that of jalap.

**Globularin′.** Bitter principle from Globularia alypum. Its action is similar to that of caffeine, and it also diminishes the amount of urine. Diluted acids decompose it, producing *globularetin*, which increases the quantity and solid ingredients of the urine, and causes diarrhœa by exciting the secretion of the gall-bladder.

**Glob′ule.** A small globe; a small pill; a spherical or spheroid element; a blood cell or lymph cell. **Dentin′al g.**, see *Dentinal.* **Direct′ing g.**, polar g. **Do′bie's g.**, see *Dobie.* **Exten′sion g.**, polar g. **Lymph g.**, lymphocyte. **Morgagn′i's g.**, see *Morgagni.* **Po′lar g.**, see *Polar.* **Red g.** or **Red blood g.**, erythrocyte. **White g.** or **White blood g.**, leucocyte.

**Glob′uli** (pl. of globulus) **Aran′tii.** Corpora Arantii. **G. gan′glii**, nerve-cells. **G. mamilla′res**, mammillary eminences; corpora albicantia. **G. martia′les** or **mar′tis**, ferrum tartarizatum. **G. medulla′res**, mammillary eminences; corpora albicantia. **G. na′si**, extremity of the nose. **G. sanc′ti** or **san′guinis**, globules of the blood.

**Globulici′dal.** Destructive to the blood globules.

**Globulim′eter.** Instrument for determining the relative number of blood corpuscles.

**Globulin′.** Crystallin; blood casein. Colorless substance remaining after abstraction of the coloring-matter of the blood globule. A peculiar albuminous principle may be obtained also from a watery extract of the crystalline lens. Albuminose of red corpuscles. Proteid substance occurring in urine, usually associated with serum albumin. To detect its presence the urine is rendered slightly alkaline by ammonium hydrate and filtered after several hours, thus separating the phosphates; ammonium sulphate in saturated solution is then added to the filtrate; should a precipitate occur, it is globulin. Globulin is found in the lardaceous form of nephritis, and also in acute nephritis. A class of proteids insoluble in water, but soluble in weak saline solutions, including fibrinogen, globulin, vitellin, myosin, and paraglobulin; the solutions are coagulable by heat. **Acid g.**, syntonin. **Crys′talline g.**, vegetable g. **Fibrinoplas′tic g.**, paraglobulin. **Se′rum g.**, paraglobulin. **Veg′etable g.**, a proteid obtained from vegetable substances which is soluble in a strong salt solution, but not in pure water.

**Glob′ulinose.** An albumose of a globulin.

**Globulinu′ria.** Presence of globulin in the urine.

**Glob′ulose.** When pepsin is digested with globulin the result is globulose, a variety of hemialbumose. Globular.

**Glob′ulus** (dim. of globus). Globule; suppository; corpus albicans. **G. hyster′icus**, globus hystericus. **G. na′si**, apex or lip of columna nasi. **G. sanguin′eus**, see *Punctum saliens.* **G. stape′dius os′sis**, orbicular bone.

**Glo′bus.** Ball or globe. **G. epilep′ticus**, epileptic aura. **G. hyster′icus**, a sensation as of a ball rising in the throat, occurring commonly in hysteria. **G. ma′jor**, head of epididymis. **G. mi′nor**, tail of epididymis. **G. pal′lidus**, nucleus lenticularis of the brain. **G. uteri′nus**, round tumor formed by the uterus in the lower part of the abdomen immediately after delivery. **G. vitella′ris**, yelk of ovum and its surrounding membrane.

**Glom′erate** (*glomus*, ball). Conglomerate.

**Glomer′ular.** Relating to a glomerule of the kidney. **G. nephri′tis**, glomerulonephritis.

**Glom′erule** (dim. of *glomus*, ball). Small ball or coil formed by an agglomeration of vessels; see also *Glomerulus.* **G. of kid′ney**, tuft or mass of blood-vessels in corpus malpighianum. **G. of Malpi′ghi**, see *Corpora malpighiana.* **G. of periodon′tium**, periodontal tufts resembling those of the kidney. **G. of Ruysch**, see *Corpora malpighiana.* **G. of spleen**, see *Corpora malpighiana.*

**Glomeruli′tis.** Involvement of the glomeruli of Malpighi in inflammation of the kidney.

**Glomerulonephri′tis.** Inflammation of the structure of the kidney commencing with the glomeruli.

**Glomer′ulus.** Glomerule. **G. arteriococcyge′us** or **arterio′sus coccyge′us**, coccygeal gland. **G. cauda′lis**, coccygeal gland. **G. choroide′us**, part of choroid plexus of the lateral ventricle of the brain. **G. coch′leæ**, a glomerule formed from the auditory artery in the cochlea. **G. olfacto′rius**, ball made by a coil of fibres of the olfactory nerve. **G. plexuo′sus**, a glomerule occasionally found in the thoracic duct.

**Glomes of the frog.** Rounded prominence on the posterior borders of the frog of the hoof of a horse.

**Glom′ulus.** Glomerule.

**Glo′mus.** Glomerule.

**Glonoïn′.** Nitroglycerin; trinitroglycerin; liquid substance prepared by adding glycerin to a mixture of sulphuric acid and fumigating nitric acid, pouring it into water, and washing upon a filter. It is an oleaginous substance of sweet taste, slightly soluble in water, but readily in alcohol and ether; used therapeutically in Bright's disease, angina pectoris, asthma, cerebral anæmia, arteriosclerosis, etc. Dose, ♏j (0.065) of a 1 per cent. solution, gradually increased.

**Glo′noinism** or **Glo′noism.** Toxic effect of glonoin.

**Glorio′sa super′ba.** Plant of E. Indies, ord. *Liliaceæ,* root of which is narcotic, tonic, and antiperiodic.

**Glos′sa.** Tongue. Speech.

**Glossag′ra** (*glossa,* tongue, *agra,* seizure). Gout in the tongue.

**Glos′sal.** Relating to the tongue.

**Glossal′gia** (*glossa,* tongue, *algos,* pain). Pain in the tongue; glossodynia.

**Glossan′thrax** (*anthrax,* carbuncle). Carbuncle of the tongue; disease more common in cattle than in man.

**Glossec′tomy** (*ektome,* excision). Excision or amputation of the tongue.

**Glossepiglot′tic.** Relating to the tongue and epiglottis.

**Glossian′us.** Lingual; lingualis muscle.

**Glossi′tis.** Inflammation of the tongue. When it affects the whole of the tongue it is a serious disease, and requires the vigorous use of antiphlogistics. **Aph′thous g.,** aphthæ. **Dissect′ing g.,** a form of g. which produces deep furrows and cracks, and gives rise to increased pain by the action of the secretions of the mouth and of alimentary matters. **Follic′ular g.,** glossitis involving the follicles of the tongue and larynx, with ulceration. **Gum′matous g.,** syphilitic inflammation of the tongue, with gummatous deposits. **Idiopath′ic g.,** primary g. **Moel′ler's g.,** see *Moeller.* **Mu′cous g.,** stomatitis; inflammation of the mucous membrane of the tongue and mouth. **G. papil′læ,** inflammation of the papillæ of the tongue. **Parenchy′matous g.,** inflammation of the muscular substance of the tongue. **Pri′mary g.,** g. occurring as an apparently independent disease. **Scle′rous g.,** sclerosed condition of the tongue.

**Glosso-** (*glossa,* tongue). In composition, relating or appertaining to the tongue.

**Glossoatax′ia.** Want of muscular coordination of the tongue.

**Glossocarcino′ma.** Cancer of the tongue.

**Glossocar′dia bosval′lia.** E. Indian plant; bitter, aromatic, emmenagogue.

**Glos′socele** (*glossa,* tongue, *kele,* hernia, tumor). Projection of the tongue from the mouth, depending generally on an inflammatory swelling. Chronic glossocele, or œdematous engorgement, sometimes proceeds to a great length, and deforms the dental arches, the lips, etc.

**Glossodes′mus** (*desmos,* bandage). Frænum linguæ.

**Glossodyn′ia.** Pain or neuralgia of the tongue.

**Glossoepiglot′tic** or **Glossoepiglottid′ean.** Belonging to the tongue and epiglottis. Term applied to fleshy fibres passing from the base of the tongue toward the epiglottis; more evident in some mammalia than in man; their use seems to be to raise the epiglottis and to remove it farther from the glottis; they have been called also retractores epiglottidis. **G. folds,** folds of mucous membrane passing from the root of the tongue to the epiglottis, between which are the *glossoepiglottic fossæ.* **G. fræn′ula** or **fræ′na,** g. ligaments. **G. lig′aments,** three folds of mucous membrane connecting the anterior surface of the epiglottis with the root of the tongue.

**Glos′sograph.** Apparatus for recording the movements of the tongue.

**Glossog′raphy** (*glossa,* tongue, *graphe,* description). Anatomical description of the tongue.

**Glossog′yne chinen′sis.** Root is used in toothache and as an expectorant, and the leaves are employed externally in burns.

**Glossohy′al.** Name given by Geoffroy Saint-Hilaire to the posterior cornua of the os hyoides.

**Glos′soid.** Having the shape of the tongue.

**Glossokynet′ic.** Relating to the movements of the tongue.

**Glossola′bial.** Relating to the tongue and lips.

**Glossolabiolaryn′geal.** Relating to the tongue, lips, and larynx. **G. paral′ysis,** bulbar paralysis in which progressive symmetrical paralysis exists, affecting the lips and neighboring muscles of the face, tongue, pharynx, and larynx.

**Glossolabiopharyn′geal.** Relating to the tongue, lips, and pharynx.

**Glossolaryn′geal.** Relating to the tongue and larynx.

**Glossol′ogy** (*logos,* treatise). Study of the tongue. Treatise on language or nomenclature.

**Glossol′ysis** (*lysis,* solution). Paralysis of the tongue or of articulation.

**Glosson′cus** (*onkos,* tumor). Swelling of the tongue.

**Glossopal′atine.** Palatoglossus; relating to the tongue and palate. **G. arch,** anterior arch of the fauces.

**Glossopalati′nus.** Glossostaphylinus muscle.

**Glossop′athy** (*pathos,* disease). Disease of the tongue.

**Glossopharyn′geal.** Belonging to the tongue and pharynx; pharyngoglossal. **G. mus′cle,** glossopharyngeus. **G. nerve,** pharyngoglossal nerve. **G. nu′cleus,** situated in the floor of the fourth ventricle, and continuous with the anterior extremity of the vagus nucleus. **G. paral′ysis,** term usually applied to the glossopharyngeal nerve itself, as well as the muscle.

**Glossopharynge′us.** Some anatomists thus designate certain fleshy bundles arising from the lateral parts of the base of the tongue, and inserted into the parietes of the pharynx; they form part of the constrictor pharyngis superior.

**Glossophyt′ia** (*phyton,* growth). Enlargement of the papillæ filiformes of the tongue, with pigmentation; black tongue.

**Glos′soplasty.** Plastic surgery of the tongue.

**Glossople′gia** (*plege,* stroke). Paralysis of the tongue, due to injury of the hypoglossal nerve.

**Glossopto′sis** (*ptosis,* falling). Glossocele.

**Glossorrha′gia** (*rhegnymi,* to break forth). Hemorrhage from the tongue.

**Glossor′rhaphy** (*rhaphe,* suture). Suture of the tongue.

**Glossos′copy** (*skopeo,* to view). Inspection of the tongue as an index of disease.

**Glossosemeiot′ics** (*semeiotice,* semeiology). Signs of disease taken from the tongue.

**Glossospas′mus.** Cramp or spasm of the tongue.

**Glossostaphyli′nus** (*staphyle,* uvula). Small, thin, narrow, and long muscle arising from the base of the tongue, and inserted at the inferior and lateral part of the velum palati.

**Glossostere′sis** (*steresis,* privation). Extirpation of the tongue.

**Glossot′omy** (*tome,* section). Dissection or amputation of, or anatomy of, the tongue.

**Glos′sy skin.** Shiny smoothness of skin, with atrophy and burning pain (causalgia), occurring after injury of a nerve.

**Glossyper′trophy.** Hypertrophy of the tongue.

**Glot′ta.** Glossa; tongue.

**Glottag′ra.** Gout in the tongue.

**Glottal′gia** (*algos,* pain). Pain in the tongue.

**Glot′tic.** Relating to the tongue or to the glottis.

**Glot′tis** (*glottis,* mouth-piece of a flute). A small, narrow, oblong aperture in the larynx, between the chordæ vocales, capable of being modified by muscular contraction, as may be required for voice production. The glottis is nearly an inch long in the adult male; less in the female and child. Rima glottidis or vocalis is the aperture in which the voice is produced, and therefore synonymous with glottis, as given above. Also ventricle of the larynx, or even the whole of the larynx. **False g.,** cavity between the superior or false vocal cords. **Infe′rior g.,** glottis. **G. interarytenoide′us,** posterior cavity of the larynx between the arytenoid cartilages. **G. ligamento′sus,** anterior part of the larynx between the inferior or true vocal cords. **Lips of g.,** thyreoarytenoid ligaments. **Poste′rior g.**, g. interarytenoideus. **G. respirato′ria**, g. interarytenoideus. **Spasm of g.**, asthma thymicum. **G. spu′ria**, superior g. **Supe′rior g.**, cavity between the superior or false vocal cords. **True g.** or **g. ve′ra** or **g. voca′lis**, glottis.

**Glot′tiscope** (*skopeo*, to view). Laryngoscope.

**Glotti′tis.** Inflammation of the tongue.

**Glov′er's su′ture.** See *Suture.*

**Glucæ′mia.** Glykæmia.

**Glu′case.** A ferment converting starch into dextroglucose.

**Glucin′.** Sodium salt of amido-triazin-sulphonic acid; resembles saccharin, but is less sweet.

**Gluci′num.** A white, metallic element, symbol Gl; also called beryllium.

**Glucogen′esis.** Formation of sugar, as in the liver.

**Glucohæ′mia.** Glykæmia.

**Glucophenetidin′.** Product of the mutual action of paraphenetidin and glucose.

**Glucopro′teid.** Proteid in combination with a carbohydrate. Mucin, mucoids, and hyalogens are glucoproteids.

**Glucosamin′.** $C_6H_{13}NO_5$. Derivative of glucose. Base resulting from the decomposition of chitin.

**Glu′cose** (*glykys*, sweet). Dextrose, glycose, grape-sugar, fruit-sugar, starch-sugar, and honey-sugar, a carbohydrate occurring naturally in many vegetable juices and in honey; also in blood, bile, liver, lungs, heart, urine, etc. Compared with cane-sugar, it is less sweet, much less soluble in water, and less disposed to crystallize; and, when injected into the blood-vessels, it does not pass off to the like extent by the kidneys. Diabetic, urinary, and hepatic sugar have the same chemical composition as glucose.

**Glu′cosides.** Certain proximate, non-nitrogenous vegetable principles, which by ebullition with dilute acid, or the action of ferments, or other method of decomposition, take up the elements of water and yield glucose, accompanied by a second substance, differing in each case according to the body operated on. The more important glucosides, some of which are interesting pharmaceutically and therapeutically, are amygdalin, from bitter almonds, etc.; arbutin, from arbutus uva ursi; cathartic acid, from senna; colocynthin, from colocynthis; digitalin, from digitalis; glycyrrhizin, from licorice root; helleborin, from hellebore root; jalapin, from resin of jalap; salicin, from willow bark; scammonin, from scammony resin; tannin, from various barks, leaves, etc.

**Glucosin′.** A base obtained by the action of ammonia on glucose ptomains.

**Gluco′sis.** Glycosuria; diabetes mellitus.

**Glucosu′ria.** Glycosuria.

**Glucu′simide.** Saccharin.

**Glue band′age.** A bandage used in the treatment of fractures; glue, diluted with alcohol, being applied over an ordinary roller. **G. bone**, osteocolla. **G. car′tilage**, chondrin. **G. fish**, ichthyocolla. **G.-like tu′mor**, glioma.

**Glu′ge's cor′puscles.** Cells or corpuscles which have experienced fatty degeneration.

**Glu′side** or **glu′sidum.** Saccharin.

**Glu′tæal.** Gluteal.

**Glutæoperinea′lis.** Relating to the glutæus muscle and perineum. Unusual origin of the muscular fibres of the superficial transversus perinæi from the fascia of the glutæus maximus.

**Glutæ′us** (*gloutos*, buttock). Gluteal muscle. **G. accesso′rius**, accessory fasciculi of the glutæus medius. **G. mag′nus** or **ma′jor** or **max′imus**, muscle situated at the posterior part of the pelvis and at the upper and posterior part of the thigh; large, thick, and quadrilateral, and attached above to the posterior part of the crista ilii, to the part of the ilium comprised between the crista and the upper curved line, to the posterior surface of the sacrum, coccyx, and great sacrosciatic ligament; and below it terminates by a broad aponeurosis inserted into the rugged surface descending from the trochanter major to the linea aspera of the femur. This muscle extends the thigh on the pelvis and rotates the thigh outward, and is greatly concerned in station and progression. **G. me′dius**, muscle situated in part beneath the preceding; broad, very thick, radiated, and triangular; attached above to the crísta ilii, and to the part of the outer surface of that bone between the three anterior fourths of its crista, its upper curved line, and its lower; and below it ends by a tendon inserted at the upper edge of the great trochanter. It is an abductor of the thigh, but can turn the thigh outward or inward according as its posterior or inferior fibres are thrown separately into contraction. **Mid′dle g.**, g. medius. **G. min′imus** or **mi′nor**, muscle situated beneath the preceding, flat, triangular, and with radiated fibres; attached above to the external surface of the os ilii from the inferior curved line to the acetabulum, and below inserted into the anterior part of the great trochanter. It has the same uses as the preceding. **G. min′imus accesso′rius**, small occasional muscle in front of g. minimus, passing from the anterior portion of the ilium to the great trochanter of the femur. **G. pri′mus**, g. magnus; tensor fasciæ latæ. **G. profun′dus**, iliotrochantericus parvus. **G. quar′tus**, g. minimus accessorius; iliacus minor. **G. secun′dus**, g. medius. **G. superficia′lis**, iliotrochantericus medius. **G. ter′tius**, g. minimus.

**Glutam′ic, glutan′ic,** or **glutamin′ic acid.** Acid produced by the splitting up of proteids. See *Amidoglutaric acid.*

**Glutar′ic acid.** $C_5H_8O_4$. An acid resulting from the decomposition of pus.

**Glu′teal.** That which belongs or relates to the nates or to the glutæi muscles. **G. aponeuro′sis**, upper and back part of the femoral fascia. **G. arch**, opening in the g. aponeurosis for the passage of the gluteal vessels and nerves. **G. ar′tery**, posterior iliac artery; one of the largest branches of the hypogastric artery. It makes its exit from the pelvis at the upper part of the superior sciatic foramen, gains the posterior part of the pelvis, and divides into two branches, the superficial and deep-seated. The latter subdivides into three secondary branches, whose ramifications are distributed particularly to the glutæi, longissimus dorsi, sacrolumbalis, etc., and anastomose with the sciatic and internal circumflex arteries. **G. ar′tery, infe′rior**, sciatic artery. **G. ar′tery, supe′rior**, gluteal artery. **G. bur′sa**, see *Bursa glutæi.* **G. fold**, crease or fold between the nates and the thigh. **G. fur′row**, deep groove between the nates. **G. lines**, curved lines of the ilium. **G. mus′cles**, see *Glutæus.* **G. nerves**, branches of the sacral plexus, chiefly distributed to the glutæi muscles. **G. re′flex**, contraction of the gluteal muscles upon irritation or application of sudden blows to the skin of the nates, from the action of the spinal centre in the lumbar region. **G. re′gion**, region of the nates. **G. ridge**, prominence on the femur for the attachment of the glutæus maximus. **G. tuberos′ity**, g. ridge. **G. veins**, branches of the internal iliac vein following the course of the gluteal artery.

**Glu′ten** (glue, paste). Vegetable gluten, vegetable casein; soft, grayish-white, viscid in consistence, and very elastic; a combination of four protein substances. Water and alcohol do not dissolve it, but it is soluble in vegetable acids and in weak mineral acids at a high temperature. Also anything glutinous, as the plasma of blood. **An′imal g.**, fibrin. **G. articulo′rum**, synovia. **G. ca′sein**, vegetable casein found in gluten; it is insoluble in alcohol. **G. fi′brin**, substance immediately precipitated after the evaporation of a solution of gluten in alcohol.

**Gluteofas′cial bur′sa.** Bursa between tendon of the glutæus maximus and origin of the vastus externus.

**Gluteofem′oral.** Relating to the gluteal and femoral regions. **G. crease**, gluteal fold.

**Gluteoperinea′lis.** See *Glutæoperinealis.*

**Gluteotrochanter′ic.** Relating to the gluteal region or muscle and the trochanter. **G. bur′sa,**

bursa between the gluteus maximus muscle and great trochanter of the femur.

**Glute′us.** Glutæus.

**Glutin′.** Gelatin; gliadin.

**Glu′tinant** (*glutino*, to glue). Agglutinant.

**Glutina′ria.** Saliva.

**Glutina′tion.** Agglutination.

**Glu′tinative.** Agglutinative.

**Glu′tinose.** Glutinous.

**Glu′tinous** (*gluten*, paste, glue). Viscid, sticky.

**Glutin′-pep′tone sub′limate.** White powder prepared by treating gelatin with hydrochloric acid; it contains corrosive sublimate; used hypodermically in the treatment of syphilis. It is stated that it does not cause abscesses or much pain.

**Gluti′num.** Gluten; glue.

**Gluti′tis.** Inflammation of the gluteal muscles.

**Glu′toform** or **glu′tol.** Formaldehyde gelatin. A mixture of solution of gelatin and solution of formaldehyde; dried and used as an antiseptic dusting-powder.

**Glutophthis′is.** Wasting away of the gluteal muscles; phthisis due to abscess in the gluteal region.

**Glutopyo′sis** (*glutoi*, nates, *pyosis*, suppuration). Suppuration of gluteal muscles.

**Glut′ton** (*glutio*, to gulp down). An excessive eater.

**Glut′tony.** Excess in eating or drinking.

**Glycæ′mia.** Glykæmia.

**Gly′camyl** (*glycerin* + *amylum*, starch). Glycerite of starch.

**Glycan′sis** (*glykys*, sweet). Act of sweetening.

**Gly′case.** Glucase.

**Glyc′erate.** Glycerin ether; glycerole; glycerite.

**Glyceride**, glis′er-ide. Combination of glycerin and an acid; a salt of glyceryl.

**Glycerin**, glis-er-in′ (*glykys*, sweet). Sweet principle of fats and oils, from which it is obtained by their decomposition. Chemically, it is glycerylic alcohol, $C_3H_5(HO)_3$, or hydrate of the triatomic radical glyceryl, $C_3H_5$; colorless, odorless, syrupy liquid; sp. gr. 1.25. It is soluble in water and alcohol, but not soluble in ether, chloroform, or oils. It has also received the names glyceric alcohol, hydrate of glyceryl, glyceryl, or propenyl. It is used externally in cutaneous diseases, as psoriasis, pityriasis, lepra, and ichthyosis. It keeps the parts moist, as it does not evaporate readily. Solutions of other substances in glycerin have been variously styled glyceroles, glycerins, glycerates, and glycerites. Its solvent powers are remarkable, a very large number of dissimilar substances being soluble in it. It is thus a valuable excipient for medicines. It is official in the Ph. U. S. and Br. under the name *glycerinum*, and a number of solutions of various substances in glycerin are official under the same name in the Ph. Br., the equivalent term in the Ph. U. S. being *glyceritum* or glycerite. Internally, glycerin is alterative and nutritive, and has been prescribed as a substitute for cod-liver oil; dose, ʒj–ij (4.0–8.0). **G. jel′ly**, a mixture of glycerin and gelatin, employed in mounting histological preparations, and also in making bougies.

**Glyceri′num.** (Ph. U. S. and Br.) Glycerin, glycerite. The following glycerina are official in the Ph. Br.: **G. ac′idi bor′ici**, glycerin of boric acid, contains 6 parts in 20. **G. a. carbol′ici**, glycerin of carbolic acid, 20 per cent. **G. a. tan′nici**, glycerin of tannic acid, 20 per cent. **G. am′yli**, glycerin of starch, 12½ per cent. **G. bora′cis**, borax glycerin, 1 part in 6. **G. pepsi′ni**, pepsin glycerin, 1 part in 12; dose, ʒss–ij (2.0–8.0). **G. plum′bi subaceta′tis**, glycerin of the subacetate of lead, of the same strength as Goulard's extract. **G. tragacan′thæ**, tragacanth glycerin, used in making pills.

**Gly′cerite.** Glyceritum.

**Glyceri′tum.** The official (Ph. U. S.) name of various solutions in glycerin, corresponding to glycerinum of the Ph. Br. The following are official: **G. ac′idi carbol′ici** is composed of carbolic acid 20 gm., glycerin 80 gm. **G. a. tan′nici** is composed of tannic acid 20 gm., glycerin 80 gm. **G. am′yli** is a soft, gelatinous substance containing 10 per cent. of starch. **G. boroglyceri′ni** is composed of boric acid 310 gm., glycerin q. s. to make 1000 gm. **G. hydras′tis** is composed of hydrastis 1000 gm., glycerin 500 c.c., alcohol and water, each q. s. to make 1000 c.c. **G. vitel′li**, glycerite of yelk of egg, made of 45 parts of fresh yelk of egg and 55 parts of glycerin. Such an emulsion, under the name of *glyconin*, has been used in France for medicinal and toilet purposes. The U. S. official glycerite may be used as a vehicle for cod-liver oil and as an external protective application in burns, erysipelas, skin diseases, etc.

**Glycerobo′rate.** Compound of glycerin and a borate. See *Boroglyceride.*

**Glycerol**, glis′er-ole. Glycerin. Also a combination of glycerin with some other remedial agent. **G. trini′trate**, nitroglycerin.

**Glyc′erolate.** Glycerite.

**Glycerophos′phates.** Combinations of glycerin and phosphoric acid; used in neurasthenia, locomotor ataxia, phosphaturia, Addison's disease, etc., and some forms of paralysis. Those of calcium, of sodium, of iron, and of lithium are employed.

**Glycerophosphor′ic acid.** Result of mixture of 1 part of phosphoric acid (sp. gr. 1.45) and 1½ parts of glycerin (sp. gr. 1.24). Yellow, soluble, odorless liquid; used in nervous prostration, tabes dorsalis, etc., in doses of two to five grains.

**Glycerose**, glis′er-oze. $C_3H_6O_3$. A form of sugar.

**Glyceryl**, glis′er-il. $C_3H_5$. The hypothetical radical of glycerin.

**Glycin′.** Glycocoll.

**Glyci′ne ab′rus.** Abrus precatorius. **G. ap′ios**, Apios tuberosa. **G. tril′oba**, E. Indian species; purgative.

**Glycipic′ros.** Solanum dulcamara.

**Glyco-, Glycy-** (*glykys*, sweet). In composition, sweet.

**Glycochol′ic acid** (*chole*, bile). Chief acid of bile. $C_{26}H_{43}NO_6$.

**Gly′cocoll** (*kolla*, glue). Amido-acetic acid; sugar of gelatin; albuminous principle produced by the action of caustic alkalies on gelatin or meat.

**Glycofor′mal.** A mixture of an aqueous solution of formaldehyde and glycerin. It is applied by an atomizer; is a very efficient disinfectant.

**Glycogelatin′.** An excipient for ointments made by mixing glycerin and gelatin.

**Gly′cogen.** Animal starch, animal dextrin, hepatic dextrin, liver starch. The peculiar white carbohydrate, resembling inulin, in liver, placenta, muscles, testicles, cartilage, and tissues of embryo. It is isomeric with starch. Sugar produced by its transformation is identical with grape-sugar.

**Glycogen′esis.** Generation or formation of sugar, as in the liver.

**Glycogen′ic** or **Glycogenous**, gli-coj′e-nous. Relating to glycogen.

**Glycogeny**, gli-koj′en-e. Glycogenesis.

**Glycohæ′mia.** Glykæmia.

**Gly′col.** One of a series of thick liquids which have qualities and chemical reactions resembling to some extent monohydric alcohol and trihydric glycerol.

**Glycolam′ine.** Glycocoll.

**Glycoleucin′** (*leukos*, white). White, sweet substance from the brain.

**Glycol′ysis.** Decomposition of glucose.

**Glycolyt′ic.** Decomposing glucose; said of certain ferments.

**Gly′cone.** Suppository of glycerin.

**Glyconin′.** Glyceritum vitelli.

**Glycopolyu′ria.** Diabetes mellitus with excess of uric acid in the blood.

**Glycoproteids**, gli-ko-pro′te-ids. Proteids combined with carbohydrates, as in mucins. See *Glucoproteid.*

**Glycorrhœ′a.** Elimination of saccharine matter, as in the urine. **G. urino′sa**, diabetes mellitus.

**Glycosæ′mia.** The presence of glucose in the blood.

**Glycosam′ine.** See *Glucosamine.*

**Glycosol′veol.** Antidiabetin.

**Glycosom′eter.** Instrument for measuring the amount of glucose in urine, based on the reduction of cupric tartrate by the latter.

**Glycosu′ria** (*ouron,* urine). Passage of saccharine urine; diabetes mellitus.

**Glycosu′ric acid.** Acid occasionally found in urine, turning it black after standing awhile.

**Glycothymolin′.** A combination of glycerin, thymol, and other antiseptics employed as a local application in rhinitis, nasopharyngitis, etc.

**Gly′cozone.** A stable preparation made of chemically pure glycerin combined with 15 times its own volume of ozone at 0° C. Its density is 1260 grammes. A stimulant to healthy granulations; used in catarrhal and other gastrointestinal affections; gastric ulcer, etc.

**Glycuron′ic acid.** $C_{16}H_{10}O_7$. Acid in urine resembling glucose as regards polarized light, and found in urine after the use of chloral, camphor, chloroform, etc.

**Gly′cyl.** Glyceril. **G. hy′drate,** glycerin.

**Glycypik′ron.** Bittersweet; dulcamara.

**Glycyramarin′.** Bitter principle from glycyrrhiza.

**Glycyrrhetin′.** Resinous matter from the action of acids on glycyrrhiza; glucoside of glycyrrhiza.

**Glycyrrhi′za** (*glykys,* sweet, *rhiza,* a root). The official (Ph. U. S. and Br.) name of the root of G. glabra, licorice or liquorice root. The root of this Southern European plant, G. glabra, ord. *Leguminosæ,* has a sweet taste, is mucilaginous, and used as a demulcent, chiefly in catarrh. The following are the official preparations: *Extrac′tum glycyrrhi′zæ, e. g. flu′idum,* and *e. g. pu′rum,* see *Extractum. Glycyrrhizi′num ammonia′tum,* see this name. *Mistu′ra glycyrrhi′zæ compos′ita,* brown mixture, see *Mistura. Pul′vis glycyrrhi′zæ compos′itus,* compound licorice powder, see *Pulvis. Trochis′ci glycyrrhi′zæ et o′pii,* see *Trochisci.* **G. echina′ta,** source of Russian licorice. **G. glab′ra,** glycyrrhiza. **G. glandulif′era,** variety of G. glabra. **G. lepido′ta,** species found in Western United States.

**Glycyrrhi′zic acid.** Active ingredient of glycyrrhiza, in which it exists in the form of glycyrrhizate of ammonia.

**Glycyrrhizin′.** Glucoside of glycyrrhiza.

**Glycyrrhizi′num ammonia′tum.** (Ph.U.S.) Dark brown, soluble substance, used as a substitute for licorice; dose, gr. v–xv (0.32–1.0).

**Glycyrrhœa,** glis-ir-rhe′ah (*glykys,* sweet, *rheo,* to flow). Discharge of saccharine matter from the system, as in **G. urino′sa,** diabetes mellitus.

**Glykæ′mia.** The presence of sugar in the blood.

**Glyp′tic** (*glypho,* to carve). Carved; in good shape. **G. for′mula,** chemical formula indicating precise interconnection and other relations of atoms in a molecule.

**Glyzi′na.** Glycyrrhizinum ammoniatum.

**Gmeli′na arbo′rea.** Verbenaceous tree of Malabar; root is bitter, tonic, stomachic; employed in dyspepsia, dropsy, gout, malarial fevers, gonorrhœa, etc. **G. asiat′ica,** mucilaginous plant of E. Indies, used as demulcent expectorant. **G. parvifo′lia,** same locality, order, and properties as G. asiatica. **G. villo′sa,** E. Indian tree with astringent root.

**Gmel′in-Heintz reac′tion.** Gmelin's test.

**Gmel′in's test.** Color test for bile-pigments, consisting of the production of colors of the spectrum by adding yellow or fuming nitric acid to bile.

**Gnapha′lium.** A genus of plants, ord. *Compositæ.* **G. califor′nicum,** California plant with astringent properties. **G. canes′cens,** Mexican plant; astringent, emollient, and expectorant. **G. congloba′tum,** European species; expectorant. **G. dioi′cum,** Antennaria dioica. **G. macroceph′alum,** white balsam plant, everlasting life, grows in California; diuretic, anodyne, diaphoretic, and hypnotic. **G. margarita′ceum,** cudweed, pearly life everlasting; indigenous plant. **G. plantaginifo′lium** or **plantagin′eum,** Antennaria plantaginifolia, and **G. polyceph′alum,** common everlasting, sweet-scented life everlasting, catfoot, are astringent, diaphoretic, and anodyne. **G. ro′seum** is a bitter tonic; **G. sprange′lii,** a California species, is astringent, and **G. viravi′ra,** of Chile, is diaphoretic and antipyretic.

**Gnathal′gia** (*gnathos,* jaw, *algos,* pain). Facial or maxillary neuralgia.

**Gnathankylo′sis.** Ankylosis of the lower jaw.

**Gnathantropol′ypus.** Polypus of the antrum of Highmore.

**Gnathan′trum.** Antrum of Highmore.

**Gnath′ic** (*gnathos,* jaw) Relating to the jaw or cheeks. **G. in′dex,** index of comparison of basialveolar length with basinasal, the latter being assumed at 100.

**Gnath′ion.** Mental point; most projecting point in the middle line of the lower jaw on the anterior inferior border.

**Gnathi′tis.** Inflammation of the cheek or upper jaw.

**Gnatho-.** In composition, the jaw or cheek.

**Gnathoceph′alus** (*gnathos,* jaw, *kephale,* head). Monster with very small head, but excessively large jaws.

**Gnathodynamom′eter** (*gnathos,* jaw, *dynamis,* power, *metron,* measure). Instrument to measure the force of closure of the jaws.

**Gnathogram′ma.** Groove on the face from the middle of the cheek to the nose.

**Gnathoneural′gia.** Facial or maxillary neuralgia.

**Gnathoparal′ysis.** Paralysis of the lower jaw, due to an affection of the inferior maxillary nerve.

**Gnathopharynge′us.** See *Constrictores pharyngis.*

**Gnath′oplasty.** Plastic surgery of the cheek and jaw.

**Gnathople′gia** (*gnathos,* jaw, *plege,* a stroke). Paralysis of the portion of the trifacial nerve, supplying the muscles of mastication.

**Gnathorrha′gia** (*rhegnymi,* to burst forth). Hemorrhage from the internal surface of the cheeks or jaws.

**Gnathoschisis,** nath-os′kis-is (*gnathos,* jaw, *schisis,* fissure). Fissure of the jaw.

**Gnath′ospasm.** Trismus.

**Gnath′us.** Cheek; jaw.

**Gne′thum fumicula′re.** Species of fir in the E. Indies; alterative and antipyretic.

**Gnid′ia imber′bis** and **G. pinnifo′lia.** Two species of genus *Thymelæaceæ,* of S. Africa; both purgative.

**Gnid′ium.** Daphne gnidium.

**Gnoscopine′.** Unimportant, white acicular alkaloid of opium, $C_{34}H_{36}N_2O_{11}$, in mother liquor after purification of narceine.

**Gno′sis.** Knowledge; common suffix, as in *prognosis.*

**Go′a** (city in India) **ipecacuan′ha.** Naregamia. **G. pow′der,** substance deposited in Andira araroba of Brazil, from which chrysarobin is extracted.

**Goagur′re.** E. Indian wood of varieties of strychnos.

**Goat bush.** Castela nicholsonii, bark of which is a bitter tonic like quassia. **G. pep′per,** Capsicum frutescens. **G. stones,** Orchis mascula.

**Goat's beard.** Tragopogon. **G.'s milk,** see *Milk.* **G.'s rue,** Galego officinalis; Tephrosis virginiana. **G.'s thorn,** Astragalus verus. **G.'s weed,** Capraria bifloria; astringent, in infusion.

**Gob′let cells.** Beaker cells; cells having shape of a goblet found among cells of epithelium of mucous membranes, as in the alimentary canal. (See cut under *Cell.*) **Emet′ic g.,** see *Calix vomitorius.*

**Go′craw.** Gokhree.

**God's mark.** Mark once placed on houses in England as a sign that the plague was there.

**God′frey's cor′dial.** Celebrated anodyne mixture, for which the following form was recommended by a committee of the Philadelphia College of Pharmacy: tincturæ opii, Oiss; syrupi nigri, Oxvj; alcoholis, Oij; aquæ, Oxxvj; potassii carbonatis, ʒijss; olei sassafratis, fʒiv.

**God′man's fas′cia.** A fascia extending from the pericardium upward to the root of the neck.

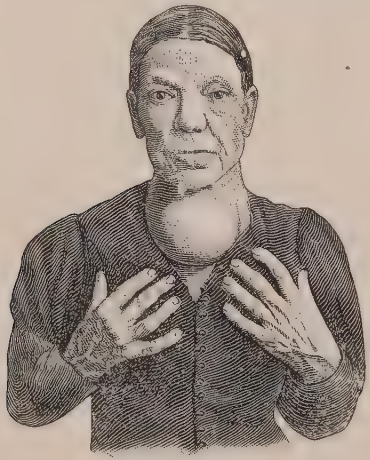
**Go′emin.** Neutral substance resembling isinglass, resulting from precipitation from decoction or mucilage of Chondrus crispus by alcohol.

**Goethe's bone.** Bone formed from the supraorbital bone by failure in the closure of the transverse suture.

**Gog′gle-eyed.** Exophthalmus.

**Gog′gles.** Close spectacles in framework accurately fitting the exterior of the eye.

**Go′go.** Plant of W. Africa; cathartic and vermifuge.



Goitre, associated with acromegaly. (Murray.)

**Goi′tre** (*guttur*, throat). Bronchocele; enlargement of the thyroid gland. **Aber′rant g.**, enlargement of an accessory thyroid gland. **Aë′rial g.**, bronchocele communicating with the trachea; localized emphysema of the neck. **Am′yloid g.**, form of goitre with amyloid degeneration of the vessels and glands. **Anæ′mic g.**, exophthalmic goitre. **Aneurys′mal g.**, pulsating g. with dilated vessels. **A′queous g.**, cystic g. **Calca′reous g.**, g. with calcareous degeneration. **Can′cerous g.**, cancer of the thyroid gland. **Col′loid g.**, cystic g. having colloid matter in its interior. **Cys′tic g.**, g. made up of cysts containing aqueous or gummy matter. **Exophthal′mic g.**, see *Exophthalmic*. **Fi′broid** or **fi′brous g.**, g. from hypertrophy of connective tissue and subsequent obliteration of the glandular structure from pressure. **Follic′ular g.**, g. with increased development of follicles and adjacent connective tissue. **Gelat′inoid g.**, colloid g. **Gland′ular g.**, follicular g. **G. leaf**, see *Laminaria digitata*. **Lu′nar** or **men′strual g.**, sudden rapid enlargement of the thyroid gland before or during menstruation. **Os′seous g.**, calcareous g. **Parenchy′matous g.**, follicular g. **Perivas′cular g.**, a bronchocele surrounding an important blood-vessel. **Pitu′itary g.**, goitrous degeneration of the pituitary gland. **Puer′peral g.**, g. forming during gestation and disappearing after delivery. **Pul′sating g.**, g. with arterial pulsation; exophthalmic g. **Scir′rhous g.**, fibrous g. **Se′rous g.**, cystic g. **Retrovas′cular g.**, a bronchocele which is crossed anteriorly by a large blood-vessel. **Soft gland′ular g.**, follicular g. **G. sticks**, the stems of a seaweed in S. America chewed by the inhabitants where goitre prevails. **Sto′ny g.**, calcareous g. **Unilat′eral g.**, g. in which only one lobe or side of the thyroid gland is involved. **Vas′cular g.**, g. with varicose condition of the veins or aneurysm. **Vesic′ular g.**, aërial g.

**Goit′rous.** Relating to goitre; one affected by goitre.

**Gok′rhu.** Gokeroo. Fruit of Pedalium murex, of the E. Indies. Demulcent, diuretic, and diluent.

**Go′la.** Kola.

**Golcoïn′.** Glyconin.

**Gold** (symbol Au). Aurum; a solid, yellow, brilliant, hard, ductile, malleable, tenacious, and heavy metal, found in nature either in native state or combined with a little silver, copper, or iron; sp. gr. 19.3. Its salts have been given as a tonic, alterative, antisyphilitic, etc. The official (Ph. U. S.) salt is the double chloride of gold and sodium (*auri et sodii chloridum*), a deliquescent, orange-yellow powder; dose, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.0032–0.0065). It has been used in syphilis, exostoses, and in venereal, scrofulous, and cancerous glandular enlargements. Also a name of *Calendula officinalis*, or marigold. **G. ar′senate**, mixture of chloride of gold and sodium and neutral arsenate of sodium; has been used in nervous diseases. **G. bro′mide**, auri bromidum; a non-official salt, occurring in deliquescent, orange-red crystals; dose, gr. $\frac{1}{5}$–$\frac{1}{2}$ (0.013–0.032). **G. chain**, Sedum acre; Cytisus laburnum. **G. chlo′ride**, auri chloridum; a non-official salt, occurring in deliquescent, orange-red crystals; dose, gr. $\frac{1}{100}$–$\frac{1}{20}$ (0.0006–0.0032). **Cohe′sion of g.**, the property possessed by pure annealed gold of welding while cold. **G.-cure**, a secret method of treating chronic alcoholism, alleged to be by means of gold chloride; also called the Keeley cure. **Crys′tal g.**, precipitated g. **G. leaf**, gold-foil, used to gild pills and to fill carious teeth. **G. monobro′mide**, yellowish-gray substance used as a nervine and an antispasmodic in epilepsy. **G. monocy′anide**, yellow powder with the formula AuCN; said to be useful in tuberculosis. **Non-cohe′sive g.**, g. that cannot be welded while cold. **Plat′inous g.**, g. alloyed with a small percentage of platinum. **G. thread**, Coptis trifolia. **White g.**, Chrysanthemum leucanthemum. **Yel′low g.**, Chrysanthemum segetum.

**Gold′-beater's skin.** Peritoneal coat of the large intestine of the ox, beaten quite thin in the manufacture of gold-leaf, being placed between the plates of gold. Used as a defensive dressing for slight cuts, etc.

**Gold′en bug.** Coccinella septempunctata. **G. chain**, gold chain. **G. flow′er**, chrysanthemum. **G. knop**, Coccinella septempunctata. **G. rag′weed**, Senecio aureus. **G. rod**, Solidago virgaurea. **G. rod, fragrant**, Solidago odora. **G. rod, rig′id**, Solidago rigida. **G. rod, sweet-scented**, Solidago odora. **G. seal**, yellow-root, Hydrastis canadensis. **G. sene′cio**, Senecio aureus. **G. show′er**, Cytisus laburnum. **G. shrub**, Palicourea speciosa. **G. staphylococ′cus**, S. pyogenes aureus. **G. sul′phur**, antimony pentasulphide. **G. sul′phuret of an′timony**, antimony pentasulphide. **G. thread**, Coptis trifolia.

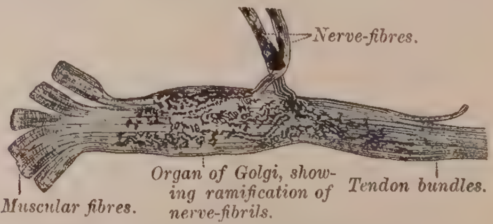
**Gold′ens, Gold′ings,** or **Golds.** Chrysanthemum leucanthemum; Calendula officinalis.

**Gold′flam's disease′.** Pseudoparalytic myasthenia. Asthenic glossolabiolaryngeal paralysis.

**Gold′scheider-Marines′co's law.** The smaller the amount of stimulation a neuron receives the smaller the amount of degeneration.

**Gold′thread.** Coptis.

**Gol′gi's cells.** Nerve-cells in gray nervous matter. **G.'s cor′puscles**, fusiform corpuscles, like Pacini's, found in tendons. **G.'s fun′nels**, spiral threads around axis-cylinder of myelinic nerve-



Organ of Golgi (neurotendinous spindle) from the human tendo Achillis. (Ciaccio.)

fibre. **G.'s meth'od,** mode of staining with silver to exhibit the processes of neurons. **G.'s or'gans,** G.'s corpuscles.

**Gol'gi-Mazzo'ni's cor'puscles.** Peripheral endings of a sensory nerve, similar to Meissner's tactile bodies.

**Gol'gi-Rezzoni'co's fun'nels.** See *Golgi's funnels.*

**Golindri'na** or **Gollindrina'ra.** Euphorbia prostata; E. polycarpa, species of opercularia of Peru having antipyretic properties.

**Goll's col'umn.** A bundle of white fibres in the median subdivision of the posterior columns of the spinal cord; Burdach's column, or cuneiform column. **G.'s nu'cleus,** clavate nucleus. **G.'s tract,** G.'s column.

**Gol'land.** Ranunculus; Chrysanthemum segetum.

**Gol'onboff's sign.** Intense pain over the spleen, with pain elicited by percussing over the ends of the long bones in chlorosis.

**Goltz's exper'iment.** Stopping the action of the frog's heart by striking over the abdomen.

**Gom'bo.** Hibiscus esculentus.

**Gomorte'ga** or **Gomorte'gia nit'ida.** Aromatic tree of Chile; leaves are astringent; fruit is eaten for food.

**Gom'phia.** Button flower. **G. angustifo'lia,** E. Indian plant; root is aromatic and bitter; leaves are used in gastralgia. **G. hexasper'ma,** Brazilian plant; bark is astringent. **G. malabar'ica,** plant of Malabar; leaves are antiperiodic, and root and bark are used externally in cutaneous affections. **G. obtusifo'lia,** roots and leaves of this plant of Jamaica are tonic and stomachic. **G. ova'lis,** plant of Brazil; root is used in toothache.

**Gomphi'asis** or **Gomphias'mus** (*gomphos,* nail). Looseness of the teeth in their sockets; toothache.

**Gomphocar'pus cris'pus.** S. African plant, the root of which, formerly known to the Dutch apothecaries as radix asclepiadis crispæ, is extremely bitter and acrid; diuretic; infusion used in dropsy, tincture in colic. **G. fructico'sus,** Cape cotton shrub; wild Australian cotton plant; plant of Africa, adulterant of senna. **G. peduncula'tus,** plant resembling G. crispus in therapeutic effect.

**Gom'phodont** (*gomphos,* nail, *odous,* tooth). Having teeth set in sockets.

**Gompho'ma.** Gomphosis.

**Gompho'sis.** Immovable articulation, in which one bone is received into another, like a nail or peg into its hole; as articulations of the teeth with the alveoli, or styloid process into the vaginal process of the temporal bone. Impaction of the fetal head.

**Gomphre'na.** A genus of herbs, ord. *Amarantaceæ.* **G. macroceph'ala,** species of Brazil, having therapeutic action of G. officinalis. **G. officina'lis,** herb of Brazil, root of which is stimulant and tonic in dyspepsia, colic, diarrhœa, dysentery, malarial fevers, etc. **G. procum'bens,** leaves of this Mexican plant are used as cataplasms in ulcers and other sores; root is tonic and astringent.

**Gom'phus.** Clavus.

**Gomu'to palm** or **Gomu'tos gomu'to.** Tree of East Indies yielding a sweet juice called toddy.

**Gonacra'sia** or **Gonacra'tia** (*gone,* semen, *a,* priv., *kratos,* power). Spermatorrhœa.

**Go'nads.** Sexual organs.

**Go'næ.** Genitals.

**Gonag'ra** or **Gonyag'ra** (*gony,* knee, *agra,* seizure). Gout or rheumatism in the knees.

**Gonal'gia** or **Gonyal'gia** (*gony,* knee, *algos,* pain). Pain in the knee, generally gout, but it may depend on some other disease, either of the knee or of another part, particularly of the hip-joint.

**Gonarthri'tis** (*gony,* knee, *arthron,* joint + *itis*). Inflammation of the knee-joint.

**Gonarthrocace,** gon-ar-throk'as-e (*gony,* knee, *arthron,* joint, *kakos,* bad). White swelling of the knee; hydrarthrus.

**Gonarthromeninigi'tis** (*gony,* knee, *arthron,* joint, *meninx,* membrane). Inflammation of the synovial membrane of the knee.

**Gonarthrot'omy** (*gony,* knee, *arthron,* joint, *tome,* incision). Operation of opening the knee-joint.

**Gonatal'gia.** Gonalgia.

**Gonatorrheu'ma.** Gout or rheumatism in the knee.

**Gon'ecyst** or **Gonecys'tis** (*gone,* semen, *kystis,* bladder). Vesiculæ seminales.

**Gonecysti'tis.** Inflammation of the vesiculæ seminales.

**Gonecyst'olith** (*lithos,* stone). Calculus of a seminal vesicle.

**Gonecyston'cus** (*onkos,* tumor). Swelling of vesiculæ seminales.

**Gonecystopyo'sis** (*pyon,* pus). Suppuration of vesiculæ seminales.

**Gonepoie'sis.** Secretion or production of semen.

**Gonepoiet'ic** (*poieo,* to make). Augmenting the secretion of semen. Exciting the venereal orgasm.

**Gongro'na.** Bronchocele. Ganglion.

**Gon'gyloid** (*gongylos,* round). Round like a ball.

**Go'nic** (*gone,* semen). Relating to sperm.

**Goniom'eter** (*gonia,* angle, *metron,* measure). Instrument for measuring angles, as facial angle.

**Go'nion** (*gonia,* angle). Outer side of angle of lower jaw taken as a craniometrical point.

**Gonio'sis.** Weak pulse, result of exhaustion.

**Goniozygomat'ic in'dex.** Index of relation of bigoniac and bizygomatic diameters of cranium.

**Goni'tis** (*gony,* knee). Inflammation of the knee.

**Gonobo'lia** or **Gonob'olism** (*gone,* semen, *bole,* throwing). Ejaculation of sperm.

**Gonob'olus conduran'go.** Condurango.

**Gonocace,** gon-ok'a-se (*gony,* knee, *kakos,* evil). White swelling of the knee; hydrarthrus.

**Gon'ocele** (*gonos,* semen, *kele,* tumor). Spermatocele; swelling of the testicles and cord. Also swelling of the knee (*gony,* knee).

**Gon'ocide.** Destructive to the gonococcus.

**Gonococ'cus of Neis'ser.** Micrococcus gonorrhœæ.

**Go'nocyte** (*gonos,* seed, *kytos,* cell). Ovum in interior of which is female pronucleus. **Male g.,** spermatozoid.

**Gonodis'cus.** Proligerous disk.

**Gonohæ'mia.** General gonorrhœal infection.

**Go'noid.** Similar to sperm; spermatoid.

**Gonol'obus conduran'go.** Shrub of South America; bark is an alterative and stomachic tonic. **G. macrophyl'lus,** indigenous; root is cathartic; the juice is an arrow poison. **G. obli'quus,** juice of this plant of Central United States is emetocathartic.

**Gon'ophore** or **Gonoph'orus** (*gonos,* semen, *phoreo,* to carry). That part of the genital system which serves to conduct the sperm or ovum.

**Gonophyse'ma** (*gony,* knee, *physema,* distention). Distention or emphysema of the knee-joint.

**Gonopoie'sis.** Secretion or production of semen.

**Gonopoiet'ic.** Augmenting secretion of sperm.

**Gonorrhoblepharrhœ'a.** Gonorrhœal ophthalmia.

**Gonorrhœ'a** (*gonos,* semen, *rheo,* to flow, because the old writers believed it to be a flux of semen). A specific inflammation, accompanied by a discharge of mucus and pus from the membrane of the urethra in man and of the vagina more especially in woman. It is caused by infection with the gonococcus, or micrococcus of Neisser. Inflammation of the bladder and of the testicles frequently occurs during acute gonorrhœa, and stricture of the urethra may follow a chronic gonorrhœa. In women the disease often extends throughout the genital tract, causing metritis and pyosalpinx, to the ovaries. Gonorrhœal rheumatism may also occur. Inflammatory symptoms usually subside, when untreated, in four or five weeks, sometimes leaving behind more or less gleet. When it affects the glans penis, gonorrhœa is called g. balani or præputialis, balanoblennorrhœa, balanorrhœa, balanitis, external clap; when implicating both the glans and the prepuce it is called balanoposthitis.

In consequence of repeated attacks of gonorrhœa, or of a single prolonged attack, it not infrequently happens that a constant, small discharge remains.

This discharge consists of globular particles contained in slimy mucus, and is generally devoid of the yellow color characterizing the discharge of acute gonorrhœa. It is unattended with pain, scalding, etc. This is called gleet, gonorrhœa longa or chronica, gonorrhœa mucosa, blennorrhœa longa or chronica, blennorrhœa, etc. It is commonly a disease of some duration. It is usually infectious, however; and indeed, even when the discharge has entirely ceased, and for years thereafter, the secretions contained in the ejaculated fluid during coitus may contain the gonococcus and infect the woman. **Ante′rior g.**, gonorrhœa of the anterior portion of the urethra, from the meatus to the triangular ligament. **G. bal′ani**, g. spuria, gonorrhœal balanitis. **G. benig′na**, non-specific urethritis. **G. catarrha′lis**, pseudogonorrhœa; urethritis. **G. chorda′ta**, chordee. **G. chron′ica**, gleet. **G. contagio′sa**, specific gonococcal urethritis. **G. dormien′tium**, seminal discharge during sleep, and occasioned by libidinous dreams. **G. impu′ra**, specific gonorrhœa acquired during an impure connection. **G. laxo′rum**, pellucid discharge from the urethra while awake, without erection, but with venereal thoughts. **G. libidino′sa**, g. laxorum. **G. lon′ga**, gleet. **G. malig′na**, specific g. **G. muco′sa**, gleet. **G. non-contagio′sa**, non-specific urethritis. **G. no′tha**, non-specific urethritis; leucorrhœa. **G. oneirog′onos**, g. dormientium; pollution. **Poste′rior g.**, gonorrhœa of the posterior portion of the urethra, from the triangular ligament to the posterior border of the prostate gland. **G. præputia′lis**, gonorrhœal posthitis. **G. sic′ca**, urethritis without discharge. **G. spu′ria**, balanitis. **G. vene′rea** or **G. virulen′ta**, specific gonorrhœa.

**Gonorrhœ′al** or **Gonorrho′ic.** Relating to or resulting from gonorrhœa.

**Gonorrhœ′ococcus.** Gonococcus.

**Gonorrhoprostati′tis.** Inflammation of prostate gland accompanying gonorrhœa.

**Gonorrhorchi′tis.** Gonorrhœal inflammation of the testicles.

**Gon′ose.** Containing semen.

**Gonostro′ma** (*gonos*, seed, *stroma*, bed). Proligerous disk.

**Gonostromat′osore** (*gonos*, offspring, *stroma*, layer, *soros*, heap). See *Cumulus.*

**Gonotoxæ′mia.** Generalized gonorrhœal infection.

**Gonotoxin′.** Toxin elaborated by the gonococcus.

**Gonyag′ra** (*gony*, knee, *agra*, seizure). Gout or rheumatism in the knee.

**Gonyal′gia** (*algos*, pain). Pain in the knee.

**Gonyan′con** (*gony*, knee, *ankon*, curvature). Curvature or bending of the knee.

**Gonycamp′sis** (*gony*, knee, *kampsis*, curvature). Curvature or bending of the knee.

**Gonyc′rotus** (*gony*, knee, *kroteo*, to strike). One who is knock-kneed or in-kneed.

**Gonyectypo′sis** (*ektyposis*, raising up). Curvature of the knee outward; genu varum.

**Gon′yocele** (*gony*, knee, *kele*, tumor). Tumor or swelling of the knee.

**Gonyon′cus** (*gony*, knee, *onkos*, tumor). Tumor or swelling of the knee.

**Gonyorrheu′ma.** Gout or rheumatism of the knee.

**Good King Harry** or **Henry.** Chenopodium bonus Henricus.

**Goodell′s′ law** or **sign.** "When the cervix is as hard as one's nose, pregnancy does not exist; when it is as soft as one's lips, pregnancy is probable."

**Goodye′ra pubes′cens** (after Goodyer, English botanist). Adder's violet, rattlesnake leaf, rattlesnake plantain, networt, netleaf, scrofula leaf or weed, cancer weed; ord. *Orchidaceæ.* Indigenous plant, the fresh leaves and roots of which are applied to scrofulous sores.

**Goose′berry.** Ribes uva crispa.

**Goose′bill.** Galium aparine.

**Goose′flesh.** Horrida cutis.

**Goose′foot.** Chenopodium anthelminticum. **Angular-leaved g.**, Chenopodium bonus Henricus. **Mer′cury g.**, Chenopodium bonus Henricus. **Stinking g.**, Chenopodium vulvaria.

**Goose′grass.** Galium aparine, G. verum, Polygonum aviculare.

**Goose′grease.** Adeps anserinus.

**Goose′pimples.** See *Horrida cutis.*

**Goose′share** or **Goose′tongue.** Galium aparine.

**Goose′skin.** Horrida cutis.

**Gor′dius medinen′sis.** Dracunculus.

**Gorge.** Fauces. Lower part of the neck. The female bust.

**Gor′get.** Instrument representing a long gutter, in the shape of a throat, especially employed in operations of lithotomy and fistula in ano, and in operations within the vagina. **Cut′ting g.**, lithotomy gorget. **G. for fis′tula in ano**, this consists of a semicylindrical wooden or metal staff, four inches long, without including the handle, and furnished with a wide groove; introduced into the rectum to prevent the point of the bistoury from injuring the intestine when the internal orifice of the fistula is deeply situated. **Lithot′omy g.**, cutting gorget; this is used in operation for the stone, to divide the prostate and neck of the bladder, to enable the surgeon to introduce the forceps and extract the stone. Besides cutting gorgets, there are also blunt gorgets, intended to be introduced into the wound, their concavity serving as a guide for the forceps into the bladder.

**Gor′ham′s pu′pil photom′eter.** Instrument consisting of a bronzed tube, one end of which is closed by a cap which is perforated with holes. The cap is provided with a slot; on the cylinder the distance between each pair of holes is marked.

**Go-sin-ju.** See *Evodia glauca.*

**Gos′selin′s frac′ture.** Fracture of lower extremity of tibia, involving the ankle-joint.

**Gos′sum.** Bronchocele.

**Gossypiin′.** Extract from cotton-root bark, having emmenagogue properties.

**Gossyp′ii rad′icis cor′tex.** (Ph. U. S. and Br.) Bark of the root of *Gossypium herbaceum.* The official preparation is the fluid extract, *extractum gossypii radicis fluidum;* it is used as a substitute for ergot as an emmenagogue and oxytocic; dose, ʒss–j (2.0–4.0).

**Gossyp′ium.** (Ph. U. S. and Br.) The hairs of the seed of G. herbaceum, ord. *Malvaceæ.* Seeds of the cotton tree, Gossypium arboreum, have been administered in coughs, on account of the mucilage they contain, and a decoction of a pint of the seeds to a quart of water has been given in the Southern States in intermittents. The bark of the root is official in Ph. U. S. under the name gossypii radicis cortex. It is emmenagogue and abortifacient; a fluid extract is official, and a decoction of the root is also used. Cotton-wool, cotton, *gossypium purificatum* (Ph. U. S.), is used in medicine for making moxas, etc., and is applied in the treatment of recent burns and scalds, as a surgical dressing in abscesses and suppurating surfaces, etc. Saturated with glycerin, glycerized cotton, it has been employed as a dressing for wounds, ulceration of the os uteri, etc.; impregnated with iodoform, boric acid, corrosive sublimate, etc., it is employed as a surgical dressing; see *Cotton.* It has been applied, bound with a bandage, over glandular enlargements, especially scrofulous swellings of children. Oil from the seed, *oleum gossypii seminis* (Ph. U. S.), has been used as a substitute for olive oil in liniments, ointments, lead plaster, etc. **G. barbaden′se** grows in E. and W. Indies and United States; infusion is galactagogue. **G. depura′tum**, absorbent cotton. **G. ful′minans**, pyroxylin. **G. hæmostat′icum**, styptic cotton. **G. herba′ceum**, cotton plant, principal source of India cotton; gossypium. **G. ioda′tum**, iodized cotton. **G. purifica′tum**, absorbent cotton. **G. salicyla′tum**, salicylated cotton. **G. styp′ticum**, hæmostatic cotton.

**Gos′sypol.** A derivative from gossypium, resembling tannin.

**Gott′stein's ba′sal pro′cess.** Thin process of outer hair-cell, which is connected with basilar membrane of Corti's organ.

**Goua′nia dominguen′sis** or **gla′bra.** Chewstick or chawstick shrub of Jamaica, ord. *Rhamneæ*. Stomachic tonic, chewed by the natives. Used in infusion as a mouth-wash. The juice is tonic. **G. leptostach′ya,** leaves are employed as cataplasms for ulcers and sores.

**Gouge.** Curved chisel.

**Goulard's′ ce′rate** (after the proposer). Ceratum plumbi subacetatis. **G.'s ex′tract,** liquor plumbi subacetatis. **G.'s lo′tion,** liquor plumbi subacetatis dilutus. **G.'s solution** (lead-water), liquor plumbi subacetatis dilutus. **G.'s water,** liquor plumbi subacetatis dilutus.

**Gould's bowed-head sign.** In some forms of retinal inflammation or disease, the patient inclines his head downward, so as to bring the image on the appreciative portion of the retina.

**Goun′dou.** A disease marked by two ovoid osseous tumors, one on each side of the root of the nose. It occurs among the natives of the West Coast of Africa, usually attacking young subjects. The growths consist of spongy or areolar tissue covered with a thin layer of compact bone, and may destroy sight and smell by encroachment upon the orbits and nasal cavities.

**Gou′ra.** Cucurbita lagenaria and C. ovifera; kola nut.

**Gourd.** Cucurbita. **Bit′ter g.,** Cucumis colocynthis. **Bot′tle g.,** Cucurbita pepo. **Sour g.,** Adansonia digitata. **Tow′el** or **wash′ing g.,** Luffa ægyptiaca.

**Gourd′worm.** Distoma hepaticum.

**Gousset's** (goo-says′) **symp′tom.** A well-marked painful spot in neuralgia of the diaphragm located at the right of the fourth or fifth articulation of the ribs and sternum.

**Gout.** Gout received its name from (Fr.) *goutte*, drop, because believed to be produced by a liquid which is distilled drop by drop on the diseased part. Name was first used about 1270. Gout is an inflammation of the fibrous and ligamentous parts of the joints, and is accompanied by an excess of uric acid and deposits of urate of sodium in and around the joints. It generally attacks, first, the great toe, whence it passes to the other smaller joints, producing or being attended with sympathetic phenomena, particularly in the digestive organs; after this it may attack the greater articulations. It is extremely fugitive and variable in recurrence, and may be acquired or hereditary. In the former case it rarely appears before the age of thirty-five; in the latter it is frequently observed earlier. It is often difficult to distinguish it from rheumatism. Pathologically and etiologically the distinction between the affections variously designated gout, rheumatism, rheumatic gout, chronic rheumatism, chronic gout, rheumatoid arthritis, arthritis deformans, etc., has not yet been satisfactorily made. During the paroxysm of gout a burning, lancinating pain is experienced in the affected joint, with tumefaction, tension, and redness. One or more joints may be attacked either at the same time or in succession, and in either case the attack terminates by resolution in a few days. This is acute, inflammatory, or regular arthritis, regular gout, or podagra. At other times pains in the joints exist of more or less acute character, the swelling being without redness. These pains persist, augment, and diminish irregularly without exhibiting intermission, and consequently without having distinct paroxysms. The disease is then called atonic, asthenic, imperfect, or irregular, or chronic gout. It may appear primarily or succeed attacks of regular gout.

Gout may also attack internal organs, when it is called arthritis aberrans or erratica, podagra aberrans, wandering, misplaced, or anomalous gout. Retrograde or retrocedent, abarticular, extra-articular, flying, recedent, or displaced gout, arthritis or podagra retrocedens, is when it leaves the joints suddenly and attacks some internal organ, as the stomach, intestines, lungs, brain, etc.; the term *arthritis uratica* has been applied also to gout resulting from abnormal exudations of urates into the articular cavities and the parenchyma of the cartilage, bones, etc., bounding the joints.

Gout is also called, according to the part affected, podagra, gonagra, chiragra, etc. It may be acute or chronic, and give rise to concretions, arthritic calculi, chiefly composed of urate of sodium, or to nodosities, when it is called arthritis nodosa. See *Arthritis deformans*.

**Abartic′ular g.,** gout attacking the stomach or other of the internal organs; retrograde g. **Acute′ g.,** see *Gout*. **Anom′alous g.,** that which attacks unusual regions. **Artic′ular g.,** see *Gout*. **Asthen′ic** or **aton′ic g.,** chronic gout; see *Gout*. **Car′diac g.,** gout affecting the heart and inducing irregularity of its action, disturbing the circulation, producing dyspnœa, etc. **Cer′ebral g.,** gouty apoplexy, apoplectiform cerebral gout, gouty meningitis; various cerebral symptoms connected with or dependent upon the gouty diathesis, mainly those of cerebral disease due to other causes. **Chron′ic g.,** see *Gout*. **Diaphragmat′ic g.,** angina pectoris. **Displaced′ g.,** retrocedent g. **Extra-artic′ular g.,** abarticular or retrograde g. **Fly′ing g.,** see *Gout;* acute rheumatism. **Gastroenter′ic g.,** gastroenteric symptoms occurring during gouty attack. **Irreg′ular g.,** retrocedent gout; see *Gout*. **Lar′val, la′tent,** or **masked g.,** painful symptoms, as headache, indicating a general gouty diathesis, without the usual symptoms of localized pain, heat, redness. **Lead g.,** gouty symptoms occurring in cases of lead poisoning. **Metastat′ic g.,** retrograde, wandering, or retrocedent gout; see *Gout*. **Misplaced′ g.,** anomalous g. **Neural′gic g.,** painful affections dependent upon gouty diathesis, sometimes cerebral in their manifestations. **Œdem′atous g.,** g. in which there is swelling without other local symptoms of gout, as pain, redness, or heat. **Poor man's g.,** g. caused by exposure, insufficient food, the use of malt liquors, etc. **Rece′dent g.,** see *Gout*. **Reg′ular g.,** acute gout. **Retroce′dent** or **Ret′rograde g.,** see *Gout*. **Rheumat′ic g.,** see *Gout* and *Rheumatism*. **Spi′nal g.,** vertebral gout. **Sthen′ic g.,** acute gout, see *Gout*. **G. stones,** arthritic calculi. **Suppressed′ g.,** retrograde gout. **Topha′ceous g.,** g. with formation of bony or cartilaginous growths around extremities of bones, with deposits of sodium urate on the cartilages of the joints, and subcutaneous concretions. **Ver′tebral g.,** chronic deformative inflammation of the vertebræ, attended with surface pains, difficulty of movement, induration, etc. **Wan′dering g.,** anomalous g.

**Gout′weed** or **Gout′wort.** Ægopodium podagraria; Ligusticum podagraria.

**Gout′y.** Arthritic; podagric. **G. diath′esis** or **hab′it,** condition of the system predisposing to gout; uric acid diathesis. **G. iri′tis,** iritis associated with a gouty condition. **G. kid′ney,** granular kidney. **G. liv′er,** interstitial hepatitis. **G. meningi′tis,** cerebral gout. **G. tem′perament,** a temperament closely resembling the sanguine except that there is apt to be poor digestion, the hair turns gray early, and the subject is prone to the joint troubles and skin lesions of the gouty.

**Gow′an.** Name applied in Scotland to several yellow flowers. **Ewe g.,** daisy; Bellis perennis. **Horse g.,** matricaria; Chrysanthemum leucanthemum; Leontodon taraxacum. **Milk g.,** Leontodon taraxacum. **Yel′low g.,** ranunculus; daisy; dandelion.

**Gow′er's col′umn.** Ascending anterolateral tract of spinal cord, Gower's tract. **G.'s interme′diate pro′cess,** process of gray matter in dorsal region of spinal cord. **G.'s symp′tom,** irregular oscillation of the iris under stimulus of light, met with in tabes dorsalis. **G.'s tract,** G.'s column.

**Gow′land's lo′tion.** Solution, principal ingredients of which are bitter almonds, corrosive sublimate, and alcohol.

**Gown, red.** Scrophulus. **Yel′low g.,** icterus infantum.

**Goy′rand's her′nia.** Inguino-interstitial hernia. **G.'s opera′tion,** operation for tying internal mammary artery through a peculiar angular incision near the border of the sternum.

**Graa′fian fol′licles or ves′icles.** Folliculi graafiani. **G. o′viduct,** Fallopian tube.

**Gracila′ria lichenoi′des.** Fucus amylaceus; Gigartina lichenoides.

**Gracilis,** gras′il-is. Slender, lean. Slender rectus interior or internus femoris muscle situated at the inside of the thigh; thin and very long, and arising from the descending ramus of the pubes, to be inserted at the inner and inferior part of the tuberosity of the tibia. It bends the leg and causes adduction of the thigh. **G. ante′rior,** rectus femoris in animals. **G. bi′ceps,** occasional form of gracilis muscle, in which it has two heads of origin. **G. inter′nus** or **ischiofemora′lis,** muscle corresponding in some animals to the human quadratus femoris. **G. par′vus,** Oxyuris vermicularis.

**Gracil′limus oc′uli** or **or′bitæ.** Slender separate fasciculus of the obliquus superior muscle of the eye. **G. su′ræ,** plantaris.

**Grad′uate** (*gradus*, step, degree). One who has attained a university degree in course. In pharmacy, a glass marked for measuring purposes.

**Grad′uated** (*gradus*, degree). Divided or marked off in degrees. **G. com′press,** a compress formed of pieces gradually diminishing in size, the smallest piece being applied directly to the affected surface.

**Grae′fe's disease′.** Progressive ophthalmoplegia. **G.'s opera′tion,** modified linear extraction for cataract; the long, slender knife used in the operation is called *Graefe's knife*. **G.'s sign** or **symp′tom,** distinct motion of the globe of the eye apart from that of the eyelid. **G.'s spots,** points near the supra-orbital foramen or over the vertebræ, pressure on which causes relaxation of blepharospasm.

**Graft.** To unite a part to another, so that it may receive support from it; to engraft. The operation is called grafting or engrafting. To transplant living tissue to other parts, in order to supply loss of surface, etc. The part so transplanted is also called a *graft*. Nerves and tendons may be grafted as well as skin. **An′imal g.,** transplantation of tissue from one of the lower animals to man. **Autoplas′tic g.,** a graft made with tissue taken from the subject's own body. **Bone g.,** a piece of bone transplanted from another part or from an animal. **Der′mic g.,** skin graft. **Epider′mic g.,** transplantation of larger or smaller pieces of the epidermis only, not involving the entire skin. **Heteroplas′tic g.,** a graft made with tissue taken from another person than the subject. **Omen′tal g.,** transplantation of a strip of omental tissue to strengthen the line of suture in an intestinal operation. **Skin g.,** see *Skin grafting*. **Sponge g.,** use of antiseptic sponge in grafting to supply a basis for the granulations. **Ten′don g.,** see *Tendon grafting*. **G.-the′ory,** theory of the causation of diseases which supposes that contagious particles are portions detached from a living being modified by a disease process, and capable of impressing on the healthy organism with which they come in contact changes similar to those which preceded their own modification in the body from which they were detached. **Thiersch's g.,** a skin graft formed of epidermis with the superficial layer of cuticle. **Thy′roid g.,** see *Thyroid*. **Zoöplas′tic g.,** animal graft.

**Gra′ham's law.** The rate of diffusion through a membrane is in inverse ratio to the square root of the density of a gas.

**Grain.** Sixtieth part of a Troy drachm = 0.06479 gramme. Granule. **Guin′ea g.,** see *Pepper, Malaguetta*. **G. of par′adise,** Amomum granum paradisi, A. malagueta. **G. oil,** fusel oil; amylic alcohol. **Oil′y g.,** Sesamum orientale. **G. poi′soning,** ergotism.

**Grain′-founder** or **Grain-sick.** Excessive impaction of the stomach of the horse with food.

**Gram.** Gramme. **G.-mol′ecule,** see *Gram-molecule*.

**Gram's meth′od.** Method employed for staining bacteria. To a filtered saturated solution of anilin oil in water a saturated alcoholic solution of gentian-violet is added until slight opalescence appears; the sections are first soaked in absolute alcohol for ten minutes, and then allowed to remain in the staining solution for from one to three minutes. **G.'s reac′tion,** the staining of bacteria by Gram's method. **G.'s solu′tion,** solution of iodine and iodide of potassium in which slides are placed containing bacteria for examination by Gram's method.

**Gra′ma.** Triticum repens.

**Gramal′la.** Cassia fistula.

**Gram′en** (grass). Triticum repens. **G. ægypti′acum,** G. crucis cyperioidis. **G. al′bum, arven′se,** or **cani′num,** Triticum repens. **G. cru′cis cyperioi′dis,** Ægyptian cock's-foot grass; roots and plants possess the virtues of Triticum repens, and have been used in the earlier stages of dropsy. **G. dioscor′idis,** Triticum repens. **G. in′dicum,** Andropogon muricatus. **G. ma′jor,** Sarsaparilla germanica. **G. orienta′le,** Juncus odoratus. **G. re′pens,** Triticum repens. **G. ru′brum,** Sarsaparilla germanica.

**Gram′ia.** See *Lippitudo*.

**Graminiv′orous** (*gramen*, grass, *voro*, to eat). Feeding or substituting on grass.

**Gramme.** Edge of the cornea; iris. Line. The weight of a cubic centimetre of distilled water, 15.43234 grains, Troy.

**Grammi′tis au′rea.** Asplenium ceterach. **G. cet′erach,** Asplenium ceterach.

**Gram-molec′ular solu′tion.** A solution containing in one litre the weight of one atom or molecule expressed in grammes (gram-molecule) of the active chemical; thus, a g.-m. solution of hydrochloric acid (see *Gram-molecule*) contains 36.4 grammes of the pure acid diluted to make one litre at 0° C.

**Gram-mol′ecule.** The weight of one atom or molecule of the active chemical, expressed in grammes; thus, taking the molecular weight of hydrochloric acid as 36.4, a g.-m. contains 36.4 grammes.

**Gram-neg′ative.** Not staining by Gram's method.

**Gram-pos′itive.** Staining by Gram's method.

**Gra′na** (pl. of granum). Hemicrania. **G. coccognid′ii,** mezereon fruit. **G. gnid′ii,** mezereon fruit. **G. guineen′sia,** Malaguetta pepper. **G. lentis′ci,** buds of Pistacia lentiscus; astringent and tonic. **G. malaguet′ta, meliguet′ta,** or **meniguet′ta,** Grana paradisi. **G. moluc′ca** or **molucca′na,** Croton tiglium. **G. moscha′ta** or **mos′chi,** Hibiscus abelmoschus. **G. orien′tis,** see *Menispermum cocculus*. **G. paradi′si,** see *Amomum granum paradisi*. **G. re′gia,** seeds of Ricinus communis. **G. sylves′tra,** cochineal insects. **G. tig′lii** or **tig′lia,** see *Croton tiglium*. **G. til′ii,** Croton tiglium. **G. tritic′ea,** lesser cornua of the hyoid bone.

**Granadil′la, ap′ple-shaped** (dim. of *granada*, pomegranate). Passiflora maliformis. **G. cæru′lea,** Passiflora cærulea.

**Grana′ti flo′res** (*granum*, because full of grains or seeds). Pomegranate flowers. **G. fruc′tûs cor′tex,** see *Punica granatum*. **G. radi′cis cor′tex,** see *Punica granatum*.

**Granatin′.** Substance derived from bark of root of Punica granatum, having a laxative effect; also from rind of unripe pomegranate.

**Granatonine′.** Pseudopelletierine.

**Granatotan′nic acid.** Tannic acid derived from pomegranate bark.

**Grana′tum.** (Ph. U. S.) Pomegranate; the bark of the root and stem of Punica granatum. Employed as an anthelmintic in doses of ℥ss–j (16.0–32.0) in decoction. The alkaloid, pelletierine, is also used for the same purpose; dose, of the tannate of pelletierine, gr. iij–v (0.2–0.32).

**Grancher's** (gron-shays′) **disease′.** Pneumonia with splenification of the lungs. **G.'s sign,** elevation of pitch of the inspiratory murmur in consolidation of the lungs. **G.'s tri′ad,** three symptoms believed to be an early indication of tuberculous disease of the lungs, viz., lessened vesicular murmur, augmented vocal fremitus, and tympanitic resonance.

**Grand mal.** See *Epilepsy.*

**Grandeb′alæ.** Hair in the arm-pits.

**Grandiflorine′.** Bitter, poisonous alkaloid from fruit of solanum.

**Grandino′sum os** (*grando*, hail). Cuboid bone.

**Gran′do** (hail). Chalaza. Cicatricula. Tubercle.

**Gran′dry's cor′puscles.** Tactile corpuscles of the skin of bills and tongue of certain birds and of the epidermis of the mammalia.

**Gran′gea maderaspata′na.** E. Indian species; tonic, antispasmodic.

**Granil′la.** Triticum repens.

**Graniv′orous** (*granum*, grain, *voro*, to eat). Feeding on grain or seeds.

**Grantris′tum.** Anthrax.

**Gran′ula** (pl. of granulum) **Pacchio′nii.** Pacchionian bodies. **G. san′guinis,** globules of the blood. **G. sem′inis,** seminal granules; see *Sperm.*

**Gran′ular.** Composed of or containing granules or small particles. **G. bod′ies of Donné,** colostrum corpuscles. **G. conjuncti′va** or **conjunctivi′tis,** trachoma, see *Conjunctivitis.* **G. degenera′tion** or **disorganiza′tion,** first stage of fatty degeneration. **G. degenera′tion of kid′ney,** a form of Bright's disease. **G. eye′lid,** trachoma. **G. forma′tion of Mey′nert,** layer of irregular ganglionic cells in cortical substance of brain. **G. kid′ney,** see *Kidney, Bright's disease of.* **G. lay′er,** membrana granulosa. **G. lay′er of ret′ina,** cerebral layer of retina. **G. lid,** trachoma. **G. liv′er,** cirrhosis. **G. ophthal′mia,** see *Ophthalmia.* **G. ova′rian cell,** granular cells in fluid of ovarian cysts. **G. pharyngi′tis,** see *Pharyngitis.* **G. tin,** see *Tin.* **G. vagini′tis,** see *Glandular vaginitis.*

**Gran′ulase.** Enzyme in grain and other substances which converts starch into achroödextrin and maltose.

**Gran′ulated.** Formed of granules; granular. **G. liv′er,** cirrhosis.

**Granula′tion.** One of the reddish, conical, fleshlike elevations on the surface of suppurating wounds and ulcers; they are formed of cells, intercellular substance, and blood-vessels. Also one of the minute, round, firm, shining, semitransparent tumors met with in the lungs particularly. Roughening of a surface with minute granular bodies, as in trachoma. In pharmacy, granulation is a process by which a metal is reduced to fine grains, by melting it, and causing it, while liquid, to pass through a sieve into a vessel of water, or by shaking or rubbing the melted metal in an appropriate vessel, as in the formation of granular tin or zinc. **Cer′ebral g.,** a Pacchionian body. **Exu′berant** or **fun′gous g.,** one of the large granulations bathed with thin, mucopurulent matter, the result of œdema of the part or due to abnormal plastic force. **Mil′iary g.,** miliary tubercle; small, transparent grain, of variable size—from a millet-seed to a grain of hemp —presumed to be the primitive state of tubercle. **G. tis′sue,** elementary form of embryonic tissue; met with also in ordinary granulations, and in the earliest stage of all rapidly developed new formations having their origin from connective tissue. The process of repair in cases of destruction of tissue, as by an abscess, is by this new formation of cells, intercellular substance, and blood-vessels developed from the tissues and vessels adjacent to the affected part. **G. tu′mor,** morbid product resulting from the partition and multiplication of the connective-tissue cells, forming groups of others resembling lymph-cells, lying in the intercellular substance; see *Granuloma.*

**Gran′ule** (dim. of *granum*, a grain). Small grain; small, compact particle; small cell mass; cytoblast. In pharmacy, small pill or globule. There are five varieties of granules found in leucocytes, designated by the letters of the Greek alphabet: *Al′pha g.,* coarse oxyphile or eosinophile g., large, highly refractive, fatty looking granules. *Be′ta g.,* amphophile g., fine granules, taking both acid and basic stains when used alone, but oxyphile when both dyes are employed together. *Gam′ma g.,* coarse basophile or mast-cell g., large granules with a strong affinity for basic stains. *Del′ta g.,* fine basophile g. occurring in polymorphonuclear leucocytes. *Ep′silon g.,* fine oxyphile or so-called neutrophile g., found in myelocytes and polynuclear leucocytes. **Brain g.,** nucleus of a cell of the gray substance of the brain. **Bet′telheim's g.,** see *Bettelheim.* **G. cells,** cells resulting from fatty degeneration of various cell-formations. **Cone g.,** nucleus of one of the retinal cells connected with the cones. **Element′ary g.,** minute protoplasmic mass in the blood. **Fe′male g.,** one of the particles into which the impregnated protonucleus divides. **G. lay′er,** layer of olfactory bulb; also layer of cortical substance of brain, each containing groups of small cells. **Male g.,** one of the particles into which the spermatozoon divides after having impregnated the ovum. **G. mas′ses of Schult′ze,** see *Globules.* **Malpi′ghian g.,** Malpighian corpuscle. **Neus′ser's g.,** see *Neusser.* **Sem′inal g.,** minute, rounded, granulated body observable in the semen.

**Granuli′tis.** Miliary tuberculosis.

**Granulo′ma.** Granulation tumor. **G. fungoi′des,** chronic cutaneous affection, consisting at first of flat, reddish, dry spots, afterward encrusted and converted into distinct tumors; mycosis fungoides. **Infec′tious g.,** infectious growth made up of granulation tissue. **G. innomina′tum,** necrotic g. **G. of the i′ris,** small, nodular tumor of the iris, of a tuberculous nature; some authors do not regard these tumors as tuberculous, but consider them to be granulomata; see *Tuberculous iritis.* **Necrot′ic g.,** condition of the skin characterized by nodules which undergo central necrosis. **G. sarcomato′des,** mycosis fungoides. **G. trichophyt′icum,** g. caused by the trichophyton, a parasitic fungus. **Syphilit′ic g.,** syphiloma.

**Gran′uloplasm.** See *Spongioplasm* and *Endosarc.*

**Gran′ulose.** Granular. Term also applied to a soluble carbohydrate, a constituent of starch, which is acted on by organic ferments, organic acids, and diluted mineral acids.

**Granulos′ity.** Collection of granular masses.

**Gran′ulous.** Granular.

**Gra′num.** Grain. **G. re′gium,** castor-oil seed.

**Gran′ville's lo′tion.** See *Lotion, Granville's counterirritant.*

**Grape.** Vitis vinifera. Grease of horses, marked by clusters of knots or knobs on the legs. Tuberculous growth on serous membranes of cattle. **Bear's g.,** Arctostaphylos uva ursi. **Cars′well's g.,** see *Carswell.* **Dy′er's g.,** Phytolacca decandra. **Europe′an g.,** Vitis vinifera. **False g.,** Ampelopsis quinquefolia. **Moun′tain** or **Or′egon g.,** Berberis aquifolium. **Sea′side g.,** see *Kino.* **G.-su′gar,** glucose.

**Grape-cure.** Medication consisting in the use of grapes for meat and drink, nothing more at the farthest being allowed than a piece of dry bread; and continued for weeks. Its effects are altogether revellent, and resemble in many respects those of hydrotherapy.

**Grape-su′gar.** Glucose.

**Grape-tree.** Varieties of coccoloba.

**Grape′wort.** Actæa spicata; Bryonia dioica.

**Graph′ic** (*grapho*, to write). Pertaining to the act of delineating, as automatic tracing. Written. **G. meth′od,** mode of studying diseases of the heart and great vessels by tracings of an instrument, the sphygmograph, for example.

**Graph′ites** (*grapho*, to write). Carburet of iron, black lead; astringent and desiccative, used externally in the treatment of herpes and other cutaneous affections.

**Graph'ium.** Pencil; a sound. **G. penicilloi'des,** form of fungus met with in the external auditory canal.

**Graph'oid** (*graphis,* style, *eidos,* resemblance). Styloid.

**Graphol'ogy** (*grapho,* to write, *logos,* description). Description of handwriting; diagnosis of certain nervous conditions of faulty coordination by handwriting of the patient.

**Graphoma'nia** (*graphe,* writing). Insane desire to write.

**Graph'omotor.** Relating to the movements executed in writing.

**Graph'oscope** (*grapho,* to write, *skopeo,* to see). Peculiar convex lens for treatment of asthenopia.

**Graph'ospasm** (*grapho,* to write, *spasmos,* spasm). Writers' cramp.

**Graptophyl'lum horten'se.** Caricature plant of Asia; bark and leaves are employed for dissipating glandular swellings.

**Grash'ey's apha'sia.** A form of aphasia, with mental disturbance, met with in concussion of the brain and other affections of that organ.

**Grass.** A plant of the order *Gramineæ.* Triticum repens. **Bear's g.,** Yucca filamentosa. **Bermu'da g.,** Cynodon dactylon. **Bit'ter g.,** Aletris farinosa. **Blue-eyed g.,** Sisyrinchium bermudianum. **Brome g.,** Bromus ciliatus. **Brome g., soft,** Bromus ciliatus. **Cana'ry g., cul'tivated,** Phalaris canariensis. **Couch g.,** Triticum repens. **Dog g.,** Triticum repens. **Eel g.,** Pila marina. **Egyp'tian cock's foot g.,** Gramen crucis cyperioidis. **Goat's g.,** scorzonera. **Knot g.,** Polygonum aviculare. **Lil'y g.,** Sisyrinchium bermudianum. **G. oil of Nemaur',** oleum graminis indici. **Phys'ic g.,** Sisyrinchium bermudianum. **Rib g.,** Plantago lanceolata. **Scur'vy g.,** Sisyrinchium bermudianum. **Silk g.,** Yucca filamentosa. **Sweet g.,** Acorus calamus. **G. tree,** xanthorrhœa. **G. tree resin,** resin from various species of xanthorrhœa, used in Australia for bowel affections. **Vi'per's g.,** scorzonera. **Yellow-eyed g.,** Xyris bulbosa.

**Grasset-Rauzier's** (gras-say'ro-ze-ays') **type.** A form of syringomyelia accompanied with disorder of the sweat glands and of the vasomotor system.

**Grass-stag'gers.** Paraplegia prevailing among horses or cattle.

**Gra'sus.** Cinabra; hircismus; bromidrosis.

**Gra'tia De'i.** Gratiola officinalis; Geranium pratense. **G. robertia'num,** scutellaria.

**Gra'ting.** Sound made by friction of rough surfaces against one another. A partition of bars or lattice-work. **Diffrac'tion g.,** see *Diffraction.*

**Grati'ola au'rea.** Indigenous; emetocathartic and diuretic. **G. carolinien'sis,** grown in the South and West; has medical properties of G. officinalis. **G. centauroi'des,** G. officinalis. **G. officina'lis,** hedge hyssop, herb of grace; European plant; inodorous, with strong, bitter, nauseous taste; anthelmintic, hydragogue cathartic, emetic, and diuretic; used in dropsy. **G. virginia'na,** indigenous plant with similar virtues.

**Gratiolacrin'.** Fatty resin from Gratiola officinalis.

**Gratiolaretin'.** $C_{34}H_{28}O_6$. See *Gratiolin.*

**Gratioletin'.** See *Gratiolin.*

**Gratiolet's** (grat-e-o-lays') **angle.** Coronofacial angle. **G.'s op'tic radia'tion,** nervous fibres connecting the optic centre in the occipital lobe with the posterior eminence of the optic thalamus and the external geniculate body.

**Gratiolin'.** Crystalline glucose obtained from Gratiola officinalis. When gratiolin is acted on by dilute sulphuric acid, gratioletin (crystalline), $C_{34}H_{28}O_{10}$, and gratiolaretin, $C_{34}H_{28}O_6$, both result.

**Gratiosoletin'.** See *Gratiosolin.*

**Gratiosolin'.** $C_{46}H_{42}O_{25}$. Bitter, amorphous glucoside from Gratiola officinalis. When treated with dilute acids a yellow, bitter substance, gratiosoletin, results.

**Grattage,** grat-tazh' (Fr.). Gentle curetting of the interior wall of the uterus with a brush.

**Grav'ative.** Weighty, as tumors.

**Grave** (*gravis,* heavy). Serious. **G. plant,** Datura sanguinea. **G. wax,** adipocera.

**Grave'do.** Catarrh; coryza. Cranial rheumatism. **G. neonato'rum,** snuffles.

**Grav'el.** A disease occasioned by small concretions, similar to sand or gravel, which form in the kidneys, pass along the ureters to the bladder, and are expelled with the urine. They are commonly composed of urates and animal matter, and are deposited at the bottom of the vessel immediately after the excretion of the urine. Vegetable diet and alkaline drinks are the best prophylactics. See *Calculi, urinary.* A "fit of the gravel" or renal colic is excruciating suffering induced by the passage of gravel from the kidney to the bladder. It can be relieved only by anæsthetics, opiates, warm bath, etc. Sometimes the deposit is in fine particles, like sand. See *Lithiasis.* **Bil'iary g.,** see *Cholelithiasis.* **Cystine' g.,** see *Cystine.* **G. grass,** Galium verum. **Hair'y g.,** pileous gravel. **Phosphat'ic g.,** phosphatic calculus. **Pi'leous g.,** species of gravel containing hairs, phosphate of lime, ammoniaco-magnesian phosphate, and a little uric acid. **G. plant,** Epigæa repens. **Red** or **u'ric-acid g.,** uric-acid calculus. **G. root,** Eupatorium purpureum; Collinsonia canadensis. **G. weed,** Onosmodium virginianum; Diervilla canadensis; Epigæa repens. **White g.,** phosphatic calculus.

**Grave'olens** (*gravis,* heavy, *oleo,* to smell). Fetid.

**Graves's disease'.** Exophthalmic goitre. **G.'s sign,** increased systolic impulse in the incipient stage of pericarditis.

**Grav'id** (*gravis,* heavy). Pregnant. **G. u'terus,** uterus during any period of pregnancy.

**Gravidin'.** White sediment in the urine of pregnant women, which is said, by its decomposition, to give rise to the pellicle kyestein.

**Grav'idism.** Pregnancy or condition symptomatic of pregnancy.

**Gravid'itas.** Gravidity.

**Gravid'ity.** Pregnancy; gestation.

**Gravim'eter** (*gravis,* heavy, *metron,* measure). Areometer. Instrument for ascertaining specific gravity.

**Gravimet'ric.** Applied to a method of chemical analysis by which the weights of the different constituents are determined; opposed to volumetric.

**Gravim'etry.** Measurement of specific gravity.

**Gra'vis.** Heavy. **G. o'dor puer'peri,** heavy odor peculiar to the lochial discharge.

**Grav'ity, specif'ic.** See *Specific gravity.*

**Gra'witz's tu'mor.** A tumor formed from suprarenal tissue; a lipomatoid tumor of the kidney.

**Gray.** Between black and white in shade. **G. at'rophy,** degeneration of the spinal cord and nerves in tabes dorsalis, the white matter becoming gray. **G. col'umn,** Clarke's column. **G. com'missure,** see *Spinal commissure.* **G. degenera'tion,** g. atrophy. **G. lo'tion,** lotio nigra or black wash. **G. mat'ter of brain,** vesicular or cortical substance of the cerebrum and cerebellum; see *Neurine.* **G. m., infraventric'ular,** gray nervous matter in the floor of the fourth ventricle. **G. m., interme'diate,** part of gray matter of spinal cord between the arteries and posterior cornua. **G. m. of op'tic lobe,** stratum opticum. **G. m. of pons,** gray matter of pons Varolii. **G. m., retic'ular,** reticulation of gray nervous matter, particularly of the medulla oblongata. **G. m., spi'nal,** gray matter of the spinal cord. **G. mill,** Lithospermum officinale. **G. oil,** a means of prescribing mercury; ʒij of lanolin is rubbed up with enough chloroform to emulsify it, and while the mixture is fluid ʒiv of metallic mercury is added, and the trituration continued; a weaker ointment, for hypodermic use, may be made by adding olive oil, about half and half. **G. pow'der,** hydrargyrum cum cretâ. **G. soap,** soap to which are added benzoinated fat and quicksilver.

**G. soft′ening,** softening of the brain or spinal cord from inflammation. **G. sub′stance,** g. matter.

**Gray-white micrococ′cus** (Bumen). Diplococcus albicans amplus.

**Grease.** Specific inflammation affecting the skin of the heels of the horse; eczema of feet of the horse. **Bar′row's g.,** adeps suillus. **Goose g.,** adeps anserinus. **G. pox,** see *Grease.*

**Green.** Of the color of grass or verdure in general. **G. bark,** bebeeru. **G. blind′ness,** blindness as to green colors. **G. bri′er,** Smilax rotundifolia; root is demulcent and diuretic. **G. drag′on,** Arisema dracontium; root is diaphoretic and expectorant. **Em′erald g.,** arsenite of copper. **French g.,** arsenite of copper. **G. groin,** gangrenous appendicitis. **G. leech,** Hirudo officinalis. **G. man,** Aceras anthropophora. **Par′is g.,** arsenite of copper. **Scheele's g.,** arsenite of copper. **Schwein′furth's g.,** arsenite of copper. **G. sick′ness,** chlorosis. **G. soft′ening,** softening of nervous substance, of a purulent character. **G. vit′riol,** ferrous sulphate. **G. wa′ters,** lochial discharge when prolonged.

**Green′heart.** Nectandra rodiæi. See *Bebeeru.*

**Green's opera′tion.** Operation employed in cicatricial entropion of the upper eyelid, occurring after trachoma.

**Green′stick frac′ture.** Incomplete fracture, the bone being bent, but broken only on the outer side of the curve.

**Green′weed.** Genista tinctoria.

**Gref′fotome** (*greffe,* graft, *tome,* incision). Knife specially made for the removal of skin grafts.

**Gregari′na** (*grex,* flock). Genus of *Protozoa,* family *Gregarinidæ.* See *Pleurococcus* and *Sporozoa.* **G. pulmona′lis** or **pulmo′num,** cysts and parasitic organisms in the lungs. Distoma Ringeri.

**Gregarino′sis.** Disease of fowls caused by parasitic organisms, gregarinæ.

**Greg′ory's pow′der.** Pulvis rhei compositus.

**Gre′mium.** Breast; lap.

**Grenadin′.** Form of mannite from Punica granatum.

**Gresso′rial** (*gradior, gressum,* to proceed). Having limbs adapted to walking; able to walk; ambulatory.

**Gressu′ra.** Perineum.

**Grew′ia mic′ros.** Species of *Tiliaceæ* growing in Ceylon; bitter, aromatic, and astringent. **G. orienta′lis,** E. Indian species; all parts are aromatic and bitter and antiarthritic. The berries and fruit of several other species, as *G. asiatica, G. elastica, G. sapida,* etc., are used in the manufacture of refreshing drinks, as sherbet.

**Grey.** Gray.

**Grib′ler's line.** Line connecting apparent origin of roots of fifth nerve. **G.'s paral′ysis,** crossed hemiplegia.

**Gri′elum.** Apium petroselinum; Smyrnium olusatrum.

**Grie′singer's disease.** Anæmia with dropsy, variously called dirt-eating disease, Egyptian chlorosis, etc., due to an intestinal parasite, Uncinaria duodenalis. **G.'s sign,** œdematous tumefaction back of the mastoid process in thrombosis of transverse sinus; compression of carotids is said to cause symptoms of cerebral anæmia in basilar thrombosis.

**Griff** or **Grif′fo.** See *Mulatto.*

**Grif′fith's base.** $C_{10}H_{17}N$. Ptomain obtained from cultures of the Bacterium allii. **G.'s mix′ture,** mistura ferri composita, Ph. U. S. **G.'s pills,** pilulæ ferri composita.

**Grinde′lia** (after D. H. von Grindel, of Dorpat). A genus of composite plants. Gum plant. The official (Ph. U. S. and Br.) name of the leaves and flowering tops of *G. robusta* and *G. squarrosa.* Antiperiodic, antispasmodic, stimulant to bronchial mucous membrane; used in asthma, chronic bronchitis, and whooping-cough. The official preparation is the fluid extract, *extrac′tum grinde′liæ flu′idum;* dose, ʒss–j (2.0–4.0). **G. glutino′sa,** California plant having somewhat similar properties to G. robusta. **G. hirsu′tala,** California plant recommended as an antidote to the poisonous effects of Rhus obtusifolia, the juice or a decoction being rubbed on the parts affected. **G. robus′ta,** official in Ph. U. S., grows in N. and S. America; leaves and flowering tops are employed; from it are obtained an oil having terebinthinate odor, a resin, and a bitter alkaloid, *grindeline′.* **G. squarro′sa,** snake-head grindelia, similar to G. robusta in physical and therapeutic properties; used also in hypertrophy of the spleen.

**Grind′ers.** Molar teeth.

**Grind′ers' asth′ma, disease′,** or **phthi′sis.** Pulmonary symptoms, resembling those of phthisis, caused by inhalation of particles thrown off during operation of grinding metallic substances.

**Grind′ing pains.** Pains of early stage of labor.

**Grip.** Grippe; influenza.

**Gripe** or **Gripes.** Pain, sometimes crampy, in the abdomen; tormina; colic. **Wa′tery g.,** popular name in England for cholera infantum.

**Gripho′sis** (*grypos,* bent). Curving inward, as of the nails.

**Grip′pal.** Relating to the grippe; influenzal.

**Grippe** (Fr., *gripper,* to seize). Epidemic catarrhal disease; influenza. It is often complicated with severe abdominal, cephalic, or thoracic symptoms, rheumatism, nervous exhaustion, and other morbid conditions. **Amer′ican g.,** myxœdema. **Intes′tinal g.,** epidemic influenza, the symptoms of which simulate those of typhoid fever.

**Grippotoxin′.** Toxin elaborated by the bacillus of influenza.

**Gris′lea tomento′sa.** Dried flowers of this E. Indian shrub are astringent and excitant, and applied externally to offensive ulcers.

**Grisolle's′ sign.** When the eruption of smallpox first appears, the papules continue distinct even over a tightly drawn skin.

**Gris′tle.** Cartilage.

**Grit.** Gravel.

**Grit′ti's amputa′tion.** Amputation of the inferior part of the thigh, the patella being included in the rectangular flap and sawn so as to be applied to the surface of the femur.

**Groan.** Sighing or suspiration accompanied by a peculiar vocal sound.

**Gro′cers' itch.** Eczema impetiginodes; psoriasis.

**Grog.** Spirits, water, and sugar. **G. blos′soms** or **ro′ses,** gutta rosea; acne rosacea.

**Groin.** Region of union of the anterior wall of the abdomen with the thigh. **Green g.,** gangrenous appendicitis.

**Grom′ell, Grom′well,** or **Gro′myl.** Lithospermum officinale.

**Grono′via scan′dens** (after Gronov, Dutch scientist). Plant of S. America; antisyphilitic.

**Groo′groo oil.** Concrete oil from fruit of Acrocomia sclerocarpa of S. America.

**Groove.** Furrow, sulcus, channel, linear excavation, or gutter. **Alveolin′gual g.,** g. between the tongue and the alveolar process of the lower jaw. **A′nal g.,** depressed surface in embryo indicating future location of anus. **Anterolat′eral g.,** groove on spinal marrow indicating place of exit of anterior roots of spinal nerves. **Auriculoventric′ular g.,** transverse furrow on the outside of the heart indicating division of that organ into auricles and ventricles. **Ax′ial g.,** medullary groove. **Bas′ilar g.,** g. on the inner surface of the basilar process of the occipital bone on which rest the pons Varolii and medulla oblongata. **Bicip′ital g.,** sulcus in the upper portion of the front of the humerus, chiefly for attachment of long tendon of biceps muscle. **Carot′id g.,** depression on the body of the sphenoid bone for the reception of the internal carotid artery and cavernous sinus. **Cav′ernous g.,** carotid groove. **Cor′neal g.,** see *Cornea.* **Den′tal g.,** slight longitudinal furrow on the margin of the jaw about the end of the second month of fetal life. **Dor′sal g.,** medullary groove. **Har′rison's g.,** see *Harrison.* **Horizon′tal g.,** peduncular sulcus. **Infraor′bital g.,** g. on the orbital surface of the upper jaw for the infraorbital artery and nerve. **Interme′diate g.,** furrow on the spinal cord in the cervical region near the posterior median fissure. **Lac′rymal g.,** sulcus for the lacrymal sac formed by the lacrymal sphenoid bones. **Mas′toid g.,** digastric fossa. **Med′ullary g.,** sulcus on the back part of the embryo in its early development, succeeding the primitive groove and becoming afterward the medullary tube. **Me′sal g.,** a longitudinal depression on the floor of the fourth ventricle. **Na′sal g.,** groove of nasal bone for nasal nerve; embryonic groove from the mouth to the nasal cavities. **Nasopal′atine g.,** a depression on the surface of the vomer where the nasopalatine nerve passes. **Neu′ral g.,** medullary groove. **Occip′ital g.,** groove on the mastoid process for the occipital nerve. **Olfac′tory g.,** depression in the cribriform plate of the ethmoid in which lies the olfactory bulb. **Op′tic g.,** groove on the body of the sphenoid bone for lodgment of the optic chiasm. **Posterolat′eral g.,** longitudinal groove on the medulla oblongata and spinal cord, indicating the place of exit of the posterior spinal roots. **Prim′itive g.,** primitive streak or trace; bright streak in the long axis of the pellucid part of the area germinativa, appearing when the latter presents a central pellucid and a peripheral opaque part, and passes from the round to the pear shape. **Scap′ular g.,** scapular notch. **Sib′son's g.,** see *Sibson.* **Sig′moid g.,** carotid groove. **Subcla′vian g.,** two depressions on the first rib, lodging the subclavian artery and vein. **Supe′rior g. of cerebel′lum,** peduncular sulcus. **G. of Syl′vius,** fissure of Sylvius. **Ventric′ular g.,** longitudinal furrow of the heart. **Ver′ga's g.,** see *Verga.* **Ver′tebral g.,** medullary groove.

**Grooved.** Canaliculated; having a small channel or gutter, as a grooved probe.

**Gross anat′omy.** Anatomy as studied from direct observation, without the aid of a microscope. **G. appear′ance,** appearance of organs or tissues, seen with the naked eye without the aid of the microscope. **G. le′sion,** a lesion coming under direct observation of the eye.

**Gross's disease.** Hypertrophic dilatation of the pouches of the rectum.

**Grossula′ria.** Ribes uva crispa. **G. ni′gra,** Ribes nigrum. **G. non-spino′sa,** Ribes nigrum. **G. ru′bra,** Ribes rubrum.

**Ground ber′ry.** Fragaria; Gaultheria procumbens. **G. bun′dle,** one of the two divisions of the antero-lateral tract of the spinal cord. **G. cen′taury,** Polygala sanguinea. **G. cher′ry,** Physalis viscosa. **G. hem′lock,** Taxus canadensis. **G. hol′ly,** gaultheria. **G. i′vy,** gaultheria, Glechoma hederacea. **G. lau′rel,** Epigæa repens. **G. line,** distance on skull between the basion and nasion. **G. ma′ple,** Heuchera americana. **G. nut,** Apios tuberosa, Arachis hypogæa, Bunium flexuosum, Aralia trifolia. **G.-nut oil,** expressed oil from the seeds of Arachis hypogæa, used in making plasters or cerates. **G. pine,** Teucrium chamæpitys. **G. pine, French,** Teucrium iva. **G. plum,** Astragalus caryocarpus; astringent. **G. sub′stance,** matrix.

**Ground′sel.** Senecio. **G. tree,** Baccharis halimifolia.

**Grouse′berry.** Gaultheria; Empetrum nigrum.

**Grove's cell.** See *Galvanic battery.*

**Grow′ing pains.** Dull, undefined pains, in the lower extremities especially, in young persons; often rheumatic in character or indicative of incipient hip-disease.

**Growth.** Development of the body, particularly in the direction of its height. Any adventitious tissue, as a morbid growth or tumor. See *Development.*

**Grub.** Larve. See *Ectozoa.*

**Gru′ber's bur′sa.** Synovial cavity of the sinus tarsi, an open groove between the astragalus and the calcaneum at the entrance to the tarsal canal. **G.'s reac′tion,** production of agglutination in a culture of Spirilla choleræ asiaticæ when added to the serum of an animal immunized against cholera. **G.'s test,** a test for the hearing, being the re-establishment of the sound of a tuning-fork, after it has ceased to be heard, by placing it on a finger previously introduced into the ear.

**Gru′ber-Widal′ reac′tion.** See *Widal's reaction.*

**Grubs.** Acne punctata; comedo.

**Gru′by's disease′.** Alopecia areata. Form of tinea tonsurans attacking children, and ascribed to Trichophyton microsporon.

**Gru′el.** A thin porridge made of corn meal or oat meal.

**Gru′mous** (*grumus,* clot). Clotted; thickened.

**Gru′tum.** Hard, white tubercle of the skin, resembling in size and appearance a millet-seed, on the eyelids, the root of the nose, the scrotum, or ear.

**Grym′felt's tri′angle.** A space in which lumbar hernia sometimes occurs, bounded by the twelfth rib, the inferior edge of the serratus posticus inferior, the anterior edge of the quadratus lumborum, and the posterior edge of the internal oblique.

**Gry′ochrome.** A nerve-cell having a well-defined body, the minute granules of which are readily stainable.

**Grypho′sis** or **Grypo′sis** (*grypos,* bent). Curvature or crookedness in general, or of the nails only, as in onychogryphosis.

**Guacam′phol.** Guaiacamphol.

**Guacetin′.** Guaiacetin.

**Guacha′ma** or **Guachama′ca.** Resinous extract from the milky juice and sap of the wood of a Venezuelan tree, which acts like curare, but more speedily, in controlling the convulsive action of the motor apparatus. *Guachamacine′,* its alkaloid, is identical with curarine.

**Guacin′.** Yellow, resinous matter from Mikania guaco; diaphoretic and cardiac stimulant.

**Gua′co.** Mikania guaco, growing in the valleys of the Madalena, Rio Cauca, etc., in S. America. Juice is used against the bites of poisonous reptiles, both in prevention and cure; tonic, stimulant, antispasmodic, antipyretic.

**Guæthol,** gu-eth′ol. $C_6H_4OC_2H_5OH$. Guaiacol-ethyl, oily fluid homologous with guaiacol, which it resembles in therapeutic action internally and externally; dose, gr. ij–v (0.13–0.32).

**Guai′ac.** Guaiacum. **G.-be′ta res′in,** a resinous principle obtained from guaiacum.

**Guaiacam′phol.** Camphoric acid ester of guaiacol. Used to check night-sweats and diarrhœa of phthisis.

**Guaiacetin′.** Result of action of chloracetic acid on pyrocatechin. Used as a substitute for guaiacol in tuberculosis of the lungs; dose, gr. v–viij (0.32–0.5).

**Guai′aci lig′num.** (Ph. U. S.) The official name of the heart-wood of Guaiacum officinale; dose, ʒj–ij (4.0–8.0) in decoction. **G. res′ina** (Ph. U. S. and Br.), resin of guaiac; dose, gr. v–xxx (0.32–2.0); see *Guaiacum.* The official preparations are: *Tinctu′ra guai′aci,* tincture of guaiac; dose, ʒss–j (2.0–4.0). *Tinctu′ra guai′aci ammonia′ta,* ammoniated tincture of guaiac; dose, ʒss–j (2.0–4.0).

**Guai′acic acid.** Acid derived from wood or resin of guaiacum.

**Guaiacin′.** A resinous principle obtained from guaiacum.

**Guai′acol.** $C_7H_8O_2$. Oily liquid constituting 60 to 90 per cent. of creosote. Product of dry distillation of guaiacum; ingredient of wood-tar creosote; obtained by fractional distillation of beechwood-tar creosote. Guaiacol has been employed as a substitute for creosote in the treatment of pulmonary tuberculosis. *Guaiacol carbonate* and *g. biiodide* have also been employed in tuberculosis. **G. ben′zoate,** benzosol, benzoyl-guaiacol; a tasteless, odorless powder; dose, gr. v–x (0.32–0.65). **G. bii'odide** or **bini'odide,** see *Guaiacol*. **G. cac'odylate,** cacodyliacol, occurs in whitish granules with a combined guaiacol and alliaceous odor; used in tuberculosis; dose, gr. ss–ij (0.032–0.13). **Cam'phorated g.,** combination of g. and camphor, employed in infectious bronchitis. **G. car'bonate,** duotal, produced by the action of phosgene gas on guaiacol sodium; a neutral, crystalline powder, insoluble in the stomach, but decomposed in the intestines; dose, gr. v–x (0.32–0.65). **G. carbon'ic acid,** produced by passing carbonic-acid gas over sodium guaiacol; a white, bitter powder having antiseptic properties; used also in rheumatism. **G. cin'namate,** occurs in white needles, the result of heating together guaiacol and cinnamyl chloride; used in phthisis and catarrh of the stomach and bowels; see *Styracol*. **G. eth'ylenate,** a guaiacol ethylene ester, having the same therapeutic action as guaiacol; dose, gr. viij–xv (0.5–1.0), twice a day. **G. glycerin' e'ther,** guaiamar. **G. oleocre'osote,** a yellowish liquid; dose, ♏xv (1.0). **G. phos'phal,** a very assimilable salt of guaiacol, employed in similar cases to guaiacol; dose, gr. xv–xxx (1.0–2.0) daily. **G. phos'phate,** $PO(C_6H_4OCH_3O)_3$; formed by adding phosphorus oxychloride to a solution of guaiacol in soda-lye. **G. phos'phite,** g. phosphal. **G. potas'sio-sul'phate,** potassium sulpho-guaiacolate, thiocol; a fine white powder, odorless, soluble in water, containing 60 per cent. of guaiacol; dose, gr. v–xx (0.32–1.3). **G. sal'icylate,** produced by action of phosphorus oxychloride on a mixture of guaiacol, sodium, and sodium salicylate. **G. sal'ol,** $C_{14}H_{12}O_4$; g. salicylate. **G. suc'cinate,** in fine silken needles; produced by mixing phosphorus oxychloride with guaiacol and succinic acid, or a watery solution of guaiacol with succinic chloride. **G. val'erate** or **vale'rianate,** geosote; guaiacol ester of valeric acid; oily fluid, employed in tuberculosis in three-grain doses, and as an antizymotic.

**Guaiacol'ic sal'ol.** Guaiacol salicylate.

**Guaiaco'nic acid.** $C_{38}H_{40}O_{10}$. An amorphous component of resin of guaiacum.

**Guai'acum.** Resin of guaiac; the resin and the wood are official. The resin is obtained as an exudation by incisions made into the wood or by the application of heat. The base of guaiacum is a peculiar resin, guaiacin. Guaiacum is stimulant and diaphoretic, and in large doses purgative. It is administered in chronic rheumatism, gout, scrofula, cutaneous diseases, and the sequelæ of syphilis. **G. angustifo'lium,** tree growing in Texas and Mexico, having somewhat similar properties to Guaiacum officinale. **G. nati'vum,** guaiacum. **G. officina'le,** guaiacum. **G. sanc'tum** grows in W. Indies; has similar properties to G. officinale. **G. test for blood,** two drops of tincture of guaiacum and two minims of ozonic ether are added to urine in a test-tube; if blood is present, a blue color appears at the junction of the two liquids. **G. wood,** wood of G. officinale and G. sanctum; yields more than 20 per cent. of resin.

**Guai'acyl.** Guaiacol sulphonic acid; produced by action of sulphuric acid on guaiacol; a rapid local anæsthetic. **G. cal'cium,** calcium salt of guaiacol sulphonic acid; local anæsthetic in dentistry and minor surgery.

**Guai'amar.** Guaiacol glycerin ether; white, soluble powder, used in tuberculosis and as an intestinal antiseptic; dose, gr. v–xv (0.32–1.0).

**Guaiap'erol.** $C_5H_{11}N(C_7H_8O_2)_2$. See *Piperidine guaiacolate*.

**Guaiaquin'.** Quinine guaiacol bisulphonate; a combination of quinine and guaiacol-sulphonic acid; a yellow, soluble, odorless substance, used as a substitute for guaiacol.

**Guaiaret'ic acid.** $C_{20}H_{26}O_4$. One of the components of guaiacum.

**Guaiasan'ol.** Guaiacoli-diethyliglycocoli hydrochloras; occurs in white, prismatic crystals with a bitter, salty taste and a slight guaiacol odor; used as an anæsthetic and antiseptic, in doses of gr. v–xxx (0.32–2.0).

**Guanidin'.** $CN_3H_5$. Carbondiamide-imide; monacid base, in the shape of colorless crystals, soluble in alcohol and water.

**Guanin'.** $C_5H_5N_5O$. Leucomain found in guano; also frequently in the liver, spleen, and pancreas, and in animal and vegetable tissues, in the excrement of the spider, etc.; regarded as the end-product of metabolism in animals of the lower order. Acted on by nitric acid, it is converted into xanthin. It generally occurs as a colorless, amorphous powder.

**Gua'no.** Bird-manure. Excrement of different kinds of marine birds—mews, divers, sheer-breaks, etc., but especially Sulla variegata; found in enormous layers in the S. American islands of the Pacific, and is used as manure; also as dressing for lepra, eczema, and other skin diseases.

**Guara'na.** (Ph. U. S.) The official name of a dried paste made chiefly from the seeds of Paullinia cupana or P. sorbilis. Used as a remedy for headache and as a nerve stimulant. Dose, ʒj–ij (4.0–8.0). The fluid extract, *extrac'tum guaran'æ flu'idum,* is official; dose, ʒj–ij (4.0–8.0).

**Guaranine'.** Caffeine procured from guarana.

**Guard.** Appliance used to prevent injury, as a block of gutta-percha placed at the neck of a tooth to prevent oozing of an arsenical application. **G. cells,** endothelial cells of serous membranes. **Cer'vical g.,** a layer of protective material placed at the neck portion of a dental cavity.

**Guare'a able'tii.** Meliaceous tree of S. America, with abortifacient and emmenagogue properties. **G. pur'gans,** Brazilian species; bark is bitter and cathartic. **G. swartz'ii,** W. Indian species; bark is emetocathartic. **G. trichilioi'des,** species of W. Indies; emetocathartic.

**Guarer'ba or'ba.** Momordica elaterium.

**Guarnier'i bod'ies.** Cytorrhyctes, the supposed protozoal cause of vaccina and variola.

**Gua'va ap'ple.** Psidium pomiferum.

**Guaya'va.** Psidium pomiferum.

**Guaycu'ru.** Baycuru.

**Gua'za.** Gunjah.

**Guazu'ma tomento'sa** or **ulmifo'lia.** Bastard cedar of W. Indies, S. America, and India; inner bark is used in syphiloderms, various non-specific cutaneous affections, and leprosy; outer bark is diaphoretic.

**Gubernac'ular** (*guberno,* to govern). Relating or appertaining to the gubernaculum testis. **G. cord,** see *Gubernaculum testis*.

**Gubernac'ulum** (rudder). One of the flagella of an infusorium, supposed to be used for steering. **G. den'tis,** cord passing from the follicle of the permanent tooth along a small, long canal behind the alveolus of the milk tooth, and becoming continuous with the gum; it has been supposed to direct the permanent tooth outward; the canal has been termed iter dentis. **G. Hunte'ri,** g. testis. **G. tes'tis,** triangular fibrocellular cord, which, in the fœtus, arises from the ramus of the ischium and the skin of the scrotum, and proceeds to the posterior part of the testicle, before this organ issues from the abdomen; supposed to be a continuation of the fascia superficialis with muscular fibres from the internal oblique muscle, which pass upward to the testis when in the abdomen, and by their contraction draw the testis down, and ultimately form the cremaster muscle. The peritoneal pouch, processus vaginalis, which passes down into the scrotum, considerably precedes the testis in its descent, and into its posterior part a columnar elevation projects, filled with soft tissue, called plica gubernatrix. There is also a fibrous structure attached, below, to the lower part of the scrotum, and surrounding the peritoneal pouch above, termed the gubernacular cord. Gubernaculum testis includes both of these.

**Gu'bler's hemiple'gia.** G.'s paralysis. **G.'s line,** a line connecting the apparent origins of the roots of the fifth pair of nerves. **G.'s paral′ysis,** crossed hemiplegia. **G.'s tu′mor,** tumefaction back of the wrist occurring after lead poisoning.

**Gud′den's com′missure.** Fibres passing between the optic tracts connecting the internal geniculate bodies. **G.'s gan′glion,** one of the ganglia in the posterior part of the corpora albicantia.

**Guel′der rose.** Viburnum opulus; irritant narcotic poison.

**Guéneau′ de Mussy's′ point.** Diaphragmatic button; an intensely painful spot on pressure met with in diaphragmatic pleurisy.

**Guenz's lig′ament.** Fibres of the obturator membrane constituting part of the wall of the canal for the obturator vessels and nerves.

**Guérin's′ amputa′tion.** Elbow-joint amputation by a single flap. **G.'s glands,** tubular glands in the mucous membrane of the female urethra. **G.'s si′nus,** lacuna magna in the urethra. **G.'s valve,** a valvular fold of mucous membrane in Guérin's sinus.

**Gueth′ol.** Guæthol.

**Guettar′da** (after Guettard, French scientist). Shrub or tree of Central America. **G. ambig′ua,** bark of this Jamaica tree is tonic, as is also that of **G. argen′tea,** or black guava, of Guiana. **G. sempervi′rens,** Malabar shrub; antiarthritic. **G. specio′sa,** E. Indian species, leaves of which are considered parturifacient.

**Gui′ac.** Guaiac.

**Guia′na bark.** Bark of Portlandia hexandra and P. grandiflora; antipyretic. Therapeutic properties are similar to those of cinchona.

**Gui′der** (leader). Tendon.

**Gui′di's canal′.** Vidian canal.

**Guido′nia adstrin′gens.** Plant of Peru; employed as vulnerary.

**Guilandi′na** (after Melchior Guilandinus, or Wieland, professor at Padua) **bonducel′la.** Cæsalpinia bonducella. **G. dioi′ca,** Gymnocladus canadensis. **G. echina′ta,** Cæsalpinia echinata. **G. microphyl′la,** root is used in renal diseases and lithiasis. **G. morin′ga,** a plant, ord. *Leguminosæ,* affording ben nut and lignum nephriticum. Ben nut or oily acorn is a W. Indian nut furnishing oil, oleum balaninum, oil of ben, that is purgative. The wood of the guilandina, lignum nephriticum, has been used in decoction in affections of the urinary organs; Cæsalpinia bonducella.

**Guil′lotine.** Amygdalatome or uvulatome.

**Guin′ea grains.** Grains of Amomum melaguetta. **G. pep′per,** African cubebs; capsicum. **G.-worm,** Filaria medinensis, Dracunculus persarum.

Female Guinea-worm.

**Guinon's′ disease′.** Tourette's disease.

**Guiril′a.** Caucasian or Persian insect powder. See *Anthemis pyrethrum.*

**Guizo′tia abyssin′ica** or **olea′cea.** Oil of seeds of this plant of Abyssinia and E. Indies is used externally in rheumatism.

**Gu′la.** Œsophagus, pharynx.

**Gulan′cha.** Roots and stems of Tinospora cordifolia; diuretic, tonic, antiperiodic.

**Gulf of Lecat′.** Bulb of urethra.

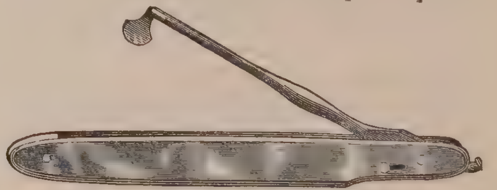
**Gull.** Chrysanthemum.

**Gull-Sut′ton's disease′.** Arteriosclerosis; atheroma.

**Gull-Toyn′bee's law.** In inflammation of the middle ear, when the mastoid is involved the cerebellum and lateral sinus may be affected; when there is caries of the top of the tympanum, the inflammation may extend to the cerebrum.

**Gul′let** (*gula,* gullet). Œsophagus, pharynx.

**Gum.** An immediate principle of vegetables; a solid, uncrystallizable, inodorous substance, of a mawkish taste, unchangeable in the air, insoluble in alcohol, but soluble in water, with which it forms a mucilage. It is obtained from a variety of trees. Nitric acid changes gum into mucic and oxalic acids. Arabin, bassorin, and curasin are some of the chief constituents. Gums are used in medicine as demulcents, emollients, and relaxants, particularly in catarrh and intestinal irritations, and in pharmacy are employed in the form of emulsions, pills, etc. Caoutchouc. Portion of mucous membrane of the mouth; in this sense, usually gums; see *Gingivæ.* **G. aca′cia,** acacia. **Ac′aroid g.,** xanthorrhœa. **G. ad′ragant,** tragacanth. **G. ammo′niac,** ammoniacum. **G. angi′co,** gum of a species of acacia in Brazil. **An′imal g.,** carbohydrate, $C_{12}H_{20}O_{10}+2H_2O$, found sometimes in the lungs, salivary glands, etc. **G. an′ime,** anime. **G. ar′abic,** acacia. **Artifi′cial g.,** dextrin. **At′rophy of the g.,** gradual diminution in the volume of the gum tissue leading to recession of the gum and loosening of the teeth. **Austra′lian g.,** g. arabic from various unofficial species of acacia; acaroid resin. **Bar′bary g.,** g. arabic from Acacia gummifera and A. nilotica. **Basso′ra g.,** see *Bassora.* **G. ben′jamin,** benzoin. **Black′boy g.,** see *Xanthorrhœa.* **Blue g.,** blue line on gum noticed when the system is affected by lead. **Bot′any Bay g.,** Australian kino; acaroid resin; see *Xanthorrhœa.* **Brit′ish g.,** dextrin. **Bu′tea g.,** see *Butea frondosa.* **Cape g.,** exudation from Acacia horrida of Cape of Good Hope. **G. caran′na,** caranna. **G. cis′tus,** ladanum. **G. dammar′,** etheral solution of the resin of this species of pine is used for microscopic mounting. **Doc′tor** or **doc′tor's g.,** resin from Rhus metopium, of Jamaica, is used in jaundice, ascites, diseases of the liver, syphilis, etc. **G. drag′on,** tragacantha. **East In′dia g.,** see *Feronia elephantum.* **G. elas′tic,** caoutchouc. **Eucalyp′tus g.,** Australian kino, see *Eucalyptus.* **G. of the eye,** sebaceous secretion from Meibomian glands, sometimes gluing the eyelids together. **Fall′ing away of the g.,** ulatrophia. **Flab′by g.,** condition of undue softness of the gum tissue. **Galam′ g.,** variety of gum Senegal. **Ged′da g.,** variety of Turkey gum. **G. getta′nia,** gutta-percha. **Gha′ti** or **Ghat′tig g.,** gummi indicum. **Gray g.,** exudation from various species of eucalyptus. **Hem′lock g.,** see *Pinus canadensis.* **Hog g.,** see *Hog.* **Hyper′trophy of the g.,** overgrowth of gum tissue. **Indig′enous g.,** gummi nostras. **I′vy g.,** see *Hedera helix.* **Jid′do g.,** Gedda gum. **Ju′niper g.,** sandarac. **G.-lan′cet,** an instrument like a fleam for separating the gum from the cervix of the tooth prior to extraction, or for dividing the tense gum over the crown of a tooth in course of eruption; the operation is called lancing the gums. **G. mag′uey,** gum resembling acacia from Agave americana. **Mar′gin of the g.,** the gingival edges. **G. mes′quite,** see *Mesquite.* **New Hol′land g.,** Australian gum. **O′renburg g.,** see *Pinus larix.* **Pec′toral g.,** see *Acacia.* **G. plant,** grindelia. **Pure g.,** arabin, caoutchouc. **G. rash,** strophulus. **Reces′sion of the g.,** moving away of the gum margin from about the necks of the teeth. **Red g.,** strophulus; Australian kino, eucalyptus gum; Gedda gum. **G.-res′in,** gummiresina. **G. san′darach,** sandarac. **G. sas′sa,** sassa. **Sen′eca** or **Sen′ega g.,** gum acacia; acaroid resin; oleoresin of a species of copaifera. **Shrink′ing of the g.,** ulatrophia. **Spon′gy g.,** condition of gum observed in scurvy, etc., in which the capillaries are dilated and the gums infiltrated. **Sweet g.,** Liquidambar styraciflua. **G. thap′sia,** T. garganica. **G. thus,** turpen-



Gum lancet.

tine. **G. tis′sue,** mass of tough, elastic epithelial and connective tissue overlying the alveolar processes. **G. tor,** Turkey gum. **G. trag′acanth,** tragacanth. **G. tree,** name of various trees, but especially the genera eucalyptus and xanthorrhœa. **G. tree, brown,** see *Kino*. **G. tu′no,** balata. **G. tu′ric,** Turkey gum. **Wa′ter g.,** see *Acacia*. **G. wax,** liquidambar. **White g.,** Liquidambar styraciflua, Strophulus albidus. **Yel′low g.,** icterus of infants.

**Gum′bo.** Abelmoschus esculentus.

**Gum′boil.** Parulis.

**Gum′chi.** Seeds of Abrus precatorius.

**Gum′ma.** Syphiloma; an elastic tumor occurring in the later stages of syphilis. When opened it contains matter like gum. These gummy tumors have been met with in all the important viscera, in the skin, cellular tissue, bones, etc. Consisting at first of granulation tissue, they are at last, by changes in their growth, made up of atrophied, disintegrated, and degenerated products imbedded in an imperfect fibrillated tissue. **G. gal′licum,** syphiloma. **G. i′ridis,** iritis gummosa. **Scrof′ulous g.,** chronic tumefaction attended with ulceration; scrofulous in origin. **Syphilit′ic g.,** syphiloma. **Tuber′culous g.,** a granuloma or neoplasm resembling a gumma, tuberculous in origin.

**Gum′mata** (pl. of gumma). Gummy tumors.

**Gum′mate.** Arabate; a salt of gummic or arabic acid.

**Gum′matous.** Of the nature of a gumma or syphiloma. **G. iri′tis,** see *Iritis*. **G. syph′ilide,** see *Syphilide*.

**Gum′mi.** Gum. **G. aca′ciæ arab′icæ,** acacia. **G. acan′thinum,** acacia. **G. acaroi′des,** see *Xanthorrhœa*. **G. adstrin′gens fothergil′li,** kino. **G. ammoni′acum,** ammoniac. **G. an′ime,** anime. **G. arab′icum,** acacia. **G. astrag′ali tragacan′thæ,** tragacantha. **G. austra′le,** Australian gum. **G. babylon′icum,** gum arabic. **G. barbar′icum,** see *Barbary*. **G. bas′sora,** see *Bassora*. **G. bo′gia,** cambogia. **G. brel′isis,** caranna. **G. citri′num,** acaroid resin. **G. copalli′num,** copal. **G. elas′ticum,** caoutchouc. **G. el′emi,** elemi. **G. euphor′biæ,** see *Euphorbia officinarum*. **G. fla′vum,** acaroid resin. **G. gaman′dræ,** cambogia. **G. gambien′se,** kino. **G. ge′nu,** sandarac. **G. getta′nia,** gutta-percha. **G. de Go′a,** cambogia. **G. got′ta,** cambogia. **G. guai′aci,** guaiac. **G. gut′ta** or **gut′ti,** cambogia. **G. hed′eræ,** see *Hedera helix*. **G. in′dicum,** Ghati or Ghatti gum, a gummy exudation from the wood of *Anogeissus latifolia*. **G. de je′mu,** cambogia. **G. junip′eri,** sandarac. **G. ki′no,** kino. **G. lac′cæ,** lacca. **G. lad′anum,** see *Cistus creticus*. **G. la′mac,** acacia. **G. lar′icis,** see *Pinus larix*. **G. laxati′vum,** gamboge. **G. lentis′ci,** mastich. **G. leu′cum,** acacia. **G. lig′ni sanc′ti,** resin of guaiacum. **G. ly′cium,** catechu. **G. mas′tiche,** mastich. **G. meto′pium,** galbanum. **G. mimo′sæ,** gum arabic. **G. nos′tras,** indigenous gum; name given to several species of gum flowing spontaneously from indigenous fruit trees, as the almond, cherry, peach, etc. **G. oli′bani,** olibanum. **G. orenburgen′se,** see *Pinus larix*. **G. pana′cis,** see *Pastinaca opopanax*. **G. plas′ticum,** gutta-percha. **G. ad podag′ram,** cambogia. **G. res′ina,** see *Gummiresina*. **G. ru′brum adstrin′gens gambien′se,** see *Butea frondosa* and *Kino*. **G. sanc′tum,** resin of guaiac. **G. sen′eca** or **sen′ega,** acacia; Senegal gum. **G. senegalen′se** or **sen′ica,** Senegal gum. **G. serapio′nis,** acacia. **G. Smyr′næ,** myrrh. **G. tacamahac′a,** tacamahac. **G. theba′icum,** acacia. **G. torriden′se,** Bassora gum. **G. tragacan′tha,** tragacantha. **G. uralen′se,** see *Pinus larix*

**Gum′mic acid.** Arabic acid; arabin.

**Gum′mide.** Compound which, when decomposed by acids or alkalies, yields glucose.

**Gummires′ina.** Gum resin; milky juice obtained by making incisions into the branches, stalks, and roots of certain vegetables. Gum resins are compounds of resin, gum, essential oil, and other vegetable matters; are solid, opaque, brittle, of a strong odor, acrid taste, variable color, and are heavier than water. They are generally powerful stimulants. **G. ammoni′acum,** ammoniac. **G. asafœt′idæ,** asafœtida. **G. gal′banum,** galbanum. **G. gut′ta,** gamboge.

**Gum′mose.** $C_6H_{12}O_6$. Saccharine matter produced by the action of dilute acids on animal gum.

**Gummos′itas.** Syphiloma.

**Gum′mous** or **Gum′my.** Mucilaginous. Having the nature or appearance of syphiloma.

**Gum-plant.** Grindelia.

**Gums.** Gingivæ; see also *Gum*.

**Gum′wood.** Eucalyptus wood.

**Gun′cotton.** Pyroxylin. See *Collodion*.

**Gunde′lia hac′ub** or **tournefor′tia.** Persian and Syrian plant; stomachic, tonic, diuretic, and emetocathartic.

**Gune.** Tinea imbricata.

**Gun′jah.** Cannabis indica.

**Gunne′ra chilen′sis** (after J. Ernst Gunner, botanist and bishop of Drontheim). Chilean and Peruvian plant; juice is refrigerant; root styptic and astringent. **G. macroceph′ala,** Java plant; fruit is stimulant. **G. perpen′sa,** African plant, decoction of which is a domestic remedy for dyspepsia; tincture has been used in gravel; infusion of leaves is demulcent and expectorant; leaves are applied to wounds and ulcers.

**Gunn's dots.** Shiny, white dots in the macula lutea.

**Gun′powder.** Explosive mixture of charcoal, sulphur, and nitre. Has been used as an antiperiodic, disinfectant, and stomachic; externally in ringworm.

**Gun′shot wound.** See *Wound*.

**Gun′stock defor′mity.** Deformity following fracture of the lower end of the humerus, in which the axis of the forearm, when the elbow is extended, is displaced laterally.

**Gurgi′na bal′sam.** See *Dipterocarpus*.

**Gur′gle** or **Gur′gling.** Gushing with a noise, as water from a bottle. Rhonchus or râle heard on auscultation when there is a cavity in the lungs containing pus, or over the intestines, as when gas is passing through the ileocæcal valve. Cavernous rattle or rhonchus. The size of the bubbles varies, and hence also the sound, which has been called cavernous or cavernulous rhonchus, as the bubbles are large or small. When the cavern is large, the râle resembles the gurgling of a bottle.

**Gur′jun balsam.** See *Dipterocarpus*. **G. oil,** wood oil, oleoresin from dipterocarpus, resembling copaiva. Given internally as an alterative in leprosy, in emulsion; dose, ʒj–ʒij (4.0–8.0).

**Gurju′nic acid.** Acid produced by acting upon gurjun balsam with alcohol.

**Gu′ru nut.** Kola acuminata.

**Gus′senbauer's su′ture.** Suture for wounds of intestines, uniting mucous and serous membranes by one stitch.

**Gusta′tion.** Taste.

**Gus′tative** (*gusto*, to taste). Gustatory.

**Gus′tatory.** Relating to taste or the sense of taste. **G. anæsthe′sia,** impairment or loss of sense taste; often a symptom of hysteria. **G. bulbs,** flask-like bodies in the tongue, associated chiefly with the circumvallate pupillæ, the outlet of which on the surface is through the gustatory pores. **G. cells,** spindle-shaped cells in taste-bulbs of tongue. **G. cen′tre,** hypothetical centre for appreciation of taste, in gyrus circinatus. **G. hyperæsthe′sia,** increased delicacy or sensitiveness of taste. **G. nerve,** lingual nerve. **G. paræsthe′sia,** peculiar perversions of the sense of taste. **G. paral′ysis,** loss of sense of taste in anterior part of tongue, a not unusual sequela of paralysis of the fifth nerve. **G. pores,** see *G. bulbs*. **G. re′gion,** parts concerned in the sense of taste.

**Gusta′via** (after Gustavus III., of Sweden) **angus′ta.** The fruit of this plant of Cayenne is laxative and refrigerant; leaves are used externally in obstruction of the bowels. **G. fastuo′sa** or **G. hexapet′ala,** plants of Brazil having the same therapeutic action as G. angusta. **G. meizocar′pa** or **tetrapet′ala,** G. angusta.

**Gus′tus.** Taste. **G. deprava′tus,** perverted or depraved taste; see *Parageustia.*

**Gut.** Intestine. **Blind g.,** cæcum. **Fore-g.,** the anterior extremity of the primitive alimentary canal, developing later into the duodenum and parts above. **Head-g.,** fore-g. **Hind-g.,** the posterior extremity of the primitive alimentary canal, developing later into the anus. **Mid-g.,** the middle portion of the primitive alimentary canal, developing later into the intestines from the duodenum to the lower part of the rectum. **Straight g.,** rectum. **Tail-g.,** the caudal extension of the hind-g. in the embryo.

**Guth′rie's amputa′tion.** See *Amputation.* **G.'s mus′cle,** ischio-urethralis muscle.

**Gut′ta** (*drop*). A drop. Apoplexy. Cambogia. Gout. By the plural—guttæ—is meant a pharmaceutical mixture—mistura contracta—to be given in drops. Gutta also denotes catarrhal discharge; flow of a liquid drop by drop; gutta-percha, as it flows from the tree, etc. Gutta and guttæ also signify certain cutaneous spots or eruptions. **G. ca′dens,** metallic tinkling noticed in pneumothorax. **G. cadi′va** or **cadu′ca,** epilepsy. **G. caman′dræ** or **gam′ba,** cambogia. **G. camboi′da, gar′ner, gem′mu,** or **ge′mou,** gamboge. **G. obscu′ra,** cataract. **G. opa′ca,** cataract. **G.-per′cha,** concrete juice of a tree (Isonandra gutta) indigenous in Singapore and its vicinity, and belonging to the order *Sapotaceæ.* Plunged into boiling water, it softens, when it may be moulded like caoutchouc to any form, which it retains on cooling. A solution of gutta-percha in chloroform—traumaticin—has been used with advantage, topically, in various cutaneous affections, scrofulous and indolent ulcers, and as an ectrotic in smallpox. **Den′tal g.-p.,** is a pink mixture of g.-p. with mercury sulphide; a white mixture is made with zinc oxide. **G. rosa′cea,** g. rosea, copper-nose, bottle-nose, blossoms; eruption of small, suppurating tubercles, with shining redness and an irregular, granular appearance of the skin of the part of the face affected; the redness commonly appears first at the end of the nose, and then spreads on both sides; it is often, but by no means always, produced by hard drinking; the affection is usually obstinate. **G. r. hypertroph′ica,** hypertrophic or hyperplastic rosacea. **G. r. syphilit′ica,** serpiginous syphilitic eruption on the forehead. **G. ro′sea,** acne. **G. ru′bra** rosacea. **G. sere′na,** old name for amaurosis.

**Gut′tæ** (pl. of gutta) **ab′batis Rousseau′.** Laudanum abbatis Rousseau. **G. ac′idæ ton′icæ,** elixir acidum Halleri. **G. ammoni′aci,** see *Ammoniac gum.* **G. gum′mi,** gamboge. **G. ni′græ,** black drop; the celebrated black drop, Lancaster or Quaker's black drop, was made of opium, verjuice, nutmegs, saffron, sugar, and yeast; one drop was equal to three of laudanum; it was imitated to a certain extent in the U. S. Pharmacopœia, in *acetum opii,* vinegar of opium. **G. ni′græ britan′nicæ,** acetum opii. **G. ophthal′micæ,** collyria or eye-washes.

**Gut′tate.** Having drop-shaped spots. **G. choroidi′tis,** see *Choroiditis.*

**Gutta′tim.** Drop by drop.

**Gutte′ria.** Bronchocele.

**Gut′ti.** Gamboge.

**Gut-tie.** Volvulus.

**Gut′tur.** Throat; larynx; trachea. **G. globo′sum** or **G. tu′midum,** bronchocele.

**Gut′tural** (*guttur,* throat). Relating or belonging to the throat. A sound seemingly produced in the throat. **G. ar′tery,** superior thyroid artery. **G. ar′tery, infe′rior,** inferior thyroid artery. **G. canal′** Eustachian tube. **G. car′tilage,** arytenoid cartilage. **G. con′sonants,** the consonants *g* and *k* (hard *c* and *ch* and *q*). **G. cough,** cough occasioned by irritation of the larynx or trachea. **G. duct,** Eustachian tube. **G. fos′sa,** region at base of skull between hard palate and foramen magnum. **G. glands,** pharyngeal glands. **G. her′nia,** bronchocele. **G. sound,** sound produced, as it were, in the throat.

**Guttura′lis, Gutturna′lis,** or **Gutturni′nus cartila′go.** Arytenoid cartilage.

**Gut′turis os** (bone of throat). Hyoid bone.

**Guttur′nia.** Arytenoid cartilages.

**Gut′turomax′illary.** Relating to throat and jaw. **G. ar′tery,** internal maxillary artery.

**Gut′turopal′atine.** Relating to throat and palate. **G. nerve,** posterior palatine nerve.

**Gut′turose.** Goitrous.

**Gutturotet′any.** Stammering caused by spasmodic closure of the glottis in using the voice, particularly in pronouncing letters like *k, g,* and *q.*

**Guvacine′.** An alkaloid derived from areca.

**Guye's sign.** Inability to fix the attention in young people affected with adenoid nasopharyngeal growths.

**Guyon's′ amputa′tion.** Supramalleolar amputation by an oblique elliptical incision. **G.'s isth′mus,** stenosis and elongation of os uteri uterinum. **G.'s sign,** ballottement of the kidney in suspected tumor of that organ.

**Gwal′ior ul′cer.** Endemic form of ulcer, named from place of its prevalence.

**Gymnade′nia** (*gymnos,* naked, *aden,* gland) **conop′sea.** European orchid; nervous sedative. **G. odoratis′sima,** antiperiodic; flowers and distilled water from this plant are tonic, and the seeds are used in epilepsy.

**Gymna′sium.** Formerly an establishment for bodily exercises, as wrestling, running, etc.; now used, in Germany especially, for an academy or higher school.

**Gymnas′tic therapeu′tics.** Kinesipathy.

**Gymnas′tics.** Part of hygienic medicine treating of bodily exercises; medical gymnastics. **Oc′ular g.,** systematic movements of the eye to increase or perfect its motor powers or its powers of fixation and accommodation. **Swe′dish g.,** see *Swedish movements.* **Vo′cal g.,** voice exercises designed to increase lung expansion.

**Gymne′ma lactif′erum.** Ceylon cowtree, kiri-aghuma; tree of the family *Apocynaceæ,* the juice of which is used by the Cingalese as milk. **G. sylves′tre,** plant of Africa and Southern Asia; antidote for snake-bites.

**Gymne′mic acid.** $C_{32}H_{55}O_{12}$. A greenish-white, acid principle derived from the leaves of Gymnema sylvestre; used as a wash for the mouth before taking bitter medicines.

**Gymnobacte′ria** (*gymnos,* naked). Non-flagellated bacteria.

**Gym′noblast** (*gymnos,* naked, *blastos,* germ). Gymnocyte.

**Gymnoc′ladus canaden′sis** or **dioi′ca.** Coffee tree, Kentucky coffee-bean tree, mahogany, nickar tree, bonduc; ord. *Leguminosæ.* Indigenous tree; leaves are cathartic; seeds are a good substitute for coffee; they resemble in therapeutic action physostigma; bark is bitter; oil is purgative.

**Gym′nocyte** (*gymnos,* naked, *kytos,* cell). A cell devoid of enveloping membrane.

**Gymnocy′tode.** Non-nucleated cell without limiting membrane.

**Gym′nodont** (*gymnos,* naked, *odous,* tooth). Having teeth unprotected by the lips.

**Gymnophthal′mus** (*gymnos,* naked, *ophthalmos,* eye). Having eyelids absent, so as to give appearance of the eyes being uncovered.

**Gym′noplast** (*gymnos,* naked, *plasso,* to form). Protoplasmic matter without limiting membrane.

**Gymnop′teris cet′erach.** Asplenium ceterach.

**Gymno′sis** (*gymnos,* naked). Nakedness; denudation.

**Gym′nospore.** A spore without limiting membrane.

**Gymnosporid′ia.** An order of parasitic amœboid sporozoa, embracing the malarial organisms, which divide into crescentic bodies without previous encapsulation.

**Gymno′tus.** Electrical eel, which is provided with certain organs capable of giving a strong electrical shock.

**Gynæ′ceous.** Feminine; belonging or relating to woman; female.

**Gynæ′cia.** Menses; gynecology.

**Gynæ′ciac.** Gynecic.

**Gynæco-** (*gyne*, woman). In composition, woman.

**Gynæcological**, jin-e-co-log′i-cal. Gynecological.

**Gynæcol′ogist.** Gynecologist.

**Gynæcol′ogy.** Gynecology.

**Gynæcoma′nia.** Nymphomania.

**Gynæcomastus**, jin-e-ko-mas′tus (*gyne*, woman, *mastos*, breast). Man whose breasts are as large as those of a woman.

**Gynæcoma′zia** or **Gynæcomas′tia.** Enlargement of the male breasts.

**Gynæcopathy**, jin-e-kop′ath-e (*gyne*, woman, *pathos*, affection). Disease peculiar to woman.

**Gynæcophonus**, jin-e-kof′o-nus (*phone*, voice). Man who has an effeminate voice.

**Gynæcoph′orous** (*gyne*, woman, *phorea*, to carry). Carrying the female, a term applied to certain worms, such as Bilharzia hæmatobia, which carry the female in a special receptacle called the *gynæphore*.

**Gynæcoph′orus.** Bilharzia hæmatobia.

**Gynan′dria** (*gyne*, woman, *aner*, man). Hermaphroditism.

**Gynan′drism.** Hermaphroditism.

**Gynandromor′phous** (*gyne*, woman, *aner*, man, *morphe*, form). Hermaphroditic.

**Gynandrop′sis pentaphyl′la.** Indigenous plant; diaphoretic; the juice has been used in earache; the bruised leaves are rubefacient.

**Gynan′drous.** Hermaphroditic.

**Gynatre′sia** (*gyne*, woman, *atresia*, imperforation). Closure or imperforation of the external parts of generation of the female.

**Gynecic**, jin-e′sik. Relating to the diseases of women.

**Gynecological**, jin-e-ko-loj′i-kal. Relating to gynecology.

**Gynecologist**, jin-e-kol′o-jist. One who practises gynecology.

**Gynecology**, jin-e-kol′o-je (*gyne*, woman, *logos*, description). The specialty in medicine which has to do with the diseases peculiar to women.

**Gynecopath′ic.** Relating to the diseases of women.

**Gynecop′athy** or **Gynep′athy.** A disease peculiar to women.

**Gynepho′bia** (*gyne*, woman, *phobos*, fear). Dread of or aversion to the society of women.

**Gyniatrics**, jin-e-at′riks (*gyne*, woman, *iatreia*, medication). Treatment of diseases of women; gynecology.

**Gynocar′date of so′dium.** Salt of sodium and gynocardic acid; yellowish-white substance, soluble in water. **G. of zinc**, compound of zinc and gynocardic acid; granular powder of a yellowish color; employed in place of gynocardic acid in cutaneous affections.

**Gynocar′dia odora′ta.** Chaulmoogra.

**Gynocar′dic acid.** $C_{14}H_{24}O_2$. Crystallizable acid, active principle of chaulmoogra oil; employed in cutaneous affections.

**Gynocyanauridzarin′.** Principle derived from Gynocardia lancifoliata; used in tuberculous diseases.

**Gynoplastic**, jin-o-plas′tik (*gyne*, woman, *plasso*, to form). Relating to plastic operations on the genital organs of woman.

**Gypsoph′ila stria′tum.** African and European herb, ord. *Caryophylleæ*, root of which, Levant soap-root, resembles saponaria.

**Gypsum**, jip′sum. Plaster-of-Paris.

**Gyp′syweed.** Lycopus sinuatus; L. virginicus.

**Gyral**, ji′ral (*gyros*, a circle). Belonging to gyri or a gyrus.

**Gyrating** (ji′ra-ting) **move′ments.** Circular movements symptomatic of some brain diseases.

**Gyra′tion.** Turning or revolving in a circle. Giddiness.

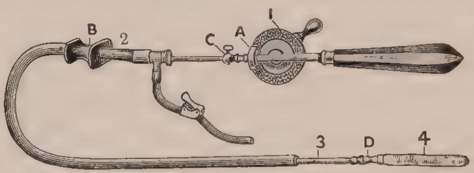
**Gyre**, jire. Gyrus.

**Gyrenceph′alus**, ji-ren-sef′al-us (*gyros*, circle, *enkephalos*, brain). Having a brain characterized by numerous convolutions or gyri.

**Gy′ri** (pl. of gyrus). Convolutions. See *Gyrus*.

**Gyro′ma.** Gyrus.

**Gy′romele** (*gyros*, turn, *mele*, probe). A revolving probe tipped with a sponge for swabbing out the interior of the stomach.



Turck's gyromele. 1 represents a thin metal wheel covered on one side by soft, unpolished rubber, which rotates on a smaller wheel, A, by friction; 2 is the stationary outer tube held by the button or spool B, it reaches to the cardia only; 3 is the cable, which is fastened to the revolving apparatus by the screw C; 4 is the sponge, which fits into a socket of the cable, D, and may be removed at will.

**Gyro′mia virgin′ica.** Medeola virginica.

**Gyropsori′asis.** Psoriasis in circular form.

**Gyro′sa.** Gastric vertigo, with a sensation as of a whirling of external objects.

**Gyrospasm**, ji′ro-spazm. A peculiar rotary or nodding spasm of the head of young children.

**Gy′rus** (circle). Convolution (see plates under *Convolution*). Scala tympani. Scala vestibuli. **G. abrup′tus**, one of the small gyri at the end of the occipital lobe. **An′gular g.**, region of brain between the fissure of Sylvius and the occipital lobe; portion of inferior parietal lobule surrounding the upper extremity of the superior temporal sulcus; angular convolution; temporal gyrus. **Annec′tant g.**, one of four gyri or convolutions connecting the gyrus on the superior part of the occipital lobe with the parietal and temporosphenoidal lobes. **Anteropari′etal g.**, precentral gyrus. **Anterotem′poral g.**, supertemporal gyrus. **G. arcua′tus**, uncinate convolution. **Ascend′ing fron′tal g.**, g. constituting the front boundary of the fissure of Rolando; usually continuous above with the superior parietal gyrus. **Ascend′ing pari′etal g.**, a convolution behind the fissure of Rolando. **Bas′ilar g.**, g. rectus. **Basirrhi′nal g.**, fold or tract near the top of the temporal lobe. **G. bre′vis**, one of the insular convolutions or gyri of the island of Reil. **Bridg′ing g.**, annectant gyrus. **Bro′ca's g.**, inferior frontal gyrus; operculum. **Callo′sal** or **callosomar′ginal g.**, convolution of the corpus callosum; internal gyrus. **G. centra′lis ante′rior** and **poste′rior**, convolutions divided by the central sulcus. **Cerebel′lar g.**, one of the narrow folds or laminæ of the cortical layer of the cerebellum. **Cer′ebral g.**, round, undulating, tortuous projections observed at the surface of the brain. **G. choroi′des**, convex wall of the lateral recess of the fourth ventricle. **G. cin′guli**, g. callosus. **G. coch′leæ**, scala cochleæ. **G. cor′poris callo′si**, g. callosus. **G. cra′nii**, convolution of the brain. **G. crista′tus**, g. cinguli. **G. cu′nei**, annectant convolution of the cuneate lobule, connecting it with the g. callosus. **G. cuneifor′mis**, g. abruptus. **Den′tal** or **den′tate g.**, small, rudimentary convolution in the dentate fissure. **G. descen′dens**, descending convolution at the extremity of the occipital lobe. **G. epithelia′lis** or **epithelia′ris**, convoluted fold of a choroid plexus. **G. fascic′ulus**, temporosphenoidal convolution. **For′nicate g.**, or **G. fornica′tus**, internal gyrus. **G. fronta′lis ascen′dens, infe′rior, me′dius, secun′dus**, and **supe′rior**, convolutions of the frontal lobe of the cerebral hemispheres. **G. fronta′lis exter′nus**, inferior or third frontal convolution. **G. f. inter′nus pri′mus**, portion of the superior or first frontal convolution on the median surface. **G. f. pri′mus**, superior frontal convolution; inferior frontal. **G. f. rec′tus**, innermost orbital convolution. **G. f. ter′tius**, inferior frontal convolution; superior frontal. **G. frontoparieta′lis media′lis**, upper portion of the superior or first frontal convolution. **G. fusifor′mis**, lateral occipitotemporal convolution. **G. glossifor′mis**, middle occipitotemporal convolution. **G. hippocam′pi** or **hippocam′pal g.**, uncinate gyrus or convolution; continuation of g. fornicatus. **Infe′rior fron′tal g.**, lower and external portion of the frontal lobe. **Infe′rior occip′ital g.**, small convolution between the middle and inferior occipital fissures. **G. inflec′tus**, V-shaped gyrus near the inflected fissure. **Infracal′carine g.**, a gyrus on the under surface of the temporal lobe. **Inframar′ginal g.**, superior temporal or temporosphenoidal convolution. **In′sular g.**, one of the small convolutions forming the island of Reil. **G. intercentra′lis**, g. between two central fissures. **Inter′nal g.**, g. of corpus callosum; cerebral convolution of great extent, the principal portion of which is found on the inner surface of each hemisphere above the corpus callosum; in front, it bends downward and backward to the fissure of Sylvius; behind, it extends to the middle lobe and forms the hippocampus major. **G. intestina′lis**, convolution or coil of intestines. **G. lingua′lis**, middle occipitotemporal convolution. **Longitu′dinal g.**, middle part of the cerebrum between the marginal and supercallosal fissures. **Mar′ginal g.**, g. bounding the longitudinal fissure on the middle aspect of the hemisphere, separated from g. of corpus callosum by the callosomarginal fissure. **G. margina′lis exter′nus**, g. callosus. **G. m. infe′rior**, superior temporal convolution. **G. media′lis occipita′lis**, cuneate lobule. **G. meditempora′lis**, g. between the meditemporal or supertemporal fissures. **G. nuclea′ris**, fold of the nuclear gray matter in the olivary body and the corpus dentatum of the cerebellum. **G. occipita′lis descen′dens, exter′nus, infe′rior, me′dius, pri′mus, secun′dus, supe′rior**, and **ter′tius**, convolutions on the occipital lobe of the brain. **Occipitofron′tal g.**, small convolution on the inferior surface of the temporosphenoidal lobe. **G. occipitotempora′lis exter′nus, infe′rior, inter′nus, latera′lis** or **supe′rior** and **media′lis**, convolutions common to the occipital and temporal lobes of the brain. **G. olfacto′rius**, g. frontalis rectus, olfactory lobe. **G. o. exter′nus** and **inter′nus**, roots of the olfactory nerve. **G. of oper′culum**, g. brevis. **G. oper′tus**, g. brevis. **G. orbita′lis, ante′rior, exter′nal, in′ner**, and **mid′dle**, convolutions on the orbital surface of the frontal lobe of the brain. **Paracen′tral g.**, oval or square area on the middle aspect of the cerebrum; motor area for part of the leg. **Pari′etal g.**, triangular area between the postcentral and parietal fissures. **G. parieta′lis infe′rior**, inferior parietal lobule; gyrus angularis, gyrus supramarginalis. **G. p. me′dius**, g. angularis. **G. p. pri′mus** or **supe′rior**, superior parietal lobule. **G. p. secun′dus**, inferior parietal lobule; g. angularis. **G. p. ter′tius**, g. supramarginalis. **G. pari′eto-occipita′lis latera′lis**, middle occipital convolution. **G. p.-o. media′lis**, superior occipital convolution. **G. postcentra′lis**, postcentral convolution lying back of the centre, separated from the precentral convolution by the central sulcus. **G. posteroparieta′lis**, g. postcentralis. **G. postrolan′dicus**, g. postcentralis. **G. præcentra′lis**, precentral convolution lying anterior to the centre, separated from the postcentral convolution by the central sulcus. **G. præsyl′vius** or **presyl′vian g.**, transverse occipital convolution in the front of the fissure of Sylvius. **Precen′tral g.**, ascending frontal gyrus. **Preor′bital g.**, g. at the junction of the frontal and orbital aspects of the cerebrum. **Pri′mary** or **prim′itive g.**, one of the cerebral areas in fetal life bounded by the primary fissures. **G. rec′tus**, innermost orbital convolution; orbital portion of the marginal gyrus. **G. retrocentra′lis**, g. postcentralis. **G. rolan′dicus ante′rior** and **poste′rior**, cerebral convolutions separated by the central sulcus. **G. semiter′tius**, last spiral of the cochlea. **Sig′moid g.**, uncinate gyrus. **Straight g.**, g. rectus. **Subcal′carine g.**, narrow area between the calcarine and collateral fissures. **Subcollat′eral g.**, g. between the collateral and subtemporal fissures. **Subfron′tal g.**, g. having **U**-shape and curving about the presylvian fissure. **Subtem′poral g.**, g. between the meditemporal and subtemporal fissures. **Superfron′tal g.**, g. between the precentral fissure and the orbital surface of the cerebrum; marginal gyrus. **Supertem′poral g.**, g. between the Sylvian and supertemporal fissures. **G. supramargina′lis**, portion of the inferior parietal convolution along the superior border of the fissure of Sylvius, continuous below with the superior temporosphenoidal and ascending parietal fissures. **Supraor′bital** or **supraor′bitar g.**, inferior frontal gyrus. **G. of Syl′vian fis′sure**, g. bounding that fissure on either side. **G. tempora′lis infe′rior, inframargina′lis, me′dius**, etc., convolutions of the temporal lobes of the brain. **G. tem′poro-occipita′lis**, g. occipitotemporalis. **G. transecun′dus** or **transitio′nis**, portion of convolution of the frontal lobe of the brain forming arch over the anterior part of the fissure of Sylvius. **Tran′sitive g.**, cerebral convolution associating or acting as a bridge between the principal lobes. **G. transver′sus**, presylvian g. **G. uncifor′mis**, g. brevis. **G. uncina′tus**, uncinate convolution from the vicinity of the posterior extremity of the occipital lobe to the apex of the temporosphenoidal; continuation of g. fornicatus. **Vault′ed g.**, g. fornicatus or g. of the corpus callosum.

# H.

**H.** Chemical symbol of hydrogen, and abbreviation of hypermetropia.

**Haab′s pu′pil re′flex.** A sign of lesion of the cortex cerebri, the pupils contracting while gazing at a bright object, but not during accommodation or convergence.

**Habe′na** (bridle). Peduncle of pineal gland. Frænum retinaculum.

**Hab′enal** or **Hab′enar.** Relating to the habena.

**Haben′ula** (dim. of habena). Small frænum or bridle. Peduncle of pineal gland. **H. arcua′ta,** internal zone of basilar membrane of cochlea. **H. cona′rii,** anterior peduncle of pineal gland. **H. denticula′ta,** lower border of spiral groove of cochlea; auditory teeth. **H. exter′na,** h. denticulata; h. pectinata. **H. gangliona′ris,** ganglion spirale or Cortii. **Hal′ler′s h.,** peritoneal sac which comes down with the testicle and is afterward obliterated. **H. inter′na,** lamina denticulata. **H. pectina′ta,** outer zone of basilar membrane of cochlea, between external wall of latter and organ of Corti. **H. perfora′ta** or **perforati′va,** area on lower surface of basilar membrane of organ of Corti; h. denticulata. **H. sulca′ta,** upper border of spiral groove of cochlea. **H. tec′ta,** h. arcuata.

**Haben′ular.** Relating to the habenula or frænum. Like a ribbon.

**Habil′la de Carthage′na** (Lat., *faba*, bean). Bejuio, Carthagena bean. Bean of South America, famed as an antidote to the poison of serpents.

**Hab′it** (*habeo*, to have). A constant practice of repeating certain acts, or a facility resulting from the frequent repetition of the same act. A predisposition to certain diseases or protection against them. Regard should be had to this in studying the progress of disease or its treatment. **Apoplec′tic h.,** a plethoric condition assumed to predispose to apoplexy; it is characterized by an habitually flushed countenance, engorgement of the blood-vessels, shortness of breath, and a tendency to make flesh. **H. of bod′y,** aggregate of the physical qualities of the human body. **H. chore′a,** irregular spasmodic action of a muscle or sets of muscles, beginning with disordered facial expression or gestures; tic. **Drug h.,** addiction to a drug, usually a narcotic or stimulant, such as opium, chloral, cocaine, or alcohol. **Full h.,** apoplectic h. **Glauco′matous h.,** shallowness of the anterior chamber, accompanied with dilatation of the pupil. **H. move′ments,** movements which through constant repetition have become habitual and involuntary. **H. spasm,** h. chorea.

**Hab′itat** (*habito*, to dwell). The place where an animal or plant is found in nature.

**Habitu′do** (*habeo*, to have). Habit.

**Hab′itus.** Habit. **H. apoplec′ticus,** apoplectic habit. **H. cor′poris,** habit. **H. quadra′tus** or **toro′sus,** apoplectic habit.

**Habroma′nia** (*habros*, gay). Insanity in which the delusions are of a gay character.

**Hack′berry.** Celtis occidentalis, Prunus padus.

**Hack′ing.** Massage of a mass of muscles, as of the neck, back, etc., by a sort of chopping motion of the side of the hand. Also recurring repeatedly but momentarily, like the strokes of an axe; as a *hacking cough*.

**Hack′matack.** Larix americana.

**Had′dock.** See *Oleum morrhuæ*.

**Hæma-** (*haima*, blood). In composition, blood. For words not found here, see *Hema-*.

**Hæmabarom′eter** (*haima*, blood, *baros*, weight, *metron*, measure). Apparatus for determining specific gravity of the blood.

**Hæmachroïn′** (*chroa*, a color). Hæmatin.

**Hæm′achrome** (*chroma*, color). Hæmatin.

**Hæmachro′ses** (*chrosis*, coloration). Diseases in which the blood has a different color from usual, as in purpura and cyanosis.

**Hæmacyanin′** (*kyanos*, blue). Blue coloring-matter in blood, owing to its containing copper.

**Hæm′acyte.** Blood cell.

**Hæmacytom′eter** (*kytos*, cell, *metron*, measure). Instrument for measuring the number of corpuscles in the blood.

**Hæ′mad.** Blood corpuscle.

**Hæmadosteno′sis** (*stenosis*, contraction). Narrowness, contraction, or obliteration of blood-vessels.

**Hæmadosteo′sis** or **Hæmadosto′sis** (*ostosis*, bony tumor). Ossification of the blood-vessels.

**Hæmadrom′ograph** (*dromos*, course, *grapho*, to write). Instrument to record the velocity of the current of blood.

**Hæmadromom′eter.** Instrument for measuring the rate of movement of the blood.

**Hæmadynam′ics** (*haima*, blood, *dynamis*, power). Mechanism of the circulation of the blood; science of forces operating to keep the blood in motion.

**Hæmadynamom′eter** (*haima*, blood, *dynamis*, power, *metron*, measure). Instrument for measuring the force of the blood in the vesssels. A modification of this instrument has been called *cardiometer*. See *Manometer*.

**Hæmafa′cient.** Blood-making; hæmatopoietic.

**Hæmagas′tric pes′tilence.** Yellow fever.

**Hæmagglutinin′.** An agglutinin having a specific action upon the blood cells, causing clumping of the erythrocytes.

**Hæm′agogue** (*ago*, to drive off). Agent promoting the menstrual or other sanguineous discharges.

**Hæ′mal.** Relating to the blood or blood-vessels. **H. arch,** arch formed by the projections anteriorly of the ribs and sternum from the bodies of the vertebræ, enclosing the great blood-vessels. **H. as′pect,** directed toward the part of the body containing the great vessels, that is to say, the anterior or ventral aspect in reference to the spinal column. **H. ax′is,** aorta. **H. canal′,** canal formed by a series of hæmal arches; cœloma or body cavity. **H. cav′ity,** h. canal. **H. flex′ure,** h. arch. **H. glands,** glands associated with the renal artery in the herbivora. **H. sep′tum,** septum of deep fascia on anterior median line. **H. spine,** sternum. **H. sys′tem,** circulation of blood. **H. tube,** h. canal.

**Hæmalbu′min.** Preparation of blood consisting chiefly of dried albumin holding a large amount of iron. Albuminate of iron; employed in chlorosis and anæmia.

**Hæmaleucin′** (*leukos*, white). Fibrinous portion of coagulum.

**Hæmaleuco′sis.** Formation of buffy coat of blood in inflammation, pregnancy, etc.

**Hæmalo′pia** (*ops*, eye). Hæmophthalmia.

**Hæmamœ′ba.** White blood corpuscle. An amœboid cell parasitic in the blood. **H. cruenta′ta,** red blood corpuscle. **H. immacula′ta,** parasite of pernicious fever. **H. lavera′ni,** order containing the parasites of malarial fevers, according to Labbé′s classification. **H. leukæ′mia mag′na,** the supposed causal organism of myelogenous leukæmia. **H. l. par′va,** a supposed parasite of lymphatic leukæmia, but probably only a product of nuclear degeneration. **H. l. p. intranuclear′is,** the supposed parasite of lymphatic leukæmia, present within the nucleus of the lymphocytes in this desease. **H. l. vi′vax,** h. l. parva. **H. mala′riæ,** parasite of quartan fever. **H. præ′cox,** parasite of pernicious fever. **H. relic′ta,**

parasite of malaria in sparrows. **H. subimmacula′ta,** parasite of malaria in hawks. **H. subpræ′cox,** parasite of malaria in larks and owls. **H. vi′vax,** parasite of tertian fever.

**Hæmangioendothelio′ma.** Epithelial hypertrophy of the capillaries.

**Hæmangio′ma.** Neoplasm made up of blood-vessels. Angeioma.

**Hæmangiosarco′ma.** Vascular sarcoma.

**Hæman′thus coccin′eus.** S. African plant, bulb of which is diuretic; given as oxymel in asthma and dropsy. The fresh leaves are antiseptic, and applied to foul, flabby ulcers and in anthrax. **H. denuda′tus** or **toxica′rius,** blood-flower, African tulip; juice of bulb is employed as an arrow poison. Alkaloid from it, *hæmanthine′*, resembles atropine.

**Hæmaphæin′, Hæmatophæ′um,** or **Hæmophæ′um** (*phaios*, dusky). Brown coloring-matter of blood, probably hæmatin modified by an alkali or by decomposition. In urine it is called urohæmatin.

**Hæmaphæ′ism.** Passage of reddish-brown urine, due to hepatic changes and disintegration of red corpuscles.

**Hæmapho′bia** or **Hæmatopho′bia** (*phobos*, dread). Morbid dread of seeing blood.

**Hæmapoie′sis** (*haima*, blood, *poieo*, to make). Hæmatosis.

**Hæmapoiet′ic.** Blood-forming, as the hæmapoietic function of the liver, spleen, etc.

**Hæmapoph′ysis** (*apophyo*, to shoot forth). Costal cartilage. Portion of typical vertebra forming the anterolateral part of the hæmal arch.

**Hæmapor′ia** (*haima*, blood, *aporos*, poor). Paucity of blood; anæmia.

**Hæmar′thron** or **Hæmarthro′sis** (*haima*, blood, *arthron*, joint). Effusion of blood into a joint.

**Hæ′mas.** Blood-vessel. Hemorrhage.

**Hæmastat′ics** (*haima*, blood, *statike*, statics). Hydrostatics of the blood. Also hæmostatics or agents for arresting hemorrhage.

**Hæmastheno′sis** (*haima*, blood, *asthenes*, weak). Anæmia; paucity of blood. Obstruction to the circulation of the blood.

**Hæmatachom′eter** (*tachys*, swift, *metron*, measure). Instrument for measuring the velocity of circulating blood.

**Hæ′matal.** Relating to the blood or the blood-vessels.

**Hæmatallos′copy** (*haima*, blood, *alloios*, different, *skopeo*, to view). Mode of distinguishing different kinds of blood from each other.

**Hæmatamœ′ba.** Hæmamœba.

**Hæmatangion′osus** (*haima*, blood, *angeion*, vessel, *nosos*, disease). Disease of the blood-vessels.

**Hæmatapo′ria.** Paucity of blood; anæmia.

**Hæmatapor′rhosis** (*haima*, blood, *apo*, from, *orrhos*, serum). Separation of serum from the blood. Cholera.

**Hæmatapos′tasis.** Congestion of blood; effusion of blood.

**Hæmataposte′ma** (*apostema*, abscess). Abscess containing blood. Hæmatocele.

**Hæmatau′ris** (*haima*, blood, *auris*, ear). Effusion of blood into the internal ear.

**Hæmatein′.** When hæmatoxylin, coloring of logwood, is acted upon by ammonia, hæmatein, $C_{16}H_{12}O_6$, results; a brownish-red, crystallized substance.

**Hæmatelytrome′tra** (*elytron*, vagina, *metra*, uterus). Accumulation of blood, especially menstrual blood, in the vagina and uterus, as in atresia vaginæ.

**Hæmatem′esis** (*haima*, blood, *emeo*, to vomit). Vomiting of blood. This is generally preceded by a feeling of oppression, weight, and dull or pungent pain in the epigastric and hypochondriac regions, by anxiety, and, occasionally, by syncope. Blood, generally of a grumous aspect, is then passed by vomiting, and sometimes also by stool. It proceeds from rupture of a vessel or from a sanguineous exhalation at the surface of the mucous membrane of the stomach. **Men′strual** or **vica′rious h.,** h. occurring in women as a form of vicarious menstruation.

**Hæmatenceph′alon.** Intracranial hemorrhage.

**Hæmatepigas′trium** (*epi*, upon, *gaster*, stomach). Hemorrhage into the epigastric region external to the peritoneum.

**Hæmaterythrin′** (*erythros*, red). Hæmatin.

**Hæmatexosto′sis.** Osteosarcoma, or exostosis with well-defined vessels.

**Hæmather′apy.** Hæmatotherapy.

**Hæmather′mal** or **Hæmather′mous** (*haima*, blood, *therme*, heat). Warm-blooded.

**Hæmathidro′sis.** Hæmatidrosis.

**Hæmatho′rax.** See *Hæmatothorax*.

**Hæmat′ic.** Sanguine; relating to blood; medicine acting on the blood as a tonic. **H. acid,** yellow substance derived from carbonization of red corpuscles and subsequent action of carbonate of sodium. **H. cri′sis,** sudden change in characteristics of blood in disease.

**Hæmatidro′sis** (*haima*, blood, *hidrosis*, sweating). Bloody sweat; sudor cruentus. **H. menstrua′lis,** vicarious sweating of blood.

**Hæmatim′eter.** A device for counting the blood cells.

**Hæmatim′etry** (*haima*, blood, *metron*, measure). Estimate of the number of blood corpuscles.

**Hæmatin′, Hematin′,** or **Hæmatosin′.** $C_{68}H_{70}N_8Fe_2O_{10}$. A brownish substance; a component of hæmoglobin residing in distinct particles or globules, and, in the opinion of some observers, in the envelope of the globules; obtained by the action of acetic acid on hæmoglobin. With chlorine, iodine, and bromine it forms crystals of hæmin. **H. albu′min,** hæmalbumin.

**Hæmatin′ic** or **Hematin′ic.** Augmenting the number of red corpuscles or the hæmatin of the blood; relating to hæmatin.

**Hæmatinom′eter.** Instrument to determine the amount of hæmatin or hæmoglobin in the blood.

**Hæmatinop′tysis** (*hæmatin* + *ptyo*, to spit). Expectoration of brownish-yellow hæmatinic crystals without red corpuscles. See *Hæmatoidin*.

**Hæmatinu′ria** (*hæmatin* + *ouron*, urine). Presence in the urine of hæmatin without the red corpuscles; former name for hæmoglobinuria.

**Hæm′atite** or **Hem′atite.** Native red oxide of iron, called bloodstone.

**Hæmato-** (*haima*, blood). In composition, blood.

**Hæmato′bium** (*haima*, blood, *bios*, life). A parasite living in the blood. Distoma hæmatobium.

**Hæm′atoblast** (*haima*, blood, *blastos*, bud). Nucleated corpuscle of marrow, adenoid tissue, and blood-forming tissues, which subsequently become red corpuscles; blood plaque; partially developed red blood corpuscle. See *Globules*.

**Hæmatocathar′tic** (*haima*, blood, *katharsis*, purification or purgation). Purifying the blood.

**Hæmat′ocele** (*haima*, blood, *kele*, tumor). Tumor formed by blood. **H. arterio′sa,** aneurysm. **Catame′nial h.,** pelvic hæmatocele from cessation or obstruction of the menses. **H. circumuteri′na,** pelvic hæmatocele. **Funic′ular h.,** h. of the spermatic cord. **Men′strual h.,** catamenial hæmatocele. **Pel′vic** or **periu′terine h.,** retro-uterine hæmatocele, pelvic hæmatoma or thrombus. Extravasation of blood into the pouch or peritoneum between the rectum and uterus (*retro-uterine*), or into the subperitoneal tissue behind and around the latter organ (*circumuterine*); called also *parametric, ovarian, catamenia′* or *tubal, intraperitoneal, extraperitoneal,* etc. The tumor thus formed is also known as a sanguineous pelvic tumor or ovarian apoplexy. **Prim′itive h.,** h. produced without any apparent cause; spontaneous hæmatocele. **Puden′dal h.,** blood tumor or thrombus of the vulva; tumor formed by a mass of clotted blood effused into the tissue of one labium, or the areolar tissue immediately surrounding the wall of the vagina, doubtless derived from the vessels of the bulb of the vestibule. **Retro-**

**u'terine h.**, pelvic hæmatocele. **Scro'tal h.**, effusion of blood into the areolar tissue of the scrotum; tumor arising from effusion of blood into the tunica vaginalis, differing from hydrocele only in the character of the effusion; effusion of blood into the interior of the tunica albuginea itself. **U'terine h.**, pelvic hæmatocele. **Vag'inal h.**, h. of the tunica vaginali testis. **Vul'var h.**, pudendal hæmatocele.

**Hæmatoceph'alus** (*kephale*, head). Monster in which the effusion of blood in the head has given occasion to more or less singular deformities. Blood tumor of the head.

**Hæmatocereb'riform.** Encephaloid.

**Hæmatoche'zia** (*haima*, blood, *chezo*, to go to stool). Discharge of blood by stool.

**Hæmatochroin'** or **Hæmatoch'roite.** Hæmatin.

**Hæmatochro'sis** (*haima*, blood, *chrosis*, coloration). Bloody discoloration of the skin.

**Hæmatochylu'ria** (*haima*, blood, *chylos*, chyle, *ouron*, urine). Passage of blood and chyle in the urine, due to the Filaria sanguinis.

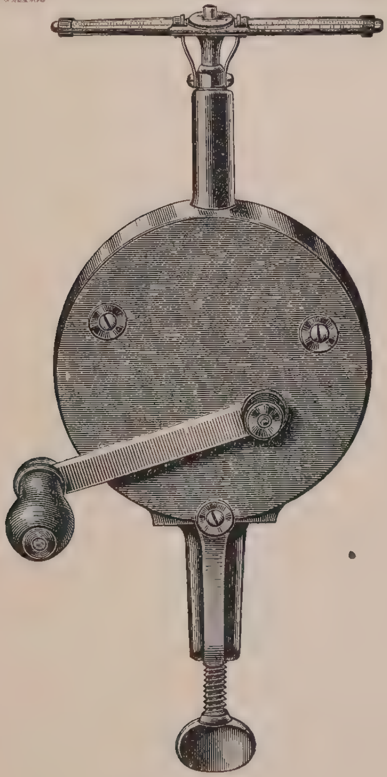
**Hæmatococ'cus.** Babesia.

**Hæmatocœ'lia** (*haima*, blood, *koilia*, abdomen). Effusion of blood into the peritoneal cavity.

**Hæmatocol'ica.** Colic accompanied with bloody passages.

**Hæmatocol'pus** (*kolpos*, vagina). Effusion of blood into the vagina; accumulation of blood owing to the occlusion of the vagina.

**Hæm'atocrit** or **Hem'atokrit** (*haima*, blood, *krino*, to separate). Instrument to measure the volume of the corpuscles in the blood by means of centrifugation. (See also cut under *Centrifuge*.)



Daland's hæmatocrit.

**Hæmatoc'ryal** (*kryos*, cold). Cold-blooded.

**Hæmatocrystallin'.** Hæmoglobin.

**Hæmatocyanin'** (*kyanos*, blue). Blue coloring-matter in blood of octopus, containing copper instead of iron.

**Hæmatocyanop'athy** or **Hæmatocyano'sis.** Cyanopathy.

**Hæm'atocyst** (*kystis*, bladder). Blood-cyst or sanguineous cyst. Hæmatoma. Hemorrhage into the urinary or gall-bladder.

**Hæm'atocyte** (*kytos*, cell). Blood corpuscle.

**Hæmatocytom'eter.** Instrument for ascertaining the number of corpuscles in the blood.

**Hæmatocytozo'on** (*kytos*, cell, *zoon*, animal). An animal parasite of the blood corpuscles.

**Hæmatodiarrhœ'a.** Passage of blood from the bowels.

**Hæmatodynam'ics.** Hæmadynamics.

**Hæmatodynamom'eter.** Hæmadynamometer.

**Hæmatodyscra'sia** (*haima*, blood, *dyskrasia*, disorder). Disease of the blood.

**Hæmatogas'ter.** Effusion of blood in the stomach.

**Hæmat'ogen.** A preparation formed by the addition of ferric citrate and acetic acid to albumin in alkaline solution. The name is applied also to other preparations used in the treatment of anæmia and other blood disorders.

**Hæmatogen'esis** (*haima*, blood, *gennao*, to produce). Formation of blood. Development of blood corpuscles in embryonic life by division of nuclei of hæmatopoietic cells.

**Hæmatogenet'ic, Hæmatog'enous,** or **Hæmatogen'ic.** Favoring hæmatosis or blood-formation. Having origin in the blood.

**Hæmatoglobin'.** Hæmoglobin.

**Hæmatoglobinu'ria.** Hæmoglobinuria.

**Hæmatoglobulin'.** Hæmoglobin.

**Hæmatog'raphy** (*haima*, blood, *graphe*, description). Description of the blood.

**Hæmatohidro'sis.** Hæmatidrosis.

**Hæm'atoid.** That which contains blood or has the character of blood. **H. can'cer** or **fun'gus,** medullary sarcoma, bleeding fungus. A term formerly employed to designate a soft, cancerous tumor with fungous and bleeding excrescences, and most frequently met with in the eyeball, but occurring elsewhere as well.

**Hæmatoidin'.** Hæmatinic, hæmatic, hæmin, or blood crystals. Substance found in the midst or in the vicinity of effusions of blood, in minute rhomboidal crystals or in fine needles. It is hæmatin separated from the globules of the blood, and passed from a state of non-crystallizable organic substance to one of a crystalline chemical compound. The term *hæmatinoptysis* has been applied to expectoration containing hæmatin crystals without red corpuscles.

**Hæmatoin'.** Hæmatoporphyrin.

**Hæmatokol'pos.** Accumulation of blood in the vagina.

**Hæm'atokrit.** Hæmatocrit.

**Hæmatolin'.** Substance derived from hæmatin.

**Hæmatol'ogist.** One versed in the technique of blood examinations and expert in the interpretation of the changes found in this fluid.

**Hæmatol'ogy** or **Hematol'ogy.** Part of medicine treating of the blood. **Clin'ical h.,** study of the blood with reference to the diagnostic significance of the changes found in it. **Patholog'ical h.,** study of diseases of the blood.

**Hæmatolymphangio'ma.** A tumor composed chiefly of blood-vessels and lymph-vessels.

**Hæmatol'ysis** (*haima*, blood, *lysis*, solution). Hæmolysis.

**Hæmatolyt'ic.** Relating to or causing hæmatolysis.

**Hæmato'ma.** Bloody tumor. Tumor of blood, as in the scalp of the newborn. **H. au'ris** or **auricula're,** insane ear, asylum ear; effusion of blood under the perichondrium of the ear, which is stripped from the cartilage; or, according to some, the effusion is within the cartilage. **H. of du'ra ma'ter,** meningeal hemorrhage under the dura mater. **H. of the ear,** h. auris. **H. la'bii,** pudendal hæmatocele. **H. neonato'rum,** cephalæmatoma. **Pel'vic h.,** pelvic hæmatocele. **Retro-u'terine h.,** effusion of blood into the connective tissue back of the uterus. **H. sacca'tum,** encysted tumor containing blood.

**H. of the scalp**, cephalæmatoma. **H. of the u'terus**, hæmatometra.

**Hæmatomediasti'num.** Hemorrhagic effusion into the mediastinum.

**Hæmatom'eter.** Hæmadynamometer; hæmometer.

**Hæmatome'tra** (*haima*, blood, *metra*, uterus). Metrorrhagia. Retention of blood in the uterus.

**Hæmatome'tria** or **Hæmatom'etry** (*haima*, blood, *metron*, measure). Measurement of blood as to amount, dimensions of corpuscles, etc.

**Hæmatom'ma** (*haima*, blood, *omma*, the eye). Effusion of blood into the eye; bloodshot eye; hæmatoma of the eye.

**Hæmatom'onas.** Genus of infusoria detected in the blood of animals; see *Trypanosoma*. **H. evans'ii**, microorganism found in the blood of certain animals, causing a disease called *surra;* hence called *surra parasite*. **H. mala'riæ**, Plasmodium malariæ.

**Hæmatom'phalocele, Hæmatom'phalum**, or **Hæmatom'phalus** (*haima*, blood, *omphalos*, navel, *kele*, tumor). Umbilical hernia, the sac of which encloses bloody serum, or which has at its surface a number of varicose veins, constituting *varicomphalus*.

**Hæmatomy'ces** (*haima*, blood, *mykes*, fungus). Fungus hæmatodes.

**Hæmatomye'lia** (*myelos*, marrow). Hemorrhage into the spinal cord.

**Hæmatomyeli'tis.** Inflammation of the spinal cord accompanied with hemorrhage.

**Hæmatomy'elopore** (*haima*, blood, *myelos*, spine, *poros*, opening). A cavity in the substance of the spinal cord left after a hemorrhage.

**Hæmaton'cus** (*haima*, blood, *onkos*, tumor). Tumor of blood or bloody tumor, such as nævi materni, varicose tumors, etc.

**Hæmaton'osus** (*nosos*, disease). Blood disease.

**Hæmatopath'ia** (*pathos* affection). Hæmatonosus.

**Hæmatopede'sis** (*haima*, blood, *pedao*, to spring). See *Diapedesis* and *Hæmatidrosis*.

**Hæmatopericar'dium.** Effusion of blood into the pericardium.

**Hæmatoph'agous** (*phago*, to eat). Blood-eating.

**Hæmatophil'ia** or **Hæmophil'ia** (*haima*, blood, *phileo*, to love). Hereditary hemorrhagic diathesis, with unusual obstinacy of traumatic hemorrhage, and tendency to spontaneous bleedings and to effusions of blood in the joints.

**Hæmatopho'bia** or **Hæmopho'bia** (*haima*, blood, *phobos*, dread). Morbid dread of the sight of blood. Those who were opposed to bloodletting in former times were called hæmoph'oboi, blood-funkers.

**Hæm'atophore** (*haima*, blood, *phoreo*, to carry). Instrument for the transfusion of blood.

**Hæmatophthal'mia.** Hæmophthalmia.

**Hæm'atophyte** (*phyton*, plant). Vegetable microorganism in the blood.

**Hæmatoplan'ia, Hæmatoplane'sis**, or **Hæmopla'nia** (*plane*, wandering). Vicarious hemorrhage, as in menstruation. **H. menstrua'lis**, vicarious menstruation.

**Hæmatoplas'ma.** Liquor sanguinis; blood-plasma.

**Hæm'atoplast.** Hæmatoblast.

**Hæmatoplas'tic** (*plasso*, to form). Blood-formative.

**Hæmatopleth'ora.** Plethora.

**Hæmatopoie'sis.** Hæmatosis; hæmogenesis.

**Hæmatopoiet'ic.** Favoring or concerned in the formation of blood.

**Hæmatoporphyrin'** (*haima*, blood, *porphyros*, purple). $C_{68}H_{74}N_8O_{12}$. Product of decomposition of hæmatin, sometimes found in urine.

**Hæmatoporphyrinu'ria.** Presence of hæmatoporphyrin in the urine, as after the use of certain drugs.

**Hæmatopo'sia** (*posis*, drink). Drinking of blood.

**Hæmatop'sia** (*ops*, eye). Hæmophthalmia.

**Hæmatop'tysis** (*ptyo*, to spit). Hæmoptysis.

**Hæmator'rhachis** (*rhachis*, the spine). Hemorrhage of, into, or around the spinal marrow.

**Hæmatorrha'gia.** Hemorrhage.

**Hæmatorrhœ'a** (*haima*, blood, *rheo*, to flow). Hemorrhage, generally passive.

**Hæmatorrhophe'sis** (*rhophesis*, absorption). Absorption of blood.

**Hæmatosal'pinx** (*salpinx*, tube). Hemorrhage or accumulation of blood in the Fallopian tube.

**Hæmatoscheocele**, hem-at-os'ke-o-seel (*haima*, blood, *oscheon*, scrotum, *kele*, tumor). Effusion of blood into the scrotum.

**Hæm'atoscope** (*haima*, blood, *skopeo*, to view). Spectroscope for examination of the blood.

**Hæmatos'copy.** Spectroscopic examination of the blood.

**Hæmatosep'sis.** Septicæmia.

**Hæmato'sic.** Hæmatopoietic.

**Hæmatosin'.** Hæmatin. Brown powder made by subjecting blood to process of thickening, pressing, extracting with alcohol, washing, etc.

**Hæmato'sis.** Transformation of venous blood into arterial blood by respiration; aëration or arterialization of blood. Formation of blood in general, or sanguinification.

**Hæmatospec'troscope.** Spectroscope used to determine the amount of hæmoglobin in the blood.

**Hæmatosper'mia.** Mixture of blood with semen.

**Hæmatospil'ia** (*haima*, blood, *spilos*, a spot). Ecchymosis; purpura hæmorrhagica.

**Hæmatospongo'sis.** Development of fungus hæmatodes.

**Hæmatospon'gus** (*haima*, blood, *spongos*, sponge, fungus). Fungus hæmatodes; medullary sarcoma.

**Hæmatostat'ics.** Hydrostatics of the blood in living bodies. Agents for arresting hemorrhage.

**Hæmatos'teon** (*osteon*, a bone). Effusion of blood into the cavity of bones.

**Hæmatostyp'tic.** Hæmostatic.

**Hæmatotelangio'sis** (*haima*, blood, *telos*, end, *angeion*, vessel). Dilatation of capillary vessels. Aneurysm by anastomosis.

**Hæmatother'apy.** The use of blood, or preparations from the same, in treatment of disease.

**Hæmatother'mal** (*therme*, heat). Warm-blooded.

**Hæmatotho'rax.** Hæmothorax.

**Hæmatotox'ic** or **Hæmatox'ic.** Relating to toxæmia or blood poisoning.

**Hæmatotym'panum.** Effusion of blood into the middle ear.

**Hæm'atous.** Relating to blood.

**Hæmatox'ilic acid.** See *Hæmatoxylon*.

**Hæmatoxin'.** Hæmatoxylin.

**Hæmatox'is.** Toxæmia.

**Hæmatox'yli lig'num.** The official name in the Ph. Br. of hæmatoxylon or logwood.

**Hæmatoxylin'.** See *Hæmatoxylon campechianum*.

**Hæmatox'ylon.** Official name in the Ph. U. S. of the heart-wood of H. campechianum. **H. campechian'um**, logwood, ord. *Leguminosæ*. Logwood is almost inodorous, of a sweetish, subastringent taste, and deep red color. Its virtues are extracted by water and alcohol. It is astringent and tonic, and is used in the protracted stages of diarrhœa and dysentery. It contains tannic acid and a coloring principle, *hæmatoxylin* or *hæmatoxylic acid*, $C_{16}H_{14}O_6$, used for microscopic staining. The official preparations are: *Decoc'tum hæmatox'yli* (Ph. Br.), decoction of logwood; dose, ℥ss–ij (16.0–64.0). *Extrac'tum hæmatox'yli* (Ph. U. S.), extract of logwood; dose, gr. v–xxx (0.32–2.0). A fluid extract is also used in doses of ʒj–iv (4.0–16.0).

**Hæmatox'ylum.** Hæmatoxylon.

**Hæmatoze'mia** (*haima*, blood, *zemia*, loss). Habitual or periodical hemorrhage.

**Hæmatozo'on** or **Hæmatozoa'rion** (*zoon*, animal). Parasitic entozoon in the blood. **H. falcip'arum**, parasite of quartan and of tertian fever. **H. pal'udis**, Plasmodium malariæ.

**Hæmatozymo'sis** (*zymosis*, fermentation). Fermentation of the blood.

**Hæmatu'ria** (*haima*, blood, *ouron*, urine). Voiding of blood with the urine; the hemorrhage may proceed from the kidneys, ureters, bladder, or urethra.

**Chy'lous h.**, hæmatochyluria. **H. cys'tica**, discharge of blood from the urinary bladder. **H. ejaculato'ria**, discharge of blood from the urethra accompanying the act of ejaculation of the sperm. **Mala'rial h.**, hæmoglobinuria. **H. rena'lis**, hemorrhage from the kidneys. **H. semina'lis**, h. ejaculatoria. **H. stillati'tia**, hemorrhage from the urethra. **H. vesica'lis**, hemorrhage from the bladder.

**Hæmau'togram** or **Hæmau'tograph.** Record of the pulse made by hæmautography.

**Hæmautog'raphy** (*haima*, blood, *autos*, self, *grapho*, to write). A study of the blood pressure by means of a tracing produced by the direct action of the blood from a cut artery against a moving disk of paper.

**Hæmax'is** (*haimasso*, to let blood). Bloodletting.

**Hæmelytrome'tra** (*elytron*, vagina, *metra*, uterus). Collection of blood in the uterus and vagina.

**Hæmenceph'alus.** Hemorrhage within the cranium.

**Hæmendocar'dium.** Effusion of blood into the substance of the lining membrane of the heart.

**Hæmen'tera** (*enteron*, intestines). Melæna.

**Hæ'mic.** Relating or appertaining to blood or state of the blood. **H. cal'culus**, concretion formed of blood or blood-clots. **H. mur'murs**, sounds caused by some changed condition of the blood. **H. u'nit**, proportion of red corpuscles in the blood under examination, the normal standard being assumed at 100.

**Hæmidro'sis.** Hæmatidrosis.

**Hæ'min.** Crystalline chloride of hæmatin.

**Hæmi'tis.** Alteration of the blood occurring in inflammatory diseases.

**Hæmo-.** In composition, blood.

**Hæmoalbuminu'ria.** Hæmaturia.

**Hæmobilinu'ria.** Presence of urobilin in the blood.

**Hæmo'bium.** Hæmatobium.

**Hæm'oblast.** Hæmatoblast.

**Hæmocardiorrha'gia** (*haima*, blood, *kardia*, the heart, *rhegnymi*, to break forth). Apoplexy of the heart; effusion of blood into the substance of the heart.

**Hæmocar'dium.** Hæmocardiorrhagia.

**Hæmocatatonis'tic** (*kata*, down, *tonos*, tension). Having an action on lessening the cohesion between hæmoglobin and the red corpuscles. The spleen is credited with such power.

**Hæmocelido'sis** (*kelidoo*, to stain). Purpura.

**Hæmochroin'.** Hæmatin.

**Hæmochro'magen.** Coloring-matter produced by decomposition of hæmoglobin.

**Hæmochromato'sis** (*chroma*, color). Formation of coloring-matter of the blood. Pigmentation with such coloring-matter.

**Hæm'ochrome** (*chroma*, color). Hæmatin.

**Hæmochro'mogen.** Hæmochromagen.

**Hæmochromom'eter.** Apparatus or instrument for determining the amount of hæmoglobin.

**Hæmochromom'etry.** Investigation as to the amount of hæmoglobin in the blood.

**Hæmochro'sis.** Hæmatochrosis.

**Hæmococ'ci.** Microorganisms in the blood.

**Hæmococcid'ium.** See *Plasmodium*.

**Hæmocrystallin'.** Hæmoglobin.

**Hæmocyanin'.** Hæmatocyanin.

**Hæmocyano'sis.** Cyanosis.

**Hæm'ocyte.** Blood corpuscle.

**Hæmocytol'ysis** (*kytos*, cell, *lysis*, solution). Dissolution or disintegration of red globules of blood.

**Hæmocytom'eter.** Hæmacytometer.

**Hæmocytotrip'sis** (*haima*, blood, *kytos*, cell, *tripsis*, rubbing). Breaking up of red globules of blood.

**Hæmocytozo'on.** Animal parasite of the blood cells.

**Hæmodac'rysis** (*haima*, blood, *dakry*, tear). Production of bloody tears.

**Hæmodiagno'sis.** Diagnosis based upon data obtained by examination of the blood or upon certain specific serum reactions.

**Hæmodiapede'sis.** Sweating of blood.

**Hæmodiarrhœ'a.** Bloody diarrhœa.

**Hæmodro'mograph** (*haima*, blood, *dromos*, running, *grapho*, to write). Instrument for recording graphically the velocity of the circulating blood.

**Hæmodromom'eter** (*haima*, blood, *dromos*, course, *metron*, measure). Instrument for measuring the velocity of the blood circulation.

**Hæmodynam'ics.** Hæmadynamics.

**Hæmodynamom'eter.** Hæmadynamometer.

**Hæmodyscra'sia.** Hæmatonosus.

**Hæmofer'rum.** Oxyhæmoglobin.

**Hæmofuscin'** (*fuscus*, brown). Brownish pigment obtained from the blood.

**Hæmogal'lol.** Reduction product of hæmatin; a readily absorbed blood tonic in chlorosis, anæmia, etc. Dose, gr. ij–v (0.13–0.32).

**Hæmogen'esis.** See *Hæmatogenesis*.

**Hæmogenet'ic** or **Hæmogen'ic.** Blood-formative.

**Hæmogenous**, hem-oj'en-us. Formed in the blood.

**Hæmoglobin'.** Albuminous coloring-matter of red corpuscles of blood, giving color to venous and arterial blood; composed of hæmatin and globulin; used therapeutically in anæmia and chlorosis in doses of gr. ss–ij (0.032–0.13).

**Hæmoglobinæ'mia.** Condition of blood characterized by the existence of free hæmoglobin in it.

**Hæmoglobinocho'lia** (*chole*, bile). Presence of hæmoglobin in the bile, as in poisoning by phenylhydrazin.

**Hæmoglobinom'eter.** Hæmatinometer.

**Hæmoglobinu'ria.** Black-water fever. The presence of free hæmoglobin in the urine, due to destruction of the red corpuscles, as in septicæmia, malaria, certain forms of poisoning, and after burns and transfusion of blood.

**Hæmoglobinu'ric.** Relating to or characterized by hæmoglobinuria. **H. fe'ver**, black-water fever.

**Hæmoglobulin'.** Hæmoglobin.

**Hæmograph'ion** (*grapho*, to write). Hæmodynamometer, arranged to indicate graphically the blood pressure.

**Hæmogregari'na.** An order of animal microorganisms parasitic in the blood cells of frogs.

**Hæmohydrarthro'sis** (*haima*, blood, *hydor*, water, *arthron*, joint). Effusion of bloody serum into a joint.

**Hæmohydronephro'sis** (*haima*, blood, *hydor*, water, *nephros*, kidney). Cystic tumor of the kidney, contents of which are blood and urine.

**Hæ'moid** (*haima*, blood, *eidos*, resemblance). Sanguine; bloody.

**Hæmokelido'sis.** Hæmocelidosis.

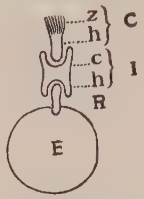
**Hæmoko'nia** (*konis*, dust). Small, spherical granules in the blood; blood dust.

**Hæ'mol.** A substance used in anæmia and chlorosis, obtained by reduction of hæmoglobin. The hæmols employed in medicine are *arsenic hæmol*, convenient for administering arsenic; daily dose, gr. iss (0.1), gradually increased; *bromohæmol*, dose, gr. xv–xxx (1.0–2.0), three times daily, for administering bromine; *cuprohæmol*, used in scrofulosis, tuberculosis, etc., dose, gr. iss–ij (0.1–0.13), three times a day; *ferrohæmol*, dose gr. viij (0.5), three times a day; *iodohæmol*, used in syphilis, scrofula, etc., dose, gr. iij (0.2); *mercuric-iodide hæmol*, used in diarrhœa, gastric irritability, syphilis, etc.; *zinc-hæmol*, used in diarrhœa in doses of gr. viij–xv (0.5–1.0), three times daily.

**Hæmoleu'cocyte** (*haima*, blood, *leukos*, white, *kytos*, cell). White blood corpuscles.

**Hæm'olymph.** Blood and lymph combined. Circulating fluid of worms and most molluscs, and arthropods; it has hæmoglobin or other oxygen-carrier in solution. **H. glands**, prevertebral glands, to which hæmatopoietic qualities have been ascribed.

**Hæmolysin'.** When blood from an animal of one species is injected into the circulation of an animal of another species there is formed in the blood of the second animal a substance (cytolysin) which has the property of destroying the red corpuscles of the blood of the first animal; this is called an hæmolysin. The same phenomenon may also be observed when the experiment is made with blood of an animal of the same species as that into which the blood is injected; in this case the substance is called *isolysin,* and the process of dissolving the corpuscles *isolysis.* When



E, red blood cell; R, receptor; I, immune body; h, haptophore, and c, complementophile group; C, complement; h, haptophore, and z, zymotoxic group.

the animals are of two species the terms employed are *heterolysin* and *heterolysis* respectively. The action of an hæmolysin is explained by Ehrlich in the side-chain theory (see *Chain*). The hæmolysin is formed of two substances, the complement and the immune body or amboceptor, each of these being composed of two groups of atoms. (See the cut, and also *Complement, Haptophore, Immune body,* etc.)

**Hæmol′ysis** (*lysis,* solution). Destruction or disintegration of the blood. **Specif′ic h.,** see *Hæmolysin.*

**Hæmolyt′ic** Relating to or causing hæmolysis. Destructive to the red blood cells.

**Hæmomanom′eter** (*haima,* blood, *manos,* thin, *metron,* measure). Instrument for determining the degree of pressure of the circulating blood.

**Hæmomediasti′num.** Hemorrhagic effusion in the mediastinum.

**Hæ′momere** (*meros,* part). Portion of theoretical segment of the vertebrate animal, composed of blood-vessels.

**Hæmom′eter.** Hæmadynamometer. An instrument for determining the percentage of hæmoglobin in the blood.

**Hæmome′tra** (*haima,* blood, *metra,* uterus). Collection of menstrual blood behind an abnormally contracted os uteri, which impedes its discharge.

**Hæmonephrorrha′gia** (*haima,* blood, *nephros,* kidney, *rhage,* rupture). Excessive renal hemorrhage.

**Hæmoöphori′tis** (*haima,* blood, *oon,* egg, *phoreo,* to bear). Hemorrhagic inflammation of the ovary.

**Hæmopath′ia** (*pathos,* affection). Hæmatonosus.

**Hæmopathol′ogy** (*haima,* blood, *pathos,* disease, *logos,* description). Pathology of the blood.

**Hæmopericar′dium.** Effusion of blood in the pericardium.

**Hæmoperitone′um.** Effusion of blood into the peritoneal cavity.

**Hæmophag′ocytes** (*haima,* blood, *phago,* to eat, *kytos,* cell). White blood corpuscles in their capacity as phagocytes.

**Hæmophil′ia.** Hæmatophilia.

**Hæmopho′bia.** Hæmatophobia.

**Hæmophthal′mia** (*ophthalmos,* eye). Effusion of blood into the eye; extravasation may be external or internal; bloodshot eye. Condition in which all objects appear blood-red.

**Hæmoplas′ma.** Blood-plasma.

**Hæmoplasmo′dium.** An animal parasite of the blood.

**Hæmoplas′tic.** Hæmatoplastic.

**Hæmopleth′ora.** Plethora.

**Hæmopneumotho′rax** (*haima,* blood, *pneuma,* air, *thorax,* chest). Pressure or accumulation of air or blood in the pleural cavity or elsewhere in the chest.

**Hæmopoie′sis.** Hæmatopoiesis.

**Hæmopoiet′ic.** Hæmatopoietic.

**Hæmoproc′tia** (*haima,* blood, *proctos,* anus). Discharge of blood from hemorrhoids. Rectal hemorrhage.

**Hæmopro′teus.** Genus of *Protozoa* parasitic in the blood corpuscles of birds.

**Hæmoptoë,** he-mop′to-e. Hæmoptysis.

**Hæmopto′ic.** Relating or appertaining to hæmoptysis; one affected with hæmoptysis. **H. fe′ver,** hemorrhage associated with malarial fever.

**Hæmop′tysis** (*haima,* blood, *ptyo,* to spit). Spitting of blood; hemorrhage from the mucous membrane of the lungs, characterized by the expectoration of more or less florid and frothy blood. It is generally preceded by cough, dyspnœa, sense of heat in the chest, etc. Hæmoptysis dependent on organic affection of the lungs or heart or some faulty conformation of the chest is a serious symptom; but one attack seldom imperils life, and the affection is chiefly dangerous by frequent recurrence and consequent great loss of blood. The general causes of hæmoptysis are the same as those of other kinds of hemorrhage; it has also particular causes, as too great exercise of the lungs, loud speaking, playing on wind instruments, breathing acrid vapors, etc. It usually occurs between puberty and the age of thirty-five years. Sudden and terrific hæmoptysis is sometimes met with, associated with a great afflux of blood to the lungs, when it is called *pulmonary apoplexy* or *extravasation.* Infiltration of blood into the air-cells may occur without any spitting of blood. Extravasation of blood into the tissue of the lungs has been termed *pneumohemorrhage.* The treatment of hæmoptysis must be conducted on the same lines as that of internal hemorrhage in general. **H. inter′na,** extravasation of blood into the chest. **H. larynge′a et trachea′lis,** hemorrhage from the trachea. **H. phthi′sis,** phthisis pulmonalis.

**Hæmoptys′mus.** Hæmoptysis.

**Hæmorrhachis,** he-mor′rak-is (*haima,* blood, *rhachis,* spine). Hemorrhage into the spinal marrow.

**Hæm′orrhage.** Hemorrhage.

**Hæmorrha′gia.** Hemorrhage.

**Hæmorrhagic,** he-mor-raj′ik. Hemorrhagic.

**Hæmorrhagin′.** A toxin contained in snake-venom which causes abundant hemorrhages in the tissues of the poisoned animal.

**Hæmorrhaphil′ia.** Hæmatophilia.

**Hæmorrhi′nia** or **Hæmorrhinorrha′gia** (*haima,* blood, *rhis,* nose, *rhegnymi,* to break forth). Bleeding at the nose.

**Hæmorrhocryp′ia** (*haimorrhois,* hemorrhoid, *kryptos,* hidden). Suppression of hemorrhoidal discharge.

**Hæmorrhœ′a** (*haima,* blood, *rheo,* to flow). Hemorrhage. **H. pulmona′lis,** hæmoptysis. **H. uteri′na,** metrorrhagia. **H. vaso′rum hæmorrhoida′lium,** discharge of blood or mucus from hemorrhoids. **H. ventric′uli,** gastrorrhagia; hæmatemesis. **H. via′rum urina′rium,** hæmaturia.

**Hæm′orrhoid.** Hemorrhoid.

**Hæmorrhoid′al.** Hemorrhoidal.

**Hæmor′rhois** (pl. hæmorrhoides) (*haima,* blood, *rheo,* to flow). Hemorrhoids; piles. **H. al′ba,** leucorrhœa analis. **H. cæ′ca,** blind pile. **H. cruen′ta,** bleeding pile. **H. cuta′nea,** external hemorrhoid. **H. ab exa′niâ,** prolapse of the rectum. **H. flu′ens,** bleeding hemorrhoid. **H. pro′cedens,** prolapse of anus.

**Hæmorrhoischesis,** he-mor-ro-is′kes-is (*ischo,* to restrain). Suppression of the hemorrhoidal flux.

**Hæmor′rhysis.** Hemorrhage.

**Hæmosal′pinx** Distention of a Fallopian tube with blood.

**Hæmos′cheocele.** Hæmatoscheocele.

**Hæmoschistocephalus,** he-mo-shist-o-sef′al-us (*schistos,* cleft, *kephale,* head). Monster having a cleft in the skull.

**Hæm′oscope.** Hæmatoscope.

**Hæmosiderin′** (*haima,* blood, *sideros,* iron). Pigment containing iron formed on exterior of extravasated blood while hæmoglobin is undergoing composition.

**Hæmospa′sia** or **Hæmos′pasis.** See *Hæmospastic.*

**Hæmospas′tic** (*haima,* blood, *spao,* to draw). An agent which draws or attracts blood to a part, as a cupping-glass. The operation is termed *hæmospasia,* the term applied to a process by which the air is exhausted over a considerable surface, as over the extremities, by an appropriate pneumatic apparatus, the *hæmospastic system.*

**Hæmosperm′atism.** Formation or ejaculation of semen mixed with blood, due to capillary hemorrhage in the vesiculæ seminales from overdistention or from excessive coitus or masturbation.

**Hæmosporid′ia.** Order of *Protozoa* parasitic in the blood corpuscles of man and other animals.

**Hæmosta′sia** or **Hæmos′tasis** (*haima,* blood, *stasis,* stagnation). Stagnation of blood. An operation, the object of which is to arrest the flow of blood, as by compression or ligation of the great vessels.

**Hæmostat′ic.** An agent that arrests hemorrhage.

**Hæmostyp′tic.** Hæmostatic.

**Hæmotachom′etry** (*haima,* blood, *tachos,* swiftness, *metron,* measure). Measurement of the velocity of circulating blood. An instrument devised for this purpose is called *hæmotachometer* or *hæmatachometer* and *tachometer.*

**Hæmotelangio′sis.** Dilatation of capillary vessels; telangiectasis.

**Hæmotho′rax.** An effusion of blood in the pleural cavity.

**Hæmotox′ic.** Toxæmic. Hæmolytic.

**Hæmotox′is.** Blood poisoning.

**Hæmo′tus** (*haima,* blood, *ous,* ear). Effusion of blood into the ear; hæmatoma auris.

**Hæmure′sis** or **Hæmu′ria.** Hæmaturia.

**Hæmyd′ria** (*hydor,* water). Excessive amount of water in the blood; hydræmia.

**Hæred′itas.** Heredity.

**Hae′ser's for′mula.** See *Trapp's formula.*

**Hæsita′tio** (*hæsito,* to stick fast). Stuttering; stammering.

**Haff′kine's se′rum** or **vaccine′.** A vaccine for conferring immunity against cholera. Also a vaccine made by heating a virulent culture of plague bacilli to 70° C., used as a preventive of this disease.

**Hag′berry.** Prunus padus.

**Hage′nia** (after Prof. K. C. Hagen, of Königsberg) **abyssin′ica.** Abyssinian tree, ord. *Rosaceæ;* infusion or decoction of its flowers, flores cosso, is anthelmintic, especially in tapeworm. The dried panicles, brayera, koosso, are official in the Ph. Br. An active resinous principle has been obtained from the flowers, to which the names *tæniin* and *koussin* have been given.

**Hagiosper′mum.** Artemisia santonica.

**Hagiox′ylum.** Guaiacum.

**Hahn's opera′tion.** Pylorodiosis or dilatation of a stenosed pylorus by the finger invaginating the wall of the stomach, the latter not being incised as it is in Loreta's operation.

**Hahn′emannism** (after S. C. F. Hahnemann, the founder). Homœopathy.

**Hail′stone spu′ta.** Small concretions of spherical masses of inspissated mucopus, expectorated in certain cases of bronchitis.

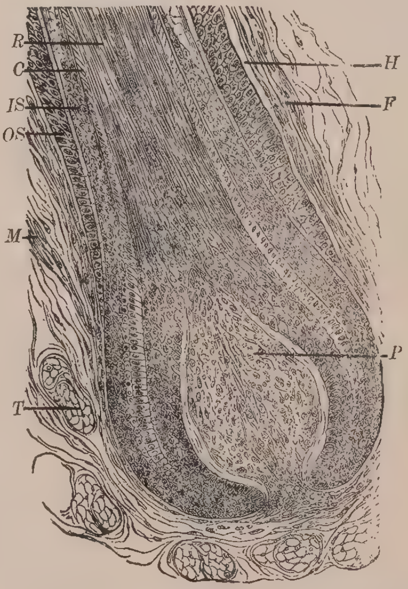
**Hair.** Conical, corneous substance, free portion or shaft, *scapus,* of which issues to a greater or less distance from the skin, to the tissue of which it adheres by a bulb or button, *bulbus pili,* seated in a hair follicle, *folliculus pili,* made by inversion of the integument, the epidermis of which forms a root-sheath, *vagina pili.* At the base of the hair follicle there is a small papilla, well supplied with blood-vessels and nerves, *papilla pili;* at times called, but improperly, *pulpa* or *blastema pili.* Hair receives various names in different parts, as beard, cilia, eyebrows, hair of the head (capilli), etc. The following measurements and statistical facts as to the hair are given by Krause:

Shaft of hair: 0.6 mm.–1.5 in length.
0.007–0.17 in transverse diameter.

The single hair can bear a weight of . . 60 g.
Hair-roots of finest hairs . . . . . . . . . . . . 0.4 mm. long.
" " thicker " . . . . . . . . . . . . 2–4 " "

| | *Broad.* | *Thick.* |
|---|---|---|
| Hair of head . . . . . . | 0.05–0.09 mm. | 0.04–0.06 mm. |
| Beard . . . . . . . . . . . | 0.1–0.2 | 0.07–0.09 |
| Cilia, 6–12 mm. long | 0.1 | 0.09 |
| Vibrissæ . . . . . . . . . | 0.13 | 0.09 |
| Lanugo . . . . . . . . . | 0.0016 | 0.0012 |
| Eyebrows, 7–16 long | 0.1 | 0.9 |

Total number of hairs on the head . . . . . . . . . . 80,000
Total number of hairs on the rest of the body 20,000
The hair of the head in females weighs about 300 g.
Life of hairs:
  On the skin of the head . . . . . . . . . . . . 2–4 years.
  On the margins of the scalp . . . . . . . . 4–9 "
  Cilia . . . . . . . . . . . . . . . . . . . . 100–150 days (Moll).
Daily growth of hair on the head . . . . . . . 0.2–0.3 mm.
  When the hair is cut monthly . . . . . . . 0.2 "
  When the hair is cut every two months . . . . . . . . . . . . . . . . . . . . 14 per cent. less.
  In the spring and summer . . 27 per cent. more than in the fall and winter.
Daily loss of hair in men and women . . . . . . . 38–103.



Lower portion of hair-pouch from the lip of a kitten: *F,* follicle; *T,* transverse section of connective-tissue bundles of derma; *M,* arrector pili muscle; *IS,* inner root-sheath; *OS,* outer root-sheath; *P,* papilla; *C,* cuticle; *R,* root of hair; *H,* hyaline, or so-called "structureless," membrane (magnified 500 diameters). (Heitzmann.)

**Aud′itory h.,** delicate nervous fibrils, continuations of spindle-shaped nerve-cells at the end of the vestibular nerve. **H. bulb,** expanded extremity of hair-root on the papilla of the hair follicle. **H. cells,** cells with hair-like terminations in the crista acustica and organ of Corti, in the internal ear. **H. cu′ticle,** scales forming the outer covering of the hair. **H. disks,** see *Pinkus.* **H. epider′mis,** h. cuticle. **H. fol′licle,** involution of epidermis lodging hair-root; see *Hair.* **H. germ,** h. papilla. **H. glands,** sebaceous glands of the skin. **H. knob,** part of old root of hair in hair follicle. **H. li′chen,** lichen pilaris. **Mat′ted h.,** plica. **Olfac′tory h.,** cilia-like projections from the free ends of the olfactory cells in amphibious animals. **H. papil′la,** matrix pili. **H. pith,** medulla of the hair. **Plait′ed h.,** plica. **Sen′sory h.,** ciliary process at the extremity of a taste bulb. **Stel′late h.,** hair split at the end. **Tac′tile h.,** hair-like appendages on the skin of some animals, considered as associated with the sense of touch. **Tricho′matose h.,** plica.

**Hair-cap moss.** Polytrichum juniperinum.

**Hair-salt.** Native magnesium sulphate.

**Hair'worm.** Seta equina. See *Ectozoa*. **Mus'cular h.**, dracunculus.

**Hair'y.** Pilous; covered with hair. **H. heart,** heart on which rough exudation is deposited. **H. tongue,** enlargement of papillæ filiformes of the tongue, with darkening of pigment.

**Hake.** See *Oleum morrhuæ*.

**Halcyo'nium rotun'dum.** Pila marina.

**Halelæ'on** (*hals*, salt, *elaion*, oil). Mixture of oil and salt for removing swellings of the joints.

**Half-arches.** Pillars of fauces or palate.

**Half-breed.** See *Half-caste*.

**Half-caste.** Term applied in India to the offspring of a Hindoo and European; since extended to the offspring of mixed races. The subjoined list from Tschudi shows the parentage of the different varieties of half-castes, and also the proper designations of the latter, as observed in South America:

| *Parents.* | *Children.* |
|---|---|
| White father and Negro mother.... | Mulatto. |
| White father and Indian mother... | Mestizo. |
| Indian father and Negro mother.... | Chino. |
| White father and Mulatta mother... | Cuarteron. |
| White father and Mestiza mother... | Mestizo-blanco. |
| White father and China mother... | Chino-blanco. |
| White father and Cuarterona mother ...................... | Quintero. |
| White father and Quintera mother... | White. |
| Negro father and Mulatta mother... | Zambo-negro. |
| Negro father and Meztiza mother... | Mulatto-oscuro. |
| Negro father and China mother.... | Zambo-chino. |
| Negro father and Zamba mother... | Zambo-negro. |
| Negro father and Cuarterona or Quintera mother ............. | Mulatto. |
| Indian father and Mulatta mother... | Chino-oscuro. |
| Indian father and Mestiza mother... | Meztizo-claro (frequently very beautiful). |
| Indian father and China mother... | Chino-cholo. |
| Indian father and Zamba mother... | Zambo-claro. |
| Indian father and China-chola mother ...................... | Indian (with rather short, frizzy hair). |
| Indian father and Cuarterona or Quintera mother ............. | Mestizo (rather brown). |
| Mulatto father and Zamba mother.. | Zambo (a miserable race). |
| Mulatto father and Mestiza mother.. | Chino-claro. |
| Mulatto father and China mother... | Chino-oscuro. |

**Half-vis'ion.** Hemiopsia.

**Halicac'abum.** Physalis.

**Halicore,** hal-ik'or-e. Dugong, genus of *Cetacea*, from fat of which a bland oil is obtained, used as a substitute for cod-liver oil.

**Hal'idrys vesiculo'sa.** Fucus vesiculosus.

**Halim'etry.** Measurement of salts.

**Halina'trum** (*hals*, salt, *natrum*, soda). Name given to subcarbonate of sodium containing a little subcarbonate of ammonium, found on the plaster of damp walls, in places inhabited by man or animals.

**Hali'nus.** Saline.

**Halistere'sis** (*hals*, salt, *steresis*, privation). Change in structure of bones by loss or deprivation of salts, leading to osteomalacia.

Lattice-work figures in halisteresis. (V. Recklinghausen.)

**Halisteret'ic.** Relating to softening of bones by loss of salts.

**Hal'itus** (vapor). Breath.

**Hall's (Mar'shall) disease'.** Hydrocephaloid disease in very young children with chronic catarrh of the intestines. **H.'s fa'cies,** projecting forehead and small features noticeable in hydrocephalus. **H.'s meth'od,** see *Drowning, resuscitation from*.

**Hal'ler's acid elix'ir.** Mixture of concentrated sulphuric acid and alcohol, employed as an astringent in hemorrhages, etc. **H.'s an'sa,** small nerve-loop from the facial nerve below the stylomastoid foramen. **H.'s cir'cles,** arterial and venous circles in the eye; also venous circle on the mammæ during lactation; see *Circulus arteriosus Halleri* and *Circulus venosus Halleri*. **H.'s col'ic omen'tum,** process of the greater omentum, sometimes adherent to the testis in the fœtus. **H.'s cones,** coni vasculosi. **H.'s congen'ital her'nia,** hernia of intestine into the vaginal process of the peritoneum. **H.'s fræ'num,** H.'s isthmus. **H.'s haben'ula,** see *Habenula*. **H.'s isth'mus,** narrow space separating the ventricle from the bulb of the aorta during early life of the fœtus. **H.'s lin'ea splen'dens,** fibrous band in the centre of the pia mater of the spinal cord. **H.'s net'work,** rete testis. **H.'s plex'us** or **laryn'geal plex'us,** plexus constituted of branches of the external laryngeal and sympathetic nerves on the external surface of the inferior constrictor of the pharynx. **H.'s splen'did line,** H.'s linea splendens. **H.'s tri'pod,** cœliac axis. **H.'s tu'nica vasculo'sa,** vascular layer of the choroid. **H.'s vas aber'rans,** small canal associated with the globus minor of the epididymis or vas deferens. **H.'s ve'nous cir'cle,** superficial venous circle on the mammæ during lactation. **H.'s zones,** coni vasculosi.

**Hal'lex** (*hallomai*, to leap). Thumb; great toe; see *Digitus*.

**Hallopeau's' disease'.** Chronic pustular dermatitis; a form of pemphigus vegetans.

**Hal'lucal.** Relating to the big toe.

**Hallucina'tion.** Waking dream, phantasm. Morbid error in one or more of the senses. Subjective perception of objects which do not in fact exist. This almost always depends on disorders of the brain, but is not an index of insanity unless the patient believes in the existence of the subject of the hallucination.

**Hal'lus** or **Hal'lux** (*hallomai*, to leap). Great toe. Hallex or pollex pedis. **H. doloro'sus,** h. flexus. **H. flex'us** or **rig'idus,** abnormal flexion of the first phalanx of the great toe, the second phalanx being extended. **H. val'gus,** dislocation of the great toe in an outward direction. **H. va'rus,** pigeon-toe; deviation or dislocation of the great toe inward.

**Ha'lo** (*halos*, circle). Areola of nipple. Circle observed in a flame by one laboring under incipient glaucoma, or around the yellow spot with the inverted image. **H. glaucomato'sus,** see *H. symptom*. **H. signa'tus,** impression of a circle made by the ciliary processes on the anterior surface of the vitreous humor. **H. symp'tom,** the colored halo or circle seen around a light in glaucoma.

**Hal'ogen** (*hals*, salt, *gennao*, to generate). One of the electronegative bodies, chlorine, iodine, bromine, or fluorine, forming salts with electropositive metals.

**Halogenous,** hal-oj'en-us. Capable of forming salts. See *Halogen*.

**Hal'oid** (*hals*, salt, *eidos*, appearance). Salt-like; a salt of one of the halogens.

**Hal'sted's su'ture.** A form of mattress or quilted suture for the intestine. (See cut on page 515.)

**Hal'stern's disease'.** Endemic syphilis.

**Halterid'ium.** Hæmoproteus.

**Halyme'nia cilia'ta** and **H. edu'lis.** Species of algæ used as food in Ireland and Scotland; the latter is also a diuretic and purgative. **H. palma'ta** is also employed as a food and as a vermifuge.

**Hal′ysis** (*halysis*, chain). Bothriocephalus. **H. ellip′tica,** Tænia elliptica. **H. la′ta,** Bothriocephalus latus. **H. margina′ta,** Tænia marginata. **H. membrana′cea,** Bothriocephalus latus. **H. so′lium,** Tænia solium.

**Ham.** Posterior part of the knee-joint.

**Hamamelidin′** or **Hamamelin′.** Extract of Hamamelis virginiana, dried and powdered; dose, gr. ¼–½ (0.016–0.032).

**Hamamel′idis cor′tex et fo′lia.** The official name (Ph. Br.) of witch-hazel. The liquor, extractum liquidum, tinctura, and unguentum are official.

**Hamame′lis** (*hama*, together with, *melis*, apple-tree). The official (Ph. U. S.) name for the leaves of H. virginiana. The recognized preparation is the *extrac′tum hamamel′idis flu′idum*, fluid extract; dose, ʒss–j (2.0–4.0). In the Ph. Br. the official preparations are: *Li′quor hamamel′idis*, made from the fresh leaves; dose, ʒss–ij (2.0–8.0). *Extrac′tum hamamel′idis li′quidum;* dose, ♏v–xv (0.32–1.0). *Tinctu′ra hamamel′idis;* dose, ʒss–j (2.0–4.0). *Unguen′tum hamamel′idis*, witch-hazel ointment; one part of liquid extract in nine parts of wool fat. **H. androg′yna, H. carolinia′na, H. corylifo′lia,** H. virginiana. **H. virginia′na** or **virgin′ica,** witch-hazel, winter witch-hazel, snapping hazelnut, winter bloom; ord. *Hamamelaceæ*. The bark of this tree, native of the United States, is somewhat bitter and sensibly astringent. Cataplasm of the inner rind of the bark is efficacious in painful inflammation of the eyes, also in hemorrhoids; it is sedative and hæmostatic.

**Hamarthri′tis** (*hama*, at once). Arthritis or gout in all the joints. Universal gout.

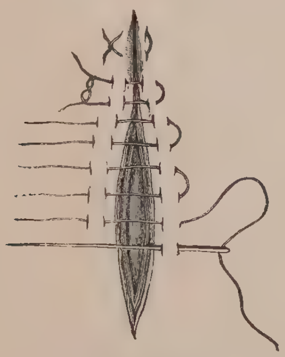
**Ham′ate** (*hamus*, hook). Uncinate, unciform.

**Ham′ilton's test.** In dislocation of the shoulder, the acromion process and external condyle are in a straight line.

**Ham′mer.** Malleus. **H. cramp,** h. palsy. **H. pal′sy,** hephæstic hemiplegia; form of paralysis of the muscles of the arms and shoulder observed in file-forgers, hammersmiths, etc. **Ther′mal h.,** Corrigan's button cautery. **H. toe,** peculiar claw-like condition of the toe (the second one especially) caused by the permanent extension of the first phalanx and flexion of the second and ungual phalanges, producing an upward angle.

**Ham′mond's disease′.** Athetosis.

**Ham′strings.** Strings or tendons of the ham. The ham muscles are the biceps femoris, whose tendon forms the outer hamstring, and the semimembranosus, semitendinosus, gracilis, and sartorius, whose tendons form the inner hamstring. "To hamstring" means to cut the strings or tendons of the ham.



Halsted's quilt suture.

**Ham′ular** (*hamulus*, small hook). Hook-like. **H. groove,** sulcus for the passage of the tendon of tensor palati muscle around the hamular process of the sphenoid bone. **H. pro′cess,** several curved or hook-like processes are so named, as *h. process of humerus*, projection in front of the internal condylar ridge of that bone; *h. process of lacrymal bone* passes over the lacrymal duct to connect that bone and the sphenoid; *h. process of pterygoid process of sphenoid bone* or *hamulus* projects from the termination of the internal pterygoid plate.

**Hamula′ria lymphat′ica.** Worm found in the bronchial tube.

**Ham′ulus** (dim. of *hamus*, hook). Hook or crook. Hook-like process; unciform bone. See *Hamular process*. **H. cartilagine′us,** extremity of limbus of the spiral lamina at the helicotrema. **H. of coch′lea,** h. laminæ spiralis; see *Hamulus*. **H. fronta′lis,** alar process of ethmoid. **H. lacryma′lis,** see *Hamular process*. **H. lam′inæ spira′lis,** pointed, hook-like process at the apex of the cochlea, terminating the lamina spiralis. **H. os′sis hama′ti,** unciform process. **H. o. lacryma′lis,** see *H. process*. **H. o. uncina′ti,** unciform process. **H. palati′nus,** curved extremity of the inferior turbinate bone, forming the joint with the palate bone. **H. pterygoide′us,** see *Hamular process*. **Scar′pa's h.,** hooked process at the upper free extremity of the lamina spiralis. **H. of spi′ral lam′ina,** h. laminæ spiralis. **H. trochlea′ris,** spinous process on the orbital surface of the frontal bone for the attachment of the pulley of the trochlearis muscles. **H. uncifor′mis** or **uncina′tus,** unciform process of ethmoid bone.

**Ha′mus.** Hook. See *Hamulus*. **H. anatom′icus,** tenaculum.

**Ha′my's plane.** Horizontal plane passing through glabella and lambda.

**Han′cock's amputa′tion.** Modification of subastragaloid amputation, the tuberosity of the calcis being saved and turned up to be united to the lower surface of the astragalus, from which a slice of bone is taken.

**Hand.** See *Manus*. **Chol′era h.,** see *Cholera hand*. **Club h.,** see *Kyllosis*.

**Hand-and-foot disease′.** A trophoneurosis of which ulceration of the feet and hands is the chief symptom.

**Han′dle of mal′leus.** Process of that bone connecting it with the membrana tympani.

**Hand-drop.** Wrist-drop; popular term for paralysis of the hand induced by the action of lead.

**Hand-woman.** Midwife.

**Han′gee.** Pinella tuberifera.

**Hang′ers.** Crusta genu equinæ. Laminaria digitata.

**Hang′ing drop.** A drop of a culture fluid containing bacteria, hanging from the under side of a cover-glass placed over a cell in the slide; used for observing colonies of bacteria under the microscope. (See cut under *Culture*.)

**Hang′nail.** Nail-spring, spring-nail. Portion of epidermis, partially detached from the finger in the vicinity of the nail.

**Han′nover's canal′.** Canal made through zonules of Zinn by injected fluid. **H.'s interme′diate mem′brane,** enamel membrane of fœtus.

**Hanot's′ disease′.** Hypertrophic cirrhosis of the liver.

**Hapalonychia,** hap-al-o-nik′e-ah (*hapalos*, soft, *onyx*, nail). Condition of nails in which they are soft and not converted into corneous or horny tissue.

**Hapantis′mus** (*hapas*, all). Matting or growing together of organic parts.

**Haphalge′sia** (*haphe*, touch, *algos*, pain). Sensation of pain caused by touching any substance.

**Haph′e.** Feeling, touch.

**Haphemet′ric.** Relating to measurement of tactile sensibility.

**Haphepho′bia** (*haphe*, touch, *phobos*, fear). Excessive fear of being touched.

**Haphon′osus** (*haphe*, touch, *nosos*, disease). Anæsthesia.

**Haplankylobleph′aron** (*haploos*, simple, *ankylos*, bent or stiff, *blepharon*, eyelid). Adhesion between upper and lower eyelids; ankyloblepharon.

**Haploac′ne.** Acne simplex.

**Haplococ'cus** (*haploos*, simple, *kokkos*, kernel). Low form of organism belonging to the protozoa. **H. reticula'tus,** vesicular formation in the muscular system of the pig, containing amœba.

**Haplodermi'tis** (*haploos*, simple, *derma*, skin). Simple inflammation of the skin.

**Hap'lodont** (*haploos*, single, *odous, odontos*, tooth). Molar tooth having a single crown.

**Haploli'chen.** Lichen simplex.

**Haplopap'pus discoide'us** or **menzies'ii.** Leaves of this Mexican plant, damiana, ord. *Compositæ*, are used in fomentations in rheumatism. **H. llare'ta,** see *Llareta*.

**Haplopath'ia** (*haploos*, simple, *pathos*, disease). A simple, uncomplicated affection.

**Haplophy'ma** (*haploos*, simple, *phyma*, growth). Simple tumor.

**Hap'loscope** (*haploos*, simple, *skopeo*, to see). Apparatus for blending two separate fields of vision into one; stereoscope.

**Hap'tic.** Relating to touch; tactile.

**Haptins'** (*hapto*, to fasten to, to seize). Receptors of various kinds, which have been cast off and are free in the body fluids; an antitoxin is a haptin.

**Haptodyspho'ria** (*hapto*, to seize, *dysphoros*, difficult to bear). Painful or sensitive to the touch.

**Hap'togen** or **Haptog'enous mem'brane** (*hapto*, to attach, *gennao*, to engender). Pellicle forming around fatty matter when albumin is brought in contact with it.

**Hap'tophile.** Term applied to the side chains of the cell protoplasm which have an affinity for the haptaphore groups of the toxin molecule.

**Hap'tophore** (*hapto*, to seize, *phero*, to bear). A term applied to the atom groups of the toxic molecule which unite with the receptors, thus neutralizing the toxin by antitoxin or chaining it to susceptible cells of the organism. These groups are stable and are present in toxoids as well as in toxins. (See *Side-chain theory*; under *Chain*, and cut under *Hæmolysin*.)

**Haptoph'orous.** Relating to haptophore atom groups.

**Haptot'ic** (*hapto*, to touch). Relating to the phenomena of touch.

**Ha'ra ke'ke.** Phormium tenax; native flax of New Zealand; root is anthelmintic and cathartic; the gum is used in diarrhœa and as a dressing to wounds and abrasions.

**Hard.** That which offers much resistance. In anatomy, the hard parts are those composing the osseous basis of the body, the skeleton. **H. pal'ate,** anterior or bony part of septum between cavity of mouth and nasal fossæ.

**Hard'ening.** Induration; sclerosis. Rendering anatomical and pathological specimens firm, so that they can be cut into sections.

**Harde'rian gland.** Rudimentary glands in inner canthus of the eye, resembling the lacrymal gland.

**Hard'hack.** Spiræa tomentosa.

**Har'dy-Béhier's** (ba-e-ays') **symp'tom.** Aphonia, an early indication of pulmonary gangrene.

**Hare'bell.** Campanula rotundifolia; emetic and expectorant.

**Harelip'.** Fissure or perpendicular division of one or both lips; so called because the upper lip of the hare is thus divided. It is generally congenital, at other times accidental, or produced by a wound the edges of which have not been brought into proper contact. It is simple when there is but one division; double, when there are two; complicated, when there is also a division or cleft of the superior maxillary bone and of the palate—cleft, split, or fissured palate, wolf's jaw—or a projection of the teeth into the separation of the lip. In the operation for harelip there are two indications to be fulfilled: first, to pare with the knife or scissors the edges of the cleft, and afterward preserve them in contact in order to cause adhesion. Staphylorrhaphy, or operation for closure of the palate, may also be required. **H. su'ture,** figure-of-8 suture applied over and around a pin which has been passed through the freshened edges of the harelip.

**Hare's ear.** Bupleurum rotundifolium. **H.'s eye,** lagophthalmia.

**Har'lequin fœ'tus.** Fœtus born with peculiar skin of keratoma diffusum or congenital ichthyosis.

**Har'ley's disease'.** Paroxysmal hæmoglobinuria.

**Harmaline'.** $C_{13}H_{14}N_2O$. Alkaloid obtained from seeds of Peganum harmala or wild rue; stimulant and anthelmintic.

**Har'mel.** Rue. Peganum harmala.

**Harmine'.** Alkaloid from Peganum harmala.

**Har'mony** or **Harmo'nia.** Suture by harmony, or simply harmony, false or superficial suture. Immovable articulation, in which the depressions and eminences presented by the bony surfaces are but slightly marked, appearing as if the junction of the bones took place by simple apposition of their surfaces; as in the union of the superior maxillary bones with each other. See *Articulation*.

**Harpal'yce al'ba.** Prenanthes alba.

**Harpoon'.** Instrument for removing a particle of tissue for microscopic examination.

**Har'rison's groove.** Depression sometimes noticed above the anterior insertion of the diaphragm in chronic dyspnœa.

**Har'tigan's fora'men.** A foramen passing through the base of the transverse processes of the vertebræ in children.

**Hart'mann's fos'sa.** A peritoneal fossa between the mesentericoparietal fold and the mesentery of the vermiform appendix.

**Harts'horn.** Cornu cervi; liquor ammoniæ. **H. and oil,** linimentum ammoniæ. **Red h.,** spiritus lavandulæ compositus. **Salt of h.,** see *Ammonii carbonas*.

**Hart's thorn.** Rhamnus catharticus. **H.'s tongue,** Asplenium scolopendrium. **H.'s truf'fles,** Elaphomyces granulatus.

**Hart'wort of Marseilles'.** Seseli tortuosum.

**Har'vest bug.** Leptus irritans. **H. mite,** h. bug.

**Har'vester's kerati'tis.** A form of keratitis observed among reapers.

**Ha'ser's form'ula.** See *Trapp's formula*.

**Hasha'bi.** Kordofan gum, finest commercial variety of gum arabic.

**Hash'eesh, Hasch'isch, Hash'ish,** or **Hash'isha.** Dried leaves and stalks of Cannabis sativa with dried fruits.

**Has'ner's valve.** Crescentic fold of mucous membrane at lower aperture of nasal duct.

**Has'sall's bod'ies** or **cor'puscles.** Striated granular corpuscles in interior of thymus gland.

**Has'tula re'gis.** Asphodelus ramosus.

**Hatch** or **Hatch'ing.** Issuing from the egg, as with the oviparous animal after incubation.

**Hat'ters' consump'tion.** Pulmonary disease, caused by inhalation of particles of fur, dust, etc., in making hats, or of the chemicals, such as mercury, arsenic, or nitrogen tetroxide, employed.

**Haunch.** Region of the trunk formed by the lateral parts of the pelvis and the hip-joint, including the soft parts. In women, on account of the greater width of the pelvis, the haunches are more prominent than in men. **H. bone,** ilium.

**Haustel'late** (*haurio*, to drink up). Epithet for the structure of the mouth, as in insects, for drinking or pumping up liquids.

**Haus'tra co'li** (*haustrum*, a bucket). Saccules of the colon.

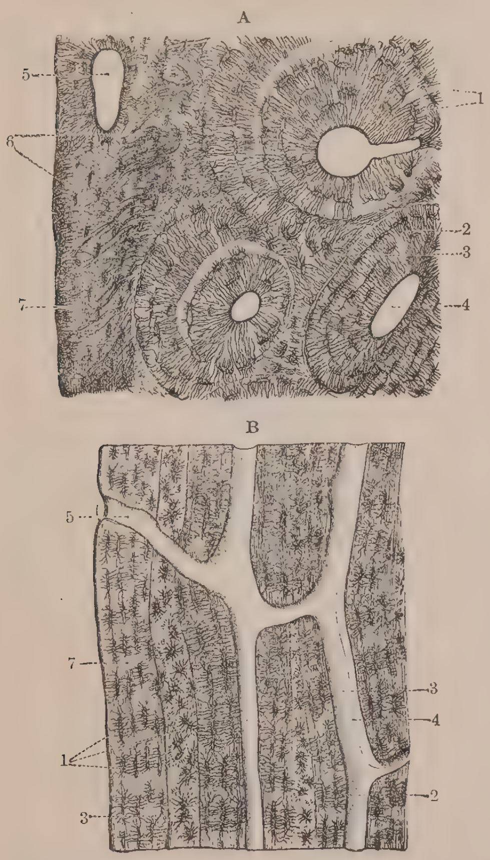
**Haus'tus** (*haurio*, to drink). Draught. Liquid medicine, which can be taken at a draught. **H. ni'ger** (black draught), infusum sennæ.

**Haut mal,** o mal (Fr.). Epileptic attack.

**Haüy's** (ah-weez') **bar.** Metallic bar which produces astatic condition of a galvanometer-needle.

**Haver'sian canals'** (after Dr. Clopton Havers). Nutritive canals of bones; minute openings through which the nutrient vessels pass to the interior of bones. **H. cancel'li,** h. spaces. **H. fringes,** vascular duplications of articular synovial membranes.

**H. glands,** h. fringes. **H. lamel′læ,** lamellæ around the canals of Havers. **H. spaces** cavities in spongy substance of bones. **H. sys′tem,** whole apparatus named from Havers, including cancelli, canals, lamellæ, and spaces.



Haversian system: A, cross section; B, longitudinal section of a long bone. 1, 1, bone corpuscles; 2, 2, Haversian lamellar system; 3, 3, 3, intermediary lamellar system; 4, 4, Haversian canal; 5, 5, Volkmann's canal; 6, Sharpey's fibres; 7, 7, circumferential lamellæ.

**Haw.** Avena sativa. **Black h.,** Virburnum prunifolium.

**Hawk′ing.** Effort to clear the throat by forced expiratory effort.

**Hawk′nut.** Bunium bulbocastanum.

**Hawk′weed.** Hieracium venosum.

**Haw′thorn.** Mespilus oxyacantha.

**Hay asth′ma.** Hay fever. **H. bacil′lus,** Bacillus subtilis obtained from infusion of hay. **Cam′el's h.,** Juncus odoratus. **H. fe′ver,** autumnal catarrh, summer catarrh, coryza vasomotoria periodica; a nasal and conjunctival catarrh, with sneezing, photophobia, headache, cough, and in the later stages asthma, occurring periodically in the late summer, often on the same day each year; it is believed by some to be due to irritation by the pollen of the ragweed; others regard it as a pure neurosis. Of the same nature, but appearing earlier in the season, is the so-called June cold or rose cold. The affection disappears spontaneously at the expiration of a certain period, usually from four to eight weeks. Certain regions are exempt from the affection, and sufferers may obtain relief by sojourning in such localities during their period of liability.

**Hay′craft's test.** Some perfectly fresh urine, or that which has been preserved from decomposition by the addition of cyanide of mercury, is poured into a glass, and a small quantity of powdered sulphur is very carefully deposited on the surface. If the urine contains bile a certain amount of the sulphur will fall to the bottom within five minutes. Detects bilirubin or biliary salts in a solution of 1: 50,000.

**Hay′em's achro′macytes.** Shadow corpuscles. **H.'s cor′puscles,** blood plaques. **H.'s disease′,** apoplectiform myelitis. **H.'s flu′id,** watery solution of sodium chloride, sodium sulphate, and mercuric chloride, employed in microscopic investigations of the blood. **H.'s hæ′matoblast,** blood plaques. **H.'s pseudobacil′li,** minute, oscillating, rod-shaped bodies occasionally seen in the blood, the result of fragmentation of the corpuscles.

**Hay′garth's nodes.** Articular nodosities in arthritis deformans.

**Hay′riff.** Galium aparine.

**Ha′zel, beaked** or **crooked.** Corylus rostrata. **Crot′tle's h.,** Lichen pulmonarius. **H. nut** (snapping), Hamamelis virginiana. **H. nut tree,** Corylus avellana. **H. rag,** Lichen pulmonarius. **Witch-h.,** Hamamelis virginiana, Sorbus aucuparia.

**Hazelin′.** Distilled product in which are combined active principles of Hamamelis virginiana.

**Ha′zelra** or **Ha′zelraw.** Lichen pulmonarius.

**Head.** The head forms the upper extremity of the body, and consists of the cranium and face. The first, comprising the superior and posterior part, has the encephalon in its cavity; the latter forms only the anterior part, and serves as a receptacle for the greater part of the organs of sense. Rounded end of a bone or organ, as h. of epididymis, h. of femur, h. of radius, h. of ulna, etc. **Big h.,** osteoporosis of maxillary bones of horses. **Black h.,** comedo; acne punctata. **H. kid′ney,** pronephros. **H. louse,** Pediculus capitis. **H. of mus′cle,** extremity of muscle at its origin. **H. of pan′creas,** duodenal extremity of that organ, *caput pancreatis*. **H. of pe′nis,** glans penis. **H. scald,** eczema, pityriasis, or seborrhœa of the scalp. **H. swell,** actinomycosis.

**Head′ache.** Pain in the head; cephalalgia. Papaver rhœas, Cardamine pratensis. **Anæ′mic h.,** h. due to local or general anæmia. **Bil′ious h.,** migraine. **Blind h.,** migraine. **Conges′tive h.,** h. due to local or general hyperæmia. **Hyperæ′mic h.,** congestive h. **Intermit′tent h.,** cephalalgia periodica. **Organ′ic h.,** h. due to structural changes in the brain or its membranes. **Pyrex′ial h.,** h. due to some form of fever. **Re′flex h.,** h. due to affections of other organs, such as the stomach. **Sick h.,** migraine. **Symptomat′ic h.,** reflex h. **Tox′ic h.,** h. due to some systemic poison.

**Head-breeze.** Static electrization of the head with a head-plate.

**Head-drop.** Endemic disease of Japan, attended with heaviness of the head, slow speech, muscular debility, or partial paralysis.

**Head-first la′bor.** Presentation of the head in labor.

**Head-fold.** Duplication or fold of the blastoderm under the upper extremity of the embryo.

**Head-gut.** Cavity in the raised cephalic extremity of the fœtus.

**Head-last la′bor.** Presentation of the fœtus in such a position that the head emerges last.

**Head-lock′ing.** Locking together of chins of twins, in labor, when presenting in opposite directions.

**Head-mold.** Cranium. **H.-m. shot,** condition of the skull in which the bones ride, or are *shot*, over each other at the sutures.

**Head-piece.** Upper enlarged extremity of a rod of Corti.

**Head-plate.** Part of middle germ-layer constituting head of the embryo. Top of inner rod of Corti prolonged.

**Head′y.** Affecting the head; that which affects the head and inebriates readily, as alcoholic drinks.

**Heal.** To cure or make healthy.

**Heal′all.** Collinsonia canadensis, Prunella vulgaris, Scrophularia nodosa, Valeriana officinalis.

**Heal′ing.** Curative; see *Intention*. **H. art,** medicine. **H. blade,** Sempervivum tectorum, Plantago major. **H. piece,** see *Touch, royal*.

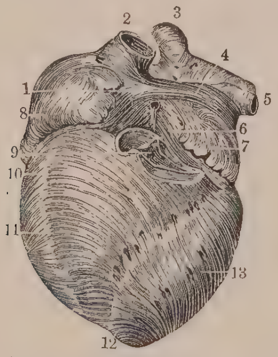
**Health.** Condition in which all the functions are performed with regularity and harmony. **H. line,** line of junction between the mucous membrane of the cheek and lips and that of the gum.

**Health′ful.** Promoting health.

**Health′y.** Salutary; not diseased. **H. pus,** laudable pus; see *Pus*.

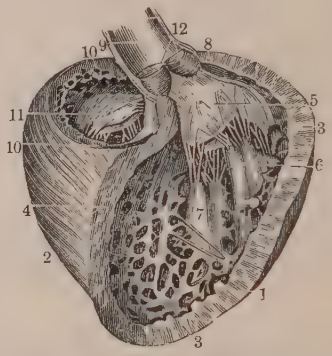
**Hear′ing.** Sense of perception and appreciation of sound. **Abnor′mal h.,** hyperacusis; paracusis; diplacusis. **H. dist′ance,** distance from the ear at which a sound begins to be heard. **Doub′le h.,** diplacusis. **Monau′ral** or **uniau′ral h.,** appreciation of sound by one ear only. **Mor′bid h.,** paracusis. **Perverse′ h.,** paracusis perversa.

**Heart.** See *Cardiac*. Azygous muscle, of an irregularly pyramidal shape, situated obliquely and a little to the left side in the chest; resting on the diaphragm by one of its surfaces; suspended by its base from the great vessels; free and movable in the rest of its extent, and surrounded by the pericardium. The right side of the body of the heart is thin and sharp, the left is thick and round. It is hollow within, and contains four cavities, two of which, with thinner and less fleshy walls, receive the blood from the lungs and the rest of the body, and pour it into two others with thick and very fleshy parietes, which send it to the lungs and to every part of the body. Of these cavities, the former are called *auricles*, the latter *ventricles*. The right auricle and right ventricle form the *pulmonic* or *right* or *anterior heart;* the left auricle and ventricle, the *systemic, corporeal, left,* or *aortic heart*. In the adult these are totally distinct from each other, being separated by a partition, the septum cordis. Into the right auricle the venæ cavæ, superior and inferior, and the coronary vein open. The pulmonary artery arises from the right ventricle (see *Conus arteriosus*); the four pulmonary veins open into the left auricle, and the aorta arises from the left ventricle.



Anterior view of external muscular layers of heart, after removal of its serous coat. 1, right auricle; 2, descending vena cava; 3, right anterior pulmonary vein; 4, horizontal band of fibres passing across base of auricles; 5, left anterior pulmonary vein; 6, muscular fibres between the auricles; 7, fringed or ring-shaped band of fibres at extremity of left auricle; 8, muscular fibres at base of right auricle; 9, section of pulmonary artery, showing semilunar valves; 10, 11, anterior ventricular muscular fibres; 12, 13, continuation on to left ventricle.

The mean weight of the adult heart is, according to Bouillaud, from eight to nine ounces. The heart is covered externally by a very thin, membranous reflection from the *pericardium*. The muscular structure of the heart is much thicker in the parietes of the ventricles than in those of the auricles. Its cavities are lined by a very delicate membrane, the *endocardium*, continuous with the inner membrane of the arteries as regards the left cavities, and with that of the veins as regards the right. Its arteries, the coronary, arise from the commencement of the aorta. Its nerves proceed chiefly from the pneumogastric and the cervical ganglions of the great sympathetic. The heart is the great agent of the circulation; by its contraction the blood is sent over every part of the body.



Three-quarter view of left ventricle after removal of its anterior parietes. 1, outer side of left ventricle; 2, outer side of right ventricle; 3, thickness of left ventricular wall; 4, thickness of a section near side of right ventricle; 5, mitral valve; 6, 7, two of the columnæ carneæ with their chordeæ tendineæ as attached to the valve; 8, thickness of ventricular parietes at origin of aorta; 9, cavity of aorta; 10, 10, section of superior surface of right auricle, showing ostium venosum and tricuspid valve from above; 11, tricuspid valve; 12, semilunar valves of aorta.

When the ear is applied to the chest a dull, lengthened sound is heard, synchronous with the arterial pulse. This is instantly succeeded by a sharp, quick sound, like that of the valve of a bellows or the lapping of a dog, and this is followed by a period of repose. Different views are entertained as to the causes of these sounds of the heart, which are evidently produced by contraction of the ventricles and consequent tension of the auriculoventricular valves by reflux of blood against the semilunar valves, etc. The word *lubb-dup* conveys a notion of the two sounds. The *beating* or *impulse of the heart, heart stroke, apex beat,* against the parietes of the chest, is mainly caused by the systole of the heart tending to project it forward.

The valves of the heart are situated as follows: Aortic, opposite the third intercostal space on the left side, close to the sternum; pulmonary, opposite the junction of the third rib with the sternum; mitral, opposite the third intercostal space, an inch to the left of the sternum; aortic, behind the middle of the sternum at the level of the fourth rib.

The following table exhibits the different actions of the heart and their coincidence with its sounds and impulse. It presumes that the period from the commencement of one pulsation to that of another is divided into eight parts; and if the case of a person whose pulse beats sixty times in a minute be taken, each part will represent the eighth of a second.

| | | |
|---|---|---|
| Last part of the pause . . | 1 . . | Auricles contracting; ventricles distended. |
| First sound and impulse. | 4 . . | Ventricles contracting; auricles dilating. |
| Second sound . . . . . . . | 2 . . | Ventricles dilating; auricles dilating. |
| Pause . . . . . . . . . . . . | 1 . . | Ventricles dilating; auricles distended. |

The duration of systole and diastole may be thus tabulated from various authorities:

| | | | |
|---|---|---|---|
| Systole of ventricles . | 0.314 (0.301–0.327) | second | (Donders). |
| | 0.307-0.311 | " | (Landois). |
| | 0.309–0.346 | " | (Marey). |
| Diastole of ventricles . . . . | 0.58 | " | (Landois) [74.2 heart-beats]. |

| | | |
|---|---|---|
| Pause | 0.4 | second (Landois). |
| Systole of auricles | 0.17 | " (Landois) [60 pulse-beats per minute]. |
| | about 0.1 | second (Marey). |
| Diastole of auricles | about 0.4–0.5 | |
| Duration of beat of heart | 0.809 | second [74.2 heart-beats per minute]. |

**Heart, at′rophy of.** A condition of the heart in which there is diminution in the thickness of the parietes of the whole organ. **Black h.,** Vaccinium myrtillus. **Bleed′ing h.,** Cheiranthus cheiri. **H.-bone,** a piece of fibrocartilage, when ossified, behind the aortic orifice and between the two auriculoventricular openings. **Bran′chial h.,** heart, as in fishes, in which aëration of the blood takes place in the gills in the absence of pulmonary structures. **H. bron′chus,** accessory bronchus passing from the right bronchus mesially and dorsally, into the inferior lobe of the right lung. **H. clot,** a coagulum of blood in one of the cavities of the heart; it may be formed before death, then called ante-mortem clot; or after death, post-mortem clot. **Dicœ′lious h.,** heart having two cavities, an auricle and a ventricle. **Dilata′tion of the h.,** see *Aneurysm.* **Displace′ment of the h.,** see *Ectopia cordis* and *Cardiocele.* **Fat′ty h.,** steatosis cordis. **Fat′ty degenera′tion of the h.,** steatosis cordis, see *Degeneration.* **Fi′broid degenera′tion of the h.,** see *Degeneration.* **Fe′tal h.,** see *Fœtus* and *Fetal circulation.* **Hyper′trophy of the h.,** supernutrition of the muscular walls of the heart, which are thicker than usual, the cavities being generally diminished. The pulse is generally strong, full, and hard. *Concentric* hypertrophy of the heart is when the walls augment at the expense of the cavities. *Eccentric hypertrophy* is known as hypertrophy with dilatation, or active aneurysm of the heart. Pulsations can be seen and felt over a larger space, and the apex is more to the left and lower down than natural. The impulse is less steady, but at times more violent, than that accompanying simple hypertrophy; the pulse is strong, full, and vibratory; the shock of the heart's action is often transmitted to the whole person and to the bed on which the patient is lying. **Im′pulse of the h.,** see *Heart.* **Ir′ritable h.,** condition of the heart noticed especially in soldiers in actual service, and characterized by palpitation, cardiac pain, rapid pulse, shortness of breath, sometimes headache, dizziness, etc. **Left h.,** the systemic heart; the auricle and ventricle which propel aërated blood, the auricle receiving it from the lungs and the ventricle propelling it into the general system. **Lux′us h.,** hypertrophy and dilatation of the left ventricle. **Lymph** or **lymphat′ic h.,** one of the muscular sacs in reptiles connected with lymphatics at their point of entrance into the veins. **Mil′itary h.,** heart strain caused by overexercise and exposure of troops on the march or in a campaign. **H. mur′murs** are produced by the blood passing over the roughened endocardium, or through constricted heart orifices, or by valvular insufficiency, allowing the blood to regurgitate. **Neural′gia of the h.,** angina pectoris. **Pul′monary h.,** right side or cavities of the heart. **Right h.,** the pulmonary heart, the auricle and ventricle which propel venous blood, the right auricle receiving it from the systemic veins, and the right ventricle propelling it into the lungs. **Rup′ture of the h.,** laceration of the heart, see *Cardiorrhexis.* **Sol′diers' h.,** military heart. **H.-sounds,** see *Heart.* **Spasm of the h.,** palpitation; angina pectoris. **H. stroke,** see *Heart.* **System′ic h.,** left side or cavities of the heart. **Tobac′co h.,** irritable condition of the heart from the abuse of tobacco. **Tricœ′lious** or **tripar′tite h.,** heart with three cavities, two auricles, and a ventricle. **H.-valves,** see *Heart.*

**Heart′burn.** Cardialgia.

**Heart's ease.** Polygonum persicaria, Viola tricolor, Cheiranthus cheiri.

**Heart′scald.** Cardialgia.

**Heart′seed.** Cardiospermum halicacabum.

**Heart′wort.** Laserpitium album.

**Heat.** Material cause producing sensation, or the particular sensation itself, produced by a body of an elevated temperature on our organs, especially on the organs of touch. The name caloric is given to the principle, whatever its nature, which is the cause of heat. When we touch a body of a temperature superior to our own, a portion of caloric passes from the body to the hand, and produces the sensation of heat. If, on the contrary, we touch a body of a temperature inferior to our own, we communicate a portion of our caloric to it, and experience the sensation of cold. The terms *calory* and *unit of heat* or *thermal unit* have been given to the quantity of heat required to raise a kilogramme of water one degree centigrade. The chief instrument used in medicine for measuring heat is the thermometer. Of this three kinds are employed: that of Fahrenheit, of Réaumur, and of Celsius, or the centigrade. See *Thermometer.*

The normal temperature of the body may be regarded as on an average from 98° to 100° F. Blood of the right side of the heart is slightly hotter than that of the left; the highest temperature observed is where the suprahepatic veins empty their blood into the vena cava ascendens.

The human body can bear a high degree of heat diffused in the atmosphere. There are cases on record in which air of 400° F. and upward has been breathed with impunity for a short time. It can likewise withstand very severe cold. In the Arctic regions the thermometer falls as low as —70° F., and Sir George Simpson affirms that it has fallen in Siberia to —83° F., or 115° below the freezing point.

Excessive heat disposes the body to gastric and intestinal diseases, and particularly to inflammation and enlargement of the liver; hence the frequency of such affections within the torrid zone. Heat is often used therapeutically: the actual cautery, at a white heat, disorganizes the parts to which it is applied; a lesser degree occasions violent inflammation. Heat higher than that of the human body is excitant; of a lower degree, sedative. Excessive cold acts as a powerful sedative, inducing sleep, the tendency to which, after long exposure, becomes irresistible. Many topical applications, as cataplasms, act wholly by virtue of their warmth and moisture.

Heat also denotes the rut of animals, periodical sexual desire experienced by them. Œstruation. **Ac′rid h.,** see *Acrid.* **An′imal h.,** see *Animal heat.* **H. ap′oplexy** or **asphyx′ia,** see *Sunstroke.* **Atom′ic h.,** quantity of heat necessary to raise the temperature of an atom 1° C. **H. cen′tres,** these are thermogenic, thermolytic, and thermo-inhibitory; see *Centre.* **Inter′nal h.,** increased body temperature which can be measured by the thermometer in the rectum, but is not appreciable to the touch. **La′tent h.,** heat required to change the form of a substance (as ice to water or water to steam) without increasing its temperature. **Prick′ly h.,** lichen tropicus. **Specif′ic h.,** quantity of heat required to raise the temperature of a given quantity of a substance a given number of degrees. **H.-stroke,** prostration by intense heat; see *Sunstroke.* **U′nit of h.,** see *Heat.* **Vi′tal h.,** see *Animal heat.*

**Heath** or **Heath′er.** Erica vulgaris.

**Heat′stroke.** Sunstroke.

**Heaves.** Broken wind; asthmatic condition of horses.

**Heav′iness.** Somnolency.

**Hea′ving.** Vomiturition, or effort at vomiting. Swelling movement of the chest.

**Heav′y.** Having sensation of weight or heaviness; pregnant. **H. spar,** sulphate of barium.

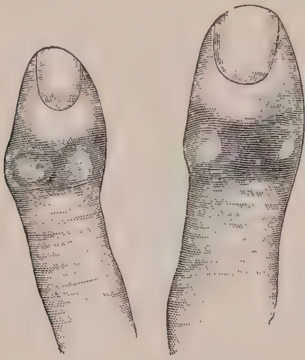
**Hebdom′adal cy′cle.** Period of seven days or years, which, according to some, controls the phenomena of animal life. **H. fe′ver,** malarial fever with paroxysms occurring once a week.

**Hebdomada′ria.** Hebdomadal or septan fever.

**He′be.** Goddess of puberty; first hair on the pubes; pubic region; puberty.

**Hebephre'nia** (*hebe*, puberty, *phren*, mind). Insanity of age of puberty.

**Heb'erden's disease'.** Rheumatic condition of the fingers, accompanied with nodules or small lumps near their extremities; it occurs in the aged and is not necessarily associated with gout or rheumatism. Also angina pectoris. **H.'s nodes**, the nodules on the fingers characteristic of H.'s disease.



Heberden's disease, showing Heberden's nodes and the terminal phalangeal deflection.

**Heb'erden-Ros'enbach nodes.** Heberden's nodes.

**Hebe'ter** or **Hebe'tes.** Adolescence.

**Hebet'ic** (*hebe*, puberty). Relating to puberty.

**Heb'etude.** Dulness of intellect; moderate stupor.

**Hebetu'do** (hebetude) **an'imi** (*hebes*, dull). Imbecility; dulness of intellect. **H. au'ris**, dulness of hearing. **H. den'tium**, great sensibility of the teeth, especially to acid food. **H. men'tis**, dulness of intellect. **H. vi'sûs**, dulness of vision; amblyopia; asthenopia; caligo.

**Hebraden'dron cambogioi'des.** See *Cambogia*.

**He'bra's disease'.** Polymorphous erythema. **H.'s erythe'ma**, polymorphous erythema. **H.'s pityri'asis**, chronic pityriasis rubra. **H.'s pruri'go**, true idiopathic prurigo.

**Hecato'nia palus'tris.** Ranunculus sceleratus.

**Hecatophyl'la.** Rosa centifolia.

**Hec'tic** (*hektikos*, habitual). Relating to the constitution or to a habit; habitual. **H. fe'ver**, slow, continued, or remittent fever, generally accompanying the end of organic affections, and esteemed idiopathic, although probably always symptomatic. It is the fever of irritation and debility, with progressive emaciation, frequent pulse, hot skin, especially of the palms of the hands and soles of the feet, and toward the end colliquative sweats and diarrhœa. Being symptomatic, it can be removed only by getting rid of the original affection, which is often impossible. **H. flush**, redness of the cheeks signaling the presence of hectic fever.

**Hec'togramme** (*hekaton*, hundred). Measure of 100 grammes—*i. e.*, 3 ounces 1 drachm and 44 grains, Troy.

**Hec'tolitre.** Measure containing 100 litres or 26.42 gallons.

**Hec'tometre.** Measure of 100 metres, or 109 yards 1 foot 1 inch.

**Hedeo'ma** or **H. pulegioi'des.** Pennyroyal, tick-weed, stinking balm, squaw-mint, ord. *Labiatæ*. The official (Ph. U. S.) name for the leaves and tops of H. pulegioides, or pennyroyal; dose, ℥ss–iv (2.0–16.0) in infusion. Indigenous plant with widely diffusing perfume, employed in the same cases as the mints and the English pennyroyal; in popular practice emmenagogue and a remedy for colds. *Oleum hedeomæ* (Ph. U. S.), oil of hedeoma or of pennyroyal, is used as a stimulating carminative; dropped on sugar; dose, ♏j–v (0.065–0.32).

**Hed'era arbo'rea.** H. helix, ord. *Araliaceæ*. Taste of ivy leaves is bitter, styptic, and nauseous. They have been used as an application to running sores and to keep issues open, also to burns. Berries were supposed by the ancients to have an emetic and purgative quality, and a watery extract was made from them. From the stalk of the tree a resinous juice exudes, in warm climates, called *gummi hederæ*, ivy gum, possessed of tonic and astringent properties. **H. quinquefo'lia**, Ampelopsis quinquefolia. **H. terres'tris**, Glechoma hederacea.

**Hede'ria.** Ivy gum.

**Hederine'.** Alkaloid from seeds of Hedera helix.

**Heder'ula.** Glechoma hederacea.

**Hedge gar'lic.** Alliaria. **H. hys'sop** gratiola. **H. mus'tard**, alliaria; Sisymbrium officinale. **H. net'tle**, Stachys palustris.

**Hedge'hog crys'tals.** Wedged-shaped sharp crystals of uric acid.

**Hed'rocele** (*hedra*, anus, *kele*, tumor). Proctocele; ischiatic or rectal hernia.

**Hedrosyr'inx** (*hedra*, anus, *syrinx*, pipe or fistula). Anal fistula.

**Hedwig'ia balsamif'era.** Tree of W. Indies and Mexico, ord. *Burceraceæ*. Extract of bark of the root contains a resin and an alkaloid, resembling in action curare. The resinous extract is used like copaiba; bark is antiperiodic.

**Hedyos'mum arbores'cens.** Grows in Jamaica; stomachic and antispasmodic. **H. bonplandian'um**, shrub used as a febrifuge in Brazil. **H. nu'tans**, mountain cigar-bush, has similar properties.

**Hedyo'tis america'na.** Mexican plant having astringent root. **H. auricula'ria**, E. Indian species; employed in deafness, and its leaves as emollient dressing. **H. umbella'ta**, Indian madder; leaves are expectorant; employed in asthma and phthisis.

**Hedypho'nia** (*hedys*, sweet, *phone*, voice). Sweetness of voice.

**Hedyp'nois tarax'acum.** Leontodon taraxacum.

**Hedys'arum alha'gi.** Alhagi camelorum; grows in Persia, and supplies alhagi manna. **H. alpi'num**, species used in Asia in dysentery and hæmatemesis.

**Heel.** The posterior extremity of the foot. **H. bone**, calcaneum. **H. string**, tendo Achillis.

**Heel'string.** Tendo Achillis.

**He'gar's opera'tion.** Battey's operation. **H.'s sign of preg'nancy**, detection through the rectum of softness or compressibility of the lower part of the womb, due to thinning of that part of the organ immediately above the cervix.

**Hei'denhain's cres'cents** or **dem'ilunes.** Crescentic masses of small cells contiguous to acini of sublingual gland in the cat and dog. **H.'s rods** or **stri'æ**, cylindrical bodies forming large part of the epithelium of convoluted tubules of the kidney.

**Height.** Stature. Crisis; period of greatest development, as of fevers.

**Hei'mia salicylifo'lia** or **syphilit'ica.** Decoction of leaves of this plant of Mexico and parts of South America is sudorific and antisyphilitic; alcoholic extract is styptic.

**Heim-Kreys'sig's sign.** Noticed in cases of adherent pericardium, there being at each systolic contraction of the heart retraction of the region over the stomach and the vicinity.

**Hein'eke-Mik'ulicz opera'tion.** Pyloroplasty.

**Hei'ne's in'fantile paral'ysis.** Spastic paralysis of the spine in very young children.

**Heis'ter's divertic'ulum.** Sinus of the jugular vein. **H.'s valve**, spiral duplication of the mucous membrane in the duct of the gall-bladder.

**Helco-** (*helkos*, ulcer). In composition, ulcer.

**Helcocace**, hel-kok'a-se (*helkos*, ulcer, *kakos*, badness). Malignant ulcer.

**Hel'coid** (*helkos*, ulcer, *eidos*, resemblance). Like an ulcer.

**Helcol'ogy.** Doctrine of or treatise on ulcers.

**Helco'ma.** Ulcer. **H. yemen'se**, Yemen sore or ulcer.

**Helcome'nia.** Vicarious menstruation from an ulcer.

**Helcophthal'mia.** Ophthalmia with ulceration.

**Hel′coplasty** (*helkos*, ulcer, *plasso*, to form). Operation of grafting skin on an ulcer when the destruction is too great to permit of a healing process.

**Helcopoie′sis** (*helkos*, ulcer, *poiesis*, making). Formation of ulcer.

**Helco′sis.** Ulceration. **H. cer′ebri,** ulceration and suppuration of the brain-substance. **H. laryn′gis,** laryngeal phthisis. **H. pulmona′lis,** phthisis pulmonalis. **H. rena′lis,** ulceration of the kidney. **H. u′teri,** ulceration of the uterus. **H. vesi′cæ,** ulceration of the bladder.

**Hel′cosol.** Bismuth pyrogallate.

**Helcostaphylo′ma.** Staphyloma with ulceration.

**Helcot′ic.** Relating to or affected with ulceration.

**Helcyd′rion** or **Helcyd′rium.** Small ulcer; superficial ulceration of the cornea.

**Helcyster,** hel-sis′ter (*helko*, to draw). Iron hook or crotchet for extracting the fœtus; crotchet.

**Helenin′.** Yellow, crystalline principle, $C_6H_8O$, from Inula helenium; demulcent, antiseptic, and germicide; used internally in diphtheria, tuberculosis, bronchitis, pneumonia, etc.; externally, in almond oil, in diphtheria; dose, gr. $\frac{1}{6}$ (0.01).

**Hele′nium.** Inula helenium. **H. autumna′le,** false sunflower, sneeze-wort, sneeze-weed, swamp sunflower, yellow star, ox-eye; ord. *Compositæ.* Indigenous herb with large, golden-yellow compound flowers; all parts are bitter and acrid, and in powder are powerful sternutatories. Several other varieties are described. **H. tenuifo′lium** is known for its peculiar deleterious effects on the nervous system, of the lower animals especially.

**Helexin′.** $C_{32}H_{54}O_{11}$. Glucoside from Hedera helix.

**Helianthel′la.** Root of H. tenuifolia; expectorant and antispasmodic.

**Helian′themum canaden′se.** Frostwort, frostweed, frostplant, mockrose, ord. *Cistaceæ.* An herbaceous plant, having large yellow flowers, growing in all parts of the United States, prescribed in scrofula and as a diuretic, as a wash in skin diseases, gargle in scarlet fever, etc. **H. corymbo′sum,** rockrose, indigenous, is used in the same cases. **H. vulga′re,** European plant having similar properties.

**Helianthin′.** Methyl orange.

**Helian′thus an′nuus.** Sunflower, ord. *Compositæ.* From its seeds a bland oil is obtained. **H. tubero′sus,** Jerusalem artichoke; Brazilian plant, used as an article of food.

**Hel′ical.** Relating to the helix.

**Helica′lis ma′jor.** Helicis major. **H. mi′nor,** helicis minor.

**Helich′rysum arena′rium.** Common yellow everlasting. Flowers of this European plant have been used in constipation, diarrhœa, dysentery, and worms. **H. nudifo′lium,** Caffir tea; S. African plant, demulcent, and in the form of infusion recommended in catarrh, phthisis, and other pulmonary affections. **H. auricula′tum** and **H. serphyllifo′lium,** Hottentots' tea, have similar virtues.

**Helicin′.** $C_{13}H_{16}O_7$. Principle resulting from oxidation of salicin by nitric acid.

**Hel′icine** (*helix*, tendril of the vine). Resembling the spiral tendril of a vine, or a helix. **H. ar′teries,** short vessels given off from the larger branches as well as from the finest twigs of the artery of the penis.

**Hel′icis ma′jor.** A muscle of the ear originating from the anterior acute part of the helix, upon which it ascends to be inserted into the helix. **H. mi′nor** originates from the under and forepart of the helix, and is inserted into the helix near the fissure in the cartilage opposite the concha.

**Helicobacte′rium aërog′enes** (Miller). Bacillus aërogenes. **H. kleb′sii** (Escherich), a microorganism found in the intestinal contents of guinea-pigs.

**Hel′icoid** (*helix + eidos*, resemblance). Helicine.

**Helicoidin′.** $C_{26}H_{34}O_{14}$. Substance derived, with helicin, from the action of nitric acid on salicin.

**Helicom′onas** (*helix*, spiral, *monas*, monad). Name given by Klebs to a supposed microorganism of syphilis.

**Hel′icopod** (*helix*, spiral, *pous*, foot). Term applied to a gait in which the feet describe segments of circles.

**Helicotre′ma** (*helix + trema*, foramen). Hiatus of Scarpa; the hole by which the two scalæ of the cochlea communicate at the apex.

**Helic′teres corylifo′lia** or **iso′ra.** E. Indian plant; fruit is used in diarrhœa, gout, and rheumatism; juice of root in affections of the stomach; leaves are used in constipation.

**Heliencephali′tis** (*helios*, sun + *encephalitis*). Inflammation of the brain due to insolation.

**Helig′mus** (*helisso*, to turn round). Convolution. Prominence of helix.

**Heliomyeli′tis** (*helios*, sun, *myelos*, marrow). Myelitis due to insolation.

**Helion′osus** (*helios*, sun, *nosos*, disease). Insolation.

**Heliopho′bia** (*helios*, sun, *phobos*, fear). Dread of sunlight; photophobia.

**Heliopsydra′cium** (*helios*, sun). Pustule from exposure to the sun.

**Heliosciad′ium nodiflo′rum** (*helios*, sun, *skiadion*, parasol). Sium.

**Helio′sis.** Insolation. Sun-bath.

**He′liostat** (*helios*, sun, *histemi*, to stand). Mirror turning so as to reflect the sun's rays constantly, used in photomicrography.

**Heliother′apy** (*helios*, sun, *therapeuo*, to cure). Sun-cure; cure of disease by exposure to the light of the sun.

**He′liotrope** (*helios*, sun, *trepo*, to turn). Heliotropium europæum.

**Heliotropin′.** Bitter principle from Heliotropium europæum; piperonal.

**Heliotro′pion.** Cichorium intybus.

**Heliot′ropism.** The phenomenon observed in growing plants of turning toward or away from the light.

**Heliotro′pium canes′cens, erec′tum,** or **europæ′um.** Heliotrope, ord. *Boraginaceæ;* plant formerly considered aperient and capable of destroying cutaneous excrescences, etc. **H. his′pidum** or **in′dicum,** E. India plant naturalized in the U. States; has similar virtues. **H. supi′num,** H. europæum.

**He′lium.** A monatomic gas present in small amount in the atmosphere.

**He′lix** (tendril of the vine). Fold forming the outer circumference or ring of the external ear; colon; convolution of intestines; a coil, as of wire in the electromagnet.

**Helleboras′ter fœt′idus.** Helleborus fœtidus.

**Hel′lebore.** Dracontium fœtidum. **Amer′ican h.,** Veratrum viride. **Bas′tard h.,** Adonis vernalis. **Bear's foot h.,** Helleborus fœtidus. **Black h.,** Helleborus niger. **Fet′id h.,** Helleborus fœtidus. **Green h.,** Helleborus viridis. **Stink′ing h.,** Helleborus fœtidus. **Swamp h.,** Veratrum viride. **White h.,** Veratrum album.

**Helleboreïn′.** $C_{52}H_{44}O_{15}$. Crystalline glucoside from black hellebore; therapeutic properties similar to those of digitalin; strong cardiac poison.

**Hellebores′in.** $C_{30}H_{38}O_4$. Result of treating helleborin with dilute acids.

**Helleboretin′.** $C_{14}H_{20}O_3$. A result of decomposition of helleborein.

**Helleborin′.** $C_{36}H_{42}O_6$. Bitter, crystallizable principle obtained from hellebore.

**Hel′leborism.** Method of treating disease among the ancients by hellebore alone.

**Helleb′orus.** A genus of plants, ord. *Ranunculaceæ.* **H. al′bus,** Veratrum album. **H. fœt′idus,** stinking hellebore or bear's foot, setterwort; emetocathartic; leaves are anthelmintic and antispasmodic. **H. grandiflo′rus,** H. niger. **H. menta′lis,** plant growing in Greece; possesses similar properties to H. niger. **H. ni′ger,** black hellebore, melampode, Christmas rose, clover-tongue; the root of this European plant is drastic cathartic; it was formerly employed as an emmenagogue, and has been given in mania, melancholia, dropsy, etc.; now used in veterinary medicine. **H. trifo′lius** or **tril′obus,** Coptis trifolia. **H. vir'idis,** green hellebore; European plant, naturalized in the U. S.; has some of the properties of H. niger, but is also used like digitalis.

**Helle'nia grandiflo'ra** (after C. N. Hellenius, professor at Abo). Costus.

**Hel'ler's plex'us.** Arterial plexus in the submucous tissues of the intestine. **H.'s test for albu'min,** to a convenient quantity of nitric acid in a test-tube is added carefully an equal amount of clear urine; if albumin is present, a white band appears between the urine and nitric acid. **H.'s test for blood,** the urine is first heated, then caustic potash is added and urine again heated; if blood is present, a dirty, yellowish-red color is precipitated.

**Hel'merich's oint'ment.** Unguentum sulphuris alkalinum.

**Hel'met flow'er, yel'low.** Aconitum anthora. **H. pod,** Jeffersonia bartoni.

**Helm'holtz's lig'ament.** Part of the anterior ligament of the malleus connected with the anterior tympanic spine. **H.'s line,** an imaginary line perpendicular to the plane of rotation of the eyes.

**Hel'mins** or **Hel'minth** (pl. helmin'thes) (*helmins,* a worm). Worm; entozoon.

**Helminth'agogue** (*helmins,* worm, *ago,* to drive). Anthelmintic; vermifuge.

**Helmin'thi.** Worms.

**Helmin'thia.** Helminthiasis. **H. al'vi,** worms in the intestinal canal. **H. errat'ica,** worms introduced by accident into the stomach or intestines. **H. pod'icis,** the presence of seat worms or ascarides.

**Helminthi'asis.** Generic name for the condition giving occasion to the presence of intestinal worms; also condition produced by the presence of worms; worm disease; see *Worms.* **H. elas'tica,** the presence of elastic tumors in the axillæ and groins caused by filaria. **H. Wu'cheri,** condition caused by Bilharzia hæmatobia in the human body.

**Helminth'ic.** Anthelmintic.

**Helminth'icide.** Vermicide.

**Helminth'ion.** Ascaris; small worm.

**Hel'minthism.** Presence of worms in the intestines.

**Helmintho-** (*helmins,* worm). In composition, worm.

**Helminthochor'ton** (*helmins,* worm, *chortos,* grass). Corsican moss; Corallina corsicana.

**Helminthocol'ic.** Colic caused by worms.

**Helminthogen'esis** (*helmins,* worm, *genesis,* generation). Helminthiasis.

**Helminth'oid** (*helmins,* worm, *eidos,* resemblance). Vermiform or worm-like; relating to worms.

**Helminthol'ogist.** One who has made a special study of the science treating of intestinal worms.

**Helminthol'ogy** (*helmins,* worm, *logos,* description). Entozoölogy; science treating of intestinal worms.

**Helmintho'ma.** Helminthoncus.

**Helminthon'cus.** Tumor caused by or containing worms. **H. medinen'sis,** dracunculus.

**Helminthopho'bia** (*helmins,* worm, *phobos,* fear). Excessive fear of being affected with worms.

**Helminthophthi'sis** (*helmins,* worm, *phthisis,* wasting). Emaciation from presence of worms.

**Helmin'thous.** Relating to worms. Wormy.

**Helmin'thus gor'dii.** Hairworm; seta equina.

**Helobacte'rium** (*helos,* head of a nail). Bacterium capitatum.

**He'loid** (*helos,* nail). Like a nail in shape. Also (*helos,* marsh) marshy or miasmatic; caused by exhalations from marshes.

**Helo'nias bulla'ta.** Species of *Liliaceæ* growing in Eastern part of the United States, decoction of which is used in constipation and intestinal diseases. **H. dioi'ca,** Chamælerium luteum. **H. erythrosper'ma,** Amianthium muscætoxicum. **H. lu'tea,** Chamælerium luteum. **H. ni'gra,** Veratrum nigrum. **H. officina'lis,** Veratrum sabadilla. **H. vir'idis,** Veratrum viride, Asagræa officinalis.

**Helonin'.** Extract of Chamælirium luteum; veratrin.

**Helo'sis** or **Helo'tis** (*heilo,* to turn). Eversion of the eyelids and convulsions of the muscles of the eyes; strabismus. Plica polonica.

**He'lus.** Marsh. Clavus.

**Helvel'la esculen'ta.** Morchella esculenta.

**Hel'weg's trian'gular bun'dle.** Olivary tract in the anterolateral column of the spinal cord.

**Helx'ine.** Parietaria. Convolvulus gummifera.

**Helx'is** (*helko,* to draw). Traction.

**Hema-** (*haima,* blood). In composition, blood. For words not found here, see under *Hæma-.*

**Hemadynam'ics.** Hæmadynamics.

**Hemanthine'.** Alkaloid, similar to atropine, from Hæmanthus toxicarius.

**Hemastat'ics.** Hæmatostatics.

**Hematin'.** Hæmatin.

**Hemat'ocele.** Hæmatocele.

**Hematog'enous** (*gennao,* to produce). Blood-forming.

**He'matoid.** Hæmatoid.

**Hematol'ogy.** Hæmatology.

**Hemeralo'pia** (*hemera,* day, *alaos,* blind, *ops,* eye). Day-blindness; condition in which a person sees more distinctly in a dim or artificial light than in bright daylight. Curiously enough, however, the word has sometimes been incorrectly employed to denote exactly the opposite condition, or night-blindness, *nyctalopia.* Owing to this confusion it would be better, perhaps, to abolish the use of both these words.

**Hemeratyphlo'sis** or **Hemerotyphlo'sis** (*hemera,* day, *typhlos,* blind). Hemeralopia, day-blindness.

**Hemi-.** Half, semi-.

**Hemiablep'sia** (*hemi,* half, *ablepsia,* blindness). Hemiopia.

**Hemiaceph'alus.** Monster whose head is represented by a shapeless tumor with appendages or cutaneous folds anteriorly. The condition is called *hemiacephalia.*

**Hemiachromatop'sia** (*hemi,* half, *a,* priv., *chroma,* color, *ops,* eye). Defect of appreciation of color in half the field of vision.

**Hemialbu'min.** An original component of albumin, changed during digestion into hemialbumose.

**Hemialbu'minose.** Hemialbumose.

**Hemialbuminosu'ria.** Hemialbumosuria.

**Hemial'bumose.** Effect of duodenal digestion of albumin by the pancreatic juice; afterward transformed to hemipeptone; noticed in urine in certain morbid conditions.

**Hemialbumosu'ria.** The presence of hemialbumose in the urine when voided.

**Hemial'gia** (*hemi,* half, *algos,* pain). Pain on one side of the body or of the head; hemicrania.

**Hemiamauro'sis.** Hemiopia; hemianopsia.

**Hemiamblyo'pia.** Amblyopia affecting one-half of each retina.

**Hemianacu'sia.** Unilateral deafness.

**Hemianæsthe'sia.** Anæsthesia of lateral half of the body, due to lesions of various parts of central nervous system.

**Hemianalge'sia.** Loss of sensation of pain, or analgesia, in one-half of the body.

**Hemiano'pia** or **Hemianop'sia** (*hemi,* half, *a,* priv., *ops,* eye). Blindness as to half the visual field; if affecting one eye, it is called *monocular, uniocular,* or *monolateral h.;* affecting both eyes, *binocular* or *bilateral h.* It is *homonymous* when the outer half of one field and inner half of the other are affected; *h. dextra* when right half is deficient; *h. sinistra* when left is deficient; *nasal* or *binasal h.* when insensibility of temporal halves of the retina render the nasal fields invisible; *temporal* or *bitemporal h.* when the opposite condition exists; *heteronymous* or *crossed h.* when the inner half of one side and outer half of the other are affected; *superior* or *inferior h.* when the upper or lower half is wanting in sight.

**Hemiano'pic.** Relating to or affected by hemianopia. **H. reac'tion,** pupillary contraction from illumination of one side of the retina.

**Hemiarthro′sis** (*hemi*, half, *arthron*, joint). Symphysis.

**Hemiatax′ia** (*hemi*, half, *ataxia*, want of order). Want of power to coordinate movements on one side of the body.

**Hemiatax′ic.** Relating to hemiataxia.

**Hemiatheto′sis** (*hemi*, half, *a*, priv., *thetos*, fixed). Athetosis, or inability to assume a fixed position, of one side of the body.

**Hemiat′rophy** (*hemi*, half, *atrophia*, atrophy). Atrophy of one side; unilateral atrophy; it is seen in progressive facial hemiatrophy, an incurable affection of the face and neck.

**Hemiaz′ygos vein.** Left lower azygos vein. **Acces′sory h. v.**, left upper azygos vein.

**He′mic.** Hæmic.

**Hemicar′dia.** The auricle and ventricle of one side of the heart.

**Hemicat′alepsy.** Hypnotism.

**Hemicel′lulose.** A form of cellulose impressible to acids; yields sugar when boiled with dilute acid.

**Hemicephalæ′um**, or **Hemicephal′ium**, or **Hemiceph′alum.** Sinciput.

**Hemicephal′ia.** Hemicrania. Hemicephalism.

**Hemicephal′ic** (*hemi*, half, *kephale*, head). Relating to the sinciput, or to half the head. Deficient formation or development of one side of the head.

**Hemiceph′alism.** See *Hemicephalus*.

**Hemiceph′alus.** Monster with one side of the skull and brain absent. The condition is called *hemiceph′alism* or *hemicephal′ia*.

**Hemicer′ebrum.** Cerebral hemisphere.

**Hemichore′a.** Chorea affecting one side of the body.

**Hemicollin′.** $C_{47}H_{70}N_{14}O_{19}$. A peptonic derivative of collagen resulting from the digestion of gelatin.

**Hemicra′nia.** Migraine, megrim; pain confined to one-half the head; almost always intermittent; at times continuing only as long as the sun is above the horizon, and hence called sun pain. **H. idiopath′ica**, facial neuralgia.

**Hemicran′ic.** Affected with hemicrania.

**Hemides′mus in′dicus.** Nannari, Indian sarsaparilla, ord. *Asclepiadaceæ*. Hindostanee plant, the root of which, *hemidesmi radix*, is used in India as a substitute for sarsaparilla; it is tonic, diaphoretic, and diuretic.

**Hemidial′ysis.** Hemiplegia.

**Hemidiaphore′sis.** Perspiration confined to one side of the body.

**Hemidiarthro′sis.** Amphiarthrosis.

**Hemidro′sis.** Hæmatidrosis. Hemihidrosis.

**Hemidysæsthe′sia** (*hemi*, half, *dys*, with difficulty, *æsthesia*, sensation). Partial sensibility of one side of the body.

**Hemidys′trophy** (*hemi*, half, *dys*, with difficulty, *trophe*, nourishment). Nutrition of one side of the body.

**Hemiellip′tical fos′sa.** Fossa for reception of utricle on inner wall of vestibule of internal ear.

**Hemienceph′alus.** A monster without any trace of the organs of senses, and yet with a very natural body. Also hemicephalus.

**Hemiep′ilepsy.** Epilepsy in which convulsions are restricted to one side of the body.

**Hemifa′cial.** Relating to half the face.

**Hemiglossi′tis** (*hemi*, half, *glossa*, tongue). Inflammation of half the tongue.

**Hemihidro′sis.** Hemidiaphoresis.

**Hemihyperæsthe′sia.** Hyperæsthesia of one lateral half of the body.

**Hemihyperto′nia.** Increased muscular tonicity limited to one side of the body.

**Hemihyper′trophy.** Increase in size of one side of the body or of a part.

**Hemihypother′mia** (*hemi*, half, *hypo*, under, *therme*, heat). Diminution of temperature of one side of the body.

**Hemihypoto′nia.** Reduced muscular tonicity limited to one side of the body.

**Hemilaryngople′gia** (*hemi*, half, *larynx*, larynx, *plege*, stroke). Unilateral paralysis of the larynx.

**Hemimyasthe′nia** (*hemi*, half, *mys*, muscle, *astheneia*, weakness). Muscular debility of one side of the body.

**Hemimyoclo′nus** (*hemi*, half, *mys*, muscle, *klonos*, disorder). Unilateral, irregular muscular action or twitching.

**Hemineurasthe′nia.** Nervous debility limited to one side.

**Hemiopal′gia** (*ops*, eye, *algos*, pain). Pain in the eye of one side, or of both eyes, in hemicrania.

**Hemio′pia** (*hemi*, half, *optomai*, to see). Hemianopia. Loss of vision over half the retina; usually due to intracranial lesion.

**Hemiop′ic.** Relating to hemiopia; hemianopic.

**Hemipa′ges** or **Hemip′agus** (*hemi*, half, *pegnymi*, to fasten). Monstrosity in which twins are united from navel to vertex; condition is called *hemipagia*.

**Hemiparæsthe′sia.** Perverted sensation limited to a lateral half of the body.

**Hemiparal′ysis.** Paralysis of half the body.

**Hemiparanæsthe′sia.** Condition following destructive lesion of lateral half of the spinal cord, characterized on the side of the lesion by motor paralysis, cutaneous hyperæsthesia, and an anæsthetic and a hyperæsthetic belt, respectively, above and below seat of lesion; on the opposite side of the lesion, by anæsthesia to touch, pain, temperature, and tickling of the parts, and a hyperæsthetic belt above the level of the upper limit of the lesion.

**Hemiparaple′gia.** Paralysis of one-half the lower extremity; hemiplegia of spinal origin. See *Hemiplegia*.

**Hemipar′esis** (*hemi*, half, *paresis*, paralysis). Paralysis of one side of the body.

**Hemiparet′ic.** Relating to hemiparesis.

**Hemipath′ia.** Disease of one side of the body.

**Hemipe′gia.** Hemicrania.

**Hemipep′tone.** Peptone obtained from hemialbumose by prolonged digestive process.

**Hemiphalacro′sis** (*phalakros*, bald). Baldness of one side of the head.

**Hemipho′nia.** Great weakness of voice.

**Hemiplec′tic.** Relating to hemiplegia.

**Hemiple′gia** (*hemi*, half, *plege*, stroke). Paralysis of motion of one side of the body, usually due to cerebral disease; occasionally to injury or disease of the spinal cord. Spinal h., or hemiparaplegia, is due to a lesion seated low down in the spinal cord. **Alter′nate h.**, cross or crossed hemiplegia, cross or crossed transverse paralysis; paralysis in which the loss of power affects the face of one side and the limbs of the other, or the upper limb of one side and the lower of the opposite side. **Anom′alous h.**, progressive muscular atrophy. **Cer′ebral h.**, h. due to cerebral lesion. **Cor′tical h.**, h. due to lesion of cortical portions of brain. **Cross** or **crossed h.**, alternate h. **Embol′ic h.**, h. caused by embolism of an artery of the brain. **H. facia′lis**, Bell's paralysis. **Hephæs′tic h.**, hammer palsy. **Spas′tic h.**, hemiplegia with irregular spasmodic contractions of the diseased muscles; most frequently in infants. **Spi′nal h.**, see *Hemiplegia*.

**Hemiple′gic.** Relating to or affected with hemiplegia. **H. gait**, see *Gait*.

**Hemiplex′ia.** Hemiplegia.

**Hemiprosople′gia** (*hemi*, half, *prosopon*, face, *plege*, stroke). Bell's palsy.

**Hemiprotein′.** Proteid resulting from the treatment of albumin with dilute sulphuric acid.

**Hemiscoto′sis.** Scotomata in one-half of the retina.

**Hemisec′tion.** Division made half through a part.

**Hemisep′tum.** One of the laminæ of the septum lucidum of the brain.

**Hem′ispasm.** Spasm of one side of the body.

**Hem′isphere** (*hemi*, half, *sphaira*, sphere). Half a sphere or of a body having a spheroidal shape. **H. of the bulb**, one of the two sections of the bulb of the urethra. **Cerebel′lar h.**, one of the two masses of the cerebellum, joined together in the median line by the vermiform processes. **Cer′ebral h.**, one of the two lateral halves which constitute the great mass of the cerebrum, divided from each other above by the longitudinal fissure, united below by the corpus callosum.

**Hemispher′ical fos′sa.** Depression on internal wall of vestibule of inner ear for reception of saccule. **H. gan′glia**, hemispheres of the brain. **H. papil′læ**, fungiform papillæ.

**Hemisys′tole.** Contraction or systole of only one ventricle of the heart.

**Hemiter′ata** (*hemi*, half, *teras*, monstrosity). Human bodies abnormally developed, but not sufficiently so as to be called monsters. They include anomalies of volume, shape, color, structure, situation, number of organs, etc.

**Hemite′ria** (*hemi*, half, *teras*, monstrosity). Malformation or partial monstrosity.

**Hemiter′ic.** Relating to an anomaly or deformity not amounting to an actual monstrosity.

**Hemither′moanæsthe′sia.** Insensibility to temperature impressions limited to one lateral half of the body.

**Hemitritæ′a** (*hemi*, half, *tritaios*, tertian). Semitertian fever possessing the characters of the tertian and quotidian intermittent.

**Hemizo′na.** Herpes zoster

**Hem′lock.** Pinus canadensis; cicuta; Conium maculatum. **Amer′ican h.**, Cicuta maculata. **Bas′tard h.**, Chræophyllum sylvestre. **Com′mon h.**, Conium maculatum. **H. drop′wort**, œnanthe. **H. fruit**, conium. **Ground h.** Taxus canadensis. **H. gum**, see *Pinus canadensis*. **H. leaves**, conium. **H. oil**, oil of spruce from Abies canadensis. **H. pitch**, see *Pinus canadensis*. **H. plas′ter**, emplastrum picis canadensis. **H. poi′son**, conium. **H. spruce**, Pinus canadensis. **Wa′ter h.**, Cicuta maculata; C. aquatica; Phellandrium aquaticum. **Wild h.**, Cicuta maculata.

**Hemo-.** In composition, blood. For words not found here, see under *Hæmo-*.

**Hemocytom′eter.** Hæmacytometer.

**Hemodynamom′eter.** Hæmadynamometer.

**Hemom′eter.** Hæmadynamometer.

**Hemophil′ia.** Hæmatophilia.

**Hemopho′bia.** Hæmatophobia.

**Hem′oplasty.** Blood formation.

**Hem′orrhage.** Hæmorrhagia; bleeding. *Active* or *arterial* hemorrhage occurs chiefly in the young and plethoric. It is commonly preceded by heaviness and pulsation in the part, owing to the afflux of blood and consequent hyperæmia, and by coldness of the extremities. Blood evacuated is generally florid red. Indications of treatment will be to diminish plethora and to lessen the heart's action. *Passive* hemorrhage occurs in those of weak constitution, or who have been debilitated by protracted disease, poor diet, long watching, excessive evacuations, etc. It is not preceded by excitement or any signs of local determination, but is usually accompanied by paleness of the countenance, feeble pulse, fainting, etc. In traumatic hemorrhages following wounds of arterial or venous trunks the blood is of a florid red color, and issues by jets and pulses if it proceed from an artery; deeper red, and issues slowly and by a continuous flow, if from a vein. If the capillary vessels be alone divided, the blood is merely effused at the surface of the wound. *Secondary* hemorrhage occurs some time after wounds or operations. When hemorrhage takes place into any tissue, or is interstitial, it is called *apoplexy*. Of the means employed for arresting traumatic hemorrhages, some act mechanically, as absorbents, ligature, and compression; others chemically, as fire, caustic, creosote, astringents, etc. **Accident′al h.**, a term applied to the bleeding resulting from premature detachment of the placenta before the beginning of labor. **Ac′tive h.**, see *Hemorrhage*. **Adynam′ic h.**, see *Hemorrhage*. **Alve′olar h.**, h. that takes place from a tooth after extraction. **Ante-par′tum h.**, see *Ante-partum*. **Arte′rial h.**, see *Hemorrhage*. **H. from the blad′der**, cystirrhagia. **Bron′chial h.**, bronchorrhagia. **Buc′cal h.**, stomatorrhagia. **Car′diac h.**, hæmocardiorrhagia. **Cer′ebral h.**, see *Apoplexy*. **Concealed′ h.**, h. in the pregnant uterus between its parietes and the ovum. **Consec′utive h.**, secondary hemorrhage. **Funic′ular h.**, h. from umbilical cord. **Gas′tric h.**, gastrorrhagia, hæmatemesis. **H. of heart**, hæmocardiorrhagia. **Inev′itable h.**, unavoidable hemorrhage. **Intersti′tial h.**, h. into connective tissue; apoplexy. **Intes′tinal h.**, enterorrhagia; melæna. **Intracra′nial h.**, cerebral hemorrhage. **Intrarrhachid′ian** or **intraspi′nal h.**, hæmatorrhachis. **H. of liv′er**, hepatorrhagia. **H. of lungs**, hæmoptysis. **Menin′geal h.**, apoplexy. **H. of the mu′cous mem′branes**, see *Hemorrhage*. **Na′sal h.**, epistaxis. **Pas′sive h.**, see *Hemorrhage*. **Pete′chial h.**, h. occurring in limited areas near the surface, the resulting ecchymoses being of very small size. **H. plant**, Aspilia latifolia. **Pleu′ral h.**, hæmatothorax. **Post-par′tum h.**, see *Post-partum*. **Pri′mary h.**, h. immediately after injury. **Puer′peral h.**, h. after labor; sometimes used to denote any hemorrhage before or after childbirth. **Pul′monary h.**, h. from the lungs. **Sec′ondary h.**, see *Hemorrhage*. **H. from the skin**, sudor cruentus. **Spi′nal h.**, hæmatorrhachis; apoplexia myelitica. **Subconjuncti′val h.**, see *Ecchymoma*. **Traumat′ic h.**, see *Hemorrhage*. **Unavoid′able h.**, h. from placenta prævia. **U′terine h.**, metrorrhagia. **Ves′ical h.**, cystirrhagia. **Vica′rious h.**, a sanguineous discharge from an unusual part, usually accompanying suppression of the menses.

**Hemorrhagic**, hem-or-rhaj′ic. Relating or appertaining to hemorrhage. **H. ar′teries**, arteries to external capsule of brain, which from some pathological change sometimes give rise to hemorrhage. **H. diath′esis**, hæmophilia. **H. fo′cus**, centre of cerebral hemorrhage in apoplexy. **H. pleu′risy**, hæmothorax.

**Hemorrhin′ia** (*rhis*, nose). Epistaxis.

**Hem′orrhoid.** A pile or single hemorrhoidal tumor; see *Hemorrhoids*. **Exter′nal h.**, h. at margin of anus. **Inter′nal h.**, h. in the interior of the anus. **Ure′thral h.**, see *Urethra, vascular tumor of*.

**Hemorrhoid′al.** Relating to hemorrhoids. **H. ar′teries** have been distinguished into superior, middle, and inferior. The first is the termination of the inferior mesenteric artery, assuming the name superior hemorrhoidal when it reaches the upper and posterior part of the rectum. Middle hemorrhoidal is furnished by the hypogastric or internal pudic; it ramifies on the inferior and anterior part of the rectum. Inferior hemorrhoidal arteries are branches of the internal pudic furnished to the inferior part of the rectum and the anal muscles. **H. flux**, hemorrhage taking place from the rectum owing to hemorrhoids. The quantity of blood discharged is often trifling, but at times sufficient to induce great debility and even death. The symptoms are those attending hemorrhoidal tumors. The treatment is the same as in hemorrhages in general. When the hemorrhage has become habitual or is vicarious, caution may be required in checking it. If inconvenience arise from a sudden suppression of habitual or vicarious hemorrhage, its return may be solicited by sitting over warm water, aloetic purgatives, glysters, irritating suppositories, etc., or leeches applied to the anus. **H. nerves**, these emanate from the sciatic and hypogastric plexuses, and cover the rectum with their numerous filaments. **H. plex′us**, continuation of pelvic plexus of nerves upon the rectum; anastomosis of hemorrhoidal veins over the rectum. **H. tu′mors**, see *Hemorrhoids*. **H. veins** follow the same distribution as the arteries, and generally empty themselves into the lesser mesenteric. Some of them assist in the formation of the hypogastric vein. **H. ves′sels** are those distributed to the rectum—the seat of hemorrhoids.

**Hem′orrhoids.** Livid, painful excrescences from the mucous membrane of the rectum or anus, usually attended with discharge of mucus or blood.

The most common causes are a sedentary life, accumulation of fæces in the rectum, violent efforts at stool, pregnancy, etc. The precursory symptoms are pains in the loins, stupor of the lower limbs, and uneasiness in the abdomen and rectum, with more or less gastric, cerebral, and general disorder, constituting a hemorrhoidal diathesis, *motus* or *turba hæmorrhoidalis*, and *molimen hæmorrhoidale*. To these symptoms follow one or more round, smooth, painful, pulsating, erectile tumors around the margin of the anus or within the anus; some bleeding occasionally. Hæmorrhoids are sometimes divided into bleeding or open piles and shut or blind piles. They have also been divided into internal or occult and external according to their situation, and into accidental or constitutional. *Hemorrhoidal tumors* are formed of a close, spongy texture, similar to that surrounding the orifice of the vagina, and, like it, erectile. The treatment in mild cases is simple: rest, horizontal posture, use of mild laxatives, as sulphur, castor oil, and emollient glysters. If they be much inflamed, leeches may be applied and warm cataplasms or cold lotions prescribed, with abstinence and cooling drinks. Afterward an ointment of powdered galls and opium may afford relief. In the relaxed kind such ointment, with attention to diet, will be of benefit. If after repeated attacks the tumors remain hard and painful and threaten fistula, they may be removed. The internal bleeding pile is a soft, red, strawberry-like elevation of the mucous membrane, called a vascular tumor. A *leucorrhœa analis*, or whitish discharge from the anus, sometimes attends ordinary hemorrhoids. The term *hemorrhoid* is applied at times to varicose veins developed elsewhere, as at the orifice of the uterus, *uterine hemorrhoid*, or to *vascular tumor of the urethra*. **Exter′nal h.**, hemorrhoids having location outside of the sphincter ani and covered with skin. **Inter′nal h.**, hemorrhoids situated within the anus and covered with mucous membrane. **Lin′gual h.**, engorgement of the veins at the root of the tongue. **U′terine h.**, see *Hemorrhoids*.

**Hemostat′ic.** Blood-stilling. An agent that arrests bleeding.

**Hemp.** A plant of the order *Urticaceæ*. **Amer′ican h.**, Cannabis americana. **Bar′ren h.**, Cannabis sativa. **Cana′dian h.**, Apocynum cannabinum. **Com′mon h.**, Cannabis sativa. **East In′dian** or **In′dian h.**, Cannabis sativa; Hibiscus cannabinus. **H. net′tle**, Galeopsis tetrahit. **H. seed**, see *Cannabis sativa*. **H.-seed cal′culus**, small, mulberry-like urinary calculus, usually multiple, composed of oxalate of calcium. **Wild h.**, Ambrosia trifida; galeopsis.

**Hemp′weed, aromat′ic.** Eupatorium aromaticum. **Round′leaved h.**, Eupatorium rotundifolium.

**Hen′bane.** Hyoscyamus.

**Hen′bit.** Lamium amplexicaule; Veronica hederifolia; stimulant diaphoretic.

**Hen′ke's retrovis′ceral space.** Thoracic space in front of the thorax, a continuation of the cervical space. **H.'s tri′angle**, Scarpa's triangle.

**Hen′le's ampul′la.** Dilated extremity of vas deferens. Dilated external portion of Fallopian tube. **H.'s cells**, large, granular cells in seminiferous tubules. **H.'s elas′tic mem′brane**, elastic membrane forming inner layer of the outer coat of the vessels. **H.'s fi′brous lay′er**, layer of cone-shaped fibres at edge of fovea centralis. **H.'s fis′sures**, spaces between muscular fibres of myocardium. **H.'s glands**, small glands in conjunctiva of the eyelids. **H.'s inter′nal cremas′ter**, smooth muscular fibres, remains of gubernaculum. **H.'s lay′er**, outer part of inner sheath of hair-root. **H.'s lig′ament**, internal portion of conjoined tendon of rectus abdominis muscle. **H.'s loop** or **looped tu′bule**, portion of uriniferous tubule forming a loop on itself. **H.'s mem′brane**, fenestrated fibroelastic coat of an artery; basal lamina constituting the interior boundary of the choroid. **H.'s root-sheath**, see *Huxley's layer*. **H.'s sheath**, see *Huxley's layer*. **H.'s sphinc′ter**, muscular fibres encircling the prostatic urethra. **H.'s spine**, occasional process of bone above the external auditory meatus. **H.'s stra′tum ner′veum**, a layer made up of all the layers of the retina except the rods and cones. **H.'s tu′bules**, H.'s loops.

**Hen′na.** Lawsonia inermis.

**Hen′och's chore′a.** See *Chorea*. **H.'s pur′pura**, purpura complicated with affection of the intestines.

**Hen′och-Ber′geron's disease′.** A form of electric chorea.

**Heno′sis.** Making into one; perfect union; adhesion between the lids or between the lids and eyeball.

**Henot′ic.** Tending to complete union or healing.

**Henri′cea pharmacear′cha** (after R. S. Henrici, of Copenhagen). Gentiana chirayita.

**Henri′cus ru′bens.** Colcothar.

**Hen′ry** (Joseph Henry). An electrical unit, employed to designate a measure of induction, when the inducing current varies one ampère per second and the electromotive force in the circuit is one volt.

**Hen′ry's law.** See *Dalton's law*.

**Hen′sen's canal′.** Canalis reuniens; minute canal between round saccule in membranous labyrinth and ductus cochlearis. **H.'s cells**, see *Prop-cells*. **H.'s cor′puscle**, elliptical portion of upper part of external hair-cells, organ of Corti. **H.'s disk**, apparent divisions of muscle-fibre as seen by polarized light. **H.'s line**, line traversing the centre of a sarcous element transversely. **H.'s node**, mass of cells at anterior extremity of primitive streak in embryo. **H.'s prop-cells**, see *Prop-cells*. **H.'s stri′a**, H.'s disk.

**Hen′sing's fold.** Superior ligament of the cæcum formed by a triangular duplicature of peritoneum.

**Hep.** See *Rosa canina*.

**Hepapto′sis.** Falling of the liver; floating liver.

**He′par** (liver). The liver. Name for substances resembling liver in appearance. Ancient name for the liver of sulphur, hepar sulphuris. **H. adipo′sum**, fatty liver; adiposis hepatica. **H. adulteri′num**, spleen. **H. antimonia′tum** or **antimo′nii**, compound of a sulphuret of antimony and an alkali; see *Oxidum stibii sulphuratum*. **H. cal′cis**, sulphurated lime. **H. kali′num**, potassii sulphuretum. **H. martia′le**, compound of sulphuret of potassium and an oxide of iron. **H. mi′grans** or **mo′bile**, movable liver; floating liver. **H. moschatifor′me**, nutmeg liver. **H. san′guinis**, blood-clot. **H. sicca′tum**, swine's liver deprived of its blood; used in the treatment of atrophic cirrhosis of the liver. **H. sinis′trum**, spleen. **H. succenturia′tum**, accessory liver; additional liver or liver lobe, a case of malformation. **H. sul′phuris**, potassii sulphuretum. **H. sul′phuris calca′reum**, calcis sulphuretum. **H. sul′phuris volat′ile**, ammonii sulphuretum. **H. uteri′num**, placenta. **H. variega′tum**, nutmeg liver.

**Hep′arocele** (*hepar*, liver, *kele*, tumor). Fatty tumor from connective tissue beneath the peritoneum, having external appearance of abdominal hernia.

**Hepatal′gia** (*hepar*, liver, *algos*, pain). Pain in the liver; neuralgia of the liver; biliary colic. **H. calculo′sa**, hepatic colic; gallstone colic. **Petit's′ h.**, distention of the gall-bladder by bile. **H. phlegmonoi′des**, inflammation of the liver.

**Hepataposte′ma.** Abscess of the liver.

**Hepatatroph′ia.** Atrophy of the liver.

**Hepataux′e.** Hypertrophy of the liver.

**Hepatec′tomy** (*ektome*, excision). Excision of a portion of the liver.

**Hepatemphrax′is** (*emphrasso*, to obstruct). Hepatic obstruction.

**Hepatencephalo′ma.** Encephaloid of the liver.

**Hepathæmorrha′gia.** Hemorrhage from the liver.

**Hepathelco′sis.** Ulceration of the liver.

**Hepat′ic** (*hepar*, liver). Belonging or relating to or resembling liver. **H. air**, sulphureted hydrogen gas. **H. al′oes**, see *Aloes hepatica*. **H. ar′tery**, one of the three branches given off by the cœliac; it passes toward the inferior surface of the liver, where it divides into two branches, a *right* and a *left*, proceeding toward the corresponding parts of that organ. **H. cells**, glandular cells of the liver, having a granular protoplasm containing adipose matter and pigment. **H. duct**, canal about three fingers' breadth in length and of the size of a quill, formed by the union of the biliary ducts, and joining the cystic duct at a very acute angle, to form the ductus choledochus; it conveys the bile from the liver toward the duodenum. **H. flex′ure**, rectangular bend between the ascending and transverse colon, at the under surface of the liver. **H. flux**, discharge from the liver. **H. gan′glion**, a ganglion contiguous to the hepatic artery. **H. glands**, glands in the mucous membrane along the hepatic duct; lymphatic glands in lesser omentum receiving supplies from the liver. **H. isl′ets**, lobules of the liver. **H. lig′aments**, peritoneal folds and other structures keeping the liver in position and restraining its movement. **H. lobes**, h. lobules, see *Liver*. **H. plex′us** consists of nervous filaments sent by the cœliac plexus to the liver, which accompany the hepatic artery. **H. veins**, suprahepatic veins, intralobular veins, arise in the substance of the liver, converge toward its posterior margin, and open into the vena cava inferior; they convey away the blood carried to the liver by the hepatic artery and vena porta. **H. zones**, areas in a hepatic lobule, which with blood-vessels and cells form vein or artery zones.

**Hepat′ica.** Medicines believed to be capable of affecting the liver. Liverwort. **H. america′na**, H. triloba. **H. fonta′na**, Marchantia polymorpha. **H. nob′ilis**, H. triloba; Anemone hepatica. **H. stella′ta**, Asperula odorata. **H. tril′oba**, kidney liver-leaf, liverwort, liverweed, trefoil, noble liverwort, herb trinity; the leaves, *hepatica* (formerly in the Ph. U. S.), are a gentle astringent.

**Hepat′icodiaphragmat′icus.** Occasional muscular slip from the central tendon of the diaphragm to the peritoneum, anterior to the spine and to the remnant of the ductus venosus or under part of the liver.

**Hepat′icogas′tric.** Hepatogastric.

**Hepaticos′tomy** (*hepar*, liver, *stoma*, mouth). Establishment of a fistulous communication with the hepatic duct.

**Hepatic′ula** (dim. of *hepar*, liver). Chronic hepatitis.

**Hepat′icus.** Hepatic. **H. flos**, Hepatica triloba.

**Hepatifac′tion** (*facio*, to make). Hepatization.

**Hepatin′.** Glycogen.

**Hep′atis suspenso′rium.** Suspensory ligament of the liver.

**Hepatisa′tio.** Hepatization.

**Hep′atism.** Combined symptoms from disordered liver.

**Hepati′tis.** Inflammation of the liver. It may be seated either in the peritoneal covering, *perihepatitis*, or in the substance of the liver, *parenchymatous hepatitis*, or in both, *parahepatitis*, and may be acute or chronic. The symptoms are pain in the right hypochondrium, shooting to the back and right shoulder and increased on pressure; difficulty of lying on the left side; sometimes jaundice, with cough and synocha. Its termination is generally by resolution. In tropical climates it often runs on to suppuration, *abscess of the liver*, *suppurative hepatitis*, the abscess breaking either externally or forming a communication with the intestines or chest, or breaking into the cavity of the abdomen. Heat predisposes to it; hence its greater frequency in hot climates. **Acute′ parenchy′matous h.**, acute yellow atrophy of the liver. **H. apostemato′sa**, suppurative inflammation of the liver. **Bil′iary h.**, inflammation of the liver originating in the bile-ducts, sometimes suppurative or plastic, the patches of inflammation being colored with bile-pigment. **Chron′ic h.**, a not very common disease, marked by enlargement, constant dull pain in the region of the liver, sallow countenance, high-colored urine, clay-colored fæces, etc. **C. intersti′tial h.**, cirrhosis of the liver. **H. cys′tica**, inflammation of the gall-bladder, cholecystitis. **H. cytoph′thora**, acute atrophy of the liver. **Diffused′ h.**, acute or yellow atrophy of the liver, acute wasting or softening of the liver; fatal jaundice. Form of parenchymatous inflammation of the liver, characterized by a rapid and complete destruction of the hepatic cells throughout every part of the organ; the chief symptoms are jaundice, sometimes with petechiæ and extensive ecchymosis, vomiting of ingesta and mucus, and afterward of altered blood resembling coffee-grounds; delirium, convulsions, and coma, usually fatal in about a week. The liver is found on post-mortem examination to be extensively atrophied. **Epidem′ic h.**, bilious remittent fever. **H. exter′na**, inflammation of the peritoneal coat of the liver; perihepatitis. **H. fibro′sa**, indurative hepatitis. **Gum′matous h.** or **H. gummo′sa**, form of syphilitic inflammation of the liver. **In′durative h.**, form of hepatitis in which the liver-cells become atrophied and the connective tissue is made denser and indurated. **Intersti′tial h.**, inflammation of the connective tissue of the liver, resulting in abscess or glandular destruction, with softening or induration, atrophy or cirrhosis; cirrhosis of the liver. **H. lon′ga**, chronic hepatitis. **H. occul′ta**, chronic hepatitis. **H. parenchymato′sa**, inflammation of the substance of the liver; yellow atrophy of the liver. **H. purulen′ta**, abscess of the liver, see *Hepatitis*. **Sup′purative h.**, abscess of the liver, see *Hepatitis*. **H. velamento′sa**, inflammation of the peritoneal coat of the liver; perihepatitis.

**Hepatiza′tion** (*hepar*, liver). Conversion into liver-like substance, as in the lungs when gorged with effused matter, so that they are no longer pervious to the air; they are then said to be hepatized. **Gray h.**, condition of the lungs characterizing the third stage of pneumonia, or stage of purulent infiltration. **Red h.**, condition of the lung characterizing the first stage of consolidation in pneumonia. **White h.**, appearance of the lungs in stillborn children affected with syphilis. **Yel′low h.**, appearance of the lungs in later stages of pneumonia, when colored with pus-cells.

**Hep′atize.** To convert or to be converted into substance resembling liver.

**Hep′atized ammo′nia.** Ammonium sulphide.

**Hepat′izon** (*hepatizo*, to resemble liver). Chloasma.

**Hepato-** (*hepar*, liver). In composition, liver.

**Hep′atocele** (*hepar*, liver, *kele*, tumor). Hernia of the liver; protrusion occasionally met with, especially in infants, in whom the upper part of the linea alba is very weak. Hepatocele may be *umbilical* (hepatomphalum) or *ventral* (through the linea alba).

**Hepatocirrho′sis.** Cirrhosis of the liver.

**Hepatocol′ic.** Relating to the liver and colon. **H. lig′ament**, ligament of the liver passing from the gall-bladder and contiguous sinus portarum, across the duodenum, to the colon; another, termed *hepatorenal*, descends from the root of the liver to the kidney. They are both peritoneal.

**Hepatocys′tic** (*hepar*, liver, *kystis*, bladder). Relating to the liver and the gall-bladder. **H. duct**, choledoch duct; rare canal passing from the liver to the gall-bladder.

**Hepatodid′ymus** or **Hepatod′ymus.** Hepatodyme.

**Hepatoduod′enal.** Relating to the liver and the duodenum. **H. lig′ament**, gastrohepatic omentum.

**Hepatoduodenos′tomy** (*stoma*, mouth). Operation for establishing communication between the liver and the duodenum when there is obstruction of the bile-ducts.

**Hep′atodyme** (*hepar*, liver, *didymos*, twin). Monster united at the liver and double above.

**Hepatod′ymus.** Hepatodyme.

**Hepatodyn′ia** (*odyne*, pain). Pain in the liver.

**Hepatogas′tric.** Relating to the stomach and liver. **H. lig′ament** or **omen′tum**, gastrohepatic ligament.

**Hepatogastri′tis.** Inflammation of the liver and stomach.

**Hepatogen′ic** or **Hepatogenous,** hep-at-oj′en-us (*gennao,* to produce). Produced by or originating in the liver.

**Hepatog′raphy** (*graphe,* description). Part of anatomy describing the liver. Hepatology.

**Hep′atoid** (*eidos,* resemblance). Hepatic.

**Hep′atolith** (*lithos,* stone). Concretion in the liver; biliary calculus.

**Hepatolithi′asis.** Formation of concretions in the liver.

**Hepatol′ogy** (*logos,* discourse). Study of the liver in its normal and morbid relations.

**Hepatolyt′ic.** Destructive to the cells of the liver.

**Hepatomala′cia** (*malakia,* softness). Softening of the liver.

**Hepatomeg′aly** (*hepar,* liver, *megas,* large). Enlargement of the liver.

**Hepatomelano′sis.** Melanosis of the liver.

**Hepatom′phalocele.** Umbilical hernia, the liver forming part of the contents of the sac.

**Hepatomyelo′ma** (*myelos,* marrow). Encephaloid of the liver.

**Hepaton′cus** (*onkos,* tumor). Tumor of the liver.

**Hepatonecro′sis.** Necrosis or gangrene of the liver.

**Hepatop′athy** (*pathos,* affection). Disease of the liver.

**Hepatoperitoni′tis.** Perihepatitis.

**Hep′atopexy** (*pexis,* fixation). Fixation of the liver by surgical procedure.

**Hep′atophage** (*phago,* to eat). A cell supposed to be destructive of the parenchyma or secreting apparatus of the liver.

**Hepatophlebi′tis** (*hepar,* liver, *phleps,* vein). Inflammation of the hepatic veins.

**Hepatophthisis,** hep-at-o-te′sis. Consumption from suppuration of the liver.

**Hepatophy′ma** (*hepar,* liver, *phyma,* growth). Tumor of the liver.

**Hepatoposte′ma.** Abscess of the liver.

**Hepatopto′sis** (*ptosis,* falling). Floating liver.

**Hepatopul′monary.** Relating to both liver and lung.

**Hepatore′nal.** Relating to the liver and the kidney. **H. liga′ment,** see *Hepatocolic.* **H. pouch,** pocket in the peritoneum for the reception of the right extremity of the liver.

**Hepatorrha′gia.** Hemorrhage of the liver.

**Hepator′rhaphy** (*rhaphe,* suture). Suture of the liver.

**Hepatorrhex′is** (*rhexis,* rupture). Rupture of the liver.

**Hepatorrhœ′a.** Excessive flow of bile.

**Hepatosarco′ma.** Sarcoma of the liver.

**Hepatoscirrhus,** hep-at-o-skir′rus. Carcinoma or scirrhus of the liver.

**Hepatos′copy** (*skopeo,* to see). Examination of the liver.

**Hepatospleni′tis.** Inflammation of the liver and spleen.

**Hepatos′tomy** (*hepar,* liver, *stoma,* mouth). Operation through the liver-substance for establishing communication in parts of that organ that are obstructed by concretions or other causes.

**Hepatot′omy** (*tome,* incision). Operation upon the liver.

**Hepatotoxæ′mia.** Circulation of poisons in the blood in consequence of disordered hepatic functions.

**Hepatotoxin′.** A cytotoxin having a specific action on the cells of the liver.

**Hephæ′stic** (*Hephæstus,* Vulcan). Relating to the forge or hammer, as hephæstic hemiplegia; see *Hammer palsy.*

**Hep′tad** (*hepta,* seven). Septivalent; element demanding seven volumes of hydrogen to produce saturation.

**Hep′tal.** Relating to seven. **H. cy′cle,** hebdomadal cycle.

**Heptal′lon grave′olens.** Hogwort, bear's fright. Indigenous plant, with fetid, porcine smell; diaphoretic, diuretic, cathartic.

**Heptam′elus** (*hepta,* seven, *melos,* limb). Double monster having seven limbs.

**Hep′tane.** Heptyl hydride. $C_7H_{16}$. A paraffin, liquid constituent of petroleum.

**Heptaphyl′lum.** Tormentilla.

**Heptapleu′ron.** Plantago major.

**Hep′tose** (*hepta,* seven). $C_7H_{14}O_7$. A form of glucose, named from its chemical composition.

**Hep-tree.** Rosa canina.

**Heracle′um.** Branca, H. spondylium. **H. lana′tum,** masterwort, cow parsnip; stimulant, carminative, poisonous. **H. spondyl′ium** or **tau′ricum,** cow parsnip, allheal, cow mumble, ord. *Umbelliferæ.* Root is tonic, stomachic, and carminative. Russians and Poles obtain from its seeds and leaves, by fermentation, an intoxicating, spirituous liquor called parst.

**Her′apathite** (after Herapath, English physician). Quinine iodosulphate, made by treating quinine sulphate with iodine. **H. cinchonine′,** antiseptol.

**Herb.** Non-ligneous plant, dying down to the ground, at least in winter. In pharmacy, the whole herb or its separate parts. **Aromat′ic h.,** species aromaticæ. **Bit′ter h.,** Erythræa centaurium. **Bless′ed h.,** Geum urbanum. **Cap′illary h.,** the five "capillary herbs" were, anciently, hart's tongue, black, white, and golden maidenhair, and spleenwort. **H. Chris′topher,** Actæa spicata. **Emol′lient h.,** the five "emollient herbs" were, anciently, beet, mallow, marshmallow, French mercury, and violet. **Ful′ler's h.,** saponaria. **H. of grace,** Gratiola officinalis. **Ho′ly h.,** Nerbena officinale. **H. mas′tich,** Thymus mastichina; Teucrium marum. **H. of pa′tience,** Rumex patientia. **H. Pe′ter,** Primula veris. **Poor′man's h.,** Gratiola officinalis. **H. of repent′ance,** Ruta graveolens. **H. Rob′ert,** Geranium robertianum. **H. of Saint Cu′negonde,** Eupatorium cannabinum. **H. of Saint George,** Valeriana officinalis. **H. Sophi′a,** Sisymbrium sophia. **H. Trin′ity,** Hepatica triloba; Viola tricolor; Anemone hepatica.

**Her′ba.** Herb. **H. alexandri′na,** Smyrnium olusatrum. **H. althæ′æ,** Pelargonium cucullatum. **H. an′thos,** rosmarinus. **H. apollina′ris,** mandragora; Hyoscyamus niger. **H. apoplec′tica,** Ajuga chamæpitys. **H. arthrit′ica,** Primula officinalis. **H. as′pera,** Galium aparine. **H. ballo′tæ lana′tæ,** Leonurus lanatus. **H. benedic′ta,** Geum urbanum. **H. beton′icæ al′bæ,** veronica herb. **H. britan′nica,** rumex. **H. can′ni,** Artemesia santonica. **H. cardi′aca,** Leonurus cardiaca. **H. car′dui benedic′ti,** blessed thistle. **H. car′dui ven′eris,** Dipsacus fullonum. **H. cata′riæ,** catnip. **H. chol′era,** Salvia sclarea. **H. citra′ta,** melissa. **H. cochlea′riæ,** scurvy grass. **H. divi′na,** tobacco leaves. **H. do′rea,** Solidago virgaurea. **H. erys′imi,** Sisymbrium officinale. **H. febrif′uga,** Teucrium chamædrys; Erythrœa centaurium. **H. fe′lis,** Nepeta cataria, catmint. **H. flam′mula jo′vis,** Clematis erecta. **H. gen′ipi ve′ri,** Achillea atrata. **H. hirundina′riæ,** chelidonium. **H. ig′nis,** Lichen pyxidatus. **H. liberia′na,** Galeopsis grandiflora. **H. melancholif′uga,** fumaria. **H. milita′ris,** Achillea millefolium. **H. ocula′ria,** Euphrasia pratensis. **H. papilla′ris,** lapsona. **H. paradisi′aca,** or **paralys′eos,** or **paralyt′ica,** Primula veris. **H. pa′tæ lapi′næ,** Leonurus cardiaca. **H. pedicula′ria,** Delphinium staphisagria. **H. pervin′cæ,** Vinca minor. **H. Pe′tri,** Primula verus. **H. pra′sii,** marrubium. **H. pulica′ris,** Plantago psyllium. **H. querci′ni,** Lichen plicatus. **H. re′gia,** Artemisia vulgaris. **H. rosel′læ,** Drosera rotundifolia. **H. Ruper′ti,** Geranium robertianum. **H. sac′ra,** Verbena officinalis. **H. saliva′ris,** Anthemis pyrethrum. **H. Sanc′ti Anto′nii,** Plumbago europæa. **H. San′tæ Mari′æ,** Chenopodium ambrosioides. **H. sardo′nia,** Ranunculus sceleratus. **H. scelera′ta,** Ranunculus sceleratus. **H. scyth′ica,** Glycyrrhiza glabra. **H. serpyl′li,** wild thyme. **H.**

**siderit′idis,** Galeopsis grandiflora. **H. solda′do,** matico. **H. somnif′era,** Atropa belladonna. **H. Trinita′tis,** Anemone hepatica; Viola tricolor. **H. Ven′eris,** Adiantum pedatum. **H. ven′tis,** Anemone pulsatilla. **H. vir′gæ pe′giæ,** digitalis. **H. vit′ri,** see *Salsola kali*. **H. zazarhen′di,** origanum.

**Herba′ceous.** Possessing the character of an herb.

**Her′balist** or **Her′barist.** Herborist.

**Herba′rium.** Collection of dried plants.

**Herb-doctor.** Botanical physician; one who claims to treat diseases altogether by herbs.

**Herbiv′orous** (*herba* + *voro*, to eat). Epithet applied to animals which feed on herbage. Such animals are called *herbivora*.

**Herb′orist.** One who deals in plants or herbs; an herb-doctor.

**Herbst's cor′puscles.** Small sensory bodies, like Pacinian corpuscles, seen in birds.

**Her′cules all′heal.** Pastinaca opopanax. **H. club,** Aralia spinosa.

**Hered′itary** (*hæres*, heir). Epithet given to diseases, or predispositions to diseases, inherited from progenitors.

**Hered′ity.** Law by which structure, mental and physical characteristics, diseases, etc., are transmitted from progenitors.

**Heredo-.** In composition, hereditary; as *heredo-ataxia*. Friedreich's ataxia, *heredosyphilis*, etc.

**Her′ing's the′ory.** The theory that color-blindness is due to the retina being deficient in some of the elementary substances which under the influence of light produce sensations of red and green, blue and yellow, black and white.

**Heritie′ra littora′lis.** Astringent plant of E. Indies, Australia, and Africa.

**Hermaph′rodism, Hermaph′roditism** (*Hermes*, Mercury, *Aphrodite*, Venus). Union of characteristics of the two sexes in the same individual. See *Hermaphrodite*.

**Hermaph′rodite.** One who possesses the attributes of male and female; bisexual, uniting in one individual the two sexes. Term applied to an animal or plant which is, at the same time, both male and female. True hermaphrodites are usually met with in the lower degrees of the animal scale, among the zoöphytes, mollusca, or gasteropoda. Individuals of the human species, regarded as hermaphrodites, owe this appearance to vicious conformation of the genital organs, in which it is often a matter of doubt to which sex the individual actually belongs; attentive examination will, however, generally exhibit the true sex. Hermaphrodites have been described which, instead of uniting the attributes of both sexes, cannot be considered male or female—neutral hermaphrodites. **Dimid′iate h.,** lateral h. **Exter′nal h.,** condition of external genital organs when they have characters of both sexes. **Fe′male h.,** subject of the malformation is here female, with some male characteristics. **Lat′eral h.,** here both sexes are apparent, a testicle being present on one side, an ovary on the other. **Male h.,** subject of the malformation is evidently a male, but has some female characteristics. **Neu′ter h.,** one in whom the characteristics of neither sex predominate. **Spu′rious h.,** condition having appearance of blended sexual organs, but in which real sex is easily established. **Transverse′ h.,** one in whom the external genitals seen to be of one sex and the internal of the other. **True h.,** actual blending of sexual organs.

**Hermaphrodit′ic.** Relating or appertaining to an hermaphrodite.

**Hermet′ic.** Closely sealed; air-tight. **H. doc′trine,** doctrine of Hermes, a celebrated Egyptian philospher, relating to that part of chemistry whose object was the pretended transmutation of metals. **H. med′icine,** a system of medicine founded upon chemistry.

**Hermodac′tyl.** A plant the root of which was formerly used as a cathartic. By some it is supposed to be identical with the Iris tuberosa; a variety of colchicum—Colchicum illyricum.

**Hernan′dia guianen′sis.** Species of plant of Guiana, seeds and roots of which are purgative. **H. ovig′era,** of E. Indies, and **H. sono′ra,** of E. and W. Indies, have similar properties.

**Her′nia.** Rupture. Any tumor formed by the displacement of a viscus, or a portion of a viscus, which has escaped from its natural cavity by some aperture and projects externally. Unless otherwise specified, hernia means abdominal hernia. Herniæ have been arranged according to the region or organ affected, the opening involved, or the viscera included in them.

*Abdominal herniæ* are remarkable for their frequency, variety, and the danger attending them. They are produced by the protrusion of the viscera of the abdomen through natural or accidental apertures in the parietes of that cavity. The organs forming them most frequently are the intestines and the epiploon. These herniæ have been divided, according to the apertures by which they escape, into:

1. *Inguinal* or *suprapubian herniæ*, which issue by the inguinal canal, are called bubonocele when small, and scrotal hernia or oscheocele in man when they descend into the scrotum; or vulvar hernia or pudendal or labial hernia, episiocele, in women when they extend to the labia majora. See *Bubonocele*. *Direct* inguinal hernia, ventro-inguinal hernia, is when the protruding parts, in place of entering the internal ring and descending along the inguinal canal, make a direct passage through the parietes of the abdomen opposite the external ring. *Indirect* inguinal hernia is one in which the protruding viscera pass down through the canal, emerging at the external ring.

2. *Crural* or *femoral hernia*, when they issue by the crural canal.

3. *Obturator*, *infrapubian*, or *subpubic hernia*, hernia foraminis ovalis or obturatoria, when the viscera escape through the obturator foramen.

4. *Ischiatic* or *sciatic hernia*, when it takes place through the sacrosciatic notch.

5. *Umbilical hernia*, hernia umbilicalis, exomphalos, omphalocele, when it occurs at the umbilicus or near it.

6. *Epigastric hernia*, occurring through the linea alba above the umbilicus.

7. *Hypogastric* or *infra-umbilical hernia*, cœliocele, hypogastrocele, when it occurs through the linea alba below the umbilicus.

8. *Perineal hernia*, mesoscelocele, hernia perinæi or perinealis, perineocele, when it takes place through the levator ani and appears at the perineum.

9. *Vaginal hernia*, colpocele, coleocele, or elytrocele, through the parietes of the vagina.

10. *Diaphragmatic hernia*, diaphragmatocele, when it passes through the diaphragm. The prolongation of the hernial sac in various directions within the abdominal walls is called intraparietal or intermuscular hernia.

Herniæ are likewise distinguished, according to the viscera forming them, into enterocele, epiplocele, enteroepiplocele, gastrocele, cystocele, hepatocele, splenocele, etc.

When a hernia can be restored to its natural cavity by the aid of pressure, etc., properly applied, it is said to be reducible; and it is irreducible when adhesion, bulk, etc., oppose its return. When the aperture giving passage to the hernia occasions more or less constriction of the protruded portion, the hernia is said to be incarcerated, and if the constriction be not removed it becomes strangulated, and constipation, hiccough, vomiting, and the signs of violent inflammation, followed by gangrene, supervene, with alteration of the features, small pulse, cold extremities, and death. See *Incarceration*.

Therapeutical indications are—1. In reducible hernia: to replace the viscera in the abdomen by taxis, and to retain them there by the use of a truss, which, if properly adapted, may effect a radical cure. 2. Irreducible hernia: to support the tumor by an appropriate suspensory bandage, until such time—not too long delayed—as it can be reduced by operative measures. 3. Strangulated hernia: to perform an operation, consisting in dividing the covering of the hernia and cutting the aponeurotic ring causing the strangulation; reducing the displaced viscera unless their diseased condition should require them to be retained without; and then so closing the hernial tract by one or another of the methods used for the "radical cure" that redescent of the hernia will be made impossible.

Hernia formerly signified also the scrotum and the testicle.

**Abdom′inal h.**, laparocele. **H. adipo′sa**, h. in which a fatty mass enters into the protruding part; lipocele; steatocele. **H. adna′ta**, congenital hernia. **Aneurys′mal h.**, cirsomphalus; caput Medusæ. **H. annula′ris**, umbilical hernia. **H. aquo′sa**, hydrocele. **H. arte′riæ** or **arteria′rum**, hernial aneurysm; see *Aneurysm*. **Ascend′ing h.**, interstitial hernia. **Béclard's′ h.**, h. through the saphenous opening. **Ber′kett's h.**, h. into the vaginal process of the peritoneum. **H. of the blad′der**, cystocele. **H. of the brain**, encephalocele. **H. bronchia′lis**, bronchocele. **Bur′sal h.**, synovial hernia. **Cæ′cal h.**, h. involving the cæcum. **H. of canal′ of Nuck**, see *Canal of Nuck*. **H. cap′itis**, encephalocele. **H. carno′sa**, sarcocele; elephantiasis of the scrotum. **H. of cerebel′lum**, parencephalocele. **Cer′ebral h.**, encephalocele; fungus cerebri. **Cloquet's′ h.**, pectineal hernia; see *Merocele*. **Complete′ h.**, h. in which the sac and contents have passed out of the canal. **Concealed′ h.**, h. of such small size that it is impossible to detect the protruding part. **Congen′ital h.**, h. of infancy; protrusion of some of the contents of the abdomen into the tunica vaginalis testis, owing to a want of adhesion between its sides after the descent of the testicle; h. into the vaginal process of the peritoneum. **Coo′per's (Sir Ast′ley) h.**, see *Merocele*. **H. cor′neæ**, ceratocele. **Cru′ral h.**, femoral hernia; merocele. **Cys′tic h.**, cystocele. **H. of di′aphragm**, see *Hernia;* diaphragmatic hernia. **Divertic′ular h.**, h. containing the diverticulum of the intestine; h., littrica. **H. dorsa′lis**, lumbar hernia. **Encyst′ed h.**, vaginal hernia. **Enterovag′inal h.**, see *Enterocele*. **Epigas′tric h.**, see *Hernia* and *Ventral hernia*. **Epiplo′ic h.**, epiplocele. **Exter′nal in′guinal h.**, form of inguinal hernia in which the neck of the sac is external to the epigastric artery and spermatic cord or round ligament of the uterus. **Fat′ty h.**, lipocele; steatocele. **Fem′oral h.**, merocele. **H. flatulen′ta**, pneumatocele. **H. foram′inis ova′lis**, obturator hernia, see *Hernia*. **Funic′ular h.**, h. into the umbilical cord or its covering. **Gas′tric h.**, gastrocele. **H. guttura′lis** or **gut′turis**, bronchocele. **H. of heart**, cardiocele. **H. hepat′ica**, hepatocele. **Hes′selbach's h.**, see *Merocele*. **Hour-glass h.**, see *Hour-glass*. **H. humora′lis**, inflammation of the testicle; swelled testicle; epididymitis. **Hypogas′tric h.**, see *Hernia*. **H. immo′bilis**, irreducible hernia. **Incar′cerated h.**, h. so constricted as to prevent the return of the contents; see *Hernia*. **Incomplete′ h.**, interstitial hernia, form of inguinal hernia in which the sac does not extend beyond the abdominal ring. **H. of in′fancy**, congenital hernia. **Infrapu′bian h.**, obturator hernia, see *Hernia*. **Infraumbil′ical h.**, see *Hernia*. **H. ingen′ita**, congenital hernia. **In′guinal h.**, h. through the inguinal canal; bubonocele; see *Hernia*. **Inguinoproperitone′al h.**, see *Inguinoproperitoneal*. **Intermus′cular h.**, see *Hernia*. **Inter′nal h.**, h. in the interior of the body that is not visible, as diaphragmatic hernia. **Intersti′tial h.**, h. between two layers of aponeurosis, as in the abdominal wall; incomplete inguinal hernia. **Intes′tinal h.**, enterocele. **H. intestina′lis omenta′lis**, enteroepiplocele. **Intrapari′etal h.**, interstitial hernia; see *Hernia*. **H. i′ridis**, ptosis iridis. **Irredu′cible h.**, see *Hernia*. **H. ischiad′ica** or **ischiat′ica**, ischiocele. **H. of kid′ney**, nephrocele. **Kron′lein's h.**, h. having both peritoneal and inguinal sacs. **La′bial h.**, pudendal hernia. **Lac′rymal h.**, see *Lacrymal*. **Lat′eral h.**, diverticular hernia. **H. of Laugier′**, see *Merocele*. **H. liena′lis**, splenocele. **Littré's′ h.**, diverticular hernia, first described by Littré, in which the intestinal canal proper is not included in the hernial sac, the protruded portion of intestine consisting of a digital prolongation or diverticulum of the ileum, which he concluded was formed by the gradual extension of a knuckle of the bowel that had been engaged in the inguinal canal. **H. lit′trica**, Littré's h. **H. of liv′er**, hepatocele. **Lum′bar h.**, see *Ventral hernia*. **H. of lung**, pneumocele. **Malgaigne's′ h.**, congenital hernia. **Mesenter′ic h.**, duodenojejunal hernia. **Mesocol′ic h.**, h. caused by the bowels gliding between the layers of the mesocolon. **Mixed h.**, enteroepiplocele. **H. mo′bilis**, reducible hernia. **Oblique′ in′guinal h.**, indirect hernia entering the internal abdominal ring and passing out of the external abdominal ring. **H. obstruc′ta**, see *Hernia*. **H. obturato′ria**, see *Hernia*. **H. oc′uli**, exophthalmia. **H. œsoph′agi**, pharyngocele. **Omen′tal h.**, epiplocele. **H. oschea′lis**, scrotal hernia. **H. ova′rii**, ovarian hernia; condition is generally congenital, caused by the entrance of the ovary into a hernial sac, usually inguinal. **H. parorchidoenter′ica**, parorchidoenterocele. **Part′ridge's h.**, femoral hernia anterior to or to outer side of femoral vessels. **Pectin′eal h.**, h. passing internal to and behind the femoral vessels or pectineus muscle. **H. perinæ′i** or **perin′ealis**, see *Hernia*. **Petit's′ h.**, lumbar hernia. **H. pharyn′gis**, pharyngocele. **Phren′ic h.**, diaphragmatic hernia. **H. pinguedino′sa scro′ti**, lipocele. **H. of pleu′ra**, pleurocele. **H. pleu′rica et pulmona′lis** pleurocele. **Properitone′al h.**, Kronlein's hernia. **H. pudenda′lis**, h. into one of the labia. **Pu′rulent h.**, empyocele. **Rectovag′inal h.**, see *Rectocele*. **H. of rec′tum**, proctocele. **Redu′cible h.**, see *Hernia*. **H. rena′lis**, nephrocele. **Retroperitone′al h.**, see *Retroperitoneal*. **Rich′ter's h.**, partial hernia, in which a part only of the circumference of the gut is engaged in the opening. **H. sac′ci lacryma′lis**, lacrymal hernia, mucocele. **Sacrorec′tal h.**, proctocele from incomplete ossification of the sacrum. **H. sanguin′ea**, hæmatocele, hæmatomphalocele. **Sciat′ic h.**, ischiocele. **Scro′tal h.**, scrotocele, oscheocele. **H. semina′lis scro′ti**, spermatocele. **H. spi′næ**, hydrorrhachis. **Sple′nic h.**, splenocele. **H. of stom′ach**, gastrocele. **Stran′gulated h.**, see *Hernia*. **Subpu′bic h.**, infrapubian h. **Suprapu′bian h.**, inguinal hernia. **Syno′vial h.**, projection of the synovial membrane through the ruptured capsular ligament of an articulation. **H. tes′tis**, benign fungus of the testis, granular swelling of the testis. Protrusion of the tubuli of the testicle through a rupture or ulceration of its fibrous envelope, the tunica albuginea; orchiocele. **Thora′cic h.**, diaphragmatic hernia; intercostal hernia; cardiocele; pneumonocele. **Thy′roid h.**, obturator hernia. **H. of the tongue**, glossocele. **Umbil′ical h.**, h. at the umbilicus; exomphalos. **H. of umbil′ical cord**, congenital protrusion of some of the abdominal viscera into the sheath of the umbilical cord; due to imperfect development of the abdominal wall. **H. u′rachi**, uromphalus. **H. u′teri**, hysterocele. **U′veal h.**, prolapse of the iris, staphyloma iridis. **H. of vagi′na**, elytrocele, see *Hernia*. **H. varico′sa**, cirsocele; varicocele. **Belpeau's′ h.**, femoral hernia protruding anterior to the vessels. **H. vena′rum**, varix. **H. ven′eris**, hernia humoralis orchitis. **H. vento′sa**, physocele. **Ven′tral h.**, see *Ventral*. **H. ventric′uli**, gastrocele. **Ven′tro-in′guinal h.**, direct inguinal hernia. **H. vesi′cæ urina′riæ**, cystocele. **Ves′ical h.**, cystocele. **Vesicovag′inal h.**, see *Cystocele*. **Vul′var h.**, pudendal or labial hernia. **H. of the womb**, hysterocele. **H. zirba′lis**, epiplocele.

**Her′nia-knife.** Herniotome.

**Her′nial.** Belonging to or concerning hernia. **H. ring**, constricted part of hernial sac. **H. sac**, peritoneal fold carried forward by the intestine in hernia.

**Hernia′ria alpes′tris, gla′bra, hirsu′ta,** or **vulga′ris.** European species used in hernia, dropsies, urinary and renal diseases; rupture wort, rupture herb; astringent and diuretic.

**Her′niated.** Term applied to part enveloped in a hernial sac.

**Herniemphrag′mus** or **Herniemphrax′is** (*emphragmos*, obstruction). Mechanical obstruction of the hernial canal for the radical cure of hernia.

**Herniencoleo′sis** (*hernia* + *en*, in, *koleos*, sheath). Invagination of integument into the inguinal canal.

**Hernioenterot′omy** (*hernia* + *enteron*, intestine, *tome*, incision). Herniotomy with enterotomy.

**Herniolaparot′omy** (*hernia* + *lapara*, the loins, *tome*, incision). Abdominal section practised in case of hernia.

**Herniol′ogy** (*hernia* + *logos*, discourse). Surgical specialty dealing with hernia.

**Herniopunc′ture.** Operation of puncturing a hernia.

**Her′niotome** (*hernia* + *tome*, incision). Knife adapted to operations for hernia.

**Herniot′omy.** Surgical operation for the relief of hernia.

**Her′nious.** Hernial.

**Hero′ic.** Epithet applied to the exhibition of remedies in very large doses or to therapeutic measures of a violent character.

**Heroine′.** Acetic ester of morphine, diacetyl morphine, suggested as a substitute for codeine, in doses of gr. $\frac{1}{20}$–$\frac{1}{6}$ (0.0032–0.01), in coughs, painful or catarrhal conditions of the respiratory organs, etc.

**Heroph′ilus, tor′cular of.** See *Torcular*.
